The total amount of the limit that has been drawn down against the counterparty. This includes the amount for prior trades. It may or may not include the amount for the given trade, specified in LastLimitAmt(1632), depending upon whether the given trade is considered pending.

Type: [Amt](#)

Used in groups: [LimitAmts](#)

### 171.2.2636 LinesOfTextGrp

Name	Mult.	Type	Description
NoLinesOfText	[1..1]	NumInGroup	Specifies the number of repeating lines of text specified
Text	[1..1]	String	Repeating field, number of instances defined in LinesOfText
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.

---

Used in messages: [Email](#), [News](#)

### 171.2.2637 LinkageHandlingIndicator

Indicate whether linkage handling is in effect for an instrument or not.

Type: [Boolean](#)

Used in messages: [SecurityStatus](#)

### 171.2.2638 LiquidityIndType

Code to identify the type of liquidity indicator.

Type: [int](#)

Allowed values in LiquidityIndTypeCodeSet:

Code	Name	Description
1	FiveDayMovingAverage	5-day moving average
2	TwentyDayMovingAverage	20-day moving average
3	NormalMarketSize	Normal market size
4	Other	Other

---

Used in messages: [BidRequest](#)

### **171.2.2639 LiquidityNumSecurities**

Number of Securites between LiquidityPctLow (402) and LiquidityPctHigh (403) in Currency.

Type: **int**

Used in groups: **BidDescReqGrp**

### **171.2.2640 LiquidityPctHigh**

Upper liquidity indicator if TotalNumSecurities (393) > 1. Represented as a percentage.

Type: **Percentage**

Used in groups: **BidDescReqGrp**

### **171.2.2641 LiquidityPctLow**

Liquidity indicator or lower limit if TotalNumSecurities (393) > 1. Represented as a percentage.

Type: **Percentage**

Used in groups: **BidDescReqGrp**

### **171.2.2642 LiquidityValue**

Value between LiquidityPctLow (402) and LiquidityPctHigh (403) in Currency

Type: **Amt**

Used in groups: **BidDescReqGrp**

### **171.2.2643 ListExecInst**

Free format text message containing list handling and execution instructions.

Type: **String**

Used in messages: **NewOrderList**

**171.2.2644 ListExecInstType**

Identifies the type of ListExecInst (69).

Type: **char**

Allowed values in ListExecInstTypeCodeSet:

Code	Name	Description
1	Immediate	Immediate
2	WaitForInstruction	Wait for Execut Instruction (i.e. a List Execut message or phone call before proceeding with execution of the list)
3	SellDriven	Exchange/switch CIV order - Sell driven
4	BuyDrivenCashTopUp	Exchange/switch CIV order - Buy driven, cash top-up (i.e. additional cash will be provided to fulfill the order)
5	BuyDrivenCashWithdraw	Exchange/switch CIV order - Buy driven, cash withdraw (i.e. additional cash will not be provided to fulfill the order)

Used in messages: **NewOrderList**

**171.2.2645 ListID**

Unique identifier for list as assigned by institution, used to associate multiple individual orders. Uniqueness must be guaranteed within a single trading day. Firms which generate multi-day orders should consider embedding a date within the ListID field to assure uniqueness across days.

Type: **String**

Used in components: **TradeReportOrderDetail**

Used in groups: **BidCompReqGrp, BidCompRspGrp, OrdAllocGrp**

Used in messages: **ExecutionReport, ListCancelRequest, ListExecute, ListStatus, ListStatusRequest, ListStrikePrice, NewOrderList, OrderCancelReject, OrderCancelReplaceRequest, OrderCancelRequest**

**171.2.2646 ListManualOrderIndicator**

Indicates if the list of orders was initially received manually (as opposed to electronically) or if it was entered manually (as opposed to entered by automated trading software).

Type: **Boolean**

Used in messages: **NewOrderList**

**171.2.2647 ListMethod**

Indicates whether instruments are pre-listed only or can also be defined via user request

Type: **int**

Allowed values in ListMethodCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	PreListedOnly	pre-listed only
1	UserRequested	user requested

---

Used in components: **Instrument**

**171.2.2648 ListName**

Descriptive name for list order.

Type: **String**

Used in messages: **BidRequest**

**171.2.2649 ListOrderStatus**

Code to represent the status of a list order.

Type: **int**

Allowed values in ListOrderStatusCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	InBiddingProcess	In bidding process
2	ReceivedForExecution	Received for execution
3	Executing	Executing
4	Cancelling	Cancelling
5	Alert	Alert
6	AllDone	All Done
7	Reject	Reject

---

Used in messages: **ListStatus**

**171.2.2650 ListOrdGrp**

<b>Name</b>	<b>Mult.</b>	<b>Type</b>	<b>Description</b>
NoOrders	[1..1]	NumInGroup	Number of orders in this message (number of repeating groups to follow)
ClOrdID	[1..1]	String	Must be the first field in the repeating group.
SecondaryClOrdID	[0..1]	String	
ListSeqNo	[1..1]	int	Order number within the list
ClOrdLinkID	[0..1]	String	
SettlInstMode	[0..1]	CodeSet	
Parties	[0..*]	Group	Insert here the set of "Parties" (firm identification) fields defined in "Common Components of Application Messages"
TradeOriginationDate	[0..1]	LocalMktDate	
TradeDate	[0..1]	LocalMktDate	
Account	[0..1]	String	
AcctIDSource	[0..1]	CodeSet	
AccountType	[0..1]	CodeSet	
DayBookingInst	[0..1]	CodeSet	
BookingUnit	[0..1]	CodeSet	
AllocID	[0..1]	String	Use to assign an ID to the block of individual preallocations
PreallocMethod	[0..1]	CodeSet	
PreAllocGrp	[0..*]	Group	
SettlType	[0..1]	CodeSet	
SettlDate	[0..1]	LocalMktDate	Takes precedence over SettlType value and conditionally required/omitted for specific SettlType values.
CashMargin	[0..1]	CodeSet	
ClearingFeeIndicator	[0..1]	CodeSet	
HandlInst	[0..1]	CodeSet	
ExecInst	[0..1]	CodeSet	Can contain multiple instructions, space delimited. If OrdType=P, exactly one of the following values (ExecInst = L, R, M, P, O, T, or W) must be specified.
MinQty	[0..1]	Qty	
MatchIncrement	[0..1]	Qty	

Name	Mult.	Type	Description
MaxPriceLevels	[0..1]	int	
DisplayInstruction	[0..1]	Component	Insert here the set of "DisplayInstruction" fields defined in "common components of application messages"
MaxFloor	[0..1]	Qty	
ExDestination	[0..1]	Exchange	
ExDestinationIDSource	[0..1]	CodeSet	
TrdgSesGrp	[0..*]	Group	
ProcessCode	[0..1]	CodeSet	
Instrument	[1..1]	Component	Insert here the set of "Instrument" (symbology) fields defined in "Common Components of Application Messages"
UndInstrmtGrp	[0..*]	Group	
PrevClosePx	[0..1]	Price	Useful for verifying security identification
Side	[1..1]	CodeSet	Note: to indicate the side of SideValue1 or SideValue2, specify Side=Undisclosed and SideValueInd=either the SideValue1 or SideValue2 indicator.
ShortMarkingExemptIndicator	[0..1]	Boolean	
ShortSaleExemptionReason	[0..1]	CodeSet	Available for optional use when Side(54) = 6(Sell short exempt).
SideValueInd	[0..1]	CodeSet	Refers to the SideValue1 or SideValue2. These are used as opposed to Buy or Sell so that the basket can be quoted either way as Buy or Sell.
LocateReqd	[0..1]	CodeSet	Required for short sell orders
TransactTime	[0..1]	UTCTimestamp	
Stipulations	[0..*]	Group	Insert here the set of "Stipulations" (repeating group of Fixed Income stipulations) fields defined in "Common Components of Application Messages"
QtyType	[0..1]	CodeSet	
OrderQtyData	[1..1]	Component	Insert here the set of "OrderQtyData" fields defined in "Common Components of Application Messages"
OrdType	[0..1]	CodeSet	
PriceType	[0..1]	CodeSet	
Price	[0..1]	Price	
PriceProtectionScope	[0..1]	CodeSet	

Name	Mult.	Type	Description
StopPx	[0..1]	Price	
TriggeringInstruction	[0..1]	Component	Insert here the set of "TriggeringInstruction" fields defined in "common components of application messages"
SpreadOrBenchmarkCurveData	[0..1]	Component	Insert here the set of "SpreadOrBenchmarkCurveData" (Fixed Income spread or benchmark curve) fields defined in "Common Components of Application Messages"
YieldData	[0..1]	Component	Insert here the set of "YieldData" (yield-related) fields defined in "Common Components of Application Messages"
Currency	[0..1]	Currency	
CurrencyCodeSource	[0..1]	CodeSet	
ComplianceID	[0..1]	String	
ComplianceText	[0..1]	String	
EncodedComplianceTextLen	[0..1]	Length	Must be set if EncodedComplianceText(2352) field is specified and must immediately precede it.
EncodedComplianceText	[0..1]	data	Encoded (non-ASCII characters) representation of the ComplianceText(2404) field in the encoded format specified via the MessageEncoding(347) field.
SolicitedFlag	[0..1]	CodeSet	
IOIID	[0..1]	String	Required for Previously Indicated Orders (OrdType=E)
QuoteID	[0..1]	String	Required for Previously Quoted Orders (OrdType=D)
RefOrderID	[0..1]	String	Required for counter-order selection / Hit / Take Orders (OrdType = Q)
RefOrderIDSource	[0..1]	CodeSet	Conditionally required if RefOrderID is specified.
TimeInForce	[0..1]	CodeSet	
EffectiveTime	[0..1]	UTCTimestamp	
ExpireDate	[0..1]	LocalMktDate	Conditionally required if TimeInForce = GTD and ExpireTime is not specified.
ExpireTime	[0..1]	UTCTimestamp	Conditionally required if TimeInForce = GTD and ExpireDate is not specified.
GTBookingInst	[0..1]	CodeSet	States whether executions are booked out or accumulated on a partially filled GT order

Name	Mult.	Type	Description
ExposureDuration	[0..1]	int	Conditionally required when TimeInForce(59)=10 (Good for Time)
ExposureDurationUnit	[0..1]	CodeSet	
CommissionData	[0..1]	Component	
CommissionDataGrp	[0..*]	Group	Use as an alternative to CommissionData if multiple commissions or enhanced attributes are needed.
OrderCapacity	[0..1]	CodeSet	
OrderRestrictions	[0..1]	CodeSet	
PreTradeAnonymity	[0..1]	Boolean	
CustOrderCapacity	[0..1]	CodeSet	
OrderAttributeGrp	[0..*]	Group	
ForexReq	[0..1]	CodeSet	
SettlCurrency	[0..1]	Currency	
SettlCurrencyCodeSource	[0..1]	CodeSet	
BookingType	[0..1]	CodeSet	Method for booking out this order. Used when notifying a broker that an order to be settled by that broker is to be booked out as an OTC derivative (e.g. CFD or similar). Absence of this field implies regular booking.
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.
SettlDate2	[0..1]	LocalMktDate	Can be used with OrdType = "Forex - Swap" to specify the "value date" for the future portion of a F/X swap.
OrderQty2	[0..1]	Qty	Can be used with OrdType = "Forex - Swap" to specify the order quantity for the future portion of a F/X swap.
Price2	[0..1]	Price	Can be used with OrdType = "Forex - Swap" to specify the price for the future portion of a F/X swap which is also a limit order. For F/X orders, should be the "all-in" rate (spot rate adjusted for forward points).
PositionEffect	[0..1]	CodeSet	

Name	Mult.	Type	Description
CoveredOrUncovered	[0..1]	CodeSet	
MaxShow	[0..1]	Qty	
PegInstructions	[0..1]	Component	Insert here the set of "PegInstruction" fields defined in "Common Components of Application Messages"
DiscretionInstructions	[0..1]	Component	Insert here the set of "DiscretionInstruction" fields defined in "Common Components of Application Messages"
TargetStrategy	[0..1]	CodeSet	The target strategy of the order
StrategyParametersGrp	[0..*]	Group	Strategy parameter block
TargetStrategyParameters	[0..1]	String	For further specification of the TargetStrategy
ParticipationRate	[0..1]	Percentage	Mandatory for a TargetStrategy=Participate order and specifies the target participation rate. For other order types optionally specifies a volume limit (i.e. do not be more than this percent of the market volume)
Designation	[0..1]	String	Supplementary registration information for this Order within the List
ManualOrderIndicator	[0..1]	Boolean	

Used in messages: [NewOrderList](#)

### 171.2.2651 ListRejectReason

Identifies the reason for rejection of a New Order List message. Note that OrdRejReason(103) is used if the rejection is based on properties of an individual order part of the List.

Type: [int](#)

Allowed values in ListRejectReasonCodeSet:

Code	Name	Description
0	BrokerCredit	Broker / Exchange option
2	ExchangeClosed	Exchange closed
4	TooLateToEnter	Too late to enter
5	UnknownOrder	Unknown order
6	DuplicateOrder	Duplicate Order (e.g. dupe CIOrdID)

---

Code	Name	Description
11	UnsupportedOrderCharacteristic	Unsupported order characteristic
99	Other	Other

---

Used in messages: [ListStatus](#)

### **171.2.2652 ListSeqNo**

Sequence of individual order within list (i.e. ListSeqNo of TotNoOrders (68), 2 of 25, 3 of 25, . . . )

Type: [int](#)

Used in groups: [ListOrdGrp](#)

### **171.2.2653 ListStatusText**

Free format text string related to List Status.

Type: [String](#)

Used in messages: [ListStatus](#)

### **171.2.2654 ListStatusType**

Code to represent the status type.

Type: [int](#)

Allowed values in ListStatusTypeCodeSet:

---

Code	Name	Description
1	Ack	Ack
2	Response	Response
3	Timed	Timed
4	ExecStarted	Exec Started
5	AllDone	All Done
6	Alert	Alert

---

Used in messages: [ListStatus](#)

**171.2.2655 ListUpdateAction**

If provided, then Instrument occurrence has explicitly changed

Type: **char**

Allowed values in ListUpdateActionCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
A	Add	Add
D	Delete	Delete
M	Modify	Modify
S	Snapshot	Snapshot

---

Used in groups: **PartyDetailAckGrp**, **PartyDetailsUpdateGrp**, **PartyEntitlementAckGrp**, **PartyEntitlementUpdateGrp**, **PartyRiskLimitsAckGrp**, **PartyRiskLimitsUpdateGrp**, **RelSymDerivSecUpdGrp**, **SecLstUpdRelSymGrp**

**171.2.2656 LoanFacility**

Specifies the type of loan when the credit default swap's reference obligation is a loan.

Type: **int**

Allowed values in LoanFacilityCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	BridgeLoan	Bridge loan
1	LetterOfCredit	Letter of credit
2	RevolvingLoan	Revolving loan
3	SwinglineFunding	Swingline funding
4	TermLoan	Term loan
5	TradeClaim	Trade claim

---

Used in components: **Instrument**

**171.2.2657 LocaleOfIssue**

Identifies the locale or region of issue.

Type: **String**

Used in components: **Instrument**

**171.2.2658 LocateReqd**

Indicates whether the broker is to locate the stock in conjunction with a short sell order.

Type: **Boolean**

Allowed values in LocateReqdCodeSet:

Code	Name	Description
N	No	Indicates the broker is not required to locate
Y	Yes	Indicates the broker is responsible for locating the stock

Used in groups: **ListOrdGrp**

Used in messages: **CrossOrderCancelReplaceRequest, MultilegOrderCancelReplace, NewOrderCross, NewOrderMultileg, NewOrderSingle, OrderCancelReplaceRequest**

**171.2.2659 LocationID**

Identification of a Market Maker's location

Type: **String**

Used in groups: **CompIDReqGrp, CompIDStatGrp, MDFullGrp, MDIncGrp**

**171.2.2660 LockedQty**

Locked order quantity.

Type: **Qty**

Used in messages: **ExecutionReport**

**171.2.2661 LockType**

Indicates whether an order is locked and for what reason.

Type: **int**

Allowed values in LockTypeCodeSet:

---

Code	Name	Description
0	NotLocked	Not locked
1	AwayMarketNetter	Away market better
2	ThreeTickLocked	Three tick locked
3	LockedByMarketMaker	Locked by market maker
4	DirectedOrderLock	Directed order lock
5	MultilegLock	Multileg lock. Lock in the context of multileg orders where legs are executed independently and the entire order is locked until matching information is available for all legs. A multileg order or quote must be matched in its entirety or not at all. For example, one of the legs may be a stock leg sent to a different execution venue that may or may not be able to fill it.
6	MarketOrderLock	Market order lock
7	PreAssignmentLock	Pre-assignment lock

---

Used in messages: **ExecutionReport**

**171.2.2662 LongQty**

Long quantity.

Type: **Qty**

Used in groups: **PositionQty**, **TradePositionQty**

**171.2.2663 LotType**

Defines the lot type assigned to the order.

Type: **char**

Allowed values in LotTypeCodeSet:

Code	Name	Description
1	OddLot	Odd Lot
2	RoundLot	Round Lot
3	BlockLot	Block Lot
4	RoundLotBasedUpon	Round lot based upon UnitOfMeasure(996)

Used in components: [TradeReportOrderDetail](#)

Used in groups: [LotTypeRules](#), [MDFullGrp](#), [MDIncGrp](#)

Used in messages: [ExecutionReport](#)

### 171.2.2664 LotTypeRules

Name	Mult.	Type	Description
<a href="#">NoLotTypeRules</a>	[1..1]	NumInGroup	Number of Lot Types
<a href="#">LotType</a>	[0..1]	CodeSet	Defines the lot type assigned to the order. Use as an alternate to RoundLot(561). To be used with MinLotSize(1231). LotType + MinLotSize (max is next level minus 1). Required if NoLotTypeRules(1234) > 0.
<a href="#">MinLotSize</a>	[0..1]	Qty	Minimum lot size allowed based on lot type specified in LotType(1093)

Used in components: [BaseTradingRules](#)

### 171.2.2665 LowExercisePriceOptionIndicator

Indicates if a given option instrument permits low exercise prices (LEPO).

Type: [Boolean](#)

Used in components: [Instrument](#)

### 171.2.2666 LowLimitPrice

Allowable low limit price for the trading day. A key parameter in validating order price. Used as the lower band for validating order prices. Orders submitted with prices below the lower limit will be rejected

Type: **Price**

Used in components: **PriceLimits**

#### **171.2.2667 LowPx**

Represents an indication of the low end of the price range for a security prior to the open or reopen

Type: **Price**

Used in groups: **MDFullGrp, MDIncGrp**

Used in messages: **AllocationInstructionAlert, SecurityStatus**

#### **171.2.2668 MailingDtls**

Set of Correspondence address details, possibly including phone, fax, etc.

Type: **String**

Used in groups: **RgstDtlsGrp**

#### **171.2.2669 MailingInst**

Free format text to specify mailing instruction requirements, e.g. "no third party mailings".

Type: **String**

Used in groups: **RgstDtlsGrp**

#### **171.2.2670 MakeWholeAmount**

Amount to be paid by the buyer of the option if the option is exercised prior to the MakeWhole-Date(42591).

Type: **Amt**

Used in components: **OptionExerciseMakeWholeProvision**

#### **171.2.2671 MakeWholeBenchmarkCurveName**

Identifies the benchmark floating rate index.

Type: **String**

Used in components: **OptionExerciseMakeWholeProvision**

**171.2.2672 MakeWholeBenchmarkCurvePoint**

The point on the floating rate index curve.

Sample values:

M = combination of a number between 1-12 and an "M" for month, e.g. 3M

Y = combination of number between 1-100 and a "Y" for year, e.g. 10Y

10Y-OLD = see above, then add "-OLD" when appropriate

INTERPOLATED = the point is mathematically derived

2/2031 5 3/8 = the point is stated via a combination of maturity month / year and coupon.

Type: **String**

Used in components: **OptionExerciseMakeWholeProvision**

**171.2.2673 MakeWholeBenchmarkQuote**

The quote side of the benchmark to be used for calculating the "make whole" amount.

Type: **int**

Allowed values in StrikeIndexQuoteCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Bid	Bid.
1	Mid	Mid
2	Offer	Offer

---

Used in components: **OptionExerciseMakeWholeProvision**

**171.2.2674 MakeWholeDate**

The date through which option cannot be exercised without penalty.

Type: **LocalMktDate**

Used in components: **OptionExerciseMakeWholeProvision**

**171.2.2675 MakeWholeInterpolationMethod**

The method used when calculating the "make whole" amount. The most common is linear method.

Type: **int**

Allowed values in PaymentStreamInflationInterpolationMethodCodeSet:

---

Code	Name	Description
0	None	None
1	LinearZeroYield	Linear zero yield

---

Used in components: **OptionExerciseMakeWholeProvision**

**171.2.2676 MakeWholeRecallSpread**

Spread over the floating rate index.

Type: **PriceOffset**

Used in components: **OptionExerciseMakeWholeProvision**

**171.2.2677 MandatoryClearingIndicator**

An indication that the trade is flagged for mandatory clearing.

Type: **Boolean**

Used in messages: **TradeCaptureReport**

**171.2.2678 MandatoryClearingJurisdiction**

Identifier of the regulatory jurisdiction requiring the trade to be cleared.

Type: **String**

Used in groups: **MandatoryClearingJurisdictionGrp**

**171.2.2679 MandatoryClearingJurisdictionGrp**

MandatoryClearingJurisdictionGrp is a repeating component of TradeCaptureReport used to specify the set of jurisdictions to which mandatory clearing applies.

Name	Mult.	Type	Description
NoMandatoryClearingJurisdictions	[1..1]	NumInGroup	
MandatoryClearingJurisdiction	[0..1]	String	Required if NoNoMandatoryClearingJurisdictions(41312) > 0.

Used in messages: [TradeCaptureReport](#)

**171.2.2680 ManualNoticeBusinessCenter**

Identifies the business center used for adjusting the time for manual exercise notice.

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in components: [OptionExercise](#)

**171.2.2681 ManualOrderIndicator**

Indicates if an order, quote or trade was initially received manually (as opposed to electronically) or if it was entered manually (as opposed to entered by automated trading software).

Type: [Boolean](#)

Used in groups: [ListOrdGrp](#)

Used in messages: [ExecutionReport](#), [MassOrder](#), [MassOrderAck](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#), [TradeCaptureReport](#)

**171.2.2682 MarginAmount**

Name	Mult.	Type	Description
NoMarginAmt	[1..1]	NumInGroup	Number of margin amount entries
MarginAmt	[0..1]	Amt	

Name	Mult.	Type	Description
MarginAmtType	[0..1]	CodeSet	Total margin requirement if not provided
MarginAmtCcy	[0..1]	Currency	Can be used to specify the base settlement currency if Currency(15) is not specified.
MarginAmtFXRate	[0..1]	float	
MarginAmtFXRateCalc	[0..1]	CodeSet	
MarginAmountMarketSegmentID	[0..1]	String	
MarginAmountMarketID	[0..1]	String	
MarginDirection	[0..1]	CodeSet	

---

Used in messages: [AccountSummaryReport](#), [MarginRequirementReport](#)

#### **171.2.2683 MarginAmountMarketID**

Market associated with the margin amount

Type: [String](#)

Used in groups: [MarginAmount](#)

#### **171.2.2684 MarginAmountMarketSegmentID**

Market segment associated with the margin amount.

Type: [String](#)

Used in groups: [MarginAmount](#)

#### **171.2.2685 MarginAmt**

Amount of margin requirement.

Type: [Amt](#)

Used in groups: [MarginAmount](#)

#### **171.2.2686 MarginAmtCcy**

Currency of the MarginAmt(1645).

Type: **Currency**

Used in groups: **MarginAmount**

### **171.2.2687 MarginAmtFXRate**

Foreign exchange rate used to compute the MarginAmt(1645) from the MarginAmtCcy(1646) and the Currency(15).

Type: **float**

Used in groups: **MarginAmount**

### **171.2.2688 MarginAmtFXRateCalc**

Specifies whether or not MarginAmtFXRate(2088) should be multiplied or divided.

Type: **char**

Allowed values in UnderlyingFXRateCalcCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Divide	Divide
M	Multiply	Multiply

---

Used in groups: **MarginAmount**

### **171.2.2689 MarginAmtType**

Type of margin requirement amount being specified.

Type: **int**

Allowed values in MarginAmtTypeCodeSet:

Code	Name	Description
1	AdditionalMargin	Additional Margin. Component of the total margin calculation which allows the CCP to include amounts generated outside of the Margin Deficit. Additional risk charges collected when a firm is placed on higher than normal surveillance. Additional margin serves to cover the additional liquidation costs that potentially could be incurred. Such possible close-out costs could arise if, based on the current market value of a portfolio, the worst case loss were to occur within a 24-hour period. It is used for options (also options on futures) and non-spread futures positions, bonds and equity trades. For bonds and equity trades, the additional margin is calculated for security positions but not for the corresponding cash positions.
2	AdjustedMargin	Adjusted Margin. Unadjusted Margin can be modified to become an Adjusted Margin by assigning a specific collateral to it or by applying an exchange rate.
3	UnadjustedMargin	Unadjusted Margin. Calculated by adding up the options Premium Margin, the current Liquidating Margin, the Futures Spread Margin and the Additional Margin on account and currency level.
4	BinaryAddOnAmount	Binary Add-On Amount. Requirement generated from positions in Binary Options which are considered fully margined. Margin for an individual contract in this category represents the total amount that would be paid upon delivery of a contract should it expire in-the-money. This amount is included as a component of Additional Margin in the Total Margin calculation.
5	CashBalanceAmount	Cash Balance Amount. Information about cash balance posted to the clearing house to cover the current margin requirement.
6	ConcentrationMargin	Concentration Margin. Reflects a riskier portfolio concentration when a set of closely related products is held.
7	CoreMargin	Core Margin. Specific basic requirement of a position. Core margin is equal to Initial Margin plus a percentage of the Variation Margin.
8	DeliveryMargin	Delivery Margin. Margin amount calculated between the Last Trade Date or Options Exercise Date and the Delivery or Settlement Date. Can also represent a commodities or energy delivery.
9	DiscretionaryMargin	Discretionary Margin. Unspecific margin amount added by the risk manager, also called Increase Coverage Amount.

<b>Code</b>	<b>Name</b>	<b>Description</b>
10	FuturesSpreadMargin	Futures Spread Margin. Long and short positions of futures with different expiration dates can be offset against each other and are called "spreads". The remaining risk stems from the difference in expiration dates which does not provide a perfect price correlation. The purpose of Futures Spread Margin is to cover this risk until the next trading day. This kind of margin is levied in order to cover those risks associated with a futures spread which could arise between today and tomorrow.
11	InitialMargin	Initial Margin. The initial amount required to cover the position.
12	LiquidatingMargin	Liquidating Margin. Calculated for cash, bond and equity positions and is equal to the profits and losses in such positions at the time of calculation. This margin protects the CCP if it is required to close out the position at the current/EOD price. The liquidating margin (also called Current Liquidating Margin or Net Liquidating Margin) is paid by the buyer or the seller of the bonds. This margin covers losses that would occur if a position were to be liquidated today. The liquidating margin is adjusted daily similar to premium margin.
13	MarginCallAmount	Margin Call Amount. If the collateral that has been deposited is no longer sufficient, meaning a lack of coverage exists, then the market participant will be called upon to provide additional cash as collateral.
14	MarginDeficitAmount	Margin Deficit Amount (Shortfall). Base margin risk charge. This amount represents anticipated losses should the value of a portfolio (all positions in the account) fall below predefined level of Historical Value-at-Risk confidence. Also called Expected Shortfall Amount.
15	MarginExcessAmount	Margin Excess Amount (Surplus). Excess long premium value which is generated when long premium value exceeds the sum of any short premium debit requirement and the account's risk charges. Also called Expected Surplus Amount or Margin Credit Amount.
16	OptionPremiumAmount	Option Premium Amount. Premium registered on the given trading date. The amount of money that the options buyer must pay the options seller.
17	PremiumMargin	Premium Margin. Premium margin must be deposited by the seller of a traditional options position. It remains effective until the exercise or expiration of the option, and covers the potential costs of a close-out (liquidation) of the position of the seller at the settlement price.

<b>Code</b>	<b>Name</b>	<b>Description</b>
18	ReserveMargin	Reserve Margin. Reserve margin provides a way to reflect the inflated risk of a position. Reserve margin is equal to a percentage of the variation margin.
19	SecurityCollateralAmount	Security Collateral Amount. Information about the security collateral posted to the clearing house to cover the current margin requirement.
20	StressTestAddOnAmount	Stress Test Add-On Amount. Amount in addition to Margin Deficit in the Risk component of the margin calculation. This charge is based on tests which incorporate changes to distributional and confidence level assumptions to evaluate exposure to security concentration and changes in dependence structure; a predetermined percentage of the calculated exposure is collateralized as this charge.
21	SuperMargin	Super Margin. Additional risk charge applied to predetermined Cross-Margin accounts. The charge is based on the account's level of Margin Deficit. This amount is included as a component of Additional Margin in the Total Margin calculation.
22	TotalMargin	Total Margin. Sum of all margin amounts at value date.
23	VariationMargin	Variation Margin. Variation margin (also called Contingent Variation Margin or Maintenance Margin) is the daily Profit and Loss (P&L) on Open Positions for the given trading date. The current price is compared to the previous day's price. Variation margin (a daily offsetting of profits and losses) occurs as a result of the mark-to-market procedure used for futures and options on futures.
24	SecondaryVariationMargin	Secondary Variation Margin. Variation margin on Option Positions that is calculated based on the market movement. This will be used by CCPs wanting to report the variation for Options and Futures separately.
25	RolledUpMarginDeficit	Rolled up margin deficit
26	SpreadResponseMargin	Spread response margin. Risk factor component associated with spread moves, curve shape changes and recovery rates.
27	SystemicRiskMargin	Systemic risk margin. Risk factor component to capture parallel shift of credit spreads.
28	CurveRiskMargin	Curve risk margin. Risk factor captures curve shifts based on portfolio.
29	IndexSpreadRiskMargin	Index spread risk margin. Risk factor component associated with risks due to widening/tightening spreads of CDS indices relative to each other.
30	SectorRiskMargin	Sector risk margin. Risk factor component to capture sector risk.

Code	Name	Description
31	JumpToDefaultRiskMargin	Jump-to-default risk margin. Risk factor component to capture extreme widening of credit spreads of a reference entity. Also known as Idiosyncratic Risk.
32	BasisRiskMargin	Basis risk margin. Risk factor component to capture basis risk between index and index constituent reference entities.
33	InterestRateRiskMargin	Interest rate risk margin. Risk factor component associated with parallel shift movements in interest rates.
34	JumpToHealthRiskMargin	Jump-to-health risk margin. Risk factor component to capture extreme narrowing of credit spreads of a reference entity. Also known as Idiosyncratic Risk.
35	OtherRiskMargin	Other risk margin. Any other risk factors include in the Margin Model.

Used in groups: [MarginAmount](#)

### 171.2.2690 MarginClass

Identifier for group of instruments with similar risk profile.

Type: [String](#)

Used in messages: [MarginRequirementInquiry](#), [MarginRequirementInquiryAck](#), [MarginRequirementReport](#)

### 171.2.2691 MarginDirection

Indicates whether the margin described is posted or received.

Type: [int](#)

Allowed values in MarginDirectionCodeSet:

Code	Name	Description
0	Posted	Posted. The party or account that is the object of the report posted margin.
1	Received	Received. The party or account that is the object of the report received margin.

Used in groups: [MarginAmount](#)

**171.2.2692 MarginExcess**

Excess margin amount (deficit if value is negative)

Type: [Amt](#)

Used in messages: [AccountSummaryReport](#), [CollateralAssignment](#), [CollateralInquiry](#), [CollateralReport](#), [CollateralRequest](#), [CollateralResponse](#)

**171.2.2693 MarginRatio**

The fraction of the cash consideration that must be collateralized, expressed as a percent. A MarginRatio of 02% indicates that the value of the collateral (after deducting for "haircut") must exceed the cash consideration by 2%.

Type: [Percentage](#)

Used in components: [FinancingDetails](#)

**171.2.2694 MarginReqmtInqID**

Unique identifier of the MarginRequirementInquiry.

Type: [String](#)

Used in messages: [MarginRequirementInquiry](#), [MarginRequirementInquiryAck](#), [MarginRequirementReport](#), [PositionReport](#)

**171.2.2695 MarginReqmtInqQualGrp**

---

Name	Mult.	Type	Description
<a href="#">NoMarginReqmtInqQualifier</a>	[1..1]	NumInGroup	Number of qualifier entries
<a href="#">MarginReqmtInqQualifier</a>	[0..1]	CodeSet	

---

Used in messages: [MarginRequirementInquiry](#), [MarginRequirementInquiryAck](#)

**171.2.2696 MarginReqmtInqQualifier**

Qualifier for MarginRequirementInquiry to identify a specific report.

Type: **int**

Allowed values in MarginReqmtInqQualifierCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Summary	Summary
1	Detail	Detail
2	ExcessDeficit	Excess/Deficit
3	NetPosition	Net Position

---

Used in groups: **MarginReqmtInqQualGrp**

**171.2.2697 MarginReqmtInqResult**

Result returned in response to MarginRequirementInquiry.

Type: **int**

Allowed values in MarginReqmtInqResultCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Successful	Successful (default)
1	InvalidOrUnknownInstrument	Invalid or unknown instrument
2	InvalidOrUnknownMarginClass	Invalid or unknown margin class
3	InvalidParties	Invalid Parties
4	InvalidTransportTypeReq	Invalid Transport Type requested
5	InvalidDestinationReq	Invalid Destination requested
6	NoMarginReqFound	No margin requirement found
7	MarginReqInquiryQualifierNotSupported	Margin requirement inquiry qualifier not supported
8	UnauthorizedForMarginReqInquiry	Unauthorized for margin requirement inquiry
99	Other	Other (further information in Text (58) field)

---

Used in messages: **MarginRequirementInquiryAck**

**171.2.2698 MarginReqmtInqStatus**

Status of MarginRequirementInquiry.

Type: **int**

Allowed values in CollInquiryStatusCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Accepted	Accepted
1	AcceptedWithWarnings	Accepted With Warnings
2	Completed	Completed
3	CompletedWithWarnings	Completed With Warnings
4	Rejected	Rejected

---

Used in messages: **MarginRequirementInquiryAck**

**171.2.2699 MarginReqmtRptID**

Identifier for the MarginRequirementReport message.

Type: **String**

Used in messages: **MarginRequirementReport**

**171.2.2700 MarginReqmtRptType**

Type of MarginRequirementReport.

Type: **int**

Allowed values in MarginReqmtRptTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Summary	Summary
1	Detail	Detail
2	ExcessDeficit	Excess/Deficit

---

Used in messages: **MarginRequirementReport**

**171.2.2701 MarketCondition**

Market condition. In the context of ESMA RTS 8 it is important that trading venues communicate the condition of the market, particularly "stressed" and "exceptional", in order to provide incentives for firms contributing to liquidity.

Type: **int**

Allowed values in MarketConditionCodeSet:

Code	Name	Description
0	Normal	Normal. The condition of the market in the absence of "stressed" or "exceptional" conditions.
1	Stressed	Stressed. In the context of ESMA RTS 8 Article 6: Trading venues shall set out the parameters to identify stressed market conditions in terms of significant short-term changes of price and volume. Trading venues shall consider the resumption of trading after volatility interruptions as stressed market conditions.
2	Exceptional	Exceptional. In the context of ESMA RTS 8 Article 3: Due to (a) a situation of extreme volatility; (b) war, industrial action, civil unrest or cyber sabotage; (c) disorderly trading conditions, e.g. due to technical issues; (d) unavailability of risk management facilities.

Used in groups: **MDFullGrp**, **MDIncGrp**

**171.2.2702 MarketDataFeedTypes**

The MarketDataFeedTypes component is used to specify the different available feed types and sub-types, and additional market data feed related attributes, such as the market depth of the specified feed type.

Name	Mult.	Type	Description
<b>NoMDFeedTypes</b>	[1..1]	NumInGroup	
<b>MDFeedType</b>	[0..1]	String	Required if NoMDFeedTypes(1141) > 0.
<b>MDSUBFeedType</b>	[0..1]	String	
<b>MarketDepth</b>	[0..1]	int	Specifies the depth of book (or levels of market depth) for the feed type.

Name	Mult.	Type	Description
MarketDepthTimeInterval	[0..1]	int	Conditionally required when MarketDepthTimeIntervalUnit(2564) is specified.
MarketDepthTimeIntervalUnit	[0..1]	CodeSet	Conditionally required when MarketDataTimeInterval(2563) is specified.
MDRecoveryTimeInterval	[0..1]	int	Conditionally required when MDRecoveryTimeIntervalUnit(2566) is specified.
MDRecoveryTimeIntervalUnit	[0..1]	CodeSet	Conditionally required when MDRecoveryTimeInterval(2565) is specified.
MDBookType	[0..1]	CodeSet	
MDSubBookType	[0..1]	int	
PrimaryServiceLocationID	[0..1]	String	
SecondaryServiceLocationID	[0..1]	String	

Used in components: [TradingSessionRules](#)

Used in messages: [MarketDefinition](#), [MarketDefinitionUpdateReport](#)

### 171.2.2703 MarketDepth

Depth of market for Book Snapshot / Incremental updates

0 - full book depth

1 - top of book

2 and above - book depth (number of levels)

Type: [int](#)

Used in components: [MDStatisticParameters](#)

Used in groups: [MDIncGrp](#), [MarketDataFeedTypes](#)

Used in messages: [MarketDataRequest](#), [MarketDataSnapshotFullRefresh](#), [SecurityMassStatus](#), [SecurityStatus](#)

### 171.2.2704 MarketDepthTimeInterval

Specifies the time interval used for netting market data in a price depth feed.

Type: [int](#)

Used in groups: [MarketDataFeedTypes](#)

**171.2.2705 MarketDepthTimeIntervalUnit**

The time unit associated with the time interval of the netting of market data in a price depth feed.

Type: **int**

Allowed values in OrderDelayUnitCodeSet:

Code	Name	Description
0	Seconds	Seconds (default if not specified)
1	TenthsOfASecond	Tenths of a second
2	HundredthsOfASecond	Hundredths of a second
3	Milliseconds	milliseconds
4	Microseconds	microseconds
5	Nanoseconds	nanoseconds
10	Minutes	minutes
11	Hours	hours
12	Days	days
13	Weeks	weeks
14	Months	months
15	Years	years

Used in groups: **MarketDataFeedTypes**

**171.2.2706 MarketDisruption**

The MarketDisruption component is a subcomponent of the Instrument used to specify the market disruption provisions of the swap.

Name	Mult.	Type	Description
<b>MarketDisruptionProvision</b>	[0..1]	CodeSet	
<b>MarketDisruptionEventGrp</b>	[0..*]	Group	
<b>MarketDisruptionFallbackProvision</b>	[0..1]	CodeSet	
<b>MarketDisruptionFallbackGrp</b>	[0..*]	Group	
<b>MarketDisruptionFallbackReferencePriceGrp</b>	[0..*]	Group	
<b>MarketDisruptionMaximumDays</b>	[0..1]	int	

Name	Mult.	Type	Description
MarketDisruptionMaterialityPercentage	[0..1]	Percentage	If specified, the disruption event should be specified in MarketDisruptionEventGrp.
MarketDisruptionMinimumFuturesContracts	[0..1]	int	Applicable only when MarketDisruptionEvent(41093)='DeMinimisTrading'.

Used in components: [Instrument](#)

### 171.2.2707 MarketDisruptionEvent

Specifies the market disruption event.

For commodities see <http://www.fpml.org/coding-scheme/commodity-market-disruption> for values.

For foreign exchange, see [http://www.fixtradingcommunity.org/codelists#Market\\_Disruption\\_Event](http://www.fixtradingcommunity.org/codelists#Market_Disruption_Event) for code list of applicable event types.

Type: [String](#)

Used in groups: [MarketDisruptionEventGrp](#)

### 171.2.2708 MarketDisruptionEventGrp

The MarketDisruptionEventGrp is a repeating subcomponent of the MarketDisruption component used to specify the market disruption events.

Name	Mult.	Type	Description
NoMarketDisruptionEvents	[1..1]	NumInGroup	
MarketDisruptionEvent	[0..1]	String	Required if NoMarketDisruptionEvents(41092) > 0.
MarketDisruptionValue	[0..1]	String	

Used in components: [MarketDisruption](#)

### 171.2.2709 MarketDisruptionFallbackBasketCurrency

Specifies the currency if the underlier is a basket. Uses ISO 4217 currency codes.

Type: **Currency**

Used in groups: **MarketDisruptionFallbackReferencePriceGrp**

#### **171.2.2710 MarketDisruptionFallbackBasketDivisor**

Specifies the basket divisor amount. This value is normally used to adjust the constituent weight for pricing or to adjust for dividends, or other corporate actions.

Type: **float**

Used in groups: **MarketDisruptionFallbackReferencePriceGrp**

#### **171.2.2711 MarketDisruptionFallbackGrp**

The MarketDisruptionFallbackGrp is a repeating subcomponent of the MarketDisruption component used to specify the market disruption fallback provisions.

---

<b>Name</b>	<b>Mult.</b>	<b>Type</b>	<b>Description</b>
<b>NoMarketDisruptionFallbacks</b>	[1..1]	NumInGroup	
<b>MarketDisruptionFallbackType</b>	[0..1]	String	Required if NoMarketDisruptionFallbacks(41094) > 0. The sequence of entries specifies the order in which the fallback provisions should be applied.
<b>MarketDisruptionFallbackValue</b>	[0..1]	String	

---

Used in components: **MarketDisruption**

#### **171.2.2712 MarketDisruptionFallbackOpenUnits**

If there are multiple underlying assets, this specifies the number of units (index or securities) that constitute the underlier of the swap. In the case of a basket swap, this is used to reference both the number of basket units, and the number of each asset components of the basket when these are expressed in absolute terms.

Type: **Qty**

Used in groups: **MarketDisruptionFallbackReferencePriceGrp**

**171.2.2713 MarketDisruptionFallbackProvision**

Specifies the location of the fallback provision documentation.

Type: **int**

Allowed values in MarketDisruptionFallbackProvisionCodeSet:

Code	Name	Description
0	MasterAgreement	As specified in master agreement
1	Confirmation	As specified in confirmation

Used in components: **MarketDisruption**

**171.2.2714 MarketDisruptionFallbackReferencePriceGrp**

The MarketDisruptionFallbackReferencePriceGrp is a repeating subcomponent of the MarketDisruption component used to specify the fallback reference price and underlying security provisions

Name	Mult.	Type	Description
NoMarketDisruptionFallbackReferencePrices	[1..1]	NumInGroup	
MarketDisruptionFallbackUnderlierType	[0..1]	CodeSet	Required if NoMarketDisruptionFallbackReferencePrices(41096) > 0.
MarketDisruptionFallbackUnderlierSecurityID	[0..1]	String	Conditionally required when MarketDisruptionFallbackUnderlierSecurityIDSource(41099) is specified.
MarketDisruptionFallbackUnderlierSecurityIDSource	[0..1]	CodeSet	Conditionally required when MarketDisruptionFallbackUnderlierSecurityID(41098) is specified.
MarketDisruptionFallbackUnderlierSecurityDesc	[0..1]	String	
EncodedMarketDisruptionFallbackUnderlierSecurityDescLen	[0..1]	Length	Must be set if EncodedMarketDisruptionFallbackUnderlierSecurityDesc(41102) field is specified and must immediately precede it
EncodedMarketDisruptionFallbackUnderlierSecurityDesc	[0..1]	data	Encoded (non-ASCII characters) representation of the MarketDisruptionFallbackUnderlierSecurityDesc(41100) field in the encoded format specified via the MessageEncoding(347) field.
MarketDisruptionFallbackOpenUnits	[0..1]	Qty	

Name	Mult.	Type	Description
MarketDisruptionFallbackBasketCurrency	[0..1]	Currency	
MarketDisruptionFallbackBasketDivisor	[0..1]	float	

---

Used in components: [MarketDisruption](#)

#### **171.2.2715 MarketDisruptionFallbackType**

Specifies the type of disruption fallback.

See <http://www.fpml.org/coding-scheme/commodity-market-disruption-fallback> for values.

Type: [String](#)

Used in groups: [MarketDisruptionFallbackGrp](#)

#### **171.2.2716 MarketDisruptionFallbackUnderlierSecurityDesc**

Specifies the description of the underlying security.

Type: [String](#)

Used in groups: [MarketDisruptionFallbackReferencePriceGrp](#)

#### **171.2.2717 MarketDisruptionFallbackUnderlierSecurityID**

Specifies the identifier value of the security.

Type: [String](#)

Used in groups: [MarketDisruptionFallbackReferencePriceGrp](#)

#### **171.2.2718 MarketDisruptionFallbackUnderlierSecurityIDSource**

Specifies the class or source scheme of the security identifier.

Type: [String](#)

Allowed values in SecurityIDSourceCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	CUSIP	CUSIP
2	SEDOL	SEDOL
3	QUIK	QUIK
4	ISINNumber	ISIN
5	RICCode	RIC
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
7	ISOCountryCode	ISO Country Code
8	ExchangeSymbol	Exchange symbol
9	ConsolidatedTapeAssociation	Consolidated Tape Association (CTA) Symbol (SIAC CTS/CQS line format)
A	BloombergSymbol	Bloomberg Symbol
B	Wertpapier	Wertpapier
C	Dutch	Dutch
D	Valoren	Valoren
E	Sicovam	Sicovam
F	Belgian	Belgian
G	Common	"Common" (Clearstream and Euroclear)
H	ClearingHouse	Clearing house / Clearing organization
I	ISDAFpMLSpecification	ISDA/FpML product specification (XML in SecurityXML(1185))
J	OptionPriceReportingAuthority	Option Price Reporting Authority
K	ISDAFpMLURL	ISDA/FpML product URL (URL in SecurityID(48))
L	LetterOfCredit	Letter of credit
M	MarketplaceAssignedIdentifier	Marketplace-assigned Identifier
N	MarkitREDEntityCLIP	Markit RED entity CLIP
P	MarkitREDPairCLIP	Markit RED pair CLIP
Q	CFTCCommodityCode	CFTC commodity code
R	ISDACommodityReferencePrice	ISDA Commodity Reference Price
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
T	LegalEntityIdentifier	Legal entity identifier
U	Synthetic	Synthetic. Used to specify that the security identifier is synthetic for linking nested underliers when there is no market identifier for the collection.
V	FidessaInstrumentMnemonic	Fidessa Instrument Mnemonic (FIM)

---

Code	Name	Description
W	IndexName	Index name. Standard name of the index or rate index, e.g. "LIBOR" or "iTraxx Australia".
X	UniformSymbol	Uniform Symbol (UMTF Symbol)
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

---

Used in groups: [MarketDisruptionFallbackReferencePriceGrp](#)

### 171.2.2719 MarketDisruptionFallbackUnderlierType

The type of reference price underlier.

Type: [int](#)

Allowed values in MarketDisruptionFallbackUnderlierTypeCodeSet:

---

Code	Name	Description
0	Basket	Basket
1	Bond	Bond
2	Cash	Cash
3	Commodity	Commodity
4	ConvertibleBond	Convertible bond
5	Equity	Equity
6	ExchangeTradedFund	Exchange traded fund
7	Future	Future
8	Index	Index
9	Loan	Loan
10	Mortgage	Mortgage
11	MutualFund	Mutual fund

---

Used in groups: [MarketDisruptionFallbackReferencePriceGrp](#)

### 171.2.2720 MarketDisruptionFallbackValue

Applicable value for MarketDisruptionFallbackType(41095).

Type: [String](#)

Used in groups: [MarketDisruptionFallbackGrp](#)

### **171.2.2721 MarketDisruptionMaterialityPercentage**

Used when a price materiality percentage applies to the price source disruption event and this event has been specified.

Type: [Percentage](#)

Used in components: [MarketDisruption](#)

### **171.2.2722 MarketDisruptionMaximumDays**

Specifies the maximum number of market disruption days (commodity or bullion business days) in a contract or confirmation. If none are specified, the maximum number of market disruption days is five (5).

Type: [int](#)

Used in components: [MarketDisruption](#)

### **171.2.2723 MarketDisruptionMinimumFuturesContracts**

Specifies the minimum futures contracts level that dictates whether or not a 'De Minimis Trading' event has occurred.

Type: [int](#)

Used in components: [MarketDisruption](#)

### **171.2.2724 MarketDisruptionProvision**

The consequences of market disruption events.

Type: [int](#)

Allowed values in MarketDisruptionProvisionCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	NotApplicable	Not applicable
1	Applicable	Applicable

---

Code	Name	Description
2	AsInMasterAgreement	As specified in master agreement
3	AsInConfirmation	As specified in confirmation

Used in components: [MarketDisruption](#)

### **171.2.2725 MarketDisruptionValue**

Applicable value for [MarketDisruptionEvent\(41093\)](#).

Type: [String](#)

Used in groups: [MarketDisruptionEventGrp](#)

### **171.2.2726 MarketID**

Identifies the market

Type: [Exchange](#)

Used in groups: [MarketSegmentGrp](#), [MarketSegmentScopeGrp](#), [TrdSessLstGrp](#)

Used in messages: [CrossRequest](#), [CrossRequestAck](#), [DerivativeSecurityListRequest](#), [MarketDataIncrementalRefresh](#), [MarketDataSnapshotFullRefresh](#), [MarketDataStatisticsReport](#), [MarketDataStatisticsRequest](#), [MarketDefinition](#), [MarketDefinitionRequest](#), [MarketDefinitionUpdateReport](#), [MassOrder](#), [MassOrderAck](#), [News](#), [OrderMassActionReport](#), [OrderMassActionRequest](#), [OrderMassCancelReport](#), [OrderMassCancelRequest](#), [PartyActionReport](#), [PartyActionRequest](#), [SecurityDefinitionRequest](#), [SecurityList](#), [SecurityListRequest](#), [SecurityListUpdateReport](#), [SecurityMassStatus](#), [SecurityMassStatusRequest](#), [SecurityStatus](#), [SecurityStatusRequest](#), [SecurityTypeRequest](#), [SecurityTypes](#), [TradeCaptureReport](#), [TradeCaptureReportAck](#), [TradeMatchReport](#), [TradingSessionListRequest](#), [TradingSessionStatus](#), [TradingSessionStatusRequest](#)

### **171.2.2727 MarketMakerActivity**

Indicates market maker participation in security.

Type: [int](#)

Allowed values in [MarketMakerActivityCodeSet](#):

Code	Name	Description
0	NoParticipation	No participation
1	BuyParticipation	Buy participation
2	SellParticipation	Sell participation
3	BothBuyAndSellParticipation	Both buy and sell participation

Used in messages: [SecurityStatus](#)

### 171.2.2728 MarketReportID

Market Definition message identifier.

Type: [String](#)

Used in messages: [MarketDefinition](#), [MarketDefinitionUpdateReport](#)

### 171.2.2729 MarketReqID

Unique ID of a Market Definition Request message.

Type: [String](#)

Used in messages: [MarketDefinition](#), [MarketDefinitionRequest](#), [MarketDefinitionUpdateReport](#)

### 171.2.2730 MarketSegmentDesc

Description or name of Market Segment

Type: [String](#)

Used in messages: [MarketDataStatisticsReport](#), [MarketDataStatisticsRequest](#), [MarketDefinition](#), [MarketDefinitionUpdateReport](#)

### 171.2.2731 MarketSegmentGrp

Name	Mult.	Type	Description
<a href="#">NoMarketSegments</a>	[1..1]	NumInGroup	Number of Market Segments on which a security may trade.

Name	Mult.	Type	Description
MarketID	[0..1]	Exchange	Identifies the market which lists and trades the instrument.
MarketSegmentID	[0..1]	String	Identifies the segment of the market to which the specify trading rules and listing rules apply.
SecurityTradingRules	[0..1]	Component	
StrikeRules	[0..*]	Group	This block specifies the rules for determining how new strikes should be listed within the stated price range of the underlying instrument.

Used in components: [DerivativeSecurityDefinition](#)

Used in messages: [SecurityDefinition](#), [SecurityDefinitionUpdateReport](#)

### 171.2.2732 MarketSegmentID

Identifies the market segment

Type: [String](#)

Used in groups: [MarketSegmentGrp](#), [MarketSegmentScopeGrp](#), [TrdSessLstGrp](#)

Used in messages: [CrossOrderCancelReplaceRequest](#), [CrossOrderCancelRequest](#), [CrossRequest](#), [CrossRequestAck](#), [DerivativeSecurityListRequest](#), [ExecutionReport](#), [MarketDataIncrementalRefresh](#), [MarketDataSnapshotFullRefresh](#), [MarketDataStatisticsReport](#), [MarketDataStatisticsRequest](#), [MarketDefinition](#), [MarketDefinitionRequest](#), [MarketDefinitionUpdateReport](#), [MassOrder](#), [MassOrderAck](#), [MultilegOrderCancelReplace](#), [NewOrderCross](#), [NewOrderMultileg](#), [NewOrderSingle](#), [News](#), [OrderCancelReplaceRequest](#), [OrderCancelRequest](#), [OrderMassActionReport](#), [OrderMassActionRequest](#), [OrderMassCancelReport](#), [OrderMassCancelRequest](#), [OrderStatusRequest](#), [PartyActionReport](#), [PartyActionRequest](#), [SecurityDefinitionRequest](#), [SecurityList](#), [SecurityListRequest](#), [SecurityListUpdateReport](#), [SecurityMassStatus](#), [SecurityMassStatusRequest](#), [SecurityStatus](#), [SecurityStatusRequest](#), [SecurityTypeRequest](#), [SecurityTypes](#), [TradeCaptureReport](#), [TradeCaptureReportAck](#), [TradeMatchReport](#), [TradingSessionListRequest](#), [TradingSessionStatus](#), [TradingSessionStatusRequest](#)

### 171.2.2733 MarketSegmentRelationship

Type of relationship between two or more market segments.

Type: [int](#)

Allowed values in [MarketSegmentRelationshipCodeSet](#):

Code	Name	Description
1	MarketSegmentPoolMember	Market segment pool member. Market segments represent constituents of the pool identified.
2	RetailSegment	Retail segment. Retail segment related to wholesale segment identified.
3	WholesaleSegment	Wholesale segment. Wholesale segment related to retail segment identified.

Used in groups: [RelatedMarketSegmentGrp](#)

### 171.2.2734 MarketSegmentScopeGrp

Conveys a list of markets and, optionally, their market segments. Note that the component MarketSegmentGrp exists, but is not useful for this purpose, as it conveys additional information not appropriate in this context.

Name	Mult.	Type	Description
<a href="#">NoMarketSegments</a>	[1..1]	NumInGroup	
<a href="#">MarketID</a>	[0..1]	Exchange	Required if NoMarketSegments(1310) > 0.
<a href="#">MarketSegmentID</a>	[0..1]	String	

Used in groups: [EntitlementGrp](#)

Used in messages: [MarketDataRequest](#), [PartyEntitlementsRequest](#)

### 171.2.2735 MarketSegmentStatus

Status of market segment.

Type: [int](#)

Allowed values in MarketSegmentStatusCodeSet:

Code	Name	Description
1	Active	Active. Market segment is active, i.e. trading is possible.
2	Inactive	Inactive. Market segment has previously been active and is now inactive.

---

Code	Name	Description
3	Published	Published. Market segment information is provided prior to its first activation.

---

Used in messages: [MarketDefinition](#), [MarketDefinitionUpdateReport](#)

### 171.2.2736 MarketSegmentSubType

Used to further categorize market segments within a MarketSegmentType(2543).

Type: [int](#)

Allowed values in MarketSegmentSubTypeCodeSet:

---

Code	Name	Description
1	InterProductSpread	Inter-product spread. Complex instruments which consist of leg instruments from different products, e.g. a location spread which include country-specific products in each leg instrument.

---

Used in messages: [MarketDefinition](#), [MarketDefinitionUpdateReport](#)

### 171.2.2737 MarketSegmentType

Used to classify the type of market segment.

Type: [int](#)

Allowed values in MarketSegmentTypeCodeSet:

---

Code	Name	Description
1	Pool	Pool. Used when multiple market segments are being grouped or pooled together.
2	Retail	Retail.
3	Wholesale	Wholesale.

---

Used in messages: [MarketDefinition](#), [MarketDefinitionUpdateReport](#)

**171.2.2738 MarketUpdateAction**

Specifies the action taken for the specified MarketID(1301) + MarketSegmentID(1300).

Type: **char**

Allowed values in SecurityUpdateActionCodeSet:

---

Code	Name	Description
A	Add	Add
D	Delete	Delete
M	Modify	Modify

---

Used in messages: **MarketDefinitionUpdateReport**

**171.2.2739 MassActionReason**

Reason for submission of mass action.

Type: **int**

Allowed values in MassActionReasonCodeSet:

---

Code	Name	Description
0	None	No special reason (default)
1	TradingRiskControl	Trading risk control. General violation of trading rules. Can be used if specific reason is unavailable or must not be disclosed.
2	ClearingRiskControl	Clearing risk control. General violation of clearing rules. Can be used if specific reason is unavailable or must not be disclosed.
3	MarketMakerProtection	Market maker protection. Specific action taken to prevent further executions for a market maker.
4	StopTrading	Stop trading. Specific action taken in conjunction with the prevention of further trading. Scope can be defined with TargetParties component.
5	EmergencyAction	Emergency action. Specific action taken due to an emergency condition. Scope can be defined with TargetParties component.
6	SessionLossLogout	Session loss or logout. Protection of trader or firm after having lost connectivity.
7	DuplicateLogin	Duplicate login. Trader only allowed to login once.

---

Code	Name	Description
8	ProductNotTraded	Product not traded. Product not available for trading, e.g. in a halted state.
9	InstrumentNotTraded	Instrument not traded. Instrument not available for trading, e.g. due to intra-day expiration.
10	CompleInstrumentDeleted	Complex instrument deleted. Removal of complex instrument, e.g. due to expiry, leading to mass action on open orders.
11	CircuitBreakerActivated	Circuit breaker activated. Trading interruption leading to mass action on open orders.
99	Other	Other

Used in messages: [OrderMassActionReport](#), [OrderMassActionRequest](#)

### 171.2.2740 MassActionRejectReason

Reason Order Mass Action Request was rejected

Type: [int](#)

Allowed values in MassActionRejectReasonCodeSet:

Code	Name	Description
0	MassActionNotSupported	Mass action not supported
1	InvalidOrUnknownSecurity	Invalid or unknown security
2	InvalidOrUnknownUnderlyingSecurity	Invalid or unknown underlying security
3	InvalidOrUnknownProduct	Invalid or unknown product
4	InvalidOrUnknownCFIcode	Invalid or unknown CFI Code
5	InvalidOrUnknownSecurityType	Invalid or unknown security type
6	InvalidOrUnknownTradingSession	Invalid or unknown trading session
7	InvalidOrUnknownMarket	Invalid or unknown market
8	InvalidOrUnknownMarketSegment	Invalid or unknown market segment
9	InvalidOrUnknownSecurityGroup	Invalid or unknown security group
10	InvalidOrUnknownSecurityIssuer	Invalid or unknown issuer
11	InvalidOrUnknownIssuerOfUnderlyingSecurity	Invalid or unknown issuer of underlying security
99	Other	Other

Used in messages: [OrderMassActionReport](#)

### **171.2.2741 MassActionReportID**

Unique identifier of Order Mass Cancel Report or Order Mass Action Report message as assigned by sell-side (broker, exchange, ECN)

Type: [String](#)

Used in messages: [OrderMassActionReport](#), [OrderMassCancelReport](#)

### **171.2.2742 MassActionResponse**

Specifies the action taken by counterparty order handling system as a result of the action type indicated in MassActionType of the Order Mass Action Request.

Type: [int](#)

Allowed values in MassActionResponseCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Rejected	Rejected - See MassActionRejectReason(1376)
1	Accepted	Accepted
2	Completed	Completed

---

Used in messages: [OrderMassActionReport](#)

### **171.2.2743 MassActionScope**

Specifies scope of Order Mass Action Request.

Type: [int](#)

Allowed values in MassActionScopeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	AllOrdersForASecurity	All orders for a security
2	AllOrdersForAnUnderlyingSecurity	All orders for an underlying security
3	AllOrdersForAProduct	All orders for a product

---

---

Code	Name	Description
4	AllOrdersForACFIcode	All orders for a CFI Code
5	AllOrdersForASecurityType	All orders for a security type
6	AllOrdersForATradingSession	All orders for a trading session
7	AllOrders	All orders
8	AllOrdersForAMarket	All orders for a market
9	AllOrdersForAMarketSegment	All orders for a market segment (or multiple segments)
10	AllOrdersForASecurityGroup	All orders for a security group
11	CancelForSecurityIssuer	All orders for an issuer
12	CancelForIssuerOfUnderlyingSecurity	All orders for an issuer of underlying security

---

Used in messages: [OrderMassActionReport](#), [OrderMassActionRequest](#)

#### **171.2.2744 MassActionType**

Specifies the type of action requested

Type: **int**

Allowed values in MassActionCodeSet:

---

Code	Name	Description
1	SuspendOrders	Suspend orders
2	ReleaseOrdersFromSuspension	Release orders from suspension
3	CancelOrders	Cancel orders

---

Used in messages: [OrderMassActionReport](#), [OrderMassActionRequest](#)

#### **171.2.2745 MassCancelRejectReason**

Reason Order Mass Cancel Request was rejected

Type: **int**

Allowed values in MassCancelRejectReasonCodeSet:

Code	Name	Description
0	MassCancelNotSupported	Mass Cancel Not Supported
1	InvalidOrUnknownSecurity	Invalid or unknown security
2	InvalidOrUnknownUnderlyingSecurity	Invalid or unknown underlying security
3	InvalidOrUnknownProduct	Invalid or unknown product
4	InvalidOrUnknownCFIcode	Invalid or unknown CFI Code
5	InvalidOrUnknownSecurityType	Invalid or unknown security type
6	InvalidOrUnknownTradingSession	Invalid or unknown trading session
7	InvalidOrUnknownMarket	Invalid or unknown market
8	InvalidOrUnknownMarketSegment	Invalid or unknown market segment
9	InvalidOrUnknownSecurityGroup	Invalid or unknown security group
10	InvalidOrUnknownSecurityIssuer	Invalid or unknown security issuer
11	InvalidOrUnknownIssuerOfUnderlyingSecurity	Invalid or unknown issuer of underlying security
99	Other	Other

Used in messages: [OrderMassCancelReport](#)

### 171.2.2746 MassCancelRequestType

Specifies scope of Order Mass Cancel Request.

Type: [char](#)

Allowed values in MassCancelRequestTypeCodeSet:

Code	Name	Description
1	CancelOrdersForASecurity	Cancel orders for a security
2	CancelOrdersForAnUnderlyingSecurity	Cancel orders for an underlying security
3	CancelOrdersForAProduct	Cancel orders for a product
4	CancelOrdersForACFIcode	Cancel orders for a CFIcode
5	CancelOrdersForASecurityType	Cancel orders for a security type
6	CancelOrdersForATradingSession	Cancel orders for a trading session
7	CancelAllOrders	Cancel all orders
8	CancelOrdersForAMarket	Cancel orders for a market

Code	Name	Description
9	CancelOrdersForAMarketSegment	Cancel orders for a market segment
A	CancelOrdersForASecurityGroup	Cancel orders for a security group
B	CancelOrdersForSecurityIssuer	Cancel orders for an issuer
C	CancelForIssuerOfUnderlyingSecurity	Cancel orders for an issuer of underlying security

Used in messages: [OrderMassCancelReport](#), [OrderMassCancelRequest](#)

### 171.2.2747 MassCancelResponse

Specifies the action taken by counterparty order handling system as a result of the Order Mass Cancel Request

Type: [char](#)

Allowed values in MassCancelResponseCodeSet:

Code	Name	Description
0	CancelRequestRejected	Cancel Request Rejected - See MassCancelRejectReason (532)
1	CancelOrdersForASecurity	Cancel orders for a security
2	CancelOrdersForAnUnderlyingSecurity	Cancel orders for an underlying security
3	CancelOrdersForAProduct	Cancel orders for a product
4	CancelOrdersForACFICode	Cancel orders for a CFI Code
5	CancelOrdersForASecurityType	Cancel orders for a security type
6	CancelOrdersForATradingSession	Cancel orders for a trading session
7	CancelAllOrders	Cancel all orders
8	CancelOrdersForAMarket	Cancel orders for a market
9	CancelOrdersForAMarketSegment	Cancel orders for a market segment
A	CancelOrdersForASecurityGroup	Cancel orders for a security group
B	CancelOrdersForASecuritiesIssuer	Cancel orders for an issuer
C	CancelOrdersForIssuerOfUnderlyingSecurity	Cancel orders for an issuer of underlying security

Used in messages: [OrderMassCancelReport](#)

**171.2.2748 MassHaltReason**

Denotes the reason for the Opening Delay or Trading halt of a group of securities.

Type: **int**

Allowed values in HaltReasonCodeSet:

Code	Name	Description
0	NewsDissemination	News Dissemination
1	OrderInflux	Order Influx
2	OrderImbalance	Order Imbalance
3	AdditionalInformation	Additional Information
4	NewsPending	News Pending
5	EquipmentChangeover	Equipment Changeover

Used in messages: **SecurityMassStatus**

**171.2.2749 MassOrderReportID**

Unique message identifier for the response to a mass order request as assigned by the receiver of the orders.

Type: **String**

Used in messages: **MassOrderAck**

**171.2.2750 MassOrderRequestID**

Unique message identifier for a mass order request as assigned by the submitter of the orders.

Type: **String**

Used in messages: **ExecutionReport, MassOrder, MassOrderAck**

**171.2.2751 MassOrderRequestResult**

Request result of mass order request.

Type: **int**

Allowed values in MassOrderRequestResultCodeSet:

Code	Name	Description
0	Successful	Successful
1	ResponseLevelNotSupported	Response level not supported
2	InvalidMarket	Invalid market
3	InvalidMarketSegment	Invalid market segment
99	Other	Other

Used in messages: [MassOrderAck](#)

### 171.2.2752 MassOrderRequestStatus

Status of mass order request.

Type: [int](#)

Allowed values in MassOrderRequestStatusCodeSet:

Code	Name	Description
1	Accepted	Accepted
2	AcceptedWithAdditionalEvents	Accepted with additional events
3	Rejected	Rejected

Used in messages: [MassOrderAck](#)

### 171.2.2753 MassStatusReqID

Value assigned by issuer of Mass Status Request to uniquely identify the request

Type: [String](#)

Used in messages: [ExecutionReport](#), [OrderMassStatusRequest](#)

### 171.2.2754 MassStatusReqType

Specifies the type or scope of the mass order status request.

Type: **int**

Allowed values in `MassStatusReqTypeCodeSet`:

Code	Name	Description
1	StatusForOrdersForASecurity	Status for orders for a security
2	StatusForOrdersForAnUnderlyingSecurity	Status for orders for an underlying security
3	StatusForOrdersForAProduct	Status for orders for a product
4	StatusForOrdersForACFICode	Status for orders for a CFI Code
5	StatusForOrdersForASecurityType	Status for orders for a security type
6	StatusForOrdersForATradingSession	Status for orders for a trading session
7	StatusForAllOrders	Status for all orders
8	StatusForOrdersForAPartyID	Status for orders for a party identifier
9	StatusForSecurityIssuer	Status for orders for an issuer
10	StatusForIssuerOfUnderlyingSecurity	Status for orders for an issuer of underlying security

Used in messages: **OrderMassStatusRequest**

#### **171.2.2755 MasterConfirmationAnnexDate**

The date that an annex to the master confirmation was executed between the parties.

Type: **LocalMktDate**

Used in components: **FinancingDetails**

#### **171.2.2756 MasterConfirmationAnnexDesc**

The type of master confirmation annex executed between the parties.

See <http://www.fpml.org/coding-scheme/master-confirmation-annex-type> for values.

Type: **String**

Used in components: **FinancingDetails**

#### **171.2.2757 MasterConfirmationDate**

Alternative to broker confirmation. The date of the confirmation executed between the parties and intended to govern all relevant transactions between those parties.

Type: **LocalMktDate**

Used in components: **FinancingDetails**

#### **171.2.2758 MasterConfirmationDesc**

The type of master confirmation executed between the parties.

See <http://www.fpml.org/coding-scheme/master-confirmation-type> for values.

Type: **String**

Used in components: **FinancingDetails**

#### **171.2.2759 MatchAlgorithm**

The types of algorithm used to match orders in a specific security. Possible value types are FIFO, Allocation, Pro-rata, Lead Market Maker, Currency Calendar.

Type: **String**

Used in groups: **MatchRules**

#### **171.2.2760 MatchAttribTagID**

Existing FIX field to be applied as a matching criteria to the instruction, bilaterally agreed between parties.

Type: **TagNum**

Used in groups: **MatchingInstructions**

#### **171.2.2761 MatchAttribValue**

Value of MatchAttribTagID(1626) on which to apply the matching instruction.

Type: **String**

Used in groups: **MatchingInstructions**

**171.2.2762 MatchExceptionAllocValue**

The allocating party's data value used in the match operation.

Type: **String**

Used in groups: **MatchExceptionGrp**

**171.2.2763 MatchExceptionConfirmValue**

The confirming party's data value used in the match operation.

Type: **String**

Used in groups: **MatchExceptionGrp**

**171.2.2764 MatchExceptionElementName**

The matching exception data point name, for example: "Trade currency". This may be used for display purposes, providing a corresponding description for the value in MatchExceptionElementType(2774).

Type: **String**

Used in groups: **MatchExceptionGrp**

**171.2.2765 MatchExceptionElementType**

Identifies the data point used in the matching operation which resulted in an exception.

Type: **int**

Allowed values in MatchExceptionElementTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	AccruedInterest	Accrued interest
2	DealPrice	Deal price
3	TradeDate	Trade date. Tolerance not applicable
4	SettlementDate	Settlement date. Tolerance not applicable
5	SideIndicator	Side indicator. Tolerance not applicable
6	TradedCurrency	Traded currency. Tolerance not applicable
7	AccountID	Account ID. Tolerance not applicable

---

Code	Name	Description
8	ExecutingBrokerID	Executing broker ID. Tolerance not applicable
9	SettlementCurrencyAndAmount	Settlement currency and amount
10	InvestmentManagerID	Investment manager ID. Tolerance not applicable
11	NetAmount	Net amount
12	PlaceOfSettlement	Place of settlement. Tolerance not applicable
13	Commissions	Commissions
14	SecurityIdentifier	Security identifier. Tolerance not applicable
15	QualityAllocated	Quantity allocated
16	Principal	Principal
17	Fees	Fees
18	Tax	Tax

Used in groups: [MatchExceptionGrp](#)

### 171.2.2766 MatchExceptionGrp

The MatchExceptionGrp component details the matching exceptions and variances identified during the matching process based on the defined matching criteria and tolerances.

Name	Mult.	Type	Description
NoMatchExceptions	[1..1]	NumInGroup	
MatchExceptionType	[0..1]	CodeSet	Required if NoMatchExceptions(2772) > 0.
MatchExceptionElementType	[0..1]	CodeSet	Required if NoMatchExceptions(2772) > 0.
MatchExceptionElementName	[0..1]	String	
MatchExceptionAllocValue	[0..1]	String	
MatchExceptionConfirmValue	[0..1]	String	
MatchExceptionToleranceValue	[0..1]	float	
MatchExceptionToleranceValueType	[0..1]	CodeSet	
MatchExceptionText	[0..1]	String	
EncodedMatchExceptionTextLen	[0..1]	Length	Must be set if EncodedMatchExceptionText(2780) field is specified and must immediately precede it.

---

Name	Mult.	Type	Description
EncodedMatchExceptionText	[0..1]	data	Encoded (non-ASCII characters) representation of the MatchExceptionText(2780) field in the encoded format specified via the MessageEncoding(347) field.

---

Used in messages: [Confirmation](#), [ConfirmationAck](#)

### 171.2.2767 MatchExceptionText

Description of the exception.

Type: [String](#)

Used in groups: [MatchExceptionGrp](#)

### 171.2.2768 MatchExceptionToleranceValue

The data element's tolerance value. Omitted if no tolerance is allowed or not applicable.

Type: [float](#)

Used in groups: [MatchExceptionGrp](#)

### 171.2.2769 MatchExceptionToleranceValueType

The type of value in MatchExceptionToleranceValue(2778). Omitted if no tolerance is allowed or not applicable.

Type: [int](#)

Allowed values in MatchExceptionToleranceValueTypeCodeSet:

---

Code	Name	Description
1	FixedAmount	Fixed amount. Default if not specified
2	Percentage	Percentage

---

Used in groups: [MatchExceptionGrp](#)

**171.2.2770 MatchExceptionType**

Type of matching exception.

Type: [int](#)

Allowed values in MatchExceptionTypeCodeSet:

Code	Name	Description
0	NoMatchingConfirmation	No matching confirmation
1	NoMatchingAllocation	No matching allocation
2	AllocationDataElementMissing	Allocation data element missing
3	ConfirmationDataElementMissing	Confirmation data element missing
4	DataDifferenceNotWithinTolerance	Data difference not within tolerance
5	MatchWithinTolerance	Match within tolerance
99	Other	Other

Used in groups: [MatchExceptionGrp](#)

**171.2.2771 MatchIncrement**

Allows orders to specify a minimum quantity that applies to every execution (one execution could be for multiple counter-orders). The order may still fill against smaller orders, but the cumulative quantity of the execution must be in multiples of the MatchIncrement.

Type: [Qty](#)

Used in groups: [ListOrdGrp](#)

Used in messages: [CrossOrderCancelReplaceRequest](#), [ExecutionReport](#), [MultilegOrderCancelReplace](#), [NewOrderCross](#), [NewOrderMultileg](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#)

**171.2.2772 MatchingDataPointGrp**

The MatchingDataPointGrp component details all the trade attributes and tolerances used for trade matching.

Name	Mult.	Type	Description
<a href="#">NoMatchingDataPoints</a>	[1..1]	NumInGroup	

Name	Mult.	Type	Description
MatchingDataPointIndicator	[0..1]	CodeSet	Required if NoMatchingDataPoints(2781) > 0.
MatchingDataPointValue	[0..1]	String	Required if NoMatchingDataPoints(2781) > 0.
MatchingDataPointType	[0..1]	CodeSet	Required if NoMatchingDataPoints(2781) > 0.
MatchingDataPointName	[0..1]	String	

---

Used in messages: [Confirmation](#), [ConfirmationAck](#)

### 171.2.2773 MatchingDataPointIndicator

Data point's matching type.

Type: [int](#)

Allowed values in MatchingDataPointIndicatorCodeSet:

---

Code	Name	Description
1	Mandatory	Mandatory
2	Optional	Optional

---

Used in groups: [MatchingDataPointGrp](#)

### 171.2.2774 MatchingDataPointName

The matching data point name, for example: "Trade currency". This may be used for display purposes, providing a corresponding description for the value in MatchingDataPointType(2784).

Type: [String](#)

Used in groups: [MatchingDataPointGrp](#)

### 171.2.2775 MatchingDataPointType

Identifies the data point used in the matching operation.

Type: [int](#)

Allowed values in MatchExceptionElementTypeCodeSet:

Code	Name	Description
1	AccruedInterest	Accrued interest
2	DealPrice	Deal price
3	TradeDate	Trade date. Tolerance not applicable
4	SettlementDate	Settlement date. Tolerance not applicable
5	SideIndicator	Side indicator. Tolerance not applicable
6	TradedCurrency	Traded currency. Tolerance not applicable
7	AccountID	Account ID. Tolerance not applicable
8	ExecutingBrokerID	Executing broker ID. Tolerance not applicable
9	SettlementCurrencyAndAmount	Settlement currency and amount
10	InvestmentManagerID	Investment manager ID. Tolerance not applicable
11	NetAmount	Net amount
12	PlaceOfSettlement	Place of settlement. Tolerance not applicable
13	Commissions	Commissions
14	SecurityIdentifier	Security identifier. Tolerance not applicable
15	QualityAllocated	Quantity allocated
16	Principal	Principal
17	Fees	Fees
18	Tax	Tax

Used in groups: [MatchingDataPointGrp](#)

### 171.2.2776 MatchingDataPointValue

Value of the matching data point.

Type: [String](#)

Used in groups: [MatchingDataPointGrp](#)

### 171.2.2777 MatchingInstructions

Name	Mult.	Type	Description
<a href="#">NoMatchInst</a>	[1..1]	NumInGroup	
<a href="#">MatchInst</a>	[0..1]	CodeSet	Required if NoMatchInst > 0.

Name	Mult.	Type	Description
MatchInstMarketID	[0..1]	Exchange	
MatchAttribTagID	[0..1]	TagNum	Required if NoMatchInst > 0.
MatchAttribValue	[0..1]	String	Required if NoMatchInst > 0.

Used in components: [TradeReportOrderDetail](#)

Used in messages: [ExecutionReport](#), [MultilegOrderCancelReplace](#), [NewOrderMultileg](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#)

### 171.2.2778 MatchInst

Matching Instruction for the order.

Type: [int](#)

Allowed values in MatchInstCodeSet:

Code	Name	Description
1	Match	Match
2	DoNotMatch	Do Not Match

Used in groups: [MatchingInstructions](#)

### 171.2.2779 MatchInstMarketID

Identifies the market to which the matching instruction applies.

Type: [Exchange](#)

Used in groups: [MatchingInstructions](#)

### 171.2.2780 MatchRuleProductComplex

Identifies an entire suite of products for which the matching rule applies.

Type: [String](#)

Used in groups: [MatchRules](#)

**171.2.2781 MatchRules**

The MatchRules component is used to specify the details of order matching rules for specified product group or complex.

Name	Mult.	Type	Description
NoMatchRules	[1..1]	NumInGroup	
MatchAlgorithm	[0..1]	String	Required if NoMatchRules(1235) > 0.
MatchType	[0..1]	CodeSet	
MatchRuleProductComplex	[0..1]	String	Can be used to limit match rule to specific product suite.
CustomerPriority	[0..1]	CodeSet	Can be used to give customer orders priority for the given matching algorithm.

Used in components: [TradingSessionRules](#)

Used in messages: [MarketDefinition](#), [MarketDefinitionUpdateReport](#)

**171.2.2782 MatchStatus**

The status of this trade with respect to matching or comparison.

Type: [char](#)

Allowed values in MatchStatusCodeSet:

Code	Name	Description
0	Compared	Compared, matched or affirmed
1	Uncompared	Uncompared, unmatched, or unaffirmed
2	AdvisoryOrAlert	Advisory or alert
3	Mismatched	Mismatched. Indicates that data points from the AllocationInstruction(35=J) and Confirmation(35=AK) are matched but there are variances. MatchExceptionGrp component may be used to detail on the mis-matched data fields.

Used in groups: [AllocGrp](#)

Used in messages: [AllocationInstructionAck](#), [AllocationReportAck](#), [Confirmation](#), [ConfirmationAck](#), [PositionReport](#), [RequestForPositions](#), [RequestForPositionsAck](#), [TradeCaptureReport](#), [TradeCaptureReportAck](#), [TradeCaptureReportRequest](#)

**171.2.2783 MatchType**

The point in the matching process at which this trade was matched.

Type: **String**

Allowed values in MatchTypeCodeSet:

Code	Name	Description
A1	ExactMatchPlus4BadgesExecTime	Exact match on Trade Date, Stock Symbol, Quantity, Price, Trade Type, and Special Trade Indicator plus four badges and execution time (within two-minute window)
A2	ExactMatchPlus4Badges	Exact match on Trade Date, Stock Symbol, Quantity, Price, Trade Type, and Special Trade Indicator, plus four badges
A3	ExactMatchPlus2BadgesExecTime	Exact match on Trade Date, Stock Symbol, Quantity, Price, Trade Type, and Special Trade Indicator, plus two badges and execution time (within two-minute window)
M3	ACTAcceptedTrade	ACT Accepted Trade
A4	ExactMatchPlus2Badges	Exact match on Trade Date, Stock Symbol, Quantity, Price, Trade Type, and Special Trade Indicator, plus two badges
M4	ACTDefaultTrade	ACT Default Trade
A5	ExactMatchPlusExecTime	Exact match on Trade Date, Stock Symbol, Quantity, Price, TradeType, and Special Trade Indicator plus execution time (within two-minute window)
M5	ACTDefaultAfterM2	ACT Default After M2
AQ	StampedAdvisoriesOrSpecialistAccepts	Compared records resulting from stamped advisories or specialist accepts/pair-offs
M6	ACTM6Match	ACT M6 Match
S1	A1ExactMatchSummarizedQuantity	Summarized match using A1 exact match criteria except quantity is summarized
S2	A2ExactMatchSummarizedQuantity	Summarized match using A2 exact match criteria except quantity is summarized
S3	A3ExactMatchSummarizedQuantity	Summarized match using A3 exact match criteria except quantity is summarized
S4	A4ExactMatchSummarizedQuantity	Summarized match using A4 exact match criteria except quantity is summarized
S5	A5ExactMatchSummarizedQuantity	Summarized match using A5 exact match criteria except quantity is summarized
M1	ExactMatchMinusBadgesTimes	Exact match on Trade Date, Stock Symbol, Quantity, Price, Trade Type, and Special Trade Indicator minus badges And times: ACT M1 match

Code	Name	Description
M2	SummarizedMatchMinusBadges-Times	Summarized match minus badges and times: ACT M2 Match
MT	OCSLockedIn	OCS Locked In: Non-ACT
1	OnePartyTradeReport	One-Party Trade Report (privately negotiated trade)
2	TwoPartyTradeReport	Two-Party Trade Report (privately negotiated trade)
3	ConfirmedTradeReport	Confirmed Trade Report (reporting from recognized markets)
4	AutoMatch	Auto-match
5	CrossAuction	Cross Auction
6	CounterOrderSelection	Counter-Order Selection
7	CallAuction	Call Auction
8	Issuing	Issuing/Buy Back Auction
9	SystematicInternaliser	Systematic Internaliser (SI)
10	AutoMatchLastLook	Auto-match with last look. Execution that arises from a match against orders or quotes which require a confirmation during continuous trading.
11	CrossAuctionLastLook	Cross auction with last look. Execution that arises from a match against orders or quotes which require a confirmation during an auction.

Used in groups: [MDFullGrp](#), [MDIncGrp](#), [MatchRules](#)

Used in messages: [AllocationInstruction](#), [AllocationInstructionAlert](#), [AllocationReport](#), [Confirmation](#), [ExecutionReport](#), [TradeCaptureReport](#), [TradeCaptureReportAck](#), [TradeMatchReport](#)

#### 171.2.2784 MaterialDividendsIndicator

Indicates whether material non-cash dividends are applicable.

Type: [Boolean](#)

Used in components: [DividendConditions](#)

#### 171.2.2785 MaturityDate

Date of maturity.

Type: [LocalMktDate](#)

Used in components: [Instrument](#)

**171.2.2786 MaturityFrequencyPeriod**

Time unit multiplier for the minimum frequency of the instrument maturity intervals.

Type: **int**

Used in components: **Instrument**

**171.2.2787 MaturityFrequencyUnit**

Time unit associated with the minimum frequency of the instrument maturity intervals.

Type: **String**

Allowed values in TimeUnitCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
H	Hour	Hour
Min	Minute	Minute
S	Second	Second
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year
Q	Quarter	Quarter
EOM	EndOfMonth	End of Month. End of Month identifies a relative time unit, e.g. until the third Friday of each month.
F	Flexible	Flexible. A flexible time unit indicates that a specific time unit for the contract is currently undetermined.

Used in components: **Instrument**

**171.2.2788 MaturityMonthYear**

Can be used with standardized derivatives vs. the MaturityDate (541) field. Month and Year of the maturity (used for standardized futures and options).

Format:

YYYYMM (e.g. 199903)

YYYYMMDD (e.g. 20030323)

YYYYMMwN (e.g. 200303w) for week

A specific date or can be appended to the MaturityMonthYear. For instance, if multiple standard products exist that mature in the same Year and Month, but actually mature at a different time, a value can be appended, such as "w" or "w2" to indicate week as opposed to week 2 expiration. Likewise, the date (0-3) can be appended to indicate a specific expiration (maturity date).

Type: **MonthYear**

Used in components: **Instrument**

### **171.2.2789 MaturityMonthYearFormat**

Format used to generate the MaturityMonthYear for each option

Type: **int**

Allowed values in MaturityMonthYearFormatCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	YearMonthOnly	YearMonth Only (default)
1	YearMonthDay	YearMonthDay
2	YearMonthWeek	YearMonthWeek

---

Used in groups: **MaturityRules**

### **171.2.2790 MaturityMonthYearIncrement**

Increment between successive maturities for an option class

Type: **int**

Used in groups: **MaturityRules**

### **171.2.2791 MaturityMonthYearIncrementUnits**

Unit of measure for the Maturity Month Year Increment

Type: **int**

Allowed values in MaturityMonthYearIncrementUnitsCodeSet:

Code	Name	Description
0	Months	Months
1	Days	Days
2	Weeks	Weeks
3	Years	Years

Used in groups: [MaturityRules](#)

### 171.2.2792 MaturityNetMoney

Net Money at maturity if Zero Coupon and maturity value is different from par value

Type: [Amt](#)

Used in messages: [Confirmation](#)

### 171.2.2793 MaturityRuleID

Allows maturity rule to be referenced via an identifier so that rules do not need to be explicitly enumerated

Type: [String](#)

Used in groups: [MaturityRules](#)

### 171.2.2794 MaturityRules

Name	Mult.	Type	Description
<a href="#">NoMaturityRules</a>	[1..1]	NumInGroup	Number of maturity rule entries. This block specifies the rules for determining how new strikes should be listed within the stated price range of the underlying instrument
<a href="#">MaturityRuleID</a>	[0..1]	String	Allows maturity rule to be referenced via an identifier so that rules do not need to be explicitly enumerated
<a href="#">MaturityMonthYearFormat</a>	[0..1]	CodeSet	Format used to generate the MMY for each option contract:
<a href="#">MaturityMonthYearIncrementUnits</a>	[0..1]	CodeSet	enumeration specifying the increment unit:

Name	Mult.	Type	Description
StartMaturityMonthYear	[0..1]	MonthYear	Starting maturity for the range to which the StrikeIncrement applies. Price refers to the price of the underlying
EndMaturityMonthYear	[0..1]	MonthYear	Ending maturity month year to which the StrikeIncrement applies. Price refers to the price of the underlying.
MaturityMonthYearIncrement	[0..1]	int	Value by which maturity month year should be incremented within the specified price range.

Used in groups: [StrikeRules](#)

### 171.2.2795 MaturityTime

Time of security's maturity expressed in local time with offset to UTC specified

Type: [TZTimeOnly](#)

Used in components: [Instrument](#)

### 171.2.2796 MaxFloor

The quantity to be displayed . Required for reserve orders. On orders specifies the qty to be displayed, on execution reports the currently displayed quantity.

Type: [Qty](#)

Used in groups: [ListOrdGrp](#)

Used in messages: [CrossOrderCancelReplaceRequest](#), [ExecutionReport](#), [MultilegOrderCancelReplace](#), [NewOrderCross](#), [NewOrderMultileg](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#)

### 171.2.2797 MaximumPriceDeviation

Maximum deviation, in percentage terms, of an execution price from a reference price, e.g. the initial price of a match event.

Type: [Percentage](#)

Used in messages: [ExecutionReport](#), [MultilegOrderCancelReplace](#), [NewOrderMultileg](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#)

### **171.2.2798 MaxMessageSize**

Maximum number of bytes supported for a single message.

Type: **Length**

Used in messages: **Logon**

### **171.2.2799 MaxPriceLevels**

Allows an order to specify a maximum number of price levels to trade through. Only valid for aggressive orders and during continuous (autoexecution) trading sessions. Property lost when order is put on book. A partially filled order is assigned last trade price as limit price. Non-filled order behaves as ordinary Market or Limit.

Type: **int**

Used in groups: **ListOrdGrp**

Used in messages: **CrossOrderCancelReplaceRequest, ExecutionReport, MultilegOrderCancelReplace, NewOrderCross, NewOrderMultileg, NewOrderSingle, OrderCancelReplaceRequest**

### **171.2.2800 MaxPriceVariation**

The maximum price variation of an execution from one event to the next for a given security. Expressed in absolute price terms.

Type: **float**

Used in components: **BaseTradingRules**

Used in groups: **MDFullGrp, MDIncGrp**

### **171.2.2801 MaxShow**

Maximum quantity (e.g. number of shares) within an order to be shown to other customers (i.e. sent via an IOI).

(Prior to FIX 4.2 this field was of type int)

Type: **Qty**

Used in groups: **ListOrdGrp**

Used in messages: **CrossOrderCancelReplaceRequest, ExecutionReport, MultilegOrderCancelReplace, NewOrderCross, NewOrderMultileg, NewOrderSingle, OrderCancelReplaceRequest**

**171.2.2802 MaxTradeVol**

The maximum order quantity (as expressed by TradeVolType(1786)) that can be submitted for a security.

Type: Qty

Used in components: BaseTradingRules

**171.2.2803 MDBookType**

Describes the type of book for which the feed is intended. Used when multiple feeds are provided over the same connection

Type: int

Allowed values in MDBookTypeCodeSet:

---

Code	Name	Description
1	TopOfBook	Top of Book
2	PriceDepth	Price Depth
3	OrderDepth	Order Depth

---

Used in groups: MarketDataFeedTypes

Used in messages: MarketDataIncrementalRefresh, MarketDataSnapshotFullRefresh, SecurityMassStatus, SecurityStatus

**171.2.2804 MDEntryBuyer**

Buying party in a trade

Type: String

Used in groups: MDFullGrp, MDIncGrp

**171.2.2805 MDEntryDate**

Date of Market Data Entry.

(prior to FIX 4.4 field was of type UTCTDate)

Type: **UTCDateOnly**

Used in groups: **MDFullGrp, MDIncGrp**

#### **171.2.2806 MEntryForwardPoints**

Used for an F/X entry. The forward points to be added to or subtracted from the spot rate to get the "all-in" rate in MEntryPx. Expressed in decimal form. For example, 61.99 points is expressed and sent as 0.006199

Type: **PriceOffset**

Used in groups: **MDFullGrp, MDIncGrp**

#### **171.2.2807 MEntryID**

Unique Market Data Entry identifier.

Type: **String**

Used in groups: **MDFullGrp, MDIncGrp**

Used in messages: **ExecutionReport**

#### **171.2.2808 MEntryOriginator**

Originator of a Market Data Entry

Type: **String**

Used in groups: **MDFullGrp, MDIncGrp**

#### **171.2.2809 MEntryPositionNo**

Display position of a bid or offer, numbered from most competitive to least competitive, per market side, beginning with 1.

Type: **int**

Used in groups: **MDFullGrp, MDIncGrp**

**171.2.2810 MDEntryPx**

Price of the Market Data Entry.

Type: **Price**

Used in groups: **MDFullGrp, MDIncGrp**

**171.2.2811 MDEntryRefID**

Refers to a previous MDEntryID (278).

Type: **String**

Used in groups: **MDIncGrp**

**171.2.2812 MDEntrySeller**

Selling party in a trade

Type: **String**

Used in groups: **MDFullGrp, MDIncGrp**

**171.2.2813 MDEntrySize**

Quantity or volume represented by the Market Data Entry.

Type: **Qty**

Used in groups: **InstrmtMDReqGrp, MDFullGrp, MDIncGrp, StrmAsgnReqInstrmtGrp**

**171.2.2814 MDEntrySpotRate**

The spot rate for an FX entry

Type: **float**

Used in groups: **MDFullGrp, MDIncGrp**

**171.2.2815 MDEntryTime**

Time of Market Data Entry.

Type: **UTCTimeOnly**

Used in groups: **MDFullGrp**, **MDIncGrp**

**171.2.2816 MDEntryType**

Type of market data entry.

Type: **char**

Allowed values in MDEntryTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Bid	Bid
1	Offer	Offer
2	Trade	Trade
3	IndexValue	Index value. A reference stock index (e.g. DJIA) or benchmark rate (e.g. LIBOR).
4	OpeningPrice	Opening price
5	ClosingPrice	Closing price
6	SettlementPrice	Settlement price
7	TradingSessionHighPrice	Trading session high price
8	TradingSessionLowPrice	Trading session low price
9	VWAP	Volume Weighted Average Price. VWAP
A	Imbalance	Imbalance
B	TradeVolume	Trade volume
C	OpenInterest	Open interest
D	CompositeUnderlyingPrice	Composite underlying price
E	SimulatedSellPrice	Simulated sell price
F	SimulatedBuyPrice	Simulated buy price
G	MarginRate	Margin rate
H	MidPrice	Mid-price
J	EmptyBook	Empty book
K	SettleHighPrice	Settle high price
L	SettleLowPrice	Settle low price

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
M	PriorSettlePrice	Prior settle price
N	SessionHighBid	Session high bid
O	SessionLowOffer	Session low offer
P	EarlyPrices	Early prices
Q	AuctionClearingPrice	Auction clearing price
S	SwapValueFactor	Swap Value Factor (SVF) for swaps cleared through a central counterparty (CCP)
R	DailyValueAdjustmentForLongPositions	Daily value adjustment for long positions
T	CumulativeValueAdjustmentForLongPositions	Cumulative value adjustment for long positions
U	DailyValueAdjustmentForShortPositions	Daily value adjustment for short positions
V	CumulativeValueAdjustmentForShortPositions	Cumulative value adjustment for short positions
W	FixingPrice	Fixing price
X	CashRate	Cash rate
Y	RecoveryRate	Recovery rate
Z	RecoveryRateForLong	Recovery rate for long positions
a	RecoveryRateForShort	Recovery rate for short positions
b	MarketBid	Market bid
c	MarketOffer	Market offer
d	ShortSaleMinPrice	Short sale minimum price
e	PreviousClosingPrice	Previous closing price
g	ThresholdLimitPriceBanding	Threshold limits and price banding. Conveys incremental real time change to pre-configured or previously disseminated pricing thresholds and/or banding parameters.
h	DailyFinancingValue	Daily financing value. The financing cost of rolling an analogous total return swap from the previous business day to the current business day. In the context of Adjusted Interest Rate (AIR) futures this is a component of the cleared futures price.
i	AccruedFinancingValue	Accrued financing value. The total of the daily funding values or amounts from a contract's first day of trading to the current day. In the context of Adjusted Interest Rate (AIR) futures this is a component of the cleared futures price.
t	TWAP	Time Weighted Average Price. TWAP

Used in groups: [MDFullGrp](#), [MDIncGrp](#), [MDReqGrp](#)

### 171.2.2817 MDFeedType

Describes a class of service for a given data feed, ie Regular and Market Maker, Bandwidth Intensive or Bandwidth Conservative

Type: [String](#)

Used in components: [MDStatisticParameters](#)

Used in groups: [MarketDataFeedTypes](#)

Used in messages: [MarketDataIncrementalRefresh](#), [MarketDataSnapshotFullRefresh](#)

### 171.2.2818 MDFullGrp

Name	Mult.	Type	Description
<a href="#">NoMDEntries</a>	[1..1]	NumInGroup	Number of entries following.
<a href="#">MDEntryType</a>	[1..1]	CodeSet	Required if NoMDEntries(268) > 0.
<a href="#">MDEntryID</a>	[0..1]	String	Conditionally required when maintaining an order-depth book (AggregatedBook(266) is "N"). Allows subsequent Incremental changes to be applied using MDEntryID(278).
<a href="#">MDEntryPx</a>	[0..1]	Price	Conditionally required if MDEntryType(269) is not A (Imbalance), B (Trade Volume), or C (Open Interest); Conditionally required when MDEntryType(269) = Q (Auction clearing price).
<a href="#">PriceType</a>	[0..1]	CodeSet	
<a href="#">PriceQualifierGrp</a>	[0..*]	Group	
<a href="#">AvgPxIndicator</a>	[0..1]	CodeSet	
<a href="#">YieldData</a>	[0..1]	Component	
<a href="#">SpreadOrBenchmarkCurveData</a>	[0..1]	Component	
<a href="#">OrdType</a>	[0..1]	CodeSet	Used to support market mechanism type; limit order, market order, committed principal order
<a href="#">Currency</a>	[0..1]	Currency	Can be used to specify the currency of the quoted price.
<a href="#">CurrencyCodeSource</a>	[0..1]	CodeSet	
<a href="#">SettlCurrency</a>	[0..1]	Currency	Required for NDFs to specify the settlement currency (fixing currency).

Name	Mult.	Type	Description
SettlCurrencyCodeSource	[0..1]	CodeSet	
RateSource	[0..*]	Group	
MDEntrySize	[0..1]	Qty	Conditionally required when MDUpdateAction(279) = 0 (New) and MDEntryType(269) = 0 (Bid), 1 (Offer), 2 (Trade), B (Trade volume), or C (Open interest).
SecSizesGrp	[0..*]	Group	
LotType	[0..1]	CodeSet	Can be used to specify the lot type of the quoted size in order depth books.
MDEntryDate	[0..1]	UTCDateOnly	
MDEntryTime	[0..1]	UTCTimeOnly	
TickDirection	[0..1]	CodeSet	
MDMkt	[0..1]	Exchange	Market posting quote / trade. Valid values: See Volume 6: Appendix 6-C
TradingSessionID	[0..1]	CodeSet	
TradingSessionSubID	[0..1]	CodeSet	
SecurityTradingStatus	[0..1]	CodeSet	
HaltReason	[0..1]	CodeSet	
FastMarketIndicator	[0..1]	Boolean	
MarketCondition	[0..1]	CodeSet	
QuoteCondition	[0..1]	CodeSet	Space-delimited list of conditions describing a quote.
TradeCondition	[0..1]	CodeSet	Space-delimited list of conditions describing a trade
TradePriceConditionGrp	[0..*]	Group	
AnonymousTradeIndicator	[0..1]	Boolean	
AlgorithmicTradeIndicator	[0..1]	CodeSet	
MDEntryOriginator	[0..1]	String	
LocationID	[0..1]	String	
DeskID	[0..1]	String	
OpenCloseSettlFlag	[0..1]	CodeSet	Used if MDEntryType(269) = 4 (Opening price), 5 (Closing price), or 6 (Settlement price).
TimeInForce	[0..1]	CodeSet	For optional use when this Bid or Offer represents an order
ExpireDate	[0..1]	LocalMktDate	For optional use when this Bid or Offer represents an order. ExpireDate(432) and ExpireTime(126) cannot both be specified in one Market Data Entry.

Name	Mult.	Type	Description
ExpireTime	[0..1]	UTCTimestamp	For optional use when this Bid or Offer represents an order. ExpireDate(432) and ExpireTime(126) cannot both be specified in one Market Data Entry.
ExposureDuration	[0..1]	int	Conditionally required when TimeInForce(59) = A (Good for Time).
ExposureDurationUnit	[0..1]	CodeSet	
MinQty	[0..1]	Qty	For optional use when this Bid or Offer represents an order
ExecInst	[0..1]	CodeSet	Can contain multiple instructions, space delimited.
SellerDays	[0..1]	int	
OrderID	[0..1]	String	For optional use when this Bid, Offer, or Trade represents an order
SecondaryOrderID	[0..1]	String	For optional use to support Hit/Take (selecting a specific order from the feed) without disclosing a private order id.
QuoteEntryID	[0..1]	String	For optional use when this Bid, Offer, or Trade represents a quote
TradeID	[0..1]	String	For optional use in reporting Trades.
StrategyLinkID	[0..1]	String	For optional use in reporting Trades. May be used to link together trades that are reported separately but are part of the same overall trade, e.g. spread trade and their constituent trades.
MDEntryBuyer	[0..1]	String	For optional use in reporting Trades
MDEntrySeller	[0..1]	String	For optional use in reporting Trades
NumberOfBuyOrders	[0..1]	int	For optional use in reporting trades.
NumberOfSellOrders	[0..1]	int	For optional use in reporting trades.
NumberOfOrders	[0..1]	int	In an Aggregated Book, used to show how many individual orders make up an MDEntry
MDEntryPositionNo	[0..1]	int	
Scope	[0..1]	CodeSet	
PriceDelta	[0..1]	float	
TrdType	[0..1]	CodeSet	Specifies trade type when a trade is being reported. For optional use in reporting trades.
TrdSubType	[0..1]	CodeSet	For optional use in reporting trades.
SecondaryTrdType	[0..1]	CodeSet	For optional use in reporting trades. Conditionally requires presence of TrdType(828).

Name	Mult.	Type	Description
TertiaryTrdType	[0..1]	CodeSet	For optional use in reporting trades. Conditionally requires presence of SecondaryTrdType(855).
TradeTypeGrp	[0..*]	Group	For optional use in reporting trades as alternative to the use of individual fields.
RegulatoryReportType	[0..1]	CodeSet	Used only when reporting a trade (MDEntryType(269)=2 (Trade)) that is a regulatory trade report.
MultiJurisdictionReportingIndicator	[0..1]	CodeSet	For optional use in reporting trades.
ExecMethod	[0..1]	CodeSet	
MatchType	[0..1]	CodeSet	For optional use in reporting trades.
OrderCategory	[0..1]	CodeSet	
TradePublishIndicator	[0..1]	CodeSet	For optional use in reporting trades.
TrdRegPublicationGrp	[0..*]	Group	
IntraFirmTradeIndicator	[0..1]	Boolean	
PreviouslyReported	[0..1]	CodeSet	
RelatedTradeGrp	[0..*]	Group	For optional use when reporting trades. Lists trades related to the current market data entry, e.g. leg trades of a multi-leg trade.
Text	[0..1]	String	Text to describe the Market Data Entry. Part of repeating group.
EncodedTextLen	[0..1]	Length	Must be set if EncodedText(355) field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text(58) field in the encoded format specified via the MessageEncoding(347) field.
MDPriceLevel	[0..1]	int	
OrderCapacity	[0..1]	CodeSet	
MDOriOriginType	[0..1]	CodeSet	
HighPx	[0..1]	Price	Used to report high price in association with trade, bid or ask rather than a separate entity
LowPx	[0..1]	Price	Used to report low price in association with trade, bid or ask rather than a separate entity.
FirstPx	[0..1]	Price	Indicates the first price of a trading session; can be a bid, ask, or trade price.
LastPx	[0..1]	Price	Indicates the last price of a trading session; can be a bid, ask, or trade price.
DiscountFactor	[0..1]	float	

Name	Mult.	Type	Description
TradeVolume	[0..1]	Qty	Used to report trade volume in association with trade, bid or ask rather than a separate entity
PriceLimits	[0..1]	Component	
MaxPriceVariation	[0..1]	float	
SettlPriceType	[0..1]	CodeSet	
SettlPriceDeterminationMethod	[0..1]	CodeSet	
SettlType	[0..1]	CodeSet	
SettlDate	[0..1]	LocalMktDate	Indicates date on which instrument will settle. For NDFs required for specifying the "value date".
MDQuoteType	[0..1]	CodeSet	
RptSeq	[0..1]	int	Used to identify the sequence number within a feed type
DealingCapacity	[0..1]	CodeSet	
MDEntrySpotRate	[0..1]	float	
MDEntryForwardPoints	[0..1]	PriceOffset	
Parties	[0..*]	Group	
AggressorTime	[0..1]	UTCTimestamp	
AggressorSide	[0..1]	CodeSet	
LegRefID	[0..1]	String	May be specified for an MDEntryType(269)=2 (Trade) entry to indicate that MDEntryPx(270), PriceType(423) and MDEntrySize(271) apply to the instance of the InstrmtLegGrp component with matching LegID(1788).

Used in messages: [MarketDataSnapshotFullRefresh](#)

### 171.2.2819 MDHaltReason

Denotes the reason for the Opening Delay or Trading Halt.

Type: **int**

Allowed values in HaltReasonCodeSet:

Code	Name	Description
0	NewsDissemination	News Dissemination
1	OrderInflux	Order Influx

Code	Name	Description
2	OrderImbalance	Order Imbalance
3	AdditionalInformation	Additional Information
4	NewsPending	News Pending
5	EquipmentChangeover	Equipment Changeover

Used in messages: [MarketDataSnapshotFullRefresh](#)

### 171.2.2820 MDImplicitDelete

Defines how a server handles distribution of a truncated book. Defaults to broker option.

Type: [Boolean](#)

Allowed values in MDImplicitDeleteCodeSet:

Code	Name	Description
N	No	Server must send an explicit delete for bids or offers falling outside the requested MarketDepth of the request
Y	Yes	Client has responsibility for implicitly deleting bids or offers falling outside the MarketDepth of the request

Used in messages: [MarketDataRequest](#)

### 171.2.2821 MDIncGrp

Name	Mult.	Type	Description
<a href="#">NoMDEntries</a>	[1..1]	NumInGroup	Number of entries following.
<a href="#">MDUpdateAction</a>	[1..1]	CodeSet	Required if NoMDEntries(268) > 0.
<a href="#">DeleteReason</a>	[0..1]	CodeSet	If MDUpdateAction = Delete(2), can be used to specify a reason for the deletion.
<a href="#">MDSubBookType</a>	[0..1]	int	Can be used to define a subordinate book.
<a href="#">MarketDepth</a>	[0..1]	int	Can be used to define the current depth of the book.
<a href="#">MDEntryType</a>	[0..1]	CodeSet	Conditionally required if MDUpdateAction(279) = 0 (New). Cannot be changed.

Name	Mult.	Type	Description
MDEntryID	[0..1]	String	If specified, must be unique among currently active entries if MDUpdateAction(279) = 0 (New); must be the same as a previous MDEntryID(278) if MDUpdateAction(279) = 2 (Delete); must be the same as a previous MDEntryID(278) if MDUpdateAction(279) = 1 (Change) and MDEntryRefID(280) is not specified; or. must be unique among currently active entries if MDUpdateAction(279) = 1 (Change) and MDEntryRefID(280) is specified.
MDEntryRefID	[0..1]	String	If MDUpdateAction(279) = 0 (New), for the first market data entry in a message, either this field or a security symbol must be specified. If MDUpdateAction(279) = 1 (Change), this must refer to a previous MDEntryID(278).
MStreamID	[0..1]	String	
Instrument	[0..1]	Component	
InstrumentExtension	[0..1]	Component	
FinancingDetails	[0..1]	Component	
UndInstrmtGrp	[0..*]	Group	
InstrmtLegGrp	[0..*]	Group	
RelatedInstrumentGrp	[0..*]	Group	
FinancialStatus	[0..1]	CodeSet	
CorporateAction	[0..1]	CodeSet	
MDEntryPx	[0..1]	Price	Conditionally required when MDUpdateAction(279) = 0 (New) and MDEntryType(269) is not A (Imbalance), B (Trade volume), or C (Open interest). Conditionally required when MDEntryType(269) = Q (Auction clearing price).
PriceType	[0..1]	CodeSet	
PriceQualifierGrp	[0..*]	Group	
AvgPxIndicator	[0..1]	CodeSet	
YieldData	[0..1]	Component	Insert here the set of YieldData (yield-related) fields defined in Common Components of Application Messages
SpreadOrBenchmarkCurveData	[0..1]	Component	Insert here the set of SpreadOrBenchmarkCurveData (Fixed Income spread or benchmark curve) fields defined in Common Components of Application Messages

Name	Mult.	Type	Description
OrdType	[0..1]	CodeSet	Used to support market mechanism type; limit order, market order, committed principal order
Currency	[0..1]	Currency	Can be used to specify the currency of the quoted price.
CurrencyCodeSource	[0..1]	CodeSet	
SettlCurrency	[0..1]	Currency	Required for NDFs to specify the settlement currency (fixing currency).
SettlCurrencyCodeSource	[0..1]	CodeSet	
RateSource	[0..*]	Group	
MDEntrySize	[0..1]	Qty	Conditionally required when MDUpdateAction(279) = 0 (New) and MDEntryType(269) = 0 (Bid), 1 (Offer), 2 (Trade), B (Trade volume), or C (Open interest).
SecSizesGrp	[0..*]	Group	
LotType	[0..1]	CodeSet	Can be used to specify the lot type of the quoted size in order depth books.
MDEntryDate	[0..1]	UTCDateOnly	
MDEntryTime	[0..1]	UTCTimeOnly	
TickDirection	[0..1]	CodeSet	
MDMkt	[0..1]	Exchange	Market posting quote / trade. Valid values: See Volume 6: Appendix 6-C

LowPx	[0..1]	Price	

Name	Mult.	Type	Description
FirstPx	[0..1]	Price	Indicates the first price of a trading session; can be a bid, ask, or a trade price.
LastPx	[0..1]	Price	Indicates the last price of a trading session; can be a bid, ask, or a trade price.
DiscountFactor	[0..1]	float	
TradeVolume	[0..1]	Qty	
PriceLimits	[0..1]	Component	
MaxPriceVariation	[0..1]	float	
SettlPriceType	[0..1]	CodeSet	
SettlPriceDeterminationMethod	[0..1]	CodeSet	
SettlType	[0..1]	CodeSet	
SettlDate	[0..1]	LocalMktDate	Indicates date on which instrument will settle. For NDFs required for specifying the "value date".
TransBkdTime	[0..1]	UTCTimestamp	For optional use in reporting Trades. Used to specify the time of trade agreement for privately negotiated trades.
TransactTime	[0..1]	UTCTimestamp	For optional use in reporting Trades. Used to specify the time of matching.
AggressorTime	[0..1]	UTCTimestamp	Entry time of the incoming order that triggered the trade
AggressorSide	[0..1]	CodeSet	
MDQuoteType	[0..1]	CodeSet	
RptSeq	[0..1]	int	Allows sequence number to be specified within a feed type
DealingCapacity	[0..1]	CodeSet	
MDEntrySpotRate	[0..1]	float	
MDEntryForwardPoints	[0..1]	PriceOffset	
StatsIndGrp	[0..*]	Group	
Parties	[0..*]	Group	

Used in messages: [MarketDataIncrementalRefresh](#)

### 171.2.2822 MDMkt

Market posting quote / trade.

Valid values:

See "Appendix 6-C"

Type: **Exchange**

Used in groups: **MDFullGrp**, **MDIncGrp**

### **171.2.2823 MDOriOriginType**

Used to describe the origin of the market data entry.

Type: **int**

Allowed values in MDOriOriginTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Book	Book
1	OffBook	Off-Book
2	Cross	Cross
3	QuoteDrivenMarket	Quote driven market. Examples for quote driven markets are market maker or specialist market models.
4	DarkOrderBook	Dark order book
5	AuctionDrivenMarket	Auction driven market. Markets where matching occurs only in scheduled auctions.
6	QuoteNegotiation	Quote negotiation. Discretionary quoting on request or "request for quote" market.
7	VoiceNegotiation	Voice negotiation. A trading system where transactions between members are arranged through voice negotiation.
8	HybridMarket	Hybrid market. A hybrid system falling into two or more types of trading systems. In the context of ESMA reporting, this is for "Hybrid system." In the context of FCA reporting, this is for "Any other, including hybrid."
9	OtherMarket	Other market. A market that does not fall under any of the market types defined for MDOriOriginType(1024). In the context of ESMA reporting, this is for "Any other, excluding hybrid."

---

Used in components: **MDStatisticParameters**

Used in groups: **MDFullGrp**, **MDIncGrp**

**171.2.2824 MDPriceLevel**

Integer to convey the level of a bid or offer at a given price level. This is in contrast to MDEntryPositionNo(290) which is used to convey the position of an order within a price level.

Type: **int**

Used in groups: **MDFullGrp**, **MDIncGrp**

**171.2.2825 MDQuoteType**

Identifies market data quote type.

Type: **int**

Allowed values in MDQuoteTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Indicative	Indicative
1	Tradeable	Tradeable
2	RestrictedTradeable	Restricted Tradeable
3	Counter	Counter
4	IndicativeAndTradeable	Indicative and Tradeable

---

Used in groups: **MDFullGrp**, **MDIncGrp**

Used in messages: **MarketDataRequest**

**171.2.2826 MDRecoveryTimeInterval**

Specifies the time interval between two repetitions of the same market data for cyclic recovery feeds.

Type: **int**

Used in groups: **MarketDataFeedTypes**

**171.2.2827 MDRecoveryTimeIntervalUnit**

The time unit associated with the time interval between two cycles of the same market data in cyclic data recovery feeds.

Type: **int**

Allowed values in OrderDelayUnitCodeSet:

Code	Name	Description
0	Seconds	Seconds (default if not specified)
1	TenthsOfASecond	Tenths of a second
2	HundredthsOfASecond	Hundredths of a second
3	Milliseconds	milliseconds
4	Microseconds	microseconds
5	Nanoseconds	nanoseconds
10	Minutes	minutes
11	Hours	hours
12	Days	days
13	Weeks	weeks
14	Months	months
15	Years	years

Used in groups: **MarketDataFeedTypes**

#### **171.2.2828 MDReportCount**

Number of reference and market data messages in-between two MarketDataReport(35=DR) messages.

Type: **int**

Used in messages: **MarketDataReport**

#### **171.2.2829 MDReportEvent**

Technical event within market data feed.

Type: **int**

Allowed values in MDReportEventCodeSet:

Code	Name	Description
1	StartInstrumentRefData	Start of instrument reference data.
2	EndInstrumentRefData	End of instrument reference data.
3	StartOffMarketTrades	Start of off-market trades.
4	EndOffMarketTrades	End of off-market trades.
5	StartOrderBookTrades	Start of order book trades.
6	EndOrderBookTrades	End of order book trades.
7	StartOpenInterest	Start of open interest.
8	EndOpenInterest	End of open interest.
9	StartSettlementPrices	Start of settlement prices.
10	EndSettlementPrices	End of settlement prices.
11	StartStatsRefData	Start of statistics reference data.
12	EndStatsRefData	End of statistics reference data.
13	StartStatistics	Start of statistics.
14	EndStatistics	End of statistics.

Used in messages: [MarketDataReport](#)

### 171.2.2830 MDReportID

Unique identifier for the Market Data Report.

Type: [int](#)

Used in messages: [MarketDataReport](#), [MarketDataSnapshotFullRefresh](#)

### 171.2.2831 MDReqGrp

Name	Mult.	Type	Description
<a href="#">NoMDEntryTypes</a>	[1..1]	NumInGroup	Number of MDEntryType fields requested.
<a href="#">MDEntryType</a>	[1..1]	CodeSet	Must be the first field in this repeating group. This is a list of all the types of Market Data Entries that the firm requesting the Market Data is interested in receiving.

Used in messages: [MarketDataRequest](#)

**171.2.2832 MDRReqID**

Unique identifier for Market Data Request

Type: **String**

Used in messages: **MarketDataIncrementalRefresh**, **MarketDataRequest**, **MarketDataRequestReject**, **MarketDataSnapshotFullRefresh**

**171.2.2833 MDRReqRejReason**

Reason for the rejection of a Market Data request.

Type: **char**

Allowed values in MDRReqRejReasonCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	UnknownSymbol	Unknown symbol
1	DuplicateMDReqID	Duplicate MDRReqID
2	InsufficientBandwidth	Insufficient Bandwidth
3	InsufficientPermissions	Insufficient Permissions
4	UnsupportedSubscriptionRequest- Type	Unsupported SubscriptionRequestType
5	UnsupportedMarketDepth	Unsupported MarketDepth
6	UnsupportedMDUpdateType	Unsupported MDUpdateType
7	UnsupportedAggregatedBook	Unsupported AggregatedBook
8	UnsupportedMDEntryType	Unsupported MDEntryType
9	UnsupportedTradingSessionID	Unsupported TradingSessionID
A	UnsupportedScope	Unsupported Scope
B	UnsupportedOpenCloseSettleFlag	Unsupported OpenCloseSettleFlag
C	UnsupportedMDImplicitDelete	Unsupported MDImplicitDelete
D	InsufficientCredit	Insufficient credit

---

Used in messages: **MarketDataRequestReject**

**171.2.2834 MDRjctGrp**

---

Name	Mult.	Type	Description
NoAltMDSource	[1..1]	NumInGroup	
AltMDSourceID	[0..1]	String	Alternative Market Data Source

---

Used in messages: [MarketDataRequestReject](#)

### 171.2.2835 MDSize

A part of the MDEntrySize(271) that represents secondary interest as specified by MDSizeType(1178).

Type: [Qty](#)

Used in groups: [SecSizesGrp](#)

### 171.2.2836 MDSizeType

Specifies the type of secondary size.

Type: [int](#)

Allowed values in MDSizeTypeCodeSet:

---

Code	Name	Description
1	Customer	Customer. Quantity of retail investors.
2	CustomerProfessional	Customer professional. Quantity of high-volume investors acting similar to broker-dealers.
3	DoNotTradeThrough	Do not trade through. Quantity that cannot trade through the away markets.

---

Used in groups: [SecSizesGrp](#)

### 171.2.2837 MDSecurityTradingStatus

Identifies the trading status applicable to the instrument in the market data message.

Type: [int](#)

Allowed values in SecurityTradingStatusCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	OpeningDelay	Opening delay
2	TradingHalt	Trading halt
3	Resume	Resume
4	NoOpen	No Open / No Resume
5	PriceIndication	Price indication
6	TradingRangeIndication	Trading Range Indication
7	MarketImbalanceBuy	Market Imbalance Buy
8	MarketImbalanceSell	Market Imbalance Sell
9	MarketOnCloseImbalanceBuy	Market on Close Imbalance Buy
10	MarketOnCloseImbalanceSell	Market on Close Imbalance Sell
12	NoMarketImbalance	No Market Imbalance
13	NoMarketOnCloseImbalance	No Market on Close Imbalance
14	ITSPreOpening	ITS Pre-opening
15	NewPriceIndication	New Price Indication
16	TradeDisseminationTime	Trade Dissemination Time
17	ReadyToTrade	Ready to trade (start of session)
18	NotAvailableForTrading	Not available for trading (end of session)
19	NotTradedOnThisMarket	Not traded on this market
20	UnknownOrInvalid	Unknown or Invalid
21	PreOpen	Pre-open
22	OpeningRotation	Opening Rotation
23	FastMarket	Fast Market
24	PreCross	Pre-Cross - system is in a pre-cross state allowing market to respond to either side of cross
25	Cross	Cross - system has crossed a percentage of the orders and allows market to respond prior to crossing remaining portion
26	PostClose	Post-close
27	NoCancel	No-cancel

---

Used in messages: [MarketDataSnapshotFullRefresh](#)

### **171.2.2838 MDStatisticDelayPeriod**

Number of time units between the calculation of the statistic and its dissemination. Can be used to defer or delay publication.

Type: **int**

Used in components: **MDStatisticParameters**

### **171.2.2839 MDStatisticDelayUnit**

Time unit for MDStatisticDelayPeriod(2462).

Type: **int**

Allowed values in OrderDelayUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Seconds	Seconds (default if not specified)
1	TenthsOfASecond	Tenths of a second
2	HundredthsOfASecond	Hundredths of a second
3	Milliseconds	milliseconds
4	Microseconds	microseconds
5	Nanoseconds	nanoseconds
10	Minutes	minutes
11	Hours	hours
12	Days	days
13	Weeks	weeks
14	Months	months
15	Years	years

---

Used in components: **MDStatisticParameters**

### **171.2.2840 MDStatisticDesc**

Can be used to provide an optional textual description for a statistic.

Type: **String**

Used in components: **MDStatisticParameters**

### **171.2.2841 MDStatisticEndDate**

Last day of range for which statistical data is collected.

Type: [UTCTimestamp](#)

Used in components: [MDStatisticParameters](#)

### **171.2.2842 MDStatisticEndTime**

End time of the time range for which statistical data is collected.

Type: [UTCTimeOnly](#)

Used in components: [MDStatisticParameters](#)

### **171.2.2843 MDStatisticFrequencyPeriod**

Dissemination frequency of statistics.

Special meaning for a value of zero which represents an event-driven dissemination in real time (e.g. as soon as a new trade occurs).

Type: [int](#)

Used in components: [MDStatisticParameters](#)

### **171.2.2844 MDStatisticFrequencyUnit**

Time unit for MDStatisticFrequencyPeriod(2460).

Type: [int](#)

Allowed values in OrderDelayUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Seconds	Seconds (default if not specified)
1	TenthsOfASecond	Tenths of a second
2	HundredthsOfASecond	Hundredths of a second
3	Milliseconds	milliseconds
4	Microseconds	microseconds
5	Nanoseconds	nanoseconds
10	Minutes	minutes
11	Hours	hours
12	Days	days

---

---

Code	Name	Description
13	Weeks	weeks
14	Months	months
15	Years	years

---

Used in components: [MDStatisticParameters](#)

#### **171.2.2845 MDStatisticID**

Unique identifier for a statistic.

Type: [String](#)

Used in groups: [MDStatisticReqGrp](#), [MDStatisticRptGrp](#)

#### **171.2.2846 MDStatisticIntervalPeriod**

Length of time over which the statistic is calculated. Special meaning for a value of zero to express that there is no aggregation over time. Can be used with other interval types expressing relative date and time ranges to combine them with sliding window peaks, e.g. highest volume across 1 minute intervals of the previous day.

Type: [int](#)

Used in components: [MDStatisticParameters](#)

#### **171.2.2847 MDStatisticIntervalType**

Type of interval over which statistic is calculated.

Type: [int](#)

Allowed values in MDStatisticIntervalTypeCodeSet:

---

Code	Name	Description
1	SlidingWindow	Sliding window. Window is defined as an interval period up to the current time of dissemination, see MDStatisticIntervalPeriod (2466).

---

Code	Name	Description
2	SlidingWindowPeak	Sliding window peak. Highest value of all sliding windows across date and/or time range. Omission of date/time range represents current day.
3	FixedDateRange	Fixed date range. Interval may be open ended on either side, see MDStatisticStartDate (2468) and MDStatisticEndDate(2469). Starting/ending time of date fields only apply to the first/last day of the date range. Additional time range may be defined with MDStatisticStartTime(2470) and MDStatisticEndTime(2471) and applies to every business day within date range, i.e. to define an identical time slice across days.
4	FixedTimeRange	Fixed time range. Interval may be open ended on either side, see MDStatisticStartTime(2470) and MDStatisticEndTime(2471).
5	CurrentTimeUnit	Current time unit. Relative time unit which has not ended yet, e.g. current day. Interval ends with the time of dissemination of the statistic. Requires the definition of an actual unit, see MDStatisticIntervalTypeUnit(2465).
6	PreviousTimeUnit	Previous time unit. Relative time unit which has ended in the past. Requires the definition of an actual unit, see MDStatisticIntervalTypeUnit(2465).
7	MaximumRange	Maximum range. Use to convey record values over the lifetime of the system or venue.
8	MaximumRangeUpToPreviousTime-Unit	Maximum range up to previous time unit. Use to convey record values over the lifetime of the system or venue but does not include the most recent time unit as it has not completed yet. Requires the definition of an actual unit, see MDStatisticIntervalTypeUnit(2465)

Used in components: [MDStatisticParameters](#)

### 171.2.2848 MDStatisticIntervalTypeUnit

Time unit for MDStatisticIntervalType(2464).

Type: [String](#)

Allowed values in TimeUnitCodeSet:

Code	Name	Description
H	Hour	Hour

Code	Name	Description
Min	Minute	Minute
S	Second	Second
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year
Q	Quarter	Quarter
EOM	EndOfMonth	End of Month. End of Month identifies a relative time unit, e.g. until the third Friday of each month.
F	Flexible	Flexible. A flexible time unit indicates that a specific time unit for the contract is currently undetermined.

Used in components: [MDStatisticParameters](#)

#### 171.2.2849 MDStatisticIntervalUnit

Time unit for MDStatisticIntervalPeriod(2466).

Type: [int](#)

Allowed values in OrderDelayUnitCodeSet:

Code	Name	Description
0	Seconds	Seconds (default if not specified)
1	TenthsOfASecond	Tenths of a second
2	HundredthsOfASecond	Hundredths of a second
3	Milliseconds	milliseconds
4	Microseconds	microseconds
5	Nanoseconds	nanoseconds
10	Minutes	minutes
11	Hours	hours
12	Days	days
13	Weeks	weeks
14	Months	months
15	Years	years

Used in components: [MDStatisticParameters](#)

### 171.2.2850 MDStatisticName

The short name or acronym for a set of statistic parameters.

Type: [String](#)

Used in components: [MDStatisticParameters](#)

### 171.2.2851 MDStatisticParameters

This component comprises all parameters that can be used to describe the market data statistics. These can be part of the request as well as the response. All parameters defined on the MarketDataStatisticRequest(35=DO) message should be echoed in the MarketDataStatisticsReport(35=DP) message as the latter could also be sent unsolicited.

The general category and the entities involved in the statistics are defined by MDStatisticType(2456), MDStatisticScope(2457), and MDStatisticIntervalType(2464) and must always be specified. The remaining fields are optional and restrict the data range in one way or another. The time range for the data can either be specified in terms of an interval for which the statistics are typically calculated on a regular basis or in terms of an absolute date and/or time range.

---

Name	Mult.	Type	Description
<a href="#">MDStatisticType</a>	[1..1]	CodeSet	
<a href="#">MDStatisticScope</a>	[1..1]	CodeSet	
<a href="#">MDStatisticSubScope</a>	[0..1]	CodeSet	
<a href="#">MDStatisticScopeType</a>	[0..1]	CodeSet	
<a href="#">MDStatisticName</a>	[0..1]	String	
<a href="#">MDStatisticDesc</a>	[0..1]	String	
<a href="#">EncodedMDStatisticDescLen</a>	[0..1]	Length	Must be set if <a href="#">EncodedMDStatisticDesc(2482)</a> field is specified and must immediately precede it.
<a href="#">EncodedMDStatisticDesc</a>	[0..1]	data	Encoded (non-ASCII characters) representation of the <a href="#">MDStatisticDesc(2455)</a> field in the encoded format specified via the <a href="#">MessageEncoding(347)</a> field.
<a href="#">MarketDepth</a>	[0..1]	int	May be used to specify the market depth up to specified level.

---

Name	Mult.	Type	Description
MDStatisticFrequencyPeriod	[0..1]	int	Conditionally required when MDStatisticFrequencyUnit(2461) is specified. Omission represents a one-time dissemination.
MDStatisticFrequencyUnit	[0..1]	CodeSet	Conditionally required when MDStatisticFrequencyPeriod(2460) is specified.
MDStatisticDelayPeriod	[0..1]	int	Conditionally required when MDStatisticDelayUnit(2463) is specified.
MDStatisticDelayUnit	[0..1]	CodeSet	Conditionally required when MDStatisticDelayPeriod(2462) is specified.
MDStatisticIntervalType	[1..1]	CodeSet	
MDStatisticIntervalTypeUnit	[0..1]	CodeSet	Conditionally required when MDStatisticIntervalType (2464) = 5(Current time unit), 6(Previous time unit) or 8(Maximum range up to previous time unit).
MDStatisticIntervalPeriod	[0..1]	int	Conditionally required if/when MDStatisticIntervalUnit(2467) is specified. Conditionally required when MDStatisticIntervalType(2464) = 1 (Sliding window) or 2 (Sliding window peak).
MDStatisticIntervalUnit	[0..1]	CodeSet	Conditionally required when MDStatisticIntervalPeriod(2466) is specified.
MDStatisticStartDate	[0..1]	UTCTimestamp	Can be used to define a date range for a sliding window peak other than the current day. Omission represents a date range starting with the first available day.
MDStatisticEndDate	[0..1]	UTCTimestamp	Can be used to define a date range for a sliding window peak other than the current day. Omission represents a date range including the current day.
MDStatisticStartTime	[0..1]	UTCTimeOnly	Can be used to define a time range for a sliding window peak other than the complete day. Omission represents a time range starting at midnight.
MDStatisticEndTime	[0..1]	UTCTimeOnly	Can be used to define a time range for a sliding window peak other than the complete day. Omission represents a time range ending with the time of dissemination of the statistical data.
MDStatisticRatioType	[0..1]	CodeSet	Conditionally required when MDStatisticType(2456) = 5(Ratio).
NestedParties	[0..*]	Group	
AnnualTradingBusinessDays	[0..1]	int	

Name	Mult.	Type	Description
TradingCapacity	[0..1]	CodeSet	
OrdType	[0..1]	CodeSet	
TimeInForce	[0..1]	CodeSet	
QuoteCondition	[0..1]	CodeSet	
TradeCondition	[0..1]	CodeSet	
Side	[0..1]	CodeSet	
TradeInputSource	[0..1]	String	
TradingSessionID	[0..1]	CodeSet	
TradingSessionSubID	[0..1]	CodeSet	
MDOriOriginType	[0..1]	CodeSet	
MDValueTier	[0..1]	CodeSet	
TradSesMethod	[0..1]	CodeSet	
MDFeedType	[0..1]	String	
ExposureDuration	[0..1]	int	
ExposureDurationUnit	[0..1]	CodeSet	Conditionally required when ExposureDuration(1629) is specified.
AggressorIndicator	[0..1]	CodeSet	

Used in groups: [MDStatisticReqGrp](#), [MDStatisticRptGrp](#)

### 171.2.2852 MDStatisticRatioType

Ratios between various entities.

Type: [int](#)

Allowed values in MDStatisticRatioTypeCodeSet:

Code	Name	Description
1	BuyersToSellers	Buyers to sellers.
2	UpticksToDownticks	Upticks to downticks. Can also be used with a scope of multiple instruments representing an index.
3	MarketMakerToNonMarketMaker	Market maker to non-market maker. Use to identify share of market making activity.
4	AutomatedToNonAutomated	Automated to non-automated. Use to identify ratio of orders and quotes resulting from automated trading.

Code	Name	Description
5	OrdersToTrades	Orders to trades. Use with scope of trades.
6	QuotesToTrades	Quotes to trades. Use with scope of trades.
7	OrdersAndQuotesToTrades	Orders and quotes to trades. Use with scope of trades.
8	FailedToTotalTradedValue	Failed to total traded value. Total value of failed trades over total traded value.
9	BenefitsToTotalTradedValue	Benefits to total traded value. Total value of all benefits over total traded value.
10	FeesToTotalTradedValue	Fees to total traded value. Total value of all fees excluding rebates over total traded value.
11	TradeVolumeToTotalTradedVolume	Trade volume to total traded volume. Total value of failed trades over total traded value.
12	OrdersToTotalNumberOrders	Orders to total number of orders. Orders pertaining to a type over total number of orders.

Used in components: [MDStatisticParameters](#)

### 171.2.2853 MDStatisticReqGrp

This component block is used within the MarketDataStatisticsRequest(35=DO) message to define a set of parameters describing the desired statistics.

Name	Mult.	Type	Description
<a href="#">NoMDStatistics</a>	[1..1]	NumInGroup	
<a href="#">MDStatisticID</a>	[0..1]	String	Required if NoMDStatistics(2474) > 0. Unique statistics identifier used as a placeholder for a set of parameters. If an ID is not applicable use "[N/A]".
<a href="#">MDStatisticParameters</a>	[0..1]	Component	Required if NoMDStatistics(2474) > 0 and MDStatisticID(2475) = "[N/A]".

Used in messages: [MarketDataStatisticsRequest](#)

### 171.2.2854 MDStatisticReqID

Message identifier for a statistics request.

Type: **String**

Used in messages: **MarketDataStatisticsReport**, **MarketDataStatisticsRequest**

### 171.2.2855 MDStatisticRequestResult

Result returned in response to MarketDataStatisticsRequest (35=DO).

Type: **int**

Allowed values in MDStatisticRequestResultCodeSet:

---

Code	Name	Description
0	Successful	Successful (default)
1	InvalidOrUnknownMarket	Invalid or unknown market
2	InvalidOrUnknownMarketSegment	Invalid or unknown market segment
3	InvalidOrUnknownSecurityList	Invalid or unknown security list
4	InvalidOrUnknownInstruments	Invalid or unknown instrument(s)
5	InvalidParties	Invalid parties
6	TradeDateOutOfSupportedRange	Trade date out of supported range
7	UnsupportedStatisticType	Statistic type not supported
8	UnsupportedScopeOrSubScope	Scope or sub-scope not supported
9	UnsupportedScopeType	Scope type not supported
10	MarketDepthNotSupported	Market depth not supported
11	FrequencyNotSupported	Frequency not supported
12	UnsupportedStatisticInterval	Statistic interval not supported
13	UnsupportedStatisticDateRange	Statistic date range not supported
14	UnsupportedStatisticTimeRange	Statistic time range not supported
15	UnsupportedRatioType	Ratio type not supported
16	InvalidOrUnknownTradeInputSource	Invalid or unknown trade input source
17	InvalidOrUnknownTradingSession	Invalid or unknown trading session
18	UnauthorizedForStatisticRequest	Unauthorized for statistic request
99	Other	Other (further information in Text (58) field)

---

Used in messages: **MarketDataStatisticsReport**

**171.2.2856 MDStatisticRptGrp**

This component block is used within the MarketDataStatisticsReport(35=DP) message to provide results together with the related set of parameters.

Name	Mult.	Type	Description
NoMDStatistics	[1..1]	NumInGroup	
MDStatisticParameters	[0..1]	Component	Required if NoMDStatistics(2474) > 0.
MDStatisticID	[0..1]	String	Required if NoMDStatistics(2474) > 0.
MDStatisticTime	[0..1]	UTCTimestamp	Conditionally required when MDStatisticValue(2478) is specified.
MDStatisticStatus	[0..1]	CodeSet	May be used when sending reference data only to establish MDStatisticID(2475) as a reference to a set of parameters specified in MDStatisticParameters component. If not specified the default is MDStatisticStatus(2477)=1 (Active).
MDStatisticValue	[0..1]	float	Conditionally required unless sending reference data only to establish MDStatisticID(2475) as a reference to a set of parameters specified in MDStatisticParameters component.
MDStatisticValueType	[0..1]	CodeSet	
MDStatisticValueUnit	[0..1]	CodeSet	

Used in messages: [MarketDataStatisticsReport](#)

**171.2.2857 MDStatisticRptID**

Message identifier for a statistics report.

Type: [String](#)

Used in messages: [MarketDataStatisticsReport](#)

**171.2.2858 MDStatisticScope**

Entities used as basis for the statistics.

Type: [int](#)

Allowed values in MDStatisticScopeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	BidPrices	Bid prices
2	OfferPrices	Offer prices
3	BidDepth	Bid depth
4	OfferDepth	Offer depth
5	Orders	Orders
6	Quotes	Quotes
7	OrdersAndQuotes	Orders and Quotes
8	Trades	Trades
9	TradePrices	Trade prices
10	AuctionPrices	Auction prices
11	OpeningPrices	Opening prices
12	ClosingPrices	Closing prices
13	SettlementPrices	Settlement prices
14	UnderlyingPrices	Underlying prices
15	OpenInterest	Open interest
16	IndexValues	Index values
17	MarginRates	Margin rates
18	Outages	Outages. System halt due to a technical malfunction or failure.
19	ScheduledAuctions	Scheduled auctions
20	ReferencePrices	Reference prices
21	TradeValue	Trade value. Trade size multiplied by price.
22	MarketDataFeeItems	Market data fee items. Fees related to market data access.
23	Rebates	Rebates. Rebate items offered to the client.
24	Discounts	Discounts. Discounts offered to the client.
25	Payments	Payments. Other benefits offered to the client.
26	Taxes	Taxes. Taxes incurred.
27	Levies	Levies. Levies incurred.
28	Benefits	Benefits. Benefits offered to the client.
29	Fees	Fees
30	OrdersRFQs	Orders and RFQs (Request for quotes)
31	MarketMakers	Market makers
32	TradingInterruptions	Trading interruptions. Disruption in trading due to an automatic or manual decision.

---

Code	Name	Description
33	TradingSuspensions	Trading suspensions. An instrument is deliberately prevented from being quoted or traded due to a decision by execution venue or a competent authority.
34	NoQuotes	No quotes. Period of no quotes received.
35	RequestForQuotes	Request for quotes
36	TradeVolume	Trade volume. Quantity traded.

Used in components: [MDStatisticParameters](#)

### 171.2.2859 MDStatisticScopeType

Scope details of the statistics to reduce the number of events being used as basis for the statistics.

Type: [int](#)

Allowed values in MDStatisticScopeTypeCodeSet:

Code	Name	Description
1	EntryRate	Entry rate
2	ModificationRate	Modification rate
3	CancelRate	Cancel rate
4	DownwardMove	Downward move
5	UpwardMove	Upward move

Used in components: [MDStatisticParameters](#)

### 171.2.2860 MDStatisticStartDate

First day of range for which statistical data is collected.

Type: [UTCTimestamp](#)

Used in components: [MDStatisticParameters](#)

**171.2.2861 MDStatisticStartTime**

Start time of the time range for which statistical data is collected.

Type: [UTCTimeOnly](#)

Used in components: [MDStatisticParameters](#)

**171.2.2862 MDStatisticStatus**

Status for a statistic to indicate its availability.

Type: [int](#)

Allowed values in MDStatisticStatusCodeSet:

Code	Name	Description
1	Active	Active (default)
2	Inactive	Inactive (not disseminated)

Used in groups: [MDStatisticRptGrp](#)

**171.2.2863 MDStatisticSubScope**

Sub-scope of the statistics to further reduce the entities used as basis for the statistics.

Type: [int](#)

Allowed values in MDStatisticSubScopeCodeSet:

Code	Name	Description
1	Visible	Visible. Only includes visible orders and/or quotes.
2	Hidden	Hidden. Only includes hidden orders and/or quotes.
3	Indicative	Indicative. Only includes IOIs and non-tradable quotes.
4	Tradeable	Tradeable. Excludes IOIs and indicative quotes.
5	Passive	Passive. Only includes resting orders and tradeable quotes.
6	MarketConsensus	Market consensus. Only includes entities, e.g. trades, conforming to minimum requirements. Details to be defined out of band.
7	Power	Power. Outages due to power failure.

Code	Name	Description
8	HardwareError	Hardware error. Outages due to a hardware malfunction or failure.
9	SoftwareError	Software error. Outages due to a software malfunction or failure.
10	NetworkError	Network error. Outages due to network error.
11	Failed	Failed. Transaction voided by the execution venue.
12	Executed	Executed. Total or partial execution of an order or quote.
13	Entered	Entered. Order or quote entry.
14	Modified	Modified. Order or quote modification.
15	Cancelled	Cancelled. Order or quote cancellation.
16	MarketDataAccess	Market data access
17	TerminalAccess	Terminal access
18	Volume	Volume. Specifies sub-scope of market data per volume.
19	Cleared	Cleared. Cleared trade.
20	Settled	Settled. Settled trade.
21	Other	Other. Any other fees incurred by the client.
22	Monetary	Monetary. Monetary benefits offered to the clients.
23	NonMonetary	Non-monetary. Non-monetary benefits offered to the clients
24	Gross	Gross. Total fees excluding rebates and discounts.
25	LargeInScale	Large in scale. Means an order classified as large in scale in accordance with a regulatory definition.
26	NeitherHiddenNorLargeInScale	Neither hidden nor large in scale. Excluding orders pending disclosures and LIS.
27	CorporateAction	Corporate action. Specifies type of trading suspension.
28	VenueDecision	Venue decision. Specifies type of trading suspension.
29	MinimumTimePeriod	Minimum time period. Minimum time period for the event defined by scope.
30	Open	Open. Open status of RFQs (request for quotes), no quotes have been provided.
31	NotExecuted	Not executed. Orders or quotes that didn't execute.
32	Aggressive	Aggressive. Order or Quote entered into the order book that took liquidity.
33	Directed	Directed. An order where execution venue is specified by the client.

Used in components: [MDStatisticParameters](#)

**171.2.2864 MDStatisticTime**

Time of calculation of a statistic.

Type: **UTCTimestamp**

Used in groups: **MDStatisticRptGrp**

**171.2.2865 MDStatisticType**

Type of statistic value.

Type: **int**

Allowed values in MDStatisticTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	Count	Count. Simple count of entities or events, e.g. orders transactions during a period of time.
2	AverageVolume	Average volume. Average quantity of entities, e.g. average volume of incoming quotes or average trade volume.
3	TotalVolume	Total volume. Aggregated quantities of entities across events, e.g. total trade volume during a period of time.
4	Distribution	Distribution. Distribution of entities across entity types, e.g. percentage of limit orders amongst all order types.
5	Ratio	Ratio. Pre-defined ratio between entities, e.g. ratio of trades triggered by buy orders.
6	Liquidity	Liquidity. Measurement of liquidity of an instrument, e.g. by providing the spread between bid and offer or the trade volume needed to move the price.
7	VWAP	Volume weighted average price (VWAP). Benchmark price.
8	Volatility	Volatility. Volatility of entities, e.g. price movements of incoming orders.
9	Duration	Duration. Time period of events, e.g. resting period of passive orders.
10	Tick	Tick. Price movement of an instrument in number of ticks.
11	AverageValue	Average value. Average quantity multiplied by price.
12	TotalValue	Total value. Aggregated quantity multiplied by price; also described as turnover.
13	High	High. Highest price.
14	Low	Low. Lowest price.

---

Code	Name	Description
15	Midpoint	Midpoint. Midpoint price between bid and offer.
16	First	First. First price or initial value.
17	Last	Last. Most recent price or value.
18	Final	Final. Final price or confirmed value.
19	ExchangeBest	Exchange best. Best price of a single venue regardless of volume.
20	ExchangeBestWithVolume	Exchange best with volume. Best price of a single venue with volume at or above a pre-defined threshold.
21	ConsolidatedBest	Consolidated best. Best price across multiple venues regardless of volume.
22	ConsolidatedBestWithVolume	Consolidated best with volume. Best price across multiple venues with volume at or above a pre-defined threshold.
23	TWAP	Time weighted average price (TWAP)
24	AverageDuration	Average duration. Average duration of time periods of events.
25	AveragePrice	Average price. Average price across entities e.g. trade prices.
26	TotalFees	Total fees. Aggregated fees.
27	TotalBenefits	Total benefits. Aggregated benefits.
28	MedianValue	Median value. Median quantity multiplied by price for orders or quotes.
29	AverageLiquidity	Average liquidity. Average liquidity of an instrument e.g. average effective spread.
30	MedianDuration	Median duration. Median duration of time periods of events.

Used in components: [MDStatisticParameters](#)

### **171.2.2866 MDStatisticValue**

Statistical value.

Type: [float](#)

Used in groups: [MDStatisticRptGrp](#)

### **171.2.2867 MDStatisticValueType**

Type of statistical value.

Type: **int**

Allowed values in MDStatisticValueTypeCodeSet:

---

Code	Name	Description
1	Absolute	Absolute
2	Percentage	Percentage

---

Used in groups: **MDStatisticRptGrp**

### **171.2.2868 MDStatisticValueUnit**

Unit of time for statistical value.

Type: **int**

Allowed values in OrderDelayUnitCodeSet:

---

Code	Name	Description
0	Seconds	Seconds (default if not specified)
1	TenthsOfASecond	Tenths of a second
2	HundredthsOfASecond	Hundredths of a second
3	Milliseconds	milliseconds
4	Microseconds	microseconds
5	Nanoseconds	nanoseconds
10	Minutes	minutes
11	Hours	hours
12	Days	days
13	Weeks	weeks
14	Months	months
15	Years	years

---

Used in groups: **MDStatisticRptGrp**

### **171.2.2869 MDStreamID**

The identifier or name of the price stream.

Type: **String**

Used in groups: **InstrmtMDReqGrp, MDIncGrp, StrmAsgnReqInstrmtGrp, StrmAsgnRptInstrmtGrp**

Used in messages: **MarketDataSnapshotFullRefresh**

### **171.2.2870 MDSubBookType**

Describes a class of sub book, e.g. for the separation of various lot types. The Sub Book Type indicates that the following Market Data Entries belong to a non-integrated Sub Book. Whenever provided the Sub Book must be used together with MDPriceLevel and MDEntryPositionNo in order to sort the order properly.

Values are bilaterally agreed.

Type: **int**

Used in groups: **MDIncGrp, MarketDataFeedTypes**

Used in messages: **MarketDataSnapshotFullRefresh**

### **171.2.2871 MDSubFeedType**

Describes a sub-class for a given class of service defined by MDFeedType (1022)

Type: **String**

Used in groups: **MarketDataFeedTypes**

Used in messages: **MarketDataIncrementalRefresh, MarketDataSnapshotFullRefresh**

### **171.2.2872 MDUpdateAction**

Type of Market Data update action.

Type: **char**

Allowed values in MDUpdateActionCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	New	New
1	Change	Change
2	Delete	Delete

---

---

Code	Name	Description
3	DeleteThru	Delete Thru
4	DeleteFrom	Delete From
5	Overlay	Overlay

---

Used in groups: [MDIncGrp](#)

### 171.2.2873 MDUpdateType

Specifies the type of Market Data update.

Type: [int](#)

Allowed values in MDUpdateTypeCodeSet:

---

Code	Name	Description
0	FullRefresh	Full refresh
1	IncrementalRefresh	Incremental refresh

---

Used in messages: [MarketDataRequest](#)

### 171.2.2874 MDValueTier

Describes the reporting ranges for executed transactions.

Type: [int](#)

Allowed values in MDValueTierCodeSet:

---

Code	Name	Description
1	Range1	Range 1
2	Range2	Range 2
3	Range3	Range 3

---

Used in components: [MDStatisticParameters](#)

**171.2.2875 MessageEncoding**

Type of message encoding (non-ASCII (non-English) characters) used in a message's "Encoded" fields.

Type: **String**

Used in components: **StandardHeader**

**171.2.2876 MessageEventSource**

Used to identify the event or source which gave rise to a message.

Valid values will be based on an exchange's implementation.

Example values are:

"MQM" (originated at Firm Back Office)

"Clear" (originated in Clearing System)

"Reg" (static data generated via Register request)

Type: **String**

Used in messages: **AllocationInstruction**, **AllocationInstructionAlert**, **AllocationReport**, **PositionReport**, **TradeCaptureReport**, **TradeCaptureReportAck**, **TradeCaptureReportRequest**, **TradeCaptureReportRequestAck**

**171.2.2877 MetricsCalculationPriceSource**

Specifies the source of the price(s) of the security used in the calculation of the metrics or analytics data.

Type: **int**

Allowed values in MetricsCalculationPriceSourceCodeSet:

Code	Name	Description
1	Realtime	Real-time. Real-time market prices used as the data source in metrics/analytics calculation.
2	EndOfDay	End of day. Official end of day price (marking) used as the data source in metrics/analytics calculation.

Used in messages: **SecurityRiskMetricsReport**

### **171.2.2878 MidPx**

Mid price/rate.

For OTC swaps this is the mid-market mark (for example, as defined by CFTC).

For uncleared OTC swaps, LegMidPx(2346) and the MidPx(631) fields are mutually exclusive.

Type: **Price**

Used in groups: **QuotEntryAckGrp, QuotEntryGrp, QuotReqGrp**

Used in messages: **ExecutionReport, Quote, QuoteResponse, QuoteStatusReport, TradeCaptureReport**

### **171.2.2879 MidVolatility**

Volatility based on mid prices.

Type: **float**

Used in groups: **SecurityRiskMetricGrp**

### **171.2.2880 MidYield**

Mid yield

Type: **Percentage**

Used in groups: **QuotEntryAckGrp, QuotEntryGrp**

Used in messages: **Quote, QuoteResponse, QuoteStatusReport**

### **171.2.2881 MinBidSize**

Used to indicate a minimum quantity for a bid.

Type: **Qty**

Used in groups: **QuoteSizeRuleGrp**

Used in messages: **Quote, QuoteResponse, QuoteStatusReport**

### **171.2.2882 MinLotSize**

Minimum lot size allowed based on lot type specified in LotType(1093)

Type: Qty

Used in groups: LotTypeRules

### **171.2.2883 MinOfferSize**

Used to indicate a minimum quantity for an offer. If this field is used the OfferSize (135) field is interpreted as the maximum offer size.

Type: Qty

Used in groups: QuoteSizeRuleGrp

Used in messages: Quote, QuoteResponse, QuoteStatusReport

### **171.2.2884 MinPriceIncrement**

Minimum price increase for a given exchange-traded Instrument

Type: float

Used in components: Instrument

### **171.2.2885 MinPriceIncrementAmount**

Minimum price increment amount associated with MinPriceIncrement(969). For listed derivatives, the value can be calculated by multiplying MinPriceIncrement(969) with ContractMultiplier(231).

Type: Amt

Used in components: Instrument

### **171.2.2886 MinQty**

Minimum quantity of an order to be executed.

(Prior to FIX 4.2 this field was of type int)

Type: Qty

Used in groups: ListOrdGrp, MDFullGrp, MDIncGrp, QuotReqGrp

Used in messages: [CrossOrderCancelReplaceRequest](#), [ExecutionReport](#), [MultilegOrderCancelReplace](#), [NewOrderCross](#), [NewOrderMultileg](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#), [Quote](#), [QuoteResponse](#), [QuoteStatusReport](#)

### **171.2.2887 MinQtyMethod**

Indicates how the minimum quantity should be applied when executing the order.

Type: [int](#)

Allowed values in MinQtyMethodCodeSet:

Code	Name	Description
1	Once	Once (applies only to first execution)
2	Multiple	Multiple (applies to every execution)

Used in messages: [CrossOrderCancelReplaceRequest](#), [ExecutionReport](#), [MultilegOrderCancelReplace](#), [NewOrderCross](#), [NewOrderMultileg](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#)

### **171.2.2888 MinTradeVol**

The minimum order quantity (as expressed by [TradeVolType\(1786\)](#)) that can be submitted for a security.

Type: [Qty](#)

Used in components: [BaseTradingRules](#)

### **171.2.2889 MiscFeeAmountDue**

The fee amount due if different from [MiscFeeAmt\(137\)](#).

Type: [Amt](#)

Used in groups: [MiscFeesGrp](#)

### **171.2.2890 MiscFeeAmt**

Miscellaneous fee value

Type: **Amt**

Used in groups: **MiscFeesGrp**

### **171.2.2891 MiscFeeBasis**

Defines the unit for a miscellaneous fee.

Type: **int**

Allowed values in MiscFeeBasisCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Absolute	Absolute. The fee or markup is a total fixed amount expressed in the currency of the trade.
1	PerUnit	Per Unit. The fee or markup is an amount per quantity unit, i.e. per share or contract, expressed in the currency of the trade.
2	Percentage	Percentage. The percentage is expressed in standard FIX "Percentage" datatype format, i.e. "0.01" for 1 percent and ranges between 0 and 1. It is the number which when multiplied by the trade price and quantity produces the total amount of the fee or markup.

---

Used in groups: **MiscFeesGrp**

### **171.2.2892 MiscFeeCurr**

Currency of miscellaneous fee

Type: **Currency**

Used in groups: **MiscFeesGrp**

### **171.2.2893 MiscFeeDesc**

Can be used to provide a textual description of the fee type.

Type: **String**

Used in groups: **MiscFeesGrp**

**171.2.2894 MiscFeeQualifier**

Identifies whether the current entry contributes to the trade or transaction economics, i.e. affects NetMoney(118).

Type: **int**

Allowed values in MiscFeeQualifierCodeSet:

Code	Name	Description
0	Contributes	Contributes (default). Fee contributes to the trade or transaction economics.
1	DoesNotContribute	Does not contribute. Fee does not contribute to the trade or transaction economics.

Used in groups: **MiscFeesGrp**

**171.2.2895 MiscFeeRate**

The fee rate when MiscFeeAmt(137) is a percentage of trade quantity.

Type: **Percentage**

Used in groups: **MiscFeesGrp**

**171.2.2896 MiscFeesGrp**

The MiscFeesGrp component is used to provide details of trade and transaction fees other than commissions, e.g. regulatory, exchange, taxes, levies, markup, trade reporting, etc. In the context of ESMA RTS 27 Best Execution Reporting, it may also be used to collect and publish the nature and level of current venue fees, rebates and payouts. Use MiscFeeQualifier(2712) to communicate whether the fee affects trade economics.

Name	Mult.	Type	Description
<b>NoMiscFees</b>	[1..1]	NumInGroup	Required if any miscellaneous fees are reported. Indicates number of repeating entries.
<b>MiscFeeAmt</b>	[0..1]	Amt	Required if NoMiscFees(136) > 0.
<b>MiscFeeCurr</b>	[0..1]	Currency	
<b>MiscFeeType</b>	[0..1]	CodeSet	Required if NoMiscFees(136) > 0.

Name	Mult.	Type	Description
MiscFeeQualifier	[0..1]	CodeSet	
MiscFeesSubGrp	[0..*]	Group	
MiscFeeBasis	[0..1]	CodeSet	
MiscFeeRate	[0..1]	Percentage	
MiscFeeAmountDue	[0..1]	Amt	
MiscFeeDesc	[0..1]	String	

Used in groups: [AllocGrp](#), [TrdCapRptAckSideGrp](#), [TrdCapRptSideGrp](#)

Used in messages: [CollateralAssignment](#), [CollateralReport](#), [CollateralRequest](#), [CollateralResponse](#), [Confirmation](#), [ExecutionReport](#), [MarketDefinition](#)

### 171.2.2897 MiscFeesSubGrp

The MiscFeesSubGrp component is used to provide further details for a given MiscFeeType(139) value.

Name	Mult.	Type	Description
NoMiscFeeSubTypes	[1..1]	NumInGroup	
MiscFeeSubType	[0..1]	String	Required if NoMiscFeeSubTypes(2633) > 0.
MiscFeeSubTypeAmt	[0..1]	Amt	
MiscFeeSubTypeDesc	[0..1]	String	
EncodedMiscFeeSubTypeDescLen	[0..1]	Length	Must be set if EncodedMiscFeeSubTypeDesc(2638) field is specified and must immediately precede it.
EncodedMiscFeeSubTypeDesc	[0..1]	data	Encoded (non-ASCII characters) representation of the MiscFeeSubTypeDesc(2636) field in the encoded format specified via the MessageEncoding(347) field.

Used in groups: [MiscFeesGrp](#)

### 171.2.2898 MiscFeeSubType

Used to provide more granular fee types related to a value of MiscFeeType(139).

See [http://www.fixtradingcommunity.org/codelists#Misc\\_Fee\\_Sub\\_Types](http://www.fixtradingcommunity.org/codelists#Misc_Fee_Sub_Types) for code list of applicable fees. Other fee sub-types may be used by mutual agreement of the counterparties.

Type: **String**

Used in groups: **MiscFeesSubGrp**

### **171.2.2899 MiscFeeSubTypeAmt**

The amount of the specified MiscFeeSubType(2634).

Type: **Amt**

Used in groups: **MiscFeesSubGrp**

### **171.2.2900 MiscFeeSubTypeDesc**

Can be used to provide an optional textual description of the fee sub-type.

Type: **String**

Used in groups: **MiscFeesSubGrp**

### **171.2.2901 MiscFeeType**

Indicates type of miscellaneous fee.

Type: **String**

Allowed values in MiscFeeTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	Regulatory	Regulatory (e.g. SEC)
2	Tax	Tax
3	LocalCommission	Local Commission. DEPRECATE - use <CommissionDataGrp> component instead
4	ExchangeFees	Exchange Fees
5	Stamp	Stamp
6	Levy	Levy
7	Other	Other
8	Markup	Markup
9	ConsumptionTax	Consumption Tax
10	PerTransaction	Per transaction
11	Conversion	Conversion

---

Code	Name	Description
12	Agent	Agent
13	TransferFee	Transfer Fee
14	SecurityLending	Security Lending
15	TradeReporting	Trade reporting. Trade reporting [Elaboration: The fee charged to recover the cost of trade reporting, e.g. corporate bonds and structured products reported to FINRA TRACE.
16	TaxOnPrincipalAmount	Tax on principal amount
17	TaxOnAccruedInterestAmount	Tax on accrued interest amount
18	NewIssuanceFee	New issuance fee
19	ServiceFee	Service fee
20	OddLotFee	Odd lot fee
21	AuctionFee	Auction fee
22	ValueAddedTax	Value Added tax - VAT
23	SalesTax	Sales tax
24	ExecutionFee	Execution venue fee
25	OrderEntryFee	Order or quote entry fee. Order or quote submission fees per transaction.
26	OrderModificationFee	Order or quote modification fee. Order or quote modification fees per transaction.
27	OrdersCancellationFee	Orders or quote cancellation fee. Order or quote cancellation fees per transaction.
28	MarketDataAccessFee	Market data access fee. Fee for market data access.
29	MarketDataTerminalFee	Market data terminal fee. Fee for market data terminal.
30	MarketDataVolumeFee	Market data volume fee. Fee for market data per volume group.
31	ClearingFee	Clearing fee. Fee for clearing of trades.
32	SettlementFee	Settlement fee. Fee for settlement of trades.
33	Rebates	Rebates. Rebates offered to the client.
34	Discounts	Discounts. Discounts offered to the client.
35	Payments	Payments. Other benefits offered to the client.
36	NonMonetaryPayments	Non-monetary payments. Non-monetary benefits offered to the client.

Used in groups: **MiscFeesGrp**

**171.2.2902 MixedSwapIndicator**

An indication that the trade is a mixed swap.

Type: **Boolean**

Used in messages: **TradeCaptureReport**

**171.2.2903 MktBidPx**

Used to indicate the best bid in a market

Type: **Price**

Used in messages: **Quote, QuoteResponse, QuoteStatusReport**

**171.2.2904 MktOfferPx**

Used to indicate the best offer in a market

Type: **Price**

Used in messages: **Quote, QuoteResponse, QuoteStatusReport**

**171.2.2905 ModelType**

Type of pricing model used

Type: **int**

Allowed values in ModelTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	UtilityProvidedStandardModel	Utility provided standard model
1	ProprietaryModel	Proprietary (user supplied) model

---

Used in messages: **PositionReport**

**171.2.2906 MoneyLaunderingStatus**

A one character code identifying Money laundering status.

Type: **char**

Allowed values in MoneyLaunderingStatusCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
Y	Passed	Passed
N	NotChecked	Not Checked
1	ExemptBelowLimit	Exempt - Below the Limit
2	ExemptMoneyType	Exempt - Client Money Type exemption
3	ExemptAuthorised	Exempt - Authorised Credit or financial institution

---

Used in messages: **CrossOrderCancelReplaceRequest**, **ExecutionReport**, **MultilegOrderCancelReplace**, **NewOrderCross**, **NewOrderList**, **NewOrderMultileg**, **NewOrderSingle**, **OrderCancelReplaceRequest**

**171.2.2907 MsgDirection**

Specifies the direction of the message.

Type: **char**

Allowed values in MsgDirectionCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
R	Receive	Receive
S	Send	Send

---

Used in groups: **MsgTypeGrp**

**171.2.2908 MsgSeqNum**

Integer message sequence number.

Type: **SeqNum**

Used in components: **StandardHeader**

**171.2.2909 MsgType**

Defines message type ALWAYS THIRD FIELD IN MESSAGE. (Always unencrypted)

Note: A "U" as the first character in the MsgType field (i.e. U, U2, etc) indicates that the message format is privately defined between the sender and receiver.

\*\*\* Note the use of lower case letters \*\*\*

Type: **String**

Allowed values in MsgTypeCodeSet:

Code	Name	Description
0	Heartbeat	Heartbeat. The Heartbeat monitors the status of the communication link and identifies when the last of a string of messages was not received.
1	TestRequest	TestRequest. The test request message forces a heartbeat from the opposing application. The test request message checks sequence numbers or verifies communication line status. The opposite application responds to the Test Request with a Heartbeat containing the TestReqID.
2	ResendRequest	ResendRequest. The resend request is sent by the receiving application to initiate the retransmission of messages. This function is utilized if a sequence number gap is detected, if the receiving application lost a message, or as a function of the initialization process.
3	Reject	Reject. The reject message should be issued when a message is received but cannot be properly processed due to a session-level rule violation. An example of when a reject may be appropriate would be the receipt of a message with invalid basic data which successfully passes de-encryption, CheckSum and BodyLength checks.
4	SequenceReset	SequenceReset. The sequence reset message is used by the sending application to reset the incoming sequence number on the opposing side.
5	Logout	Logout. The logout message initiates or confirms the termination of a FIX session. Disconnection without the exchange of logout messages should be interpreted as an abnormal condition.

<b>Code</b>	<b>Name</b>	<b>Description</b>
6	IOI	IOI. Indication of interest messages are used to market merchandise which the broker is buying or selling in either a proprietary or agency capacity. The indications can be time bound with a specific expiration value. Indications are distributed with the understanding that other firms may react to the message first and that the merchandise may no longer be available due to prior trade. Indication messages can be transmitted in various transaction types; NEW, CANCEL, and REPLACE. All message types other than NEW modify the state of the message identified in IOIRefID.
7	Advertisement	Advertisement. Advertisement messages are used to announce completed transactions. The advertisement message can be transmitted in various transaction types; NEW, CANCEL and REPLACE. All message types other than NEW modify the state of a previously transmitted advertisement identified in AdvRefID.
8	ExecutionReport	ExecutionReport. The execution report message is used to: 1. confirm the receipt of an order. 2. confirm changes to an existing order (i.e. accept cancel and replace requests). 3. relay order status information. 4. relay fill information on working orders. 5. relay fill information on tradeable or restricted tradeable quotes. 6. reject orders. 7. report post-trade fees calculations associated with a trade
9	OrderCancelReject	OrderCancelReject. The order cancel reject message is issued by the broker upon receipt of a cancel request or cancel/replace request message which cannot be honored.
A	Logon	Logon. The logon message authenticates a user establishing a connection to a remote system. The logon message must be the first message sent by the application requesting to initiate a FIX session.
B	News	News. The news message is a general free format message between the broker and institution. The message contains flags to identify the news item's urgency and to allow sorting by subject company (symbol). The News message can be originated at either the broker or institution side, or exchanges and other marketplace venues.
C	Email	Email. The email message is similar to the format and purpose of the News message, however, it is intended for private use between two parties.

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	NewOrderSingle	NewOrderSingle. The new order message type is used by institutions wishing to electronically submit securities and forex orders to a broker for execution. The New Order message type may also be used by institutions or retail intermediaries wishing to electronically submit Collective Investment Vehicle (CIV) orders to a broker or fund manager for execution.
E	NewOrderList	NewOrderList. The NewOrderList Message can be used in one of two ways depending on which market conventions are being followed.
F	OrderCancelRequest	OrderCancelRequest. The order cancel request message requests the cancellation of all of the remaining quantity of an existing order. Note that the Order Cancel/Replace Request should be used to partially cancel (reduce) an order).
G	OrderCancelReplaceRequest	OrderCancelReplaceRequest. The order cancel/replace request is used to change the parameters of an existing order. Do not use this message to cancel the remaining quantity of an outstanding order, use the Order Cancel Request message for this purpose.
H	OrderStatusRequest	OrderStatusRequest. The order status request message is used by the institution to generate an order status message back from the broker.
J	AllocationInstruction	AllocationInstruction. The Allocation Instruction message provides the ability to specify how an order or set of orders should be subdivided amongst one or more accounts. In versions of FIX prior to version 4.4, this same message was known as the Allocation message. Note in versions of FIX prior to version 4.4, the allocation message was also used to communicate fee and expense details from the Sellside to the Buyside. This role has now been removed from the Allocation Instruction and is now performed by the new (to version 4.4) Allocation Report and Confirmation messages.,The Allocation Report message should be used for the Sell-side Initiated Allocation role as defined in previous versions of the protocol.
K	ListCancelRequest	ListCancelRequest. The List Cancel Request message type is used by institutions wishing to cancel previously submitted lists either before or during execution.
L	ListExecute	ListExecute. The List Execute message type is used by institutions to instruct the broker to begin execution of a previously submitted list. This message may or may not be used, as it may be mirroring a phone conversation.

---

Code	Name	Description
M	ListStatusRequest	ListStatusRequest. The list status request message type is used by institutions to instruct the broker to generate status messages for a list.
N	ListStatus	ListStatus. The list status message is issued as the response to a List Status Request message sent in an unsolicited fashion by the sell-side. It indicates the current state of the orders within the list as they exist at the broker's site. This message may also be used to respond to the List Cancel Request.
P	AllocationInstructionAck	AllocationInstructionAck. In versions of FIX prior to version 4.4, this message was known as the Allocation ACK message. The Allocation Instruction Ack message is used to acknowledge the receipt of and provide status for an Allocation Instruction message.
Q	DontKnowTrade	DontKnowTrade. The Don't Know Trade (DK) message notifies a trading partner that an electronically received execution has been rejected. This message can be thought of as an execution reject message.
R	QuoteRequest	QuoteRequest. In some markets it is the practice to request quotes from brokers prior to placement of an order. The quote request message is used for this purpose. This message is commonly referred to as an Request For Quote (RFQ)
S	Quote	Quote. The Quote message is used as the response to a Quote Request or a Quote Response message in both indicative, tradeable, and restricted tradeable quoting markets.
T	SettlementInstructions	SettlementInstructions. The Settlement Instructions message provides the broker's, the institution's, or the intermediary's instructions for trade settlement. This message has been designed so that it can be sent from the broker to the institution, from the institution to the broker, or from either to an independent "standing instructions" database or matching system or, for CIV, from an intermediary to a fund manager.
V	MarketDataRequest	MarketDataRequest. Some systems allow the transmission of real-time quote, order, trade, trade volume, open interest, and/or other price information on a subscription basis. A MarketDataRequest(35=V) is a general request for market data on specific securities or forex quotes. The values in the fields provided within the request will serve as further filter criteria for the result set.

Code	Name	Description
W	MarketDataSnapshotFullRefresh	MarketDataSnapshotFullRefresh. The Market Data messages are used as the response to a Market Data Request message. In all cases, one Market Data message refers only to one Market Data Request. It can be used to transmit a 2-sided book of orders or list of quotes, a list of trades, index values, opening, closing, settlement, high, low, or VWAP prices, the trade volume or open interest for a security, or any combination of these.
X	MarketDataIncrementalRefresh	MarketDataIncrementalRefresh. The Market Data message for incremental updates may contain any combination of new, changed, or deleted Market Data Entries, for any combination of instruments, with any combination of trades, imbalances, quotes, index values, open, close, settlement, high, low, and VWAP prices, trade volume and open interest so long as the maximum FIX message size is not exceeded. All of these types of Market Data Entries can be changed and deleted.
Y	MarketDataRequestReject	MarketDataRequestReject. The Market Data Request Reject is used when the broker cannot honor the Market Data Request, due to business or technical reasons. Brokers may choose to limit various parameters, such as the size of requests, whether just the top of book or the entire book may be displayed, and whether Full or Incremental updates must be used.
Z	QuoteCancel	QuoteCancel. The Quote Cancel message is used by an originator of quotes to cancel quotes. The Quote Cancel message supports cancellation of: <ul style="list-style-type: none"> <li>• All quotes.</li> <li>• Quotes for a specific symbol or security ID.</li> <li>• All quotes for a security type.</li> <li>• All quotes for an underlying</li> </ul>
a	QuoteStatusRequest	QuoteStatusRequest. The quote status request message is used for the following purposes in markets that employ tradeable or restricted tradeable quotes: <ul style="list-style-type: none"> <li>• For the issuer of a quote in a market to query the status of that quote (using the QuoteID to specify the target quote).</li> <li>• To subscribe and unsubscribe for Quote Status Report messages for one or more securities.</li> </ul>
b	MassQuoteAck	MassQuoteAck. Mass Quote Acknowledgement is used as the application level response to a Mass Quote message.
c	SecurityDefinitionRequest	SecurityDefinitionRequest. The SecurityDefinitionRequest(35=c) message is used for the following: <ol style="list-style-type: none"> <li>1. Request a specific security to be traded with the second party. The requested security can be defined as a multileg security made up of one or more instrument legs.</li> <li>2. Request a set of individual securities for a single market segment.</li> <li>3. Request all securities, independent of market segment.</li> </ol>

<b>Code</b>	<b>Name</b>	<b>Description</b>
d	SecurityDefinition	SecurityDefinition. The SecurityDefinition(35=d) message is used for the following: 1. Accept the security defined in a SecurityDefinition(35=d) message. 2. Accept the security defined in a SecurityDefinition(35=d) message with changes to the definition and/or identity of the security. 3. Reject the security requested in a SecurityDefinition(35=d) message. 4. Respond to a request for securities within a specified market segment. 5. Convey comprehensive security definition for all market segments that the security participates in. 6. Convey the security's trading rules that differ from default rules for the market segment.
e	SecurityStatusRequest	SecurityStatusRequest. The Security Status Request message provides for the ability to request the status of a security. One or more Security Status messages are returned as a result of a Security Status Request message.
f	SecurityStatus	SecurityStatus. The Security Status message provides for the ability to report changes in status to a security. The Security Status message contains fields to indicate trading status, corporate actions, financial status of the company. The Security Status message is used by one trading entity (for instance an exchange) to report changes in the state of a security.
g	TradingSessionStatusRequest	TradingSessionStatusRequest. The Trading Session Status Request is used to request information on the status of a market. With the move to multiple sessions occurring for a given trading party (morning and evening sessions for instance) there is a need to be able to provide information on what product is trading on what market.
h	TradingSessionStatus	TradingSessionStatus. The Trading Session Status provides information on the status of a market. For markets multiple trading sessions on multiple-markets occurring (morning and evening sessions for instance), this message is able to provide information on what products are trading on what market during what trading session.
i	MassQuote	MassQuote. The Mass Quote message can contain quotes for multiple securities to support applications that allow for the mass quoting of an option series. Two levels of repeating groups have been provided to minimize the amount of data required to submit a set of quotes for a class of options (e.g. all option series for IBM).

Code	Name	Description
j	BusinessMessageReject	BusinessMessageReject. The Business Message Reject message can reject an application-level message which fulfills session-level rules and cannot be rejected via any other means. Note if the message fails a session-level rule (e.g. body length is incorrect), a session-level Reject message should be issued.
k	BidRequest	BidRequest. The BidRequest Message can be used in one of two ways depending on which market conventions are being followed. In the "Non disclosed" convention (e.g. US/European model) the BidRequest message can be used to request a bid based on the sector, country, index and liquidity information contained within the message itself. In the "Non disclosed" convention the entry repeating group is used to define liquidity of the program. See " Program/Basket/List Trading" for an example. In the "Disclosed" convention (e.g. Japanese model) the BidRequest message can be used to request bids based on the ListOrderDetail messages sent in advance of BidRequest message. In the "Disclosed" convention the list repeating group is used to define which ListOrderDetail messages a bid is being sort for and the directions of the required bids.
l	BidResponse	BidResponse. The Bid Response message can be used in one of two ways depending on which market conventions are being followed. In the "Non disclosed" convention the Bid Response message can be used to supply a bid based on the sector, country, index and liquidity information contained within the corresponding bid request message. See "Program/Basket/List Trading" for an example. In the "Disclosed" convention the Bid Response message can be used to supply bids based on the List Order Detail messages sent in advance of the corresponding Bid Request message.
m	ListStrikePrice	ListStrikePrice. The strike price message is used to exchange strike price information for principal trades. It can also be used to exchange reference prices for agency trades.
n	XMLnonFIX	XMLnonFIX.
o	RegistrationInstructions	RegistrationInstructions. The Registration Instructions message type may be used by institutions or retail intermediaries wishing to electronically submit registration information to a broker or fund manager (for CIV) for an order or for an allocation.
p	RegistrationInstructionsResponse	RegistrationInstructionsResponse. The Registration Instructions Response message type may be used by broker or fund manager (for CIV) in response to a Registration Instructions message submitted by an institution or retail intermediary for an order or for an allocation.

<b>Code</b>	<b>Name</b>	<b>Description</b>
q	OrderMassCancelRequest	OrderMassCancelRequest. The order mass cancel request message requests the cancellation of all of the remaining quantity of a group of orders matching criteria specified within the request. NOTE: This message can only be used to cancel order messages (reduce the full quantity).
r	OrderMassCancelReport	OrderMassCancelReport. The Order Mass Cancel Report is used to acknowledge an Order Mass Cancel Request. Note that each affected order that is canceled is acknowledged with a separate Execution Report or Order Cancel Reject message.
s	NewOrderCross	NewOrderCross. Used to submit a cross order into a market. The cross order contains two order sides (a buy and a sell). The cross order is identified by its CrossID.
t	CrossOrderCancelReplaceRequest	CrossOrderCancelReplaceRequest. Used to modify a cross order previously submitted using the New Order - Cross message. See Order Cancel Replace Request for details concerning message usage.
u	CrossOrderCancelRequest	CrossOrderCancelRequest. Used to fully cancel the remaining open quantity of a cross order.
v	SecurityTypeRequest	SecurityTypeRequest. The Security Type Request message is used to return a list of security types available from a counterparty or market.
w	SecurityTypes	SecurityTypes. The Security Type Request message is used to return a list of security types available from a counterparty or market.
x	SecurityListRequest	SecurityListRequest. The Security List Request message is used to return a list of securities from the counterparty that match criteria provided on the request
y	SecurityList	SecurityList. The Security List message is used to return a list of securities that matches the criteria specified in a Security List Request.
z	DerivativeSecurityListRequest	DerivativeSecurityListRequest. The Derivative Security List Request message is used to return a list of securities from the counterparty that match criteria provided on the request
AA	DerivativeSecurityList	DerivativeSecurityList. The Derivative Security List message is used to return a list of securities that matches the criteria specified in a Derivative Security List Request.
AB	NewOrderMultileg	NewOrderMultileg. The New Order - Multileg is provided to submit orders for securities that are made up of multiple securities, known as legs.

<b>Code</b>	<b>Name</b>	<b>Description</b>
AC	MultilegOrderCancelReplace	MultilegOrderCancelReplace. Used to modify a multileg order previously submitted using the New Order - Multileg message. See Order Cancel Replace Request for details concerning message usage.
AD	TradeCaptureReportRequest	TradeCaptureReportRequest. The Trade Capture Report Request can be used to: <ul style="list-style-type: none"> <li>• Request one or more trade capture reports based upon selection criteria provided on the trade capture report request.</li> <li>• Subscribe for trade capture reports based upon selection criteria provided on the trade capture report request.</li> </ul>
AE	TradeCaptureReport	TradeCaptureReport. The Trade Capture Report message can be: <ul style="list-style-type: none"> <li>- Used to report trades between counterparties.</li> <li>- Used to report trades to a trade matching system.</li> <li>- Sent unsolicited between counterparties.</li> <li>- Sent as a reply to a Trade Capture Report Request.</li> <li>- Used to report unmatched and matched trades.</li> </ul>
AF	OrderMassStatusRequest	OrderMassStatusRequest. The order mass status request message requests the status for orders matching criteria specified within the request.
AG	QuoteRequestReject	QuoteRequestReject. The Quote Request Reject message is used to reject Quote Request messages for all quoting models.
AH	RFQRequest	RFQRequest. In tradeable and restricted tradeable quoting markets – Quote Requests are issued by counterparties interested in ascertaining the market for an instrument. Quote Requests are then distributed by the market to liquidity providers who make markets in the instrument. The RFQ Request is used by liquidity providers to indicate to the market for which instruments they are interested in receiving Quote Requests. It can be used to register interest in receiving quote requests for a single instrument or for multiple instruments
AI	QuoteStatusReport	QuoteStatusReport. The quote status report message is used: <ul style="list-style-type: none"> <li>• as the response to a Quote Status Request message.</li> <li>• as a response to a Quote Cancel message.</li> <li>• as a response to a Quote Response message in a negotiation dialog (see Volume 7 – PRODUCT: FIXED INCOME and USER GROUP: EXCHANGES AND MARKETS)</li> </ul>
AJ	QuoteResponse	QuoteResponse. The QuoteResponse(35=AJ) message is used for the following purposes: <ol style="list-style-type: none"> <li>1. Respond to an IOI(35=6) message.</li> <li>2. Respond to a Quote(35=S) message.</li> <li>3. Counter a Quote.</li> <li>4. End a negotiation dialog.</li> <li>5. Follow-up or end a QuoteRequest(35=R) dialog that did not receive a response.</li> </ol>

<b>Code</b>	<b>Name</b>	<b>Description</b>
AK	Confirmation	Confirmation. The Confirmation messages are used to provide individual trade level confirmations from the sell side to the buy side. In versions of FIX prior to version 4.4, this role was performed by the allocation message. Unlike the allocation message, the confirmation message operates at an allocation account (trade) level rather than block level, allowing for the affirmation or rejection of individual confirmations.
AL	PositionMaintenanceRequest	PositionMaintenanceRequest. The Position Maintenance Request message allows the position owner to submit requests to the holder of a position which will result in a specific action being taken which will affect the position. Generally, the holder of the position is a central counter party or clearing organization but can also be a party providing investment services.
AM	PositionMaintenanceReport	PositionMaintenanceReport. The Position Maintenance Report message is sent by the holder of a position in response to a Position Maintenance Request and is used to confirm that a request has been successfully processed or rejected.
AN	RequestForPositions	RequestForPositions. The Request For Positions message is used by the owner of a position to request a Position Report from the holder of the position, usually the central counter party or clearing organization. The request can be made at several levels of granularity.
AO	RequestForPositionsAck	RequestForPositionsAck. The Request for Positions Ack message is returned by the holder of the position in response to a Request for Positions message. The purpose of the message is to acknowledge that a request has been received and is being processed.
AP	PositionReport	PositionReport. The Position Report message is returned by the holder of a position in response to a Request for Position message. The purpose of the message is to report all aspects of a position and may be provided on a standing basis to report end of day positions to an owner.

<b>Code</b>	<b>Name</b>	<b>Description</b>
AQ	TradeCaptureReportRequestAck	TradeCaptureReportRequestAck. The Trade Capture Request Ack message is used to: - Provide an acknowledgement to a Trade Capture Report Request in the case where the Trade Capture Report Request is used to specify a subscription or delivery of reports via an out-of-band ResponseTransmissionMethod. - Provide an acknowledgement to a Trade Capture Report Request in the case when the return of the Trade Capture Reports matching that request will be delayed or delivered asynchronously. This is useful in distributed trading system environments. - Indicate that no trades were found that matched the selection criteria specified on the Trade Capture Report Request or the Trade Capture Report Request was invalid for some business reason, such as request is not authorized, invalid or unknown instrument, party, trading session, etc.
AR	TradeCaptureReportAck	TradeCaptureReportAck. The Trade Capture Report Ack message can be: - Used to acknowledge trade capture reports received from a counterparty. - Used to reject a trade capture report received from a counterparty.
AS	AllocationReport	AllocationReport. Sent from sell-side to buy-side, sell-side to 3rd-party or 3rd-party to buy-side, the Allocation Report (Claim) provides account breakdown of an order or set of orders plus any additional follow-up front-office information developed post-trade during the trade allocation, matching and calculation phase. In versions of FIX prior to version 4.4, this functionality was provided through the Allocation message. Depending on the needs of the market and the timing of "confirmed" status, the role of Allocation Report can be taken over in whole or in part by the Confirmation message.
AT	AllocationReportAck	AllocationReportAck. The Allocation Report Ack message is used to acknowledge the receipt of and provide status for an Allocation Report message.
AU	ConfirmationAck	ConfirmationAck. The Confirmation Ack (aka Affirmation) message is used to respond to a Confirmation message.
AV	SettlementInstructionRequest	SettlementInstructionRequest. The Settlement Instruction Request message is used to request standing settlement instructions from another party.
AW	AssignmentReport	AssignmentReport. Assignment Reports are sent from a clearing house to counterparties, such as a clearing firm as a result of the assignment process.

<b>Code</b>	<b>Name</b>	<b>Description</b>
AX	CollateralRequest	CollateralRequest. An initiator that requires collateral from a respondent sends a Collateral Request. The initiator can be either counterparty to a trade in a two party model or an intermediary such as an ATS or clearinghouse in a three party model. A Collateral Assignment is expected as a response to a request for collateral.
AY	CollateralAssignment	CollateralAssignment. Used to assign collateral to cover a trading position. This message can be sent unsolicited or in reply to a Collateral Request message.
AZ	CollateralResponse	CollateralResponse. Used to respond to a Collateral Assignment message.
BA	CollateralReport	CollateralReport. Used to report collateral status when responding to a Collateral Inquiry message.
BB	CollateralInquiry	CollateralInquiry. Used to inquire for collateral status.
BC	NetworkCounterpartySystemStatus-Request	NetworkCounterpartySystemStatusRequest. This message is send either immediately after logging on to inform a network (counterparty system) of the type of updates required or to at any other time in the FIX conversation to change the nature of the types of status updates required. It can also be used with a NetworkRequestType of Snapshot to request a one-off report of the status of a network (or counterparty) system. Finally this message can also be used to cancel a request to receive updates into the status of the counterparties on a network by sending a NetworkRequestStatusMessage with a NetworkRequestType of StopSubscribing.
BD	NetworkCounterpartySystemStatus-Response	NetworkCounterpartySystemStatusResponse. This message is sent in response to a Network (Counterparty System) Status Request Message.
BE	UserRequest	UserRequest. This message is used to initiate a user action, logon, logout or password change. It can also be used to request a report on a user's status.
BF	UserResponse	UserResponse. This message is used to respond to a user request message, it reports the status of the user after the completion of any action requested in the user request message.
BG	CollateralInquiryAck	CollateralInquiryAck. Used to respond to a Collateral Inquiry in the following situations: <ul style="list-style-type: none"> <li>• When the CollateralInquiry will result in an out of band response (such as a file transfer).</li> <li>• When the inquiry is otherwise valid but no collateral is found to match the criteria specified on the Collateral Inquiry message.</li> <li>• When the Collateral Inquiry is invalid based upon the business rules of the counterparty.</li> </ul>

<b>Code</b>	<b>Name</b>	<b>Description</b>
BH	ConfirmationRequest	ConfirmationRequest. The Confirmation Request message is used to request a Confirmation message.
BO	ContraryIntentionReport	ContraryIntentionReport. The Contrary Intention Report is used for reporting of contrary expiration quantities for Saturday expiring options. This information is required by options exchanges for regulatory purposes.
BP	SecurityDefinitionUpdateReport	SecurityDefinitionUpdateReport. This message is used for reporting updates to a product security master file. Updates could be the result of corporate actions or other business events. Updates may include additions, modifications or deletions.
BK	SecurityListUpdateReport	SecurityListUpdateReport. The Security List Update Report is used for reporting updates to a Contract Security Masterfile. Updates could be due to Corporate Actions or other business events. Update may include additions, modifications and deletions.
BL	AdjustedPositionReport	AdjustedPositionReport. Used to report changes in position, primarily in equity options, due to modifications to the underlying due to corporate actions
BM	AllocationInstructionAlert	AllocationInstructionAlert. This message is used in a 3-party allocation model (buy-side and sell-side using a central clearing entity) where notification of group creation and group updates to counterparties is needed. The message will also carry trade information that comprised the group to the counterparties.
BN	ExecutionAck	ExecutionAck. The Execution Report Acknowledgement message is an optional message that provides dual functionality to notify a trading partner that an electronically received execution has either been accepted or rejected (DK'd).
BJ	TradingSessionList	TradingSessionList. The Trading Session List message is sent as a response to a Trading Session List Request. The Trading Session List should contain the characteristics of the trading session and the current state of the trading session.
BI	TradingSessionListRequest	TradingSessionListRequest. The Trading Session List Request is used to request a list of trading sessions available in a market place and the state of those trading sessions. A successful request will result in a response from the counterparty of a Trading Session List (MsgType=BJ) message that contains a list of zero or more trading sessions.
BQ	SettlementObligationReport	SettlementObligationReport. The Settlement Obligation Report message provides a central counterparty, institution, or individual counterparty with a capacity for reporting the final details of a currency settlement obligation.

<b>Code</b>	<b>Name</b>	<b>Description</b>
BR	DerivativeSecurityListUpdateReport	DerivativeSecurityListUpdateReport. The Derivative Security List Update Report message is used to send updates to an option family or the strikes that comprise an option family.
BS	TradingSessionListUpdateReport	TradingSessionListUpdateReport. The Trading Session List Update Report is used by marketplaces to provide intra-day updates of trading sessions when there are changes to one or more trading sessions.
BT	MarketDefinitionRequest	MarketDefinitionRequest. The Market Definition Request message is used to request for market structure information from the Respondent that receives this request.
BU	MarketDefinition	MarketDefinition. The MarketDefinition(35=BU) message is used to respond to MarketDefinitionRequest(35=BT). In a subscription, it will be used to provide the initial snapshot of the information requested. Subsequent updates are provided by the MarketDefinitionUpdateReport(35=BV).
BV	MarketDefinitionUpdateReport	MarketDefinitionUpdateReport. In a subscription for market structure information, this message is used once the initial snapshot of the information has been sent using the MarketDefinition(35=BU) message.
BW	ApplicationMessageRequest	ApplicationMessageRequest. This message is used to request a retransmission of a set of one or more messages generated by the application specified in RefApplID (1355).
BX	ApplicationMessageRequestAck	ApplicationMessageRequestAck. This message is used to acknowledge an Application Message Request providing a status on the request (i.e. whether successful or not). This message does not provide the actual content of the messages to be resent.
BY	ApplicationMessageReport	ApplicationMessageReport. This message is used for three difference purposes: to reset the ApplSeqNum (1181) of a specified ApplID (1180). to indicate that the last message has been sent for a particular ApplID, or as a keep-alive mechanism for ApplIDs with infrequent message traffic.
BZ	OrderMassActionReport	OrderMassActionReport. The Order Mass Action Report is used to acknowledge an Order Mass Action Request. Note that each affected order that is suspended or released or canceled is acknowledged with a separate Execution Report for each order.
CA	OrderMassActionRequest	OrderMassActionRequest. The Order Mass Action Request message can be used to request the suspension or release of a group of orders that match the criteria specified within the request. This is equivalent to individual Order Cancel Replace Requests for each order with or without adding "S" to the ExecInst values. It can also be used for mass order cancellation.

<b>Code</b>	<b>Name</b>	<b>Description</b>
CB	UserNotification	UserNotification. The User Notification message is used to notify one or more users of an event or information from the sender of the message. This message is usually sent unsolicited from a marketplace (e.g. Exchange, ECN) to a market participant.
CC	StreamAssignmentRequest	StreamAssignmentRequest. In certain markets where market data aggregators fan out to end clients the pricing streams provided by the price makers, the price maker may assign the clients to certain pricing streams that the price maker publishes via the aggregator. An example of this use is in the FX markets where clients may be assigned to different pricing streams based on volume bands and currency pairs.
CD	StreamAssignmentReport	StreamAssignmentReport. The StreamAssignmentReport message is in response to the StreamAssignmentRequest message. It provides information back to the aggregator as to which clients to assign to receive which price stream based on requested CCY pair. This message can be sent unsolicited to the Aggregator from the Price Maker.
CE	StreamAssignmentReportACK	StreamAssignmentReportACK. This message is used to respond to the Stream Assignment Report, to either accept or reject an unsolicited assignment.
CF	PartyDetailsListRequest	PartyDetailsListRequest. The PartyDetailsListRequest is used to request party detail information.
CG	PartyDetailsListReport	PartyDetailsListReport. The PartyDetailsListReport message is used to disseminate party details between counterparties. PartyDetailsListReport messages may be sent in response to a PartyDetailsListRequest message or sent unsolicited.

<b>Code</b>	<b>Name</b>	<b>Description</b>
CH	MarginRequirementInquiry	MarginRequirementInquiry. The purpose of this message is to initiate a margin requirement inquiry for a margin account. The inquiry may be submitted at the detail level or the summary level. It can also be used to inquire margin excess/deficit or net position information. Margin excess/deficit will provide information about the surplus or shortfall compared to the previous trading day or a more recent margin calculation. An inquiry for net position information will trigger one or more PositionReport messages instead of one or more MarginRequirementReport messages. If the inquiry is made at the detail level, an Instrument block must be provided with the desired level of detail. If the inquiry is made at the summary level, the Instrument block is not provided, implying a summary request is being made. For example, if the inquiring firm specifies the Security Type of "FUT" in the Instrument block, then a detail report will be generated containing the margin requirements for all futures positions for the inquiring account. Similarly, if the inquiry is made at the summary level, the report will contain the total margin requirement aggregated to the margin account level.
CI	MarginRequirementInquiryAck	MarginRequirementInquiryAck. Used to respond to a Margin Requirement Inquiry.
CJ	MarginRequirementReport	MarginRequirementReport. The Margin Requirement Report returns information about margin requirement either as an overview across all margin accounts or on a detailed level due to the inquiry making use of the optional Instrument component block. Application sequencing can be used to re-request a range of reports.
CK	PartyDetailsListUpdateReport	PartyDetailsListUpdateReport. The PartyDetailsListUpdateReport(35=CK) is used to disseminate updates to party detail information.
CL	PartyRiskLimitsRequest	PartyRiskLimitsRequest. The PartyRiskLimitsRequest message is used to request for risk information for specific parties, specific party roles or specific instruments.
CM	PartyRiskLimitsReport	PartyRiskLimitsReport. The PartyRiskLimitsReport message is used to communicate party risk limits. The message can either be sent as a response to the PartyRiskLimitsRequest message or can be published unsolicited.
CN	SecurityMassStatusRequest	SecurityMassStatusRequest.
CO	SecurityMassStatus	SecurityMassStatus.

<b>Code</b>	<b>Name</b>	<b>Description</b>
CQ	AccountSummaryReport	AccountSummaryReport. The AccountSummaryReport is provided by the clearinghouse to its clearing members on a daily basis. It contains margin, settlement, collateral and pay/collect data for each clearing member level account type. Clearing member account types will be described through use of the Parties component and PtysSubGrp sub-component. In certain usages, the clearing members can send the AccountSummaryReport message to the clearinghouse as needed. For example, clearing members can send this message to the clearinghouse to identify the value of collateral for each customer (to satisfy CFTC Legally Segregated Operationally Commingled (LSOC) regulatory reporting obligations). Clearing organizations can also send the AccountSummaryReport message to regulators to meet regulatory reporting obligations. For example, clearing organizations can use this message to submit daily reports for each clearing member ("CM") by house origin and by each customer origin for all futures, options, and swaps positions, and all securities positions held in a segregated account or pursuant to a cross margining agreement, to a regulator (e.g. to the CFTC to meet Part 39, Section 39.19 reporting obligations).
CR	PartyRiskLimitsUpdateReport	PartyRiskLimitsUpdateReport. The PartyRiskLimitsUpdateReport(35=CR) is used to convey incremental changes to risk limits. It is similar to the regular report but uses the PartyRiskLimitsUpdateGrp component instead of the PartyRiskLimitsGrp component to include an update action.
CS	PartyRiskLimitsDefinitionRequest	PartyRiskLimitsDefinitionRequest. PartyRiskLimitDefinitionRequest is used for defining new risk limits.
CT	PartyRiskLimitsDefinitionRequestAck	PartyRiskLimitsDefinitionRequestAck. PartyRiskLimitDefinitionRequestAck is used for accepting (with or without changes) or rejecting the definition of risk limits.
CU	PartyEntitlementsRequest	PartyEntitlementsRequest. The PartyEntitlementsRequest message is used to request for entitlement information for one or more party(-ies), specific party role(s), or specific instrument(s).
CV	PartyEntitlementsReport	PartyEntitlementsReport. The PartyEntitlementsReport is used to report entitlements for one or more parties, party role(s), or specific instrument(s).

<b>Code</b>	<b>Name</b>	<b>Description</b>
CW	QuoteAck	QuoteAck. The QuoteAck(35=CW) message is used to acknowledge a Quote(35=S) submittal or request to cancel an individual quote using the QuoteCancel(35=Z) message during a Quote/Negotiation dialog.
CX	PartyDetailsDefinitionRequest	PartyDetailsDefinitionRequest. The PartyDetailsDefinitionRequest(35=CX) is used for defining new parties and modifying or deleting existing parties information, including the relationships between parties. The recipient of the message responds with a PartyDetailsDefinitionRequestAck(35=CY) to indicate whether the request was accepted or rejected.
CY	PartyDetailsDefinitionRequestAck	PartyDetailsDefinitionRequestAck. The PartyDetailsDefinitionRequestAck(35=CY) is used as a response to the PartyDetailsDefinitionRequest(35=CX) message. The request can be accepted (with or without changes) or rejected.
CZ	PartyEntitlementsUpdateReport	PartyEntitlementsUpdateReport. The PartyEntitlementsUpdateReport(35=CZ) is used to convey incremental changes to party entitlements. It is similar to the PartyEntitlementsReport(35=CV). This message uses the PartyEntitlementsUpdateGrp component which includes the ability to specify an update action using ListUpdateAction(1324).
DA	PartyEntitlementsDefinitionRequest	PartyEntitlementsDefinitionRequest. The PartyEntitlementsDefinitionRequest(35=DA) is used for defining new entitlements, and modifying or deleting existing entitlements for the specified party(-ies).
DB	PartyEntitlementsDefinitionRequestAck	PartyEntitlementsDefinitionRequestAck. The PartyEntitlementsDefinitionRequestAck(35=DB) is used as a response to the PartyEntitlementsDefinitionRequest(35=DA) to accept (with or without changes) or reject the definition of party entitlements.
DC	TradeMatchReport	TradeMatchReport. The TradeMatchReport(35=DC) message is used by exchanges and ECN's to report matched trades to central counterparties (CCPs) as an atomic event. The message is used to express the one-to-one, one-to-many and many-to-many matches as well as implied matches in which more complex instruments can match with simpler instruments.
DD	TradeMatchReportAck	TradeMatchReportAck. The TradeMatchReportAck(35=DD) is used to respond to the TradeMatchReport(35=DC) message. It may be used to report on the status of the request (e.g. accepting the request or rejecting the request).

<b>Code</b>	<b>Name</b>	<b>Description</b>
DE	PartyRiskLimitsReportAck	PartyRiskLimitsReportAck. PartyRiskLimitsReportAck is an optional message used as a response to the PartyRiskLimitReport(35=CM) or PartyRiskLimitUpdateReport(35=CR) messages to acknowledge or reject those messages.
DF	PartyRiskLimitCheckRequest	PartyRiskLimitCheckRequest. PartyRiskLimitCheckRequest is used to request for approval of credit or risk limit amount intended to be used by a party in a transaction from another party that holds the information.
DG	PartyRiskLimitCheckRequestAck	PartyRiskLimitCheckRequestAck. PartyRiskLimitCheckRequestAck is used to acknowledge a PartyRiskLimitCheckRequest(35=DF) message and to respond whether the limit check request was approved or not. When used to accept the PartyRiskLimitCheckRequest(35=DF) message the Respondent may also include the limit amount that was approved.
DH	PartyActionRequest	PartyActionRequest. The PartyActionRequest message is used suspend or halt the specified party from further trading activities at the Respondent. The Respondent must respond with a PartyActionReport(35=DI) message.
DI	PartyActionReport	PartyActionReport. Used to respond to the PartyActionRequest(35=DH) message, indicating whether the request has been received, accepted or rejected. Can also be used in an unsolicited manner to report party actions, e.g. reinstatements after a manual intervention out of band.
DJ	MassOrder	MassOrder. The MassOrder(35=DJ) message can be used to add, modify or delete multiple unrelated orders with a single message. Apart from clearing related attributes, only the key order attributes for high performance trading are available.
DK	MassOrderAck	MassOrderAck. The mass order acknowledgement message is used to acknowledge the receipt of and the status for a MassOrder(35=DJ) message.
DL	PositionTransferInstruction	PositionTransferInstruction. The PositionTransferInstruction(35=DL) is sent by clearing firms to CCPs to initiate position transfers, or to accept or decline position transfers.
DM	PositionTransferInstructionAck	PositionTransferInstructionAck. The PositionTransferInstructionAck(35=DM) is sent by CCPs to clearing firms to acknowledge position transfer instructions, and to report errors processing position transfer instructions.

<b>Code</b>	<b>Name</b>	<b>Description</b>
DN	PositionTransferReport	PositionTransferReport. The PositionTransferReport(35=DN) is sent by CCPs to clearing firms indicating of positions that are to be transferred to the clearing firm, or to report on status of the transfer to the clearing firms involved in the transfer process.
DO	MarketDataStatisticsRequest	MarketDataStatisticsRequest. The MarketDataStatisticsRequest(35=DO) is used to request for statistical data. The simple form is to use an identifier (MDStatisticID(2475)) assigned by the market place which would denote a pre-defined statistical report. Alternatively, or also in addition, the request can define a number of parameters for the desired statistical information.
DP	MarketDataStatisticsReport	MarketDataStatisticsReport. The MarketDataStatisticsReport(35=DP) is used to provide unsolicited statistical information or in response to a specific request. Each report contains a set of statistics for a single entity which could be a market, a market segment, a security list or an instrument.
DQ	CollateralReportAck	CollateralReportAck. CollateralReportAck(35=DQ) is used as a response to the CollateralReport(35=BA). It can be used to reject a CollateralReport(35=BA) when the content of the report is invalid based on the business rules of the receiver. The message may also be used to acknowledge receipt of a valid CollateralReport(35=BA).
DR	MarketDataReport	MarketDataReport. The MarketDataReport(35=DR) message is used to provide delimiting references (e.g. start and end markers in a continuous broadcast) and details about the number of market data messages sent in a given distribution cycle.
DS	CrossRequest	CrossRequest. The CrossRequest(35=DS) message is used to indicate the submission of orders or quotes that may result in a crossed trade.
DT	CrossRequestAck	CrossRequestAck. The CrossRequestAck(35=DT) message is used to confirm the receipt of a CrossRequest(35=DS) message.
DU	AllocationInstructionAlertRequest	AllocationInstructionAlertRequest. This message is used in a clearinghouse 3-party allocation model to request for AllocationInstructionAlert(35=BM) from the clearinghouse. The request may be used to obtain a one-time notification of the status of an allocation group.

Code	Name	Description
DV	AllocationInstructionAlertRequestAck	AllocationInstructionAlertRequestAck. This message is used in a clearinghouse 3-party allocation model to acknowledge a AllocationInstructionAlertRequest(35=DU) message for an AllocationInstructionAlert(35=BM) message from the clearinghouse.
DW	TradeAggregationRequest	TradeAggregationRequest. TradeAggregationRequest(35=DW) is used to request that the identified trades between the initiator and respondent be aggregated together for further processing.
DX	TradeAggregationReport	TradeAggregationReport. TradeAggregationReport(35=DX) is used to respond to the TradeAggregationRequest(35=DW) message. It provides the status of the request (e.g. accepted or rejected) and may also provide additional information supplied by the respondent.
EA	PayManagementReport	PayManagementReport. PayManagementReport(35=EA) may be used to respond to the PayManagementRequest(35=DY) message. It provides the status of the request (e.g. accepted, disputed) and may provide additional information related to the request. PayManagementReport(35=EA) may also be sent unsolicited by the broker to a client. In which case the client may acknowledge and resolve disputes out-of-band or with a simple PayManagementReportAck(35=EB). PayManagementReport(35=EA) may also be sent unsolicited to report the progress status of the payment itself with PayReportTransType(2804)=2 (Status).
EB	PayManagementReportAck	PayManagementReportAck. PayManagementReportAck(35=EB) is used as a response to the PayManagementReport(35=EA) message. It may be used to accept, reject or dispute the details of the PayManagementReport(35=EA) depending on the business rules of the receiver. This message may also be used to acknowledge the receipt of a PayManagementReport(35=EA) message.
DY	PayManagementRequest	PayManagementRequest. PayManagementRequest(35=DY) message is used to communicate a future or expected payment to be made or received related to a trade or contract after its settlement.
DZ	PayManagementRequestAck	PayManagementRequestAck. PayManagementRequestAck(35=DZ) is used to acknowledge the receipt of the PayManagementRequest(35=DY) message (i.e. a technical acknowledgement of receipt). Acceptance or rejection of the request is reported in the corresponding PayManagementReport(35=EA).

Code	Name	Description
EC	SettlementStatusRequest	SettlementStatusRequest. SettlementStatusRequest(35=EC) is used to request for the settlement status of a trade.
ED	SettlementStatusRequestAck	SettlementStatusRequestAck. SettlementStatusRequestAck(35=ED) is used to respond to the SettlementStatusRequest(35=EC) to acknowledge the request and provide status for the request message.
EE	SettlementStatusReport	SettlementStatusReport. SettlementStatusReport(35=EE) is a response to the SettlementStatusRequest(35=EC) to provide settlement status for the requested trade. It may also be sent unsolicited without an explicit request message by the party able to provide the settlement status for the trade identified in the report message.
EF	SettlementStatusReportAck	SettlementStatusReportAck. SettlementStatusReportAck(35=EF) is used to respond to the SettlementStatusReport(35=EE) to acknowledge or reject the report.
EG	SecurityRiskMetricsReport	SecurityRiskMetricsReport. SecurityRiskMetricsReport(35=EG) is used for publishing the risk metrics, valuation metrics or analytics of one or more securities, or for an option series.

Used in components: [StandardHeader](#)

### 171.2.2910 MsgTypeGrp

Name	Mult.	Type	Description
NoMsgTypes	[1..1]	NumInGroup	Specifies the number of repeating RefMsgTypes specified
RefMsgType	[0..1]	CodeSet	Specifies a specific, supported MsgType. Required if NoMsgTypes is > 0. Should be specified from the point of view of the sender of the Logon message
MsgDirection	[0..1]	CodeSet	Indicates direction (send vs. receive) of a supported MsgType. Required if NoMsgTypes is > 0. Should be specified from the point of view of the sender of the Logon message
RefAppVerID	[0..1]	CodeSet	Specifies the service pack release being applied to an application message.
RefAppExtID	[0..1]	int	Specified the extension pack being applied to a message.

Name	Mult.	Type	Description
RefCstmApplVerID	[0..1]	String	Specifies a custom extension to a message being applied at the session level.
DefaultVerIndicator	[0..1]	Boolean	Indicates that this Application Version (RefApplVerID(1130), RefApplExtID(1406),RefCstmApplVerID(1131)) is the default for the RefMsgType(372) field.

---

Used in messages: [Logon](#)

### **171.2.2911 MthToDefault**

The Mth reference obligation to default in a CDS reference basket. When NthToDefault(1942) and MthToDefault(1943) are represented then the CDS payout occurs between the Nth and Mth obligations to default.

Type: [int](#)

Used in components: [Instrument](#)

### **171.2.2912 MultiAssetSwapIndicator**

Indicates a swap that does not have one easily identifiable primary underlying asset, but instead involves multiple underlying assets within one trade repository's jurisdiction that belong to different asset classes.

Type: [Boolean](#)

Used in messages: [TradeCaptureReport](#)

### **171.2.2913 MultiJurisdictionReportingIndicator**

Indicate whether a trade is eligible to be reported to more than one regulatory jurisdictions, e.g. due to overlapping reporting rules that require reporting to different jurisdictions.

Type: [int](#)

Allowed values in MultiJurisdictionReportingIndicatorCodeSet:

Code	Name	Description
0	NotMultiJrsdctnEligible	Trade not eligible for multi-jurisdiction reporting
1	MultiJrsdctnEligible	Trade eligible for multi-jurisdiction reporting

Used in groups: [MDFullGrp](#), [MDIncGrp](#)

Used in messages: [TradeCaptureReport](#)

### 171.2.2914 MultilegModel

Specifies the type of multileg order. Defines whether the security is pre-defined or user-defined. Note that MultilegModel(1377)=2(User-defined, Non-Securitized, Multileg) does not apply for Securities.

Type: [int](#)

Allowed values in MultilegModelCodeSet:

Code	Name	Description
0	PredefinedMultilegSecurity	Predefined Multileg Security
1	UserDefinedMultilegSecurity	User-defined Multileg Security
2	UserDefined	User-defined, Non-Securitized, Multileg

Used in components: [BaseTradingRules](#)

Used in messages: [MultilegOrderCancelReplace](#), [NewOrderMultileg](#)

### 171.2.2915 MultilegPriceMethod

Code to represent how the multileg price is to be interpreted when applied to the legs.

(See Volume : "Glossary" for further value definitions)

Type: [int](#)

Allowed values in MultilegPriceMethodCodeSet:

Code	Name	Description
0	NetPrice	Net Price
1	ReversedNetPrice	Reversed Net Price

Code	Name	Description
2	YieldDifference	Yield Difference
3	Individual	Individual
4	ContractWeightedAveragePrice	Contract Weighted Average Price
5	MultipliedPrice	Multiplied Price

Used in components: [BaseTradingRules](#)

Used in messages: [MultilegOrderCancelReplace](#), [NewOrderMultileg](#)

### 171.2.2916 MultiLegReportingType

Used to indicate how the multi-legged security (e.g. option strategies, spreads, etc.) is being reported.

Type: [char](#)

Allowed values in MultiLegReportingTypeCodeSet:

Code	Name	Description
1	SingleSecurity	Single security (default if not specified)
2	IndividualLegOfAMultiLegSecurity	Individual leg of a multi-leg security
3	MultiLegSecurity	Multi-leg security

Used in messages: [AllocationInstruction](#), [AllocationInstructionAlert](#), [AllocationReport](#), [ExecutionReport](#), [TradeCaptureReport](#), [TradeCaptureReportAck](#), [TradeCaptureReportRequest](#), [TradeCaptureReportRequestAck](#), [TradeMatchReport](#)

### 171.2.2917 MultiLegRptTypeReq

Indicates the method of execution reporting requested by issuer of the order.

Type: [int](#)

Allowed values in MultiLegRptTypeReqCodeSet:

Code	Name	Description
0	ReportByMultilegSecurityOnly	Report by multileg security only (do not report legs)

---

Code	Name	Description
1	ReportByMultilegSecurityAndInstrumentLegs	Report by multileg security and by instrument legs belonging to the multileg security
2	ReportByInstrumentLegsOnly	Report by instrument legs belonging to the multileg security only (do not report status of multileg security)

---

Used in messages: [MultilegOrderCancelReplace](#), [NewOrderMultileg](#)

### 171.2.2918 NBBOEntryType

Type of NBBO information.

Type: [int](#)

Allowed values in NBBOEntryTypeCodeSet:

---

Code	Name	Description
0	Bid	Bid. May apply to price or quantity.
1	Offer	Offer. May apply to price or quantity.
2	MidPrice	Mid-price

---

Used in groups: [TrdRegTimestamps](#)

### 171.2.2919 NBBOPrice

Price related to NBBO. NBBOEntryType(2831) may be used to indicate entry type, e.g. bid or offer.

Type: [Price](#)

Used in groups: [TrdRegTimestamps](#)

### 171.2.2920 NBBOQty

Quantity related to NBBO. NBBOEntryType(2831) may be used to indicate entry type, e.g. bid or offer.

Type: [Qty](#)

Used in groups: [TrdRegTimestamps](#)

**171.2.2921 NBBOSource**

Source of NBBO information.

Type: **int**

Allowed values in NBBOSourceCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Default if not specified. NBBO information is not applicable. NBBOEntryType(2831), NBBOPrice(2832), and NBBOQty(2833) must be omitted.
1	Direct	Direct. Information is retrieved directly from an exchange or other electronic execution venue. There may be a performance advantage compared to retrieving the information from a source consolidating multiple feeds.
2	SIP	Securities Information Processor. The Securities Information Processor (SIP) links the U.S. markets by processing and consolidating all protected bid/ask quotes and trades from every trading venue into a single, easily consumed data feed.
3	Hybrid	Hybrid. A combination of two or more data feeds is used as NBBO source. In the context of US CAT this is used for a combination of direct and SIP feeds.

Used in groups: **TrdRegTimestamps**

**171.2.2922 NegotiationMethod**

Specifies the negotiation method to be used.

Type: **int**

Allowed values in NegotiationMethodCodeSet:

Code	Name	Description
0	AutoSpot	Auto spot. The spot price for the reference or benchmark security is provided automatically.
1	NegotiatedSpot	Negotiated spot. The spot price for the reference or benchmark security is to be negotiated.

Code	Name	Description
2	PhoneSpot	The spot price for the reference or benchmark security is to be negotiated via phone or voice. The spot price for the reference of benchmark security is to be negotiated via phone or voice.

Used in groups: [QuotReqGrp](#), [QuotReqRjctGrp](#)

Used in messages: [Quote](#), [QuoteResponse](#), [QuoteStatusReport](#)

### 171.2.2923 Nested2PartyID

PartyID value within a "second instance" Nested repeating group.

Same values as PartyID (448)

Type: [String](#)

Used in groups: [NestedParties2](#)

### 171.2.2924 Nested2PartyIDSource

PartyIDSource value within a "second instance" Nested repeating group.

Same values as PartyIDSource (447)

Type: [char](#)

Allowed values in PartyIDSourceCodeSet:

Code	Name	Description
1	KoreanInvestorID	Korean Investor ID
6	UKNationalInsuranceOrPension-Number	UK National Insurance or Pension Number
B	BIC	BIC (Bank Identification Code - SWIFT managed) code (ISO9362 - See "Appendix 6-B")
I	ISITCAcronym	Directed broker three character acronym as defined in ISITC "ETC Best Practice" guidelines document
2	TaiwaneseForeignInvestorID	Taiwanese Qualified Foreign Investor ID QFII/FID
7	USSocialSecurityNumber	US Social Security Number
C	GeneralIdentifier	Generally accepted market participant identifier (e.g. NASD mnemonic)

Code	Name	Description
3	TaiwaneseTradingAcct	Taiwanese Trading Acct
8	USEmployerOrTaxIDNumber	US Employer or Tax ID Number
D	Proprietary	Proprietary / Custom code. Custom ID schema used between counterparties, trading platforms and repositories.
4	MalaysianCentralDepository	Malaysian Central Depository (MCD) number
9	AustralianBusinessNumber	Australian Business Number
E	ISOCountryCode	ISO Country Code
5	ChineseInvestorID	Chinese Investor ID
A	AustralianTaxFileNumber	Australian Tax File Number
F	SettlementEntityLocation	Settlement Entity Location (note if Local Market Settlement use "E=ISO Country Code") (see "Appendix 6-G" for valid values)
G	MIC	Market Identifier Code (ISO 10383) MIC
J	TaxID	Tax ID
H	CSDParticipant	CSD participant/member code (e.g. Euroclear, DTC, CREST or Kassenverein number)
K	AustralianCompanyNumber	Australian Company Number
L	AustralianRegisteredBodyNumber	Australian Registered Body Number
M	CFTCReportingFirmIdentifier	CFTC reporting firm identifier
N	LegalEntityIdentifier	Legal Entity Identifier (ISO 17442) LEI
O	InterimIdentifier	Interim identifier. An interim entity identifier assigned by a regulatory agency prior to an LEI (ISO 17442) being assigned.
P	ShortCodeIdentifier	Short code identifier. A generic means for trading venues, brokers, investment managers to convey a bilaterally agreed upon "short hand" code for an identifier that is a reference to a mapping between the parties.
Q	NationalIDNaturalPerson	National ID of natural person. An identification number generally assigned by a government authority or agency to a natural person which is unique to the person it is assigned to. Examples include, but not limited to, "social security number", "pension number".
R	IndiaPermanentAccountNumber	India Permanent Account Number. Also referred to as PAN ID. An identifier issued by the Income Tax Department of India.
S	FDID	Firm designated identifier. Also referred to as FDID. A unique identifier required by the SEC for each trading account designated by Industry Members for purposes of reporting to CAT (Consolidated Audit Trail).

Code	Name	Description
T	SPSAID	Special Segregated Account ID. Also referred to as SPSA ID. The Special Segregated Account identifier issued by Hong Kong Exchanges and Clearing.
U	MasterSPSAID	Master Special Segregated Account ID. Also referred to as Master SPSA ID. The master identifier issued by Hong Kong Exchanges and Clearing for the aggregation of SPSA IDs.

Used in groups: [NestedParties2](#)

### 171.2.2925 Nested2PartyRole

PartyRole value within a "second instance" Nested repeating group.

Same values as PartyRole (452)

Type: [int](#)

Allowed values in PartyRoleCodeSet:

Code	Name	Description
1	ExecutingFirm	Executing Firm (formerly FIX 4.2 ExecBroker)
2	BrokerOfCredit	Broker of Credit (formerly FIX 4.2 BrokerOfCredit)
3	ClientID	Client ID (formerly FIX 4.2 ClientID)
4	ClearingFirm	Clearing Firm (formerly FIX 4.2 ClearingFirm)
5	InvestorID	Investor ID
6	IntroducingFirm	Introducing Firm
7	EnteringFirm	Entering Firm
8	Locate	Locate / Lending Firm (for short-sales)
9	FundManagerClientID	Fund Manager Client ID (for CIV)
10	SettlementLocation	Settlement Location (formerly FIX 4.2 SettlLocation)
11	OrderOriginationTrader	Order Origination Trader (associated with Order Origination Firm - i.e. trader who initiates/submits the order)
12	ExecutingTrader	Executing Trader (associated with Executing Firm - actually executes)
13	OrderOriginationFirm	Order Origination Firm (e.g. buy-side firm)
14	GiveupClearingFirmDepr	Giveup Clearing Firm (firm to which trade is given up)
15	CorrespondantClearingFirm	Correspondant Clearing Firm

<b>Code</b>	<b>Name</b>	<b>Description</b>
16	ExecutingSystem	Executing System
17	ContraFirm	Contra Firm
18	ContraClearingFirm	Contra Clearing Firm
19	SponsoringFirm	Sponsoring Firm
20	UnderlyingContraFirm	Underlying Contra Firm
21	ClearingOrganization	Clearing Organization
22	Exchange	Exchange. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
24	CustomerAccount	Customer Account
25	CorrespondentClearingOrganization	Correspondent Clearing Organization
26	CorrespondentBroker	Correspondent Broker
27	Buyer	Buyer/Seller (Receiver/Deliverer)
28	Custodian	Custodian
29	Intermediary	Intermediary
30	Agent	Agent
31	SubCustodian	Sub-custodian
32	Beneficiary	Beneficiary
33	InterestedParty	Interested party
34	RegulatoryBody	Regulatory body. In the context of regulatory reporting, this identifies the regulator the trade is being reported to.
35	LiquidityProvider	Liquidity provider
36	EnteringTrader	Entering trader
37	ContraTrader	Contra trader
38	PositionAccount	Position account. The account which positions are maintained. Typically represents the aggregation of one or more customer accounts.
39	ContraInvestorID	Contra Investor ID
40	TransferToFirm	Transfer to Firm
41	ContraPositionAccount	Contra Position Account
42	ContraExchange	Contra Exchange
43	InternalCarryAccount	Internal Carry Account
44	OrderEntryOperatorID	Order Entry Operator ID
45	SecondaryAccountNumber	Secondary Account Number
46	ForeignFirm	Foreign Firm
47	ThirdPartyAllocationFirm	Third Party Allocation Firm

<b>Code</b>	<b>Name</b>	<b>Description</b>
48	ClaimingAccount	Claiming Account
49	AssetManager	Asset Manager
50	PledgorAccount	Pledgor Account
51	PledgeeAccount	Pledgee Account
52	LargeTraderReportableAccount	Large Trader Reportable Account
53	TraderMnemonic	Trader mnemonic
54	SenderLocation	Sender Location
55	SessionID	Session ID
56	AcceptableCounterparty	Acceptable Counterparty
57	UnacceptableCounterparty	Unacceptable Counterparty
58	EnteringUnit	Entering Unit
59	ExecutingUnit	Executing Unit
60	IntroducingBroker	Introducing Broker
61	QuoteOriginator	Quote originator
62	ReportOriginator	Report originator
63	SystematicInternaliser	Systematic internaliser (SI)
64	MultilateralTradingFacility	Multilateral Trading Facility (MTF). Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
65	RegulatedMarket	Regulated Market (RM). Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
66	MarketMaker	Market Maker
67	InvestmentFirm	Investment Firm
68	HostCompetentAuthority	Host Competent Authority (Host CA)
69	HomeCompetentAuthority	Home Competent Authority (Home CA)
70	CompetentAuthorityLiquidity	Competent Authority of the most relevant market in terms of liquidity (CAL)
71	CompetentAuthorityTransactionVenue	Competent Authority of the Transaction (Execution) Venue (CATV)
72	ReportingIntermediary	Reporting intermediary. The medium or vendor used to report to a regulator, non-regulatory agency or data repository.
73	ExecutionVenue	Execution Venue. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
74	MarketDataEntryOriginator	Market data entry originator
75	LocationID	Location ID
76	DeskID	Desk ID

<b>Code</b>	<b>Name</b>	<b>Description</b>
77	MarketDataMarket	Market data market
78	AllocationEntity	Allocation Entity
79	PrimeBroker	Prime Broker providing General Trade Services
80	StepOutFirm	Step-Out Firm (Prime Broker)
81	BrokerClearingID	Broker clearing identifier
82	CentralRegistrationDepository	Central Registration Depository (CRD)
83	ClearingAccount	Clearing Account
84	AcceptableSettlingCounterparty	Acceptable Settling Counterparty
85	UnacceptableSettlingCounterparty	Unacceptable Settling Counterparty
86	CLSMemberBank	CLS Member Bank
87	InConcertGroup	In Concert Group
88	InConcertControllingEntity	In Concert Controlling Entity
89	LargePositionsReportingAccount	Large Positions Reporting Account
90	SettlementFirm	Settlement Firm
91	SettlementAccount	Settlement account. The account to which individual payment obligations are aggregated for netting and funds movement. Typically represents the aggregation of many margin (performance bond) accounts.
92	ReportingMarketCenter	Reporting Market Center
93	RelatedReportingMarketCenter	Related Reporting Market Center
94	AwayMarket	Away Market. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
95	GiveupTradingFirm	Give-up (trading) firm
96	TakeupTradingFirm	Take-up (trading) firm
97	GiveupClearingFirm	Give-up clearing firm
98	TakeupClearingFirm	Take-up clearing firm
99	OriginatingMarket	Originating Market. Identifies the Market using PartyIDSource(tag 447) = G (Market Identifier Code) where an order originated in the event that the order is sent to an alternative market for execution. Serves as an inverse of an away market.
100	MarginAccount	Margin account. Also referred to as "performance bond account". The margin account is the calculated margin requirements. Typically represents the aggregation of one or more position accounts.

<b>Code</b>	<b>Name</b>	<b>Description</b>
101	CollateralAssetAccount	Collateral asset account. The account at which individual collateral assets are maintained. Typically, although not always, one-for-one with the settlement account.
102	DataRepository	Data repository. Multiple instances of this PartyRole may appear for reporting purposes.
103	CalculationAgent	Calculation agent
104	ExerciseNoticeSender	Sender of exercise notice
105	ExerciseNoticeReceiver	Receiver of exercise notice
106	RateReferenceBank	Rate reference bank. The bank providing the reference rate. Multiple instance of this PartyRole may appear.
107	Correspondent	Correspondent
109	BeneficiaryBank	Beneficiary's bank or depository institution. The institution in which the beneficiary, a person or an entity, has their account with. The institution may be a bank or non-bank institution.
110	Borrower	Borrower
111	PrimaryObligator	Primary obligator
112	Guarantor	Guarantor
113	ExcludedReferenceEntity	Excluded reference entity
114	DeterminingParty	Determining party
115	HedgingParty	Hedging party
116	ReportingEntity	Reporting entity. The entity that is reporting the information.
117	SalesPerson	Sales person. The person who is involved in the sales activities for their firm.
118	Operator	Operator. The person who has the capabilities and authorization to take certain actions; for example, setting entitlements, etc.
119	CSD	Central Securities Depository (CSD)
120	ICSD	International Central Securities Depository (ICSD)
121	TradingSubAccount	Trading sub-account. Example of sub-accounts include a clearing account that has multiple trading sub-accounts, a trading account that has multiple trading sub-accounts belonging to different trading firms.
122	InvestmentDecisionMaker	Investment decision maker. In the context of ESMA RTS reporting, this is used to specify party responsible for the investment decision. See RTS 24, Annex, Table 2, Field 4.
123	PublishingIntermediary	Publishing intermediary. The medium or vendor used to publish to the market.

Code	Name	Description
124	CSDParticipant	Central Securities Depository (CSD) Participant. In the context of EU SFTR reporting the identifier of the CSD participant or indirect participant of the reporting counterparty. Where both the CSD participant and indirect participant are involved in the transaction this should identify the indirect participant.
125	Issuer	Issuer. The issuer of the security.
126	ContraCustomerAccount	Contra Customer Account. Same as PartyRole(452) = 24 (Customer Account) but for the counterparty. Can be used whenever the parties component is not nested in a repeating group representing both sides.
127	ContraInvestmentDecisionMaker	Contra Investment Decision Maker. Same as PartyRole(452) = 122 (Investment Decision Maker) but for the counterparty. Can be used whenever the parties component is not nested in a repeating group representing both sides.

Used in groups: [NestedParties2](#)

### 171.2.2926 Nested2PartyRoleQualifier

Used to further qualify the value of Nested2PartyRole(759).

Type: [int](#)

Allowed values in PartyDetailRoleQualifierCodeSet:

Code	Name	Description
0	Agency	Agency
1	Principal	Principal
2	RisklessPrincipal	Riskless principal
3	GeneralClearingMember	General clearing member
30	ExchangeOrderSubmitter	Exchange order submitter. Used to identify original or initial exchange order submitting broker when party role "1" (Executing Firm) appears more than once.
4	IndividualClearingMember	Individual clearing member
5	PreferredMarketMaker	Preferred market maker. Market maker getting a part of the matched quantity before primary or default market maker.
6	DirectedMarketMaker	Directed market maker. Single market maker to handle the order provided.

<b>Code</b>	<b>Name</b>	<b>Description</b>
7	Bank	Bank
8	Hub	Hub. Indicates that the Intermediary party is a hub system or service provider.
9	PrimaryTrdRepository	Primary trade repository. Used to differentiate the principal trade repository from the Original or Additional trade repositories when there are multiple trade repositories being reported.
10	OrigTrdRepository	Original trade repository. Used to identify the trade repository to which the trade was originally reported if different from the current repository to which the trade is being reported.
11	AddtnIntlTrdRepository	Additional international trade repository. Used with InternationalSwapIndicator(2526) to identify the trade repository that is in addition to the local swaps data repository as required by U.S. law.
12	AddtnlDomesticTrdRepository	Additional domestic trade repository. Used with MixedSwapIndicator(1929) to identify the trade repository that is in addition to the current trade repository when the assets in the swap are subject to two different domestic regulators.
13	RelatedExchange	Related exchange
14	OptionsExchange	Options exchange
15	SpecifiedExchange	Specified exchange
16	ConstituentExchange	Constituent exchange.
17	ExemptFromTradeReporting	Exempt from trade reporting. In the context of FINRA TRACE reporting requirements, this is used to indicate the ATS has been granted a regulatory exemption from reporting.
18	Current	Current. Can be used to convey an existing party identifier for the same party role in a single message.
19	New	New. Can be used to convey a future party identifier for the same party role in a single message.
20	DesignatedSponsor	Designated sponsor. Market maker jointly providing liquidity for the same security with other market makers.
21	Specialist	Specialist. Market maker being the only one providing liquidity for a security.
22	Algorithm	Algorithm
23	FirmOrLegalEntity	Firm or legal entity
24	NaturalPerson	Natural person
25	RegularTrader	Regular trader. Standard trader profile.
26	HeadTrader	Head trader. Senior trader leading a group of regular traders.

Code	Name	Description
27	Supervisor	Supervisor. Administrative user that has only limited rights for normal trading but possibly special rights for emergency actions.
28	TriParty	Tri-party. In the context of EU SFTR reporting, identifies the third party, not necessarily the custodian, to which the reporting counterparty has outsourced the post-trade processing of an SFT (if applicable).
29	Lender	Lender. In the context of EU SFTR reporting, identifies the agent lender involved in the securities lending transaction.

Used in groups: [NestedParties2](#)

#### 171.2.2927 Nested2PartySubID

PartySubID value within a "second instance" Nested repeating group.

Same values as PartySubID (523)

Type: [String](#)

Used in groups: [NstdPtys2SubGrp](#)

#### 171.2.2928 Nested2PartySubIDType

Type of Nested2PartySubID (760) value. Second instance of <NestedParties>.

Same values as PartySubIDType (803)

Type: [int](#)

Allowed values in PartySubIDTypeCodeSet:

Code	Name	Description
1	Firm	Firm
2	Person	Person
3	System	System
4	Application	Application
5	FullLegalNameOfFirm	Full legal name of firm
6	PostalAddress	Postal address

<b>Code</b>	<b>Name</b>	<b>Description</b>
7	PhoneNumber	Phone number
8	EmailAddress	Email address
9	ContactName	Contact name
10	SecuritiesAccountNumber	Securities account number (for settlement instructions)
11	RegistrationNumber	Registration number (for settlement instructions and confirmations)
12	RegisteredAddressForConfirmation	Registered address (for confirmation purposes)
13	RegulatoryStatus	Regulatory status (for confirmation purposes)
14	RegistrationName	Registration name (for settlement instructions)
15	CashAccountNumber	Cash account number (for settlement instructions)
16	BIC	BIC
17	CSDParticipantMemberCode	CSD participant member code
18	RegisteredAddress	Registered address
19	FundAccountName	Fund account name
20	TelexNumber	Telex number
21	FaxNumber	Fax number
22	SecuritiesAccountName	Securities account name
23	CashAccountName	Cash account name
24	Department	Department
25	LocationDesk	Location desk
26	PositionAccountType	Position account type
27	SecurityLocateID	Security locate ID
28	MarketMaker	Market maker
29	EligibleCounterparty	Eligible counterparty
30	ProfessionalClient	Professional client
31	Location	Location
32	ExecutionVenue	Execution venue
33	CurrencyDeliveryIdentifier	Currency delivery identifier
34	AddressCity	Address City
35	AddressStateOrProvince	Address State/Province
36	AddressPostalCode	Address Postal Code
37	AddressStreet	Address Street
38	AddressISOCountryCode	Address Country (ISO country code)
39	ISOCountryCode	ISO country code

Code	Name	Description
40	MarketSegment	Market segment
41	CustomerAccountType	Customer account type
42	OmnibusAccount	Omnibus account
43	FundsSegregationType	Funds segregation type
44	GuaranteeFund	Guarantee fund. Identifies a guarantee fund related to an account. Used when one account has multiple funds of collateral, each guaranteeing different positions. Can be used for PartyRole(452) = Customer Account(24).
45	SwapDealer	Swap dealer. The US regulator's defined term for identifying the trade counterparty as "any person who holds itself out as a dealer in swaps, makes a market in swaps, regularly enters into swaps with counterparties as an ordinary course of business for its own account, or engages in activity causing itself to be commonly known in the trade as a dealer or market maker in swaps".
46	MajorParticipant	Major participant. When PartySubID(523)=Y the counterparty is not the swap dealer but is a major swap participant as defined in the regulations.
47	FinancialEntity	Financial entity. When PartySubID(523)=Y the counterparty is neither a swap dealer nor a major swap participant but is a financial entity as defined in the regulations.
48	USPerson	U.S. person. A legal term referring to any U.S. person or legal entity anywhere in the world that should be taxed under U.S. law.
49	ReportingEntityIndicator	Reporting entity indicator. Indicates the entity obligated or delegated to report to their regulator, a non-regulatory agency or data repository. Set PartySubID(523)=Y if true.
50	ElectedClearingRequirementException	Elected clearing requirement exception
51	BusinessCenter	Business center.
52	ReferenceText	Reference text
53	ShortMarkingExemptAccount	Short-marking exempt account
54	ParentFirmIdentifier	Parent firm identifier. Implementation-specific identifier of this party's parent entity.
55	ParentFirmName	Parent firm name. Full name of this party's parent entity.
56	DealIdentifier	Deal identifier. The internal identifier assigned to the trade by this party, particularly by a Clearing Organization.
57	SystemTradeID	System trade identifier
58	SystemTradeSubID	System trade sub-identifier

Code	Name	Description
59	FCMCode	Futures Commission Merchant (FCM) code. The FCM's code or identifier in relation to the PartyRole(452). For example, if PartyRole(452) is the exchange or clearinghouse, the FCM code/ID specified in PartySubID(523) is the FCM's identifier at the exchange or clearinghouse.
60	DlvryTrmlCode	Delivery terminal customer account/code. Usually used for gas delivery to identify whose account the gas is allocated to at the delivery terminal. Often referred to as "HUB" code.
61	VolntyRptEntity	Voluntary reporting entity. The entity voluntarily reporting the trade to the regulator. Set PartySubID(523)=Y if true.
62	RptObligJursdctn	Reporting obligation jurisdiction. For a trade that falls under multiple jurisdictions this may be used to identify, through PartySubID(523), the reporting jurisdiction to which the party is obligated to report.
63	VolntyRptJursdctn	Voluntary reporting jurisdiction. For a trade that falls under multiple jurisdictions this may be used to identify, through PartySubID(523), the regulatory jurisdiction to which the party is submitting a voluntary report.
64	CompanyActivities	Company activities. For regulatory reporting. ID values include: A = Assurance undertaking authorized in accordance with Directive 2002/83/EC C=Credit institution authorized in accordance with Directive 2006/48/EC F=Investment firm in accordance with Directive 2004/39/EC I=Insurance undertaking authorized in accordance with Directive 73/239/EC L=Alternative investment fund managed by AIFMs authorized or registered in accordance with Directive 2011/61/EC O=Institution for occupational retirement provision within the meaning of Article 6(a0 of Directive 2003/41/EC R=Reinsurance undertaking authorized in accordance with Directive 2005/68/EC U=UCITS and its management company, authorized in accordance with Directive 2009/65/EC or blank in case of coverage by LEI or in case of non-financial counterparties. In the context of EU SFTR reporting use the appropriate 4- or 1-character code noted in the regulations. See SFTR ITS "Commission Implementing Regulation (EU) 2019/363" Annexes 1 and 2 for values.
65	EEAreaDomiciled	European Economic Area domiciled. ID values: Y or N
66	ContractLinked	Contract linked to commercial or treasury financing for this counterparty. ID values: Y or N
67	ContractAbove	Contract above clearing threshold for this counterparty. ID values: Y or N

<b>Code</b>	<b>Name</b>	<b>Description</b>
68	VolntyRptPty	Voluntary reporting party. When PartySubID(523)=Y, identifies that the trading party is reporting voluntarily when VoluntaryRegulatoryReport(1935)=Y.
69	EndUser	End user. When PartySubID(523)=Y, the counterparty is neither the swap dealer, major swap participant nor financial entity as defined in the regulations.
70	LocationOrJurisdiction	Location or jurisdiction. One or more instances may be used in combination with PartySubIDType(803) = 49 (Reporting entity indicator) or 102 (Data repository) to identify the jurisdiction, countries, regions or provinces for which the party is a reporting entity or data repository when that characteristic is ambiguous or where there are multiple locations. The party sub-ID value is either a jurisdiction acronym, a 2-character ISO 3166 country code, or a hyphenated combination of the country code and the standard post-office abbreviation for province, state or region if necessary. E.g. "US" for United States or "CA-QC" for Quebec Canada.
71	DerivativesDealer	Derivatives dealer. Indicates whether the party is a derivatives dealer or not (Y/N). The Canadian regulator's defined term for identifying the trade counterparty as "a person or company engaging in or holding himself, herself or itself out as engaging in the business of trading in derivatives in Ontario as principal or agent".
72	Domicile	Domicile. Country and optionally province, state or region of domicile. The party sub-ID value is either a 2-character ISO 3166 country code or a hyphenated combination of the country code and the standard post-office abbreviation of province, state or region if necessary. E.g. "US" for United States or "CA-QC" for Quebec Canada.
73	ExemptFromRecognition	Exempt from recognition. Used with party role 21 "Clearing Organization" to indicate exemption (Y/N). Identifies a clearing agency as exempt from oversight in Ontario, i.e. one that 1) only provides limited services and does not present significant risks or 2) is foreign-based, intends to operate in Ontario but is subject to regulatory oversight in another jurisdiction.
74	Payer	Payer. Identifies the party as the payer of a particular payment stream or bullet payment by quoting the stream's StreamDesc(40051) (or LegStreamDesc(40243) or UnderlyingStreamDesc(40542)) or payment's PaymentDesc(43087) in the associated party sub-identifier field.

Code	Name	Description
75	Receiver	Receiver. Identifies the party as the receiver of a particular payment stream or bullet payment by quoting the stream's StreamDesc(40051) (or LegStreamDesc(40243) or UnderlyingStreamDesc(40542)) or payment's PaymentDesc(43087) in the associated party sub-identifier field.
76	SystematicInternaliser	Systematic Internaliser (SI). In the context of ESMA reporting, this is used to indicate whether the specified party is a Systematic Internaliser or not for the security defined in the Instrument component (Y/N).
77	PublishingEntityIndicator	Publishing entity indicator. Indicates the entity obligated or delegated to publish to the market. Set PartySubID(523)=Y if true.
78	FirstName	First name. The first name(s) of a natural person. If multiple names, separate entries by a comma.
79	Surname	Surname. The surname(s) or lastname(s) of a natural person. If multiple names, separate entries by a comma.
80	DateOfBirth	Date of birth. The date of birth of a natural person in the format YYYYMMDD.
81	OrderTransmittingFirm	Order transmitting firm. Identifies whether the party specified in PartyID(448) is the firm that transmitted the order. In the context of RTS 22 Article 4, when "true" the PartySubID(523)=Y shall be set "by the transmitting firm within the transmitting firm's report where conditions for transmission specified in Article 4 were not satisfied."
82	OrderTransmittingFirmBuyer	Order transmitting firm for buyer. Identifies the firm that transmitted the order for the buyer. In the context of ESMA RTS 22, PartySubID(523)=Y is used to indicate the firm identified in PartyID(448) is the firm that transmitted the order for the buyer. "This shall be populated by the receiving firm within the receiving firm's report with the identification code provided by the transmitting firm."
83	OrderTransmitterSeller	Order transmitter for seller. Identifies the order transmitting firm for the seller. In the context of ESMA RTS 22, PartySubID(523)=Y is used to indicate the firm identified in PartyID(448) is the firm that transmitted the order for the seller. "This shall be populated by the receiving firm within the receiving firm's report with the identification code provided by the transmitting firm."
84	LegalEntityIdentifier	Legal Entity Identifier (ISO 17442) LEI

Code	Name	Description
85	SubSectorClassification	Sub-sector classification. Supplemental to party sub-ID type "64" (Company activities) for regulatory reporting. For EU SFTR reporting use the appropriate 4-character code noted in the regulations applying the conditional association rules. See SFTR ITS "Commission Implementing Regulation (EU) 2019/363" Annexes 1 and 2 for values.
86	PartySide	Party side. May be used, when appropriate, to explicitly indicate the transaction side of the party, e.g. Buyer, Seller, Lender, Borrower, Maker, Taker, etc. in the ID. In the context of EU SFTR reporting, use values as required by SFTR, "GIVE" and "TAKE" in the ID, to identify collateral giver and taker.
87	LegalRegistrationCountry	Legal registration country. ISO Country Code where the registered office of the party is located as specified in the LEI reference data.

Used in groups: [NstdPtys2SubGrp](#)

### 171.2.2929 Nested3PartyID

PartyID value within a "third instance" Nested repeating group.

Same values as PartyID (448)

Type: [String](#)

Used in groups: [NestedParties3](#)

### 171.2.2930 Nested3PartyIDSource

PartyIDSource value within a "third instance" Nested repeating group.

Same values as PartyIDSource (447)

Type: [char](#)

Allowed values in PartyIDSourceCodeSet:

Code	Name	Description
1	KoreanInvestorID	Korean Investor ID

Code	Name	Description
6	UKNationalInsuranceOrPension-Number	UK National Insurance or Pension Number
B	BIC	BIC (Bank Identification Code - SWIFT managed) code (ISO9362 - See "Appendix 6-B")
I	ISITCAcronym	Directed broker three character acronym as defined in ISITC "ETC Best Practice" guidelines document
2	TaiwaneseForeignInvestorID	Taiwanese Qualified Foreign Investor ID QFII/FID
7	USSocialSecurityNumber	US Social Security Number
C	GeneralIdentifier	Generally accepted market participant identifier (e.g. NASD mnemonic)
3	TaiwaneseTradingAcct	Taiwanese Trading Acct
8	USEmployerOrTaxIDNumber	US Employer or Tax ID Number
D	Proprietary	Proprietary / Custom code. Custom ID schema used between counterparties, trading platforms and repositories.
4	MalaysianCentralDepository	Malaysian Central Depository (MCD) number
9	AustralianBusinessNumber	Australian Business Number
E	ISOCountryCode	ISO Country Code
5	ChineseInvestorID	Chinese Investor ID
A	AustralianTaxFileNumber	Australian Tax File Number
F	SettlementEntityLocation	Settlement Entity Location (note if Local Market Settlement use "E=ISO Country Code") (see "Appendix 6-G" for valid values)
G	MIC	Market Identifier Code (ISO 10383) MIC
J	TaxID	Tax ID
H	CSDParticipant	CSD participant/member code (e.g. Euroclear, DTC, CREST or Kassenverein number)
K	AustralianCompanyNumber	Australian Company Number
L	AustralianRegisteredBodyNumber	Australian Registered Body Number
M	CFTCReportingFirmIdentifier	CFTC reporting firm identifier
N	LegalEntityIdentifier	Legal Entity Identifier (ISO 17442) LEI
O	InterimIdentifier	Interim identifier. An interim entity identifier assigned by a regulatory agency prior to an LEI (ISO 17442) being assigned.
P	ShortCodeIdentifier	Short code identifier. A generic means for trading venues, brokers, investment managers to convey a bilaterally agreed upon "short hand" code for an identifier that is a reference to a mapping between the parties.

Code	Name	Description
Q	NationalIDNaturalPerson	National ID of natural person. An identification number generally assigned by a government authority or agency to a natural person which is unique to the person it is assigned to. Examples include, but not limited to, "social security number", "pension number".
R	IndiaPermanentAccountNumber	India Permanent Account Number. Also referred to as PAN ID. An identifier issued by the Income Tax Department of India.
S	FDID	Firm designated identifier. Also referred to as FDID. A unique identifier required by the SEC for each trading account designated by Industry Members for purposes of reporting to CAT (Consolidated Audit Trail).
T	SPSAID	Special Segregated Account ID. Also referred to as SPSA ID. The Special Segregated Account identifier issued by Hong Kong Exchanges and Clearing.
U	MasterSPSAID	Master Special Segregated Account ID. Also referred to as Master SPSA ID. The master identifier issued by Hong Kong Exchanges and Clearing for the aggregation of SPSA IDs.

Used in groups: [NestedParties3](#)

### 171.2.2931 Nested3PartyRole

PartyRole value within a "third instance" Nested repeating group.

Same values as PartyRole (452)

Type: [int](#)

Allowed values in PartyRoleCodeSet:

Code	Name	Description
1	ExecutingFirm	Executing Firm (formerly FIX 4.2 ExecBroker)
2	BrokerOfCredit	Broker of Credit (formerly FIX 4.2 BrokerOfCredit)
3	ClientID	Client ID (formerly FIX 4.2 ClientID)
4	ClearingFirm	Clearing Firm (formerly FIX 4.2 ClearingFirm)
5	InvestorID	Investor ID
6	IntroducingFirm	Introducing Firm
7	EnteringFirm	Entering Firm

<b>Code</b>	<b>Name</b>	<b>Description</b>
8	Locate	Locate / Lending Firm (for short-sales)
9	FundManagerClientID	Fund Manager Client ID (for CIV)
10	SettlementLocation	Settlement Location (formerly FIX 4.2 SettlLocation)
11	OrderOriginationTrader	Order Origination Trader (associated with Order Origination Firm - i.e. trader who initiates/submits the order)
12	ExecutingTrader	Executing Trader (associated with Executing Firm - actually executes)
13	OrderOriginationFirm	Order Origination Firm (e.g. buy-side firm)
14	GiveupClearingFirmDepr	Giveup Clearing Firm (firm to which trade is given up)
15	CorrespondantClearingFirm	Correspondant Clearing Firm
16	ExecutingSystem	Executing System
17	ContraFirm	Contra Firm
18	ContraClearingFirm	Contra Clearing Firm
19	SponsoringFirm	Sponsoring Firm
20	UnderlyingContraFirm	Underlying Contra Firm
21	ClearingOrganization	Clearing Organization
22	Exchange	Exchange. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
24	CustomerAccount	Customer Account
25	CorrespondentClearingOrganization	Correspondent Clearing Organization
26	CorrespondentBroker	Correspondent Broker
27	Buyer	Buyer/Seller (Receiver/Deliverer)
28	Custodian	Custodian
29	Intermediary	Intermediary
30	Agent	Agent
31	SubCustodian	Sub-custodian
32	Beneficiary	Beneficiary
33	InterestedParty	Interested party
34	RegulatoryBody	Regulatory body. In the context of regulatory reporting, this identifies the regulator the trade is being reported to.
35	LiquidityProvider	Liquidity provider
36	EnteringTrader	Entering trader
37	ContraTrader	Contra trader
38	PositionAccount	Position account. The account which positions are maintained. Typically represents the aggregation of one or more customer accounts.

<b>Code</b>	<b>Name</b>	<b>Description</b>
39	ContraInvestorID	Contra Investor ID
40	TransferToFirm	Transfer to Firm
41	ContraPositionAccount	Contra Position Account
42	ContraExchange	Contra Exchange
43	InternalCarryAccount	Internal Carry Account
44	OrderEntryOperatorID	Order Entry Operator ID
45	SecondaryAccountNumber	Secondary Account Number
46	ForeignFirm	Foreign Firm
47	ThirdPartyAllocationFirm	Third Party Allocation Firm
48	ClaimingAccount	Claiming Account
49	AssetManager	Asset Manager
50	PledgorAccount	Pledgor Account
51	PledgeeAccount	Pledgee Account
52	LargeTraderReportableAccount	Large Trader Reportable Account
53	TraderMnemonic	Trader mnemonic
54	SenderLocation	Sender Location
55	SessionID	Session ID
56	AcceptableCounterparty	Acceptable Counterparty
57	UnacceptableCounterparty	Unacceptable Counterparty
58	EnteringUnit	Entering Unit
59	ExecutingUnit	Executing Unit
60	IntroducingBroker	Introducing Broker
61	QuoteOriginator	Quote originator
62	ReportOriginator	Report originator
63	SystematicInternaliser	Systematic internaliser (SI)
64	MultilateralTradingFacility	Multilateral Trading Facility (MTF). Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
65	RegulatedMarket	Regulated Market (RM). Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
66	MarketMaker	Market Maker
67	InvestmentFirm	Investment Firm
68	HostCompetentAuthority	Host Competent Authority (Host CA)
69	HomeCompetentAuthority	Home Competent Authority (Home CA)

<b>Code</b>	<b>Name</b>	<b>Description</b>
70	CompetentAuthorityLiquidity	Competent Authority of the most relevant market in terms of liquidity (CAL)
71	CompetentAuthorityTransactionVenue	Competent Authority of the Transaction (Execution) Venue (CATV)
72	ReportingIntermediary	Reporting intermediary. The medium or vendor used to report to a regulator, non-regulatory agency or data repository.
73	ExecutionVenue	Execution Venue. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
74	MarketDataEntryOriginator	Market data entry originator
75	LocationID	Location ID
76	DeskID	Desk ID
77	MarketDataMarket	Market data market
78	AllocationEntity	Allocation Entity
79	PrimeBroker	Prime Broker providing General Trade Services
80	StepOutFirm	Step-Out Firm (Prime Broker)
81	BrokerClearingID	Broker clearing identifier
82	CentralRegistrationDepository	Central Registration Depository (CRD)
83	ClearingAccount	Clearing Account
84	AcceptableSettlingCounterparty	Acceptable Settling Counterparty
85	UnacceptableSettlingCounterparty	Unacceptable Settling Counterparty
86	CLSMemberBank	CLS Member Bank
87	InConcertGroup	In Concert Group
88	InConcertControllingEntity	In Concert Controlling Entity
89	LargePositionsReportingAccount	Large Positions Reporting Account
90	SettlementFirm	Settlement Firm
91	SettlementAccount	Settlement account. The account to which individual payment obligations are aggregated for netting and funds movement. Typically represents the aggregation of many margin (performance bond) accounts.
92	ReportingMarketCenter	Reporting Market Center
93	RelatedReportingMarketCenter	Related Reporting Market Center
94	AwayMarket	Away Market. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
95	GiveupTradingFirm	Give-up (trading) firm
96	TakeupTradingFirm	Take-up (trading) firm
97	GiveupClearingFirm	Give-up clearing firm

<b>Code</b>	<b>Name</b>	<b>Description</b>
98	TakeupClearingFirm	Take-up clearing firm
99	OriginatingMarket	Originating Market. Identifies the Market using PartyIDSource(tag 447) = G (Market Identifier Code) where an order originated in the event that the order is sent to an alternative market for execution. Serves as an inverse of an away market.
100	MarginAccount	Margin account. Also referred to as "performance bond account". The margin account is the calculated margin requirements. Typically represents the aggregation of one or more position accounts.
101	CollateralAssetAccount	Collateral asset account. The account at which individual collateral assets are maintained. Typically, although not always, one-for-one with the settlement account.
102	DataRepository	Data repository. Multiple instances of this PartyRole may appear for reporting purposes.
103	CalculationAgent	Calculation agent
104	ExerciseNoticeSender	Sender of exercise notice
105	ExerciseNoticeReceiver	Receiver of exercise notice
106	RateReferenceBank	Rate reference bank. The bank providing the reference rate. Multiple instance of this PartyRole may appear.
107	Correspondent	Correspondent
109	BeneficiaryBank	Beneficiary's bank or depository institution. The institution in which the beneficiary, a person or an entity, has their account with. The institution may be a bank or non-bank institution.
110	Borrower	Borrower
111	PrimaryObligator	Primary obligator
112	Guarantor	Guarantor
113	ExcludedReferenceEntity	Excluded reference entity
114	DeterminingParty	Determining party
115	HedgingParty	Hedging party
116	ReportingEntity	Reporting entity. The entity that is reporting the information.
117	SalesPerson	Sales person. The person who is involved in the sales activities for their firm.
118	Operator	Operator. The person who has the capabilities and authorization to take certain actions; for example, setting entitlements, etc.
119	CSD	Central Securities Depository (CSD)
120	ICSD	International Central Securities Depository (ICSD)

Code	Name	Description
121	TradingSubAccount	Trading sub-account. Example of sub-accounts include a clearing account that has multiple trading sub-accounts, a trading account that has multiple trading sub-accounts belonging to different trading firms.
122	InvestmentDecisionMaker	Investment decision maker. In the context of ESMA RTS reporting, this is used to specify party responsible for the investment decision. See RTS 24, Annex, Table 2, Field 4.
123	PublishingIntermediary	Publishing intermediary. The medium or vendor used to publish to the market.
124	CSDParticipant	Central Securities Depository (CSD) Participant. In the context of EU SFTR reporting the identifier of the CSD participant or indirect participant of the reporting counterparty. Where both the CSD participant and indirect participant are involved in the transaction this should identify the indirect participant.
125	Issuer	Issuer. The issuer of the security.
126	ContraCustomerAccount	Contra Customer Account. Same as PartyRole(452) = 24 (Customer Account) but for the counterparty. Can be used whenever the parties component is not nested in a repeating group representing both sides.
127	ContraInvestmentDecisionMaker	Contra Investment Decision Maker. Same as PartyRole(452) = 122 (Investment Decision Maker) but for the counterparty. Can be used whenever the parties component is not nested in a repeating group representing both sides.

Used in groups: [NestedParties3](#)

### 171.2.2932 Nested3PartyRoleQualifier

Used to further qualify the value of Nested3PartyRole(951).

Type: [int](#)

Allowed values in PartyDetailRoleQualifierCodeSet:

Code	Name	Description
0	Agency	Agency
1	Principal	Principal
2	RisklessPrincipal	Riskless principal
3	GeneralClearingMember	General clearing member

<b>Code</b>	<b>Name</b>	<b>Description</b>
30	ExchangeOrderSubmitter	Exchange order submitter. Used to identify original or initial exchange order submitting broker when party role "1" (Executing Firm) appears more than once.
4	IndividualClearingMember	Individual clearing member
5	PreferredMarketMaker	Preferred market maker. Market maker getting a part of the matched quantity before primary or default market maker.
6	DirectedMarketMaker	Directed market maker. Single market maker to handle the order provided.
7	Bank	Bank
8	Hub	Hub. Indicates that the Intermediary party is a hub system or service provider.
9	PrimaryTrdRepository	Primary trade repository. Used to differentiate the principal trade repository from the Original or Additional trade repositories when there are multiple trade repositories being reported.
10	OrigTrdRepository	Original trade repository. Used to identify the trade repository to which the trade was originally reported if different from the current repository to which the trade is being reported.
11	AddnlIntlTrdRepository	Additional international trade repository. Used with InternationalSwapIndicator(2526) to identify the trade repository that is in addition to the local swaps data repository as required by U.S. law.
12	AddnlDomesticTrdRepository	Additional domestic trade repository. Used with MixedSwapIndicator(1929) to identify the trade repository that is in addition to the current trade repository when the assets in the swap are subject to two different domestic regulators.
13	RelatedExchange	Related exchange
14	OptionsExchange	Options exchange
15	SpecifiedExchange	Specified exchange
16	ConstituentExchange	Constituent exchange.
17	ExemptFromTradeReporting	Exempt from trade reporting. In the context of FINRA TRACE reporting requirements, this is used to indicate the ATS has been granted a regulatory exemption from reporting.
18	Current	Current. Can be used to convey an existing party identifier for the same party role in a single message.
19	New	New. Can be used to convey a future party identifier for the same party role in a single message.
20	DesignatedSponsor	Designated sponsor. Market maker jointly providing liquidity for the same security with other market makers.

Code	Name	Description
21	Specialist	Specialist. Market maker being the only one providing liquidity for a security.
22	Algorithm	Algorithm
23	FirmOrLegalEntity	Firm or legal entity
24	NaturalPerson	Natural person
25	RegularTrader	Regular trader. Standard trader profile.
26	HeadTrader	Head trader. Senior trader leading a group of regular traders.
27	Supervisor	Supervisor. Administrative user that has only limited rights for normal trading but possibly special rights for emergency actions.
28	TriParty	Tri-party. In the context of EU SFTR reporting, identifies the third party, not necessarily the custodian, to which the reporting counterparty has outsourced the post-trade processing of an SFT (if applicable).
29	Lender	Lender. In the context of EU SFTR reporting, identifies the agent lender involved in the securities lending transaction.

33	CurrencyDeliveryIdentifier	Currency delivery identifier

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
34	AddressCity	Address City
35	AddressStateOrProvince	Address State/Province
36	AddressPostalCode	Address Postal Code
37	AddressStreet	Address Street
38	AddressISOCountryCode	Address Country (ISO country code)
39	ISOCountryCode	ISO country code
40	MarketSegment	Market segment
41	CustomerAccountType	Customer account type
42	OmnibusAccount	Omnibus account
43	FundsSegregationType	Funds segregation type
44	GuaranteeFund	Guarantee fund. Identifies a guarantee fund related to an account. Used when one account has multiple funds of collateral, each guaranteeing different positions. Can be used for PartyRole(452) = Customer Account(24).
45	SwapDealer	Swap dealer. The US regulator's defined term for identifying the trade counterparty as "any person who holds itself out as a dealer in swaps, makes a market in swaps, regularly enters into swaps with counterparties as an ordinary course of business for its own account, or engages in activity causing itself to be commonly known in the trade as a dealer or market maker in swaps".
46	MajorParticipant	Major participant. When PartySubID(523)=Y the counterparty is not the swap dealer but is a major swap participant as defined in the regulations.
47	FinancialEntity	Financial entity. When PartySubID(523)=Y the counterparty is neither a swap dealer nor a major swap participant but is a financial entity as defined in the regulations.
48	USPerson	U.S. person. A legal term referring to any U.S. person or legal entity anywhere in the world that should be taxed under U.S. law.
49	ReportingEntityIndicator	Reporting entity indicator. Indicates the entity obligated or delegated to report to their regulator, a non-regulatory agency or data repository. Set PartySubID(523)=Y if true.
50	ElectedClearingRequirementException	Elected clearing requirement exception
51	BusinessCenter	Business center.
52	ReferenceText	Reference text
53	ShortMarkingExemptAccount	Short-marking exempt account

<b>Code</b>	<b>Name</b>	<b>Description</b>
54	ParentFirmIdentifier	Parent firm identifier. Implementation-specific identifier of this party's parent entity.
55	ParentFirmName	Parent firm name. Full name of this party's parent entity.
56	DealIdentifier	Deal identifier. The internal identifier assigned to the trade by this party, particularly by a Clearing Organization.
57	SystemTradeID	System trade identifier
58	SystemTradeSubID	System trade sub-identifier
59	FCMCode	Futures Commission Merchant (FCM) code. The FCM's code or identifier in relation to the PartyRole(452). For example, if PartyRole(452) is the exchange or clearinghouse, the FCM code/ID specified in PartySubID(523) is the FCM's identifier at the exchange or clearinghouse.
60	DlvryTrmlCode	Delivery terminal customer account/code. Usually used for gas delivery to identify whose account the gas is allocated to at the delivery terminal. Often referred to as "HUB" code.
61	VolntyRptEntity	Voluntary reporting entity. The entity voluntarily reporting the trade to the regulator. Set PartySubID(523)=Y if true.
62	RptObligJurisdiction	Reporting obligation jurisdiction. For a trade that falls under multiple jurisdictions this may be used to identify, through PartySubID(523), the reporting jurisdiction to which the party is obligated to report.
63	VolntyRptJurisdiction	Voluntary reporting jurisdiction. For a trade that falls under multiple jurisdictions this may be used to identify, through PartySubID(523), the regulatory jurisdiction to which the party is submitting a voluntary report.

Code	Name	Description
64	CompanyActivities	Company activities. For regulatory reporting. ID values include: A = Assurance undertaking authorized in accordance with Directive 2002/83/EC C=Credit institution authorized in accordance with Directive 2006/48/EC F=Investment firm in accordance with Directive 2004/39/EC I=Insurance undertaking authorized in accordance with Directive 73/239/EC L=Alternative investment fund managed by AIFMs authorized or registered in accordance with Directive 2011/61/EC O=Institution for occupational retirement provision within the meaning of Article 6(a0 of Directive 2003/41/EC R=Reinsurance undertaking authorized in accordance with Directive 2005/68/EC U=UCITS and its management company, authorized in accordance with Directive 2009/65/EC or blank in case of coverage by LEI or in case of non-financial counterparties. In the context of EU SFTR reporting use the appropriate 4- or 1-character code noted in the regulations. See SFTR ITS "Commission Implementing Regulation (EU) 2019/363" Annexes 1 and 2 for values.
65	EEAreaDomiciled	European Economic Area domiciled. ID values: Y or N
66	ContractLinked	Contract linked to commercial or treasury financing for this counterparty. ID values: Y or N
67	ContractAbove	Contract above clearing threshold for this counterparty. ID values: Y or N
68	VolntyRptPty	Voluntary reporting party. When PartySubID(523)=Y, identifies that the trading party is reporting voluntarily when VoluntaryRegulatoryReport(1935)=Y.
69	EndUser	End user. When PartySubID(523)=Y, the counterparty is neither the swap dealer, major swap participant nor financial entity as defined in the regulations.
70	LocationOrJurisdiction	Location or jurisdiction. One or more instances may be used in combination with PartySubIDType(803) = 49 (Reporting entity indicator) or 102 (Data repository) to identify the jurisdiction, countries, regions or provinces for which the party is a reporting entity or data repository when that characteristic is ambiguous or where there are multiple locations. The party sub-ID value is either a jurisdiction acronym, a 2-character ISO 3166 country code, or a hyphenated combination of the country code and the standard post-office abbreviation for province, state or region if necessary. E.g. "US" for United States or "CA-QC" for Quebec Canada.

Code	Name	Description
71	DerivativesDealer	Derivatives dealer. Indicates whether the party is a derivatives dealer or not (Y/N). The Canadian regulator's defined term for identifying the trade counterparty as "a person or company engaging in or holding himself, herself or itself out as engaging in the business of trading in derivatives in Ontario as principal or agent".
72	Domicile	Domicile. Country and optionally province, state or region of domicile. The party sub-ID value is either a 2-character ISO 3166 country code or a hyphenated combination of the country code and the standard post-office abbreviation of province, state or region if necessary. E.g. "US" for United States or "CA-QC" for Quebec Canada.
73	ExemptFromRecognition	Exempt from recognition. Used with party role 21 "Clearing Organization" to indicate exemption (Y/N). Identifies a clearing agency as exempt from oversight in Ontario, i.e. one that 1) only provides limited services and does not present significant risks or 2) is foreign-based, intends to operate in Ontario but is subject to regulatory oversight in another jurisdiction.
74	Payer	Payer. Identifies the party as the payer of a particular payment stream or bullet payment by quoting the stream's StreamDesc(40051) (or LegStreamDesc(40243) or UnderlyingStreamDesc(40542)) or payment's PaymentDesc(43087) in the associated party sub-identifier field.
75	Receiver	Receiver. Identifies the party as the receiver of a particular payment stream or bullet payment by quoting the stream's StreamDesc(40051) (or LegStreamDesc(40243) or UnderlyingStreamDesc(40542)) or payment's PaymentDesc(43087) in the associated party sub-identifier field.
76	SystematicInternaliser	Systematic Internaliser (SI). In the context of ESMA reporting, this is used to indicate whether the specified party is a Systematic Internaliser or not for the security defined in the Instrument component (Y/N).
77	PublishingEntityIndicator	Publishing entity indicator. Indicates the entity obligated or delegated to publish to the market. Set PartySubID(523)=Y if true.
78	FirstName	First name. The first name(s) of a natural person. If multiple names, separate entries by a comma.
79	Surname	Surname. The surname(s) or lastname(s) of a natural person. If multiple names, separate entries by a comma.

Code	Name	Description
80	DateOfBirth	Date of birth. The date of birth of a natural person in the format YYYYMMDD.
81	OrderTransmittingFirm	Order transmitting firm. Identifies whether the party specified in PartyID(448) is the firm that transmitted the order. In the context of RTS 22 Article 4, when "true" the PartySubID(523)=Y shall be set "by the transmitting firm within the transmitting firm's report where conditions for transmission specified in Article 4 were not satisfied."
82	OrderTransmittingFirmBuyer	Order transmitting firm for buyer. Identifies the firm that transmitted the order for the buyer. In the context of ESMA RTS 22, PartySubID(523)=Y is used to indicate the firm identified in PartyID(448) is the firm that transmitted the order for the buyer. "This shall be populated by the receiving firm within the receiving firm's report with the identification code provided by the transmitting firm."
83	OrderTransmitterSeller	Order transmitter for seller. Identifies the order transmitting firm for the seller. In the context of ESMA RTS 22, PartySubID(523)=Y is used to indicate the firm identified in PartyID(448) is the firm that transmitted the order for the seller. "This shall be populated by the receiving firm within the receiving firm's report with the identification code provided by the transmitting firm."
84	LegalEntityIdentifier	Legal Entity Identifier (ISO 17442) LEI
85	SubSectorClassification	Sub-sector classification. Supplemental to party sub-ID type "64" (Company activities) for regulatory reporting. For EU SFTR reporting use the appropriate 4-character code noted in the regulations applying the conditional association rules. See SFTR ITS "Commission Implementing Regulation (EU) 2019/363" Annexes 1 and 2 for values.
86	PartySide	Party side. May be used, when appropriate, to explicitly indicate the transaction side of the party, e.g. Buyer, Seller, Lender, Borrower, Maker, Taker, etc. in the ID. In the context of EU SFTR reporting, use values as required by SFTR, "GIVE" and "TAKE" in the ID, to identify collateral giver and taker.
87	LegalRegistrationCountry	Legal registration country. ISO Country Code where the registered office of the party is located as specified in the LEI reference data.

<b>Code</b>	<b>Name</b>	<b>Description</b>
32	Beneficiary	Beneficiary
33	InterestedParty	Interested party
34	RegulatoryBody	Regulatory body. In the context of regulatory reporting, this identifies the regulator the trade is being reported to.
35	LiquidityProvider	Liquidity provider
36	EnteringTrader	Entering trader
37	ContraTrader	Contra trader
38	PositionAccount	Position account. The account which positions are maintained. Typically represents the aggregation of one or more customer accounts.
39	ContraInvestorID	Contra Investor ID
40	TransferToFirm	Transfer to Firm
41	ContraPositionAccount	Contra Position Account
42	ContraExchange	Contra Exchange
43	InternalCarryAccount	Internal Carry Account
44	OrderEntryOperatorID	Order Entry Operator ID
45	SecondaryAccountNumber	Secondary Account Number
46	ForeignFirm	Foreign Firm
47	ThirdPartyAllocationFirm	Third Party Allocation Firm
48	ClaimingAccount	Claiming Account
49	AssetManager	Asset Manager
50	PledgorAccount	Pledgor Account
51	PledgeeAccount	Pledgee Account
52	LargeTraderReportableAccount	Large Trader Reportable Account
53	TraderMnemonic	Trader mnemonic
54	SenderLocation	Sender Location
55	SessionID	Session ID
56	AcceptableCounterparty	Acceptable Counterparty
57	UnacceptableCounterparty	Unacceptable Counterparty
58	EnteringUnit	Entering Unit
59	ExecutingUnit	Executing Unit
60	IntroducingBroker	Introducing Broker
61	QuoteOriginator	Quote originator
62	ReportOriginator	Report originator
63	SystematicInternaliser	Systematic internaliser (SI)

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
64	MultilateralTradingFacility	Multilateral Trading Facility (MTF). Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
65	RegulatedMarket	Regulated Market (RM). Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
66	MarketMaker	Market Maker
67	InvestmentFirm	Investment Firm
68	HostCompetentAuthority	Host Competent Authority (Host CA)
69	HomeCompetentAuthority	Home Competent Authority (Home CA)
70	CompetentAuthorityLiquidity	Competent Authority of the most relevant market in terms of liquidity (CAL)
71	CompetentAuthorityTransactionV- enue	Competent Authority of the Transaction (Execution) Venue (CATV)
72	ReportingIntermediary	Reporting intermediary. The medium or vendor used to report to a regulator, non-regulatory agency or data repository.
73	ExecutionVenue	Execution Venue. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
74	MarketDataEntryOriginator	Market data entry originator
75	LocationID	Location ID
76	DeskID	Desk ID
77	MarketDataMarket	Market data market
78	AllocationEntity	Allocation Entity
79	PrimeBroker	Prime Broker providing General Trade Services
80	StepOutFirm	Step-Out Firm (Prime Broker)
81	BrokerClearingID	Broker clearing identifier
82	CentralRegistrationDepository	Central Registration Depository (CRD)
83	ClearingAccount	Clearing Account
84	AcceptableSettlingCounterparty	Acceptable Settling Counterparty
85	UnacceptableSettlingCounterparty	Unacceptable Settling Counterparty
86	CLSMemberBank	CLS Member Bank
87	InConcertGroup	In Concert Group
88	InConcertControllingEntity	In Concert Controlling Entity
89	LargePositionsReportingAccount	Large Positions Reporting Account
90	SettlementFirm	Settlement Firm

<b>Code</b>	<b>Name</b>	<b>Description</b>
91	SettlementAccount	Settlement account. The account to which individual payment obligations are aggregated for netting and funds movement. Typically represents the aggregation of many margin (performance bond) accounts.
92	ReportingMarketCenter	Reporting Market Center
93	RelatedReportingMarketCenter	Related Reporting Market Center
94	AwayMarket	Away Market. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
95	GiveupTradingFirm	Give-up (trading) firm
96	TakeupTradingFirm	Take-up (trading) firm
97	GiveupClearingFirm	Give-up clearing firm
98	TakeupClearingFirm	Take-up clearing firm
99	OriginatingMarket	Originating Market. Identifies the Market using PartyIDSource(tag 447) = G (Market Identifier Code) where an order originated in the event that the order is sent to an alternative market for execution. Serves as an inverse of an away market.
100	MarginAccount	Margin account. Also referred to as "performance bond account". The margin account is the calculated margin requirements. Typically represents the aggregation of one or more position accounts.
101	CollateralAssetAccount	Collateral asset account. The account at which individual collateral assets are maintained. Typically, although not always, one-for-one with the settlement account.
102	DataRepository	Data repository. Multiple instances of this PartyRole may appear for reporting purposes.
103	CalculationAgent	Calculation agent
104	ExerciseNoticeSender	Sender of exercise notice
105	ExerciseNoticeReceiver	Receiver of exercise notice
106	RateReferenceBank	Rate reference bank. The bank providing the reference rate. Multiple instance of this PartyRole may appear.
107	Correspondent	Correspondent
109	BeneficiaryBank	Beneficiary's bank or depository institution. The institution in which the beneficiary, a person or an entity, has their account with. The institution may be a bank or non-bank institution.
110	Borrower	Borrower
111	PrimaryObligator	Primary obligator
112	Guarantor	Guarantor

<b>Code</b>	<b>Name</b>	<b>Description</b>
113	ExcludedReferenceEntity	Excluded reference entity
114	DeterminingParty	Determining party
115	HedgingParty	Hedging party
116	ReportingEntity	Reporting entity. The entity that is reporting the information.
117	SalesPerson	Sales person. The person who is involved in the sales activities for their firm.
118	Operator	Operator. The person who has the capabilities and authorization to take certain actions; for example, setting entitlements, etc.
119	CSD	Central Securities Depository (CSD)
120	ICSD	International Central Securities Depository (ICSD)
121	TradingSubAccount	Trading sub-account. Example of sub-accounts include a clearing account that has multiple trading sub-accounts, a trading account that has multiple trading sub-accounts belonging to different trading firms.
122	InvestmentDecisionMaker	Investment decision maker. In the context of ESMA RTS reporting, this is used to specify party responsible for the investment decision. See RTS 24, Annex, Table 2, Field 4.
123	PublishingIntermediary	Publishing intermediary. The medium or vendor used to publish to the market.
124	CSDParticipant	Central Securities Depository (CSD) Participant. In the context of EU SFTR reporting the identifier of the CSD participant or indirect participant of the reporting counterparty. Where both the CSD participant and indirect participant are involved in the transaction this should identify the indirect participant.
125	Issuer	Issuer. The issuer of the security.
126	ContraCustomerAccount	Contra Customer Account. Same as PartyRole(452) = 24 (Customer Account) but for the counterparty. Can be used whenever the parties component is not nested in a repeating group representing both sides.
127	ContraInvestmentDecisionMaker	Contra Investment Decision Maker. Same as PartyRole(452) = 122 (Investment Decision Maker) but for the counterparty. Can be used whenever the parties component is not nested in a repeating group representing both sides.

**171.2.2938 Nested4PartyRoleQualifier**

Used to further qualify the value of Nested4PartyRole(1417).

Type: **int**

Allowed values in PartyDetailRoleQualifierCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Agency	Agency
1	Principal	Principal
2	RisklessPrincipal	Riskless principal
3	GeneralClearingMember	General clearing member
30	ExchangeOrderSubmitter	Exchange order submitter. Used to identify original or initial exchange order submitting broker when party role "1" (Executing Firm) appears more than once.
4	IndividualClearingMember	Individual clearing member
5	PreferredMarketMaker	Preferred market maker. Market maker getting a part of the matched quantity before primary or default market maker.
6	DirectedMarketMaker	Directed market maker. Single market maker to handle the order provided.
7	Bank	Bank
8	Hub	Hub. Indicates that the Intermediary party is a hub system or service provider.
9	PrimaryTrdRepository	Primary trade repository. Used to differentiate the principal trade repository from the Original or Additional trade repositories when there are multiple trade repositories being reported.
10	OrigTrdRepository	Original trade repository. Used to identify the trade repository to which the trade was originally reported if different from the current repository to which the trade is being reported.
11	AddtnlIntlTrdRepository	Additional international trade repository. Used with InternationalSwapIndicator(2526) to identify the trade repository that is in addition to the local swaps data repository as required by U.S. law.
12	AddtnlDomesticTrdRepository	Additional domestic trade repository. Used with MixedSwapIndicator(1929) to identify the trade repository that is in addition to the current trade repository when the assets in the swap are subject to two different domestic regulators.
13	RelatedExchange	Related exchange
14	OptionsExchange	Options exchange

Code	Name	Description
15	SpecifiedExchange	Specified exchange
16	ConstituentExchange	Constituent exchange.
17	ExemptFromTradeReporting	Exempt from trade reporting. In the context of FINRA TRACE reporting requirements, this is used to indicate the ATS has been granted a regulatory exemption from reporting.
18	Current	Current. Can be used to convey an existing party identifier for the same party role in a single message.
19	New	New. Can be used to convey a future party identifier for the same party role in a single message.
20	DesignatedSponsor	Designated sponsor. Market maker jointly providing liquidity for the same security with other market makers.
21	Specialist	Specialist. Market maker being the only one providing liquidity for a security.
22	Algorithm	Algorithm
23	FirmOrLegalEntity	Firm or legal entity
24	NaturalPerson	Natural person
25	RegularTrader	Regular trader. Standard trader profile.
26	HeadTrader	Head trader. Senior trader leading a group of regular traders.
27	Supervisor	Supervisor. Administrative user that has only limited rights for normal trading but possibly special rights for emergency actions.
28	TriParty	Tri-party. In the context of EU SFTR reporting, identifies the third party, not necessarily the custodian, to which the reporting counterparty has outsourced the post-trade processing of an SFT (if applicable).
29	Lender	Lender. In the context of EU SFTR reporting, identifies the agent lender involved in the securities lending transaction.

55	ParentFirmName	Parent firm name. Full name of this party's parent entity.
56	DealIdentifier	Deal identifier. The internal identifier assigned to the trade by this party, particularly by a Clearing Organization.
57	SystemTradeID	System trade identifier
58	SystemTradeSubID	System trade sub-identifier
59	FCMCode	Futures Commission Merchant (FCM) code. The FCM's code or identifier in relation to the PartyRole(452). For example, if PartyRole(452) is the exchange or clearinghouse, the FCM code/ID specified in PartySubID(523) is the FCM's identifier at the exchange or clearinghouse.
60	DlvryTrmlCode	Delivery terminal customer account/code. Usually used for gas delivery to identify whose account the gas is allocated to at the delivery terminal. Often referred to as "HUB" code.
61	VolntyRptEntity	Voluntary reporting entity. The entity voluntarily reporting the trade to the regulator. Set PartySubID(523)=Y if true.
62	RptObligJurisdiction	Reporting obligation jurisdiction. For a trade that falls under multiple jurisdictions this may be used to identify, through PartySubID(523), the reporting jurisdiction to which the party is obligated to report.
63	VolntyRptJurisdiction	Voluntary reporting jurisdiction. For a trade that falls under multiple jurisdictions this may be used to identify, through PartySubID(523), the regulatory jurisdiction to which the party is submitting a voluntary report.

Code	Name	Description
64	CompanyActivities	Company activities. For regulatory reporting. ID values include: A = Assurance undertaking authorized in accordance with Directive 2002/83/EC C=Credit institution authorized in accordance with Directive 2006/48/EC F=Investment firm in accordance with Directive 2004/39/EC I=Insurance undertaking authorized in accordance with Directive 73/239/EC L=Alternative investment fund managed by AIFMs authorized or registered in accordance with Directive 2011/61/EC O=Institution for occupational retirement provision within the meaning of Article 6(a0 of Directive 2003/41/EC R=Reinsurance undertaking authorized in accordance with Directive 2005/68/EC U=UCITS and its management company, authorized in accordance with Directive 2009/65/EC or blank in case of coverage by LEI or in case of non-financial counterparties. In the context of EU SFTR reporting use the appropriate 4- or 1-character code noted in the regulations. See SFTR ITS "Commission Implementing Regulation (EU) 2019/363" Annexes 1 and 2 for values.
65	EEAreaDomiciled	European Economic Area domiciled. ID values: Y or N
66	ContractLinked	Contract linked to commercial or treasury financing for this counterparty. ID values: Y or N
67	ContractAbove	Contract above clearing threshold for this counterparty. ID values: Y or N
68	VolntyRptPty	Voluntary reporting party. When PartySubID(523)=Y, identifies that the trading party is reporting voluntarily when VoluntaryRegulatoryReport(1935)=Y.
69	EndUser	End user. When PartySubID(523)=Y, the counterparty is neither the swap dealer, major swap participant nor financial entity as defined in the regulations.
70	LocationOrJurisdiction	Location or jurisdiction. One or more instances may be used in combination with PartySubIDType(803) = 49 (Reporting entity indicator) or 102 (Data repository) to identify the jurisdiction, countries, regions or provinces for which the party is a reporting entity or data repository when that characteristic is ambiguous or where there are multiple locations. The party sub-ID value is either a jurisdiction acronym, a 2-character ISO 3166 country code, or a hyphenated combination of the country code and the standard post-office abbreviation for province, state or region if necessary. E.g. "US" for United States or "CA-QC" for Quebec Canada.

<b>Code</b>	<b>Name</b>	<b>Description</b>
71	DerivativesDealer	Derivatives dealer. Indicates whether the party is a derivatives dealer or not (Y/N). The Canadian regulator's defined term for identifying the trade counterparty as "a person or company engaging in or holding himself, herself or itself out as engaging in the business of trading in derivatives in Ontario as principal or agent".
72	Domicile	Domicile. Country and optionally province, state or region of domicile. The party sub-ID value is either a 2-character ISO 3166 country code or a hyphenated combination of the country code and the standard post-office abbreviation of province, state or region if necessary. E.g. "US" for United States or "CA-QC" for Quebec Canada.
73	ExemptFromRecognition	Exempt from recognition. Used with party role 21 "Clearing Organization" to indicate exemption (Y/N). Identifies a clearing agency as exempt from oversight in Ontario, i.e. one that 1) only provides limited services and does not present significant risks or 2) is foreign-based, intends to operate in Ontario but is subject to regulatory oversight in another jurisdiction.
74	Payer	Payer. Identifies the party as the payer of a particular payment stream or bullet payment by quoting the stream's StreamDesc(40051) (or LegStreamDesc(40243) or UnderlyingStreamDesc(40542)) or payment's PaymentDesc(43087) in the associated party sub-identifier field.
75	Receiver	Receiver. Identifies the party as the receiver of a particular payment stream or bullet payment by quoting the stream's StreamDesc(40051) (or LegStreamDesc(40243) or UnderlyingStreamDesc(40542)) or payment's PaymentDesc(43087) in the associated party sub-identifier field.
76	SystematicInternaliser	Systematic Internaliser (SI). In the context of ESMA reporting, this is used to indicate whether the specified party is a Systematic Internaliser or not for the security defined in the Instrument component (Y/N).
77	PublishingEntityIndicator	Publishing entity indicator. Indicates the entity obligated or delegated to publish to the market. Set PartySubID(523)=Y if true.
78	FirstName	First name. The first name(s) of a natural person. If multiple names, separate entries by a comma.
79	Surname	Surname. The surname(s) or lastname(s) of a natural person. If multiple names, separate entries by a comma.

Code	Name	Description
80	DateOfBirth	Date of birth. The date of birth of a natural person in the format YYYYMMDD.
81	OrderTransmittingFirm	Order transmitting firm. Identifies whether the party specified in PartyID(448) is the firm that transmitted the order. In the context of RTS 22 Article 4, when "true" the PartySubID(523)=Y shall be set "by the transmitting firm within the transmitting firm's report where conditions for transmission specified in Article 4 were not satisfied."
82	OrderTransmittingFirmBuyer	Order transmitting firm for buyer. Identifies the firm that transmitted the order for the buyer. In the context of ESMA RTS 22, PartySubID(523)=Y is used to indicate the firm identified in PartyID(448) is the firm that transmitted the order for the buyer. "This shall be populated by the receiving firm within the receiving firm's report with the identification code provided by the transmitting firm."
83	OrderTransmitterSeller	Order transmitter for seller. Identifies the order transmitting firm for the seller. In the context of ESMA RTS 22, PartySubID(523)=Y is used to indicate the firm identified in PartyID(448) is the firm that transmitted the order for the seller. "This shall be populated by the receiving firm within the receiving firm's report with the identification code provided by the transmitting firm."
84	LegalEntityIdentifier	Legal Entity Identifier (ISO 17442) LEI
85	SubSectorClassification	Sub-sector classification. Supplemental to party sub-ID type "64" (Company activities) for regulatory reporting. For EU SFTR reporting use the appropriate 4-character code noted in the regulations applying the conditional association rules. See SFTR ITS "Commission Implementing Regulation (EU) 2019/363" Annexes 1 and 2 for values.
86	PartySide	Party side. May be used, when appropriate, to explicitly indicate the transaction side of the party, e.g. Buyer, Seller, Lender, Borrower, Maker, Taker, etc. in the ID. In the context of EU SFTR reporting, use values as required by SFTR, "GIVE" and "TAKE" in the ID, to identify collateral giver and taker.
87	LegalRegistrationCountry	Legal registration country. ISO Country Code where the registered office of the party is located as specified in the LEI reference data.

Used in groups: [NstdPtys4SubGrp](#)

**171.2.2941 NestedInstrAttribType**

Code to represent the type of instrument attribute

Type: **int**

Allowed values in InstrAttribTypeCodeSet:

Code	Name	Description
1	Flat	Flat (securities pay interest on a current basis but are traded without interest)
2	ZeroCoupon	Zero coupon
3	InterestBearing	Interest bearing (for Euro commercial paper when not issued at discount)
4	NoPeriodicPayments	No periodic payments
5	VariableRate	Variable rate
6	LessFeeForPut	Less fee for put
7	SteppedCoupon	Stepped coupon
8	CouponPeriod	Coupon period (if not semi-annual). Supply redemption date in the InstrAttribValue(872) field.
9	When	When [and if] issued
10	OriginalIssueDiscount	Original issue discount
11	Callable	Callable, puttable
12	EscrowedToMaturity	Escrowed to Maturity
13	EscrowedToRedemptionDate	Escrowed to redemption date - callable. Supply redemption date in the InstrAttribValue(872) field.
14	PreRefunded	Pre-refunded
15	InDefault	In default
16	Unrated	Unrated
17	Taxable	Taxable
18	Indexed	Indexed
19	SubjectToAlternativeMinimumTax	Subject To Alternative Minimum Tax
20	OriginalIssueDiscountPrice	Original issue discount price. Supply price in the InstrAttribValue(872) field.
21	CallableBelowMaturityValue	Callable below maturity value
22	CallableWithoutNotice	Callable without notice by mail to holder unless registered
23	PriceTickRulesForSecurity	Price tick rules for security
24	TradeTypeEligibilityDetailsForSecurity	Trade type eligibility details for security

Code	Name	Description
25	InstrumentDenominator	Instrument denominator
26	InstrumentNumerator	Instrument numerator
27	InstrumentPricePrecision	Instrument price precision
28	InstrumentStrikePrice	Instrument strike price
29	TradeableIndicator	Tradeable indicator
30	InstrumentEligibleAnonOrders	Instrument is eligible to accept anonymous orders
31	MinGuaranteedFillVolume	Minimum guaranteed fill volume
32	MinGuaranteedFillStatus	Minimum guaranteed fill status
33	TradeAtSettlementEligibility	Trade at settlement (TAS) eligibility
34	TestInstrument	Test instrument. Instrument that is tradable but has no effect on the positions, exchange turnover etc.
35	DummyInstrument	Dummy instrument. Instrument that is normally halted and is only activated for trading under very special conditions (e.g. temporarily assigned for newly listed instrument). Use of a dummy instrument generally applies to systems that are unable to add reference data for new instruments intraday.
36	NegativeSettlementPriceEligibility	Negative settlement price eligibility
37	NegativeStrikePriceEligibility	Negative strike price eligibility
38	USStdContractInd	US standard contract indicator. Indicates through InstrAttribValue(872) - values Y or N - whether the underlying asset in the trade references or is economically related to a contract listed in Appendix B of CFTC Part 43 regulation. See <a href="http://www.ecfr.gov/cgi-bin/text-idx?SID=4b2d1078ad68f6564a89d7ff6c52ec43&amp;node=17:2.0.1.1.3.0.1.8.2&amp;rgn=div">http://www.ecfr.gov/cgi-bin/text-idx?SID=4b2d1078ad68f6564a89d7ff6c52ec43&amp;node=17:2.0.1.1.3.0.1.8.2&amp;rgn=div</a> or refer to Appendix B to Part 43 in the final rule at <a href="http://www.cftc.gov/ucm/groups/public/@lrfederalregister/documents/file/2013-12133a.pdf">http://www.cftc.gov/ucm/groups/public/@lrfederalregister/documents/file/2013-12133a.pdf</a>
39	AdmittedToTradingOnTradingVenue	Admitted to trading on a trading venue
40	AverageDailyNotionalAmount	Average daily notional amount
41	AverageDailyNumberTrades	Average daily number of trades
99	Text	Text. Supply the text value in InstrAttribValue(872).

Used in groups: **NestedInstrumentAttribute**

### 171.2.2942 NestedInstrAttribValue

Attribute value appropriate to the NestedInstrAttribType field

Type: [String](#)

Used in groups: [NestedInstrumentAttribute](#)

### 171.2.2943 NestedInstrumentAttribute

Name	Mult.	Type	Description
<a href="#">NoNestedInstrAttrib</a>	[1..1]	NumInGroup	
<a href="#">NestedInstrAttribType</a>	[0..1]	CodeSet	Code to represent the type of instrument attribute
<a href="#">NestedInstrAttribValue</a>	[0..1]	String	Attribute value appropriate to the NestedInstrAttribType field

Used in components: [SecurityTradingRules](#)

### 171.2.2944 NestedParties2

The NestedParties2 component block is identical to the Parties Block. It is used in other component blocks and repeating groups when nesting will take place resulting in multiple occurrences of the Parties block within a single FIX message. Use of NestedParties2 under these conditions avoids multiple references to the Parties block within the same message which is not allowed in FIX tag/value syntax.

Name	Mult.	Type	Description
<a href="#">NoNested2PartyIDs</a>	[1..1]	NumInGroup	Repeating group below should contain unique combinations of Nested2PartyID, Nested2PartyIDSource, and Nested2PartyRole
<a href="#">Nested2PartyID</a>	[0..1]	String	Used to identify source of Nested2PartyID. Required if Nested2PartyIDSource is specified. Required if NoNested2PartyIDs > 0.
<a href="#">Nested2PartyIDSource</a>	[0..1]	CodeSet	Used to identify class source of Nested2PartyID value (e.g. BIC). Required if Nested2PartyID is specified. Required if NoNested2PartyIDs > 0.
<a href="#">Nested2PartyRole</a>	[0..1]	CodeSet	Identifies the type of Nested2PartyID (e.g. Executing Broker). Required if NoNested2PartyIDs > 0.
<a href="#">Nested2PartyRoleQualifier</a>	[0..1]	CodeSet	
<a href="#">NstdPtys2SubGrp</a>	[0..*]	Group	Repeating group of Nested2Party sub-identifiers.

Used in groups: [LegPreAllocGrp](#), [OrdAllocGrp](#), [TrdAllocGrp](#)

**171.2.2945 NestedParties3**

The NestedParties3 component block is identical to the Parties Block. It is used in other component blocks and repeating groups when nesting will take place resulting in multiple occurrences of the Parties block within a single FIX message. Use of NestedParties3 under these conditions avoids multiple references to the Parties block within the same message which is not allowed in FIX tag/value syntax.

Name	Mult.	Type	Description
NoNested3PartyIDs	[1..1]	NumInGroup	Repeating group below should contain unique combinations of Nested3PartyID, Nested3PartyIDSource, and Nested3PartyRole
Nested3PartyID	[0..1]	String	Used to identify source of Nested3PartyID. Required if Nested3PartyIDSource is specified. Required if NoNested3PartyIDs > 0.
Nested3PartyIDSource	[0..1]	CodeSet	Used to identify class source of Nested3PartyID value (e.g. BIC). Required if Nested3PartyID is specified. Required if NoNested3PartyIDs > 0.
Nested3PartyRole	[0..1]	CodeSet	Identifies the type of Nested3PartyID (e.g. Executing Broker). Required if NoNested3PartyIDs > 0.
Nested3PartyRoleQualifier	[0..1]	CodeSet	
NstdPtys3SubGrp	[0..*]	Group	Repeating group of Nested3Party sub-identifiers.

Used in groups: [InstrmtLegExecGrp](#), [PreAllocMlegGrp](#), [SideCrossLegGrp](#), [TrdInstrmtLegExecGrp](#)

**171.2.2946 NestedParties4**

The NestedParties4 component block is identical to the Parties Block. It is used in other component blocks and repeating groups when nesting will take place resulting in multiple occurrences of the Parties block within a single FIX message. Use of NestedParties4 under these conditions avoids multiple references to the Parties block within the same message which is not allowed in FIX tag/value syntax.

Name	Mult.	Type	Description
NoNested4PartyIDs	[1..1]	NumInGroup	Repeating group below should contain unique combinations of Nested4PartyID, Nested4PartyIDSource, and Nested4PartyRole.

Name	Mult.	Type	Description
<b>Nested4PartyID</b>	[0..1]	String	Used to identify source of Nested4PartyID. Required if Nested4PartyIDSource is specified. Required if NoNested4PartyIDs > 0.
<b>Nested4PartyIDSource</b>	[0..1]	CodeSet	Used to identify class source of Nested4PartyID value (e.g. BIC). Required if Nested4PartyID is specified. Required if NoNested4PartyIDs > 0.
<b>Nested4PartyRole</b>	[0..1]	CodeSet	Identifies the type of Nested4PartyID (e.g. Executing Broker). Required if NoNested4PartyIDs > 0.
<b>Nested4PartyRoleQualifier</b>	[0..1]	CodeSet	
<b>NstdPtys4SubGrp</b>	[0..*]	Group	

Used in groups: **FillsGrp**

### 171.2.2947 NestedParties

The NestedParties component block is identical to the Parties Block. It is used in other component blocks and repeating groups when nesting will take place resulting in multiple occurrences of the Parties block within a single FIX message. Use of NestedParties under these conditions avoids multiple references to the Parties block within the same message which is not allowed in FIX tag/value syntax.

Name	Mult.	Type	Description
<b>NoNestedPartyIDs</b>	[1..1]	NumInGroup	Repeating group below should contain unique combinations of NestedPartyID, NestedPartyIDSource, and NestedPartyRole
<b>NestedPartyID</b>	[0..1]	String	Used to identify source of NestedPartyID. Required if NestedPartyIDSource is specified. Required if NoNestedPartyIDs > 0.
<b>NestedPartyIDSource</b>	[0..1]	CodeSet	Used to identify class source of NestedPartyID value (e.g. BIC). Required if NestedPartyID is specified. Required if NoNestedPartyIDs > 0.
<b>NestedPartyRole</b>	[0..1]	CodeSet	Identifies the type of NestedPartyID (e.g. Executing Broker). Required if NoNestedPartyIDs > 0.
<b>NestedPartyRoleQualifier</b>	[0..1]	CodeSet	
<b>NstdPtysSubGrp</b>	[0..*]	Group	Repeating group of NestedParty sub-identifiers.

Used in components: **MDStatisticParameters, SettlTradeDetails**

Used in groups: [AllocAckGrp](#), [AllocGrp](#), [ApplIDRequestAckGrp](#), [ApplIDRequestGrp](#), [LegOrdGrp](#), [LegQuotGrp](#), [LegQuotStatGrp](#), [PositionQty](#), [PreAllocGrp](#), [QuotReqLegsGrp](#), [RgstDtIsGrp](#), [TrdInstrmtLegGrp](#)

### 171.2.2948 NestedPartyID

PartyID value within a nested repeating group.

Same values as PartyID (448)

Type: **String**

Used in groups: [NestedParties](#)

### 171.2.2949 NestedPartyIDSource

PartyIDSource value within a nested repeating group.

Same values as PartyIDSource (447)

Type: **char**

Allowed values in PartyIDSourceCodeSet:

---

Code	Name	Description
1	KoreanInvestorID	Korean Investor ID
6	UKNationalInsuranceOrPension- Number	UK National Insurance or Pension Number
B	BIC	BIC (Bank Identification Code - SWIFT managed) code (ISO9362 - See "Appendix 6-B")
I	ISITCAcronym	Directed broker three character acronym as defined in ISITC "ETC Best Practice" guidelines document
2	TaiwaneseForeignInvestorID	Taiwanese Qualified Foreign Investor ID QFII/FID
7	USSocialSecurityNumber	US Social Security Number
C	GeneralIdentifier	Generally accepted market participant identifier (e.g. NASD mnemonic)
3	TaiwaneseTradingAcct	Taiwanese Trading Acct
8	USEmployerOrTaxIDNumber	US Employer or Tax ID Number
D	Proprietary	Proprietary / Custom code. Custom ID schema used between counterparties, trading platforms and repositories.
4	MalaysianCentralDepository	Malaysian Central Depository (MCD) number
9	AustralianBusinessNumber	Australian Business Number

---

Code	Name	Description
E	ISOCountryCode	ISO Country Code
5	ChineseInvestorID	Chinese Investor ID
A	AustralianTaxFileNumber	Australian Tax File Number
F	SettlementEntityLocation	Settlement Entity Location (note if Local Market Settlement use "E=ISO Country Code") (see "Appendix 6-G" for valid values)
G	MIC	Market Identifier Code (ISO 10383) MIC
J	TaxID	Tax ID
H	CSDParticipant	CSD participant/member code (e.g. Euroclear, DTC, CREST or Kassenverein number)
K	AustralianCompanyNumber	Australian Company Number
L	AustralianRegisteredBodyNumber	Australian Registered Body Number
M	CFTCReportingFirmIdentifier	CFTC reporting firm identifier
N	LegalEntityIdentifier	Legal Entity Identifier (ISO 17442) LEI
O	InterimIdentifier	Interim identifier. An interim entity identifier assigned by a regulatory agency prior to an LEI (ISO 17442) being assigned.
P	ShortCodeIdentifier	Short code identifier. A generic means for trading venues, brokers, investment managers to convey a bilaterally agreed upon "short hand" code for an identifier that is a reference to a mapping between the parties.
Q	NationalIDNaturalPerson	National ID of natural person. An identification number generally assigned by a government authority or agency to a natural person which is unique to the person it is assigned to. Examples include, but not limited to, "social security number", "pension number".
R	IndiaPermanentAccountNumber	India Permanent Account Number. Also referred to as PAN ID. An identifier issued by the Income Tax Department of India.
S	FDID	Firm designated identifier. Also referred to as FDID. A unique identifier required by the SEC for each trading account designated by Industry Members for purposes of reporting to CAT (Consolidated Audit Trail).
T	SPSAID	Special Segregated Account ID. Also referred to as SPSA ID. The Special Segregated Account identifier issued by Hong Kong Exchanges and Clearing.
U	MasterSPSAID	Master Special Segregated Account ID. Also referred to as Master SPSA ID. The master identifier issued by Hong Kong Exchanges and Clearing for the aggregation of SPSA IDs.

Used in groups: **NestedParties**

**171.2.2950 NestedPartyRole**

PartyRole value within a nested repeating group.

Same values as PartyRole (452)

Type: **int**

Allowed values in PartyRoleCodeSet:

Code	Name	Description
1	ExecutingFirm	Executing Firm (formerly FIX 4.2 ExecBroker)
2	BrokerOfCredit	Broker of Credit (formerly FIX 4.2 BrokerOfCredit)
3	ClientID	Client ID (formerly FIX 4.2 ClientID)
4	ClearingFirm	Clearing Firm (formerly FIX 4.2 ClearingFirm)
5	InvestorID	Investor ID
6	IntroducingFirm	Introducing Firm
7	EnteringFirm	Entering Firm
8	Locate	Locate / Lending Firm (for short-sales)
9	FundManagerClientID	Fund Manager Client ID (for CIV)
10	SettlementLocation	Settlement Location (formerly FIX 4.2 SettlLocation)
11	OrderOriginationTrader	Order Origination Trader (associated with Order Origination Firm - i.e. trader who initiates/submits the order)
12	ExecutingTrader	Executing Trader (associated with Executing Firm - actually executes)
13	OrderOriginationFirm	Order Origination Firm (e.g. buy-side firm)
14	GiveupClearingFirmDepr	Giveup Clearing Firm (firm to which trade is given up)
15	CorrespondantClearingFirm	Correspondant Clearing Firm
16	ExecutingSystem	Executing System
17	ContraFirm	Contra Firm
18	ContraClearingFirm	Contra Clearing Firm
19	SponsoringFirm	Sponsoring Firm
20	UnderlyingContraFirm	Underlying Contra Firm
21	ClearingOrganization	Clearing Organization
22	Exchange	Exchange. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
24	CustomerAccount	Customer Account
25	CorrespondentClearingOrganization	Correspondent Clearing Organization
26	CorrespondentBroker	Correspondent Broker

<b>Code</b>	<b>Name</b>	<b>Description</b>
27	Buyer	Buyer/Seller (Receiver/Deliverer)
28	Custodian	Custodian
29	Intermediary	Intermediary
30	Agent	Agent
31	SubCustodian	Sub-custodian
32	Beneficiary	Beneficiary
33	InterestedParty	Interested party
34	RegulatoryBody	Regulatory body. In the context of regulatory reporting, this identifies the regulator the trade is being reported to.
35	LiquidityProvider	Liquidity provider
36	EnteringTrader	Entering trader
37	ContraTrader	Contra trader
38	PositionAccount	Position account. The account which positions are maintained. Typically represents the aggregation of one or more customer accounts.
39	ContraInvestorID	Contra Investor ID
40	TransferToFirm	Transfer to Firm
41	ContraPositionAccount	Contra Position Account
42	ContraExchange	Contra Exchange
43	InternalCarryAccount	Internal Carry Account
44	OrderEntryOperatorID	Order Entry Operator ID
45	SecondaryAccountNumber	Secondary Account Number
46	ForeignFirm	Foreign Firm
47	ThirdPartyAllocationFirm	Third Party Allocation Firm
48	ClaimingAccount	Claiming Account
49	AssetManager	Asset Manager
50	PledgorAccount	Pledgor Account
51	PledgeeAccount	Pledgee Account
52	LargeTraderReportableAccount	Large Trader Reportable Account
53	TraderMnemonic	Trader mnemonic
54	SenderLocation	Sender Location
55	SessionID	Session ID
56	AcceptableCounterparty	Acceptable Counterparty
57	UnacceptableCounterparty	Unacceptable Counterparty
58	EnteringUnit	Entering Unit

<b>Code</b>	<b>Name</b>	<b>Description</b>
59	ExecutingUnit	Executing Unit
60	IntroducingBroker	Introducing Broker
61	QuoteOriginator	Quote originator
62	ReportOriginator	Report originator
63	SystematicInternaliser	Systematic internaliser (SI)
64	MultilateralTradingFacility	Multilateral Trading Facility (MTF). Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
65	RegulatedMarket	Regulated Market (RM). Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
66	MarketMaker	Market Maker
67	InvestmentFirm	Investment Firm
68	HostCompetentAuthority	Host Competent Authority (Host CA)
69	HomeCompetentAuthority	Home Competent Authority (Home CA)
70	CompetentAuthorityLiquidity	Competent Authority of the most relevant market in terms of liquidity (CAL)
71	CompetentAuthorityTransactionVenue	Competent Authority of the Transaction (Execution) Venue (CATV)
72	ReportingIntermediary	Reporting intermediary. The medium or vendor used to report to a regulator, non-regulatory agency or data repository.
73	ExecutionVenue	Execution Venue. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
74	MarketDataEntryOriginator	Market data entry originator
75	LocationID	Location ID
76	DeskID	Desk ID
77	MarketDataMarket	Market data market
78	AllocationEntity	Allocation Entity
79	PrimeBroker	Prime Broker providing General Trade Services
80	StepOutFirm	Step-Out Firm (Prime Broker)
81	BrokerClearingID	Broker clearing identifier
82	CentralRegistrationDepository	Central Registration Depository (CRD)
83	ClearingAccount	Clearing Account
84	AcceptableSettlingCounterparty	Acceptable Settling Counterparty
85	UnacceptableSettlingCounterparty	Unacceptable Settling Counterparty
86	CLSMemberBank	CLS Member Bank
87	InConcertGroup	In Concert Group

<b>Code</b>	<b>Name</b>	<b>Description</b>
88	InConcertControllingEntity	In Concert Controlling Entity
89	LargePositionsReportingAccount	Large Positions Reporting Account
90	SettlementFirm	Settlement Firm
91	SettlementAccount	Settlement account. The account to which individual payment obligations are aggregated for netting and funds movement. Typically represents the aggregation of many margin (performance bond) accounts.
92	ReportingMarketCenter	Reporting Market Center
93	RelatedReportingMarketCenter	Related Reporting Market Center
94	AwayMarket	Away Market. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
95	GiveupTradingFirm	Give-up (trading) firm
96	TakeupTradingFirm	Take-up (trading) firm
97	GiveupClearingFirm	Give-up clearing firm
98	TakeupClearingFirm	Take-up clearing firm
99	OriginatingMarket	Originating Market. Identifies the Market using PartyIDSource(tag 447) = G (Market Identifier Code) where an order originated in the event that the order is sent to an alternative market for execution. Serves as an inverse of an away market.
100	MarginAccount	Margin account. Also referred to as "performance bond account". The margin account is the calculated margin requirements. Typically represents the aggregation of one or more position accounts.
101	CollateralAssetAccount	Collateral asset account. The account at which individual collateral assets are maintained. Typically, although not always, one-for-one with the settlement account.
102	DataRepository	Data repository. Multiple instances of this PartyRole may appear for reporting purposes.
103	CalculationAgent	Calculation agent
104	ExerciseNoticeSender	Sender of exercise notice
105	ExerciseNoticeReceiver	Receiver of exercise notice
106	RateReferenceBank	Rate reference bank. The bank providing the reference rate. Multiple instance of this PartyRole may appear.
107	Correspondent	Correspondent
109	BeneficiaryBank	Beneficiary's bank or depository institution. The institution in which the beneficiary, a person or an entity, has their account with. The institution may be a bank or non-bank institution.

<b>Code</b>	<b>Name</b>	<b>Description</b>
110	Borrower	Borrower
111	PrimaryObligator	Primary obligator
112	Guarantor	Guarantor
113	ExcludedReferenceEntity	Excluded reference entity
114	DeterminingParty	Determining party
115	HedgingParty	Hedging party
116	ReportingEntity	Reporting entity. The entity that is reporting the information.
117	SalesPerson	Sales person. The person who is involved in the sales activities for their firm.
118	Operator	Operator. The person who has the capabilities and authorization to take certain actions; for example, setting entitlements, etc.
119	CSD	Central Securities Depository (CSD)
120	ICSD	International Central Securities Depository (ICSD)
121	TradingSubAccount	Trading sub-account. Example of sub-accounts include a clearing account that has multiple trading sub-accounts, a trading account that has multiple trading sub-accounts belonging to different trading firms.
122	InvestmentDecisionMaker	Investment decision maker. In the context of ESMA RTS reporting, this is used to specify party responsible for the investment decision. See RTS 24, Annex, Table 2, Field 4.
123	PublishingIntermediary	Publishing intermediary. The medium or vendor used to publish to the market.
124	CSDParticipant	Central Securities Depository (CSD) Participant. In the context of EU SFTR reporting the identifier of the CSD participant or indirect participant of the reporting counterparty. Where both the CSD participant and indirect participant are involved in the transaction this should identify the indirect participant.
125	Issuer	Issuer. The issuer of the security.
126	ContraCustomerAccount	Contra Customer Account. Same as PartyRole(452) = 24 (Customer Account) but for the counterparty. Can be used whenever the parties component is not nested in a repeating group representing both sides.
127	ContraInvestmentDecisionMaker	Contra Investment Decision Maker. Same as PartyRole(452) = 122 (Investment Decision Maker) but for the counterparty. Can be used whenever the parties component is not nested in a repeating group representing both sides.

Used in groups: [NestedParties](#)

### 171.2.2951 NestedPartyRoleQualifier

Used to further qualify the value of NestedPartyRole(538).

Type: [int](#)

Allowed values in PartyDetailRoleQualifierCodeSet:

Code	Name	Description
0	Agency	Agency
1	Principal	Principal
2	RisklessPrincipal	Riskless principal
3	GeneralClearingMember	General clearing member
30	ExchangeOrderSubmitter	Exchange order submitter. Used to identify original or initial exchange order submitting broker when party role "1" (Executing Firm) appears more than once.
4	IndividualClearingMember	Individual clearing member
5	PreferredMarketMaker	Preferred market maker. Market maker getting a part of the matched quantity before primary or default market maker.
6	DirectedMarketMaker	Directed market maker. Single market maker to handle the order provided.
7	Bank	Bank
8	Hub	Hub. Indicates that the Intermediary party is a hub system or service provider.
9	PrimaryTrdRepository	Primary trade repository. Used to differentiate the principal trade repository from the Original or Additional trade repositories when there are multiple trade repositories being reported.
10	OrigTrdRepository	Original trade repository. Used to identify the trade repository to which the trade was originally reported if different from the current repository to which the trade is being reported.
11	AddtnIntlTrdRepository	Additional international trade repository. Used with InternationalSwapIndicator(2526) to identify the trade repository that is in addition to the local swaps data repository as required by U.S. law.
12	AddtnDomesticTrdRepository	Additional domestic trade repository. Used with MixedSwapIndicator(1929) to identify the trade repository that is in addition to the current trade repository when the assets in the swap are subject to two different domestic regulators.

Code	Name	Description
13	RelatedExchange	Related exchange
14	OptionsExchange	Options exchange
15	SpecifiedExchange	Specified exchange
16	ConstituentExchange	Constituent exchange.
17	ExemptFromTradeReporting	Exempt from trade reporting. In the context of FINRA TRACE reporting requirements, this is used to indicate the ATS has been granted a regulatory exemption from reporting.
18	Current	Current. Can be used to convey an existing party identifier for the same party role in a single message.
19	New	New. Can be used to convey a future party identifier for the same party role in a single message.
20	DesignatedSponsor	Designated sponsor. Market maker jointly providing liquidity for the same security with other market makers.
21	Specialist	Specialist. Market maker being the only one providing liquidity for a security.
22	Algorithm	Algorithm
23	FirmOrLegalEntity	Firm or legal entity
24	NaturalPerson	Natural person
25	RegularTrader	Regular trader. Standard trader profile.
26	HeadTrader	Head trader. Senior trader leading a group of regular traders.
27	Supervisor	Supervisor. Administrative user that has only limited rights for normal trading but possibly special rights for emergency actions.
28	TriParty	Tri-party. In the context of EU SFTR reporting, identifies the third party, not necessarily the custodian, to which the reporting counterparty has outsourced the post-trade processing of an SFT (if applicable).
29	Lender	Lender. In the context of EU SFTR reporting, identifies the agent lender involved in the securities lending transaction.

---

Used in groups: **NestedParties**

### **171.2.2952 NestedPartySubID**

PartySubID value within a nested repeating group.

Same values as PartySubID (523)

Type: **String**

Used in groups: **NstdPtysSubGrp**

### **171.2.2953 NestedPartySubIDType**

Type of NestedPartySubID (545) value.

Same values as PartySubIDType (803)

Type: **int**

Allowed values in PartySubIDTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	Firm	Firm
2	Person	Person
3	System	System
4	Application	Application
5	FullLegalNameOfFirm	Full legal name of firm
6	PostalAddress	Postal address
7	PhoneNumber	Phone number
8	EmailAddress	Email address
9	ContactName	Contact name
10	SecuritiesAccountNumber	Securities account number (for settlement instructions)
11	RegistrationNumber	Registration number (for settlement instructions and confirmations)
12	RegisteredAddressForConfirmation	Registered address (for confirmation purposes)
13	RegulatoryStatus	Regulatory status (for confirmation purposes)
14	RegistrationName	Registration name (for settlement instructions)
15	CashAccountNumber	Cash account number (for settlement instructions)
16	BIC	BIC
17	CSDParticipantMemberCode	CSD participant member code
18	RegisteredAddress	Registered address
19	FundAccountName	Fund account name
20	TelexNumber	Telex number
21	FaxNumber	Fax number
22	SecuritiesAccountName	Securities account name
23	CashAccountName	Cash account name

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
24	Department	Department
25	LocationDesk	Location desk
26	PositionAccountType	Position account type
27	SecurityLocateID	Security locate ID
28	MarketMaker	Market maker
29	EligibleCounterparty	Eligible counterparty
30	ProfessionalClient	Professional client
31	Location	Location
32	ExecutionVenue	Execution venue
33	CurrencyDeliveryIdentifier	Currency delivery identifier
34	AddressCity	Address City
35	AddressStateOrProvince	Address State/Province
36	AddressPostalCode	Address Postal Code
37	AddressStreet	Address Street
38	AddressISOCountryCode	Address Country (ISO country code)
39	ISOCountryCode	ISO country code
40	MarketSegment	Market segment
41	CustomerAccountType	Customer account type
42	OmnibusAccount	Omnibus account
43	FundsSegregationType	Funds segregation type
44	GuaranteeFund	Guarantee fund. Identifies a guarantee fund related to an account. Used when one account has multiple funds of collateral, each guaranteeing different positions. Can be used for PartyRole(452) = Customer Account(24).
45	SwapDealer	Swap dealer. The US regulator's defined term for identifying the trade counterparty as "any person who holds itself out as a dealer in swaps, makes a market in swaps, regularly enters into swaps with counterparties as an ordinary course of business for its own account, or engages in activity causing itself to be commonly known in the trade as a dealer or market maker in swaps".
46	MajorParticipant	Major participant. When PartySubID(523)=Y the counterparty is not the swap dealer but is a major swap participant as defined in the regulations.
47	FinancialEntity	Financial entity. When PartySubID(523)=Y the counterparty is neither a swap dealer nor a major swap participant but is a financial entity as defined in the regulations.

<b>Code</b>	<b>Name</b>	<b>Description</b>
48	USPerson	U.S. person. A legal term referring to any U.S. person or legal entity anywhere in the world that should be taxed under U.S. law.
49	ReportingEntityIndicator	Reporting entity indicator. Indicates the entity obligated or delegated to report to their regulator, a non-regulatory agency or data repository. Set PartySubID(523)=Y if true.
50	ElectedClearingRequirementException	Elected clearing requirement exception
51	BusinessCenter	Business center.
52	ReferenceText	Reference text
53	ShortMarkingExemptAccount	Short-marking exempt account
54	ParentFirmIdentifier	Parent firm identifier. Implementation-specific identifier of this party's parent entity.
55	ParentFirmName	Parent firm name. Full name of this party's parent entity.
56	DealIdentifier	Deal identifier. The internal identifier assigned to the trade by this party, particularly by a Clearing Organization.
57	SystemTradeID	System trade identifier
58	SystemTradeSubID	System trade sub-identifier
59	FCMCode	Futures Commission Merchant (FCM) code. The FCM's code or identifier in relation to the PartyRole(452). For example, if PartyRole(452) is the exchange or clearinghouse, the FCM code/ID specified in PartySubID(523) is the FCM's identifier at the exchange or clearinghouse.
60	DlvryTrmlCode	Delivery terminal customer account/code. Usually used for gas delivery to identify whose account the gas is allocated to at the delivery terminal. Often referred to as "HUB" code.
61	VolntyRptEntity	Voluntary reporting entity. The entity voluntarily reporting the trade to the regulator. Set PartySubID(523)=Y if true.
62	RptObligJurisdiction	Reporting obligation jurisdiction. For a trade that falls under multiple jurisdictions this may be used to identify, through PartySubID(523), the reporting jurisdiction to which the party is obligated to report.
63	VolntyRptJurisdiction	Voluntary reporting jurisdiction. For a trade that falls under multiple jurisdictions this may be used to identify, through PartySubID(523), the regulatory jurisdiction to which the party is submitting a voluntary report.

Code	Name	Description
64	CompanyActivities	Company activities. For regulatory reporting. ID values include: A = Assurance undertaking authorized in accordance with Directive 2002/83/EC C=Credit institution authorized in accordance with Directive 2006/48/EC F=Investment firm in accordance with Directive 2004/39/EC I=Insurance undertaking authorized in accordance with Directive 73/239/EC L=Alternative investment fund managed by AIFMs authorized or registered in accordance with Directive 2011/61/EC O=Institution for occupational retirement provision within the meaning of Article 6(a0 of Directive 2003/41/EC R=Reinsurance undertaking authorized in accordance with Directive 2005/68/EC U=UCITS and its management company, authorized in accordance with Directive 2009/65/EC or blank in case of coverage by LEI or in case of non-financial counterparties. In the context of EU SFTR reporting use the appropriate 4- or 1-character code noted in the regulations. See SFTR ITS "Commission Implementing Regulation (EU) 2019/363" Annexes 1 and 2 for values.
65	EEAreaDomiciled	European Economic Area domiciled. ID values: Y or N
66	ContractLinked	Contract linked to commercial or treasury financing for this counterparty. ID values: Y or N
67	ContractAbove	Contract above clearing threshold for this counterparty. ID values: Y or N
68	VolntyRptPty	Voluntary reporting party. When PartySubID(523)=Y, identifies that the trading party is reporting voluntarily when VoluntaryRegulatoryReport(1935)=Y.
69	EndUser	End user. When PartySubID(523)=Y, the counterparty is neither the swap dealer, major swap participant nor financial entity as defined in the regulations.
70	LocationOrJurisdiction	Location or jurisdiction. One or more instances may be used in combination with PartySubIDType(803) = 49 (Reporting entity indicator) or 102 (Data repository) to identify the jurisdiction, countries, regions or provinces for which the party is a reporting entity or data repository when that characteristic is ambiguous or where there are multiple locations. The party sub-ID value is either a jurisdiction acronym, a 2-character ISO 3166 country code, or a hyphenated combination of the country code and the standard post-office abbreviation for province, state or region if necessary. E.g. "US" for United States or "CA-QC" for Quebec Canada.

<b>Code</b>	<b>Name</b>	<b>Description</b>
71	DerivativesDealer	Derivatives dealer. Indicates whether the party is a derivatives dealer or not (Y/N). The Canadian regulator's defined term for identifying the trade counterparty as "a person or company engaging in or holding himself, herself or itself out as engaging in the business of trading in derivatives in Ontario as principal or agent".
72	Domicile	Domicile. Country and optionally province, state or region of domicile. The party sub-ID value is either a 2-character ISO 3166 country code or a hyphenated combination of the country code and the standard post-office abbreviation of province, state or region if necessary. E.g. "US" for United States or "CA-QC" for Quebec Canada.
73	ExemptFromRecognition	Exempt from recognition. Used with party role 21 "Clearing Organization" to indicate exemption (Y/N). Identifies a clearing agency as exempt from oversight in Ontario, i.e. one that 1) only provides limited services and does not present significant risks or 2) is foreign-based, intends to operate in Ontario but is subject to regulatory oversight in another jurisdiction.
74	Payer	Payer. Identifies the party as the payer of a particular payment stream or bullet payment by quoting the stream's StreamDesc(40051) (or LegStreamDesc(40243) or UnderlyingStreamDesc(40542)) or payment's PaymentDesc(43087) in the associated party sub-identifier field.
75	Receiver	Receiver. Identifies the party as the receiver of a particular payment stream or bullet payment by quoting the stream's StreamDesc(40051) (or LegStreamDesc(40243) or UnderlyingStreamDesc(40542)) or payment's PaymentDesc(43087) in the associated party sub-identifier field.
76	SystematicInternaliser	Systematic Internaliser (SI). In the context of ESMA reporting, this is used to indicate whether the specified party is a Systematic Internaliser or not for the security defined in the Instrument component (Y/N).
77	PublishingEntityIndicator	Publishing entity indicator. Indicates the entity obligated or delegated to publish to the market. Set PartySubID(523)=Y if true.
78	FirstName	First name. The first name(s) of a natural person. If multiple names, separate entries by a comma.
79	Surname	Surname. The surname(s) or lastname(s) of a natural person. If multiple names, separate entries by a comma.

Code	Name	Description
80	DateOfBirth	Date of birth. The date of birth of a natural person in the format YYYYMMDD.
81	OrderTransmittingFirm	Order transmitting firm. Identifies whether the party specified in PartyID(448) is the firm that transmitted the order. In the context of RTS 22 Article 4, when "true" the PartySubID(523)=Y shall be set "by the transmitting firm within the transmitting firm's report where conditions for transmission specified in Article 4 were not satisfied."
82	OrderTransmittingFirmBuyer	Order transmitting firm for buyer. Identifies the firm that transmitted the order for the buyer. In the context of ESMA RTS 22, PartySubID(523)=Y is used to indicate the firm identified in PartyID(448) is the firm that transmitted the order for the buyer. "This shall be populated by the receiving firm within the receiving firm's report with the identification code provided by the transmitting firm."
83	OrderTransmitterSeller	Order transmitter for seller. Identifies the order transmitting firm for the seller. In the context of ESMA RTS 22, PartySubID(523)=Y is used to indicate the firm identified in PartyID(448) is the firm that transmitted the order for the seller. "This shall be populated by the receiving firm within the receiving firm's report with the identification code provided by the transmitting firm."
84	LegalEntityIdentifier	Legal Entity Identifier (ISO 17442) LEI
85	SubSectorClassification	Sub-sector classification. Supplemental to party sub-ID type "64" (Company activities) for regulatory reporting. For EU SFTR reporting use the appropriate 4-character code noted in the regulations applying the conditional association rules. See SFTR ITS "Commission Implementing Regulation (EU) 2019/363" Annexes 1 and 2 for values.
86	PartySide	Party side. May be used, when appropriate, to explicitly indicate the transaction side of the party, e.g. Buyer, Seller, Lender, Borrower, Maker, Taker, etc. in the ID. In the context of EU SFTR reporting, use values as required by SFTR, "GIVE" and "TAKE" in the ID, to identify collateral giver and taker.
87	LegalRegistrationCountry	Legal registration country. ISO Country Code where the registered office of the party is located as specified in the LEI reference data.

Used in groups: [NstdPtysSubGrp](#)

**171.2.2954 NetChgPrevDay**

Net change from previous day's closing price vs. last traded price.

Type: [PriceOffset](#)

Used in groups: [MDIncGrp](#)

Used in messages: [MarketDataSnapshotFullRefresh](#)

**171.2.2955 NetGrossInd**

Code to represent whether value is net (inclusive of tax) or gross.

Type: [int](#)

Allowed values in NetGrossIndCodeSet:

Code	Name	Description
1	Net	Net
2	Gross	Gross

Used in groups: [BidCompReqGrp](#), [BidCompRspGrp](#), [SettlObligationInstructions](#), [TrdCapRptAckSideGrp](#), [TrdCapRptSideGrp](#), [TrdMatchSideGrp](#)

**171.2.2956 NetMoney**

Total amount due as the result of the transaction (e.g. for Buy order - principal + commission + fees) reported in currency of execution.

Type: [Amt](#)

Used in components: [SettlTradeDetails](#)

Used in groups: [TrdCapRptAckSideGrp](#), [TrdCapRptSideGrp](#)

Used in messages: [AllocationInstruction](#), [AllocationInstructionAlert](#), [AllocationReport](#), [Confirmation](#), [ExecutionReport](#)

**171.2.2957 NetworkRequestID**

Unique identifier for a network request.

Type: **String**

Used in messages: **NetworkCounterpartySystemStatusRequest**, **NetworkCounterpartySystemStatus-Response**

### **171.2.2958 NetworkRequestType**

Indicates the type and level of details required for a Network Status Request Message

Boolean logic applies EG If you want to subscribe for changes to certain id's then UserRequestType =0 (8+2), Snapshot for certain ID's = 9 (8+1)

Type: **int**

Allowed values in NetworkRequestTypeCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	Snapshot	Snapshot
2	Subscribe	Subscribe
4	StopSubscribing	Stop Subscribing
8	LevelOfDetail	Level of Detail, then NoCompID's becomes required

Used in messages: **NetworkCounterpartySystemStatusRequest**

### **171.2.2959 NetworkResponseID**

Unique identifier for a network response.

Type: **String**

Used in messages: **NetworkCounterpartySystemStatusResponse**

### **171.2.2960 NetworkStatusResponseType**

Indicates the type of Network Response Message.

Type: **int**

Allowed values in NetworkStatusResponseTypeCodeSet:

---

Code	Name	Description
1	Full	Full
2	IncrementalUpdate	Incremental Update

---

Used in messages: [NetworkCounterpartySystemStatusResponse](#)

### 171.2.2961 NewPassword

New Password or passphrase

Type: [String](#)

Used in messages: [Logon](#), [UserRequest](#)

### 171.2.2962 NewsCategory

Category of news message.

Type: [int](#)

Allowed values in NewsCategoryCodeSet:

---

Code	Name	Description
0	CompanyNews	Company News
1	MarketplaceNews	Marketplace News
2	FinancialMarketNews	Financial Market News
3	TechnicalNews	Technical News
99	OtherNews	Other News

---

Used in messages: [News](#)

### 171.2.2963 NewSeqNo

New sequence number

Type: [SeqNum](#)

Used in messages: [SequenceReset](#)

**171.2.2964 NewsID**

Unique identifier for a News message

Type: **String**

Used in messages: **News**

**171.2.2965 NewsRefGrp**

---

<b>Name</b>	<b>Mult.</b>	<b>Type</b>	<b>Description</b>
<b>NoNewsRefIDs</b>	[1..1]	NumInGroup	Number of news item references
<b>NewsRefID</b>	[0..1]	String	Required if NoNewsRefIDs(2144) > 0. News item being referenced.
<b>NewsRefType</b>	[0..1]	CodeSet	Type of reference.

---

Used in messages: **News**

**171.2.2966 NewsRefID**

Reference to another News message identified by NewsID(1474).

Type: **String**

Used in groups: **NewsRefGrp**

**171.2.2967 NewsRefType**

Type of reference to another News(35=B) message item.

Type: **int**

Allowed values in NewsRefTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Replacement	Replacement
1	OtherLanguage	Other language
2	Complimentary	Complimentary

---

Code	Name	Description
3	Withdrawal	Withdrawal. Withdrawal of the referenced news item, e.g. to correct an error.

Used in groups: [NewsRefGrp](#)

#### **171.2.2968 NextAuctionTime**

The time of the next auction.

Type: [UTCTimestamp](#)

Used in messages: [SecurityStatus](#)

#### **171.2.2969 NextExpectedMsgSeqNum**

Next expected MsgSeqNum value to be received.

Type: [SeqNum](#)

Used in messages: [Logon](#)

#### **171.2.2970 NextIndexRollDate**

Next index roll date.

Type: [LocalMktDate](#)

Used in components: [InstrumentExtension](#)

#### **171.2.2971 NoAdditionalTermBondRefs**

Number of bonds in the repeating group.

Type: [NumInGroup](#)

Used in groups: [AdditionalTermBondRefGrp](#)

**171.2.2972 NoAdditionalTerms**

Number of additional terms in the repeating group.

Type: NumInGroup

Used in groups: AdditionalTermGrp

**171.2.2973 NoAffectedMarketSegments**

Number of market segments affected by a mass action.

Type: NumInGroup

Used in groups: AffectedMarketSegmentGrp

**171.2.2974 NoAffectedOrders**

Number of affected orders in the repeating group of order ids.

Type: NumInGroup

Used in groups: AffectedOrdGrp

**171.2.2975 NoAllocCommissions**

Number of commissions in the repeating group.

Type: NumInGroup

Used in groups: AllocCommissionDataGrp

**171.2.2976 NoAllocGroupSubQtyAttributes**

Indicates number of trade attributes used to define a subgroup in an allocation group.

Type: NumInGroup

Used in groups: AllocGroupSubQtyAttributeGrp

**171.2.2977 NoAllocGroupSubQtys**

Indicates number of subgroups in an allocation group.

Type: NumInGroup

Used in groups: AllocGroupSubQtyGrp

**171.2.2978 NoAllocRegulatoryTradeIDs**

Number of regulatory IDs in the repeating group.

Type: NumInGroup

Used in groups: AllocRegulatoryTradeIDGrp

**171.2.2979 NoAllocs**

Number of repeating AllocAccount (79)/AllocPrice (366) entries.

Type: NumInGroup

Used in groups: AllocAckGrp, AllocGrp, PreAllocGrp, PreAllocMlegGrp, TrdAllocGrp

**171.2.2980 NoAltMDSources**

Number of alternative market data sources

Type: NumInGroup

Used in groups: MDRjctGrp

**171.2.2981 NoApplIDs**

Specifies number of application id occurrences

Type: NumInGroup

Used in groups: ApplIDReportGrp, ApplIDRequestAckGrp, ApplIDRequestGrp

**171.2.2982 NoAsgnReqs**

Number of assignment requests.

Type: [NumInGroup](#)

Used in groups: [StrmAsgnReqGrp](#), [StrmAsgnRptGrp](#)

**171.2.2983 NoAssetAttributes**

The number of asset attribute entries in the group.

Type: [NumInGroup](#)

Used in groups: [AssetAttributeGrp](#)

**171.2.2984 NoAttachmentKeywords**

The number of attachment keywords.

Type: [NumInGroup](#)

Used in groups: [AttachmentKeywordGrp](#)

**171.2.2985 NoAttachments**

The number of attached files.

Type: [NumInGroup](#)

Used in groups: [AttachmentGrp](#)

**171.2.2986 NoAuctionTypeRules**

Number of auction order types.

Type: [NumInGroup](#)

Used in groups: [AuctionTypeRuleGrp](#)

**171.2.2987 NoBidComponents**

Indicates the number of list entries.

Type: NumInGroup

Used in groups: BidCompReqGrp, BidCompRspGrp

**171.2.2988 NoBidDescriptors**

Number of BidDescriptor (400) entries.

Type: NumInGroup

Used in groups: BidDescReqGrp

**171.2.2989 NoBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: BusinessCenterGrp

**171.2.2990 NoCapacities**

Number of repeating OrderCapacity entries.

Type: NumInGroup

Used in groups: CpctyConfGrp

**171.2.2991 NoCashSettlDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: CashSettlDateBusinessCenterGrp

**171.2.2992 NoCashSettlDealers**

Number of dealers in the repeating group.

Type: NumInGroup

Used in groups: CashSettlDealerGrp

**171.2.2993 NoCashSettlTerms**

Number of elements in the repeating group.

Type: NumInGroup

Used in groups: CashSettlTermGrp

**171.2.2994 NoClearingAccountTypes**

Number of clearing account type entries.

Type: NumInGroup

Used in groups: ClearingAccountTypeGrp

**171.2.2995 NoClearingInstructions**

Number of clearing instructions

Type: NumInGroup

Used in groups: ClrInstGrp

**171.2.2996 NoClearingPriceParameters**

Number of parameter sets for clearing prices.

Type: NumInGroup

Used in groups: ClearingPriceParametersGrp

**171.2.2997 NoCollateralAmounts**

Number of collateral amount entries.

Type: NumInGroup

Used in groups: CollateralAmountGrp

**171.2.2998 NoCollateralReinvestments**

Number of instances of CollateralReinvestmentType(2844) in the repeating group.

Type: NumInGroup

Used in groups: CollateralReinvestmentGrp

**171.2.2999 NoCollInquiryQualifier**

Number of CollInquiryQualifier entries in a repeating group.

Type: NumInGroup

Used in groups: CollInqQualGrp

**171.2.3000 NoCommissions**

Number of commissions in the repeating group.

Type: NumInGroup

Used in groups: CommissionDataGrp

**171.2.3001 NoCompIDs**

Number of CompID entries in a repeating group.

Type: NumInGroup

Used in groups: CompIDReqGrp, CompIDStatGrp

### **171.2.3002 NoComplexEventAveragingObservations**

The number of averaging observations in the repeating group.

Type: NumInGroup

Used in groups: ComplexEventAveragingObservationGrp

### **171.2.3003 NoComplexEventCreditEventQualifiers**

The number of qualifiers in the repeating group.

Type: NumInGroup

Used in groups: ComplexEventCreditEventQualifierGrp

### **171.2.3004 NoComplexEventCreditEvents**

The number of credit events specified in the repeating group.

Type: NumInGroup

Used in groups: ComplexEventCreditEventGrp

### **171.2.3005 NoComplexEventCreditEventSources**

Number of event sources in the repeating group.

Type: NumInGroup

Used in groups: ComplexEventCreditEventSourceGrp

### **171.2.3006 NoComplexEventDateBusinessCenters**

The number of business centers in the repeating group.

Type: NumInGroup

Used in groups: ComplexEventDateBusinessCenterGrp

**171.2.3007 NoComplexEventDates**

Number of complex event date occurrences for a given complex event.

Type: NumInGroup

Used in groups: ComplexEventDates

**171.2.3008 NoComplexEventPeriodDateTimes**

The number of entries in the date-time repeating group.

Type: NumInGroup

Used in groups: ComplexEventPeriodDateGrp

**171.2.3009 NoComplexEventPeriods**

The number of periods in the repeating group.

Type: NumInGroup

Used in groups: ComplexEventPeriodGrp

**171.2.3010 NoComplexEventRateSources**

The number of rate sources in the repeating group.

Type: NumInGroup

Used in groups: ComplexEventRateSourceGrp

**171.2.3011 NoComplexEvents**

Number of complex event occurrences.

Type: NumInGroup

Used in groups: ComplexEvents

**171.2.3012 NoComplexEventSchedules**

Number of schedules in the repeating group.

Type: NumInGroup

Used in groups: ComplexEventScheduleGrp

**171.2.3013 NoComplexEventTimes**

Number of complex event time occurrences for a given complex event date

The default in case of an absence of time fields is 00:00:00-23:59:59.

Type: NumInGroup

Used in groups: ComplexEventTimes

**171.2.3014 NoContAmts**

The number of Contract Amount details on an Execution Report message

Type: NumInGroup

Used in groups: ContAmtGrp

**171.2.3015 NoContraBrokers**

The number of ContraBroker (375) entries.

Type: NumInGroup

Used in groups: ContraGrp

**171.2.3016 NoContractualDefinitions**

Number of financing definitions in the repeating group.

Type: NumInGroup

Used in groups: FinancingContractualDefinitionGrp

**171.2.3017 NoContractualMatrices**

Number of contractual matrices in the repeating group.

Type: NumInGroup

Used in groups: FinancingContractualMatrixGrp

**171.2.3018 NoCrossLegs**

Number of legs in the side of a cross order.

Type: NumInGroup

Used in groups: SideCrossLegGrp

**171.2.3019 NoDates**

Number of Date fields provided in date range

Type: NumInGroup

Used in groups: TrdCapDtGrp

**171.2.3020 NoDeliverySchedules**

Number of delivery schedules in the repeating group.

Type: NumInGroup

Used in groups: DeliveryScheduleGrp

**171.2.3021 NoDeliveryScheduleSettlDays**

Number of delivery schedules in the repeating group.

Type: NumInGroup

Used in groups: DeliveryScheduleSettlDayGrp

**171.2.3022 NoDeliveryScheduleSettlTimes**

Number of hour ranges in the repeating group.

Type: NumInGroup

Used in groups: DeliveryScheduleSettlTimeGrp

**171.2.3023 NoDeliveryStreamCommoditySources**

Number of commodity sources in the repeating group.

Type: NumInGroup

Used in groups: DeliveryStreamCommoditySourceGrp

**171.2.3024 NoDeliveryStreamCycles**

Number of delivery cycles in the repeating group.

Type: NumInGroup

Used in groups: DeliveryStreamCycleGrp

**171.2.3025 NoDerivativeEvents**

Number of repeating DerivativeEventType entries.

Type: NumInGroup

Used in groups: DerivativeEventsGrp

**171.2.3026 NoDerivativeInstrAttrib**

Number of instrument attributes.

Type: NumInGroup

Used in groups: DerivativeInstrumentAttribute

**171.2.3027 NoDerivativeInstrumentParties**

Number of repeating derivative instrument party entries.

Type: NumInGroup

Used in groups: DerivativeInstrumentParties

**171.2.3028 NoDerivativeInstrumentPartySubIDs**

Number of derivative instrument party sub IDs.

Type: NumInGroup

Used in groups: DerivativeInstrumentPartySubIDsGrp

**171.2.3029 NoDerivativeSecurityAltID**

Number of alternate derivative security IDs.

Type: NumInGroup

Used in groups: DerivativeSecurityAltIDGrp

**171.2.3030 NoDisclosureInstructions**

Number of disclosure instructions.

Type: NumInGroup

Used in groups: DisclosureInstructionGrp

**171.2.3031 NoDistriblnsts**

The number of Distribution Instructions on a Registration Instructions message

Type: NumInGroup

Used in groups: RgstDistInstGrp

### **171.2.3032 NoDividendAccrualPaymentDateBusinessCenters**

Number of entries in the DividendAccrualPaymentDateBusinessCenterGrp.

Type: NumInGroup

Used in groups: DividendAccrualPaymentDateBusinessCenterGrp

### **171.2.3033 NoDividendFXTriggerDateBusinessCenters**

Number of entries in the DividendFXTriggerDateBusinessCenterGrp.

Type: NumInGroup

Used in groups: DividendFXTriggerDateBusinessCenterGrp

### **171.2.3034 NoDividendPeriodBusinessCenters**

Number of entries in the DividendPeriodBusinessCenterGrp.

Type: NumInGroup

Used in groups: DividendPeriodBusinessCenterGrp

### **171.2.3035 NoDividendPeriods**

Number of entries in the DividendPeriodGrp component.

Type: NumInGroup

Used in groups: DividendPeriodGrp

### **171.2.3036 NoDlvyInst**

Number of delivery instruction fields in repeating group.

Note this field was removed in FIX 4.1 and reinstated in FIX 4.4.

Type: NumInGroup

Used in groups: DlvyInstGrp

**171.2.3037 NoEntitlementAttrib**

Number of entitlement attributes.

Type: NumInGroup

Used in groups: EntitlementAttribGrp

**171.2.3038 NoEntitlements**

Number of entitlement values.

Type: NumInGroup

Used in groups: EntitlementGrp

**171.2.3039 NoEntitlementTypes**

Number of entitlement types in the repeating group.

Type: NumInGroup

Used in groups: EntitlementTypeGrp

**171.2.3040 NoEvents**

Number of repeating EventType entries.

Type: NumInGroup

Used in groups: EvntGrp

**171.2.3041 NoExecInstRules**

Number of execution instructions

Type: NumInGroup

Used in groups: ExecInstRules

#### **171.2.3042 NoExecs**

Number of executions or trades.

Type: NumInGroup

Used in groups: ExecAllocGrp, ExecCollGrp, ExecutionAggregationGrp

#### **171.2.3043 NoExpiration**

Number of Expiration Qty entries

Type: NumInGroup

Used in groups: ExpirationQty

#### **171.2.3044 NoExtraordinaryEvents**

Number of extraordinary events in the repeating group.

Type: NumInGroup

Used in groups: ExtraordinaryEventGrp

#### **171.2.3045 NoFills**

Type: NumInGroup

Used in groups: FillsGrp

#### **171.2.3046 NoFinancingTermSupplements**

Number of financing terms supplements in the repeating group.

Type: NumInGroup

Used in groups: FinancingTermSupplementGrp

#### **171.2.3047 NoFlexProductEligibilities**

Number of eligibility indicators for the creation of flexible securities.

Type: NumInGroup

Used in groups: FlexProductEligibilityGrp

**171.2.3048 NoFundingSources**

Number of instances of FundingSource(2846) in the repeating group.

Type: NumInGroup

Used in groups: FundingSourceGrp

**171.2.3049 NoHops**

Number of HopCompID entries in repeating group.

Type: NumInGroup

Used in groups: HopGrp

**171.2.3050 NoIndexRollMonths**

Number of instances of the index roll month.

Type: NumInGroup

Used in groups: IndexRollMonthGrp

**171.2.3051 NoInstrAttrib**

Number of repeating InstrAttribType entries.

Type: NumInGroup

Used in groups: AttribGrp

**171.2.3052 NoInstrmtMatchSides**

Number of instrument match sides.

Type: NumInGroup

Used in groups: InstrmtMatchSideGrp

### **171.2.3053 NoInstrumentParties**

Identifies the number of parties identified with an instrument

Type: **NumInGroup**

Used in groups: **InstrumentParties**

### **171.2.3054 NoInstrumentPartySubIDs**

Number of InstrumentPartySubID (1053) and InstrumentPartySubIDType (1054) entries

Type: **NumInGroup**

Used in groups: **InstrumentPtysSubGrp**

### **171.2.3055 NoInstrumentScopes**

Number of instrument scopes.

Type: **NumInGroup**

Used in groups: **InstrumentScopeGrp**

### **171.2.3056 NoInstrumentScopeSecurityAltID**

Number of alternate security identifier for the specified InstrumentScopeSecurityID(1538).

Type: **NumInGroup**

Used in groups: **InstrumentScopeSecurityAltIDGrp**

### **171.2.3057 NoIOIQualifiers**

Number of repeating groups of IOIQualifiers (04).

Type: **NumInGroup**

Used in groups: **IOIQualGrp**

**171.2.3058 NoLegAdditionalTermBondRefs**

Number of bonds in the repeating group.

Type: NumInGroup

Used in groups: LegAdditionalTermBondRefGrp

**171.2.3059 NoLegAdditionalTerms**

Number of additional terms in the repeating group.

Type: NumInGroup

Used in groups: LegAdditionalTermGrp

**171.2.3060 NoLegAllocs**

Number of Allocations for the leg

Type: NumInGroup

Used in groups: LegPreAllocGrp

**171.2.3061 NoLegAssetAttributes**

Number of asset attribute entries in the group.

Type: NumInGroup

Used in groups: LegAssetAttributeGrp

**171.2.3062 NoLegBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: LegBusinessCenterGrp

**171.2.3063 NoLegCashSettlDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: LegCashSettlDateBusinessCenterGrp

**171.2.3064 NoLegCashSettlDealers**

Number of dealers in the repeating group.

Type: NumInGroup

Used in groups: LegCashSettlDealerGrp

**171.2.3065 NoLegCashSettlTerms**

Number of elements in the repeating group.

Type: NumInGroup

Used in groups: LegCashSettlTermGrp

**171.2.3066 NoLegComplexEventAveragingObservations**

The number of averaging observations in the repeating group.

Type: NumInGroup

Used in groups: LegComplexEventAveragingObservationGrp

**171.2.3067 NoLegComplexEventCreditEventQualifiers**

Number of qualifiers in the repeating group.

Type: NumInGroup

Used in groups: LegComplexEventCreditEventQualifierGrp

**171.2.3068 NoLegComplexEventCreditEvents**

The number of credit events specified in the repeating group.

Type: NumInGroup

Used in groups: LegComplexEventCreditEventGrp

**171.2.3069 NoLegComplexEventCreditEventSources**

Number of event sources in the repeating group.

Type: NumInGroup

Used in groups: LegComplexEventCreditEventSourceGrp

**171.2.3070 NoLegComplexEventDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: LegComplexEventDateBusinessCenterGrp

**171.2.3071 NoLegComplexEventDates**

Number of complex event dates in the repeating group.

Type: NumInGroup

Used in groups: LegComplexEventDates

**171.2.3072 NoLegComplexEventPeriodDateTimes**

Number of entries in the date-time repeating group.

Type: NumInGroup

Used in groups: LegComplexEventPeriodDateGrp

**171.2.3073 NoLegComplexEventPeriods**

Number of periods in the repeating group.

Type: NumInGroup

Used in groups: LegComplexEventPeriodGrp

**171.2.3074 NoLegComplexEventRateSources**

Number of rate sources in the repeating group.

Type: NumInGroup

Used in groups: LegComplexEventRateSourceGrp

**171.2.3075 NoLegComplexEvents**

Number of complex events in the repeating group.

Type: NumInGroup

Used in groups: LegComplexEvents

**171.2.3076 NoLegComplexEventSchedules**

Number of schedules in the repeating group.

Type: NumInGroup

Used in groups: LegComplexEventScheduleGrp

**171.2.3077 NoLegComplexEventTimes**

Number of complex event times in the repeating group.

Type: NumInGroup

Used in groups: LegComplexEventTimes

**171.2.3078 NoLegContractualDefinitions**

Number of financing definitions in the repeating group.

Type: NumInGroup

Used in groups: LegFinancingContractualDefinitionsGrp

**171.2.3079 NoLegContractualMatrices**

Number of contractual matrices in the repeating group.

Type: NumInGroup

Used in groups: LegFinancingContractualMatrixGrp

**171.2.3080 NoLegDeliverySchedules**

Number of delivery schedules in the repeating group.

Type: NumInGroup

Used in groups: LegDeliveryScheduleGrp

**171.2.3081 NoLegDeliveryScheduleSettlDays**

Number of delivery schedules in the repeating group.

Type: NumInGroup

Used in groups: LegDeliveryScheduleSettlDayGrp

**171.2.3082 NoLegDeliveryScheduleSettlTimes**

Number of hour ranges in the repeating group.

Type: NumInGroup

Used in groups: LegDeliveryScheduleSettlTimeGrp

**171.2.3083 NoLegDeliveryStreamCommoditySources**

Number of commodity sources in the repeating group.

Type: NumInGroup

Used in groups: LegDeliveryStreamCommoditySourceGrp

**171.2.3084 NoLegDeliveryStreamCycles**

Number of commodity sources in the repeating group.

Type: NumInGroup

Used in groups: LegDeliveryStreamCycleGrp

**171.2.3085 NoLegDividendAccrualPaymentDateBusinessCenters**

Number of entries in the LegDividendAccrualPaymentDateBusinessCenterGrp.

Type: NumInGroup

Used in groups: LegDividendAccrualPaymentDateBusinessCenterGrp

**171.2.3086 NoLegDividendFXTriggerDateBusinessCenters**

Number of entries in the LegDividendFXTriggerDateBusinessCenterGrp.

Type: NumInGroup

Used in groups: LegDividendFXTriggerDateBusinessCenterGrp

**171.2.3087 NoLegDividendPeriodBusinessCenters**

The number of entries in the LegDividendPeriodBusinessCentersGrp component.

Type: NumInGroup

Used in groups: LegDividendPeriodBusinessCenterGrp

**171.2.3088 NoLegDividendPeriods**

Number of entries in the LegDividendPeriodGrp component.

Type: NumInGroup

Used in groups: LegDividendPeriodGrp

**171.2.3089 NoLegEvents**

Number of events in the repeating group

Type: NumInGroup

Used in groups: LegEvntGrp

**171.2.3090 NoLegExecs**

Number of instrument leg executions.

Type: NumInGroup

Used in groups: TrdInstrmtLegExecGrp

**171.2.3091 NoLegExtraordinaryEvents**

Number of extraordinary events in the repeating group.

Type: NumInGroup

Used in groups: LegExtraordinaryEventGrp

**171.2.3092 NoLegFinancingTermSupplements**

Number of financing terms supplements in the repeating group.

Type: NumInGroup

Used in groups: LegFinancingTermSupplementGrp

**171.2.3093 NoLegInstrumentParties**

Number of parties in the repeating group.

Type: NumInGroup

Used in groups: LegInstrumentParties

**171.2.3094 NoLegInstrumentPartySubIDs**

Number of parties sub-IDs in the repeating group.

Type: NumInGroup

Used in groups: LegInstrumentPtysSubGrp

**171.2.3095 NoLegMarketDisruptionEvents**

Number of disruption events in the repeating group.

Type: NumInGroup

Used in groups: LegMarketDisruptionEventGrp

**171.2.3096 NoLegMarketDisruptionFallbackReferencePrices**

Number of fallback reference securities in the repeating group.

Type: NumInGroup

Used in groups: LegMarketDisruptionFallbackReferencePriceGrp

**171.2.3097 NoLegMarketDisruptionFallbacks**

Number of fallbacks in the repeating group.

Type: NumInGroup

Used in groups: LegMarketDisruptionFallbackGrp

**171.2.3098 NoLegNonDeliverableFixingDates**

Number of fixing dates in the repeating group.

Type: NumInGroup

Used in groups: LegPaymentStreamNonDeliverableFixingDateGrp

**171.2.3099 NoLegOptionExerciseBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: LegOptionExerciseBusinessCenterGrp

**171.2.3100 NoLegOptionExerciseDates**

Number of dates in the repeating group.

Type: NumInGroup

Used in groups: LegOptionExerciseDateGrp

**171.2.3101 NoLegOptionExerciseExpirationDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: LegOptionExerciseExpirationDateBusinessCenterGrp

**171.2.3102 NoLegOptionExerciseExpirationDates**

Number of fixed exercise expiration dates in the repeating group.

Type: NumInGroup

Used in groups: LegOptionExerciseExpirationDateGrp

**171.2.3103 NoLegPaymentScheduleFixingDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: LegPaymentScheduleFixingDateBusinessCenterGrp

**171.2.3104 NoLegPaymentScheduleFixingDays**

Number of fixing days in the repeating group.

Type: NumInGroup

Used in groups: LegPaymentScheduleFixingDayGrp

**171.2.3105 NoLegPaymentScheduleInterimExchangeDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: LegPaymentScheduleInterimExchangeDateBusinessCenterGrp

**171.2.3106 NoLegPaymentScheduleRateSources**

Number of rate sources in the repeating group

Type: NumInGroup

Used in groups: LegPaymentScheduleRateSourceGrp

**171.2.3107 NoLegPaymentSchedules**

Number of swap schedules in the repeating group

Type: NumInGroup

Used in groups: LegPaymentScheduleGrp

**171.2.3108 NoLegPaymentStreamCompoundingDates**

Number of dates in the repeating group.

Type: NumInGroup

Used in groups: LegPaymentStreamCompoundingDateGrp

**171.2.3109 NoLegPaymentStreamCompoundingDatesBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: LegPaymentStreamCompoundingDatesBusinessCenterGrp

**171.2.3110 NoLegPaymentStreamFixingDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: LegPaymentStreamFixingDateBusinessCenterGrp

**171.2.3111 NoLegPaymentStreamFixingDates**

Number of fixing dates in the repeating group.

Type: NumInGroup

Used in groups: LegPaymentStreamFixingDateGrp

**171.2.3112 NoLegPaymentStreamFormulas**

Number of formulas in the repeating group.

Type: NumInGroup

Used in groups: LegPaymentStreamFormulaMathGrp

**171.2.3113 NoLegPaymentStreamInitialFixingDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: LegPaymentStreamInitialFixingDateBusinessCenterGrp

**171.2.3114 NoLegPaymentStreamNonDeliverableFixingDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: LegPaymentStreamNonDeliverableFixingDatesBusinessCenterGrp

**171.2.3115 NoLegPaymentStreamPaymentDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: LegPaymentStreamPaymentDateBusinessCenterGrp

**171.2.3116 NoLegPaymentStreamPaymentDates**

Number of payment dates in the repeating group.

Type: NumInGroup

Used in groups: LegPaymentStreamPaymentDateGrp

**171.2.3117 NoLegPaymentStreamPricingBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: LegPaymentStreamPricingBusinessCenterGrp

**171.2.3118 NoLegPaymentStreamPricingDates**

Number of pricing dates in the repeating group.

Type: NumInGroup

Used in groups: LegPaymentStreamPricingDateGrp

**171.2.3119 NoLegPaymentStreamPricingDays**

Number of pricing days in the repeating group.

Type: NumInGroup

Used in groups: LegPaymentStreamPricingDayGrp

**171.2.3120 NoLegPaymentStreamResetDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: LegPaymentStreamResetDateBusinessCenterGrp

**171.2.3121 NoLegPaymentStubEndDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: LegPaymentStubEndDateBusinessCenterGrp

**171.2.3122 NoLegPaymentStubs**

Number of stubs in the repeating group

Type: NumInGroup

Used in groups: LegPaymentStubGrp

**171.2.3123 NoLegPaymentStubStartDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: LegPaymentStubStartDateBusinessCenterGrp

**171.2.3124 NoLegPhysicalSettlDeliverableObligations**

Number of entries in the repeating group.

Type: NumInGroup

Used in groups: LegPhysicalSettlDeliverableObligationGrp

**171.2.3125 NoLegPhysicalSettlTerms**

Number of entries in the repeating group.

Type: NumInGroup

Used in groups: LegPhysicalSettlTermGrp

**171.2.3126 NoLegPosAmt**

Number of TrdInstrmtLegPosAmt values.

Type: NumInGroup

Used in groups: LegPositionAmountData

**171.2.3127 NoLegPricingDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: LegPricingDateBusinessCenterGrp

**171.2.3128 NoLegProtectionTermEventNewsSources**

Number of event sources in the repeating group.

Type: NumInGroup

Used in groups: LegProtectionTermEventNewsSourceGrp

**171.2.3129 NoLegProtectionTermEventQualifiers**

Number of qualifiers in the repeating group.

Type: NumInGroup

Used in groups: LegProtectionTermEventQualifierGrp

**171.2.3130 NoLegProtectionTermEvents**

Number of protection term events in the repeating group.

Type: NumInGroup

Used in groups: LegProtectionTermEventGrp

**171.2.3131 NoLegProtectionTermObligations**

Number of obligations in the repeating group.

Type: NumInGroup

Used in groups: LegProtectionTermObligationGrp

**171.2.3132 NoLegProtectionTerms**

Number of protection terms in the repeating group.

Type: NumInGroup

Used in groups: LegProtectionTermGrp

**171.2.3133 NoLegProvisionCashSettlPaymentDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: LegProvisionCashSettlPaymentDateBusinessCenterGrp

**171.2.3134 NoLegProvisionCashSettlPaymentDates**

Number of provision cash settlement payment dates in the repeating group.

Type: NumInGroup

Used in groups: LegProvisionCashSettlPaymentFixedDateGrp

**171.2.3135 NoLegProvisionCashSettlValueDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: LegProvisionCashSettlValueDateBusinessCenterGrp

**171.2.3136 NoLegProvisionDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: LegProvisionDateBusinessCenterGrp

**171.2.3137 NoLegProvisionOptionExerciseBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: LegProvisionOptionExerciseBusinessCenterGrp

**171.2.3138 NoLegProvisionOptionExerciseFixedDates**

Number of provision option exercise fixed dates in the repeating group.

Type: NumInGroup

Used in groups: LegProvisionOptionExerciseFixedDateGrp

**171.2.3139 NoLegProvisionOptionExpirationDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: LegProvisionOptionExpirationDateBusinessCenterGrp

**171.2.3140 NoLegProvisionOptionRelevantUnderlyingDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: LegProvisionOptionRelevantUnderlyingDateBusinessCenterGrp

**171.2.3141 NoLegProvisionPartyIDs**

Number of parties identified in the contract provision.

Type: NumInGroup

Used in groups: LegProvisionParties

**171.2.3142 NoLegProvisionPartySubIDs**

Number of sub-party IDs to be reported for the party.

Type: NumInGroup

Used in groups: LegProvisionPtysSubGrp

### **171.2.3143 NoLegProvisions**

Number of provisions in the repeating group.

Type: NumInGroup

Used in groups: LegProvisionGrp

### **171.2.3144 NoLegReturnRateDates**

Number of iterations in the return rate date repeating group.

Type: NumInGroup

Used in groups: LegReturnRateDateGrp

### **171.2.3145 NoLegReturnRateFXConversions**

Number of iterations in the return rate FX conversion repeating group.

Type: NumInGroup

Used in groups: LegReturnRateFXConversionGrp

### **171.2.3146 NoLegReturnRateInformationSources**

Number of iterations in the return rate information source repeating group.

Type: NumInGroup

Used in groups: LegReturnRateInformationSourceGrp

### **171.2.3147 NoLegReturnRatePrices**

Number of iterations in the return rate price repeating group.

Type: NumInGroup

Used in groups: LegReturnRatePriceGrp

### **171.2.3148 NoLegReturnRates**

Number of iterations in the return rate repeating group.

Type: [NumInGroup](#)

Used in groups: [LegReturnRateGrp](#)

### **171.2.3149 NoLegReturnRateValuationDateBusinessCenters**

Number of iterations in the return rate valuation date business center repeating group.

Type: [NumInGroup](#)

Used in groups: [LegReturnRateValuationDateBusinessCenterGrp](#)

### **171.2.3150 NoLegReturnRateValuationDates**

Number of iterations in the return rate valuation date repeating group.

Type: [NumInGroup](#)

Used in groups: [LegReturnRateValuationDateGrp](#)

### **171.2.3151 NoLegs**

Number of InstrumentLeg repeating group instances.

Type: [NumInGroup](#)

Used in groups: [InstrmtLegExecGrp](#), [InstrmtLegGrp](#), [InstrmtLegIOIGrp](#), [InstrmtLegSecListGrp](#), [LegOrd-Grp](#), [LegQuotGrp](#), [LegQuotStatGrp](#), [QuotReqLegsGrp](#), [SecLstUpdRelSymsLegGrp](#), [TrdInstrmtLegGrp](#)

### **171.2.3152 NoLegSecondaryAssetClasses**

Number of secondary asset classes in the repeating group.

Type: [NumInGroup](#)

Used in groups: [LegSecondaryAssetGrp](#)

### **171.2.3153 NoLegSecurityAltID**

Multileg instrument's individual security's NoSecurityAltID.

See NoSecurityAltID (454) field for description

Type: NumInGroup

Used in groups: LegSecAltIDGrp

### **171.2.3154 NoLegSettlMethodElectionDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: LegSettlMethodElectionDateBusinessCenterGrp

### **171.2.3155 NoLegSettlRateFallbacks**

Number of settlement rate fallbacks in the repeating group

Type: NumInGroup

Used in groups: LegSettlRateDisruptionFallbackGrp

### **171.2.3156 NoLegStipulations**

Number of leg stipulation entries

Type: NumInGroup

Used in groups: LegStipulations

### **171.2.3157 NoLegStreamAssetAttributes**

Number of asset attribute entries in the group.

Type: NumInGroup

Used in groups: LegStreamAssetAttributeGrp

**171.2.3158 NoLegStreamCalculationPeriodBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: LegStreamCalculationPeriodBusinessCenterGrp

**171.2.3159 NoLegStreamCalculationPeriodDates**

Number of calculation period dates in the repeating group.

Type: NumInGroup

Used in groups: LegStreamCalculationPeriodDateGrp

**171.2.3160 NoLegStreamCommodityAltIDs**

Number of alternate security identifiers.

Type: NumInGroup

Used in groups: LegStreamCommodityAltIDGrp

**171.2.3161 NoLegStreamCommodityDataSources**

Number of data sources in the repeating group. The order of entry determines priority – first is the main source, second is fallback, third is second fallback.

Type: NumInGroup

Used in groups: LegStreamCommodityDataSourceGrp

**171.2.3162 NoLegStreamCommoditySettlBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: LegStreamCommoditySettlBusinessCenterGrp

**171.2.3163 NoLegStreamCommoditySettlDays**

Number of days in the repeating group.

Type: NumInGroup

Used in groups: LegStreamCommoditySettlDayGrp

**171.2.3164 NoLegStreamCommoditySettlPeriods**

Number of commodity settlement periods in the repeating group.

Type: NumInGroup

Used in groups: LegStreamCommoditySettlPeriodGrp

**171.2.3165 NoLegStreamCommoditySettlTimes**

Number of hour ranges in the repeating group.

Type: NumInGroup

Used in groups: LegStreamCommoditySettlTimeGrp

**171.2.3166 NoLegStreamEffectiveDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: LegStreamEffectiveDateBusinessCenterGrp

**171.2.3167 NoLegStreamFirstPeriodStartDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: LegStreamFirstPeriodStartDateBusinessCenterGrp

**171.2.3168 NoLegStreams**

Number of swap streams in the repeating group.

Type: NumInGroup

Used in groups: LegStreamGrp

**171.2.3169 NoLegStreamTerminationDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: LegStreamTerminationDateBusinessCenterGrp

**171.2.3170 NoLimitAmts**

The number of limit amount entries.

Type: NumInGroup

Used in groups: LimitAmts

**171.2.3171 NoLinesOfText**

Identifies number of lines of text body

Type: NumInGroup

Used in groups: LinesOfTextGrp

**171.2.3172 NoLotTypeRules**

Number of Lot Type Rules

Type: NumInGroup

Used in groups: LotTypeRules

**171.2.3173 NoMandatoryClearingJurisdictions**

Number of mandatory clearing jurisdictions.

Type: NumInGroup

Used in groups: MandatoryClearingJurisdictionGrp

**171.2.3174 NoMarginAmt**

Number of margin requirement amounts.

Type: NumInGroup

Used in groups: MarginAmount

**171.2.3175 NoMarginReqmtInqQualifier**

Number of margin requirement inquiry qualifiers.

Type: NumInGroup

Used in groups: MarginReqmtInqQualGrp

**171.2.3176 NoMarketDisruptionEvents**

Number of disruption events in the repeating group.

Type: NumInGroup

Used in groups: MarketDisruptionEventGrp

**171.2.3177 NoMarketDisruptionFallbackReferencePrices**

Number of fallback reference securities in the repeating group.

Type: NumInGroup

Used in groups: MarketDisruptionFallbackReferencePriceGrp

**171.2.3178 NoMarketDisruptionFallbacks**

Number of fallbacks in the repeating group.

Type: NumInGroup

Used in groups: MarketDisruptionFallbackGrp

**171.2.3179 NoMarketSegments**

Number of Market Segments on which a security may trade.

Type: NumInGroup

Used in groups: MarketSegmentGrp, MarketSegmentScopeGrp

**171.2.3180 NoMatchExceptions**

Number of match exceptions in the repeating group.

Type: NumInGroup

Used in groups: MatchExceptionGrp

**171.2.3181 NoMatchingDataPoints**

Number of matching data points in the repeating group.

Type: NumInGroup

Used in groups: MatchingDataPointGrp

**171.2.3182 NoMatchInst**

Number of Instructions in the <MatchingInstructions> repeating group.

Type: NumInGroup

Used in groups: MatchingInstructions

### **171.2.3183 NoMatchRules**

Number of Match Rules

Type: NumInGroup

Used in groups: MatchRules

### **171.2.3184 NoMaturityRules**

Number of maturity rules in MarurityRules component block

Type: NumInGroup

Used in groups: MaturityRules

### **171.2.3185 NoMDEntries**

Number of entries in Market Data message.

Type: NumInGroup

Used in groups: MDFullGrp, MDIncGrp

### **171.2.3186 NoMDEntryTypes**

Number of MDEntryType (269) fields requested.

Type: NumInGroup

Used in groups: MDReqGrp

### **171.2.3187 NoMDFeedTypes**

The number of feed types and corresponding book depths associated with a security

Type: NumInGroup

Used in groups: MarketDataFeedTypes

**171.2.3188 NoMDStatistics**

Number of market data statistics.

Type: NumInGroup

Used in groups: MDStatisticReqGrp, MDStatisticRptGrp

**171.2.3189 NoMiscFees**

Number of repeating groups of miscellaneous fees

Type: NumInGroup

Used in groups: MiscFeesGrp

**171.2.3190 NoMiscFeeSubTypes**

Specifies the number of miscellaneous fee sub-types.

Type: NumInGroup

Used in groups: MiscFeesSubGrp

**171.2.3191 NoMsgTypes**

Number of MsgTypes (35) in repeating group.

Type: NumInGroup

Used in groups: MsgTypeGrp

**171.2.3192 NonCashDividendTreatment**

Defines the treatment of non-cash dividends.

Type: int

Allowed values in NonCashDividendTreatmentCodeSet:

Code	Name	Description
0	PotentialAdjustment	Potential adjustment event. The treatment of any non-cash dividend shall be determined in accordance with the potential adjustment event provisions.
1	CashEquivalent	Cash equivalent. Any non-cash dividend shall be treated as a declared cash equivalent dividend.

Used in components: [DividendConditions](#)

### 171.2.3193 NonDeliverableFixingDate

Non-deliverable fixing date unadjusted or adjusted depending on NonDeliverableFixingDateType(40827).

Type: [LocalMktDate](#)

Used in groups: [PaymentStreamNonDeliverableFixingDateGrp](#)

### 171.2.3194 NonDeliverableFixingDateType

Specifies the type of date (e.g. adjusted for holidays).

Type: [int](#)

Allowed values in NonDeliverableFixingDateTypeCodeSet:

Code	Name	Description
0	Unadjusted	Unadjusted
1	Adjusted	Adjusted

Used in groups: [PaymentStreamNonDeliverableFixingDateGrp](#)

### 171.2.3195 NoNested2PartyIDs

Number of Nested2PartyID (757), Nested2PartyIDSource (758), and Nested2PartyRole (759) entries

Type: [NumInGroup](#)

Used in groups: [NestedParties2](#)

**171.2.3196 NoNested2PartySubIDs**

Number of Nested2PartySubID (760) and Nested2PartySubIDType (807) entries. Second instance of <NestedParties>.

Type: NumInGroup

Used in groups: NstdPtys2SubGrp

**171.2.3197 NoNested3PartyIDs**

Number of Nested3PartyID (949), Nested3PartyIDSource (950), and Nested3PartyRole (95) entries

Type: NumInGroup

Used in groups: NestedParties3

**171.2.3198 NoNested3PartySubIDs**

Number of Nested3PartySubIDs (953) entries

Type: NumInGroup

Used in groups: NstdPtys3SubGrp

**171.2.3199 NoNested4PartyIDs**

Refer to definition of NoPartyIDs(453)

Type: NumInGroup

Used in groups: NestedParties4

**171.2.3200 NoNested4PartySubIDs**

Refer to definition of NoPartySubIDs(802)

Type: NumInGroup

Used in groups: NstdPtys4SubGrp

**171.2.3201 NoNestedInstrAttrib**

Type: NumInGroup

Used in groups: NestedInstrumentAttribute

**171.2.3202 NoNestedPartyIDs**

Number of NestedPartyID (524), NestedPartyIDSource (525), and NestedPartyRole (538) entries

Type: NumInGroup

Used in groups: NestedParties

**171.2.3203 NoNestedPartySubIDs**

Number of NestedPartySubID (545) and NestedPartySubIDType (805) entries

Type: NumInGroup

Used in groups: NstdPtysSubGrp

**171.2.3204 NoNewsRefIDs**

Number of News reference items

Type: NumInGroup

Used in groups: NewsRefGrp

**171.2.3205 NoNonDeliverableFixingDates**

Number of Fixing dates in the repeating group

Type: NumInGroup

Used in groups: PaymentStreamNonDeliverableFixingDateGrp

**171.2.3206 NoNotAffectedMarketSegments**

Number of market segments left unaffected by a mass action.

Type: NumInGroup

Used in groups: NotAffectedMarketSegmentGrp

**171.2.3207 NoNotAffectedOrders**

Number of not affected orders in the repeating group of order ids.

Type: NumInGroup

Used in groups: NotAffectedOrdGrp

**171.2.3208 NoOfLegUnderlyings**

Number of Underlyings, Identifies the Underlying of the Leg

Type: NumInGroup

Used in groups: TradeCapLegUnderlyingsGrp

**171.2.3209 NoOfSecSizes**

The number of secondary sizes specifies in this entry

Type: NumInGroup

Used in groups: SecSizesGrp

**171.2.3210 NoOptionExerciseBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: OptionExerciseBusinessCenterGrp

**171.2.3211 NoOptionExerciseDates**

Number of dates in the repeating group.

Type: NumInGroup

Used in groups: OptionExerciseDateGrp

**171.2.3212 NoOptionExerciseExpirationDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: OptionExerciseExpirationDateBusinessCenterGrp

**171.2.3213 NoOptionExerciseExpirationDates**

Number of fixed exercise expiration dates in the repeating group.

Type: NumInGroup

Used in groups: OptionExerciseExpirationDateGrp

**171.2.3214 NoOrderAttributes**

Number of order attribute entries.

Type: NumInGroup

Used in groups: OrderAttributeGrp

**171.2.3215 NoOrderEntries**

Number of order entries.

Type: NumInGroup

Used in groups: OrderEntryAckGrp, OrderEntryGrp

**171.2.3216 NoOrderEvents**

Number of order events.

Type: NumInGroup

Used in groups: OrderEventGrp

### **171.2.3217 NoOrders**

Indicates number of orders to be combined for average pricing and allocation.

Type: NumInGroup

Used in groups: ListOrdGrp, OrdAllocGrp, OrdListStatGrp, OrderAggregationGrp, RelatedOrderGrp

### **171.2.3218 NoOrdTypeRules**

Number of order types

Type: NumInGroup

Used in groups: OrdTypeRules

### **171.2.3219 NoPartyDetailAltID**

Number of party alternative identifiers.

Type: NumInGroup

Used in groups: PartyDetailAltIDGrp

### **171.2.3220 NoPartyDetailAltSubIDs**

Number of party detail alternate sub-identifiers.

Type: NumInGroup

Used in groups: PartyDetailAltSubGrp

### **171.2.3221 NoPartyDetails**

Number of party details.

Type: NumInGroup

Used in groups: PartyDetailGrp

### **171.2.3222 NoPartyDetailSubIDs**

Number of party detail sub-identifiers.

Type: NumInGroup

Used in groups: PartyDetailSubGrp

### **171.2.3223 NoPartyEntitlements**

Number of party entitlement values.

Type: NumInGroup

Used in groups: PartyEntitlementAckGrp, PartyEntitlementGrp, PartyEntitlementUpdateGrp

### **171.2.3224 NoPartyIDs**

Number of PartyID (448), PartyIDSource (447), and PartyRole (452) entries

Type: NumInGroup

Used in groups: Parties

### **171.2.3225 NoPartyRelationships**

Number of party relationships.

Type: NumInGroup

Used in groups: PartyRelationshipGrp

### **171.2.3226 NoPartyRiskLimits**

Number of party risk limits.

Type: NumInGroup

Used in groups: PartyRiskLimitsAckGrp, PartyRiskLimitsGrp, PartyRiskLimitsUpdateGrp

**171.2.3227 NoPartySubIDs**

Number of PartySubID (523)and PartySubIDType (803) entries

Type: NumInGroup

Used in groups: PtysSubGrp

**171.2.3228 NoPartyUpdates**

Number of party updates.

Type: NumInGroup

Used in groups: PartyDetailAckGrp, PartyDetailsUpdateGrp

**171.2.3229 NoPayCollects**

Number of pay collect entries.

Type: NumInGroup

Used in groups: PayCollectGrp

**171.2.3230 NoPaymentBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: PaymentBusinessCenterGrp

**171.2.3231 NoPayments**

Number of additional settlement or bullet payments.

Type: NumInGroup

Used in groups: PaymentGrp

**171.2.3232 NoPaymentScheduleFixingDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: PaymentScheduleFixingDateBusinessCenterGrp

**171.2.3233 NoPaymentScheduleFixingDays**

Number of fixing days in the repeating group.

Type: NumInGroup

Used in groups: PaymentScheduleFixingDayGrp

**171.2.3234 NoPaymentScheduleInterimExchangeDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: PaymentScheduleInterimExchangeDateBusinessCenterGrp

**171.2.3235 NoPaymentScheduleRateSources**

Number of swap schedule rate sources.

Type: NumInGroup

Used in groups: PaymentScheduleRateSourceGrp

**171.2.3236 NoPaymentSchedules**

Number of swap schedules in the repeating group

Type: NumInGroup

Used in groups: PaymentScheduleGrp

**171.2.3237 NoPaymentSettlPartyIDs**

Number of parties identified in the additional settlement or bullet payment.

Type: NumInGroup

Used in groups: PaymentSettlParties

**171.2.3238 NoPaymentSettlPartySubIDs**

Number of sub-party IDs to be reported for the party.

Type: NumInGroup

Used in groups: PaymentSettlPtysSubGrp

**171.2.3239 NoPaymentSettls**

Number of additional settlements or bullet payments.

Type: NumInGroup

Used in groups: PaymentSettlGrp

**171.2.3240 NoPaymentStreamCompoundingDates**

Number of dates in the repeating group.

Type: NumInGroup

Used in groups: PaymentStreamCompoundingDateGrp

**171.2.3241 NoPaymentStreamCompoundingDatesBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: PaymentStreamCompoundingDatesBusinessCenterGrp

**171.2.3242 NoPaymentStreamFixingDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: PaymentStreamFixingDateBusinessCenterGrp

**171.2.3243 NoPaymentStreamFixingDates**

Number of fixing dates in the repeating group.

Type: NumInGroup

Used in groups: PaymentStreamFixingDateGrp

**171.2.3244 NoPaymentStreamFormulas**

Number of formulas in the repeating group.

Type: NumInGroup

Used in groups: PaymentStreamFormulaMathGrp

**171.2.3245 NoPaymentStreamInitialFixingDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: PaymentStreamInitialFixingDateBusinessCenterGrp

**171.2.3246 NoPaymentStreamNonDeliverableFixingDatesBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: PaymentStreamNonDeliverableFixingDatesBusinessCenterGrp

**171.2.3247 NoPaymentStreamPaymentDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: PaymentStreamPaymentDateBusinessCenterGrp

**171.2.3248 NoPaymentStreamPaymentDates**

Number of payment dates in the repeating group.

Type: NumInGroup

Used in groups: PaymentStreamPaymentDateGrp

**171.2.3249 NoPaymentStreamPricingBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: PaymentStreamPricingBusinessCenterGrp

**171.2.3250 NoPaymentStreamPricingDates**

Number of pricing dates in the repeating group.

Type: NumInGroup

Used in groups: PaymentStreamPricingDateGrp

**171.2.3251 NoPaymentStreamPricingDays**

Number of pricing days in the repeating group.

Type: NumInGroup

Used in groups: PaymentStreamPricingDayGrp

**171.2.3252 NoPaymentStreamResetDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: PaymentStreamResetDateBusinessCenterGrp

**171.2.3253 NoPaymentStubEndDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: PaymentStubEndDateBusinessCenterGrp

**171.2.3254 NoPaymentStubs**

Number of stubs in the repeating group

Type: NumInGroup

Used in groups: PaymentStubGrp

**171.2.3255 NoPaymentStubStartDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: PaymentStubStartDateBusinessCenterGrp

**171.2.3256 NoPhysicalSettlDeliverableObligations**

Number of entries in the repeating group.

Type: NumInGroup

Used in groups: PhysicalSettlDeliverableObligationGrp

**171.2.3257 NoPhysicalSettlTerms**

Number of entries in the repeating group.

Type: NumInGroup

Used in groups: PhysicalSettlTermGrp

**171.2.3258 NoPosAmt**

Number of position amount entries.

Type: NumInGroup

Used in groups: PositionAmountData

**171.2.3259 NoPositions**

Number of position entries.

Type: NumInGroup

Used in groups: PositionQty, TradePositionQty

**171.2.3260 NoPriceMovements**

Number of price movement entries.

Type: NumInGroup

Used in groups: PriceMovementGrp

**171.2.3261 NoPriceMovementValues**

Number of price movement value entries.

Type: NumInGroup

Used in groups: PriceMovementValueGrp

**171.2.3262 NoPriceQualifiers**

Number of price qualifiers in the repeating group.

Type: NumInGroup

Used in groups: PriceQualifierGrp

**171.2.3263 NoPriceRangeRules**

Number of rules related to price ranges.

Type: NumInGroup

Used in groups: PriceRangeRuleGrp

**171.2.3264 NoPricingDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: PricingDateBusinessCenterGrp

**171.2.3265 NoProtectionTermEventNewsSources**

Number of event news sources in the repeating group.

Type: NumInGroup

Used in groups: ProtectionTermEventNewsSourceGrp

**171.2.3266 NoProtectionTermEventQualifiers**

Number of qualifiers in the repeating group.

Type: NumInGroup

Used in groups: ProtectionTermEventQualifierGrp

**171.2.3267 NoProtectionTermEvents**

Number of protection term events in the repeating group.

Type: NumInGroup

Used in groups: ProtectionTermEventGrp

**171.2.3268 NoProtectionTermObligations**

Number of obligations in the repeating group.

Type: NumInGroup

Used in groups: ProtectionTermObligationGrp

**171.2.3269 NoProtectionTerms**

Number of protection terms in the repeating group.

Type: NumInGroup

Used in groups: ProtectionTermGrp

**171.2.3270 NoProvisionCashSettlPaymentDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: ProvisionCashSettlPaymentDateBusinessCenterGrp

**171.2.3271 NoProvisionCashSettlPaymentDates**

Number of provision cash settlement payment dates in the repeating group.

Type: NumInGroup

Used in groups: ProvisionCashSettlPaymentFixedDateGrp

**171.2.3272 NoProvisionCashSettlValueDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: ProvisionCashSettlValueDateBusinessCenterGrp

**171.2.3273 NoProvisionDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: ProvisionDateBusinessCenterGrp

**171.2.3274 NoProvisionOptionExerciseBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: ProvisionOptionExerciseBusinessCenterGrp

**171.2.3275 NoProvisionOptionExerciseFixedDates**

Number of provision option exercise fixed dates in the repeating group.

Type: NumInGroup

Used in groups: ProvisionOptionExerciseFixedDateGrp

**171.2.3276 NoProvisionOptionExpirationDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: ProvisionOptionExpirationDateBusinessCenterGrp

**171.2.3277 NoProvisionOptionRelevantUnderlyingDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: ProvisionOptionRelevantUnderlyingDateBusinessCenterGrp

**171.2.3278 NoProvisionPartyIDs**

Number of parties identified in the contract provision.

Type: NumInGroup

Used in groups: ProvisionParties

**171.2.3279 NoProvisionPartySubIDs**

Number of sub-party IDs to be reported for the party.

Type: NumInGroup

Used in groups: ProvisionPtysSubGrp

**171.2.3280 NoProvisions**

Number of provisions in the repeating group.

Type: NumInGroup

Used in groups: ProvisionGrp

**171.2.3281 NoQuoteAttributes**

Number of quote attributes entries.

Type: NumInGroup

Used in groups: QuoteAttributeGrp

### **171.2.3282 NoQuoteEntries**

The number of quote entries for a QuoteSet.

Type: NumInGroup

Used in groups: QuotCxlEntriesGrp, QuotEntryAckGrp, QuotEntryGrp

### **171.2.3283 NoQuoteQualifiers**

Number of repeating groups of QuoteQualifiers (695).

Type: NumInGroup

Used in groups: QuotQualGrp

### **171.2.3284 NoQuoteSets**

The number of sets of quotes in the message.

Type: NumInGroup

Used in groups: QuotSetAckGrp, QuotSetGrp

### **171.2.3285 NoQuoteSizeRules**

Number of rules related to quote sizes.

Type: NumInGroup

Used in groups: QuoteSizeRuleGrp

### **171.2.3286 NoRateSources**

Number of rate sources being specified.

Type: NumInGroup

Used in groups: RateSource

**171.2.3287 NoReferenceDataDates**

Number of instances of reference data dates.

Type: NumInGroup

Used in groups: ReferenceDataDateGrp

**171.2.3288 NoRegistDtls**

The number of registration details on a Registration Instructions message

Type: NumInGroup

Used in groups: RgstDtlsGrp

**171.2.3289 NoRegulatoryTradeIDs**

Number of regulatory IDs in the repeating group.

Type: NumInGroup

Used in groups: RegulatoryTradeIDGrp

**171.2.3290 NoRelatedInstruments**

Number of related instruments

Type: NumInGroup

Used in groups: RelatedInstrumentGrp

**171.2.3291 NoRelatedMarketSegments**

Number of related market segments.

Type: NumInGroup

Used in groups: RelatedMarketSegmentGrp

**171.2.3292 NoRelatedPartyDetailAltID**

Number of related party detail alternate identifiers.

Type: NumInGroup

Used in groups: RelatedPartyDetailAltIDGrp

**171.2.3293 NoRelatedPartyDetailAltSubIDs**

Number of related party detail alternate sub-identifiers.

Type: NumInGroup

Used in groups: RelatedPartyDetailAltSubGrp

**171.2.3294 NoRelatedPartyDetailID**

Number of related party detail identifiers.

Type: NumInGroup

Used in groups: RelatedPartyDetailGrp

**171.2.3295 NoRelatedPartyDetailSubIDs**

Number of related party detail sub-identifiers.

Type: NumInGroup

Used in groups: RelatedPartyDetailSubGrp

**171.2.3296 NoRelatedPositions**

Number of related positions.

Type: NumInGroup

Used in groups: RelatedPositionGrp

### **171.2.3297 NoRelatedSym**

Specifies the number of repeating symbols specified.

Type: **NumInGroup**

Used in groups: **InstrmtGrp**, **InstrmtMDReqGrp**, **QuotReqGrp**, **QuotReqRjctGrp**, **RFQReqGrp**, **RelSymDerivSecGrp**, **RelSymDerivSecUpdGrp**, **SecListGrp**, **SecLstUpdRelSymGrp**, **SecMassStatGrp**, **StrmAsgnReqInstrmtGrp**, **StrmAsgnRptInstrmtGrp**

### **171.2.3298 NoRelatedTrades**

Number of related trades.

Type: **NumInGroup**

Used in groups: **RelatedTradeGrp**

### **171.2.3299 NoRelativeValues**

Number of relative value metrics entries in the repeating group.

Type: **NumInGroup**

Used in groups: **RelativeValueGrp**

### **171.2.3300 NoRequestedPartyRoles**

Number of requested party roles.

Type: **NumInGroup**

Used in groups: **RequestedPartyRoleGrp**

### **171.2.3301 NoRequestedRiskLimitType**

Number of risk limit types requested.

Type: **NumInGroup**

Used in groups: **RequestedRiskLimitTypesGrp**

**171.2.3302 NoRequestingPartyIDs**

Number of requesting party identifiers.

Type: NumInGroup

Used in groups: RequestingPartyGrp

**171.2.3303 NoRequestingPartySubIDs**

Number of requesting party sub-identifiers.

Type: NumInGroup

Used in groups: RequestingPartySubGrp

**171.2.3304 NoReturnRateDates**

Number of iterations in the return rate date repeating group.

Type: NumInGroup

Used in groups: ReturnRateDateGrp

**171.2.3305 NoReturnRateFXConversions**

Number of iterations in the return rate FX conversion repeating group.

Type: NumInGroup

Used in groups: ReturnRateFXConversionGrp

**171.2.3306 NoReturnRateInformationSources**

Number of iterations in the return rate information source repeating group.

Type: NumInGroup

Used in groups: ReturnRateInformationSourceGrp

**171.2.3307 NoReturnRatePrices**

Number of iterations in the return rate price repeating group.

Type: NumInGroup

Used in groups: ReturnRatePriceGrp

**171.2.3308 NoReturnRates**

Number of iterations in the return rate repeating group.

Type: NumInGroup

Used in groups: ReturnRateGrp

**171.2.3309 NoReturnRateValuationDateBusinessCenters**

Number of iterations in the return rate valuation date business center repeating group.

Type: NumInGroup

Used in groups: ReturnRateValuationDateBusinessCenterGrp

**171.2.3310 NoReturnRateValuationDates**

Number of iterations in the return rate valuation date repeating group.

Type: NumInGroup

Used in groups: ReturnRateValuationDateGrp

**171.2.3311 NoRiskInstrumentScopes**

Number of risk instrument scopes.

Type: NumInGroup

Used in groups: RiskInstrumentScopeGrp

### **171.2.3312 NoRiskLimits**

Number of risk limits for different instrument scopes.

Type: **NumInGroup**

Used in groups: **RiskLimitsGrp**

### **171.2.3313 NoRiskLimitTypes**

Number of risk limits with associated warning levels.

Type: **NumInGroup**

Used in groups: **RiskLimitTypesGrp**

### **171.2.3314 NoRiskWarningLevels**

Number of risk warning levels.

Type: **NumInGroup**

Used in groups: **RiskWarningLevelGrp**

### **171.2.3315 NoRootPartyIDs**

Number of RootPartyID (1117), RootPartyIDSource (1118), and RootPartyRole (1119) entries

Type: **NumInGroup**

Used in groups: **RootParties**

### **171.2.3316 NoRootPartySubIDs**

Number of RootPartySubID (1121) and RootPartySubIDType (1122) entries

Type: **NumInGroup**

Used in groups: **RootSubParties**

### **171.2.3317 NoRoutingIDs**

Number of repeating groups of RoutingID (217) and RoutingType (216) values.

See Volume 3: "Pre-Trade Message Targeting/Routing"

Type: NumInGroup

Used in groups: RoutingGrp

### **171.2.3318 NoRpts**

Total number of reports within series.

Type: int

Used in messages: ListStatus

### **171.2.3319 NoSecondaryAssetClasses**

Number of secondary asset classes in the repeating group.

Type: NumInGroup

Used in groups: SecondaryAssetGrp

### **171.2.3320 NoSecurityAltID**

Number of SecurityAltID (455) entries.

Type: NumInGroup

Used in groups: SecAltIDGrp

### **171.2.3321 NoSecurityClassifications**

Number of Security Classifications.

Type: NumInGroup

Used in groups: SecurityClassificationGrp

**171.2.3322 NoSecurityRiskMetrics**

Number of instruments with security risk metrics data.

Type: NumInGroup

Used in groups: SecurityRiskMetricGrp

**171.2.3323 NoSecurityTypes**

Number of Security Type repeating group instances.

Type: NumInGroup

Used in groups: SecTypesGrp

**171.2.3324 NoSettlDetails**

Used to group Each Settlement Party

Type: NumInGroup

Used in groups: SettlDetails

**171.2.3325 NoSettlementAmounts**

Number of settlement amount entries.

Type: NumInGroup

Used in groups: SettlementAmountGrp

**171.2.3326 NoSettlInst**

Number of settlement instructions within repeating group.

Type: NumInGroup

Used in groups: SettlInstGrp

**171.2.3327 NoSettlMethodElectionDateBusinessCenters**

Number of business centers in the repeating group.

Type: [NumInGroup](#)

Used in groups: [SettlMethodElectionDateBusinessCenterGrp](#)

**171.2.3328 NoSettlOblig**

Number of settlement obligations

Type: [NumInGroup](#)

Used in groups: [SettlObligationInstructions](#)

**171.2.3329 NoSettlPartyIDs**

Number of SettlPartyID (782), SettlPartyIDSource (783), and SettlPartyRole (784) entries

Type: [NumInGroup](#)

Used in groups: [SettlParties](#)

**171.2.3330 NoSettlPartySubIDs**

Number of SettlPartySubID (785) and SettlPartySubIDType (786) entries

Type: [NumInGroup](#)

Used in groups: [SettlPtysSubGrp](#)

**171.2.3331 NoSettlRateFallbacks**

Number of settlement rate fallbacks in the repeating group

Type: [NumInGroup](#)

Used in groups: [SettlRateDisruptionFallbackGrp](#)

**171.2.3332 NoSideCollateralAmounts**

Number of side collateral amount entries.

Type: [NumInGroup](#)

Used in groups: [SideCollateralAmountGrp](#)

**171.2.3333 NoSideCollateralReinvestments**

Number of instances of SideCollateralReinvestmentType(2867) in the repeating group.

Type: [NumInGroup](#)

Used in groups: [SideCollateralReinvestmentGrp](#)

**171.2.3334 NoSideRegulatoryTradeIDs**

Number of regulatory IDs in the repeating group.

Type: [NumInGroup](#)

Used in groups: [SideRegulatoryTradeIDGrp](#)

**171.2.3335 NoSides**

Number of Side repeating group instances.

Type: [NumInGroup](#)

Allowed values in NoSidesCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	OneSide	One Side
2	BothSides	Both Sides

---

Used in groups: [SideCrossOrdCxlGrp](#), [SideCrossOrdModGrp](#), [TrdCapRptAckSideGrp](#), [TrdCapRptSide-Grp](#)

**171.2.3336 NoSideTrdRegTS**

Indicates number of SideTimestamps contained in group

Type: NumInGroup

Used in groups: SideTrdRegTS

**171.2.3337 NoStatsIndicators**

Number of statistics indicator repeating group entries

Type: NumInGroup

Used in groups: StatsIndGrp

**171.2.3338 NoStipulations**

Number of stipulation entries

(Note tag # was reserved in FIX 4.1, added in FIX 4.3).

Type: NumInGroup

Used in groups: Stipulations

**171.2.3339 NoStrategyParameters**

Indicates number of strategy parameters

Type: NumInGroup

Used in groups: StrategyParametersGrp

**171.2.3340 NoStreamAssetAttributes**

Number of asset attribute entries in the group.

Type: NumInGroup

Used in groups: StreamAssetAttributeGrp

**171.2.3341 NoStreamCalculationPeriodBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: StreamCalculationPeriodBusinessCenterGrp

**171.2.3342 NoStreamCalculationPeriodDates**

Number of calculation period dates in the repeating group.

Type: NumInGroup

Used in groups: StreamCalculationPeriodDateGrp

**171.2.3343 NoStreamCommodityAltIDs**

Number of alternate security identifiers.

Type: NumInGroup

Used in groups: StreamCommodityAltIDGrp

**171.2.3344 NoStreamCommodityDataSources**

Number of data sources in the repeating group. The order of entry determines priority – first is the main source, second is fallback, third is second fallback.

Type: NumInGroup

Used in groups: StreamCommodityDataSourceGrp

**171.2.3345 NoStreamCommoditySettlBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: StreamCommoditySettlBusinessCenterGrp

**171.2.3346 NoStreamCommoditySettlDays**

Number of days in the repeating group.

Type: NumInGroup

Used in groups: StreamCommoditySettlDayGrp

**171.2.3347 NoStreamCommoditySettlPeriods**

Number of commodity settlement periods in the repeating group.

Type: NumInGroup

Used in groups: StreamCommoditySettlPeriodGrp

**171.2.3348 NoStreamCommoditySettlTimes**

Number of hour ranges in the repeating group.

Type: NumInGroup

Used in groups: StreamCommoditySettlTimeGrp

**171.2.3349 NoStreamEffectiveDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: StreamEffectiveDateBusinessCenterGrp

**171.2.3350 NoStreamFirstPeriodStartDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: StreamFirstPeriodStartDateBusinessCenterGrp

**171.2.3351 NoStreams**

Number of swap streams in the repeating group.

Type: [NumInGroup](#)

Used in groups: [StreamGrp](#)

**171.2.3352 NoStreamTerminationDateBusinessCenters**

Number of business centers in the repeating group.

Type: [NumInGroup](#)

Used in groups: [StreamTerminationDateBusinessCenterGrp](#)

**171.2.3353 NoStrikeRules**

Number of strike rule entries. This block specifies the rules for determining how new strikes should be listed within the stated price range of the underlying instrument

Type: [NumInGroup](#)

Used in groups: [StrikeRules](#)

**171.2.3354 NoStrikes**

Number of list strike price entries.

Type: [NumInGroup](#)

Used in groups: [InstrmtStrkPxGrp](#)

**171.2.3355 NotAffectedMarketSegmentGrp**

List of market segments that were not affected by a mass action.

---

Name	Mult.	Type	Description
<a href="#">NoNotAffectedMarketSegments</a>	[1..1]	NumInGroup	
<a href="#">NotAffectedMarketSegmentID</a>	[0..1]	String	Required when <a href="#">NoNotAffectedMarketSegments(1793) &gt; 0</a> .

---

Used in messages: [OrderMassActionReport](#)

**171.2.3356 NotAffectedMarketSegmentID**

Market segment within an unaffected market repeating segment group.

Type: **String**

Used in groups: **NotAffectedMarketSegmentGrp**

**171.2.3357 NotAffectedOrderID**

OrderID(37) of an order not affected by a mass cancel or mass action request.

Type: **String**

Used in groups: **NotAffectedOrdGrp**

**171.2.3358 NotAffectedOrdGrp**

---

<b>Name</b>	<b>Mult.</b>	<b>Type</b>	<b>Description</b>
<b>NoNotAffectedOrders</b>	[1..1]	NumInGroup	
<b>NotAffOrigCLOrdID</b>	[0..1]	String	Required if NoNotAffectedOrders(1370) > 0 and must be the first repeating field in the group. Indicates the client order identifier of an order not affected by the request. If order(s) were manually delivered (or otherwise not delivered over FIX and not assigned a CLOrdID(11)) this field should contain string "MANUAL".
<b>NotAffectedOrderID</b>	[0..1]	String	Contains the OrderID(37) assigned by the counterparty of an unaffected order. Not required as part of the repeating group if NotAffOrigCLOrdID(1372) has a value other than "MANUAL".
<b>NotAffSecondaryOrderID</b>	[0..1]	String	Contains the SecondaryOrderID(198) assigned by the counterparty of an unaffected order. Not required as part of the repeating group.
<b>NotAffectedReason</b>	[0..1]	CodeSet	Can be used to provide a reason for excluding this order from the scope of the mass action.

---

Used in messages: **OrderMassActionReport**, **OrderMassCancelReport**

**171.2.3359 NotAffectedReason**

Reason for order being unaffected by mass action even though it belongs to the orders covered by MassActionScope(1374).

Type: **int**

Allowed values in NotAffectedReasonCodeSet:

Code	Name	Description
0	OrderSuspended	Order suspended
1	InstrumentSuspended	Instrument suspended

Used in groups: **NotAffectedOrdGrp**

**171.2.3360 NotAffOrigClOrdID**

ClOrdID(11) of an order not affected by a mass cancel or mass action request.

Type: **String**

Used in groups: **NotAffectedOrdGrp**

**171.2.3361 NotAffSecondaryOrderID**

SecondaryOrderID (198) of an order not affected by a mass cancel or mass action request.

Type: **String**

Used in groups: **NotAffectedOrdGrp**

**171.2.3362 NoTargetMarketSegments**

Number of market segments upon which a mass action is to be taken.

Type: **NumInGroup**

Used in groups: **TargetMarketSegmentGrp**

### **171.2.3363 NoTargetPartyIDs**

Identifies the number of target parties identified in a mass action.

Type: NumInGroup

Used in groups: TargetParties

### **171.2.3364 NoTargetPartySubIDs**

Number of target party sub IDs in the repeating group.

Type: NumInGroup

Used in groups: TargetPtysSubGrp

### **171.2.3365 NoThrottleMsgType**

Number of ThrottleMsgType fields.

Type: NumInGroup

Used in groups: ThrottleMsgTypeGrp

### **171.2.3366 NoThrottles**

Indicates number of repeating groups to follow.

Type: NumInGroup

Used in groups: ThrottleParamsGrp

### **171.2.3367 NoTickRules**

Number of tick rules. This block specifies the rules for determining how a security ticks, i.e. the price increments at which it can be quoted and traded, depending on the current price of the security

Type: NumInGroup

Used in groups: TickRules

**171.2.3368 NotifyBrokerOfCredit**

Indicates whether or not details should be communicated to BrokerOfCredit (i.e. step-in broker).

Type: **Boolean**

Allowed values in NotifyBrokerOfCreditCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
N	DetailsShouldNotBeCommunicated	Details should not be communicated
Y	DetailsShouldBeCommunicated	Details should be communicated

---

Used in groups: **AllocGrp**

**171.2.3369 NoTimeInForceRules**

Number of time in force techniques

Type: **NumInGroup**

Used in groups: **TimeInForceRules**

**171.2.3370 NotionalPercentageOutstanding**

Indicates the notional percentage of the deal that is still outstanding based on the remaining components of the index.

Used to calculate the true value of a CDS trade or position.

Type: **Percentage**

Used in components: **Instrument**

**171.2.3371 NoTradeAllocAmts**

Number of trade allocation amount entries.

Type: **NumInGroup**

Used in groups: **TradeAllocAmtGrp**

#### **171.2.3372 NoTradePriceConditions**

Number of trade price conditions.

Type: **NumInGroup**

Used in groups: **TradePriceConditionGrp**

#### **171.2.3373 NoTradeQtys**

Number of trade quantities.

Type: **NumInGroup**

Used in groups: **TradeQtyGrp**

#### **171.2.3374 NoTrades**

Number of trades in repeating group.

Type: **NumInGroup**

Used in groups: **TrdCollGrp**

#### **171.2.3375 NoTradeTypes**

Number of trade types in repeating group.

Type: **NumInGroup**

Used in groups: **TradeTypeGrp**

#### **171.2.3376 NoTradingSessionRules**

Allows trading rules to be expressed by trading session

Type: **NumInGroup**

Used in groups: **TradingSessionRulesGrp**

**171.2.3377 NoTradingSessions**

Number of TradingSessionIDs (336) in repeating group.

Type: NumInGroup

Used in groups: TrdSessLstGrp, TrdgSesGrp

**171.2.3378 NoTransactionAttributes**

Number of instances of TransactionAttributeType(2872) in the repeating group.

Type: NumInGroup

Used in groups: TransactionAttributeGrp

**171.2.3379 NoTrdMatchSides**

Number of trade match sides.

Type: NumInGroup

Used in groups: TrdMatchSideGrp

**171.2.3380 NoTrdRegPublications**

Number of regulatory publication rules in repeating group.

Type: NumInGroup

Used in groups: TrdRegPublicationGrp

**171.2.3381 NoTrdRegTimestamps**

Number of TrdRegTimestamp (769) entries

Type: NumInGroup

Used in groups: TrdRegTimestamps

**171.2.3382 NoTrdRepIndicators**

Number of trade reporting indicators

Type: NumInGroup

Used in groups: TrdRepIndicatorsGrp

**171.2.3383 NoUnderlyingAdditionalTermBondRefs**

Number of bonds in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingAdditionalTermBondRefGrp

**171.2.3384 NoUnderlyingAdditionalTerms**

Number of additional terms in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingAdditionalTermGrp

**171.2.3385 NoUnderlyingAmounts**

Total number of occurrences of Amount to pay in order to receive the underlying instrument

Type: NumInGroup

Used in groups: UnderlyingAmount

**171.2.3386 NoUnderlyingAssetAttributes**

Number of asset attribute entries in the group.

Type: NumInGroup

Used in groups: UnderlyingAssetAttributeGrp

**171.2.3387 NoUnderlyingBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingBusinessCenterGrp

**171.2.3388 NoUnderlyingCashSettlDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingCashSettlDateBusinessCenterGrp

**171.2.3389 NoUnderlyingCashSettlDealers**

Number of dealers in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingCashSettlDealerGrp

**171.2.3390 NoUnderlyingCashSettlTerms**

Number of elements in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingCashSettlTermGrp

**171.2.3391 NoUnderlyingComplexEventAveragingObservations**

The number of averaging observations in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingComplexEventAveragingObservationGrp

**171.2.3392 NoUnderlyingComplexEventCreditEventQualifiers**

Number of qualifiers in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingComplexEventCreditEventQualifierGrp

**171.2.3393 NoUnderlyingComplexEventCreditEvents**

The number of credit events specified in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingComplexEventCreditEventGrp

**171.2.3394 NoUnderlyingComplexEventCreditEventSources**

Number of event sources in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingComplexEventCreditEventSourceGrp

**171.2.3395 NoUnderlyingComplexEventDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingComplexEventDateBusinessCenterGrp

**171.2.3396 NoUnderlyingComplexEventDates**

Number of underlying complex event dates in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingComplexEventDates

**171.2.3397 NoUnderlyingComplexEventPeriodDateTimes**

Number of entries in the date-time repeating group.

Type: NumInGroup

Used in groups: UnderlyingComplexEventPeriodDateGrp

**171.2.3398 NoUnderlyingComplexEventPeriods**

Number of periods in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingComplexEventPeriodGrp

**171.2.3399 NoUnderlyingComplexEventRateSources**

Number of rate sources in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingComplexEventRateSourceGrp

**171.2.3400 NoUnderlyingComplexEvents**

Number of complex events in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingComplexEvents

**171.2.3401 NoUnderlyingComplexEventSchedules**

Number of schedules in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingComplexEventScheduleGrp

**171.2.3402 NoUnderlyingComplexEventTimes**

Number of complex event times in the repeating group.

Type: [NumInGroup](#)

Used in groups: [UnderlyingComplexEventTimes](#)

**171.2.3403 NoUnderlyingDeliverySchedules**

Number of delivery schedules in the repeating group.

Type: [NumInGroup](#)

Used in groups: [UnderlyingDeliveryScheduleGrp](#)

**171.2.3404 NoUnderlyingDeliveryScheduleSettlDays**

Number of delivery schedules in the repeating group.

Type: [NumInGroup](#)

Used in groups: [UnderlyingDeliveryScheduleSettlDayGrp](#)

**171.2.3405 NoUnderlyingDeliveryScheduleSettlTimes**

Number of hour ranges in the repeating group.

Type: [NumInGroup](#)

Used in groups: [UnderlyingDeliveryScheduleSettlTimeGrp](#)

**171.2.3406 NoUnderlyingDeliveryStreamCommoditySources**

Number of commodity sources in the repeating group.

Type: [NumInGroup](#)

Used in groups: [UnderlyingDeliveryStreamCommoditySourceGrp](#)

**171.2.3407 NoUnderlyingDeliveryStreamCycles**

Number of delivery cycles in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingDeliveryStreamCycleGrp

**171.2.3408 NoUnderlyingDividendAccrualPaymentDateBusinessCenters**

Number of entries in the UnderlyingDividendAccrualPaymentDateBusinessCenterGrp.

Type: NumInGroup

Used in groups: UnderlyingDividendAccrualPaymentDateBusinessCenterGrp

**171.2.3409 NoUnderlyingDividendFXTriggerDateBusinessCenters**

Number of entries in the UnderlyingDividendFXTriggerDateBusinessCenterGrp.

Type: NumInGroup

Used in groups: UnderlyingDividendFXTriggerDateBusinessCenterGrp

**171.2.3410 NoUnderlyingDividendPayments**

Number of entries in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingDividendPaymentGrp

**171.2.3411 NoUnderlyingDividendPeriodBusinessCenters**

Number of entries in UnderlyingDividendPeriodBusinessCenterGrp.

Type: NumInGroup

Used in groups: UnderlyingDividendPeriodBusinessCenterGrp

**171.2.3412 NoUnderlyingDividendPeriods**

Number of entries in the UnderlyingDividendPeriodGrp component.

Type: NumInGroup

Used in groups: UnderlyingDividendPeriodGrp

**171.2.3413 NoUnderlyingEvents**

Number of events in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingEvntGrp

**171.2.3414 NoUnderlyingExtraordinaryEvents**

Number of extraordinary events in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingExtraordinaryEventGrp

**171.2.3415 NoUnderlyingLegSecurityAltID**

Refer to definition for NoSecurityAltID(454)

Type: NumInGroup

Used in groups: UnderlyingLegSecurityAltIDGrp

**171.2.3416 NoUnderlyingMarketDisruptionEvents**

Number of disruption events in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingMarketDisruptionEventGrp

**171.2.3417 NoUnderlyingMarketDisruptionFallbackReferencePrices**

Number of fallback reference securities in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingMarketDisruptionFallbackReferencePriceGrp

**171.2.3418 NoUnderlyingMarketDisruptionFallbacks**

Number of fallbacks in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingMarketDisruptionFallbackGrp

**171.2.3419 NoUnderlyingNonDeliverableFixingDates**

Number of Fixing dates in the repeating group

Type: NumInGroup

Used in groups: UnderlyingPaymentStreamNonDeliverableFixingDateGrp

**171.2.3420 NoUnderlyingOptionExerciseBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingOptionExerciseBusinessCenterGrp

**171.2.3421 NoUnderlyingOptionExerciseDates**

Number of dates in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingOptionExerciseDateGrp

**171.2.3422 NoUnderlyingOptionExerciseExpirationDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingOptionExerciseExpirationDateBusinessCenterGrp

**171.2.3423 NoUnderlyingOptionExerciseExpirationDates**

Number of fixed exercise expiration dates in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingOptionExerciseExpirationDateGrp

**171.2.3424 NoUnderlyingPaymentScheduleFixingDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingPaymentScheduleFixingDateBusinessCenterGrp

**171.2.3425 NoUnderlyingPaymentScheduleFixingDays**

Number of fixing days in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingPaymentScheduleFixingDayGrp

**171.2.3426 NoUnderlyingPaymentScheduleInterimExchangeDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingPaymentScheduleInterimExchangeDateBusinessCenterGrp

**171.2.3427 NoUnderlyingPaymentScheduleRateSources**

Number of rate sources in the repeating group

Type: NumInGroup

Used in groups: UnderlyingPaymentScheduleRateSourceGrp

**171.2.3428 NoUnderlyingPaymentSchedules**

Number of swap schedules in the repeating group

Type: NumInGroup

Used in groups: UnderlyingPaymentScheduleGrp

**171.2.3429 NoUnderlyingPaymentStreamCompoundingDates**

Number of dates in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingPaymentStreamCompoundingDateGrp

**171.2.3430 NoUnderlyingPaymentStreamCompoundingDatesBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingPaymentStreamCompoundingDatesBusinessCenterGrp

**171.2.3431 NoUnderlyingPaymentStreamFixingDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingPaymentStreamFixingDateBusinessCenterGrp

**171.2.3432 NoUnderlyingPaymentStreamFixingDates**

Number of fixing dates in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingPaymentStreamFixingDateGrp

**171.2.3433 NoUnderlyingPaymentStreamFormulas**

Number of formulas in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingPaymentStreamFormulaMathGrp

**171.2.3434 NoUnderlyingPaymentStreamInitialFixingDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingPaymentStreamInitialFixingDateBusinessCenterGrp

**171.2.3435 NoUnderlyingPaymentStreamNonDeliverableFixingDatesBizCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingPaymentStreamNonDeliverableFixingDatesBusinessCenterGrp

**171.2.3436 NoUnderlyingPaymentStreamPaymentDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingPaymentStreamPaymentDateBusinessCenterGrp

**171.2.3437 NoUnderlyingPaymentStreamPaymentDates**

Number of payment dates in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingPaymentStreamPaymentDateGrp

**171.2.3438 NoUnderlyingPaymentStreamPricingBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingPaymentStreamPricingBusinessCenterGrp

**171.2.3439 NoUnderlyingPaymentStreamPricingDates**

Number of pricing dates in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingPaymentStreamPricingDateGrp

**171.2.3440 NoUnderlyingPaymentStreamPricingDays**

Number of pricing days in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingPaymentStreamPricingDayGrp

**171.2.3441 NoUnderlyingPaymentStreamResetDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingPaymentStreamResetDateBusinessCenterGrp

**171.2.3442 NoUnderlyingPaymentStubEndDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingPaymentStubEndDateBusinessCenterGrp

**171.2.3443 NoUnderlyingPaymentStubs**

Number of stubs in the repeating group

Type: NumInGroup

Used in groups: UnderlyingPaymentStubGrp

**171.2.3444 NoUnderlyingPaymentStubStartDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingPaymentStubStartDateBusinessCenterGrp

**171.2.3445 NoUnderlyingPhysicalSettlDeliverableObligations**

Number of entries in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingPhysicalSettlDeliverableObligationGrp

**171.2.3446 NoUnderlyingPhysicalSettlTerms**

Number of entries in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingPhysicalSettlTermGrp

**171.2.3447 NoUnderlyingPricingDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingPricingDateBusinessCenterGrp

**171.2.3448 NoUnderlyingProtectionTermEventNewsSources**

Number of event news sources in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingProtectionTermEventNewsSourceGrp

**171.2.3449 NoUnderlyingProtectionTermEventQualifiers**

Number of qualifiers in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingProtectionTermEventQualifierGrp

**171.2.3450 NoUnderlyingProtectionTermEvents**

Number of protection term events in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingProtectionTermEventGrp

**171.2.3451 NoUnderlyingProtectionTermObligations**

Number of obligations in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingProtectionTermObligationGrp

**171.2.3452 NoUnderlyingProtectionTerms**

Number of protection terms in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingProtectionTermGrp

**171.2.3453 NoUnderlyingProvisionCashSettlPaymentDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingProvisionCashSettlPaymentDateBusinessCenterGrp

**171.2.3454 NoUnderlyingProvisionCashSettlPaymentDates**

Number of UnderlyingProvision cash settlement payment dates in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingProvisionCashSettlPaymentFixedDateGrp

**171.2.3455 NoUnderlyingProvisionCashSettlValueDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingProvisionCashSettlValueDateBusinessCenterGrp

**171.2.3456 NoUnderlyingProvisionDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingProvisionDateBusinessCenterGrp

**171.2.3457 NoUnderlyingProvisionOptionExerciseBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingProvisionOptionExerciseBusinessCenterGrp

**171.2.3458 NoUnderlyingProvisionOptionExerciseFixedDates**

Number of UnderlyingProvision option exercise fixed dates in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingProvisionOptionExerciseFixedDateGrp

**171.2.3459 NoUnderlyingProvisionOptionExpirationDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingProvisionOptionExpirationDateBusinessCenterGrp

**171.2.3460 NoUnderlyingProvisionOptionRelevantUnderlyingDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingProvisionOptionRelevantUnderlyingDateBusinessCenterGrp

**171.2.3461 NoUnderlyingProvisionPartyIDs**

Number of parties identified in the contract provision.

Type: NumInGroup

Used in groups: UnderlyingProvisionParties

**171.2.3462 NoUnderlyingProvisionPartySubIDs**

Number of sub-party IDs to be reported for the party.

Type: NumInGroup

Used in groups: UnderlyingProvisionPtysSubGrp

**171.2.3463 NoUnderlyingProvisions**

Number of provisions in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingProvisionGrp

**171.2.3464 NoUnderlyingRateSpreadSteps**

Number of entries in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingRateSpreadStepGrp

**171.2.3465 NoUnderlyingReturnRateDates**

Number of iterations in the return rate date repeating group.

Type: NumInGroup

Used in groups: UnderlyingReturnRateDateGrp

**171.2.3466 NoUnderlyingReturnRateFXConversions**

Number of iterations in the return rate FX conversion repeating group.

Type: NumInGroup

Used in groups: UnderlyingReturnRateFXConversionGrp

**171.2.3467 NoUnderlyingReturnRateInformationSources**

Number of iterations in the return rate information source repeating group.

Type: NumInGroup

Used in groups: UnderlyingReturnRateInformationSourceGrp

**171.2.3468 NoUnderlyingReturnRatePrices**

Number of iterations in the return rate price repeating group.

Type: NumInGroup

Used in groups: UnderlyingReturnRatePriceGrp

**171.2.3469 NoUnderlyingReturnRates**

Number of iterations in the return rate repeating group.

Type: NumInGroup

Used in groups: UnderlyingReturnRateGrp

**171.2.3470 NoUnderlyingReturnRateValuationDateBusinessCenters**

Number of iterations in the return rate valuation date business center repeating group.

Type: NumInGroup

Used in groups: UnderlyingReturnRateValuationDateBusinessCenterGrp

**171.2.3471 NoUnderlyingReturnRateValuationDates**

Number of iterations in the return rate valuation date repeating group.

Type: NumInGroup

Used in groups: UnderlyingReturnRateValuationDateGrp

**171.2.3472 NoUnderlyings**

Number of underlying legs that make up the security.

Type: NumInGroup

Used in groups: PosUndInstrmtGrp, UndInstrmtCollGrp, UndInstrmtGrp

**171.2.3473 NoUnderlyingSecondaryAssetClasses**

Number of secondary asset classes in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingSecondaryAssetGrp

**171.2.3474 NoUnderlyingSecurityAltID**

Number of UnderlyingSecurityAltID (458) entries.

Type: NumInGroup

Used in groups: UndSecAltIDGrp

**171.2.3475 NoUnderlyingSettlMethodElectionDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingSettlMethodElectionDateBusinessCenterGrp

**171.2.3476 NoUnderlyingSettlRateFallbacks**

Number of settlement rate fallbacks in the repeating group

Type: NumInGroup

Used in groups: UnderlyingSettlRateDisruptionFallbackGrp

**171.2.3477 NoUnderlyingStips**

Number of underlying stipulation entries

Type: NumInGroup

Used in groups: UnderlyingStipulations

**171.2.3478 NoUnderlyingStreamAssetAttributes**

Number of asset attribute entries in the group.

Type: NumInGroup

Used in groups: UnderlyingStreamAssetAttributeGrp

**171.2.3479 NoUnderlyingStreamCalculationPeriodBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingStreamCalculationPeriodBusinessCenterGrp

**171.2.3480 NoUnderlyingStreamCalculationPeriodDates**

Number of calculation period dates in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingStreamCalculationPeriodDateGrp

**171.2.3481 NoUnderlyingStreamCommodityAltIDs**

Number of alternate security identifiers.

Type: NumInGroup

Used in groups: UnderlyingStreamCommodityAltIDGrp

**171.2.3482 NoUnderlyingStreamCommodityDataSources**

Number of commodity data sources in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingStreamCommodityDataSourceGrp

**171.2.3483 NoUnderlyingStreamCommoditySettlBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingStreamCommoditySettlBusinessCenterGrp

**171.2.3484 NoUnderlyingStreamCommoditySettlDays**

Number of days in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingStreamCommoditySettlDayGrp

**171.2.3485 NoUnderlyingStreamCommoditySettlPeriods**

Number of commodity settlement periods in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingStreamCommoditySettlPeriodGrp

**171.2.3486 NoUnderlyingStreamCommoditySettlTimes**

Number of hour ranges in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingStreamCommoditySettlTimeGrp

**171.2.3487 NoUnderlyingStreamEffectiveDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingStreamEffectiveDateBusinessCenterGrp

**171.2.3488 NoUnderlyingStreamFirstPeriodStartDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingStreamFirstPeriodStartDateBusinessCenterGrp

**171.2.3489 NoUnderlyingStreams**

Number of swap streams in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingStreamGrp

**171.2.3490 NoUnderlyingStreamTerminationDateBusinessCenters**

Number of business centers in the repeating group.

Type: NumInGroup

Used in groups: UnderlyingStreamTerminationDateBusinessCenterGrp

**171.2.3491 NoUndlyInstrumentParties**

Identifies the number of parties identified with an underlying instrument

Type: NumInGroup

Used in groups: UndlyInstrumentParties

**171.2.3492 NoUndlyInstrumentPartySubIDs**

Number of Underlying InstrumentPartySubID (1053) and InstrumentPartySubIDType (1054) entries

Type: [NumInGroup](#)

Used in groups: [UndlyInstrumentPtysSubGrp](#)

**171.2.3493 NoUsernames**

Number of Usernames to which this this response is directed

Type: [NumInGroup](#)

Used in groups: [UsernameGrp](#)

**171.2.3494 NoValueChecks**

Number of value check entries.

Type: [NumInGroup](#)

Used in groups: [ValueChecksGrp](#)

**171.2.3495 NstdPtys2SubGrp**

---

Name	Mult.	Type	Description
<a href="#">NoNested2PartySubIDs</a>	[1..1]	NumInGroup	
<a href="#">Nested2PartySubID</a>	[0..1]	String	
<a href="#">Nested2PartySubIDType</a>	[0..1]	CodeSet

Name	Mult.	Type	Description
NoNestedPartySubIDs	[1..1]	NumInGroup	
NestedPartySubID	[0..1]	String	
NestedPartySubIDType	[0..1]	CodeSet	

Used in groups: [NestedParties](#)

#### 171.2.3499 NthToDefault

The Nth reference obligation to default in a CDS reference basket. If specified without MthToDefault(1943) the default will trigger a CDS payout. If MthToDefault(1943) is also present then payout occurs between the Nth and Mth obligations to default.

Type: [int](#)

Used in components: [Instrument](#)

### **171.2.3500 NTPositionLimit**

Position Limit in the near-term contract for a given exchange-traded product.

Type: **int**

Used in components: **Instrument**

### **171.2.3501 NumberOfBuyOrders**

Number of buy orders involved in a trade.

Type: **int**

Used in groups: **MDFullGrp, MDIncGrp**

### **171.2.3502 NumberOfOrders**

Number of orders in the market.

Type: **int**

Used in groups: **MDFullGrp, MDIncGrp**

### **171.2.3503 NumberOfSellOrders**

Number of sell orders involved in a trade.

Type: **int**

Used in groups: **MDFullGrp, MDIncGrp**

### **171.2.3504 NumBidders**

Indicates the total number of bidders on the list

Type: **int**

Used in messages: **BidRequest**

### **171.2.3505 NumDaysInterest**

Number of Days of Interest for convertible bonds and fixed income. Note value may be negative.

Type: **int**

Used in groups: **TrdCapRptAckSideGrp**, **TrdCapRptSideGrp**

Used in messages: **AllocationInstruction**, **AllocationInstructionAlert**, **AllocationReport**, **Confirmation**, **ExecutionReport**

### **171.2.3506 NumOfCompetitors**

The number of competing Respondents (e.g. dealers) to receive a quote request (either via the QuoteRequest(35=R) or via other means).

Type: **int**

Used in groups: **QuotReqGrp**

### **171.2.3507 NumOfComplexInstruments**

Represents the total number of multileg securities or user defined securities that make up the security.

Type: **int**

Used in messages: **SecurityDefinition**, **SecurityDefinitionUpdateReport**

### **171.2.3508 NumOfSimpleInstruments**

Represents the total number of simple instruments that make up a multi-legged security. Complex spread instruments may be constructed of legs which themselves are multi-leg instruments.

Type: **int**

Used in groups: **RelSymDerivSecGrp**, **SecListGrp**

Used in messages: **SecurityDefinition**, **SecurityDefinitionUpdateReport**

**171.2.3509 NumTickets**

Total number of tickets.

Type: **int**

Used in messages: **BidRequest**

**171.2.3510 ObligationType**

Type of reference obligation for credit derivatives contracts.

Type: **String**

Allowed values in ObligationTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Bond	Bond
1	ConvertBond	Convertible bond
2	Mortgage	Mortgage
3	Loan	Loan

---

Used in components: **Instrument**

**171.2.3511 OddLot**

This trade is to be treated as an odd lot

If this field is not specified, the default will be "N"

Type: **Boolean**

Allowed values in OddLotCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
N	TreatAsRoundLot	Treat as round lot (default)
Y	TreatAsOddLot	Treat as odd lot

---

Used in groups: **TrdCapRptAckSideGrp, TrdCapRptSideGrp**

### **171.2.3512 OfferForwardPoints**

Offer F/X forward points added to spot rate. May be a negative value.

Type: **PriceOffset**

Used in groups: **QuotEntryAckGrp, QuotEntryGrp**

Used in messages: **Quote, QuoteResponse, QuoteStatusReport**

### **171.2.3513 OfferForwardPoints2**

Offer F/X forward points of the future portion of a F/X swap quote added to spot rate. May be a negative value.

Type: **PriceOffset**

Used in groups: **QuotEntryAckGrp, QuotEntryGrp**

Used in messages: **Quote, QuoteResponse, QuoteStatusReport**

### **171.2.3514 OfferID**

Unique identifier for the ask side of the quote assigned by the quote issuer.

Type: **String**

Used in messages: **Quote, QuoteStatusReport**

### **171.2.3515 OfferMDEntryID**

The market data entry identifier of the offer side of a quote.

Type: **String**

Used in messages: **QuoteStatusReport**

### **171.2.3516 OfferPx**

Offer price/rate

Type: **Price**

Used in groups: **QuotEntryAckGrp, QuotEntryGrp, SecurityRiskMetricGrp**

Used in messages: **Quote, QuoteResponse, QuoteStatusReport**

### **171.2.3517 OfferQuoteID**

Marketplace assigned quote identifier for the offer side. Can be used to indicate priority.

Type: **String**

Used in messages: **QuoteStatusReport**

### **171.2.3518 OfferSize**

Quantity of offer

(Prior to FIX 4.2 this field was of type int)

Type: **Qty**

Used in groups: **QuotEntryAckGrp, QuotEntryGrp**

Used in messages: **Quote, QuoteResponse, QuoteStatusReport**

### **171.2.3519 OfferSpotRate**

Offer F/X spot rate.

Type: **Price**

Used in groups: **QuotEntryAckGrp, QuotEntryGrp**

Used in messages: **Quote, QuoteResponse, QuoteStatusReport**

### **171.2.3520 OfferSpread**

Basis points relative to a benchmark curve on the offer side, such as LIBOR, or a known security, such as 10Y US Treasury bond. The benchmark security or curve name is specified in the SpreadOrBenchmarkCurveData component.

Type: **float**

Used in messages: **Quote**

### **171.2.3521 OfferSwapPoints**

The offer FX Swap points for an FX Swap. It is the "far offer forward points - near bid forward points". Value can be negative. Expressed in decimal form. For example, 61.99 points is expressed and sent as 0.006199

Type: **PriceOffset**

Used in messages: **Quote**

### **171.2.3522 OfferVolatility**

Volatility based on offer prices.

Type: **float**

Used in groups: **SecurityRiskMetricGrp**

### **171.2.3523 OfferYield**

Offer yield

Type: **Percentage**

Used in groups: **QuotEntryAckGrp, QuotEntryGrp**

Used in messages: **Quote, QuoteResponse, QuoteStatusReport**

### **171.2.3524 OffMarketPriceIndicator**

An indication that the price is off-market.

Type: **Boolean**

Used in messages: **TradeCaptureReport**

### **171.2.3525 OffsetInstruction**

Indicates the trade is a result of an offset or onset.

Type: **int**

Allowed values in OffsetInstructionCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Offset	Offset. A type of transaction where an executing firm gives up a trade as a result of an allocation. Or, in the case of a reversal of an allocation, the take-up (claiming) firm's transaction.

---

Code	Name	Description
1	Onset	Onset. A type of transaction where a take-up (claiming) firm takes up a trade as a result of an allocation. Or, in the case of a reversal of an allocation, the executing firm's transaction.

Used in messages: [TradeCaptureReport](#), [TradeCaptureReportAck](#), [TradeCaptureReportRequest](#)

### 171.2.3526 OffshoreIndicator

Indicates the type of the currency rate being used. This is relevant for currencies that have offshore rate that different from onshore rate.

Type: [int](#)

Allowed values in OffshoreIndicatorCodeSet:

Code	Name	Description
0	Regular	Regular - Default if not specified. The notion of onshore and offshore rates does not apply.
1	Offshore	Offshore. Used to indicate that the rate specified is an offshore rate which differs from its onshore rate.
2	Onshore	Onshore. Used to indicate that the rate specified is an onshore rate which differs from its offshore rate.

Used in messages: [AllocationInstruction](#), [ExecutionReport](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#)

### 171.2.3527 OnBehalfOfCompID

Assigned value used to identify firm originating message if the message was delivered by a third party i.e. the third party firm identifier would be delivered in the SenderCompID field and the firm originating the message in this field.

Type: [String](#)

Used in components: [StandardHeader](#)

**171.2.3528 OnBehalfOfLocationID**

Assigned value used to identify specific message originator's location (i.e. geographic location and/or desk, trader) if the message was delivered by a third party

Type: **String**

Used in components: **StandardHeader**

**171.2.3529 OnBehalfOfSubID**

Assigned value used to identify specific message originator (i.e. trader) if the message was delivered by a third party

Type: **String**

Used in components: **StandardHeader**

**171.2.3530 OpenCloseSettlFlag**

Flag that identifies a market data entry. (Prior to FIX 4.3 this field was of type char)

Type: **MultipleCharValue**

Allowed values in OpenCloseSettlFlagCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	DailyOpen	Daily Open / Close / Settlement entry
1	SessionOpen	Session Open / Close / Settlement entry
2	DeliverySettlementEntry	Delivery Settlement entry
3	ExpectedEntry	Expected entry
4	EntryFromPreviousBusinessDay	Entry from previous business day
5	TheoreticalPriceValue	Theoretical Price value

---

Used in groups: **MDFullGrp**, **MDIncGrp**

Used in messages: **MarketDataRequest**

**171.2.3531 OpenInterest**

Open interest that was eligible for assignment.

Type: **Amt**

Used in messages: **AssignmentReport**

**171.2.3532 OptAttribute**

Provided to support versioning of option contracts as a result of corporate actions or events. Use of this field is defined by counterparty agreement or market conventions.

Type: **char**

Used in components: **Instrument**

**171.2.3533 OptionExerciseBusinessCenter**

The business center calendar used to adjust the option exercise dates, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **OptionExerciseBusinessCenterGrp**

**171.2.3534 OptionExerciseBusinessCenterGrp**

The OptionExerciseBusinessCenterGrp is a repeating subcomponent of the OptionExerciseDates component used to specify the set of business centers whose calendars drive date adjustment. Used only to override the business centers defined in the DateAdjustment component in Instrument.

Name	Mult.	Type	Description
<b>NoOptionExerciseBusinessCenters</b>	[1..1]	NumInGroup	
<b>OptionExerciseBusinessCenter</b>	[0..1]	String	Required if NoOptionExerciseBusinessCenters(41116) > 0.

Used in components: **OptionExerciseDates**

### 171.2.3535 OptionExerciseBusinessDayConvention

The business day convention used to adjust the option exercise dates. Used only to override the business day convention specified in the DateAdjustment component within the Instrument component.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [OptionExerciseDates](#)

### 171.2.3536 OptionExercise

The OptionExercise component is a subcomponent of the Instrument component used to specify option exercise provisions. Its purpose is to identify the opportunities and conditions for exercise, e.g. the schedule of dates on which exercise is allowed. The embedded OptionExerciseExpiration component is used to terminate the opportunity for exercise.

Name	Mult.	Type	Description
<a href="#">ExerciseDesc</a>	[0..1]	String	
<a href="#">EncodedExerciseDescLen</a>	[0..1]	Length	Must be set if EncodedExerciseDesc(41108) field is specified and must immediately precede it.
<a href="#">EncodedExerciseDesc</a>	[0..1]	data	Encoded (non-ASCII characters) representation of the ExerciseDesc(41106) field in the encoded format specified via the MessageEncoding(347) field.
<a href="#">AutomaticExerciseIndicator</a>	[0..1]	Boolean	
<a href="#">AutomaticExerciseThresholdRate</a>	[0..1]	float	

Name	Mult.	Type	Description
ExerciseConfirmationMethod	[0..1]	CodeSet	
ManualNoticeBusinessCenter	[0..1]	String	
FallbackExerciseIndicator	[0..1]	Boolean	
LimitedRightToConfirmIndicator	[0..1]	Boolean	
ExerciseSplitTicketIndicator	[0..1]	Boolean	
SettlMethodElectingPartySide	[0..1]	CodeSet	
SettlMethodElectionDate	[0..1]	Component	
OptionExerciseDates	[0..1]	Component	
OptionExerciseExpiration	[0..1]	Component	
OptionExerciseMakeWholeProvision	[0..1]	Component	

Used in components: [Instrument](#)

#### 171.2.3537 OptionExerciseDate

The option exercise fixed date, unadjusted or adjusted depending on OptionExerciseDateType(41139).

Type: [LocalMktDate](#)

Used in groups: [OptionExerciseDateGrp](#)

#### 171.2.3538 OptionExerciseDateGrp

The OptionExerciseDateGrp is a repeating subcomponent of the OptionExerciseDates component used to specify fixed dates for exercise.

Name	Mult.	Type	Description
NoOptionExerciseDates	[1..1]	NumInGroup	
OptionExerciseDate	[0..1]	LocalMktDate	Required if NoOptionExerciseDates(41137) > 0.
OptionExerciseDateType	[0..1]	CodeSet	When specified it applies not only to the current date but to all subsequent dates in the group until overridden with a new type.

Used in components: [OptionExerciseDates](#)

**171.2.3539 OptionExerciseDates**

The OptionExerciseDate component is a subcomponent of the OptionExercise component used to specify option exercise dates.

Name	Mult.	Type	Description
OptionExerciseBusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the DateAdjustment component in Instrument. The specified value would be specific to this instance of option exercise dates.
OptionExerciseBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the DateAdjustment component in Instrument. The specified values would be specific to this instance of option exercise dates.
OptionExerciseDateGrp	[0..*]	Group	
OptionExerciseEarliestDateOffsetDayType	[0..1]	CodeSet	
OptionExerciseEarliestDateOffsetPeriod	[0..1]	int	Conditionally required when OptionExerciseEarliestDateUnit(41121) is specified.
OptionExerciseEarliestDateOffsetUnit	[0..1]	CodeSet	Conditionally required when OptionExerciseEarliestDatePeriod(41120) is specified.
OptionExerciseFrequencyPeriod	[0..1]	int	Conditionally required when OptionExerciseFrequencyUnit(41123) is specified.
OptionExerciseFrequencyUnit	[0..1]	CodeSet	Conditionally required when OptionExerciseFrequencyPeriod(41122) is specified.
OptionExerciseStartDateUnadjusted	[0..1]	LocalMktDate	
OptionExerciseStartDateRelativeTo	[0..1]	int	
OptionExerciseStartDateOffsetPeriod	[0..1]	int	Conditionally required when OptionExerciseStartDateOffsetUnit(41127) is specified.
OptionExerciseStartDateOffsetUnit	[0..1]	CodeSet	Conditionally required when OptionExerciseStartDateOffsetPeriod(41126) is specified.
OptionExerciseStartDateOffsetDayType	[0..1]	CodeSet	
OptionExerciseStartDateAdjusted	[0..1]	LocalMktDate	
OptionExerciseSkip	[0..1]	int	

Name	Mult.	Type	Description
OptionExerciseNominationDeadline	[0..1]	LocalMktDate	
OptionExerciseFirstDateUnadjusted	[0..1]	LocalMktDate	
OptionExerciseLastDateUnadjusted	[0..1]	LocalMktDate	
OptionExerciseEarliestTime	[0..1]	LocalMktTime	
OptionExerciseLatestTime	[0..1]	LocalMktTime	
OptionExerciseTimeBusinessCenter	[0..1]	String	

Used in components: [OptionExercise](#)

### 171.2.3540 OptionExerciseDateType

Specifies the type of date. When specified it applies not only to the current date but to all subsequent dates in the group until overridden with a new type.

Type: [int](#)

Allowed values in OptionExerciseDateTypeCodeSet:

Code	Name	Description
0	Unadjusted	Unadjusted
1	Adjusted	Adjusted

Used in groups: [OptionExerciseDateGrp](#)

### 171.2.3541 OptionExerciseEarliestDateOffsetDayType

Specifies the day type of the relative earliest option exercise date offset.

Type: [int](#)

Allowed values in ComplexEventDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business

---

Code	Name	Description
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in components: [OptionExerciseDates](#)

### 171.2.3542 OptionExerciseEarliestDateOffsetPeriod

Time unit multiplier for the relative earliest exercise date offset.

Type: [int](#)

Used in components: [OptionExerciseDates](#)

### 171.2.3543 OptionExerciseEarliestDateOffsetUnit

Time unit associated with the relative earliest exercise date offset.

Type: [String](#)

Allowed values in ProvisionOptionExerciseEarliestDateOffsetUnitCodeSet:

---

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: [OptionExerciseDates](#)

### 171.2.3544 OptionExerciseEarliestTime

The earliest time at which notice of exercise can be given by the buyer to the seller (or seller's agent) (i) on the expiration date, in the case of a European style option, (ii) on each Bermuda option exercise date and the expiration date, in the case of a Bermuda style option, (iii) the commencement date to, and including, the expiration date, in the case of an American option.

Type: [LocalMktTime](#)

Used in components: [OptionExerciseDates](#)

### 171.2.3545 OptionExerciseExpiration

The OptionExerciseExpiration component is a subcomponent of the OptionExercise component used to specify option exercise expiration dates and times. The purpose of OptionExercise is to identify the scheduled opportunities for exercise. OptionExerciseExpiration identifies the end of the schedule.

Name	Mult.	Type	Description
<a href="#">OptionExerciseExpirationDateBusinessDayConvention</a>	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the DateAdjustment component in Instrument. The specified value would be specific to this instance of option exercise expiration dates.
<a href="#">OptionExerciseExpirationDateBusinessCenterGrp</a>	[0..*]	Group	When specified, this overrides the business centers defined in the DateAdjustment component in Instrument. The specified values would be specific to this instance of option exercise expiration dates.
<a href="#">OptionExerciseExpirationDateGrp</a>	[0..*]	Group	
<a href="#">OptionExerciseExpirationDateRelativeTo</a>	[0..1]	int	
<a href="#">OptionExerciseExpirationDateOffsetPeriod</a>	[0..1]	int	Conditionally required when <a href="#">OptionExerciseExpirationDateOffsetUnit(41145)</a> is specified.
<a href="#">OptionExerciseExpirationDateOffsetUnit</a>	[0..1]	CodeSet	Conditionally required when <a href="#">OptionExerciseExpirationDateOffsetPeriod(41144)</a> is specified.
<a href="#">OptionExerciseExpirationFrequencyPeriod</a>	[0..1]	int	Conditionally required when <a href="#">OptionExerciseExpirationFrequencyUnit(41147)</a> is specified.
<a href="#">OptionExerciseExpirationFrequencyUnit</a>	[0..1]	CodeSet	Conditionally required when <a href="#">OptionExerciseExpirationFrequencyPeriod(41146)</a> is specified.
<a href="#">OptionExerciseExpirationRollConvention</a>	[0..1]	CodeSet	When specified, this overrides the date roll convention defined in the DateAdjustment component in Instrument. The specified values would be specific to this instance of the option expiration dates and times.
<a href="#">OptionExerciseExpirationDateOffsetDayType</a>	[0..1]	CodeSet	

Name	Mult.	Type	Description
OptionExerciseExpirationTime	[0..1]	LocalMktTime	
OptionExerciseExpirationTimeBusinessCenter	[0..1]	String	

Used in components: [OptionExercise](#)

### 171.2.3546 OptionExerciseExpirationDate

An adjusted or unadjusted fixed option exercise expiration date.

Type: [LocalMktDate](#)

Used in groups: [OptionExerciseExpirationDateGrp](#)

### 171.2.3547 OptionExerciseExpirationDateBusinessCenter

The business center calendar used to adjust the option exercise expiration dates, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in groups: [OptionExerciseExpirationDateBusinessCenterGrp](#)

### 171.2.3548 OptionExerciseExpirationDateBusinessCenterGrp

The OptionExerciseExpirationDateBusinessCenterGrp is a repeating subcomponent of the OptionExerciseExpiration component used to specify the set of business centers whose calendars drive date adjustment. Used only to override the business centers defined in the DateAdjustment component in Instrument.

Name	Mult.	Type	Description
NoOptionExerciseExpirationDateBusinessCenters	[1..1]	NumInGroup	
OptionExerciseExpirationDateBusinessCenter	[0..1]	String	Required if NoOptionExerciseExpirationDateBusinessCenters(41140) > 0.

Used in components: [OptionExerciseExpiration](#)

**171.2.3549 OptionExerciseExpirationDateBusinessDayConvention**

The business day convention used to adjust the option exercise expiration dates. Used only to override the business day convention specified in the DateAdjustment component within the Instrument component.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [OptionExerciseExpiration](#)

**171.2.3550 OptionExerciseExpirationDateGrp**

The OptionExerciseExpirationDateGrp is a repeating subcomponent of the OptionExerciseExpiration component used to specify fixed dates for expiration.

Name	Mult.	Type	Description
<a href="#">NoOptionExerciseExpirationDates</a>	[1..1]	NumInGroup	
<a href="#">OptionExerciseExpirationDate</a>	[0..1]	LocalMktDate	Required if NoOptionExpirationDates(41152) > 0.
<a href="#">OptionExerciseExpirationDateType</a>	[0..1]	CodeSet	When specified it applies not only to the current date but to all subsequent dates in the group until overridden with a new type.

Used in components: [OptionExerciseExpiration](#)

**171.2.3551 OptionExerciseExpirationDateOffsetDayType**

Specifies the day type of the relative option exercise expiration date offset.

Type: **int**

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in components: [OptionExerciseExpiration](#)

**171.2.3552 OptionExerciseExpirationDateOffsetPeriod**

Time unit multiplier for the relative exercise expiration date offset.

Type: **int**

Used in components: [OptionExerciseExpiration](#)

**171.2.3553 OptionExerciseExpirationDateOffsetUnit**

Time unit associated with the relative exercise expiration date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: [OptionExerciseExpiration](#)

**171.2.3554 OptionExerciseExpirationDateRelativeTo**

Specifies the anchor date when the option exercise expiration date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: **int**

Used in components: **OptionExerciseExpiration**

**171.2.3555 OptionExerciseExpirationDateType**

Specifies the type of option exercise expiration date. When specified it applies not only to the current date but to all subsequent dates in the group until overridden with a new type.

Type: **int**

Allowed values in OptionExerciseDateTypeCodeSet:

---

Code	Name	Description
0	Unadjusted	Unadjusted
1	Adjusted	Adjusted

---

Used in groups: **OptionExerciseExpirationDateGrp**

**171.2.3556 OptionExerciseExpirationFrequencyPeriod**

Time unit multiplier for the frequency of exercise expiration dates.

Type: **int**

Used in components: **OptionExerciseExpiration**

**171.2.3557 OptionExerciseExpirationFrequencyUnit**

Time unit associated with the frequency of exercise expiration dates.

Type: **String**

Allowed values in ProtectionTermEventUnitCodeSet:

---

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: [OptionExerciseExpiration](#)

### 171.2.3558 OptionExerciseExpirationRollConvention

The convention for determining the sequence of exercise expiration dates. It is used in conjunction with a specified frequency. Used only to override the roll convention defined in the DateAdjustment component in Instrument.

Type: [String](#)

Allowed values in DateRollConventionCodeSet:

---

Code	Name	Description
1	FirstDay	1st day of the month
2	SecondDay	2nd day of the month
3	ThirdDay	3rd day of the month
4	FourthDay	4th day of the month
5	FifthDay	5th day of the month
6	SixthDay	6th day of the month
7	SeventhDay	7th day of the month
8	EighthDay	8th day of the month
9	NinthDay	9th day of the month
10	TenthDay	10th day of the month
11	EleventhDay	11th day of the month
12	TwelvthDay	12th day of the month
13	ThirteenthDay	13th day of the month
14	ForteenthDay	14th day of the month
15	FifteenthDay	15th day of the month
16	SixteenthDay	16th day of the month
17	SeventeenthDay	17th day of the month

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
18	EighteenthDay	18th day of the month
19	NineteenthDay	19th day of the month
20	TwentiethDay	20th day of the month
21	TwentyFirstDay	21st day of the month
22	TwentySecondDay	22nd day of the month

28	TwentyEighthDay	28th day of the month
29	TwentyNinthDay	29th day of the month
30	ThirtiethDay	30th day of the month
EOM	EOM	The end of the month. Use EOM for 31st day of the month.
FRN	FRN	The floating rate note convention or Eurodollar convention.
IMM	IMM	The International Money Market settlement date, i.e. the 3rd Wednesday of the month.
IMMCAD	IMMCAD	The last trading day/expiration day of the Canadian Derivatives Exchange.
IMMAUD	IMMAUD	The last trading day of the Sydney Futures Exchange Australian 90-day bank accepted bill futures contract.
IMMNZD	IMMNZD	The last trading day of the Sydney Futures Exchange New Zealand 90-day bank bill futures contract.
SFE	SFE	The Sydney Futures Exchange 90-day bank accepted bill futures settlement dates.
NONE	NONE	No adjustment
TBILL	TBILL	The 13-week and 26-week U.S. Treasury Bill auction dates.
MON	MON	Monday
TUE	TUE	Tuesday
WED	WED	Wednesday
THU	THU	Thursday
FRI	FRI	Friday
SAT	SAT	Saturday
SUN	SUN	Sunday

Used in components: [OptionExerciseExpiration](#)

### **171.2.3559 OptionExerciseExpirationTime**

The option exercise expiration time.

Type: [LocalMktTime](#)

Used in components: [OptionExerciseExpiration](#)

### **171.2.3560 OptionExerciseExpirationTimeBusinessCenter**

The business center used to determine the locale for option exercise expiration time, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in components: [OptionExerciseExpiration](#)

### **171.2.3561 OptionExerciseFirstDateUnadjusted**

The unadjusted first exercise date.

Type: [LocalMktDate](#)

Used in components: [OptionExerciseDates](#)

### **171.2.3562 OptionExerciseFrequencyPeriod**

Time unit multiplier for the frequency of exercise dates.

Type: [int](#)

Used in components: [OptionExerciseDates](#)

### **171.2.3563 OptionExerciseFrequencyUnit**

Time unit associated with the frequency of exercise dates.

Type: [String](#)

Allowed values in ProtectionTermEventUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: [OptionExerciseDates](#)

### 171.2.3564 OptionExerciseLastDateUnadjusted

The unadjusted last exercise date.

Type: [LocalMktDate](#)

Used in components: [OptionExerciseDates](#)

### 171.2.3565 OptionExerciseLatestTime

The latest exercise time. See also [OptionExerciseEarliestTime\(41134\)](#).

Type: [LocalMktTime](#)

Used in components: [OptionExerciseDates](#)

### 171.2.3566 OptionExerciseMakeWholeProvision

[OptionExerciseMakeWholeProvision](#) is a subcomponent of the [OptionExercise](#) component used to specify the set of rules of maintaining balance when an option is exercised.

Name	Mult.	Type	Description
<a href="#">MakeWholeDate</a>	[0..1]	<a href="#">LocalMktDate</a>	
<a href="#">MakeWholeAmount</a>	[0..1]	Amt	
<a href="#">MakeWholeBenchmarkCurveName</a>	[0..1]	String	
<a href="#">MakeWholeBenchmarkCurvePoint</a>	[0..1]	String	
<a href="#">MakeWholeRecallSpread</a>	[0..1]	<a href="#">PriceOffset</a>	
<a href="#">MakeWholeBenchmarkQuote</a>	[0..1]	<a href="#">CodeSet</a>	
<a href="#">MakeWholeInterpolationMethod</a>	[0..1]	<a href="#">CodeSet</a>	

Used in components: [OptionExercise](#)

### **171.2.3567 OptionExerciseNominationDeadline**

Last date (adjusted) for establishing the option exercise terms.

Type: [LocalMktDate](#)

Used in components: [OptionExerciseDates](#)

### **171.2.3568 OptionExerciseSkip**

The number of periods in the referenced date schedule that are between each date in the relative date schedule. Thus a skip of 2 would mean that dates are relative to every second date in the referenced schedule. If present this should have a value greater than 1.

Type: [int](#)

Used in components: [OptionExerciseDates](#)

### **171.2.3569 OptionExerciseStartDateAdjusted**

The adjusted start date for calculating periodic exercise dates.

Type: [LocalMktDate](#)

Used in components: [OptionExerciseDates](#)

### **171.2.3570 OptionExerciseStartDateOffsetDayType**

Specifies the day type of the relative option exercise start date offset.

Type: [int](#)

Allowed values in [PaymentStreamPaymentDateOffsetDayTypeCodeSet](#):

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business

---

---

Code	Name	Description
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in components: [OptionExerciseDates](#)

### **171.2.3571 OptionExerciseStartDateOffsetPeriod**

Time unit multiplier for the relative exercise start date offset.

Type: [int](#)

Used in components: [OptionExerciseDates](#)

### **171.2.3572 OptionExerciseStartDateOffsetUnit**

Time unit associated with the relative exercise start date offset.

Type: [String](#)

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: [OptionExerciseDates](#)

### **171.2.3573 OptionExerciseStartDateRelativeTo**

Specifies the anchor date when the option exercise start date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: [int](#)

Used in components: [OptionExerciseDates](#)

### **171.2.3574 OptionExerciseStartDateUnadjusted**

The unadjusted start date for calculating periodic exercise dates.

Type: **LocalMktDate**

Used in components: **OptionExerciseDates**

### **171.2.3575 OptionExerciseTimeBusinessCenter**

The business center used to determine the locale for option exercise time, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values

Type: **String**

Used in components: **OptionExerciseDates**

### **171.2.3576 OptionExpirationDesc**

Description of the option expiration.

Type: **String**

Used in components: **Instrument**

### **171.2.3577 OptionsExchangeDividendsIndicator**

Indicates whether option exchange dividends are applicable.

Type: **Boolean**

Used in components: **DividendConditions**

### **171.2.3578 OptPayoutAmount**

Cash amount indicating the pay out associated with an option. For binary options this is a fixed amount.

Type: **Amt**

Used in components: **Instrument**

**171.2.3579 OptPayoutType**

Indicates the type of valuation method or payout trigger for an in-the-money option.

Type: **int**

Allowed values in OptPayoutTypeCodeSet:

Code	Name	Description
1	Vanilla	Vanilla
2	Capped	Capped
3	Binary	Digital (Binary)
4	Asian	Asian
5	Barrier	Barrier
6	DigitalBarrier	Digital Barrier
7	Lookback	Lookback
8	OtherPathDependent	Other path dependent
99	Other	Other

Used in components: **Instrument**

**171.2.3580 OrdAllocGrp**

Name	Mult.	Type	Description
<b>NoOrders</b>	[1..1]	NumInGroup	Indicates number of orders to be combined for allocation. If order(s) were manually delivered set to 1 (one). Required when AllocNoOrdersType = 1
<b>ClOrdID</b>	[0..1]	String	Order identifier assigned by client if order(s) were electronically delivered over FIX (or otherwise assigned a ClOrdID) and executed. If order(s) were manually delivered (or otherwise not delivered over FIX) this field should contain string "MANUAL". Note where an order has undergone one or more cancel/replaces, this should be the ClOrdID of the most recent version of the order. Required when NoOrders(73) > 0 and must be the first repeating field in the group.
<b>OrderID</b>	[0..1]	String	

Name	Mult.	Type	Description
SecondaryOrderID	[0..1]	String	Can be used to provide order id used by exchange or executing system.
SecondaryClOrdID	[0..1]	String	
ListID	[0..1]	String	Required for List Orders.
NestedParties2	[0..*]	Group	Insert here the set of "NestedParties2" fields defined in "Common Components of Application Messages". This is used to identify the executing broker for step in/give in trades
OrderQty	[0..1]	Qty	
OrderAvgPx	[0..1]	Price	Average price for this order. For FX, if specified, expressed in terms of Currency(15).
OrderBookingQty	[0..1]	Qty	Quantity of this order that is being booked out by this message (will be equal to or less than this order's OrderQty). Note that the sum of the OrderBookingQty values in this repeating group must equal the total quantity being allocated (in Quantity (53) field)
OrdType	[0..1]	CodeSet	

Used in messages: [AllocationInstruction](#), [AllocationInstructionAlert](#), [AllocationReport](#), [Confirmation](#), [ConfirmationRequest](#)

### 171.2.3581 OrderAggregationGrp

Identifies the orders being aggregated together.

Name	Mult.	Type	Description
NoOrders	[1..1]	NumInGroup	
ClOrdID	[0..1]	String	Required if NoOrders(73) > 0.
OrderID	[0..1]	String	
OrderQty	[0..1]	Qty	Required if NoOrders(73) > 0.
OrderAvgPx	[0..1]	Price	

Used in messages: [TradeAggregationRequest](#)

### 171.2.3582 OrderAttributeGrp

The OrderAttributeGrp component provides additional attributes about the order. Attributes included in this component are primarily "indicators" that may be associated with regulatory requirements and are typically not part of normal trading activities.

Name	Mult.	Type	Description
NoOrderAttributes	[1..1]	NumInGroup	
OrderAttributeType	[0..1]	CodeSet	Required if NoOrderAttributes(2593) > 0.
OrderAttributeValue	[0..1]	String	Required if NoOrderAttributes(2593) > 0.

Used in components: [TradeReportOrderDetail](#)

Used in groups: [ListOrdGrp](#)

Used in messages: [ExecutionReport](#), [MultilegOrderCancelReplace](#), [NewOrderMultileg](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#)

### 171.2.3583 OrderAttributeType

The type of order attribute.

Type: [int](#)

Allowed values in OrderAttributeTypeCodeSet:

Code	Name	Description
0	AggregatedOrder	Aggregated order. In the context of ESMA RTS 24 Article 2(3), when OrderAttributeValue(2595)=Y, it signifies that the order consists of several orders aggregated together. This maps to ESMA RTS value "AGGR".
1	PendingAllocation	Order pending allocation. In the context of ESMA RTS 24 Article 2(2), when OrderAttributeValue(2595)=Y, it signifies that the order submitter "is authorized under the legislation of a Member State to allocate an order to its client following submission of the order to the trading venue and has not yet allocated the order to its client at the time of the submission of the order". This maps to ESMA RTS value "PNAL".

Code	Name	Description
2	LiquidityProvisionActivityOrder	Liquidity provision activity order. In the context of ESMA RTS 24 Article 3, when OrderAttributeValue(2595)=Y, it signifies that the order was submitted "as part of a market making strategy pursuant to Articles 17 and 18 of Directive 2014/65/EU, or is submitted as part of another activity in accordance with Article 3" (of RTS 24).
3	RiskReductionOrder	Risk reduction order. In the context of ESMA RTS 22 Article 4(2)(i), when OrderAttributeValue(2595)=Y, it signifies that the commodity derivative order is a transaction "to reduce risk in an objectively measurable way in accordance with Article 57 of Directive 2014/65/EU".
4	AlgorithmicOrder	Algorithmic order. When OrderAttributeValue(2595)=Y, it signifies the order submitted to the dealer/investment firm resulted from an algorithm.
5	SystematicInternaliserOrder	Authorised reporter order. When OrderAttributeValue(2595)=Y, it signifies the order is submitted by an authorised reporter who is responsible for reporting trades resulting from the order. This may be a systematic internaliser.
6	AllExecutionsSubmittedToAPA	All executions for the order are to be submitted to an APA. All executions from this order that may need to be trade reported by the order submitter under MiFID II rules will be submitted by the order receiver on the submitter's behalf to the Approved Publication Arrangement (APA) facility specified in OrderAttributeValue(2595). ESMA RTS 1.
7	OrderExecutionInstructedByClient	Order execution instructed by client. In the context of ESMA RTS 22, Annex I, Table 2, Field 59, when OrderAttributeValue(2595)=Y, it signifies that the execution (e.g. the details of the trade including the venue of execution) was instructed by a client or by another person from outside the Investment Firm but within the same group (Field 59 'CLIENT' in ESMA 2016-1452 Guidelines).
8	LargeInScale	Large in scale order. In the context of MiFIR Article 4(1)(c) and Article 9(1)(a), when OrderAttributeValue(2595)=Y, it signifies that the order size is large in scale compared to normal market size.
9	Hidden	Hidden order. In the context of MiFIR Article 4(1)(d) and Article 9(1)(a), when OrderAttributeValue(2595)=Y, it signifies that the order is held in an order management facility of the trading venue pending disclosure.

Code	Name	Description
10	SubjectToEUSTO	Subject to EU share trading obligation (STO). This attribute is mutually exclusive with OrderAttributeType(2594)=14 (Exempt from STO), but not mutually exclusive with OrderAttributeType(2594)=11 (Subject to UK STO). In the context of the trading obligation for shares (STO) under ESMA's Article 23 of MiFIR, it signifies that the order is subject to the rules defined by ESMA.
11	SubjectToUKSTO	Subject to UK share trading obligation (STO). This attribute is mutually exclusive with OrderAttributeType(2594)=14 (Exempt from STO), but not mutually exclusive with OrderAttributeType(2594)=10 (Subject to EU STO). In the context of the trading obligation for shares (STO) under ESMA's Article 23 of MiFIR, it signifies that the order is subject to UK rules defined by the FCA.
12	RepresentativeOrder	Representative order. Order was originated to represent an order received by the broker from a customer/client.
13	LinkageType	Linkage type. Order is subject to regulatory linkage requirements related to customer/client orders. Can be used for US CAT order and trade level linkages between customer/client orders and representative orders.
14	ExemptFromSTO	Exempt from share trading obligation (STO). This attribute is mutually exclusive with OrderAttributeType(2594)=10 = (Subject to EU STO) and OrderAttributeType(2594)=11 = (Subject to UK STO). It can be used to override standing instructions for a trading obligation for shares (STO). It overrides the standing instructions in their entirety. In the context of STO under ESMA's Article 23 of MiFIR, it signifies that the order is exempt from any share trading obligation.

---

Used in groups: [OrderAttributeGrp](#)

### 171.2.3584 OrderAttributeValue

The value associated with the order attribute type specified in OrderAttributeType(2594).

Type: [String](#)

Used in groups: [OrderAttributeGrp](#)

**171.2.3585 OrderAvgPx**

Average price for a specific order

Type: **Price**

Used in groups: **OrdAllocGrp, OrderAggregationGrp**

**171.2.3586 OrderBookingQty**

Quantity of the order that is being booked out as part of an Allocation Instruction or Allocation Report message

Type: **Qty**

Used in groups: **OrdAllocGrp**

**171.2.3587 OrderCapacity**

Designates the capacity of the firm placing the order.

(as of FIX 4.3, this field replaced Rule80A (tag 47) –used in conjunction with OrderRestrictions (529) field)

(see Volume : "Glossary" for value definitions)

Type: **char**

Allowed values in OrderCapacityCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
A	Agency	Agency
G	Proprietary	Proprietary
I	Individual	Individual
P	Principal	Principal. For some markets Principal may include Proprietary.
R	RisklessPrincipal	Riskless Principal
W	AgentForOtherMember	Agent for Other Member
M	MixedCapacity	Mixed capacity

---

Used in components: **TradeReportOrderDetail**

Used in groups: **CpctyConfGrp, ListOrdGrp, MDFullGrp, MDIncGrp, QuotEntryAckGrp, QuotEntryGrp, SideCrossOrdModGrp**

Used in messages: [ExecutionReport](#), [MassOrder](#), [MassOrderAck](#), [MultilegOrderCancelReplace](#), [NewOrderMultileg](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#), [Quote](#), [QuoteRequest](#), [QuoteResponse](#), [QuoteStatusReport](#)

### **171.2.3588 OrderCapacityQty**

Quantity executed under a specific OrderCapacity (e.g. quantity executed as agent, quantity executed as principal)

Type: [Qty](#)

Used in groups: [CpctyConfGrp](#)

### **171.2.3589 OrderCategory**

Defines the type of interest behind a trade (fill or partial fill).

Type: [char](#)

Allowed values in OrderCategoryCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	Order	Order
2	Quote	Quote
3	PrivatelyNegotiatedTrade	Privately Negotiated Trade
4	MultilegOrder	Multileg order
5	LinkedOrder	Linked order
6	QuoteRequest	Quote Request
7	ImpliedOrder	Implied Order
8	CrossOrder	Cross Order
9	StreamingPrice	Streaming price (quote)
A	InternalCrossOrder	Internal Cross Order

---

Used in groups: [MDFullGrp](#), [MDIncGrp](#), [TrdCapRptAckSideGrp](#), [TrdCapRptSideGrp](#), [TrdMatchSideGrp](#)

Used in messages: [ExecutionReport](#)

**171.2.3590 OrderDelay**

Time lapsed from order entry until match, based on the unit of time specified in OrderDelayUnit. Default is seconds if OrderDelayUnit is not specified. Value = 0, indicates the aggressor (the initiating side of the trade).

Type: **int**

Used in groups: **TrdCapRptAckSideGrp, TrdCapRptSideGrp, TrdMatchSideGrp**

**171.2.3591 OrderDelayUnit**

Time unit in which the OrderDelay(1428) is expressed

Type: **int**

Allowed values in OrderDelayUnitCodeSet:

Code	Name	Description
0	Seconds	Seconds (default if not specified)
1	TenthsOfASecond	Tenths of a second
2	HundredthsOfASecond	Hundredths of a second
3	Milliseconds	milliseconds
4	Microseconds	microseconds
5	Nanoseconds	nanoseconds
10	Minutes	minutes
11	Hours	hours
12	Days	days
13	Weeks	weeks
14	Months	months
15	Years	years

Used in groups: **TrdCapRptAckSideGrp, TrdCapRptSideGrp, TrdMatchSideGrp**

**171.2.3592 OrderEntryAckGrp**

Acknowledgment for a group of order transactions across one or more instruments.

Name	Mult.	Type	Description
NoOrderEntries	[1..1]	NumInGroup	
OrdStatus	[0..1]	CodeSet	Required if NoOrderEntries(2428) > 0.
ExecType	[0..1]	CodeSet	Required if NoOrderEntries(2428) > 0.
ExecTypeReason	[0..1]	CodeSet	
OrderEntryAction	[0..1]	CodeSet	
OrderEntryID	[0..1]	int	Conditionally required when neither ClOrdID(11) nor OrderID(37) is provided.
ClOrdID	[0..1]	String	Conditionally required when neither OrderEntryID(2430) nor OrderID(37) is provided.
OrigClOrdID	[0..1]	String	ClOrdID(11) of the previous non rejected order (NOT the initial order of the day) when canceling or replacing an order. Conditionally required when ClOrdID(11) is provided and message-chaining model is used.
OrderID	[0..1]	String	Conditionally required when neither OrderEntryID(2430) nor ClOrdID(11) is provided.
OrdRejReason	[0..1]	CodeSet	
CumQty	[0..1]	Qty	Use to explicitly provide executed quantity.
LeavesQty	[0..1]	Qty	Use to explicitly provide remaining quantity.
CxlQty	[0..1]	Qty	Use to explicitly provide cancelled quantity.
OrdType	[0..1]	CodeSet	
Price	[0..1]	Price	
Side	[0..1]	CodeSet	
TimeInForce	[0..1]	CodeSet	
OrderQtyData	[0..1]	Component	
Instrument	[0..1]	Component	

Used in messages: [MassOrderAck](#)

### 171.2.3593 OrderEntryAction

Specifies the action to be taken for the given order.

Type: [char](#)

Allowed values in OrderEntryActionCodeSet:

Code	Name	Description
1	Add	Add
2	Modify	Modify
3	Delete	Delete / Cancel
4	Suspend	Suspend
5	Release	Release

Used in groups: [OrderEntryAckGrp](#), [OrderEntryGrp](#)

### 171.2.3594 OrderEntryGrp

Group of order transactions across one or more instruments.

Name	Mult.	Type	Description
NoOrderEntries	[1..1]	NumInGroup	
OrderEntryAction	[0..1]	CodeSet	Required if NoOrderEntries(2428) > 0.
OrderEntryID	[0..1]	int	Unique order entry identification across all entries of a single message. Conditionally required when neither ClOrdID(11) nor OrderID(37) is provided.
ClOrdID	[0..1]	String	Conditionally required when neither OrderEntryID(2430) nor OrderID(37) is provided.
OrigClOrdID	[0..1]	String	Conditionally required when OrderEntryAction(2429) is not "1" (Add), ClOrdID(11) was provided in original order, and message-chaining model is used.
OrderID	[0..1]	String	Conditionally required when OrderEntryAction(2429) is not "1" (Add) and neither OrderEntryID(2430) nor ClOrdID(11) is provided.
OrdType	[0..1]	CodeSet	Conditionally required when OrderEntryAction (2429) = 1 (Add) or 2 (Modify). Only a subset of OrdType(40) values permitted that do not require additional pricing fields other than Price(44) field.
Price	[0..1]	Price	Conditionally required when OrdType(40) = 2 (Limit)
Side	[0..1]	CodeSet	Conditionally required when OrderEntryAction(2429) = 1 (Add) or 2 (Modify)

Name	Mult.	Type	Description
TimeInForce	[0..1]	CodeSet	Only subset of values permitted that do not require additional fields
OrderQtyData	[0..1]	Component	Conditionally required when OrderEntryAction(2429) = 1 (Add) or 2 (Modify)
Instrument	[0..1]	Component	Required if NoOrderEntries(2432) > 0.

Used in messages: [MassOrder](#)

### 171.2.3595 OrderEntryID

Unique identifier for an order within a single [MassOrder\(35=DJ\)](#) message that can be used as a reference in the [MassOrderAck\(35=DK\)](#) message.

Type: [int](#)

Used in groups: [OrderEntryAckGrp](#), [OrderEntryGrp](#)

### 171.2.3596 OrderEventExecID

Refer to [ExecID\(17\)](#). Used when multiple different events are reported in single Execution Report. [ExecID\(17\)](#) and [OrderEventExecID\(1797\)](#) values should not overlap.

Type: [String](#)

Used in groups: [OrderEventGrp](#)

### 171.2.3597 OrderEventGrp

List the different types of events affecting orders. These can include entry, modification and deletion of orders as well as executions (fills). Modifications can be solicited or unsolicited, e.g. triggering of stop orders, replenishment of reserve orders, orders being suspended (locked) or released from suspension.

Name	Mult.	Type	Description
NoOrderEvents	[1..1]	NumInGroup	
OrderEventType	[0..1]	CodeSet	Required when NoOrderEvents(1795) > 0.
OrderEventExecID	[0..1]	String	

Name	Mult.	Type	Description
OrderEventReason	[0..1]	CodeSet	
OrderEventPx	[0..1]	Price	
OrderEventQty	[0..1]	Qty	
OrderEventLiquidityIndicator	[0..1]	CodeSet	
OrderEventText	[0..1]	String	

Used in messages: **ExecutionReport**

### 171.2.3598 OrderEventLiquidityIndicator

Indicator to identify whether this fill was a result of a liquidity provider providing or liquidity taker taking the liquidity. Applicable only for OrderEventType(1796) values of 4(Partially Filled) or 5(Filled).

Type: **int**

Allowed values in LastLiquidityIndCodeSet:

Code	Name	Description
0	NeitherAddedNorRemovedLiquidity	Neither added nor removed liquidity. May be used by venues where market rules do not define "add" or "remove" liquidity. In the context of the SEC amendment of Regulation NMS Rule 606(b), may be used to identify executions that are only reported as part of total shares executed and not as part of shares providing or removing liquidity (see <a href="https://www.sec.gov/rules/final/2018/34-84528.pdf">https://www.sec.gov/rules/final/2018/34-84528.pdf</a> for details).
1	AddedLiquidity	Added Liquidity
2	RemovedLiquidity	Removed Liquidity
3	LiquidityRoutedOut	Liquidity Routed Out
4	Auction	Auction execution
5	TriggeredStopOrder	Triggered stop order. Fill was the result of a stop order being triggered and immediately executed.
6	TriggeredContingencyOrder	Triggered contingency order. Fill was the result of a contingency order (OCO, OTO, OUO) becoming active (after cancelling or updating another order) and being immediately executed.
7	TriggeredMarketOrder	Triggered market order. Fill was the result of a market order being triggered due to an executable orderbook situation.

Code	Name	Description
8	RemovedLiquidityAfterFirmOrder-Commitment	Removed liquidity after firm order commitment. An order that was submitted for continuous trading that required a firm order commit prior to execution. "Conditional order" is an alternate term used for such orders.
9	AuctionExecutionAfterFirmOrder-Commitment	Auction execution after firm order commitment. An order that was submitted for auction trading that required a firm order commit prior to execution. "Conditional order" is an alternate term used for such orders.
10	Unknown	Unknown. The liquidity indicator of the execution cannot be determined or was not provided upon execution.
11	Other	Other. None of the existing liquidity indicators are applicable for the execution (e.g. due to a venue's new order type that does not fit existing values).

---

Used in groups: [OrderEventGrp](#)

#### **171.2.3599 OrderEventPx**

Price associated with the event.

Type: [Price](#)

Used in groups: [OrderEventGrp](#)

#### **171.2.3600 OrderEventQty**

Quantity associated with the event.

Type: [Qty](#)

Used in groups: [OrderEventGrp](#)

#### **171.2.3601 OrderEventReason**

Action that caused the event to occur.

Type: [int](#)

Allowed values in OrderEventReasonCodeSet:

---

Code	Name	Description
1	AddOrderRequest	Add order request
2	ModifyOrderRequest	Modify order request
3	DeleteOrderRequest	Delete order request
4	OrderEnteredOOB	Order entered out-of-band
5	OrderModifiedOOB	Order modified out-of-band
6	OrderDeletedOOB	Order deleted out-of-band
7	OrderActivatedOrTriggered	Order activated or triggered
8	OrderExpired	Order expired
9	ReserveOrderRefreshed	Reserve order refreshed
10	AwayMarketBetter	Away market better
11	CorporateAction	Corporate action
12	StartOfDay	Start of day
13	EndOfDay	End of day

---

Used in groups: [OrderEventGrp](#)

### 171.2.3602 OrderEventText

Additional information about the event.

Type: [String](#)

Used in groups: [OrderEventGrp](#)

### 171.2.3603 OrderEventType

The type of event affecting an order. The last event type within the OrderEventGrp component indicates the ExecType(150) value resulting from the series of events (ExecType(150) values are shown in brackets).

Type: [int](#)

Allowed values in OrderEventTypeCodeSet:

---

Code	Name	Description
1	Added	Added (0=New)

---

Code	Name	Description
2	Modified	Modified (5=Replaced)
3	Deleted	Deleted (4=Canceled)
4	PartiallyFilled	Partially Filled (F=Trade)
5	Filled	Filled (F=Trade)
6	Suspended	Suspended (9=Suspended)
7	Released	Released (N=Released)
8	Restated	Restated (D=Restated)
9	Locked	Locked (M=Locked)
10	Triggered	Triggered (L=Triggered or Activated by System)
11	Activated	Activated (L=Triggered or Activated by System)

Used in groups: [OrderEventGrp](#)

#### 171.2.3604 OrderHandlingInstSource

Identifies the class or source of the order handling instruction values. Scope of this will apply to both CustOrderHandlingInst(1031) and DeskOrderHandlingInst(1035).

Conditionally required when CustOrderHandlingInst(1031) or DeskOrderHandlingInst(1035) is specified.

Type: [int](#)

Allowed values in OrderHandlingInstSourceCodeSet:

Code	Name	Description
1	FINRAOATS	FINRA OATS
2	FIAExecutionSourceCode	FIA Execution Source Code

Used in groups: [TrdCapRptAckSideGrp](#), [TrdCapRptSideGrp](#), [TrdMatchSideGrp](#)

Used in messages: [AllocationInstructionAlert](#), [AllocationReport](#), [AllocationReportAck](#), [ExecutionReport](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#)

**171.2.3605 OrderID**

Unique identifier for Order as assigned by sell-side (broker, exchange, ECN). Uniqueness must be guaranteed within a single trading day. Firms which accept multi-day orders should consider embedding a date within the OrderID field to assure uniqueness across days.

Type: **String**

Used in components: **TradeReportOrderDetail**

Used in groups: **MDFullGrp, MDIncGrp, OrdAllocGrp, OrdListStatGrp, OrderAggregationGrp, OrderEntryAckGrp, OrderEntryGrp**

Used in messages: **CollateralAssignment, CollateralInquiry, CollateralInquiryAck, CollateralReport, CollateralRequest, CollateralResponse, CrossOrderCancelReplaceRequest, CrossOrderCancelRequest, DontKnowTrade, Email, ExecutionAck, ExecutionReport, MultilegOrderCancelReplace, OrderCancelReject, OrderCancelReplaceRequest, OrderCancelRequest, OrderMassCancelReport, OrderStatusRequest, TradeCaptureReportRequest**

**171.2.3606 OrderInputDevice**

Specific device number, terminal number or station where order was entered

Type: **String**

Used in components: **TradeReportOrderDetail**

**171.2.3607 OrderOrigination**

Identifies the origin of the order.

Type: **int**

Allowed values in OrderOriginationCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	OrderReceivedFromCustomer	Order received from a customer
2	OrderReceivedFromWithinFirm	Order received from within the firm
3	OrderReceivedFromAnotherBrokerDealer	Order received from another broker-dealer
4	OrderReceivedFromCustomerOrWithFirm	Order received from a customer or originated from within the firm

---

Code	Name	Description
5	OrderReceivedFromDirectAccessCustomer	Order received from a direct access or sponsored access customer
6	OrderReceivedFromForeignDealerEquivalent	Order received from a foreign dealer equivalent. A foreign dealer equivalent is a person in the business of trading securities in a foreign jurisdiction in a manner analogous to an investment dealer and that is subject to the regulatory jurisdiction of a signatory to the International Organization of Securities Commissions' (IOSCO) Multilateral Memorandum of Understanding. in that foreign jurisdiction.
7	OrderReceivedFromExecutionOnly-Service	Order received from an execution-only service. The acceptance and execution of orders from customers for trades that the broker-dealer has not recommended and for which the broker-dealer takes no responsibility as to the appropriateness or suitability of orders accepted or account positions held.

---

Used in components: [TradeReportOrderDetail](#)

Used in groups: [SideCrossOrdModGrp](#)

Used in messages: [ExecutionReport](#), [MultilegOrderCancelReplace](#), [NewOrderMultileg](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#)

### **171.2.3608 OrderOriginationFirmID**

Identifier for the original owner of an order as part of the RelatedOrderGrp component. Use the Parties component with PartyRole(452) = 13 (Order Origination Firm) to identify the original owner of an individual order.

Type: [String](#)

Used in groups: [RelatedOrderGrp](#)

### **171.2.3609 OrderOwnershipIndicator**

Change of ownership of an order to a specific party.

Type: [int](#)

Allowed values in OrderOwnershipIndicatorCodeSet:

Code	Name	Description
0	NoChange	No change of ownership (default)
1	ExecutingPartyChange	Change of ownership to executing party. Executing party can be given either implicitly via session attributes or explicitly via Parties component. The party taking over ownership must also be the one submitting the request.
2	EnteringPartyChange	Change of ownership to entering party. Entering party can be given either implicitly via session attributes or explicitly via Parties component. The party taking over ownership must also be the one submitting the request.
3	SpecifiedPartyChange	Change of ownership to specified party. Ownership is transferred by a third party from/to the parties specified via Parties component together with PartyRoleQualifier(2376) = Current(18) and New(19).

Used in messages: [ExecutionReport](#), [MultilegOrderCancelReplace](#), [OrderCancelReplaceRequest](#)

#### **171.2.3610 OrderPercent**

For CIV specifies the approximate order quantity desired. For a CIV Sale it specifies percentage of investor's total holding to be sold. For a CIV switch/exchange it specifies percentage of investor's cash realised from sales to be re-invested. The executing broker, intermediary or fund manager is responsible for converting and calculating OrderQty (38) in shares/units for subsequent messages.

Type: [Percentage](#)

Used in components: [OrderQtyData](#)

#### **171.2.3611 OrderPercentOfTotalVolume**

For Percent-of-volume (POV) average pricing this is the target percentage this order quantity represents of the total trading volume of an instrument during the specified time period. This provides the data needed to ensure that the average price is fair based on the total sum of grouped POV trades.

Type: [Percentage](#)

Used in components: [TradeReportOrderDetail](#)

**171.2.3612 OrderQty**

Quantity ordered. This represents the number of shares for equities or par, face or nominal value for FI instruments.

(Prior to FIX 4.2 this field was of type int)

Type: Qty

Used in components: OrderQtyData

Used in groups: OrdAllocGrp, OrderAggregationGrp

Used in messages: CrossRequest, CrossRequestAck

**171.2.3613 OrderQty2**

OrderQty (38) of the future part of a F/X swap order.

Type: Qty

Used in groups: ListOrdGrp, QuotEntryAckGrp, QuotEntryGrp, QuotReqGrp, QuotReqRjctGrp

Used in messages: ExecutionReport, NewOrderSingle, OrderCancelReplaceRequest, Quote, QuoteResponse, QuoteStatusReport

**171.2.3614 OrderQtyData**

The OrderQtyData component block contains the fields commonly used for indicating the amount or quantity of an order. Note that when this component block is marked as "required" in a message either one of these three fields must be used to identify the amount: OrderQty, CashOrderQty or OrderPercent (in the case of CIV).

---

Name	Mult.	Type	Description
OrderQty	[0..1]	Qty	One of CashOrderQty, OrderQty, or (for CIV only) OrderPercent is required. Note that unless otherwise specified, only one of CashOrderQty, OrderQty, or OrderPercent should be specified.

---

Name	Mult.	Type	Description
CashOrderQty	[0..1]	Qty	One of CashOrderQty, OrderQty, or (for CIV only) OrderPercent is required. Note that unless otherwise specified, only one of CashOrderQty, OrderQty, or OrderPercent should be specified. Specifies the approximate "monetary quantity" for the order. Broker is responsible for converting and calculating OrderQty in tradeable units (e.g. shares) for subsequent messages.
OrderPercent	[0..1]	Percentage	For CIV - Optional. One of CashOrderQty, OrderQty or (for CIV only) OrderPercent is required. Note that unless otherwise specified, only one of CashOrderQty, OrderQty, or OrderPercent should be specified.
RoundingDirection	[0..1]	CodeSet	For CIV - Optional
RoundingModulus	[0..1]	float	For CIV - Optional

Used in components: [TradeReportOrderDetail](#)

Used in groups: [ListOrdGrp](#), [OrderEntryAckGrp](#), [OrderEntryGrp](#), [QuotReqGrp](#), [QuotReqRjctGrp](#), [SideCrossOrdCxlGrp](#), [SideCrossOrdModGrp](#)

Used in messages: [DontKnowTrade](#), [ExecutionAck](#), [ExecutionReport](#), [IOI](#), [MultilegOrderCancelReplace](#), [NewOrderMultileg](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#), [OrderCancelRequest](#), [Quote](#), [QuoteResponse](#), [QuoteStatusReport](#)

### 171.2.3615 OrderRelationship

Describes the type of relationship between the order identified by RelatedOrderID(2887) and the order outside of the RelatedOrderGrp component.

Type: [int](#)

Allowed values in OrderRelationshipCodeSet:

Code	Name	Description
0	NotSpecified	Not specified
1	OrderAggregation	Order aggregation. Order has been subject to a bundling of multiple orders to a single new order identified outside of the component.

---

Code	Name	Description
2	OrderSplit	Order split. Order has been created as a child order of the order identified outside of the component.

---

Used in groups: [RelatedOrderGrp](#)

### 171.2.3616 OrderRequestID

Unique message identifier for an order request as assigned by the submitter of the request.

Type: [int](#)

Used in messages: [CrossOrderCancelReplaceRequest](#), [CrossOrderCancelRequest](#), [ExecutionReport](#), [MultilegOrderCancelReplace](#), [NewOrderCross](#), [NewOrderMultileg](#), [NewOrderSingle](#), [OrderCancelReject](#), [OrderCancelReplaceRequest](#), [OrderCancelRequest](#), [SecurityDefinition](#)

### 171.2.3617 OrderResponseLevel

The level of response requested from receiver of mass order messages. A default value should be bilaterally agreed.

Type: [int](#)

Allowed values in OrderResponseLevelCodeSet:

---

Code	Name	Description
0	NoAck	No acknowledgement. Responses are provided through one or more ExecutionReport(35=8) messages.
1	MinimumAck	Minimum acknowledgement. The minimum is any information to explain why the requested transaction was refused or led to additional events, e.g. immediate execution of an order that was entered or modified.
2	AckEach	Acknowledge each order. The number of entries in the response is identical to the number of entries in the request.
3	SummaryAck	Summary acknowledgement. Responses are provided through a single MassOrderAck(35=DK) without entries and one or more ExecutionReport(35=8) messages.

---

Used in messages: [MassOrder](#), [MassOrderAck](#)

**171.2.3618 OrderRestrictions**

Restrictions associated with an order. If more than one restriction is applicable to an order, this field can contain multiple instructions separated by space.

Type: **MultipleCharValue**

Allowed values in OrderRestrictionsCodeSet:

Code	Name	Description
1	ProgramTrade	Program Trade
2	IndexArbitrage	Index Arbitrage
3	NonIndexArbitrage	Non-Index Arbitrage
4	CompetingMarketMaker	Competing Market Maker
5	ActingAsMarketMakerOrSpecialistIn-Security	Acting as Market Maker or Specialist in the security
6	ActingAsMarketMakerOrSpecialistIn-Underlying	Acting as Market Maker or Specialist in the underlying security of a derivative security
7	ForeignEntity	Foreign Entity (of foreign government or regulatory jurisdiction)
8	ExternalMarketParticipant	External Market Participant
9	ExternalInterConnectedMarketLinkage	External Inter-connected Market Linkage
A	RisklessArbitrage	Riskless Arbitrage
B	IssuerHolding	Issuer Holding
C	IssuePriceStabilization	Issue Price Stabilization
D	NonAlgorithmic	Non-algorithmic
E	Algorithmic	Algorithmic
F	Cross	Cross
G	InsiderAccount	Insider Account
H	SignificantShareholder	Significant Shareholder
I	NormalCourseIssuerBid	Normal Course Issuer Bid (NCIB)

Used in components: **TradeReportOrderDetail**

Used in groups: **CpctyConfGrp, ListOrdGrp, QuotEntryAckGrp, QuotEntryGrp, SideCrossOrdModGrp**

Used in messages: **ExecutionReport, MassOrder, MassOrderAck, MultilegOrderCancelReplace, NewOrderMultileg, NewOrderSingle, OrderCancelReplaceRequest, Quote, QuoteRequest, QuoteResponse, QuoteStatusReport**

**171.2.3619 OrdListStatGrp**

Name	Mult.	Type	Description
NoOrders	[1..1]	NumInGroup	Number of orders stasured in this message, i.e. number of repeating groups to follow.
ClOrdID	[0..1]	String	Required when referring to orders that were electronically submitted over FIX or otherwise assigned a ClOrdID.
OrderID	[0..1]	String	
SecondaryClOrdID	[0..1]	String	
CumQty	[1..1]	Qty	
OrdStatus	[1..1]	CodeSet	
WorkingIndicator	[0..1]	CodeSet	For optional use with OrdStatus = 0 (New)
LeavesQty	[1..1]	Qty	Quantity open for further execution. LeavesQty = OrderQty - CumQty.
CxlQty	[1..1]	Qty	
AvgPx	[1..1]	Price	
OrdRejReason	[0..1]	CodeSet	Used if the order is rejected
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.

Used in messages: [ListStatus](#)

**171.2.3620 OrdRejReason**

Code to identify reason for order rejection. Note: Values 3, 4, and 5 will be used when rejecting an order due to pre-allocation information errors.

Type: `int`

Allowed values in OrdRejReasonCodeSet:

Code	Name	Description
0	BrokerCredit	Broker / Exchange option
1	UnknownSymbol	Unknown symbol. In the context of IA FX Reject codes, Trade Request Rejection Category F, order rejected due to the product not being supported, e.g. by the specific venue, tenor restrictions on the market participant(s) involved.
2	ExchangeClosed	Exchange closed
3	OrderExceedsLimit	Order exceeds limit
4	TooLateToEnter	Too late to enter
5	UnknownOrder	Unknown order
6	DuplicateOrder	Duplicate Order (e.g. dupe ClOrdID)
7	DuplicateOfAVerballyCommunicatedOrder	Duplicate of a verbally communicated order
8	StaleOrder	Stale order
9	TradeAlongRequired	Trade along required
10	InvalidInvestorID	Invalid Investor ID
11	UnsupportedOrderCharacteristic	Unsupported order characteristic
12	SurveillanceOption	Surveillance option
13	IncorrectQuantity	Incorrect quantity
14	IncorrectAllocatedQuantity	Incorrect allocated quantity
15	UnknownAccount	Unknown account(s). In the context of IA FX Reject codes, Trade Request Rejection Category D, order rejected due to static data when the account/fund is not setup or unknown.
16	PriceExceedsCurrentPriceBand	Price exceeds current price band
18	InvalidPriceIncrement	Invalid price increment
19	ReferencePriceNotAvailable	Reference price not available
20	NotionalValueExceedsThreshold	Notional value exceeds threshold
21	AlgorithmRiskThresholdBreached	Algorithm risk threshold breached. A sell-side broker algorithm has detected that a risk limit has been breached which requires further communication with the client. Used in conjunction with Text(58) to convey the details of the specific event.
22	ShortSellNotPermitted	Short sell not permitted
23	ShortSellSecurityPreBorrowRestriction	Short sell rejected due to security pre-borrow restriction
24	ShortSellAccountPreBorrowRestriction	Short sell rejected due to account pre-borrow restriction

Code	Name	Description
25	InsufficientCreditLimit	Insufficient credit limit. In the context of IA FX Reject codes, Trade Request Rejection Category C, order rejected due to credit limit exceeded or not in place.
26	ExceededClipSizeLimit	Exceeded clip size limit
27	ExceededMaxNotionalOrderAmt	Exceeded maximum notional order amount
28	ExceededDV01PV01Limit	Exceeded DV01/PV01 limit
29	ExceededCS01Limit	Exceeded CS01 limit
30	LastLook	Last look. In the context of IA FX Reject codes, Trade Request Rejection Category A-1, order rejected due to a "last look".
31	LastLookLatency	Last look latency. In the context of IA FX Reject codes, Trade Request Rejection Category A-2, order rejected due to "last look latency", therefore price or liquidity is unavailable.
32	UnavailablePriceLiquidity	Unavailable price or liquidity. In the context of IA FX Reject codes, Trade Request Rejection Category B, the order was not subjected to last look but rejected due to pricing or liquidity being no longer available for execution.
33	InvalidMissingEntitlements	Invalid or missing entitlements. In the context of IA FX Reject codes, Trade Request Rejection Category D, order rejected due to static/reference data error where counterparty is not permitted or entitled.
99	Other	Other. In the context of IA FX Reject codes, Trade Request Rejection Category E, order rejected due to other exceptions. Further detail may be provided in RejectText(1328) or Text(58), with preference for RejectText(1328) if field is present in the message.

Used in groups: [OrdListStatGrp](#), [OrderEntryAckGrp](#)

Used in messages: [ExecutionReport](#)

### 171.2.3621 OrdStatus

Identifies current status of order. \*\*\* SOME VALUES HAVE BEEN REPLACED - See "Replaced Features and Supported Approach" \*\*\* (see Volume : "Glossary" for value definitions)

Type: [char](#)

Allowed values in OrdStatusCodeSet:

---

Code	Name	Description
0	New	New
1	PartiallyFilled	Partially filled
2	Filled	Filled
3	DoneForDay	Done for day
4	Canceled	Canceled
5	Replaced	Replaced (No longer used)
6	PendingCancel	Pending Cancel (i.e. result of Order Cancel Request)
7	Stopped	Stopped
8	Rejected	Rejected
9	Suspended	Suspended
A	PendingNew	Pending New
B	Calculated	Calculated
C	Expired	Expired
D	AcceptedForBidding	Accepted for Bidding
E	PendingReplace	Pending Replace (i.e. result of Order Cancel/Replace Request)

---

Used in components: [TradeReportOrderDetail](#)

Used in groups: [OrdListStatGrp](#), [OrderEntryAckGrp](#)

Used in messages: [ExecutionReport](#), [OrderCancelReject](#)

### **171.2.3622 OrdStatusReqID**

Can be used to uniquely identify a specific Order Status Request message.

Type: [String](#)

Used in messages: [ExecutionReport](#), [OrderStatusRequest](#)

### **171.2.3623 OrdType**

Order type. \*\*\* SOME VALUES ARE NO LONGER USED - See "Deprecated (Phased-out) Features and Supported Approach" \*\*\* (see Volume : "Glossary" for value definitions)

Type: [char](#)

Allowed values in OrdTypeCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	Market	Market
2	Limit	Limit
3	Stop	Stop/Stop Loss. A stop order that is triggered as a result of a trade in the market at which point the stopped order becomes a market order.
4	StopLimit	Stop Limit. A stop limit order that is triggered as a result of a trade in the market at which point the stopped order becomes a limit order.
5	MarketOnClose	Market On Close (No longer used)
6	WithOrWithout	With Or Without
7	LimitOrBetter	Limit Or Better
8	LimitWithOrWithout	Limit With Or Without
9	OnBasis	On Basis
A	OnClose	On Close (No longer used)
B	LimitOnClose	Limit On Close (No longer used)
C	ForexMarket	Forex Market (No longer used)
D	PreviouslyQuoted	Previously Quoted
E	PreviouslyIndicated	Previously Indicated
F	ForexLimit	Forex Limit (No longer used)
G	ForexSwap	Forex Swap
H	ForexPreviouslyQuoted	Forex Previously Quoted (No longer used)
I	Funari	Funari (Limit day order with unexecuted portion handles as Market On Close. E.g. Japan)
J	MarketIfTouched	Market If Touched (MIT)
K	MarketWithLeftOverAsLimit	Market With Left Over as Limit (market order with unexecuted quantity becoming limit order at last price)
L	PreviousFundValuationPoint	Previous Fund Valuation Point (Historic pricing; for CIV)
M	NextFundValuationPoint	Next Fund Valuation Point (Forward pricing; for CIV)
P	Pegged	Pegged
Q	CounterOrderSelection	Counter-order selection
R	StopOnBidOrOffer	Stop on Bid or Offer. A stop order that is triggered by a bid or offer price movement (quote) at which point the stopped order becomes a market order, also known as "stop on quote" in some markets (e.g. US markets). In the US equities market it is common to trigger a stop off the National Best Bid or Offer (NBBO).

Code	Name	Description
S	StopLimitOnBidOrOffer	Stop Limit on Bid or Offer. A stop order that is triggered by a bid or offer price movement (quote) at which point the stopped order becomes a limit order, also known as "stop limit on quote" in some markets (e.g. US markets). In the US equities market it is common to trigger a stop off the National Best Bid or Offer (NBBO).

Used in components: [MDStatisticParameters](#), [TradeReportOrderDetail](#)

Used in groups: [ListOrdGrp](#), [MDFullGrp](#), [MDIncGrp](#), [OrdAllocGrp](#), [OrdTypeRules](#), [OrderEntryAckGrp](#), [OrderEntryGrp](#), [QuotEntryAckGrp](#), [QuotEntryGrp](#), [QuotReqGrp](#), [QuotReqRjctGrp](#)

Used in messages: [CrossOrderCancelReplaceRequest](#), [ExecutionReport](#), [MultilegOrderCancelReplace](#), [NewOrderCross](#), [NewOrderMultileg](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#), [Quote](#), [QuoteResponse](#), [QuoteStatusReport](#)

### 171.2.3624 OrdTypeRules

Name	Mult.	Type	Description
<a href="#">NoOrdTypeRules</a>	[1..1]	NumInGroup	Number of order types
<a href="#">OrdType</a>	[0..1]	CodeSet	Indicates order types that are valid for the specified market segment.

Used in components: [TradingSessionRules](#)

Used in messages: [MarketDefinition](#), [MarketDefinitionUpdateReport](#)

### 171.2.3625 OrigClOrdID

ClOrdID (11) of the previous order (NOT the initial order of the day) as assigned by the institution, used to identify the previous order in cancel and cancel/replace requests.

Type: [String](#)

Used in groups: [OrderEntryAckGrp](#), [OrderEntryGrp](#), [SideCrossOrdCxlGrp](#), [SideCrossOrdModGrp](#)

Used in messages: [ExecutionReport](#), [MultilegOrderCancelReplace](#), [OrderCancelReject](#), [OrderCancelReplaceRequest](#), [OrderCancelRequest](#)

**171.2.3626 OrigCrossID**

CrossID of the previous cross order (NOT the initial cross order of the day) as assigned by the institution, used to identify the previous cross order in Cross Cancel and Cross Cancel/Replace Requests.

Type: **String**

Used in messages: **CrossOrderCancelReplaceRequest, CrossOrderCancelRequest, ExecutionReport**

**171.2.3627 OrigCustOrderCapacity**

The customer capacity for this trade at the time of the order/execution.

Primarily used by futures exchanges to indicate the CTICode (customer type indicator) as required by the US CFTC (Commodity Futures Trading Commission).

Type: **int**

Allowed values in OrigCustOrderCapacityCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	MemberTradingForTheirOwnAccount	Member trading for their own account
2	ClearingFirmTradingForItsProprietaryAccount	Clearing Firm trading for its proprietary account
3	MemberTradingForAnotherMember	Member trading for another member
4	Allother	All other

---

Used in components: **TradeReportOrderDetail**

**171.2.3628 OriginalNotionalPercentageOutstanding**

Used to reflect the Original value prior to the application of a credit event. See NotionalPercentageOutstanding(1451).

Type: **Percentage**

Used in components: **Instrument**

**171.2.3629 OriginatingDeptID**

An identifier representing the department or desk within the firm that originated the order.

Type: **String**

Used in groups: **SideCrossOrdModGrp**

Used in messages: **ExecutionReport, NewOrderSingle, OrderCancelReplaceRequest**

**171.2.3630 OrigOrdModTime**

The most recent (or current) modification TransactTime (tag 60) reported on an Execution Report for the order. The OrigOrdModTime is provided as an optional field on Order Cancel Request and Order Cancel Replace Requests to identify that the state of the order has not changed since the request was issued. The use of this approach is not recommended.

Type: **UTCTimestamp**

Used in components: **TradeReportOrderDetail**

Used in groups: **SideCrossOrdCxlGrp, SideCrossOrdModGrp**

Used in messages: **MultilegOrderCancelReplace, OrderCancelReject, OrderCancelReplaceRequest, OrderCancelRequest**

**171.2.3631 OrigPosReqRefID**

Reference to the PosReqID (710) of a previous maintenance request that is being replaced or canceled.

Type: **String**

Used in messages: **PositionMaintenanceReport, PositionMaintenanceRequest**

**171.2.3632 OrigSecondaryTradeID**

Used to preserve original secondary trade id when original trade is being referenced in a subsequent trade transaction such as a transfer

Type: **String**

Used in messages: **TradeCaptureReport, TradeCaptureReportAck**

### **171.2.3633 OrigSendingTime**

Original time of message transmission (always expressed in UTC (Universal Time Coordinated, also known as "GMT") when transmitting orders as the result of a resend request.

Type: **UTCTimestamp**

Used in components: **StandardHeader**

### **171.2.3634 OrigStrikePrice**

Original exercise price, e.g. after corporate action requiring changes.

Type: **Price**

Used in components: **Instrument**

### **171.2.3635 OrigTime**

Time of message origination (always expressed in UTC (Universal Time Coordinated, also known as "GMT"))

Type: **UTCTimestamp**

Used in messages: **Email, News**

### **171.2.3636 OrigTradeDate**

Used to preserve original trade date when original trade is being referenced in a subsequent trade transaction such as a transfer

Type: **LocalMktDate**

Used in messages: **TradeCaptureReport, TradeCaptureReportAck**

### **171.2.3637 OrigTradeHandlingInstr**

Optionally used with TradeHandlingInstr = 0 to relay the trade handling instruction used when reporting the trade to the marketplace. Same values as TradeHandlingInstr (1123)

Type: **char**

Allowed values in TradeHandlingInstrCodeSet:

---

Code	Name	Description
0	TradeConfirmation	Trade confirmation
1	TwoPartyReport	Two-party report
2	OnePartyReportForMatching	One-party report for matching
3	OnePartyReportForPassThrough	One-party report for pass through. Can be used when one of the parties to the trade submits a report which then has to be approved or confirmed by the other (counter)party.
4	AutomatedFloorOrderRouting	Automated floor order routing
5	TwoPartyReportForClaim	Two-party report for claim
6	OnePartyReport	One-party report
7	ThirdPtyRptForPassThrough	Third-party report for pass through. Can be used when RootParties component contains a service provider role who submits the trade report and is not necessarily also on one side of the trade.
8	OnePartyReportAutoMatch	One-party report for auto-match. Indicates that the submission is a transfer trade to a firm or account that is part of the same corporate entity and that once validated the transfer should be automatically accepted without confirmation.

---

Used in messages: [TradeCaptureReport](#), [TradeCaptureReportAck](#)

### **171.2.3638 OrigTradeID**

Used to preserve original trade id when original trade is being referenced in a subsequent trade transaction such as a transfer

Type: [String](#)

Used in messages: [TradeCaptureReport](#), [TradeCaptureReportAck](#)

### **171.2.3639 OutMainCntryUIndex**

Value of stocks in Currency

Type: [Amt](#)

Used in messages: [BidRequest](#)

**171.2.3640 OutsideIndexPct**

Used in EFP trades. Represented as a percentage.

Type: **Percentage**

Used in groups: **BidDescReqGrp**

**171.2.3641 OvernightInterestRate**

Overnight interest rate.

Type: **float**

Used in groups: **ClearingPriceParametersGrp**

**171.2.3642 OwnershipType**

The relationship between Registration parties.

Type: **char**

Allowed values in OwnershipTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
J	JointInvestors	Joint Investors
T	TenantsInCommon	Tenants in Common
2	JointTrustees	Joint Trustees

---

Used in messages: **RegistrationInstructions**

**171.2.3643 OwnerType**

Identifies the type of owner.

Type: **int**

Allowed values in OwnerTypeCodeSet:

Code	Name	Description
1	IndividualInvestor	Individual investor
2	PublicCompany	Public company
3	PrivateCompany	Private company
4	IndividualTrustee	Individual trustee
5	CompanyTrustee	Company trustee
6	PensionPlan	Pension plan
7	CustodianUnderGiftsToMinorsAct	Custodian under Gifts to Minors Act
8	Trusts	Trusts
9	Fiduciaries	Fiduciaries
10	NetworkingSubAccount	Networking sub-account
11	NonProfitOrganization	Non-profit organization
12	CorporateBody	Corporate body
13	Nominee	Nominee
14	InstitutionalCustomer	Institutional customer
15	Combined	Combined. Representing more than one type of beneficial owner account.
16	MemberFirmEmployee	Member firm employee or associated person
17	MarketMakingAccount	Market making account
18	ProprietaryAccount	Proprietary account
19	NonbrokerDealer	Non-broker-dealer
20	UnknownBeneficialOwnerType	Unknown beneficial owner type. In the context of US CAT this is a non-broker-dealer foreign affiliate or non-reporting foreign broker-dealer.
21	FirmsErrorAccount	Error account of firm
22	FirmAgencyAveragePriceAccount	Firm agency average price account

Used in groups: [RgstDtlsGrp](#), [TrdCapRptSideGrp](#)

Used in messages: [ExecutionReport](#), [MultilegOrderCancelReplace](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#), [Quote](#)

### 171.2.3644 PackageID

Identifier assigned to a collection of trades so that they can be analyzed as one atomic unit for risk assessment and clearing.

Type: **String**

Used in messages: **TradeCaptureReport**

#### **171.2.3645 ParentAllocID**

Contains the IndividualAllocId (tag 467) value of the allocation that is being offset as a result of a new allocation. This would be an optional field that would only be populated in the case of an allocation of an allocation (as well as any subsequent allocations). This wouldn't be populated for an initial allocation since an allocation id is not supplied on default (initial) allocations.

Type: **String**

Used in groups: **AllocAckGrp, AllocGrp, TrdAllocGrp**

#### **171.2.3646 ParentMktSegmID**

Reference to a parent Market Segment. See MarketSegmentID(1300)

Type: **String**

Used in messages: **MarketDefinition, MarketDefinitionRequest, MarketDefinitionUpdateReport**

#### **171.2.3647 ParticipationRate**

For a TargetStrategy=Participate order specifies the target participation rate. For other order types this is a volume limit (i.e. do not be more than this percent of the market volume)

Type: **Percentage**

Used in groups: **ListOrdGrp**

Used in messages: **CrossOrderCancelReplaceRequest, ExecutionReport, MultilegOrderCancelReplace, NewOrderCross, NewOrderMultileg, NewOrderSingle, OrderCancelReplaceRequest**

#### **171.2.3648 Parties**

The Parties component block is used to identify and convey information on the entities both central and peripheral to the financial transaction represented by the FIX message containing the Parties Block. The Parties block allows many different types of entites to be expressed through use of the PartyRole field and identifies the source of the PartyID through the the PartyIDSource.

Name	Mult.	Type	Description
NoPartyIDs	[1..1]	NumInGroup	Repeating group below should contain unique combinations of PartyID, PartyIDSource, and PartyRole
PartyID	[0..1]	String	Required if NoPartyIDs(453) > 0. Identification of the party.
PartyIDSource	[0..1]	CodeSet	Required if NoPartyIDs(453) > 0. Used to identify classification source.
PartyRole	[0..1]	CodeSet	Required if NoPartyIDs(453) > 0. Identifies the type of PartyID(448).
PartyRoleQualifier	[0..1]	CodeSet	
PtysSubGrp	[0..*]	Group	Repeating group of Party sub-identifiers.

Used in groups: ListOrdGrp, MDFullGrp, MDIncGrp, QuotReqGrp, QuotReqRjctGrp, SettInstGrp, SettIObligationInstructions, SideCrossOrdCxlGrp, SideCrossOrdModGrp, StrmAsgnReqGrp, StrmAsgnRptGrp, TrdCapRptAckSideGrp, TrdCapRptSideGrp, TrdMatchSideGrp

Used in messages: AccountSummaryReport, AdjustedPositionReport, AllocationInstruction, AllocationInstructionAck, AllocationInstructionAlert, AllocationInstructionAlertRequest, AllocationReport, AllocationReportAck, ApplicationMessageRequest, ApplicationMessageRequestAck, AssignmentReport, CollateralAssignment, CollateralInquiry, CollateralInquiryAck, CollateralReport, CollateralReportAck, CollateralRequest, CollateralResponse, Confirmation, ContraryIntentionReport, ExecutionReport, IOI, ListCancelRequest, MarginRequirementInquiry, MarginRequirementInquiryAck, MarginRequirementReport, MarketDataRequest, MarketDataRequestReject, MarketDataStatisticsReport, MarketDataStatisticsRequest, MarketDefinition, MarketDefinitionUpdateReport, MassOrder, MassOrderAck, MassQuote, MassQuoteAck, MultilegOrderCancelReplace, NewOrderMultileg, NewOrderSingle, OrderCancelReject, OrderCancelReplaceRequest, OrderCancelRequest, OrderMassActionReport, OrderMassActionRequest, OrderMassCancelReport, OrderMassCancelRequest, OrderMassStatusRequest, OrderStatusRequest, PartyActionReport, PartyActionRequest, PartyDetailsListRequest, PartyEntitlementsRequest, PartyRiskLimitCheckRequest, PartyRiskLimitCheckRequestAck, PartyRiskLimitsRequest, PayManagementReport, PayManagementRequest, PositionMaintenanceReport, PositionMaintenanceRequest, PositionReport, PositionTransferInstruction, PositionTransferInstructionAck, PositionTransferReport, Quote, QuoteAck, QuoteCancel, QuoteResponse, QuoteStatusReport, QuoteStatusRequest, RFQRequest, RegistrationInstructions, RegistrationInstructionsResponse, RequestForPositions, RequestForPositionsAck, SettlementInstructionRequest, SettlementStatusReport, SettlementStatusRequest, TradeAggregationRequest, TradeCaptureReportRequest

**171.2.3649 PartyActionRejectReason**

Specifies the reason the PartyActionRequest(35=DH) was rejected.

Type: **int**

Allowed values in PartyActionRejectReasonCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	InvalidParty	Invalid party or parties
1	UnkReqParty	Unknown requesting party
98	NotAuthorized	Not authorized
99	Other	Other

---

Used in messages: **PartyActionReport**

**171.2.3650 PartyActionReportID**

The unique identifier of the PartyActionReport(35=DI) message as assigned by the message sender.

Type: **String**

Used in messages: **PartyActionReport**

**171.2.3651 PartyActionRequestID**

The unique identifier of the PartyActionRequest(35=DH) message.

Type: **String**

Used in messages: **PartyActionReport, PartyActionRequest**

**171.2.3652 PartyActionResponse**

Specifies the action taken as a result of the PartyActionType(2239) of the PartyActionRequest(35=DH) message.

Type: **int**

Allowed values in PartyActionResponseCodeSet:

Code	Name	Description
0	Accepted	Accepted. The action request is accepted for processing.
1	Completed	Completed. The processing of the requested action has been successfully completed.
2	Rejected	Rejected. The action request was rejected. PartyActionRejectReason(2233) should be used to specify the rejection reason

Used in messages: [PartyActionReport](#)

### 171.2.3653 PartyActionType

Specifies the type of action to take or was taken for a given party.

Type: [int](#)

Allowed values in PartyActionCodeSet:

Code	Name	Description
0	Suspend	Suspend
1	HaltTrading	Halt trading
2	Reinstate	Reinstate

Used in messages: [PartyActionReport](#), [PartyActionRequest](#)

### 171.2.3654 PartyDetailAckGrp

The PartyDetailAckGrp component is used in the PartyDetailsDefinitionRequestAck(35=CX) message to provide the status of each action (add, modify or delete) requested by the PartyDetailsDefinitionRequest(35=CX) message. The PartyDetailStatus(1880) field is used to indicate the status. In the case where an add or modify request is accepted with changes, the PartyDetailGrp component is required, with the complete set of party details that have been accepted for the party included.

Name	Mult.	Type	Description
<a href="#">NoPartyUpdates</a>	[1..1]	NumInGroup	
<a href="#">ListUpdateAction</a>	[0..1]	CodeSet	Required if NoPartyUpdates(1676) > 0.

Name	Mult.	Type	Description
PartyDetailDefinitionStatus	[0..1]	CodeSet	Required if NoPartyUpdates(1676) > 0.
PartyDetailDefinitionResult	[0..1]	CodeSet	
RejectText	[0..1]	String	
EncodedRejectTextLen	[0..1]	Length	
EncodedRejectText	[0..1]	data	
PartyDetailGrp	[0..*]	Group	

Used in messages: [PartyDetailsDefinitionRequestAck](#)

### 171.2.3655 PartyDetailAltID

An alternate party identifier for the party specified in PartyDetailID(1691)

Type: [String](#)

Used in groups: [PartyDetailAltIDGrp](#)

### 171.2.3656 PartyDetailAltIDGrp

Alternative identifiers for a party.

Name	Mult.	Type	Description
NoPartyDetailAltID	[1..1]	NumInGroup	
PartyDetailAltID	[0..1]	String	Required when NoPartyDetailAltID > 0.
PartyDetailAltIDSource	[0..1]	CodeSet	Required when NoPartyDetailAltID > 0.
PartyDetailAltSubGrp	[0..*]	Group	

Used in groups: [PartyDetailGrp](#)

### 171.2.3657 PartyDetailAltIDSource

Identifies the source of the PartyDetailAltID(1517) value.

Type: [char](#)

Allowed values in PartyIDSourceCodeSet:

Code	Name	Description
1	KoreanInvestorID	Korean Investor ID
6	UKNationalInsuranceOrPension-Number	UK National Insurance or Pension Number
B	BIC	BIC (Bank Identification Code - SWIFT managed) code (ISO9362 - See "Appendix 6-B")
I	ISITCAcronym	Directed broker three character acronym as defined in ISITC "ETC Best Practice" guidelines document
2	TaiwaneseForeignInvestorID	Taiwanese Qualified Foreign Investor ID QFII/FID
7	USSocialSecurityNumber	US Social Security Number
C	GeneralIdentifier	Generally accepted market participant identifier (e.g. NASD mnemonic)
3	TaiwaneseTradingAcct	Taiwanese Trading Acct
8	USEmployerOrTaxIDNumber	US Employer or Tax ID Number
D	Proprietary	Proprietary / Custom code. Custom ID schema used between counterparties, trading platforms and repositories.
4	MalaysianCentralDepository	Malaysian Central Depository (MCD) number
9	AustralianBusinessNumber	Australian Business Number
E	ISOCountryCode	ISO Country Code
5	ChineseInvestorID	Chinese Investor ID
A	AustralianTaxFileNumber	Australian Tax File Number
F	SettlementEntityLocation	Settlement Entity Location (note if Local Market Settlement use "E=ISO Country Code") (see "Appendix 6-G" for valid values)
G	MIC	Market Identifier Code (ISO 10383) MIC
J	TaxID	Tax ID
H	CSDParticipant	CSD participant/member code (e.g. Euroclear, DTC, CREST or Kassenverein number)
K	AustralianCompanyNumber	Australian Company Number
L	AustralianRegisteredBodyNumber	Australian Registered Body Number
M	CFTCReportingFirmIdentifier	CFTC reporting firm identifier
N	LegalEntityIdentifier	Legal Entity Identifier (ISO 17442) LEI
O	InterimIdentifier	Interim identifier. An interim entity identifier assigned by a regulatory agency prior to an LEI (ISO 17442) being assigned.
P	ShortCodeIdentifier	Short code identifier. A generic means for trading venues, brokers, investment managers to convey a bilaterally agreed upon "short hand" code for an identifier that is a reference to a mapping between the parties.

Code	Name	Description
Q	NationalIDNaturalPerson	National ID of natural person. An identification number generally assigned by a government authority or agency to a natural person which is unique to the person it is assigned to. Examples include, but not limited to, "social security number", "pension number".
R	IndiaPermanentAccountNumber	India Permanent Account Number. Also referred to as PAN ID. An identifier issued by the Income Tax Department of India.
S	FDID	Firm designated identifier. Also referred to as FDID. A unique identifier required by the SEC for each trading account designated by Industry Members for purposes of reporting to CAT (Consolidated Audit Trail).
T	SPSAID	Special Segregated Account ID. Also referred to as SPSA ID. The Special Segregated Account identifier issued by Hong Kong Exchanges and Clearing.
U	MasterSPSAID	Master Special Segregated Account ID. Also referred to as Master SPSA ID. The master identifier issued by Hong Kong Exchanges and Clearing for the aggregation of SPSA IDs.

Used in groups: [PartyDetailAltIDGrp](#)

### 171.2.3658 PartyDetailAltSubGrp

Alternate sub-identifiers for a party.

Name	Mult.	Type	Description
<a href="#">NoPartyDetailAltSubIDs</a>	[1..1]	NumInGroup	
<a href="#">PartyDetailAltSubID</a>	[0..1]	String	Required when NoPartyDetailAltSubIDs > 0.
<a href="#">PartyDetailAltSubIDType</a>	[0..1]	CodeSet	Required when NoPartyDetailAltSubIDs > 0.

Used in groups: [PartyDetailAltIDGrp](#)

### 171.2.3659 PartyDetailAltSubID

Sub-identifier for the party specified in PartyDetailAltID(1517).

Type: [String](#)

Used in groups: [PartyDetailAltSubGrp](#)

**171.2.3660 PartyDetailAltSubIDType**

Type of PartyDetailAltSubID(1520) value.

Type: **int**

Allowed values in PartySubIDTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	Firm	Firm
2	Person	Person
3	System	System
4	Application	Application
5	FullLegalNameOfFirm	Full legal name of firm
6	PostalAddress	Postal address
7	PhoneNumber	Phone number
8	EmailAddress	Email address
9	ContactName	Contact name
10	SecuritiesAccountNumber	Securities account number (for settlement instructions)
11	RegistrationNumber	Registration number (for settlement instructions and confirmations)
12	RegisteredAddressForConfirmation	Registered address (for confirmation purposes)
13	RegulatoryStatus	Regulatory status (for confirmation purposes)
14	RegistrationName	Registration name (for settlement instructions)
15	CashAccountNumber	Cash account number (for settlement instructions)
16	BIC	BIC
17	CSDParticipantMemberCode	CSD participant member code
18	RegisteredAddress	Registered address
19	FundAccountName	Fund account name
20	TelexNumber	Telex number
21	FaxNumber	Fax number
22	SecuritiesAccountName	Securities account name
23	CashAccountName	Cash account name
24	Department	Department
25	LocationDesk	Location desk
26	PositionAccountType	Position account type
27	SecurityLocateID	Security locate ID
28	MarketMaker	Market maker

---

Code	Name	Description
29	EligibleCounterparty	Eligible counterparty
30	ProfessionalClient	Professional client
31	Location	Location
32	ExecutionVenue	Execution venue
33	CurrencyDeliveryIdentifier	Currency delivery identifier
34	AddressCity	Address City
35	AddressStateOrProvince	Address State/Province
36	AddressPostalCode	Address Postal Code
37	AddressStreet	Address Street
38	AddressISOCountryCode	Address Country (ISO country code)
39	ISOCountryCode	ISO country code
40	MarketSegment	Market segment
41	CustomerAccountType	Customer account type
42	OmnibusAccount	Omnibus account
43	FundsSegregationType	Funds segregation type
44	GuaranteeFund	Guarantee fund. Identifies a guarantee fund related to an account. Used when one account has multiple funds of collateral, each guaranteeing different positions. Can be used for PartyRole(452) = Customer Account(24).
45	SwapDealer	Swap dealer. The US regulator's defined term for identifying the trade counterparty as "any person who holds itself out as a dealer in swaps, makes a market in swaps, regularly enters into swaps with counterparties as an ordinary course of business for its own account, or engages in activity causing itself to be commonly known in the trade as a dealer or market maker in swaps".
46	MajorParticipant	Major participant. When PartySubID(523)=Y the counterparty is not the swap dealer but is a major swap participant as defined in the regulations.
47	FinancialEntity	Financial entity. When PartySubID(523)=Y the counterparty is neither a swap dealer nor a major swap participant but is a financial entity as defined in the regulations.
48	USPerson	U.S. person. A legal term referring to any U.S. person or legal entity anywhere in the world that should be taxed under U.S. law.
49	ReportingEntityIndicator	Reporting entity indicator. Indicates the entity obligated or delegated to report to their regulator, a non-regulatory agency or data repository. Set PartySubID(523)=Y if true.

<b>Code</b>	<b>Name</b>	<b>Description</b>
50	ElectedClearingRequirementException	Elected clearing requirement exception
51	BusinessCenter	Business center.
52	ReferenceText	Reference text
53	ShortMarkingExemptAccount	Short-marking exempt account
54	ParentFirmIdentifier	Parent firm identifier. Implementation-specific identifier of this party's parent entity.
55	ParentFirmName	Parent firm name. Full name of this party's parent entity.
56	DealIdentifier	Deal identifier. The internal identifier assigned to the trade by this party, particularly by a Clearing Organization.
57	SystemTradeID	System trade identifier
58	SystemTradeSubID	System trade sub-identifier
59	FCMCode	Futures Commission Merchant (FCM) code. The FCM's code or identifier in relation to the PartyRole(452). For example, if PartyRole(452) is the exchange or clearinghouse, the FCM code/ID specified in PartySubID(523) is the FCM's identifier at the exchange or clearinghouse.
60	DlvryTrmlCode	Delivery terminal customer account/code. Usually used for gas delivery to identify whose account the gas is allocated to at the delivery terminal. Often referred to as "HUB" code.
61	VolntyRptEntity	Voluntary reporting entity. The entity voluntarily reporting the trade to the regulator. Set PartySubID(523)=Y if true.
62	RptObligJursdctn	Reporting obligation jurisdiction. For a trade that falls under multiple jurisdictions this may be used to identify, through PartySubID(523), the reporting jurisdiction to which the party is obligated to report.
63	VolntyRptJursdctn	Voluntary reporting jurisdiction. For a trade that falls under multiple jurisdictions this may be used to identify, through PartySubID(523), the regulatory jurisdiction to which the party is submitting a voluntary report.

Code	Name	Description
64	CompanyActivities	Company activities. For regulatory reporting. ID values include: A = Assurance undertaking authorized in accordance with Directive 2002/83/EC C=Credit institution authorized in accordance with Directive 2006/48/EC F=Investment firm in accordance with Directive 2004/39/EC I=Insurance undertaking authorized in accordance with Directive 73/239/EC L=Alternative investment fund managed by AIFMs authorized or registered in accordance with Directive 2011/61/EC O=Institution for occupational retirement provision within the meaning of Article 6(a0 of Directive 2003/41/EC R=Reinsurance undertaking authorized in accordance with Directive 2005/68/EC U=UCITS and its management company, authorized in accordance with Directive 2009/65/EC or blank in case of coverage by LEI or in case of non-financial counterparties. In the context of EU SFTR reporting use the appropriate 4- or 1-character code noted in the regulations. See SFTR ITS "Commission Implementing Regulation (EU) 2019/363" Annexes 1 and 2 for values.
65	EEAreaDomiciled	European Economic Area domiciled. ID values: Y or N
66	ContractLinked	Contract linked to commercial or treasury financing for this counterparty. ID values: Y or N
67	ContractAbove	Contract above clearing threshold for this counterparty. ID values: Y or N
68	VolntyRptPty	Voluntary reporting party. When PartySubID(523)=Y, identifies that the trading party is reporting voluntarily when VoluntaryRegulatoryReport(1935)=Y.
69	EndUser	End user. When PartySubID(523)=Y, the counterparty is neither the swap dealer, major swap participant nor financial entity as defined in the regulations.
70	LocationOrJurisdiction	Location or jurisdiction. One or more instances may be used in combination with PartySubIDType(803) = 49 (Reporting entity indicator) or 102 (Data repository) to identify the jurisdiction, countries, regions or provinces for which the party is a reporting entity or data repository when that characteristic is ambiguous or where there are multiple locations. The party sub-ID value is either a jurisdiction acronym, a 2-character ISO 3166 country code, or a hyphenated combination of the country code and the standard post-office abbreviation for province, state or region if necessary. E.g. "US" for United States or "CA-QC" for Quebec Canada.

<b>Code</b>	<b>Name</b>	<b>Description</b>
71	DerivativesDealer	Derivatives dealer. Indicates whether the party is a derivatives dealer or not (Y/N). The Canadian regulator's defined term for identifying the trade counterparty as "a person or company engaging in or holding himself, herself or itself out as engaging in the business of trading in derivatives in Ontario as principal or agent".
72	Domicile	Domicile. Country and optionally province, state or region of domicile. The party sub-ID value is either a 2-character ISO 3166 country code or a hyphenated combination of the country code and the standard post-office abbreviation of province, state or region if necessary. E.g. "US" for United States or "CA-QC" for Quebec Canada.
73	ExemptFromRecognition	Exempt from recognition. Used with party role 21 "Clearing Organization" to indicate exemption (Y/N). Identifies a clearing agency as exempt from oversight in Ontario, i.e. one that 1) only provides limited services and does not present significant risks or 2) is foreign-based, intends to operate in Ontario but is subject to regulatory oversight in another jurisdiction.
74	Payer	Payer. Identifies the party as the payer of a particular payment stream or bullet payment by quoting the stream's StreamDesc(40051) (or LegStreamDesc(40243) or UnderlyingStreamDesc(40542)) or payment's PaymentDesc(43087) in the associated party sub-identifier field.
75	Receiver	Receiver. Identifies the party as the receiver of a particular payment stream or bullet payment by quoting the stream's StreamDesc(40051) (or LegStreamDesc(40243) or UnderlyingStreamDesc(40542)) or payment's PaymentDesc(43087) in the associated party sub-identifier field.
76	SystematicInternaliser	Systematic Internaliser (SI). In the context of ESMA reporting, this is used to indicate whether the specified party is a Systematic Internaliser or not for the security defined in the Instrument component (Y/N).
77	PublishingEntityIndicator	Publishing entity indicator. Indicates the entity obligated or delegated to publish to the market. Set PartySubID(523)=Y if true.
78	FirstName	First name. The first name(s) of a natural person. If multiple names, separate entries by a comma.
79	Surname	Surname. The surname(s) or lastname(s) of a natural person. If multiple names, separate entries by a comma.

Code	Name	Description
80	DateOfBirth	Date of birth. The date of birth of a natural person in the format YYYYMMDD.
81	OrderTransmittingFirm	Order transmitting firm. Identifies whether the party specified in PartyID(448) is the firm that transmitted the order. In the context of RTS 22 Article 4, when "true" the PartySubID(523)=Y shall be set "by the transmitting firm within the transmitting firm's report where conditions for transmission specified in Article 4 were not satisfied."
82	OrderTransmittingFirmBuyer	Order transmitting firm for buyer. Identifies the firm that transmitted the order for the buyer. In the context of ESMA RTS 22, PartySubID(523)=Y is used to indicate the firm identified in PartyID(448) is the firm that transmitted the order for the buyer. "This shall be populated by the receiving firm within the receiving firm's report with the identification code provided by the transmitting firm."
83	OrderTransmitterSeller	Order transmitter for seller. Identifies the order transmitting firm for the seller. In the context of ESMA RTS 22, PartySubID(523)=Y is used to indicate the firm identified in PartyID(448) is the firm that transmitted the order for the seller. "This shall be populated by the receiving firm within the receiving firm's report with the identification code provided by the transmitting firm."
84	LegalEntityIdentifier	Legal Entity Identifier (ISO 17442) LEI
85	SubSectorClassification	Sub-sector classification. Supplemental to party sub-ID type "64" (Company activities) for regulatory reporting. For EU SFTR reporting use the appropriate 4-character code noted in the regulations applying the conditional association rules. See SFTR ITS "Commission Implementing Regulation (EU) 2019/363" Annexes 1 and 2 for values.
86	PartySide	Party side. May be used, when appropriate, to explicitly indicate the transaction side of the party, e.g. Buyer, Seller, Lender, Borrower, Maker, Taker, etc. in the ID. In the context of EU SFTR reporting, use values as required by SFTR, "GIVE" and "TAKE" in the ID, to identify collateral giver and taker.
87	LegalRegistrationCountry	Legal registration country. ISO Country Code where the registered office of the party is located as specified in the LEI reference data.

Used in groups: [PartyDetailAltSubGrp](#)

**171.2.3661 PartyDetailDefinitionResult**

Result of party detail definition for one party.

Type: **int**

Allowed values in PartyDetailRequestResultCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Successful	Successful (default)
1	InvalidParty	Invalid party(-ies)

Used in messages: PartyDetailsListReport

### 171.2.3664 PartyDetailID

Party identifier within Parties Reference Data messages.

Type: String

Used in groups: PartyDetailGrp

### 171.2.3665 PartyDetailIDSource

Source of the identifier of the PartyDetailID(1691) specified.

Type: char

Allowed values in PartyIDSourceCodeSet:

Code	Name	Description
1	KoreanInvestorID	Korean Investor ID
6	UKNationalInsuranceOrPension-Number	UK National Insurance or Pension Number
B	BIC	BIC (Bank Identification Code - SWIFT managed) code (ISO9362 - See "Appendix 6-B")
I	ISITCAcronym	Directed broker three character acronym as defined in ISITC "ETC Best Practice" guidelines document
2	TaiwaneseForeignInvestorID	Taiwanese Qualified Foreign Investor ID QFII/FID
7	USSocialSecurityNumber	US Social Security Number
C	GeneralIdentifier	Generally accepted market participant identifier (e.g. NASD mnemonic)
3	TaiwaneseTradingAcct	Taiwanese Trading Acct
8	USEmployerOrTaxIDNumber	US Employer or Tax ID Number
D	Proprietary	Proprietary / Custom code. Custom ID schema used between counterparties, trading platforms and repositories.
4	MalaysianCentralDepository	Malaysian Central Depository (MCD) number
9	AustralianBusinessNumber	Australian Business Number
E	ISOCountryCode	ISO Country Code
5	ChineseInvestorID	Chinese Investor ID
A	AustralianTaxFileNumber	Australian Tax File Number
F	SettlementEntityLocation	Settlement Entity Location (note if Local Market Settlement use "E=ISO Country Code") (see "Appendix 6-G" for valid values)
G	MIC	Market Identifier Code (ISO 10383) MIC
J	TaxID	Tax ID
H	CSDParticipant	CSD participant/member code (e.g. Euroclear, DTC, CREST or Kassenverein number)
K	AustralianCompanyNumber	Australian Company Number
L	AustralianRegisteredBodyNumber	Australian Registered Body Number
M	CFTCReportingFirmIdentifier	CFTC reporting firm identifier
N	LegalEntityIdentifier	Legal Entity Identifier (ISO 17442) LEI
O	InterimIdentifier	Interim identifier. An interim entity identifier assigned by a regulatory agency prior to an LEI (ISO 17442) being assigned.
P	ShortCodeIdentifier	Short code identifier. A generic means for trading venues, brokers, investment managers to convey a bilaterally agreed upon "short hand" code for an identifier that is a reference to a mapping between the parties.

Code	Name	Description
Q	NationalIDNaturalPerson	National ID of natural person. An identification number generally assigned by a government authority or agency to a natural person which is unique to the person it is assigned to. Examples include, but not limited to, "social security number", "pension number".
R	IndiaPermanentAccountNumber	India Permanent Account Number. Also referred to as PAN ID. An identifier issued by the Income Tax Department of India.
S	FDID	Firm designated identifier. Also referred to as FDID. A unique identifier required by the SEC for each trading account designated by Industry Members for purposes of reporting to CAT (Consolidated Audit Trail).
T	SPSAID	Special Segregated Account ID. Also referred to as SPSA ID. The Special Segregated Account identifier issued by Hong Kong Exchanges and Clearing.
U	MasterSPSAID	Master Special Segregated Account ID. Also referred to as Master SPSA ID. The master identifier issued by Hong Kong Exchanges and Clearing for the aggregation of SPSA IDs.

Used in groups: [PartyDetailGrp](#)

### 171.2.3666 PartyDetailRequestResult

**171.2.3667 PartyDetailRequestStatus**

Status of party details definition request.

Type: **int**

Allowed values in PartyDetailRequestStatusCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Accepted	Accepted
1	AcceptedWithChanges	Accepted with changes
2	Rejected	Rejected
3	AcceptancePending	Acceptance pending

---

Used in messages: **PartyDetailsDefinitionRequestAck**

**171.2.3668 PartyDetailRole**

Identifies the type or role of PartyDetailID(1691) specified.

Type: **int**

Allowed values in PartyRoleCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	ExecutingFirm	Executing Firm (formerly FIX 4.2 ExecBroker)
2	BrokerOfCredit	Broker of Credit (formerly FIX 4.2 BrokerOfCredit)
3	ClientID	Client ID (formerly FIX 4.2 ClientID)
4	ClearingFirm	Clearing Firm (formerly FIX 4.2 ClearingFirm)
5	InvestorID	Investor ID
6	IntroducingFirm	Introducing Firm
7	EnteringFirm	Entering Firm
8	Locate	Locate / Lending Firm (for short-sales)
9	FundManagerClientID	Fund Manager Client ID (for CIV)
10	SettlementLocation	Settlement Location (formerly FIX 4.2 SettlLocation)
11	OrderOriginationTrader	Order Origination Trader (associated with Order Origination Firm - i.e. trader who initiates/submits the order)
12	ExecutingTrader	Executing Trader (associated with Executing Firm - actually executes)

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
13	OrderOriginationFirm	Order Origination Firm (e.g. buy-side firm)
14	GiveupClearingFirmDepr	Giveup Clearing Firm (firm to which trade is given up)
15	CorrespondantClearingFirm	Correspondant Clearing Firm
16	ExecutingSystem	Executing System
17	ContraFirm	Contra Firm
18	ContraClearingFirm	Contra Clearing Firm
19	SponsoringFirm	Sponsoring Firm
20	UnderlyingContraFirm	Underlying Contra Firm
21	ClearingOrganization	Clearing Organization
22	Exchange	Exchange. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
24	CustomerAccount	Customer Account
25	CorrespondentClearingOrganization	Correspondent Clearing Organization
26	CorrespondentBroker	Correspondent Broker
27	Buyer	Buyer/Seller (Receiver/Deliverer)
28	Custodian	Custodian
29	Intermediary	Intermediary
30	Agent	Agent
31	SubCustodian	Sub-custodian
32	Beneficiary	Beneficiary
33	InterestedParty	Interested party
34	RegulatoryBody	Regulatory body. In the context of regulatory reporting, this identifies the regulator the trade is being reported to.
35	LiquidityProvider	Liquidity provider
36	EnteringTrader	Entering trader
37	ContraTrader	Contra trader
38	PositionAccount	Position account. The account which positions are maintained. Typically represents the aggregation of one or more customer accounts.
39	ContraInvestorID	Contra Investor ID
40	TransferToFirm	Transfer to Firm
41	ContraPositionAccount	Contra Position Account
42	ContraExchange	Contra Exchange
43	InternalCarryAccount	Internal Carry Account
44	OrderEntryOperatorID	Order Entry Operator ID

<b>Code</b>	<b>Name</b>	<b>Description</b>
45	SecondaryAccountNumber	Secondary Account Number
46	ForeignFirm	Foreign Firm
47	ThirdPartyAllocationFirm	Third Party Allocation Firm
48	ClaimingAccount	Claiming Account
49	AssetManager	Asset Manager
50	PledgorAccount	Pledgor Account
51	PledgeeAccount	Pledgee Account
52	LargeTraderReportableAccount	Large Trader Reportable Account
53	TraderMnemonic	Trader mnemonic
54	SenderLocation	Sender Location
55	SessionID	Session ID
56	AcceptableCounterparty	Acceptable Counterparty
57	UnacceptableCounterparty	Unacceptable Counterparty
58	EnteringUnit	Entering Unit
59	ExecutingUnit	Executing Unit
60	IntroducingBroker	Introducing Broker
61	QuoteOriginator	Quote originator
62	ReportOriginator	Report originator
63	SystematicInternaliser	Systematic internaliser (SI)
64	MultilateralTradingFacility	Multilateral Trading Facility (MTF). Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
65	RegulatedMarket	Regulated Market (RM). Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
66	MarketMaker	Market Maker
67	InvestmentFirm	Investment Firm
68	HostCompetentAuthority	Host Competent Authority (Host CA)
69	HomeCompetentAuthority	Home Competent Authority (Home CA)
70	CompetentAuthorityLiquidity	Competent Authority of the most relevant market in terms of liquidity (CAL)
71	CompetentAuthorityTransactionVenue	Competent Authority of the Transaction (Execution) Venue (CATV)
72	ReportingIntermediary	Reporting intermediary. The medium or vendor used to report to a regulator, non-regulatory agency or data repository.
73	ExecutionVenue	Execution Venue. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.

<b>Code</b>	<b>Name</b>	<b>Description</b>
74	MarketDataEntryOriginator	Market data entry originator
75	LocationID	Location ID
76	DeskID	Desk ID
77	MarketDataMarket	Market data market
78	AllocationEntity	Allocation Entity
79	PrimeBroker	Prime Broker providing General Trade Services
80	StepOutFirm	Step-Out Firm (Prime Broker)
81	BrokerClearingID	Broker clearing identifier
82	CentralRegistrationDepository	Central Registration Depository (CRD)
83	ClearingAccount	Clearing Account
84	AcceptableSettlingCounterparty	Acceptable Settling Counterparty
85	UnacceptableSettlingCounterparty	Unacceptable Settling Counterparty
86	CLSMemberBank	CLS Member Bank
87	InConcertGroup	In Concert Group
88	InConcertControllingEntity	In Concert Controlling Entity
89	LargePositionsReportingAccount	Large Positions Reporting Account
90	SettlementFirm	Settlement Firm
91	SettlementAccount	Settlement account. The account to which individual payment obligations are aggregated for netting and funds movement. Typically represents the aggregation of many margin (performance bond) accounts.
92	ReportingMarketCenter	Reporting Market Center
93	RelatedReportingMarketCenter	Related Reporting Market Center
94	AwayMarket	Away Market. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
95	GiveupTradingFirm	Give-up (trading) firm
96	TakeupTradingFirm	Take-up (trading) firm
97	GiveupClearingFirm	Give-up clearing firm
98	TakeupClearingFirm	Take-up clearing firm
99	OriginatingMarket	Originating Market. Identifies the Market using PartyIDSource(tag 447) = G (Market Identifier Code) where an order originated in the event that the order is sent to an alternative market for execution. Serves as an inverse of an away market.

<b>Code</b>	<b>Name</b>	<b>Description</b>
100	MarginAccount	Margin account. Also referred to as "performance bond account". The margin account is the calculated margin requirements. Typically represents the aggregation of one or more position accounts.
101	CollateralAssetAccount	Collateral asset account. The account at which individual collateral assets are maintained. Typically, although not always, one-for-one with the settlement account.
102	DataRepository	Data repository. Multiple instances of this PartyRole may appear for reporting purposes.
103	CalculationAgent	Calculation agent
104	ExerciseNoticeSender	Sender of exercise notice
105	ExerciseNoticeReceiver	Receiver of exercise notice
106	RateReferenceBank	Rate reference bank. The bank providing the reference rate. Multiple instance of this PartyRole may appear.
107	Correspondent	Correspondent
109	BeneficiaryBank	Beneficiary's bank or depository institution. The institution in which the beneficiary, a person or an entity, has their account with. The institution may be a bank or non-bank institution.
110	Borrower	Borrower
111	PrimaryObligator	Primary obligator
112	Guarantor	Guarantor
113	ExcludedReferenceEntity	Excluded reference entity
114	DeterminingParty	Determining party
115	HedgingParty	Hedging party
116	ReportingEntity	Reporting entity. The entity that is reporting the information.
117	SalesPerson	Sales person. The person who is involved in the sales activities for their firm.
118	Operator	Operator. The person who has the capabilities and authorization to take certain actions; for example, setting entitlements, etc.
119	CSD	Central Securities Depository (CSD)
120	ICSD	International Central Securities Depository (ICSD)
121	TradingSubAccount	Trading sub-account. Example of sub-accounts include a clearing account that has multiple trading sub-accounts, a trading account that has multiple trading sub-accounts belonging to different trading firms.

Code	Name	Description
122	InvestmentDecisionMaker	Investment decision maker. In the context of ESMA RTS reporting, this is used to specify party responsible for the investment decision. See RTS 24, Annex, Table 2, Field 4.
123	PublishingIntermediary	Publishing intermediary. The medium or vendor used to publish to the market.
124	CSDParticipant	Central Securities Depository (CSD) Participant. In the context of EU SFTR reporting the identifier of the CSD participant or indirect participant of the reporting counterparty. Where both the CSD participant and indirect participant are involved in the transaction this should identify the indirect participant.
125	Issuer	Issuer. The issuer of the security.
126	ContraCustomerAccount	Contra Customer Account. Same as PartyRole(452) = 24 (Customer Account) but for the counterparty. Can be used whenever the parties component is not nested in a repeating group representing both sides.
127	ContraInvestmentDecisionMaker	Contra Investment Decision Maker. Same as PartyRole(452) = 122 (Investment Decision Maker) but for the counterparty. Can be used whenever the parties component is not nested in a repeating group representing both sides.

Used in groups: [PartyDetailGrp](#)

### 171.2.3669 PartyDetailRoleQualifier

Qualifies the value of PartyDetailRole(1693).

Type: [int](#)

Allowed values in PartyDetailRoleQualifierCodeSet:

Code	Name	Description
0	Agency	Agency
1	Principal	Principal
2	RisklessPrincipal	Riskless principal
3	GeneralClearingMember	General clearing member
30	ExchangeOrderSubmitter	Exchange order submitter. Used to identify original or initial exchange order submitting broker when party role "1" (Executing Firm) appears more than once.

<b>Code</b>	<b>Name</b>	<b>Description</b>
4	IndividualClearingMember	Individual clearing member
5	PreferredMarketMaker	Preferred market maker. Market maker getting a part of the matched quantity before primary or default market maker.
6	DirectedMarketMaker	Directed market maker. Single market maker to handle the order provided.
7	Bank	Bank
8	Hub	Hub. Indicates that the Intermediary party is a hub system or service provider.
9	PrimaryTrdRepository	Primary trade repository. Used to differentiate the principal trade repository from the Original or Additional trade repositories when there are multiple trade repositories being reported.
10	OrigTrdRepository	Original trade repository. Used to identify the trade repository to which the trade was originally reported if different from the current repository to which the trade is being reported.
11	AddtnlIntlTrdRepository	Additional international trade repository. Used with InternationalSwapIndicator(2526) to identify the trade repository that is in addition to the local swaps data repository as required by U.S. law.
12	AddtnlDomesticTrdRepository	Additional domestic trade repository. Used with MixedSwapIndicator(1929) to identify the trade repository that is in addition to the current trade repository when the assets in the swap are subject to two different domestic regulators.
13	RelatedExchange	Related exchange
14	OptionsExchange	Options exchange
15	SpecifiedExchange	Specified exchange
16	ConstituentExchange	Constituent exchange.
17	ExemptFromTradeReporting	Exempt from trade reporting. In the context of FINRA TRACE reporting requirements, this is used to indicate the ATS has been granted a regulatory exemption from reporting.
18	Current	Current. Can be used to convey an existing party identifier for the same party role in a single message.
19	New	New. Can be used to convey a future party identifier for the same party role in a single message.
20	DesignatedSponsor	Designated sponsor. Market maker jointly providing liquidity for the same security with other market makers.
21	Specialist	Specialist. Market maker being the only one providing liquidity for a security.
22	Algorithm	Algorithm

Code	Name	Description
23	FirmOrLegalEntity	Firm or legal entity
24	NaturalPerson	Natural person
25	RegularTrader	Regular trader. Standard trader profile.
26	HeadTrader	Head trader. Senior trader leading a group of regular traders.
27	Supervisor	Supervisor. Administrative user that has only limited rights for normal trading but possibly special rights for emergency actions.
28	TriParty	Tri-party. In the context of EU SFTR reporting, identifies the third party, not necessarily the custodian, to which the reporting counterparty has outsourced the post-trade processing of an SFT (if applicable).
29	Lender	Lender. In the context of EU SFTR reporting, identifies the agent lender involved in the securities lending transaction.

#### **171.2.3670 PartyDetailsListReportID**

Identifier for the PartyDetailsListReport and the PartyDetailsListUpdateReport.

Type: [String](#)

Used in messages: [PartyDetailsListReport](#), [PartyDetailsListUpdateReport](#)

#### **171.2.3671 PartyDetailsListRequestID**

Unique identifier for PartyDetailsListRequest.

Type: [String](#)

Used in messages: [PartyDetailsDefinitionRequest](#), [PartyDetailsDefinitionRequestAck](#), [PartyDetailsListReport](#), [PartyDetailsListRequest](#), [PartyDetailsListUpdateReport](#)

#### **171.2.3672 PartyDetailStatus**

Indicates the status of the party identified with PartyDetailID(1691).

Type: [int](#)

Allowed values in PartyDetailStatusCodeSet:

Code	Name	Description
0	Active	Active (default if not specified)
1	Suspended	Suspended
2	Halted	Halted

Used in groups: [PartyDetailGrp](#)

### 171.2.3673 PartyDetailSubGrp

Additional party sub-identifiers

Name	Mult.	Type	Description
<a href="#">NoPartyDetailSubIDs</a>	[1..1]	NumInGroup	
<a href="#">PartyDetailSubID</a>	[0..1]	String	Required when NoPartyDetailSubIDs > 0.
<a href="#">PartyDetailSubIDType</a>	[0..1]	CodeSet	Required when NoPartyDetailSubIDs > 0.

Used in groups: [PartyDetailGrp](#)

### 171.2.3674 PartyDetailSubID

Sub-identifier for the party specified in PartyDetailID(1691).

Type: [String](#)

Used in groups: [PartyDetailSubGrp](#)

### 171.2.3675 PartyDetailSubIDType

Type of PartyDetailSubID(1695) value.

Type: [int](#)

Allowed values in PartySubIDTypeCodeSet:

Code	Name	Description
1	Firm	Firm
2	Person	Person

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
3	System	System
4	Application	Application
5	FullLegalNameOfFirm	Full legal name of firm
6	PostalAddress	Postal address
7	PhoneNumber	Phone number
8	EmailAddress	Email address
9	ContactName	Contact name
10	SecuritiesAccountNumber	Securities account number (for settlement instructions)
11	RegistrationNumber	Registration number (for settlement instructions and confirmations)
12	RegisteredAddressForConfirmation	Registered address (for confirmation purposes)
13	RegulatoryStatus	Regulatory status (for confirmation purposes)
14	RegistrationName	Registration name (for settlement instructions)
15	CashAccountNumber	Cash account number (for settlement instructions)
16	BIC	BIC
17	CSDParticipantMemberCode	CSD participant member code
18	RegisteredAddress	Registered address
19	FundAccountName	Fund account name
20	TelexNumber	Telex number
21	FaxNumber	Fax number
22	SecuritiesAccountName	Securities account name
23	CashAccountName	Cash account name
24	Department	Department
25	LocationDesk	Location desk
26	PositionAccountType	Position account type
27	SecurityLocateID	Security locate ID
28	MarketMaker	Market maker
29	EligibleCounterparty	Eligible counterparty
30	ProfessionalClient	Professional client
31	Location	Location
32	ExecutionVenue	Execution venue
33	CurrencyDeliveryIdentifier	Currency delivery identifier
34	AddressCity	Address City
35	AddressStateOrProvince	Address State/Province

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
36	AddressPostalCode	Address Postal Code
37	AddressStreet	Address Street
38	AddressISOCountryCode	Address Country (ISO country code)
39	ISOCountryCode	ISO country code
40	MarketSegment	Market segment
41	CustomerAccountType	Customer account type
42	OmnibusAccount	Omnibus account
43	FundsSegregationType	Funds segregation type
44	GuaranteeFund	Guarantee fund. Identifies a guarantee fund related to an account. Used when one account has multiple funds of collateral, each guaranteeing different positions. Can be used for PartyRole(452) = Customer Account(24).
45	SwapDealer	Swap dealer. The US regulator's defined term for identifying the trade counterparty as "any person who holds itself out as a dealer in swaps, makes a market in swaps, regularly enters into swaps with counterparties as an ordinary course of business for its own account, or engages in activity causing itself to be commonly known in the trade as a dealer or market maker in swaps".
46	MajorParticipant	Major participant. When PartySubID(523)=Y the counterparty is not the swap dealer but is a major swap participant as defined in the regulations.
47	FinancialEntity	Financial entity. When PartySubID(523)=Y the counterparty is neither a swap dealer nor a major swap participant but is a financial entity as defined in the regulations.
48	USPerson	U.S. person. A legal term referring to any U.S. person or legal entity anywhere in the world that should be taxed under U.S. law.
49	ReportingEntityIndicator	Reporting entity indicator. Indicates the entity obligated or delegated to report to their regulator, a non-regulatory agency or data repository. Set PartySubID(523)=Y if true.
50	ElectedClearingRequirementException	Elected clearing requirement exception
51	BusinessCenter	Business center.
52	ReferenceText	Reference text
53	ShortMarkingExemptAccount	Short-marking exempt account
54	ParentFirmIdentifier	Parent firm identifier. Implementation-specific identifier of this party's parent entity.
55	ParentFirmName	Parent firm name. Full name of this party's parent entity.

Code	Name	Description
56	DealIdentifier	Deal identifier. The internal identifier assigned to the trade by this party, particularly by a Clearing Organization.
57	SystemTradeID	System trade identifier
58	SystemTradeSubID	System trade sub-identifier
59	FCMCode	Futures Commission Merchant (FCM) code. The FCM's code or identifier in relation to the PartyRole(452). For example, if PartyRole(452) is the exchange or clearinghouse, the FCM code/ID specified in PartySubID(523) is the FCM's identifier at the exchange or clearinghouse.
60	DlvryTrmlCode	Delivery terminal customer account/code. Usually used for gas delivery to identify whose account the gas is allocated to at the delivery terminal. Often referred to as "HUB" code.
61	VolntyRptEntity	Voluntary reporting entity. The entity voluntarily reporting the trade to the regulator. Set PartySubID(523)=Y if true.
62	RptObligJurisdiction	Reporting obligation jurisdiction. For a trade that falls under multiple jurisdictions this may be used to identify, through PartySubID(523), the reporting jurisdiction to which the party is obligated to report.
63	VolntyRptJurisdiction	Voluntary reporting jurisdiction. For a trade that falls under multiple jurisdictions this may be used to identify, through PartySubID(523), the regulatory jurisdiction to which the party is submitting a voluntary report.
64	CompanyActivities	Company activities. For regulatory reporting. ID values include: A = Assurance undertaking authorized in accordance with Directive 2002/83/EC C = Credit institution authorized in accordance with Directive 2006/48/EC F = Investment firm in accordance with Directive 2004/39/EC I = Insurance undertaking authorized in accordance with Directive 73/239/EC L = Alternative investment fund managed by AIFMs authorized or registered in accordance with Directive 2011/61/EC O = Institution for occupational retirement provision within the meaning of Article 6(a) of Directive 2003/41/EC R = Reinsurance undertaking authorized in accordance with Directive 2005/68/EC U = UCITS and its management company, authorized in accordance with Directive 2009/65/EC or blank in case of coverage by LEI or in case of non-financial counterparties. In the context of EU SFTR reporting use the appropriate 4- or 1-character code noted in the regulations. See SFTR ITS "Commission Implementing Regulation (EU) 2019/363" Annexes 1 and 2 for values.
65	EEAreaDomiciled	European Economic Area domiciled. ID values: Y or N

<b>Code</b>	<b>Name</b>	<b>Description</b>
66	ContractLinked	Contract linked to commercial or treasury financing for this counterparty. ID values: Y or N
67	ContractAbove	Contract above clearing threshold for this counterparty. ID values: Y or N
68	VolntyRptPty	Voluntary reporting party. When PartySubID(523)=Y, identifies that the trading party is reporting voluntarily when VoluntaryRegulatoryReport(1935)=Y.
69	EndUser	End user. When PartySubID(523)=Y, the counterparty is neither the swap dealer, major swap participant nor financial entity as defined in the regulations.
70	LocationOrJurisdiction	Location or jurisdiction. One or more instances may be used in combination with PartySubIDType(803) = 49 (Reporting entity indicator) or 102 (Data repository) to identify the jurisdiction, countries, regions or provinces for which the party is a reporting entity or data repository when that characteristic is ambiguous or where there are multiple locations. The party sub-ID value is either a jurisdiction acronym, a 2-character ISO 3166 country code, or a hyphenated combination of the country code and the standard post-office abbreviation for province, state or region if necessary. E.g. "US" for United States or "CA-QC" for Quebec Canada.
71	DerivativesDealer	Derivatives dealer. Indicates whether the party is a derivatives dealer or not (Y/N). The Canadian regulator's defined term for identifying the trade counterparty as "a person or company engaging in or holding himself, herself or itself out as engaging in the business of trading in derivatives in Ontario as principal or agent".
72	Domicile	Domicile. Country and optionally province, state or region of domicile. The party sub-ID value is either a 2-character ISO 3166 country code or a hyphenated combination of the country code and the standard post-office abbreviation of province, state or region if necessary. E.g. "US" for United States or "CA-QC" for Quebec Canada.
73	ExemptFromRecognition	Exempt from recognition. Used with party role 21 "Clearing Organization" to indicate exemption (Y/N). Identifies a clearing agency as exempt from oversight in Ontario, i.e. one that 1) only provides limited services and does not present significant risks or 2) is foreign-based, intends to operate in Ontario but is subject to regulatory oversight in another jurisdiction.

Code	Name	Description
74	Payer	Payer. Identifies the party as the payer of a particular payment stream or bullet payment by quoting the stream's StreamDesc(40051) (or LegStreamDesc(40243) or UnderlyingStreamDesc(40542)) or payment's PaymentDesc(43087) in the associated party sub-identifier field.
75	Receiver	Receiver. Identifies the party as the receiver of a particular payment stream or bullet payment by quoting the stream's StreamDesc(40051) (or LegStreamDesc(40243) or UnderlyingStreamDesc(40542)) or payment's PaymentDesc(43087) in the associated party sub-identifier field.
76	SystematicInternaliser	Systematic Internaliser (SI). In the context of ESMA reporting, this is used to indicate whether the specified party is a Systematic Internaliser or not for the security defined in the Instrument component (Y/N).
77	PublishingEntityIndicator	Publishing entity indicator. Indicates the entity obligated or delegated to publish to the market. Set PartySubID(523)=Y if true.
78	FirstName	First name. The first name(s) of a natural person. If multiple names, separate entries by a comma.
79	Surname	Surname. The surname(s) or lastname(s) of a natural person. If multiple names, separate entries by a comma.
80	DateOfBirth	Date of birth. The date of birth of a natural person in the format YYYYMMDD.
81	OrderTransmittingFirm	Order transmitting firm. Identifies whether the party specified in PartyID(448) is the firm that transmitted the order. In the context of RTS 22 Article 4, when "true" the PartySubID(523)=Y shall be set "by the transmitting firm within the transmitting firm's report where conditions for transmission specified in Article 4 were not satisfied."
82	OrderTransmittingFirmBuyer	Order transmitting firm for buyer. Identifies the firm that transmitted the order for the buyer. In the context of ESMA RTS 22, PartySubID(523)=Y is used to indicate the firm identified in PartyID(448) is the firm that transmitted the order for the buyer. "This shall be populated by the receiving firm within the receiving firm's report with the identification code provided by the transmitting firm."

Code	Name	Description
83	OrderTransmitterSeller	Order transmitter for seller. Identifies the order transmitting firm for the seller. In the context of ESMA RTS 22, PartySubID(523)=Y is used to indicate the firm identified in PartyID(448) is the firm that transmitted the order for the seller. "This shall be populated by the receiving firm within the receiving firm's report with the identification code provided by the transmitting firm."
84	LegalEntityIdentifier	Legal Entity Identifier (ISO 17442) LEI
85	SubSectorClassification	Sub-sector classification. Supplemental to party sub-ID type "64" (Company activities) for regulatory reporting. For EU SFTR reporting use the appropriate 4-character code noted in the regulations applying the conditional association rules. See SFTR ITS "Commission Implementing Regulation (EU) 2019/363" Annexes 1 and 2 for values.
86	PartySide	Party side. May be used, when appropriate, to explicitly indicate the transaction side of the party, e.g. Buyer, Seller, Lender, Borrower, Maker, Taker, etc. in the ID. In the context of EU SFTR reporting, use values as required by SFTR, "GIVE" and "TAKE" in the ID, to identify collateral giver and taker.
87	LegalRegistrationCountry	Legal registration country. ISO Country Code where the registered office of the party is located as specified in the LEI reference data.

Used in groups: [PartyDetailSubGrp](#)

### 171.2.3676 PartyDetailsUpdateGrp

Party details component that includes an update action.

Name	Mult.	Type	Description
<a href="#">NoPartyUpdates</a>	[1..1]	NumInGroup	
<a href="#">ListUpdateAction</a>	[0..1]	CodeSet	Required if NoPartyUpdates > 0.
<a href="#">PartyDetailGrp</a>	[0..*]	Group	

Used in messages: [PartyDetailsDefinitionRequest](#), [PartyDetailsListUpdateReport](#)

**171.2.3677 PartyEntitlementAckGrp**

The PartyEntitlementAckGrp component is used in the PartyEntitlementsDefinitionRequestAck(35=DB) message to provide the status of each action (add, modify or delete) requested by the PartyEntitlementsDefinitionRequest(35=DA) message.

Name	Mult.	Type	Description
NoPartyEntitlements	[1..1]	NumInGroup	
ListUpdateAction	[0..1]	CodeSet	Required if NoPartyEntitlements(1772).
EntitlementStatus	[0..1]	CodeSet	Required if NoPartyEntitlements(1772).
EntitlementResult	[0..1]	CodeSet	
RejectText	[0..1]	String	
EncodedRejectTextLen	[0..1]	Length	
EncodedRejectText	[0..1]	data	
PartyDetailGrp	[0..*]	Group	Optional when ListUpdateAction(1324) = M(Modify) or D(Delete) and EntitlementRefID(1885) is provided.
EntitlementGrp	[0..*]	Group	Optional when ListUpdateAction(1324) = M(Modify) or D(Delete) and EntitlementRefID(1885) is provided.
EntitlementRefID	[0..1]	String	Optional when PartyDetailGrp is provided or ListUpdateAction(1324) = A(Add).

Used in messages: [PartyEntitlementsDefinitionRequestAck](#)

**171.2.3678 PartyEntitlementGrp**

Conveys a list of parties (optionally including related parties) and the entitlements for each.

Name	Mult.	Type	Description
NoPartyEntitlements	[1..1]	NumInGroup	
PartyDetailGrp	[0..*]	Group	Required if NoPartyEntitlements(1772) > 0.
EntitlementStatus	[0..1]	CodeSet	
EntitlementGrp	[0..*]	Group	Required unless omitted to indicate the removal of entitlements for the party(-ies) specified in the PartyDetailGrp component.

Used in messages: [PartyEntitlementsReport](#)

**171.2.3679 PartyEntitlementUpdateGrp**

The PartyEntitlementUpdateGrp component is used to supply incremental entitlement definitions changes for the party(-ies) specified in the PartyDetailGrp component. The update action type is specified using ListUpdateAction(1324).

Name	Mult.	Type	Description
NoPartyEntitlements	[1..1]	NumInGroup	
ListUpdateAction	[0..1]	CodeSet	Required if NoPartyEntitlements(1772).
PartyDetailGrp	[0..*]	Group	Optional when ListUpdateAction(1324) = M(Modify) or D(Delete) and EntitlementRefID(1885) is provided.
EntitlementStatus	[0..1]	CodeSet	
EntitlementGrp	[0..*]	Group	Optional when ListUpdateAction(1324) = M(Modify) or D(Delete) and EntitlementRefID(1885) is provided.
EntitlementRefID	[0..1]	String	Optional when PartyDetailGrp is provided or ListUpdateAction(1324) = A(Add).

Used in messages: [PartyEntitlementsDefinitionRequest](#), [PartyEntitlementsUpdateReport](#)

**171.2.3680 PartyID**

Party identifier/code. See PartyIDSource (447) and PartyRole (452).

See "Appendix 6-G - Use of <Parties> Component Block"

Type: [String](#)

Used in groups: [Parties](#)

**171.2.3681 PartyIDSource**

Identifies class or source of the PartyID (448) value. Required if PartyID is specified. Note: applicable values depend upon PartyRole (452) specified.

See "Appendix 6-G - Use of <Parties> Component Block"

Type: [char](#)

Allowed values in PartyIDSourceCodeSet:

Code	Name	Description
1	KoreanInvestorID	Korean Investor ID
6	UKNationalInsuranceOrPension-Number	UK National Insurance or Pension Number
B	BIC	BIC (Bank Identification Code - SWIFT managed) code (ISO9362 - See "Appendix 6-B")
I	ISITCAcronym	Directed broker three character acronym as defined in ISITC "ETC Best Practice" guidelines document
2	TaiwaneseForeignInvestorID	Taiwanese Qualified Foreign Investor ID QFII/FID
7	USSocialSecurityNumber	US Social Security Number
C	GeneralIdentifier	Generally accepted market participant identifier (e.g. NASD mnemonic)
3	TaiwaneseTradingAcct	Taiwanese Trading Acct
8	USEmployerOrTaxIDNumber	US Employer or Tax ID Number
D	Proprietary	Proprietary / Custom code. Custom ID schema used between counterparties, trading platforms and repositories.
4	MalaysianCentralDepository	Malaysian Central Depository (MCD) number
9	AustralianBusinessNumber	Australian Business Number
E	ISOCountryCode	ISO Country Code
5	ChineseInvestorID	Chinese Investor ID
A	AustralianTaxFileNumber	Australian Tax File Number
F	SettlementEntityLocation	Settlement Entity Location (note if Local Market Settlement use "E=ISO Country Code") (see "Appendix 6-G" for valid values)
G	MIC	Market Identifier Code (ISO 10383) MIC
J	TaxID	Tax ID
H	CSDParticipant	CSD participant/member code (e.g. Euroclear, DTC, CREST or Kassenverein number)
K	AustralianCompanyNumber	Australian Company Number
L	AustralianRegisteredBodyNumber	Australian Registered Body Number
M	CFTCReportingFirmIdentifier	CFTC reporting firm identifier
N	LegalEntityIdentifier	Legal Entity Identifier (ISO 17442) LEI
O	InterimIdentifier	Interim identifier. An interim entity identifier assigned by a regulatory agency prior to an LEI (ISO 17442) being assigned.
P	ShortCodeIdentifier	Short code identifier. A generic means for trading venues, brokers, investment managers to convey a bilaterally agreed upon "short hand" code for an identifier that is a reference to a mapping between the parties.

Code	Name	Description
Q	NationalIDNaturalPerson	National ID of natural person. An identification number generally assigned by a government authority or agency to a natural person which is unique to the person it is assigned to. Examples include, but not limited to, "social security number", "pension number".
R	IndiaPermanentAccountNumber	India Permanent Account Number. Also referred to as PAN ID. An identifier issued by the Income Tax Department of India.
S	FDID	Firm designated identifier. Also referred to as FDID. A unique identifier required by the SEC for each trading account designated by Industry Members for purposes of reporting to CAT (Consolidated Audit Trail).
T	SPSAID	Special Segregated Account ID. Also referred to as SPSA ID. The Special Segregated Account identifier issued by Hong Kong Exchanges and Clearing.
U	MasterSPSAID	Master Special Segregated Account ID. Also referred to as Master SPSA ID. The master identifier issued by Hong Kong Exchanges and Clearing for the aggregation of SPSA IDs.

Used in groups: [Parties](#)

### 171.2.3682 PartyRelationship

Used to specify the type of the party relationship.

Type: [int](#)

Allowed values in PartyRelationshipCodeSet:

Code	Name	Description
0	IsAlso	Is also
1	ClearsFor	Clears for
2	ClearsThrough	Clears through
3	TradesFor	Trades for
4	TradesThrough	Trades through
5	Sponsors	Sponsors
6	SponsoredThrough	Sponsored through
7	ProvidesGuaranteeFor	Provides guarantee for
8	IsGuaranteedBy	Is guaranteed by

<b>Code</b>	<b>Name</b>	<b>Description</b>
9	MemberOf	Member of
10	HasMembers	Has members
11	ProvidesMarketplaceFor	Provides marketplace for
12	ParticipantOfMarketplace	Participant of marketplace
13	CarriesPositionsFor	Carries positions for
14	PostsTradesTo	Posts trades to
15	EntersTradesFor	Enters trades for
16	EntersTradesThrough	Enters trades through
17	ProvidesQuotesTo	Provides quotes to
18	RequestsQuotesFrom	Requests quotes from
19	InvestsFor	Invests for
20	InvestsThrough	Invests through
21	BrokersTradesFor	Brokers trades for
22	BrokersTradesThrough	Brokers trades through
23	ProvidesTradingServicesFor	Provides trading services for
24	UsesTradingServicesOf	Uses trading services of
25	ApprovesOf	Approves of
26	ApprovedBy	Approved by
27	ParentFirmFor	Parent firm for
28	SubsidiaryOf	Subsidiary of
29	RegulatoryOwnerOf	Regulatory owner of
30	OwnedByRegulatory	Owned by (regulatory)
31	Controls	Controls
32	IsControlledBy	Is controlled by
33	LegalOwnerOf	Legal / titled owner of
34	OwnedByLegal	Owned by (legal / title)
35	BeneficialOwnerOf	Beneficial owner of
36	OwnedByBeneficial	Owned by (beneficial)
37	SettlesFor	Settles for
38	SettlesThrough	Settles through

---

Used in groups: [PartyRelationshipGrp](#)

**171.2.3683 PartyRelationshipGrp**

Repeating group of party relationships.

Name	Mult.	Type	Description
NoPartyRelationships	[1..1]	NumInGroup	
PartyRelationship	[0..1]	CodeSet	Identifies the type of party relationship requested. Required if NoPartyRelationships > 0.

Used in groups: [RelatedPartyDetailGrp](#)

Used in messages: [PartyDetailsListRequest](#)

**171.2.3684 PartyRiskLimitsAckGrp**

This new block is a repeating group based on the existing block <PartyRiskLimitsGrp> with an additional field RiskLimitStatus(1763) to accept (with or without changes) or reject individual risk limits. It is only used in PartyRiskLimitDefinitionRequestAck, the response to the request to define risk limits. An approval with changes requires to send <RiskLimitsGrp> with the complete set of risk limits that have been accepted for the party defined.

Name	Mult.	Type	Description
NoPartyRiskLimits	[1..1]	NumInGroup	
ListUpdateAction	[0..1]	CodeSet	Required if NoPartyRiskLimits(1677) > 0.
RiskLimitStatus	[0..1]	CodeSet	Required if NoPartyRiskLimits(1677) > 0.
RiskLimitResult	[0..1]	CodeSet	
PartyDetailGrp	[0..*]	Group	Conditionally required when RiskLimitID(1670) is not provided. Changes to party or related party(-ies) defined in the request are not permitted.
RiskLimitsGrp	[0..*]	Group	Conditionally required when RiskLimitStatus(1763) = 1(Accepted with changes) and must then be complete, i.e. omissions compared to the request represent risk limits that were removed, additional risk limits are possible.
RiskLimitID	[0..1]	String	Conditionally required when PartyDetailGrp component is not provided.
RiskLimitCheckModelType	[0..1]	CodeSet	

Name	Mult.	Type	Description
RejectText	[0..1]	String	
EncodedRejectTextLen	[0..1]	Length	Must be set if EncodedRejectText(1665) field is specified and must immediately precede it.
EncodedRejectText	[0..1]	data	Encoded (non-ASCII characters) representation of the RejectText(1328) field in the encoded format specified via the MessageEncoding(347) field.
PartyRiskLimitStatus	[0..1]	CodeSet	

Used in messages: [PartyRiskLimitsDefinitionRequestAck](#)

### 171.2.3685 PartyRiskLimitsGrp

Repeating group of parties (specified using PartyDetails) and the risk limits for the party.

Name	Mult.	Type	Description
NoPartyRiskLimits	[1..1]	NumInGroup	
PartyDetailGrp	[0..*]	Group	Required if NoPartyRiskLimits(1677) > 0.
RiskLimitsGrp	[0..*]	Group	Required if NoPartyRiskLimits(1677) > 0. Omit to implicitly report removal of risk limits.
RiskLimitID	[0..1]	String	
RiskLimitCheckModelType	[0..1]	CodeSet	
PartyRiskLimitStatus	[0..1]	CodeSet	

Used in messages: [PartyRiskLimitsReport](#)

### 171.2.3686 PartyRiskLimitStatus

The status of risk limits for a party.

Type: `int`

Allowed values in PartyRiskLimitStatusCodeSet:

Code	Name	Description
0	Disabled	Disabled. Risk limits for party is disabled.

Code	Name	Description
1	Enabled	Enabled. Risk limits for party is enabled.

Used in groups: [PartyRiskLimitsAckGrp](#), [PartyRiskLimitsGrp](#), [PartyRiskLimitsUpdateGrp](#)

### 171.2.3687 PartyRiskLimitsUpdateGrp

This new block is a repeating group based on the existing block <PartyRiskLimitsGrp> with an additional field ListUpdateAction(1324) to support incremental changes of risk limit definitions. The group is part of the definition request as well as part of the update report for risk limits.

Name	Mult.	Type	Description
NoPartyRiskLimits	[1..1]	NumInGroup	
ListUpdateAction	[0..1]	CodeSet	Required if NoPartyRiskLimits(1677) > 0.
PartyDetailGrp	[0..*]	Group	Conditionally required when ListUpdateAction(1324) = A(Add). Conditionally required when ListUpdateAction(1324) = M(Modify) or D(Delete) and RiskLimitID(1670) is not provided.
RiskLimitsGrp	[0..*]	Group	Conditionally required when ListUpdateAction(1324) = A(Add) or M(Modify).
RiskLimitID	[0..1]	String	Conditionally required when PartyDetailGrp component is not provided.
RiskLimitCheckModelType	[0..1]	CodeSet	
PartyRiskLimitStatus	[0..1]	CodeSet	

Used in messages: [PartyRiskLimitsDefinitionRequest](#), [PartyRiskLimitsReportAck](#), [PartyRiskLimitsUpdateReport](#)

### 171.2.3688 PartyRole

Identifies the type or role of the PartyID (448) specified.

Type: [int](#)

Allowed values in PartyRoleCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	ExecutingFirm	Executing Firm (formerly FIX 4.2 ExecBroker)
2	BrokerOfCredit	Broker of Credit (formerly FIX 4.2 BrokerOfCredit)
3	ClientID	Client ID (formerly FIX 4.2 ClientID)
4	ClearingFirm	Clearing Firm (formerly FIX 4.2 ClearingFirm)
5	InvestorID	Investor ID
6	IntroducingFirm	Introducing Firm
7	EnteringFirm	Entering Firm
8	Locate	Locate / Lending Firm (for short-sales)
9	FundManagerClientID	Fund Manager Client ID (for CIV)
10	SettlementLocation	Settlement Location (formerly FIX 4.2 SettlLocation)
11	OrderOriginationTrader	Order Origination Trader (associated with Order Origination Firm - i.e. trader who initiates/submits the order)
12	ExecutingTrader	Executing Trader (associated with Executing Firm - actually executes)
13	OrderOriginationFirm	Order Origination Firm (e.g. buy-side firm)
14	GiveupClearingFirmDepr	Giveup Clearing Firm (firm to which trade is given up)
15	CorrespondantClearingFirm	Correspondant Clearing Firm
16	ExecutingSystem	Executing System
17	ContraFirm	Contra Firm
18	ContraClearingFirm	Contra Clearing Firm
19	SponsoringFirm	Sponsoring Firm
20	UnderlyingContraFirm	Underlying Contra Firm
21	ClearingOrganization	Clearing Organization
22	Exchange	Exchange. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
24	CustomerAccount	Customer Account
25	CorrespondentClearingOrganization	Correspondent Clearing Organization
26	CorrespondentBroker	Correspondent Broker
27	Buyer	Buyer/Seller (Receiver/Deliverer)
28	Custodian	Custodian
29	Intermediary	Intermediary
30	Agent	Agent
31	SubCustodian	Sub-custodian
32	Beneficiary	Beneficiary
33	InterestedParty	Interested party

<b>Code</b>	<b>Name</b>	<b>Description</b>
34	RegulatoryBody	Regulatory body. In the context of regulatory reporting, this identifies the regulator the trade is being reported to.
35	LiquidityProvider	Liquidity provider
36	EnteringTrader	Entering trader
37	ContraTrader	Contra trader
38	PositionAccount	Position account. The account which positions are maintained. Typically represents the aggregation of one or more customer accounts.
39	ContraInvestorID	Contra Investor ID
40	TransferToFirm	Transfer to Firm
41	ContraPositionAccount	Contra Position Account
42	ContraExchange	Contra Exchange
43	InternalCarryAccount	Internal Carry Account
44	OrderEntryOperatorID	Order Entry Operator ID
45	SecondaryAccountNumber	Secondary Account Number
46	ForeignFirm	Foreign Firm
47	ThirdPartyAllocationFirm	Third Party Allocation Firm
48	ClaimingAccount	Claiming Account
49	AssetManager	Asset Manager
50	PledgorAccount	Pledgor Account
51	PledgeeAccount	Pledgee Account
52	LargeTraderReportableAccount	Large Trader Reportable Account
53	TraderMnemonic	Trader mnemonic
54	SenderLocation	Sender Location
55	SessionID	Session ID
56	AcceptableCounterparty	Acceptable Counterparty
57	UnacceptableCounterparty	Unacceptable Counterparty
58	EnteringUnit	Entering Unit
59	ExecutingUnit	Executing Unit
60	IntroducingBroker	Introducing Broker
61	QuoteOriginator	Quote originator
62	ReportOriginator	Report originator
63	SystematicInternaliser	Systematic internaliser (SI)

<b>Code</b>	<b>Name</b>	<b>Description</b>
64	MultilateralTradingFacility	Multilateral Trading Facility (MTF). Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
65	RegulatedMarket	Regulated Market (RM). Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
66	MarketMaker	Market Maker
67	InvestmentFirm	Investment Firm
68	HostCompetentAuthority	Host Competent Authority (Host CA)
69	HomeCompetentAuthority	Home Competent Authority (Home CA)
70	CompetentAuthorityLiquidity	Competent Authority of the most relevant market in terms of liquidity (CAL)
71	CompetentAuthorityTransactionV- enue	Competent Authority of the Transaction (Execution) Venue (CATV)
72	ReportingIntermediary	Reporting intermediary. The medium or vendor used to report to a regulator, non-regulatory agency or data repository.
73	ExecutionVenue	Execution Venue. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
74	MarketDataEntryOriginator	Market data entry originator
75	LocationID	Location ID
76	DeskID	Desk ID
77	MarketDataMarket	Market data market
78	AllocationEntity	Allocation Entity
79	PrimeBroker	Prime Broker providing General Trade Services
80	StepOutFirm	Step-Out Firm (Prime Broker)
81	BrokerClearingID	Broker clearing identifier
82	CentralRegistrationDepository	Central Registration Depository (CRD)
83	ClearingAccount	Clearing Account
84	AcceptableSettlingCounterparty	Acceptable Settling Counterparty
85	UnacceptableSettlingCounterparty	Unacceptable Settling Counterparty
86	CLSMemberBank	CLS Member Bank
87	InConcertGroup	In Concert Group
88	InConcertControllingEntity	In Concert Controlling Entity
89	LargePositionsReportingAccount	Large Positions Reporting Account
90	SettlementFirm	Settlement Firm

<b>Code</b>	<b>Name</b>	<b>Description</b>
91	SettlementAccount	Settlement account. The account to which individual payment obligations are aggregated for netting and funds movement. Typically represents the aggregation of many margin (performance bond) accounts.
92	ReportingMarketCenter	Reporting Market Center
93	RelatedReportingMarketCenter	Related Reporting Market Center
94	AwayMarket	Away Market. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
95	GiveupTradingFirm	Give-up (trading) firm
96	TakeupTradingFirm	Take-up (trading) firm
97	GiveupClearingFirm	Give-up clearing firm
98	TakeupClearingFirm	Take-up clearing firm
99	OriginatingMarket	Originating Market. Identifies the Market using PartyIDSource(tag 447) = G (Market Identifier Code) where an order originated in the event that the order is sent to an alternative market for execution. Serves as an inverse of an away market.
100	MarginAccount	Margin account. Also referred to as "performance bond account". The margin account is the calculated margin requirements. Typically represents the aggregation of one or more position accounts.
101	CollateralAssetAccount	Collateral asset account. The account at which individual collateral assets are maintained. Typically, although not always, one-for-one with the settlement account.
102	DataRepository	Data repository. Multiple instances of this PartyRole may appear for reporting purposes.
103	CalculationAgent	Calculation agent
104	ExerciseNoticeSender	Sender of exercise notice
105	ExerciseNoticeReceiver	Receiver of exercise notice
106	RateReferenceBank	Rate reference bank. The bank providing the reference rate. Multiple instance of this PartyRole may appear.
107	Correspondent	Correspondent
109	BeneficiaryBank	Beneficiary's bank or depository institution. The institution in which the beneficiary, a person or an entity, has their account with. The institution may be a bank or non-bank institution.
110	Borrower	Borrower
111	PrimaryObligator	Primary obligator
112	Guarantor	Guarantor

<b>Code</b>	<b>Name</b>	<b>Description</b>
113	ExcludedReferenceEntity	Excluded reference entity
114	DeterminingParty	Determining party
115	HedgingParty	Hedging party
116	ReportingEntity	Reporting entity. The entity that is reporting the information.
117	SalesPerson	Sales person. The person who is involved in the sales activities for their firm.
118	Operator	Operator. The person who has the capabilities and authorization to take certain actions; for example, setting entitlements, etc.
119	CSD	Central Securities Depository (CSD)
120	ICSD	International Central Securities Depository (ICSD)
121	TradingSubAccount	Trading sub-account. Example of sub-accounts include a clearing account that has multiple trading sub-accounts, a trading account that has multiple trading sub-accounts belonging to different trading firms.
122	InvestmentDecisionMaker	Investment decision maker. In the context of ESMA RTS reporting, this is used to specify party responsible for the investment decision. See RTS 24, Annex, Table 2, Field 4.
123	PublishingIntermediary	Publishing intermediary. The medium or vendor used to publish to the market.
124	CSDParticipant	Central Securities Depository (CSD) Participant. In the context of EU SFTR reporting the identifier of the CSD participant or indirect participant of the reporting counterparty. Where both the CSD participant and indirect participant are involved in the transaction this should identify the indirect participant.
125	Issuer	Issuer. The issuer of the security.
126	ContraCustomerAccount	Contra Customer Account. Same as PartyRole(452) = 24 (Customer Account) but for the counterparty. Can be used whenever the parties component is not nested in a repeating group representing both sides.
127	ContraInvestmentDecisionMaker	Contra Investment Decision Maker. Same as PartyRole(452) = 122 (Investment Decision Maker) but for the counterparty. Can be used whenever the parties component is not nested in a repeating group representing both sides.

---

Used in groups: **Parties**

**171.2.3689 PartyRoleQualifier**

Used to further qualify the value of PartyRole(452).

Type: **int**

Allowed values in PartyDetailRoleQualifierCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Agency	Agency
1	Principal	Principal
2	RisklessPrincipal	Riskless principal
3	GeneralClearingMember	General clearing member
30	ExchangeOrderSubmitter	Exchange order submitter. Used to identify original or initial exchange order submitting broker when party role "1" (Executing Firm) appears more than once.
4	IndividualClearingMember	Individual clearing member
5	PreferredMarketMaker	Preferred market maker. Market maker getting a part of the matched quantity before primary or default market maker.
6	DirectedMarketMaker	Directed market maker. Single market maker to handle the order provided.
7	Bank	Bank
8	Hub	Hub. Indicates that the Intermediary party is a hub system or service provider.
9	PrimaryTrdRepository	Primary trade repository. Used to differentiate the principal trade repository from the Original or Additional trade repositories when there are multiple trade repositories being reported.
10	OrigTrdRepository	Original trade repository. Used to identify the trade repository to which the trade was originally reported if different from the current repository to which the trade is being reported.
11	AddtnlIntlTrdRepository	Additional international trade repository. Used with InternationalSwapIndicator(2526) to identify the trade repository that is in addition to the local swaps data repository as required by U.S. law.
12	AddtnlDomesticTrdRepository	Additional domestic trade repository. Used with MixedSwapIndicator(1929) to identify the trade repository that is in addition to the current trade repository when the assets in the swap are subject to two different domestic regulators.
13	RelatedExchange	Related exchange
14	OptionsExchange	Options exchange

---

Code	Name	Description
15	SpecifiedExchange	Specified exchange
16	ConstituentExchange	Constituent exchange.
17	ExemptFromTradeReporting	Exempt from trade reporting. In the context of FINRA TRACE reporting requirements, this is used to indicate the ATS has been granted a regulatory exemption from reporting.
18	Current	Current. Can be used to convey an existing party identifier for the same party role in a single message.
19	New	New. Can be used to convey a future party identifier for the same party role in a single message.
20	DesignatedSponsor	Designated sponsor. Market maker jointly providing liquidity for the same security with other market makers.
21	Specialist	Specialist. Market maker being the only one providing liquidity for a security.
22	Algorithm	Algorithm
23	FirmOrLegalEntity	Firm or legal entity
24	NaturalPerson	Natural person
25	RegularTrader	Regular trader. Standard trader profile.
26	HeadTrader	Head trader. Senior trader leading a group of regular traders.
27	Supervisor	Supervisor. Administrative user that has only limited rights for normal trading but possibly special rights for emergency actions.
28	TriParty	Tri-party. In the context of EU SFTR reporting, identifies the third party, not necessarily the custodian, to which the reporting counterparty has outsourced the post-trade processing of an SFT (if applicable).
29	Lender	Lender. In the context of EU SFTR reporting, identifies the agent lender involved in the securities lending transaction.

Used in groups: **Parties**

### 171.2.3690 PartySubID

Sub-identifier (e.g. Clearing Account for PartyRole (452)=Clearing Firm, Locate ID # for PartyRole=Locate/Lending Firm, etc). Not required when using PartyID (448), PartyIDSource (447), and PartyRole.

Type: **String**

Used in groups: [PtysSubGrp](#)

### 171.2.3691 PartySubIDType

Type of PartySubID(523) value.

Type: [int](#)

Allowed values in PartySubIDTypeCodeSet:

Code	Name	Description
1	Firm	Firm
2	Person	Person
3	System	System
4	Application	Application
5	FullLegalNameOfFirm	Full legal name of firm
6	PostalAddress	Postal address
7	PhoneNumber	Phone number
8	EmailAddress	Email address
9	ContactName	Contact name
10	SecuritiesAccountNumber	Securities account number (for settlement instructions)
11	RegistrationNumber	Registration number (for settlement instructions and confirmations)
12	RegisteredAddressForConfirmation	Registered address (for confirmation purposes)
13	RegulatoryStatus	Regulatory status (for confirmation purposes)
14	RegistrationName	Registration name (for settlement instructions)
15	CashAccountNumber	Cash account number (for settlement instructions)
16	BIC	BIC
17	CSDParticipantMemberCode	CSD participant member code
18	RegisteredAddress	Registered address
19	FundAccountName	Fund account name
20	TelexNumber	Telex number
21	FaxNumber	Fax number
22	SecuritiesAccountName	Securities account name
23	CashAccountName	Cash account name
24	Department	Department
25	LocationDesk	Location desk

<b>Code</b>	<b>Name</b>	<b>Description</b>
26	PositionAccountType	Position account type
27	SecurityLocateID	Security locate ID
28	MarketMaker	Market maker
29	EligibleCounterparty	Eligible counterparty
30	ProfessionalClient	Professional client
31	Location	Location
32	ExecutionVenue	Execution venue
33	CurrencyDeliveryIdentifier	Currency delivery identifier
34	AddressCity	Address City
35	AddressStateOrProvince	Address State/Province
36	AddressPostalCode	Address Postal Code
37	AddressStreet	Address Street
38	AddressISOCountryCode	Address Country (ISO country code)
39	ISOCountryCode	ISO country code
40	MarketSegment	Market segment
41	CustomerAccountType	Customer account type
42	OmnibusAccount	Omnibus account
43	FundsSegregationType	Funds segregation type
44	GuaranteeFund	Guarantee fund. Identifies a guarantee fund related to an account. Used when one account has multiple funds of collateral, each guaranteeing different positions. Can be used for PartyRole(452) = Customer Account(24).
45	SwapDealer	Swap dealer. The US regulator's defined term for identifying the trade counterparty as "any person who holds itself out as a dealer in swaps, makes a market in swaps, regularly enters into swaps with counterparties as an ordinary course of business for its own account, or engages in activity causing itself to be commonly known in the trade as a dealer or market maker in swaps".
46	MajorParticipant	Major participant. When PartySubID(523)=Y the counterparty is not the swap dealer but is a major swap participant as defined in the regulations.
47	FinancialEntity	Financial entity. When PartySubID(523)=Y the counterparty is neither a swap dealer nor a major swap participant but is a financial entity as defined in the regulations.
48	USPerson	U.S. person. A legal term referring to any U.S. person or legal entity anywhere in the world that should be taxed under U.S. law.

<b>Code</b>	<b>Name</b>	<b>Description</b>
49	ReportingEntityIndicator	Reporting entity indicator. Indicates the entity obligated or delegated to report to their regulator, a non-regulatory agency or data repository. Set PartySubID(523)=Y if true.
50	ElectedClearingRequirementException	Elected clearing requirement exception
51	BusinessCenter	Business center.
52	ReferenceText	Reference text
53	ShortMarkingExemptAccount	Short-marking exempt account
54	ParentFirmIdentifier	Parent firm identifier. Implementation-specific identifier of this party's parent entity.
55	ParentFirmName	Parent firm name. Full name of this party's parent entity.
56	DealIdentifier	Deal identifier. The internal identifier assigned to the trade by this party, particularly by a Clearing Organization.
57	SystemTradeID	System trade identifier
58	SystemTradeSubID	System trade sub-identifier
59	FCMCode	Futures Commission Merchant (FCM) code. The FCM's code or identifier in relation to the PartyRole(452). For example, if PartyRole(452) is the exchange or clearinghouse, the FCM code/ID specified in PartySubID(523) is the FCM's identifier at the exchange or clearinghouse.
60	DlvryTrmlCode	Delivery terminal customer account/code. Usually used for gas delivery to identify whose account the gas is allocated to at the delivery terminal. Often referred to as "HUB" code.
61	VolntyRptEntity	Voluntary reporting entity. The entity voluntarily reporting the trade to the regulator. Set PartySubID(523)=Y if true.
62	RptObligJursdctn	Reporting obligation jurisdiction. For a trade that falls under multiple jurisdictions this may be used to identify, through PartySubID(523), the reporting jurisdiction to which the party is obligated to report.
63	VolntyRptJursdctn	Voluntary reporting jurisdiction. For a trade that falls under multiple jurisdictions this may be used to identify, through PartySubID(523), the regulatory jurisdiction to which the party is submitting a voluntary report.

Code	Name	Description
64	CompanyActivities	Company activities. For regulatory reporting. ID values include: A = Assurance undertaking authorized in accordance with Directive 2002/83/EC C=Credit institution authorized in accordance with Directive 2006/48/EC F=Investment firm in accordance with Directive 2004/39/EC I=Insurance undertaking authorized in accordance with Directive 73/239/EC L=Alternative investment fund managed by AIFMs authorized or registered in accordance with Directive 2011/61/EC O=Institution for occupational retirement provision within the meaning of Article 6(a0 of Directive 2003/41/EC R=Reinsurance undertaking authorized in accordance with Directive 2005/68/EC U=UCITS and its management company, authorized in accordance with Directive 2009/65/EC or blank in case of coverage by LEI or in case of non-financial counterparties. In the context of EU SFTR reporting use the appropriate 4- or 1-character code noted in the regulations. See SFTR ITS "Commission Implementing Regulation (EU) 2019/363" Annexes 1 and 2 for values.
65	EEAreaDomiciled	European Economic Area domiciled. ID values: Y or N
66	ContractLinked	Contract linked to commercial or treasury financing for this counterparty. ID values: Y or N
67	ContractAbove	Contract above clearing threshold for this counterparty. ID values: Y or N
68	VolntyRptPty	Voluntary reporting party. When PartySubID(523)=Y, identifies that the trading party is reporting voluntarily when VoluntaryRegulatoryReport(1935)=Y.
69	EndUser	End user. When PartySubID(523)=Y, the counterparty is neither the swap dealer, major swap participant nor financial entity as defined in the regulations.
70	LocationOrJurisdiction	Location or jurisdiction. One or more instances may be used in combination with PartySubIDType(803) = 49 (Reporting entity indicator) or 102 (Data repository) to identify the jurisdiction, countries, regions or provinces for which the party is a reporting entity or data repository when that characteristic is ambiguous or where there are multiple locations. The party sub-ID value is either a jurisdiction acronym, a 2-character ISO 3166 country code, or a hyphenated combination of the country code and the standard post-office abbreviation for province, state or region if necessary. E.g. "US" for United States or "CA-QC" for Quebec Canada.

<b>Code</b>	<b>Name</b>	<b>Description</b>
71	DerivativesDealer	Derivatives dealer. Indicates whether the party is a derivatives dealer or not (Y/N). The Canadian regulator's defined term for identifying the trade counterparty as "a person or company engaging in or holding himself, herself or itself out as engaging in the business of trading in derivatives in Ontario as principal or agent".
72	Domicile	Domicile. Country and optionally province, state or region of domicile. The party sub-ID value is either a 2-character ISO 3166 country code or a hyphenated combination of the country code and the standard post-office abbreviation of province, state or region if necessary. E.g. "US" for United States or "CA-QC" for Quebec Canada.
73	ExemptFromRecognition	Exempt from recognition. Used with party role 21 "Clearing Organization" to indicate exemption (Y/N). Identifies a clearing agency as exempt from oversight in Ontario, i.e. one that 1) only provides limited services and does not present significant risks or 2) is foreign-based, intends to operate in Ontario but is subject to regulatory oversight in another jurisdiction.
74	Payer	Payer. Identifies the party as the payer of a particular payment stream or bullet payment by quoting the stream's StreamDesc(40051) (or LegStreamDesc(40243) or UnderlyingStreamDesc(40542)) or payment's PaymentDesc(43087) in the associated party sub-identifier field.
75	Receiver	Receiver. Identifies the party as the receiver of a particular payment stream or bullet payment by quoting the stream's StreamDesc(40051) (or LegStreamDesc(40243) or UnderlyingStreamDesc(40542)) or payment's PaymentDesc(43087) in the associated party sub-identifier field.
76	SystematicInternaliser	Systematic Internaliser (SI). In the context of ESMA reporting, this is used to indicate whether the specified party is a Systematic Internaliser or not for the security defined in the Instrument component (Y/N).
77	PublishingEntityIndicator	Publishing entity indicator. Indicates the entity obligated or delegated to publish to the market. Set PartySubID(523)=Y if true.
78	FirstName	First name. The first name(s) of a natural person. If multiple names, separate entries by a comma.
79	Surname	Surname. The surname(s) or lastname(s) of a natural person. If multiple names, separate entries by a comma.

Code	Name	Description
80	DateOfBirth	Date of birth. The date of birth of a natural person in the format YYYYMMDD.
81	OrderTransmittingFirm	Order transmitting firm. Identifies whether the party specified in PartyID(448) is the firm that transmitted the order. In the context of RTS 22 Article 4, when "true" the PartySubID(523)=Y shall be set "by the transmitting firm within the transmitting firm's report where conditions for transmission specified in Article 4 were not satisfied."
82	OrderTransmittingFirmBuyer	Order transmitting firm for buyer. Identifies the firm that transmitted the order for the buyer. In the context of ESMA RTS 22, PartySubID(523)=Y is used to indicate the firm identified in PartyID(448) is the firm that transmitted the order for the buyer. "This shall be populated by the receiving firm within the receiving firm's report with the identification code provided by the transmitting firm."
83	OrderTransmitterSeller	Order transmitter for seller. Identifies the order transmitting firm for the seller. In the context of ESMA RTS 22, PartySubID(523)=Y is used to indicate the firm identified in PartyID(448) is the firm that transmitted the order for the seller. "This shall be populated by the receiving firm within the receiving firm's report with the identification code provided by the transmitting firm."
84	LegalEntityIdentifier	Legal Entity Identifier (ISO 17442) LEI
85	SubSectorClassification	Sub-sector classification. Supplemental to party sub-ID type "64" (Company activities) for regulatory reporting. For EU SFTR reporting use the appropriate 4-character code noted in the regulations applying the conditional association rules. See SFTR ITS "Commission Implementing Regulation (EU) 2019/363" Annexes 1 and 2 for values.
86	PartySide	Party side. May be used, when appropriate, to explicitly indicate the transaction side of the party, e.g. Buyer, Seller, Lender, Borrower, Maker, Taker, etc. in the ID. In the context of EU SFTR reporting, use values as required by SFTR, "GIVE" and "TAKE" in the ID, to identify collateral giver and taker.
87	LegalRegistrationCountry	Legal registration country. ISO Country Code where the registered office of the party is located as specified in the LEI reference data.

Used in groups: [PtysSubGrp](#)

**171.2.3692 Password**

Password or passphrase.

Type: **String**

Used in messages: **Logon**, **UserRequest**

**171.2.3693 PayAmount**

Amount to be paid by the clearinghouse to the clearing firm.

Type: **Amt**

Used in groups: **PayCollectGrp**

**171.2.3694 PayCollectCurrency**

Currency denomination of value in **PayAmount(1710)** and **CollectAmount(1711)**. If not specified, default to currency specified in **SettlementAmountCurrency(1702)**.

Type: **Currency**

Used in groups: **PayCollectGrp**

**171.2.3695 PayCollectCurrencyCodeSource**

Identifies class or source of the **PayCollectCurrency(1709)** value.

Type: **String**

Allowed values in **CurrencyCodeSourceCodeSet**:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

---

Used in groups: [PayCollectGrp](#)

### 171.2.3696 PayCollectFXRate

Foreign exchange rate used to compute the PayAmount(1710) or CollectAmount(1711) from the PayCollectCurrency(1709) and the Currency(15).

Type: [float](#)

Used in groups: [PayCollectGrp](#)

### 171.2.3697 PayCollectFXRateCalc

Specifies whether or not PayCollectFXRate(2094) should be multiplied or divided.

Type: [char](#)

Allowed values in UnderlyingFXRateCalcCodeSet:

---

Code	Name	Description
D	Divide	Divide
M	Multiply	Multiply

---

Used in groups: [PayCollectGrp](#)

### 171.2.3698 PayCollectGrp

The Pay Collect Group component block is a repeatable block intended to report individual pay/collect items to be considered when calculating net settlement.

---

Name	Mult.	Type	Description
<a href="#">NoPayCollects</a>	[1..1]	NumInGroup	
<a href="#">PayCollectType</a>	[0..1]	String	Required if NoPayCollects > 0.
<a href="#">PayCollectCurrency</a>	[0..1]	Currency	Can be used to specify the base settlement currency if Currency(15) is not specified.
<a href="#">PayCollectCurrencyCodeSource</a>	[0..1]	CodeSet	
<a href="#">PayCollectFXRate</a>	[0..1]	float	
<a href="#">PayCollectFXRateCalc</a>	[0..1]	CodeSet	

---

Name	Mult.	Type	Description
PayAmount	[0..1]	Amt	
CollectAmount	[0..1]	Amt	
PayCollectMarketSegmentID	[0..1]	String	
PayCollectMarketID	[0..1]	String	

---

Used in messages: [AccountSummaryReport](#)

### **171.2.3699 PayCollectMarketID**

Market associated with the pay collect amount.

Type: [String](#)

Used in groups: [PayCollectGrp](#)

### **171.2.3700 PayCollectMarketSegmentID**

Market segment associated with the pay collect amount.

Type: [String](#)

Used in groups: [PayCollectGrp](#)

### **171.2.3701 PayCollectType**

Category describing the reason for funds paid to, or the funds collected from the clearing firm.

Type: [String](#)

Used in groups: [PayCollectGrp](#)

### **171.2.3702 PayDisputeReason**

Used to provide the reason for disputing a request or report.

See <https://www.fixtrading.org/packages/PayDisputeReason> for the list of applicable values.

Type: [int](#)

Used in messages: [PayManagementReport](#), [PayManagementReportAck](#)

### **171.2.3703 PaymentAmount**

The total payment amount.

Type: **Amt**

Used in groups: **PaymentGrp**

### **171.2.3704 PaymentAmountDeterminationMethod**

Specifies the method by which a payment amount is determined.

See <http://www.fpml.org/coding-scheme/determination-method> for values.

Type: **String**

Used in groups: **PaymentGrp**

### **171.2.3705 PaymentAmountRelativeTo**

Specifies the reference amount when the payment amount is relative to another amount in the message.

See [http://www.fixtradingcommunity.org/codelists#Payment\\_Amount\\_Relative\\_To](http://www.fixtradingcommunity.org/codelists#Payment_Amount_Relative_To) for code list of relative amounts.

Type: **int**

Used in groups: **PaymentGrp**

### **171.2.3706 PaymentBusinessCenter**

The business center calendar used to adjust the payment date, e.g. "GBLO". See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **PaymentBusinessCenterGrp**

### **171.2.3707 PaymentBusinessCenterGrp**

**PaymentBusinessCenterGrp** is a repeating subcomponent within the **PaymentGrp** component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the **DateAdjustment** component in **Instrument**.

Name	Mult.	Type	Description
NoPaymentBusinessCenters	[1..1]	NumInGroup	
PaymentBusinessCenter	[0..1]	String	Required if NoPaymentBusinessCenters(40944) > 0.

Used in groups: [PaymentGrp](#)

### 171.2.3708 PaymentBusinessDayConvention

The business day convention used to adjust the payment date. Used only to override the business day convention specified in the DateAdjustment component within the Instrument component.

Type: [int](#)

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in groups: [PaymentGrp](#)

### 171.2.3709 PaymentCurrency

Specifies the currency in which PaymentAmount(40217) is denominated. Uses ISO 4271 currency codes.

Type: [Currency](#)

Used in groups: [PaymentGrp](#)

**171.2.3710 PaymentDate**

The date written on a cheque or date payment should be submitted to the relevant clearing system.

Type: **LocalMktDate**

Used in groups: **SettlInstGrp**

**171.2.3711 PaymentDateAdjusted**

The adjusted payment date.

Type: **LocalMktDate**

Used in groups: **PaymentGrp**

**171.2.3712 PaymentDateOffsetDayType**

Specifies the day type of the relative payment date offset.

Type: **int**

Allowed values in PaymentDateOffsetDayTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Business	Business
1	Calendar	Calendar
2	Commodity	Commodity business
3	Currency	Currency business
4	Exchange	Exchange business
5	Scheduled	Scheduled trading day

---

Used in groups: **PaymentGrp**

**171.2.3713 PaymentDateOffsetPeriod**

Time unit multiplier for the relative payment date offset.

Type: **int**

Used in groups: **PaymentGrp**

**171.2.3714 PaymentDateOffsetUnit**

Time unit associated with the relative payment date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in groups: **PaymentGrp**

**171.2.3715 PaymentDateRelativeTo**

Specifies the anchor date when the payment date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: **int**

Used in groups: **PaymentGrp**

**171.2.3716 PaymentDateUnadjusted**

The unadjusted payment date.

Type: **LocalMktDate**

Used in groups: **PaymentGrp**

**171.2.3717 PaymentDesc**

A short descriptive name given to the payment, e.g. Premium, Upfront, etc. The description has no intrinsic meaning but should be arbitrarily chosen by the remitter as reference.

Type: **String**

Used in groups: **PaymentGrp**

**171.2.3718 PaymentDiscountFactor**

The value representing the discount factor used to calculate the present value of the cash flow.

Type: **float**

Used in groups: **PaymentGrp**

**171.2.3719 PaymentFixedRate**

The rate applicable to the fixed rate payment.

Type: **Percentage**

Used in groups: **PaymentGrp**

**171.2.3720 PaymentFloatingRateIndex**

The payment floating rate index. See SpreadOrBenchmarkCurveData(221) for suggested values.

Type: **String**

Used in groups: **PaymentGrp**

**171.2.3721 PaymentFloatingRateIndexCurvePeriod**

Time unit multiplier for the floating rate index.

Type: **int**

Used in groups: **PaymentGrp**

**171.2.3722 PaymentFloatingRateIndexCurveUnit**

Time unit associated with the floating rate index.

Type: **String**

Allowed values in PaymentStreamRateIndexCurveUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week

---

---

Code	Name	Description
Mo	Month	Month
Yr	Year	Year

---

Used in groups: [PaymentGrp](#)

### **171.2.3723 PaymentFloatingRateSpread**

Spread from floating rate index.

Type: [PriceOffset](#)

Used in groups: [PaymentGrp](#)

### **171.2.3724 PaymentForwardStartType**

Forward start premium type.

Type: [int](#)

Allowed values in PaymentForwardStartTypeCodeSet:

---

Code	Name	Description
0	Prepaid	Prepaid
1	Postpaid	Post-paid
2	Variable	Variable
3	Fixed	Fixed

---

Used in groups: [PaymentGrp](#)

### **171.2.3725 PaymentFrequencyPeriod**

Time unit multiplier for the payment frequency.

Type: [int](#)

Used in groups: [PaymentGrp](#)

**171.2.3726 PaymentFrequencyUnit**

Time unit associated with the payment frequency.

Type: **String**

Allowed values in PaymentStreamRateIndexCurveUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in groups: **PaymentGrp**

**171.2.3727 PaymentGrp**

The PaymentGrp is a repeating component used to report additional payments or bullet payments.

Name	Mult.	Type	Description
<b>NoPayments</b>	[1..1]	NumInGroup	
<b>PaymentType</b>	[0..1]	CodeSet	Required if NoPayments(40212) > 0.
<b>PaymentSubType</b>	[0..1]	CodeSet	
<b>PaymentPaySide</b>	[0..1]	CodeSet	
<b>PaymentReceiveSide</b>	[0..1]	CodeSet	
<b>PaymentDesc</b>	[0..1]	String	
<b>PaymentCurrency</b>	[0..1]	Currency	
<b>PaymentAmount</b>	[0..1]	Amt	Either PaymentAmount(40217), PaymentFixedRate(43097) or PaymentRFloatingRateIndex(43098) must be specified.
<b>PaymentAmountRelativeTo</b>	[0..1]	int	
<b>PaymentAmountDetermination-Method</b>	[0..1]	String	

Name	Mult.	Type	Description
PaymentFixedRate	[0..1]	Percentage	Either PaymentAmount(40217), PaymentFixedRate(43097) or PaymentFloatingRateIndex(43098) must be specified.
PaymentFloatingRateIndex	[0..1]	String	Either PaymentAmount(40217), PaymentFixedRate(43097) or PaymentFloatingRateIndex(43098) must be specified.
PaymentFloatingRateIndexCurveUnit	[0..1]	CodeSet	Conditionally required when PaymentFloatingRateIndexCurvePeriod(43099) is specified.
PaymentFloatingRateIndexCurvePeriod	[0..1]	int	Conditionally required when PaymentFloatingRateIndexCurveUnit(43100) is specified.
PaymentFloatingRateSpread	[0..1]	PriceOffset	Conditionally required when PaymentFloatingRateIndex(43098) is specified and the spread to the index is not "zero". When the spread to the index is "zero" this may be omitted.
PaymentRateResetFrequencyUnit	[0..1]	CodeSet	Conditionally required when PaymentRateResetFrequencyPeriod(43104) is specified.
PaymentRateResetFrequencyPeriod	[0..1]	int	Conditionally required when PaymentRateResetFrequencyUnit(43105) is specified.
PaymentFrequencyUnit	[0..1]	CodeSet	Conditionally required when PaymentFrequencyPeriod(43102) is specified.
PaymentFrequencyPeriod	[0..1]	int	Conditionally required when PaymentFrequencyUnitPeriod(43103) is specified.
PaymentPrice	[0..1]	Price	
PaymentPriceType	[0..1]	CodeSet	
PaymentUnitOfMeasure	[0..1]	CodeSet	
PaymentDateUnadjusted	[0..1]	LocalMktDate	
PaymentBusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the DateAdjustment component in Instrument. The specified value would be specific to this instance of the payment information.

Name	Mult.	Type	Description
PaymentBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the DateAdjustment component in Instrument. The specified values would be specific to this instance of the payment information.
PaymentDateRelativeTo	[0..1]	int	
PaymentDateOffsetPeriod	[0..1]	int	Conditionally required when PaymentDateOffsetUnit(41158) is specified.
PaymentDateOffsetUnit	[0..1]	CodeSet	Conditionally required when PaymentDateOffsetPeriod(41157) is specified.
PaymentDateOffsetDayType	[0..1]	CodeSet	
PaymentDateAdjusted	[0..1]	LocalMktDate	
PaymentForwardStartType	[0..1]	CodeSet	
PaymentDiscountFactor	[0..1]	float	
PaymentPresentValueAmount	[0..1]	Amt	
PaymentPresentValueCurrency	[0..1]	Currency	
PaymentSettlStyle	[0..1]	CodeSet	
PaymentMethod	[0..1]	CodeSet	
PaymentSettlGrp	[0..*]	Group	
PaymentLegRefID	[0..1]	String	Used to link a payment back to its parent InstrumentLeg by using the same value as the parent's LegID(1788).
PaymentText	[0..1]	String	
EncodedPaymentTextLen	[0..1]	Length	Must be set if EncodedPaymentText(40985) field is specified and must immediately precede it.
EncodedPaymentText	[0..1]	data	Encoded (non-ASCII characters) representation of the PaymentText(40229) field in the encoded format specified via the MessageEncoding(347) field.

Used in messages: [ExecutionReport](#), [PositionMaintenanceReport](#), [PositionReport](#), [TradeCaptureReport](#)

### 171.2.3728 PaymentLegRefID

Identifies the instrument leg in which this payment applies to by referencing the leg's LegID(1788).

Type: [String](#)

Used in groups: [PaymentGrp](#)

### 171.2.3729 PaymentMethod

Identifies the settlement payment method.

Type: [int](#)

Allowed values in PaymentMethodCodeSet:

Code	Name	Description
1	CREST	CREST
2	NSCC	NSCC
3	Euroclear	Euroclear
4	Clearstream	Clearstream
5	Cheque	Cheque
6	TelegraphicTransfer	Telegraphic Transfer
7	FedWire	Fed Wire
8	DebitCard	Debit Card
9	DirectDebit	Direct Debit (BECS)
10	DirectCredit	Direct Credit (BECS)
11	CreditCard	Credit Card
12	ACHDebit	ACH Debit
13	ACHCredit	ACH Credit
14	BPAY	BPAY
15	HighValueClearingSystem	High Value Clearing System (HVACS)
16	CHIPS	CHIPS
17	SWIFT	S.W.I.F.T.
18	CHAPS	CHAPS
19	SIC	SIC
20	EuroSIC	euroSIC.
999	Other	Other

Used in groups: [PaymentGrp](#), [SettlInstGrp](#)

**171.2.3730 PaymentPaySide**

The side of the party paying the payment.

Type: **int**

Allowed values in PaymentPaySideCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	Buy	Buy
2	Sell	Sell

---

Used in groups: **PaymentGrp**

**171.2.3731 PaymentPresentValueAmount**

The amount representing the present value of the forecast payment.

Type: **Amt**

Used in groups: **PaymentGrp**

**171.2.3732 PaymentPresentValueCurrency**

Specifies the currency the PaymentPresentValueAmount(40225) is denominated in. Uses ISO 4217 currency codes.

Type: **Currency**

Used in groups: **PaymentGrp**

**171.2.3733 PaymentPrice**

The price determining the payment amount expressed in terms specified in PaymentPriceType(40919) and expressed in market format.

Type: **Price**

Used in groups: **PaymentGrp**

**171.2.3734 PaymentPriceType**

Specifies the type of price for PaymentPrice(40218).

Type: **int**

Allowed values in PriceTypeCodeSet:

Code	Name	Description
1	Percentage	Percentage (i.e. percent of par) (often called "dollar price" for fixed income)
2	PerUnit	Per unit (i.e. per share or contract)
3	FixedAmount	Fixed amount (absolute value)
4	Discount	Discount - percentage points below par
5	Premium	Premium - percentage points over par
6	Spread	Spread (basis points spread). Usually the difference in yield between two switched bonds or a corporate bond traded spread-to-benchmark.
7	TEDPrice	TED Price
8	TEDYield	TED Yield
9	Yield	Yield
10	FixedCabinetTradePrice	Fixed cabinet trade price (primarily for listed futures and options)
11	VariableCabinetTradePrice	Variable cabinet trade price (primarily for listed futures and options)
12	PriceSpread	Price spread. Price spread is expressed based on market convention for the asset being priced or traded. For example, the difference between the prices of a multileg switch or strategy expressed in basis points for a CDS or TBA roll; a price value to be added to a reference price, such as a "pay up" for specified pools
13	ProductTicksInHalves	Product ticks in halves
14	ProductTicksInFourths	Product ticks in fourths
15	ProductTicksInEighths	Product ticks in eighths
16	ProductTicksInSixteenths	Product ticks in sixteenths
17	ProductTicksInThirtySeconds	Product ticks in thirty-seconds
18	ProductTicksInSixtyFourths	Product ticks in sixty-fourths
19	ProductTicksInOneTwentyEighths	Product ticks in one-twenty-eighths
20	NormalRateRepresentation	Normal rate representation (e.g. FX rate)
21	InverseRateRepresentation	Inverse rate representation (e.g. FX rate)

---

Code	Name	Description
22	BasisPoints	Basis points. When the price is not spread based.
23	UpfrontPoints	Up front points. Used specifically for CDS pricing.
24	InterestRate	Interest rate. When the price is an interest rate. For example, used with benchmark reference rate.
25	PercentageNotional	Percentage of notional

---

Used in groups: [PaymentGrp](#)

### **171.2.3735 PaymentRateResetFrequencyPeriod**

Time unit multiplier for the floating rate reset frequency.

Type: [int](#)

Used in groups: [PaymentGrp](#)

### **171.2.3736 PaymentRateResetFrequencyUnit**

Time unit associated with the floating rate reset frequency.

Type: [String](#)

Allowed values in PaymentStreamRateIndexCurveUnitCodeSet:

---

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in groups: [PaymentGrp](#)

### **171.2.3737 PaymentReceiveSide**

The side of the party receiving the payment.

Type: [int](#)

Allowed values in PaymentPaySideCodeSet:

Code	Name	Description
1	Buy	Buy
2	Sell	Sell

Used in groups: [PaymentGrp](#)

### **171.2.3738 PaymentRef**

"Settlement Payment Reference" - A free format Payment reference to assist with reconciliation, e.g. a Client and/or Order ID number.

Type: [String](#)

Used in groups: [SettlInstGrp](#)

### **171.2.3739 PaymentRemitterID**

Identifies sender of a payment, e.g. the payment remitter or a customer reference number.

Type: [String](#)

Used in groups: [SettlInstGrp](#)

### **171.2.3740 PaymentScheduleCurrency**

The currency for this step. Uses ISO 4217 currency codes.

Type: [Currency](#)

Used in groups: [PaymentScheduleGrp](#)

### **171.2.3741 PaymentScheduleEndDateUnadjusted**

The unadjusted end date of a cash flow payment.

Type: [LocalMktDate](#)

Used in groups: [PaymentScheduleGrp](#)

#### **171.2.3742 PaymentScheduleFixedAmount**

The explicit payment amount for this step schedule.

Type: **Amt**

Used in groups: **PaymentScheduleGrp**

#### **171.2.3743 PaymentScheduleFixedCurrency**

The currency of the fixed amount. Uses ISO 4217 currency codes.

Type: **Currency**

Used in groups: **PaymentScheduleGrp**

#### **171.2.3744 PaymentScheduleFixingDateAdjusted**

The adjusted fixing date.

Type: **LocalMktDate**

Used in groups: **PaymentScheduleGrp**

#### **171.2.3745 PaymentScheduleFixingDateBusinessCenter**

The business center calendar used to adjust the payment schedule's fixing date, e.g. "GBLO". See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **PaymentScheduleFixingDateBusinessCenterGrp**

#### **171.2.3746 PaymentScheduleFixingDateBusinessCenterGrp**

**PaymentScheduleFixingDateBusinessCenterGrp** is a repeating subcomponent within the **PaymentScheduleGrp** component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the **DateAdjustment** component in **Instrument**.

Name	Mult.	Type	Description
NoPaymentScheduleFixingDateBusinessCenters	[1..1]	NumInGroup	
PaymentScheduleFixingDateBusinessCenter	[0..1]	String	Required if NoPaymentScheduleFixingDateBusinessCenters(40944) > 0.

Used in groups: [PaymentScheduleGrp](#)

### 171.2.3747 PaymentScheduleFixingDateBusinessDayConvention

The business day convention used to adjust the payment schedule's fixing date. Used only to override the business day convention specified in the DateAdjustment component within the Instrument component.

Type: [int](#)

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in groups: [PaymentScheduleGrp](#)

### 171.2.3748 PaymentScheduleFixingDateOffsetDayType

Specifies the day type of the relative fixing date offset.

Type: [int](#)

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

---

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in groups: [PaymentScheduleGrp](#)

### **171.2.3749 PaymentScheduleFixingDateOffsetPeriod**

Time unit multiplier for the relative fixing date offset.

Type: [int](#)

Used in groups: [PaymentScheduleGrp](#)

### **171.2.3750 PaymentScheduleFixingDateOffsetUnit**

Time unit associated with the relative fixing date offset.

Type: [String](#)

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in groups: [PaymentScheduleGrp](#)

### **171.2.3751 PaymentScheduleFixingDateRelativeTo**

Specifies the anchor date when the fixing date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: **int**

Used in groups: **PaymentScheduleGrp**

### **171.2.3752 PaymentScheduleFixingDateUnadjusted**

The unadjusted fixing date.

Type: **LocalMktDate**

Used in groups: **PaymentScheduleGrp**

### **171.2.3753 PaymentScheduleFixingDayCount**

The number of days over which fixing should take place.

Type: **int**

Used in groups: **PaymentScheduleGrp**

### **171.2.3754 PaymentScheduleFixingDayDistribution**

The distribution of fixing days.

Type: **int**

Allowed values in **PaymentStreamPricingDayDistributionCodeSet**:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	All	All
1	First	First
2	Last	Last
3	Penultimate	Penultimate

---

Used in groups: **PaymentScheduleGrp**

**171.2.3755 PaymentScheduleFixingDayGrp**

The PaymentScheduleFixingDayGrp is a repeating subcomponent of the PaymentScheduleGrp component used to detail periodic fixing days.

Name	Mult.	Type	Description
NoPaymentScheduleFixingDays	[1..1]	NumInGroup	
PaymentScheduleFixingDayOfWeek	[0..1]	CodeSet	Required if NoPaymentScheduleFixingDays(41161) > 0.
PaymentScheduleFixingDayNumber	[0..1]	int	

Used in groups: [PaymentScheduleGrp](#)

**171.2.3756 PaymentScheduleFixingDayNumber**

The occurrence of the day of week on which fixing takes place.

Type: [int](#)

Used in groups: [PaymentScheduleFixingDayGrp](#)

**171.2.3757 PaymentScheduleFixingDayOfWeek**

The day of the week on which fixing will take place.

Type: [int](#)

Allowed values in PaymentStreamPricingDayOfWeekCodeSet:

Code	Name	Description
0	EveryDay	Every day (the default if not specified)
1	Monday	Monday
2	Tuesday	Tuesday
3	Wednesday	Wednesday
4	Thursday	Thursday
5	Friday	Friday
6	Saturday	Saturday
7	Sunday	Sunday

Used in groups: [PaymentScheduleFixingDayGrp](#)

### **171.2.3758 PaymentScheduleFixingFirstObservationDateOffsetPeriod**

Time unit multiplier for the relative first observation date offset.

Type: [int](#)

Used in groups: [PaymentScheduleGrp](#)

### **171.2.3759 PaymentScheduleFixingFirstObservationDateOffsetUnit**

Time unit associated with the relative first observation date offset.

Type: [String](#)

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in groups: [PaymentScheduleGrp](#)

### **171.2.3760 PaymentScheduleFixingLagPeriod**

Time unit multiplier for the fixing lag duration.

Type: [int](#)

Used in groups: [PaymentScheduleGrp](#)

### **171.2.3761 PaymentScheduleFixingLagUnit**

Time unit associated with the fixing lag duration.

Type: [String](#)

Allowed values in PaymentStreamInflationLagUnitCodeSet:

---

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in groups: [PaymentScheduleGrp](#)

### **171.2.3762 PaymentScheduleFixingTime**

The fixing time associated with the step schedule.

Type: [LocalMktTime](#)

Used in groups: [PaymentScheduleGrp](#)

### **171.2.3763 PaymentScheduleFixingTimeBusinessCenter**

Business center for determining fixing time.

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in groups: [PaymentScheduleGrp](#)

### **171.2.3764 PaymentScheduleGrp**

The PaymentScheduleGrp is a repeating subcomponent of the StreamGrp component used to specify notional and rate steps of the payment stream.

---

Name	Mult.	Type	Description
<a href="#">NoPaymentSchedules</a>	[1..1]	NumInGroup

Used in groups: [StreamGrp](#)

### 171.2.3765 PaymentScheduleInterimExchangeDateAdjusted

The adjusted interim exchange date.

Type: [LocalMktDate](#)

Used in groups: [PaymentScheduleGrp](#)

### 171.2.3766 PaymentScheduleInterimExchangeDateBusinessCenterGrp

PaymentScheduleInterimExchangeDateBusinessCenterGrp is a repeating subcomponent within the PaymentScheduleGrp component. It is used to specify the set of business centers whose calendars

drive the date adjustment. Used only to override the business centers defined in the DateAdjustment component in Instrument.

Name	Mult.	Type	Description
NoPaymentScheduleInterimExchange-DateBusinessCenters	[1..1]	NumInGroup	
PaymentScheduleInterimExchange-DatesBusinessCenter	[0..1]	String	Required if NoPaymentScheduleInterimExchange-DateBusinessCenters(40945) > 0.

Used in groups: [PaymentScheduleGrp](#)

### 171.2.3767 PaymentScheduleInterimExchangeDatesBusinessCenter

The business center calendar used to adjust the payment schedule's interim exchange date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in groups: [PaymentScheduleInterimExchangeDateBusinessCenterGrp](#)

### 171.2.3768 PaymentScheduleInterimExchangeDatesBusinessDayConvention

The business day convention used to adjust the payment schedule's interim exchange date. Used only to override the business day convention specified in the DateAdjustment component within the Instrument component.

Type: [int](#)

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.

---

Code	Name	Description
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

---

Used in groups: [PaymentScheduleGrp](#)

### **171.2.3769 PaymentScheduleInterimExchangeDatesOffsetDayType**

Specifies the day type of the relative interim exchange date offset.

Type: [int](#)

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

---

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in groups: [PaymentScheduleGrp](#)

### **171.2.3770 PaymentScheduleInterimExchangeDatesOffsetPeriod**

Time unit multiplier for the relative interim exchange date offset.

Type: [int](#)

Used in groups: [PaymentScheduleGrp](#)

### **171.2.3771 PaymentScheduleInterimExchangeDatesOffsetUnit**

Time unit associated with the relative interim exchange date offset.

Type: [String](#)

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in groups: [PaymentScheduleGrp](#)

#### **171.2.3772 PaymentScheduleInterimExchangePaymentDateRelativeTo**

Specifies the anchor date when the interim exchange payment date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: [int](#)

Used in groups: [PaymentScheduleGrp](#)

#### **171.2.3773 PaymentScheduleNotional**

The notional value for this step, or amount of a cashflow payment.

Type: [Amt](#)

Used in groups: [PaymentScheduleGrp](#)

#### **171.2.3774 PaymentSchedulePaySide**

The side of the party paying the step schedule.

Type: [int](#)

Allowed values in PaymentPaySideCodeSet:

---

Code	Name	Description
1	Buy	Buy
2	Sell	Sell

---

Used in groups: [PaymentScheduleGrp](#)

#### **171.2.3775 PaymentScheduleRate**

The rate value for this step schedule.

Type: **Percentage**

Used in groups: **PaymentScheduleGrp**

#### **171.2.3776 PaymentScheduleRateConversionFactor**

The number to be multiplied by the derived floating rate of the payment schedule in order to arrive at the payment rate. If omitted, the schedule rate conversion factor is 1.

Type: **float**

Used in groups: **PaymentScheduleGrp**

#### **171.2.3777 PaymentScheduleRateCurrency**

The currency of the schedule rate. Uses ISO 4217 currency codes.

Type: **Currency**

Used in groups: **PaymentScheduleGrp**

#### **171.2.3778 PaymentScheduleRateMultiplier**

A rate multiplier to apply to the floating rate. The multiplier can be less than or greater than 1 (one). This element should only be included if the multiplier is not equal to 1 (one) for the term of the stream.

Type: **float**

Used in groups: **PaymentScheduleGrp**

#### **171.2.3779 PaymentScheduleRateSource**

Identifies the source of rate information.

Type: **int**

Allowed values in RateSourceCodeSet:

Code	Name	Description
0	Bloomberg	Bloomberg
1	Reuters	Reuters
2	Telerate	Telerate
3	ISDARateOption	ISDA Settlement Rate Option. The source of the currency conversion as specified by the ISDA terms in Annex A to the 1998 FX and Currency Option Definitions. See <a href="http://www.fpml.org/coding-scheme/settlement-rate-option">http://www.fpml.org/coding-scheme/settlement-rate-option</a>
99	Other	Other

Used in groups: [PaymentScheduleRateSourceGrp](#)

### 171.2.3780 PaymentScheduleRateSourceGrp

PaymentScheduleRateSourceGrp is a repeating component within the PaymentScheduleGrp component used to identify primary and secondary rate sources.

Name	Mult.	Type	Description
<a href="#">NoPaymentScheduleRateSources</a>	[1..1]	NumInGroup	
<a href="#">PaymentScheduleRateSource</a>	[0..1]	CodeSet	Required if <code>NoPaymentScheduleRateSources(40868) &gt; 0</code> .
<a href="#">PaymentScheduleRateSourceType</a>	[0..1]	CodeSet	Required if <code>NoPaymentScheduleRateSources(40868) &gt; 0</code> .
<a href="#">PaymentScheduleReferencePage</a>	[0..1]	String	Conditionally required when <code>PaymentScheduleRateSource(40869) = 99 (Other)</code>

Used in groups: [PaymentScheduleGrp](#)

### 171.2.3781 PaymentScheduleRateSourceType

Rate source type.

Type: `int`

Allowed values in RateSourceTypeCodeSet:

---

Code	Name	Description
0	Primary	Primary
1	Secondary	Secondary

---

Used in groups: [PaymentScheduleRateSourceGrp](#)

### **171.2.3782 PaymentScheduleRateSpread**

The spread value for this step schedule.

Type: [PriceOffset](#)

Used in groups: [PaymentScheduleGrp](#)

### **171.2.3783 PaymentScheduleRateSpreadPositionType**

Identifies whether the rate spread is applied to a long or short position.

Type: [int](#)

Allowed values in [PaymentStreamRateSpreadPositionTypeCodeSet](#):

---

Code	Name	Description
0	Short	Short
1	Long	Long

---

Used in groups: [PaymentScheduleGrp](#)

### **171.2.3784 PaymentScheduleRateSpreadType**

Identifies whether the rate spread is an absolute value to be added to the index rate or a percentage of the index rate.

Type: [int](#)

Allowed values in [PaymentStreamRateSpreadTypeCodeSet](#):

---

Code	Name	Description
0	Absolute	Absolute
1	Percentage	Percentage

---

Used in groups: [PaymentScheduleGrp](#)

### 171.2.3785 PaymentScheduleRateTreatment

Specifies the yield calculation treatment for the step schedule.

Type: [int](#)

Allowed values in PaymentStreamRateTreatmentCodeSet:

---

Code	Name	Description
0	BondEquivalentYield	Bond equivalent yield
1	MoneyMarketYield	Money market yield

---

Used in groups: [PaymentScheduleGrp](#)

### 171.2.3786 PaymentScheduleRateUnitOfMeasure

The schedule rate unit of measure (UOM).

Type: [String](#)

Allowed values in UnitOfMeasureCodeSet:

---

Code	Name	Description
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet
Bbl	Barrels	Barrels. Equal to 42 US gallons
CBM	CubicMeters	Cubic Meters
BDFT	BoardFeet	Board feet. Equal to 144 cubic inches
GJ	Gigajoules	gigajoules
Bu	Bushels	Bushels

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
kHR	HeatRate	Heat rate. The number of BTUs required to produce one kilowatt hour of electricity, typically 3,412.14 BTUs per 1 kWh.
Ccy	Currency	Amount of currency
kWh	KilowattHours	Kilowatt hours
CDD	CoolingDegreeDay	Cooling degree day
MHR	MegaHeatRate	Mega heat rate. The number of million BTUs required to produce one megawatt hour of electricity, typically 3.41214 million BTUs per 1 MWh.
CER	CertifiedEmissionsReduction	Certified emissions reduction
MMBtu	OneMillionBTU	One Million BTU
CPD	CriticalPrecipDay	Critical precipitation day
MWh	MegawattHours	Megawatt hours
CRT	ClimateReserveTonnes	Climate reserve tonnes
thm	Therms	therms. Equal to 100,000 BTU
cwt	Hundredweight	Hundredweight(US). Equal to 100 lbs
tnCO2	TonsOfCarbonDioxide	Tons of carbon dioxide
day	Day	Days
dt	DryMetricTons	Dry metric tons
EnvAllwnc	EnvAllwncCert	Environmental allowance certificates
EnvCrd	EnvironmentalCredit	Environmental credit
EnvOfst	EnvironmentalOffset	Environmental Offset
g	Grams	Grams
Gal	Gallons	Gallons
GT	GrossTons	Gross tons. Also known as long tons or imperial tons, equal to 2240 lbs
HDD	HeatingDegreeDay	Heating degree day
IPNT	IndexPoint	Index point
kg	Kilograms	Kilograms
kL	Kiloliters	kiloliters
kW-a	KilowattYear	Kilowatt year (electrical capacity)
kW-d	KilowattDay	Kilowatt day (electrical capacity)
kW-h	KilowattHour	Kilowatt hour (electrical capacity)
kW-M	KilowattMonth	Kilowatt month (electrical capacity)
kW-min	KilowattMinute	Kilowatt-Minute (electrical capacity)
L	Liters	liters

<b>Code</b>	<b>Name</b>	<b>Description</b>
lbs	Pounds	pounds
MW-a	MegawattYear	Megawatt year (electrical capacity)
MW-d	MegawattDay	Megawatt day (electrical capacity)
MW-h	MegawattHour	Megawatt hour (electrical capacity)
MW-M	MegawattMonth	Megawatt month (electrical capacity)
MW-min	MegawattMinute	Megawatt minute (electrical capacity)
oz_tr	TroyOunces	Troy ounces
PRINC	PrincipalWithRelationToDebtInstrument	Principal with relation to debt instrument
t	MetricTons	Metric tons. Also known as Tonnes, equal to 1000 kg
tn	Tons	Tons (US). Equal to 2000 lbs
a	Are	Are
ac	Acre	Acre
cL	Centiliter	Centiliter
cM	Centimeter	Centimeter
DGE	DieselGallonEquivalent	Diesel gallon equivalent
ft	Foot	Foot
Gal_gb	GBGallon	GB Gallon
GGE	GasolineGallonEquivalent	Gasonline gallon equivalent

pt	USPint	US Pint
pt_gb	GBPint	GB pint
qt	USQuart	US Quart
qt_gb	GBQuart	GB Quart
SqcM	SquareCentimeter	Square centimeter
Sqft	SquareFoot	Square foot

Code	Name	Description
Sqin	SquareInch	Square inch
SqkM	SquareKilometer	Square kilometer
SqM	SquareMeter	Square meter
Sqmi	SquareMile	Square mile
SqmM	SquareMillimeter	Square millimeter
Sqyd	SquareYard	Square yard
yd	Yard	Yard
MMbbl	MillionBarrels	Million Barrels
USD	USDollars	US Dollars

Used in groups: [PaymentScheduleGrp](#)

### 171.2.3787 PaymentScheduleReceiveSide

The side of the party receiving the stepf schedule.

Type: [int](#)

Allowed values in PaymentPaySideCodeSet:

Code	Name	Description
1	Buy	Buy
2	Sell	Sell

Used in groups: [PaymentScheduleGrp](#)

### 171.2.3788 PaymentScheduleReferencePage

Identifies the reference “page” from the rate source.

For FX, the reference page to the spot rate to be used for the reference FX spot rate.

When RateSource(1446) = 3 (ISDA Settlement Rate Option) this contains the value from the scheme that reflects the terms of the Annex A to the ISDA 1998 FX and Currency Option Definitions. See: <http://www.fpml.org/coding-scheme/settlement-rate-option>

Type: [String](#)

Used in groups: [PaymentScheduleRateSourceGrp](#)

**171.2.3789 PaymentScheduleSettlPeriodPrice**

The schedule settlement period price.

Type: **Price**

Used in groups: **PaymentScheduleGrp**

**171.2.3790 PaymentScheduleSettlPeriodPriceCurrency**

Specifies the currency of the schedule settlement period price. Uses ISO 4217 currency codes.

Type: **Currency**

Used in groups: **PaymentScheduleGrp**

**171.2.3791 PaymentScheduleSettlPeriodPriceUnitOfMeasure**

The settlement period price unit of measure (UOM).

Type: **String**

Allowed values in UnitOfMeasureCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
Alw	Allowances	Allowances

Used in groups: [PaymentScheduleGrp](#)

**171.2.3795 PaymentScheduleStepOffsetRate**

The explicit amount that the rate changes on each step date. This can be a positive or negative value.

Type: **Percentage**

Used in groups: **PaymentScheduleGrp**

**171.2.3796 PaymentScheduleStepOffsetValue**

The explicit amount that the notional changes on each step date. This can be a positive or negative amount.

Type: **Amt**

Used in groups: **PaymentScheduleGrp**

**171.2.3797 PaymentScheduleStepRate**

The percentage by which the notional changes on each step date. The percentage is either a percentage applied to the initial notional amount or the previous outstanding notional, depending on the value specified in **PaymentScheduleStepRelativeTo(40849)**. The percentage can be either positive or negative.

Type: **Percentage**

Used in groups: **PaymentScheduleGrp**

**171.2.3798 PaymentScheduleStepRelativeTo**

Specifies whether the **PaymentScheduleStepRate(40847)** or **PaymentScheduleStepOffsetValue(40846)** should be applied to the initial notional or the previous notional in order to calculate the notional step change amount.

Type: **int**

Allowed values in **PaymentScheduleStepRelativeToCodeSet**:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Initial	Initial
1	Previous	Previous

---

Used in groups: **PaymentScheduleGrp**

**171.2.3799 PaymentScheduleStepUnitOfMeasure**

The schedule step unit of measure (UOM).

Type: **String**

Allowed values in UnitOfMeasureCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet
Bbl	Barrels	Barrels. Equal to 42 US gallons
CBM	CubicMeters	Cubic Meters
BDFT	BoardFeet	Board feet. Equal to 144 cubic inches
GJ	Gigajoules	gigajoules
Bu	Bushels	Bushels
kHR	HeatRate	Heat rate. The number of BTUs required to produce one kilowatt hour of electricity, typically 3,412.14 BTUs per 1 kWh.
Ccy	Currency	Amount of currency
kWh	KilowattHours	Kilowatt hours
CDD	CoolingDegreeDay	Cooling degree day
MHR	MegaHeatRate	Mega heat rate. The number of million BTUs required to produce one megawatt hour of electricity, typically 3.41214 million BTUs per 1 MWh.

Used in groups: [PaymentScheduleGrp](#)

### **171.2.3802 PaymentScheduleWeight**

Floating rate observation weight for cashflow payment.

Type: [float](#)

Used in groups: [PaymentScheduleGrp](#)

### **171.2.3803 PaymentScheduleXID**

Identifier of this PaymentSchedule for cross referencing elsewhere in the message.

Type: [XID](#)

Used in groups: [PaymentScheduleGrp](#)

### **171.2.3804 PaymentScheduleXIDRef**

Reference to payment schedule elsewhere in the message.

Type: [XIDREF](#)

Used in groups: [PaymentScheduleGrp](#)

### **171.2.3805 PaymentSettlAmount**

The payment settlement amount.

Type: [Amt](#)

Used in groups: [PaymentSettlGrp](#)

**171.2.3806 PaymentSettlCurrency**

Specifies the currency the PaymentSettlAmount(40231) is denominated in. Uses ISO 4217 currency codes.

Type: **Currency**

Used in groups: **PaymentSettlGrp**

**171.2.3807 PaymentSettlGrp**

The PaymentSettlGrp is a repeating subcomponent of the PaymentGrp component used to report payment settlement as a single or split payment.

---

<b>Name</b>	<b>Mult.</b>	<b>Type</b>	<b>Description</b>
NoPaymentSettls	[1..1]	NumInGroup	
PaymentSettlAmount	[0..1]	Amt	Required if NoPaymentSettls(40230) > 0.
PaymentSettlCurrency	[0..1]	Currency	
PaymentSettlParties	[0..*]	Group	

---

Used in groups: **PaymentGrp**

**171.2.3808 PaymentSettlParties**

PaymentSettlParties is a repeating subcomponent of the PaymentSettlGrp component used to report payment settlement routing.

---

<b>Name</b>	<b>Mult.</b>	<b>Type</b>	<b>Description</b>
NoPaymentSettlPartyIDs	[1..1]	NumInGroup	
PaymentSettlPartyID	[0..1]	String	Required if NoPaymentSettlPartyIDs(40233) > 0.
PaymentSettlPartyIDSource	[0..1]	CodeSet	Required if NoPaymentSettlPartyIDs(40233) > 0.
PaymentSettlPartyRole	[0..1]	CodeSet	Required if NoPaymentSettlPartyIDs(40233) > 0.
PaymentSettlPartyRoleQualifier	[0..1]	CodeSet	
PaymentSettlPtysSubGrp	[0..*]	Group	

---

Used in groups: **PaymentSettlGrp**

**171.2.3809 PaymentSettlPartyID**

The payment settlement party identifier.

Type: **String**

Used in groups: **PaymentSettlParties**

**171.2.3810 PaymentSettlPartyIDSource**

Identifies the class or source of PaymentSettlPartyID(40234) value (e.g. BIC).

Type: **char**

Allowed values in PartyIDSourceCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	KoreanInvestorID	Korean Investor ID
6	UKNationalInsuranceOrPension-Number	UK National Insurance or Pension Number
B	BIC	BIC (Bank Identification Code - SWIFT managed) code (ISO9362 - See "Appendix 6-B")
I	ISITCAcronym	Directed broker three character acronym as defined in ISITC "ETC Best Practice" guidelines document
2	TaiwaneseForeignInvestorID	Taiwanese Qualified Foreign Investor ID QFII/FID
7	USSocialSecurityNumber	US Social Security Number
C	GeneralIdentifier	Generally accepted market participant identifier (e.g. NASD mnemonic)
3	TaiwaneseTradingAcct	Taiwanese Trading Acct
8	USEmployerOrTaxIDNumber	US Employer or Tax ID Number
D	Proprietary	Proprietary / Custom code. Custom ID schema used between counterparties, trading platforms and repositories.
4	MalaysianCentralDepository	Malaysian Central Depository (MCD) number
9	AustralianBusinessNumber	Australian Business Number
E	ISOCountryCode	ISO Country Code
5	ChineseInvestorID	Chinese Investor ID
A	AustralianTaxFileNumber	Australian Tax File Number
F	SettlementEntityLocation	Settlement Entity Location (note if Local Market Settlement use "E=ISO Country Code") (see "Appendix 6-G" for valid values)
G	MIC	Market Identifier Code (ISO 10383) MIC

---

Code	Name	Description
J	TaxID	Tax ID
H	CSDParticipant	CSD participant/member code (e.g. Euroclear, DTC, CREST or Kassenverein number)
K	AustralianCompanyNumber	Australian Company Number
L	AustralianRegisteredBodyNumber	Australian Registered Body Number
M	CFTCReportingFirmIdentifier	CFTC reporting firm identifier
N	LegalEntityIdentifier	Legal Entity Identifier (ISO 17442) LEI
O	InterimIdentifier	Interim identifier. An interim entity identifier assigned by a regulatory agency prior to an LEI (ISO 17442) being assigned.
P	ShortCodeIdentifier	Short code identifier. A generic means for trading venues, brokers, investment managers to convey a bilaterally agreed upon "short hand" code for an identifier that is a reference to a mapping between the parties.
Q	NationalIDNaturalPerson	National ID of natural person. An identification number generally assigned by a government authority or agency to a natural person which is unique to the person it is assigned to. Examples include, but not limited to, "social security number", "pension number".
R	IndiaPermanentAccountNumber	India Permanent Account Number. Also referred to as PAN ID. An identifier issued by the Income Tax Department of India.
S	FDID	Firm designated identifier. Also referred to as FDID. A unique identifier required by the SEC for each trading account designated by Industry Members for purposes of reporting to CAT (Consolidated Audit Trail).
T	SPSAID	Special Segregated Account ID. Also referred to as SPSA ID. The Special Segregated Account identifier issued by Hong Kong Exchanges and Clearing.
U	MasterSPSAID	Master Special Segregated Account ID. Also referred to as Master SPSA ID. The master identifier issued by Hong Kong Exchanges and Clearing for the aggregation of SPSA IDs.

Used in groups: [PaymentSettlParties](#)

### 171.2.3811 PaymentSettlPartyRole

Identifies the role of PaymentSettlPartyID(40234) (e.g. the beneficiary's bank or depository institution).

Type: [int](#)

## Allowed values in PartyRoleCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	ExecutingFirm	Executing Firm (formerly FIX 4.2 ExecBroker)
2	BrokerOfCredit	Broker of Credit (formerly FIX 4.2 BrokerOfCredit)
3	ClientID	Client ID (formerly FIX 4.2 ClientID)
4	ClearingFirm	Clearing Firm (formerly FIX 4.2 ClearingFirm)
5	InvestorID	Investor ID
6	IntroducingFirm	Introducing Firm
7	EnteringFirm	Entering Firm
8	Locate	Locate / Lending Firm (for short-sales)
9	FundManagerClientID	Fund Manager Client ID (for CIV)
10	SettlementLocation	Settlement Location (formerly FIX 4.2 SettlLocation)
11	OrderOriginationTrader	Order Origination Trader (associated with Order Origination Firm - i.e. trader who initiates/submits the order)
12	ExecutingTrader	Executing Trader (associated with Executing Firm - actually executes)
13	OrderOriginationFirm	Order Origination Firm (e.g. buy-side firm)
14	GiveupClearingFirmDepr	Giveup Clearing Firm (firm to which trade is given up)
15	CorrespondantClearingFirm	Correspondant Clearing Firm
16	ExecutingSystem	Executing System
17	ContraFirm	Contra Firm
18	ContraClearingFirm	Contra Clearing Firm
19	SponsoringFirm	Sponsoring Firm
20	UnderlyingContraFirm	Underlying Contra Firm
21	ClearingOrganization	Clearing Organization
22	Exchange	Exchange. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
24	CustomerAccount	Customer Account
25	CorrespondentClearingOrganization	Correspondent Clearing Organization
26	CorrespondentBroker	Correspondent Broker
27	Buyer	Buyer/Seller (Receiver/Deliverer)
28	Custodian	Custodian
29	Intermediary	Intermediary
30	Agent	Agent
31	SubCustodian	Sub-custodian

<b>Code</b>	<b>Name</b>	<b>Description</b>
32	Beneficiary	Beneficiary
33	InterestedParty	Interested party
34	RegulatoryBody	Regulatory body. In the context of regulatory reporting, this identifies the regulator the trade is being reported to.
35	LiquidityProvider	Liquidity provider
36	EnteringTrader	Entering trader
37	ContraTrader	Contra trader
38	PositionAccount	Position account. The account which positions are maintained. Typically represents the aggregation of one or more customer accounts.
39	ContraInvestorID	Contra Investor ID
40	TransferToFirm	Transfer to Firm
41	ContraPositionAccount	Contra Position Account
42	ContraExchange	Contra Exchange
43	InternalCarryAccount	Internal Carry Account
44	OrderEntryOperatorID	Order Entry Operator ID
45	SecondaryAccountNumber	Secondary Account Number
46	ForeignFirm	Foreign Firm
47	ThirdPartyAllocationFirm	Third Party Allocation Firm
48	ClaimingAccount	Claiming Account
49	AssetManager	Asset Manager
50	PledgorAccount	Pledgor Account
51	PledgeeAccount	Pledgee Account
52	LargeTraderReportableAccount	Large Trader Reportable Account
53	TraderMnemonic	Trader mnemonic
54	SenderLocation	Sender Location
55	SessionID	Session ID
56	AcceptableCounterparty	Acceptable Counterparty
57	UnacceptableCounterparty	Unacceptable Counterparty
58	EnteringUnit	Entering Unit
59	ExecutingUnit	Executing Unit
60	IntroducingBroker	Introducing Broker
61	QuoteOriginator	Quote originator
62	ReportOriginator	Report originator
63	SystematicInternaliser	Systematic internaliser (SI)

<b>Code</b>	<b>Name</b>	<b>Description</b>
64	MultilateralTradingFacility	Multilateral Trading Facility (MTF). Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
65	RegulatedMarket	Regulated Market (RM). Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
66	MarketMaker	Market Maker
67	InvestmentFirm	Investment Firm
68	HostCompetentAuthority	Host Competent Authority (Host CA)
69	HomeCompetentAuthority	Home Competent Authority (Home CA)
70	CompetentAuthorityLiquidity	Competent Authority of the most relevant market in terms of liquidity (CAL)
71	CompetentAuthorityTransactionVenue	Competent Authority of the Transaction (Execution) Venue (CATV)
72	ReportingIntermediary	Reporting intermediary. The medium or vendor used to report to a regulator, non-regulatory agency or data repository.
73	ExecutionVenue	Execution Venue. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
74	MarketDataEntryOriginator	Market data entry originator
75	LocationID	Location ID
76	DeskID	Desk ID
77	MarketDataMarket	Market data market
78	AllocationEntity	Allocation Entity
79	PrimeBroker	Prime Broker providing General Trade Services
80	StepOutFirm	Step-Out Firm (Prime Broker)
81	BrokerClearingID	Broker clearing identifier
82	CentralRegistrationDepository	Central Registration Depository (CRD)
83	ClearingAccount	Clearing Account
84	AcceptableSettlingCounterparty	Acceptable Settling Counterparty
85	UnacceptableSettlingCounterparty	Unacceptable Settling Counterparty
86	CLSMemberBank	CLS Member Bank
87	InConcertGroup	In Concert Group
88	InConcertControllingEntity	In Concert Controlling Entity
89	LargePositionsReportingAccount	Large Positions Reporting Account
90	SettlementFirm	Settlement Firm

Code	Name	Description
91	SettlementAccount	Settlement account. The account to which individual payment obligations are aggregated for netting and funds movement. Typically represents the aggregation of many margin (performance bond) accounts.
92	ReportingMarketCenter	Reporting Market Center
93	RelatedReportingMarketCenter	Related Reporting Market Center
94	AwayMarket	Away Market. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
95	GiveupTradingFirm	Give-up (trading) firm
96	TakeupTradingFirm	Take-up (trading) firm
97	GiveupClearingFirm	Give-up clearing firm
98	TakeupClearingFirm	Take-up clearing firm
99	OriginatingMarket	Originating Market. Identifies the Market using PartyIDSource(tag 447) = G (Market Identifier Code) where an order originated in the event that the order is sent to an alternative market for execution. Serves as an inverse of an away market.
100	MarginAccount	Margin account. Also referred to as "performance bond account". The margin account is the calculated margin requirements. Typically represents the aggregation of one or more position accounts.
101	CollateralAssetAccount	Collateral asset account. The account at which individual collateral assets are maintained. Typically, although not always, one-for-one with the settlement account.
102	DataRepository	Data repository. Multiple instances of this PartyRole may appear for reporting purposes.
103	CalculationAgent	Calculation agent
104	ExerciseNoticeSender	Sender of exercise notice
105	ExerciseNoticeReceiver	Receiver of exercise notice
106	RateReferenceBank	Rate reference bank. The bank providing the reference rate. Multiple instance of this PartyRole may appear.
107	Correspondent	Correspondent
109	BeneficiaryBank	Beneficiary's bank or depository institution. The institution in which the beneficiary, a person or an entity, has their account with. The institution may be a bank or non-bank institution.
110	Borrower	Borrower
111	PrimaryObligator	Primary obligator
112	Guarantor	Guarantor

Code	Name	Description
113	ExcludedReferenceEntity	Excluded reference entity
114	DeterminingParty	Determining party
115	HedgingParty	Hedging party
116	ReportingEntity	Reporting entity. The entity that is reporting the information.
117	SalesPerson	Sales person. The person who is involved in the sales activities for their firm.
118	Operator	Operator. The person who has the capabilities and authorization to take certain actions; for example, setting entitlements, etc.
119	CSD	Central Securities Depository (CSD)
120	ICSD	International Central Securities Depository (ICSD)
121	TradingSubAccount	Trading sub-account. Example of sub-accounts include a clearing account that has multiple trading sub-accounts, a trading account that has multiple trading sub-accounts belonging to different trading firms.
122	InvestmentDecisionMaker	Investment decision maker. In the context of ESMA RTS reporting, this is used to specify party responsible for the investment decision. See RTS 24, Annex, Table 2, Field 4.
123	PublishingIntermediary	Publishing intermediary. The medium or vendor used to publish to the market.
124	CSDParticipant	Central Securities Depository (CSD) Participant. In the context of EU SFTR reporting the identifier of the CSD participant or indirect participant of the reporting counterparty. Where both the CSD participant and indirect participant are involved in the transaction this should identify the indirect participant.
125	Issuer	Issuer. The issuer of the security.
126	ContraCustomerAccount	Contra Customer Account. Same as PartyRole(452) = 24 (Customer Account) but for the counterparty. Can be used whenever the parties component is not nested in a repeating group representing both sides.
127	ContraInvestmentDecisionMaker	Contra Investment Decision Maker. Same as PartyRole(452) = 122 (Investment Decision Maker) but for the counterparty. Can be used whenever the parties component is not nested in a repeating group representing both sides.

Used in groups: [PaymentSettlParties](#)

**171.2.3812 PaymentSettlPartyRoleQualifier**

Qualifies the value of PaymentSettlPartyRole(40236).

Type: **int**

Allowed values in PartyDetailRoleQualifierCodeSet:

Code	Name	Description
0	Agency	Agency
1	Principal	Principal
2	RisklessPrincipal	Riskless principal
3	GeneralClearingMember	General clearing member
30	ExchangeOrderSubmitter	Exchange order submitter. Used to identify original or initial exchange order submitting broker when party role "1" (Executing Firm) appears more than once.
4	IndividualClearingMember	Individual clearing member
5	PreferredMarketMaker	Preferred market maker. Market maker getting a part of the matched quantity before primary or default market maker.
6	DirectedMarketMaker	Directed market maker. Single market maker to handle the order provided.
7	Bank	Bank
8	Hub	Hub. Indicates that the Intermediary party is a hub system or service provider.
9	PrimaryTrdRepository	Primary trade repository. Used to differentiate the principal trade repository from the Original or Additional trade repositories when there are multiple trade repositories being reported.
10	OrigTrdRepository	Original trade repository. Used to identify the trade repository to which the trade was originally reported if different from the current repository to which the trade is being reported.
11	AddnlIntlTrdRepository	Additional international trade repository. Used with InternationalSwapIndicator(2526) to identify the trade repository that is in addition to the local swaps data repository as required by U.S. law.
12	AddnlDomesticTrdRepository	Additional domestic trade repository. Used with MixedSwapIndicator(1929) to identify the trade repository that is in addition to the current trade repository when the assets in the swap are subject to two different domestic regulators.
13	RelatedExchange	Related exchange
14	OptionsExchange	Options exchange

Code	Name	Description
15	SpecifiedExchange	Specified exchange
16	ConstituentExchange	Constituent exchange.
17	ExemptFromTradeReporting	Exempt from trade reporting. In the context of FINRA TRACE reporting requirements, this is used to indicate the ATS has been granted a regulatory exemption from reporting.
18	Current	Current. Can be used to convey an existing party identifier for the same party role in a single message.
19	New	New. Can be used to convey a future party identifier for the same party role in a single message.
20	DesignatedSponsor	Designated sponsor. Market maker jointly providing liquidity for the same security with other market makers.
21	Specialist	Specialist. Market maker being the only one providing liquidity for a security.
22	Algorithm	Algorithm
23	FirmOrLegalEntity	Firm or legal entity
24	NaturalPerson	Natural person
25	RegularTrader	Regular trader. Standard trader profile.
26	HeadTrader	Head trader. Senior trader leading a group of regular traders.
27	Supervisor	Supervisor. Administrative user that has only limited rights for normal trading but possibly special rights for emergency actions.
28	TriParty	Tri-party. In the context of EU SFTR reporting, identifies the third party, not necessarily the custodian, to which the reporting counterparty has outsourced the post-trade processing of an SFT (if applicable).
29	Lender	Lender. In the context of EU SFTR reporting, identifies the agent lender involved in the securities lending transaction.

---

7	PhoneNumber	Phone number
8	EmailAddress	Email address
9	ContactName	Contact name
10	SecuritiesAccountNumber	Securities account number (for settlement instructions)
11	RegistrationNumber	Registration number (for settlement instructions and confirmations)
12	RegisteredAddressForConfirmation	Registered address (for confirmation purposes)
13	RegulatoryStatus	Regulatory status (for confirmation purposes)
14	RegistrationName	Registration name (for settlement instructions)
15	CashAccountNumber	Cash account number (for settlement instructions)
16	BIC	BIC
17	CSDParticipantMemberCode	CSD participant member code
18	RegisteredAddress	Registered address
19	FundAccountName	Fund account name
20	TelexNumber	Telex number
21	FaxNumber	Fax number
22	SecuritiesAccountName	Securities account name
23	CashAccountName	Cash account name
24	Department	Department
25	LocationDesk	Location desk
26	PositionAccountType	Position account type
27	SecurityLocateID	Security locate ID
28	MarketMaker	Market maker

---

Code	Name	Description
29	EligibleCounterparty	Eligible counterparty
30	ProfessionalClient	Professional client
31	Location	Location
32	ExecutionVenue	Execution venue
33	CurrencyDeliveryIdentifier	Currency delivery identifier
34	AddressCity	Address City
35	AddressStateOrProvince	Address State/Province
36	AddressPostalCode	Address Postal Code
37	AddressStreet	Address Street
38	AddressISOCountryCode	Address Country (ISO country code)
39	ISOCountryCode	ISO country code
40	MarketSegment	Market segment
41	CustomerAccountType	Customer account type
42	OmnibusAccount	Omnibus account
43	FundsSegregationType	Funds segregation type
44	GuaranteeFund	Guarantee fund. Identifies a guarantee fund related to an account. Used when one account has multiple funds of collateral, each guaranteeing different positions. Can be used for PartyRole(452) = Customer Account(24).
45	SwapDealer	Swap dealer. The US regulator's defined term for identifying the trade counterparty as "any person who holds itself out as a dealer in swaps, makes a market in swaps, regularly enters into swaps with counterparties as an ordinary course of business for its own account, or engages in activity causing itself to be commonly known in the trade as a dealer or market maker in swaps".
46	MajorParticipant	Major participant. When PartySubID(523)=Y the counterparty is not the swap dealer but is a major swap participant as defined in the regulations.
47	FinancialEntity	Financial entity. When PartySubID(523)=Y the counterparty is neither a swap dealer nor a major swap participant but is a financial entity as defined in the regulations.
48	USPerson	U.S. person. A legal term referring to any U.S. person or legal entity anywhere in the world that should be taxed under U.S. law.
49	ReportingEntityIndicator	Reporting entity indicator. Indicates the entity obligated or delegated to report to their regulator, a non-regulatory agency or data repository. Set PartySubID(523)=Y if true.

<b>Code</b>	<b>Name</b>	<b>Description</b>
50	ElectedClearingRequirementException	Elected clearing requirement exception
51	BusinessCenter	Business center.
52	ReferenceText	Reference text
53	ShortMarkingExemptAccount	Short-marking exempt account
54	ParentFirmIdentifier	Parent firm identifier. Implementation-specific identifier of this party's parent entity.
55	ParentFirmName	Parent firm name. Full name of this party's parent entity.
56	DealIdentifier	Deal identifier. The internal identifier assigned to the trade by this party, particularly by a Clearing Organization.
57	SystemTradeID	System trade identifier
58	SystemTradeSubID	System trade sub-identifier
59	FCMCode	Futures Commission Merchant (FCM) code. The FCM's code or identifier in relation to the PartyRole(452). For example, if PartyRole(452) is the exchange or clearinghouse, the FCM code/ID specified in PartySubID(523) is the FCM's identifier at the exchange or clearinghouse.
60	DlvryTrmlCode	Delivery terminal customer account/code. Usually used for gas delivery to identify whose account the gas is allocated to at the delivery terminal. Often referred to as "HUB" code.
61	VolntyRptEntity	Voluntary reporting entity. The entity voluntarily reporting the trade to the regulator. Set PartySubID(523)=Y if true.
62	RptObligJurisdiction	Reporting obligation jurisdiction. For a trade that falls under multiple jurisdictions this may be used to identify, through PartySubID(523), the reporting jurisdiction to which the party is obligated to report.
63	VolntyRptJurisdiction	Voluntary reporting jurisdiction. For a trade that falls under multiple jurisdictions this may be used to identify, through PartySubID(523), the regulatory jurisdiction to which the party is submitting a voluntary report.

Code	Name	Description
64	CompanyActivities	Company activities. For regulatory reporting. ID values include: A = Assurance undertaking authorized in accordance with Directive 2002/83/EC C=Credit institution authorized in accordance with Directive 2006/48/EC F=Investment firm in accordance with Directive 2004/39/EC I=Insurance undertaking authorized in accordance with Directive 73/239/EC L=Alternative investment fund managed by AIFMs authorized or registered in accordance with Directive 2011/61/EC O=Institution for occupational retirement provision within the meaning of Article 6(a0 of Directive 2003/41/EC R=Reinsurance undertaking authorized in accordance with Directive 2005/68/EC U=UCITS and its management company, authorized in accordance with Directive 2009/65/EC or blank in case of coverage by LEI or in case of non-financial counterparties. In the context of EU SFTR reporting use the appropriate 4- or 1-character code noted in the regulations. See SFTR ITS "Commission Implementing Regulation (EU) 2019/363" Annexes 1 and 2 for values.
65	EEAreaDomiciled	European Economic Area domiciled. ID values: Y or N
66	ContractLinked	Contract linked to commercial or treasury financing for this counterparty. ID values: Y or N
67	ContractAbove	Contract above clearing threshold for this counterparty. ID values: Y or N
68	VolntyRptPty	Voluntary reporting party. When PartySubID(523)=Y, identifies that the trading party is reporting voluntarily when VoluntaryRegulatoryReport(1935)=Y.
69	EndUser	End user. When PartySubID(523)=Y, the counterparty is neither the swap dealer, major swap participant nor financial entity as defined in the regulations.
70	LocationOrJurisdiction	Location or jurisdiction. One or more instances may be used in combination with PartySubIDType(803) = 49 (Reporting entity indicator) or 102 (Data repository) to identify the jurisdiction, countries, regions or provinces for which the party is a reporting entity or data repository when that characteristic is ambiguous or where there are multiple locations. The party sub-ID value is either a jurisdiction acronym, a 2-character ISO 3166 country code, or a hyphenated combination of the country code and the standard post-office abbreviation for province, state or region if necessary. E.g. "US" for United States or "CA-QC" for Quebec Canada.

<b>Code</b>	<b>Name</b>	<b>Description</b>
71	DerivativesDealer	Derivatives dealer. Indicates whether the party is a derivatives dealer or not (Y/N). The Canadian regulator's defined term for identifying the trade counterparty as "a person or company engaging in or holding himself, herself or itself out as engaging in the business of trading in derivatives in Ontario as principal or agent".
72	Domicile	Domicile. Country and optionally province, state or region of domicile. The party sub-ID value is either a 2-character ISO 3166 country code or a hyphenated combination of the country code and the standard post-office abbreviation of province, state or region if necessary. E.g. "US" for United States or "CA-QC" for Quebec Canada.
73	ExemptFromRecognition	Exempt from recognition. Used with party role 21 "Clearing Organization" to indicate exemption (Y/N). Identifies a clearing agency as exempt from oversight in Ontario, i.e. one that 1) only provides limited services and does not present significant risks or 2) is foreign-based, intends to operate in Ontario but is subject to regulatory oversight in another jurisdiction.
74	Payer	Payer. Identifies the party as the payer of a particular payment stream or bullet payment by quoting the stream's StreamDesc(40051) (or LegStreamDesc(40243) or UnderlyingStreamDesc(40542)) or payment's PaymentDesc(43087) in the associated party sub-identifier field.
75	Receiver	Receiver. Identifies the party as the receiver of a particular payment stream or bullet payment by quoting the stream's StreamDesc(40051) (or LegStreamDesc(40243) or UnderlyingStreamDesc(40542)) or payment's PaymentDesc(43087) in the associated party sub-identifier field.
76	SystematicInternaliser	Systematic Internaliser (SI). In the context of ESMA reporting, this is used to indicate whether the specified party is a Systematic Internaliser or not for the security defined in the Instrument component (Y/N).
77	PublishingEntityIndicator	Publishing entity indicator. Indicates the entity obligated or delegated to publish to the market. Set PartySubID(523)=Y if true.
78	FirstName	First name. The first name(s) of a natural person. If multiple names, separate entries by a comma.
79	Surname	Surname. The surname(s) or lastname(s) of a natural person. If multiple names, separate entries by a comma.

Code	Name	Description
80	DateOfBirth	Date of birth. The date of birth of a natural person in the format YYYYMMDD.
81	OrderTransmittingFirm	Order transmitting firm. Identifies whether the party specified in PartyID(448) is the firm that transmitted the order. In the context of RTS 22 Article 4, when "true" the PartySubID(523)=Y shall be set "by the transmitting firm within the transmitting firm's report where conditions for transmission specified in Article 4 were not satisfied."
82	OrderTransmittingFirmBuyer	Order transmitting firm for buyer. Identifies the firm that transmitted the order for the buyer. In the context of ESMA RTS 22, PartySubID(523)=Y is used to indicate the firm identified in PartyID(448) is the firm that transmitted the order for the buyer. "This shall be populated by the receiving firm within the receiving firm's report with the identification code provided by the transmitting firm."
83	OrderTransmitterSeller	Order transmitter for seller. Identifies the order transmitting firm for the seller. In the context of ESMA RTS 22, PartySubID(523)=Y is used to indicate the firm identified in PartyID(448) is the firm that transmitted the order for the seller. "This shall be populated by the receiving firm within the receiving firm's report with the identification code provided by the transmitting firm."
84	LegalEntityIdentifier	Legal Entity Identifier (ISO 17442) LEI
85	SubSectorClassification	Sub-sector classification. Supplemental to party sub-ID type "64" (Company activities) for regulatory reporting. For EU SFTR reporting use the appropriate 4-character code noted in the regulations applying the conditional association rules. See SFTR ITS "Commission Implementing Regulation (EU) 2019/363" Annexes 1 and 2 for values.
86	PartySide	Party side. May be used, when appropriate, to explicitly indicate the transaction side of the party, e.g. Buyer, Seller, Lender, Borrower, Maker, Taker, etc. in the ID. In the context of EU SFTR reporting, use values as required by SFTR, "GIVE" and "TAKE" in the ID, to identify collateral giver and taker.
87	LegalRegistrationCountry	Legal registration country. ISO Country Code where the registered office of the party is located as specified in the LEI reference data.

Used in groups: [PaymentSettlPtysSubGrp](#)

**171.2.3815 PaymentSettlPtysSubGrp**

PaymentSettlSubParties is a repeating component within the PaymentSettlParties component used to extend information to be reported for the party.

Name	Mult.	Type	Description
NoPaymentSettlPartySubIDs	[1..1]	NumInGroup	
PaymentSettlPartySubID	[0..1]	String	Required if NoPaymentSettlPartySubIDs(40238) > 0.
PaymentSettlPartySubIDType	[0..1]	CodeSet	Required if NoPaymentSettlPartySubIDs(40238) > 0.

Used in groups: [PaymentSettlParties](#)

**171.2.3816 PaymentSettlStyle**

Payment settlement style.

Type: [int](#)

Allowed values in PaymentSettlStyleCodeSet:

Code	Name	Description
0	Standard	Standard
1	Net	Net
2	StandardfNet	Standard and net

Used in groups: [PaymentGrp](#)

**171.2.3817 PaymentStreamAccrualDays**

The number of days from the adjusted calculation period start date to the adjusted value date, calculated in accordance with the applicable day count fraction.

Type: [int](#)

Used in components: [PaymentStream](#)

**171.2.3818 PaymentStreamAveragingMethod**

When rate averaging is applicable, used to specify whether a weighted or unweighted average calculation method is to be used.

Type: `int`

Allowed values in PaymentStreamAveragingMethodCodeSet:

Code	Name	Description
0	Unweighted	Unweighted
1	Weighted	Weighted

Used in components: `PaymentStreamFloatingRate`

**171.2.3819 PaymentStreamBoundsFirstDateUnadjusted**

The unadjusted first date of the compounding schedule. This can be used to restrict the range of dates when they are relative.

Type: `LocalMktDate`

Used in components: `PaymentStreamCompoundingDates`

**171.2.3820 PaymentStreamBoundsLastDateUnadjusted**

The unadjusted last date of the compounding schedule. This can be used to restrict the range of dates when they are relative.

Type: `LocalMktDate`

Used in components: `PaymentStreamCompoundingDates`

**171.2.3821 PaymentStreamCalculationLagPeriod**

Time unit multiplier for the calculation lag duration.

Type: `int`

Used in components: `PaymentStreamFloatingRate`

**171.2.3822 PaymentStreamCalculationLagUnit**

Time unit associated with the calculation lag duration.

Type: **String**

Allowed values in PaymentStreamInflationLagUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: **PaymentStreamFloatingRate**

**171.2.3823 PaymentStreamCapRate**

The cap rate, if any, which applies to the floating rate. The cap rate (strike) is only required where the floating rate on a swap stream is capped at a certain level. The cap rate is assumed to be exclusive of any spread and is a per annum rate, expressed as a decimal. A cap rate of 5% would be represented as 0.05.

Type: **Percentage**

Used in components: **PaymentStreamFloatingRate**

**171.2.3824 PaymentStreamCapRateBuySide**

Reference to the buyer of the cap rate option through its trade side.

Type: **int**

Allowed values in PaymentStreamCapRateBuySideCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

---

Used in components: **PaymentStreamFloatingRate**

**171.2.3825 PaymentStreamCapRateSellSide**

Reference to the seller of the cap rate option through its trade side.

Type: **int**

Allowed values in PaymentStreamCapRateBuySideCodeSet:

---

Code	Name	Description
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

---

Used in components: **PaymentStreamFloatingRate**

**171.2.3826 PaymentStreamCashSettlIndicator**

Indicates whether cash settlement is applicable.

Type: **Boolean**

Used in components: **PaymentStream**

**171.2.3827 PaymentStream**

The PaymentStream component is a subcomponent of the Stream used to detail the attributes of a payment stream in a swap.

---

Name	Mult.	Type	Description
<b>PaymentStreamType</b>	[0..1]	CodeSet	
<b>PaymentStreamMarketRate</b>	[0..1]	int	
<b>PaymentStreamDelayIndicator</b>	[0..1]	Boolean	
<b>PaymentStreamCashSettlIndicator</b>	[0..1]	Boolean	
<b>PaymentStreamSettlCurrency</b>	[0..1]	Currency	
<b>PaymentStreamDayCount</b>	[0..1]	CodeSet	
<b>PaymentStreamOtherDayCount</b>	[0..1]	String	May be used to specify a count method not listed in PaymentStreamDayCount(40742).
<b>PaymentStreamAccrualDays</b>	[0..1]	int	
<b>PaymentStreamDiscountType</b>	[0..1]	CodeSet	

---

Name	Mult.	Type	Description
PaymentStreamDiscountRate	[0..1]	Percentage	
PaymentStreamDiscountRateDay-Count	[0..1]	CodeSet	
PaymentStreamCompoundingMethod	[0..1]	CodeSet	
PaymentStreamCompoundingXIDRef	[0..1]	XIDREF	Mutually exclusive with PaymentStreamCompoundingFixedRate(42605) or the PaymentStreamCompoundingFloatingRate component.
PaymentStreamCompoundingSpread	[0..1]	PriceOffset	
PaymentStreamInterpolationMethod	[0..1]	CodeSet	
PaymentStreamInterpolationPeriod	[0..1]	CodeSet	
PaymentStreamInitialPrincipalExchangeIndicator	[0..1]	Boolean	
PaymentStreamInterimPrincipalExchangeIndicator	[0..1]	Boolean	
PaymentStreamFinalPrincipalExchangeIndicator	[0..1]	Boolean

PaymentStreamFixedRate	[0..1]	Component	
PaymentStreamFloatingRate	[0..1]	Component	
PaymentStreamCompoundingFixedRate	[0..1]	float	Mutually exclusive with PaymentStreamCompoundingXIDRef(42601) or the PaymentStreamCompoundingFloatingRate component.

Name	Mult.	Type	Description
<a href="#">PaymentStreamCompoundingFloatingRate</a>	[0..1]	Component	Mutually exclusive with <a href="#">PaymentStreamCompoundingFixedRate(42605)</a> or the <a href="#">PaymentStreamCompoundingXIDRef(42601)</a> .
<a href="#">PaymentStreamCompoundingDates</a>	[0..1]	Component	
<a href="#">PaymentStreamNonDeliverableSettlementTerms</a>	[0..1]	Component	

Used in groups: [StreamGrp](#)

### 171.2.3828 [PaymentStreamCompoundingAveragingMethod](#)

Specifies the averaging method when compounding floating rate averaging is applicable (e.g. weighted or unweighted).

Type: [int](#)

Allowed values in [PaymentStreamAveragingMethodCodeSet](#):

Code	Name	Description
0	Unweighted	Unweighted
1	Weighted	Weighted

Used in components: [PaymentStreamCompoundingFloatingRate](#)

### 171.2.3829 [PaymentStreamCompoundingCapRate](#)

The cap rate, if any, which applies to the compounding floating rate. It is only required where the compounding floating rate on a swap stream is capped at a certain level. The cap rate is assumed to be exclusive of any spread and is a per annum rate, expressed as a decimal. A cap rate of 5% would be represented as "0.05".

Type: [Percentage](#)

Used in components: [PaymentStreamCompoundingFloatingRate](#)

**171.2.3830 PaymentStreamCompoundingCapRateBuySide**

Reference to the buyer of the compounding cap rate option through its trade side.

Type: [int](#)

Allowed values in PaymentStreamCapRateBuySideCodeSet:

---

Code	Name	Description
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

---

Used in components: [PaymentStreamCompoundingFloatingRate](#)

**171.2.3831 PaymentStreamCompoundingCapRateSellSide**

Reference to the seller of the compounding cap rate option through its trade side.

Type: [int](#)

Allowed values in PaymentStreamCapRateBuySideCodeSet:

---

Code	Name	Description
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

---

Used in components: [PaymentStreamCompoundingFloatingRate](#)

**171.2.3832 PaymentStreamCompoundingDate**

The compounding date. The type of date is specified in PaymentStreamCompoundingDate-Type(42608).

Type: [LocalMktDate](#)

Used in groups: [PaymentStreamCompoundingDateGrp](#)

**171.2.3833 PaymentStreamCompoundingDateGrp**

PaymentStreamCompoundingDateGrp is a subcomponent of the PaymentStreamCompoundingDates component used to specify predetermined compounding dates.

Name	Mult.	Type	Description
NoPaymentStreamCompoundingDates	[1..1]	NumInGroup	
PaymentStreamCompoundingDate	[0..1]	LocalMktDate	Required if NoPaymentStreamCompoundingDates(42606) > 0.
PaymentStreamCompoundingDate- Type	[0..1]	CodeSet	When specified it applies not only to the current date instance but to all subsequent date instances in the group until overridden when a new type is specified.

Used in components: [PaymentStreamCompoundingDates](#)

**171.2.3834 PaymentStreamCompoundingDatesBusinessCenter**

The business center calendar used for date adjustment of the payment stream compounding dates, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in groups: [PaymentStreamCompoundingDatesBusinessCenterGrp](#)

**171.2.3835 PaymentStreamCompoundingDatesBusinessCenterGrp**

PaymentStreamCompoundingDatesBusinessCenterGrp is a repeating subcomponent within the PaymentStreamCompoundingDates component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the DateAdjustment component in Instrument.

Name	Mult.	Type	Description
NoPaymentStreamCompounding- DatesBusinessCenters	[1..1]	NumInGroup	
PaymentStreamCompoundingDates- BusinessCenter	[0..1]	String	Required if NoPaymentStreamCompounding- DatesBusinessCenters(42620) > 0.

Used in components: [PaymentStreamCompoundingDates](#)

### 171.2.3836 PaymentStreamCompoundingDatesBusinessDayConvention

The compounding dates business day convention.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [PaymentStreamCompoundingDates](#)

### 171.2.3837 PaymentStreamCompoundingDates

PaymentStreamCompoundingDates is a subcomponent of the PaymentStream component used to specify the compounding dates of the stream - either specific, relative or periodic dates.

Name	Mult.	Type	Description
<a href="#">PaymentStreamCompoundingDates-BusinessDayConvention</a>	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the DateAdjustment component in Instrument. The specified value would be specific to payment stream compounding dates.
<a href="#">PaymentStreamCompoundingDates-BusinessCenterGrp</a>	[0..*]	Group	When specified, this overrides the business centers defined in the DateAdjustment component in Instrument. The specified values would be specific to payment stream compounding dates.
<a href="#">PaymentStreamCompoundingDateGrp</a>	[0..*]	Group	

Name	Mult.	Type	Description
PaymentStreamCompoundingDates-RelativeTo	[0..1]	int	
PaymentStreamCompoundingDatesOffsetPeriod	[0..1]	int	Conditionally required when PaymentStreamCompoundingDatesOffsetUnit(42612) is specified.
PaymentStreamCompoundingDatesOffsetUnit	[0..1]	CodeSet	Conditionally required when PaymentCompoundingDatesOffsetPeriod(42611) is specified.
PaymentStreamCompoundingDatesOffsetDayType	[0..1]	CodeSet	
PaymentStreamCompoundingPeriodSkip	[0..1]	int	
PaymentStreamCompoundingStartDate	[0..1]	Component	
PaymentStreamCompoundingEndDate	[0..1]	Component	
PaymentStreamCompoundingFrequencyPeriod	[0..1]	int	Conditionally required when PaymentStreamCompoundingFrequencyUnit(42616) is specified.
PaymentStreamCompoundingFrequencyUnit	[0..1]	CodeSet	Conditionally required when PaymentStreamCompoundingFrequencyPeriod(42615) is specified.
PaymentStreamCompoundingRollConvention	[0..1]	CodeSet	When specified, this overrides the date roll convention defined in the DateAdjustment component in Instrument. The specified value would be specific to this instance of the payment stream compounding dates.
PaymentStreamBoundsFirstDateUnadjusted	[0..1]	LocalMktDate	
PaymentStreamBoundsLastDateUnadjusted	[0..1]	LocalMktDate	

Used in components: [PaymentStream](#)

### 171.2.3838 PaymentStreamCompoundingDatesOffsetDayType

Specifies the day type of the relative compounding date offset.

Type: [int](#)

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

---

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in components: [PaymentStreamCompoundingDates](#)

### **171.2.3839 PaymentStreamCompoundingDatesOffsetPeriod**

Time unit multiplier for the relative compounding date offset.

Type: [int](#)

Used in components: [PaymentStreamCompoundingDates](#)

### **171.2.3840 PaymentStreamCompoundingDatesOffsetUnit**

Time unit associated with the relative compounding date offset.

Type: [String](#)

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: [PaymentStreamCompoundingDates](#)

### **171.2.3841 PaymentStreamCompoundingDatesRelativeTo**

Specifies the anchor date when the compounding dates are relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: **int**

Used in components: **PaymentStreamCompoundingDates**

### **171.2.3842 PaymentStreamCompoundingDateType**

Specifies the type of payment compounding date (e.g. adjusted for holidays).

Type: **int**

Allowed values in NonDeliverableFixingDateTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Unadjusted	Unadjusted
1	Adjusted	Adjusted

---

Used in groups: **PaymentStreamCompoundingDateGrp**

### **171.2.3843 PaymentStreamCompoundingEndDateAdjusted**

The adjusted compounding end date.

Type: **LocalMktDate**

Used in components: **PaymentStreamCompoundingEndDate**

### **171.2.3844 PaymentStreamCompoundingEndDate**

PaymentStreamCompoundingEndDate is a subcomponent of the PaymentStreamCompoundingDates component used to specify the end date for compounding.

---

<b>Name</b>	<b>Mult.</b>	<b>Type</b>	<b>Description</b>
<b>PaymentStreamCompoundingEndDa- teUnadjusted</b>	[0..1]	LocalMktDate	
<b>PaymentStreamCompoundingEnd- DateRelativeTo</b>	[0..1]	int	
<b>PaymentStreamCompoundingEndDa- teOffsetPeriod</b>	[0..1]	int	Conditionally required when PaymentStreamCom- poundingEndDateOffsetUnit(42625) is specified.

---

Name	Mult.	Type	Description
PaymentStreamCompoundingEndDateOffsetUnit	[0..1]	CodeSet	Conditionally required when PaymentStreamCompoundingEndDateOffsetPeriod(42624) is specified.
PaymentStreamCompoundingEndDateOffsetDayType	[0..1]	CodeSet	
PaymentStreamCompoundingEndDateAdjusted	[0..1]	LocalMktDate	

Used in components: [PaymentStreamCompoundingDates](#)

### 171.2.3845 PaymentStreamCompoundingEndDateOffsetDayType

Specifies the day type of the relative compounding end date offset.

Type: [int](#)

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: [PaymentStreamCompoundingEndDate](#)

### 171.2.3846 PaymentStreamCompoundingEndDateOffsetPeriod

Time unit multiplier for the relative compounding end date offset.

Type: [int](#)

Used in components: [PaymentStreamCompoundingEndDate](#)

**171.2.3847 PaymentStreamCompoundingEndDateOffsetUnit**

Time unit associated with the relative compounding end date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: **PaymentStreamCompoundingEndDate**

**171.2.3848 PaymentStreamCompoundingEndDateRelativeTo**

Specifies the anchor date when the compounding end date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: **int**

Used in components: **PaymentStreamCompoundingEndDate**

**171.2.3849 PaymentStreamCompoundingEndDateUnadjusted**

The unadjusted compounding end date.

Type: **LocalMktDate**

Used in components: **PaymentStreamCompoundingEndDate**

**171.2.3850 PaymentStreamCompoundingFinalRatePrecision**

Specifies the compounding floating rate rounding precision in terms of a number of decimal places.

Note how a percentage rate rounding of 5 decimal places is expressed as a rounding precision of 7.

Type: **int**

Used in components: **PaymentStreamCompoundingFloatingRate**

**171.2.3851 PaymentStreamCompoundingFinalRateRoundingDirection**

Specifies the rounding direction for the compounding floating rate.

Type: **char**

Allowed values in RoundingDirectionCodeSet:

Code	Name	Description
0	RoundToNearest	Round to nearest
1	RoundDown	Round down
2	RoundUp	Round up

Used in components: **PaymentStreamCompoundingFloatingRate**

**171.2.3852 PaymentStreamCompoundingFixedRate**

The compounding fixed rate applicable to the payment stream.

Type: **float**

Used in components: **PaymentStream**

**171.2.3853 PaymentStreamCompoundingFloatingRate**

PaymentStreamCompoundingFloatingRate is a subcomponent of the PaymentStream component used to report the parameters for determining the compounding floating rate of the stream.

Name	Mult.	Type	Description
<b>PaymentStreamCompoundingRateIndex</b>	[0..1]	String	
<b>PaymentStreamCompoundingRateIndexCurvePeriod</b>	[0..1]	int	Conditionally required if PaymentStreamCompoundingRateIndexCurveUnit(42630) is specified.
<b>PaymentStreamCompoundingRateIndexCurveUnit</b>	[0..1]	CodeSet	Conditionally required if PaymentStreamCompoundingRateIndexCurvePeriod(42629) is specified.
<b>PaymentStreamCompoundingRateMultiplier</b>	[0..1]	float	

Name	Mult.	Type	Description
PaymentStreamCompoundingRate-Spread	[0..1]	PriceOffset	
PaymentStreamCompoundingRate-SpreadPositionType	[0..1]	CodeSet	
PaymentStreamCompoundingRate-Treatment	[0..1]	CodeSet	
PaymentStreamCompoundingCapRate	[0..1]	Percentage	
PaymentStreamCompounding-CapRateBuySide	[0..1]	CodeSet	
PaymentStreamCompounding-CapRateSellSide	[0..1]	CodeSet	
PaymentStreamCompoundingFloor-Rate	[0..1]	Percentage	
PaymentStreamCompoundingFloor-RateBuySide	[0..1]	CodeSet	
PaymentStreamCompoundingFloor-RateSellSide	[0..1]	CodeSet	
PaymentStreamCompoundingInitial-Rate	[0..1]	Percentage	
PaymentStreamCompoundingFinal-RateRoundingDirection	[0..1]	CodeSet	
PaymentStreamCompoundingFinal-RatePrecision	[0..1]	int	
PaymentStreamCompoundingAveragingMethod	[0..1]	CodeSet	
PaymentStreamCompoundingNegativeRateTreatment	[0..1]	CodeSet	

Used in components: [PaymentStream](#)

### 171.2.3854 PaymentStreamCompoundingFloorRate

The floor rate, if any, which applies to the compounding floating rate. The floor rate (strike) is only required where the compounding floating rate on a swap stream is floored at a certain strike level. The floor rate is assumed to be exclusive of any spread and is a per annum rate. The rate is expressed as a decimal, e.g. 5% is represented as "0.05".

Type: [Percentage](#)

Used in components: [PaymentStreamCompoundingFloatingRate](#)

### **171.2.3855 PaymentStreamCompoundingFloorRateBuySide**

Reference to the buyer of the compounding floor rate option through its trade side.

Type: [int](#)

Allowed values in PaymentStreamFloorRateBuySideCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

---

Used in components: [PaymentStreamCompoundingFloatingRate](#)

### **171.2.3856 PaymentStreamCompoundingFloorRateSellSide**

Reference to the seller of the floor rate option through its trade side.

Type: [int](#)

Allowed values in PaymentStreamFloorRateBuySideCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

---

Used in components: [PaymentStreamCompoundingFloatingRate](#)

### **171.2.3857 PaymentStreamCompoundingFrequencyPeriod**

Time unit multiplier for the frequency at which compounding dates occur.

Type: [int](#)

Used in components: [PaymentStreamCompoundingDates](#)

**171.2.3858 PaymentStreamCompoundingFrequencyUnit**

Time unit associated with the frequency at which compounding dates occur.

Type: **String**

Allowed values in CouponFrequencyUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year
H	Hour	Hour
Min	Minute	Minute
S	Second	Second
T	Term	Term

---

Used in components: **PaymentStreamCompoundingDates**

**171.2.3859 PaymentStreamCompoundingInitialRate**

The initial compounding floating rate reset agreed between the principal parties involved in the trade. It should only be included when the rate is not equal to the rate published on the source implied by the floating rate index. The initial rate is expressed in decimal form, e.g. 5% is represented as "0.05".

Type: **Percentage**

Used in components: **PaymentStreamCompoundingFloatingRate**

**171.2.3860 PaymentStreamCompoundingMethod**

Compounding method.

Type: **int**

Allowed values in PaymentStreamCompoundingMethodCodeSet:

Code	Name	Description
0	None	None
1	Flat	Flat
2	Straight	Straight
3	SpreadExclusive	Spread exclusive

Used in components: [PaymentStream](#)

### **171.2.3861 PaymentStreamCompoundingNegativeRateTreatment**

Specifies the method for calculating payment obligations when a compounding floating rate is negative (either due to a quoted negative floating rate or by operation of a spread that is subtracted from the floating rate).

Type: [int](#)

Allowed values in [PaymentStreamNegativeRateTreatmentCodeSet](#):

Code	Name	Description
0	ZeroInterestRateMethod	Zero interest rate method
1	NegativeInterestRateMethod	Negative interest rate method

Used in components: [PaymentStreamCompoundingFloatingRate](#)

### **171.2.3862 PaymentStreamCompoundingPeriodSkip**

The number of periods in the "RelativeTo" schedule that are between each date in the compounding schedule. A skip of 2 would mean that compounding dates are relative to every second date in the "RelativeTo" schedule. If present this should have a value greater than 1.

Type: [int](#)

Used in components: [PaymentStreamCompoundingDates](#)

### **171.2.3863 PaymentStreamCompoundingRateIndex**

The payment stream's compounding floating rate index.

Type: **String**

Used in components: **PaymentStreamCompoundingFloatingRate**

#### **171.2.3864 PaymentStreamCompoundingRateIndexCurvePeriod**

Time unit multiplier for the payment stream's compounding floating rate index curve period.

Type: **int**

Used in components: **PaymentStreamCompoundingFloatingRate**

#### **171.2.3865 PaymentStreamCompoundingRateIndexCurveUnit**

Time unit associated with the payment stream's compounding floating rate index curve period.

Type: **String**

Allowed values in PaymentStreamRateIndexCurveUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: **PaymentStreamCompoundingFloatingRate**

#### **171.2.3866 PaymentStreamCompoundingRateMultiplier**

A rate multiplier to apply to the compounding floating rate. The multiplier can be less than or greater than 1 (one). This should only be included if the multiplier is not equal to 1 (one) for the term of the stream.

Type: **float**

Used in components: **PaymentStreamCompoundingFloatingRate**

**171.2.3867 PaymentStreamCompoundingRateSpread**

The basis points spread from the index specified in PaymentStreamCompoundingRateIndex(42628).

Type: [PriceOffset](#)

Used in components: [PaymentStreamCompoundingFloatingRate](#)

**171.2.3868 PaymentStreamCompoundingRateSpreadPositionType**

Identifies whether the rate spread is applied to a long or short position.

Type: [int](#)

Allowed values in PaymentStreamRateSpreadPositionTypeCodeSet:

---

Code	Name	Description
0	Short	Short
1	Long	Long

---

Used in components: [PaymentStreamCompoundingFloatingRate](#)

**171.2.3869 PaymentStreamCompoundingRateTreatment**

Specifies the yield calculation treatment for the index.

Type: [int](#)

Allowed values in PaymentStreamRateTreatmentCodeSet:

---

Code	Name	Description
0	BondEquivalentYield	Bond equivalent yield
1	MoneyMarketYield	Money market yield

---

Used in components: [PaymentStreamCompoundingFloatingRate](#)

**171.2.3870 PaymentStreamCompoundingRollConvention**

The convention for determining the sequence of compounding dates. It is used in conjunction with a specified frequency.

Type: **String**

Allowed values in DateRollConventionCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	FirstDay	1st day of the month
2	SecondDay	2nd day of the month
3	ThirdDay	3rd day of the month
4	FourthDay	4th day of the month
5	FifthDay	5th day of the month
6	SixthDay	6th day of the month
7	SeventhDay	7th day of the month
8	EighthDay	8th day of the month
9	NinthDay	9th day of the month
10	TenthDay	10th day of the month
11	EleventhDay	11th day of the month
12	TwelvthDay	12th day of the month
13	ThirteenthDay	13th day of the month
14	ForteenthDay	14th day of the month
15	FifteenthDay	15th day of the month
16	SixteenthDay	16th day of the month
17	SeventeenthDay	17th day of the month
18	EighteenthDay	18th day of the month
19	NineteenthDay	19th day of the month
20	TwentiethDay	20th day of the month
21	TwentyFirstDay	21st day of the month
22	TwentySecondDay	22nd day of the month
23	TwentyThirdDay	23rd day of the month
24	TwentyFourthDay	24th day of the month
25	TwentyFifthDay	25th day of the month
26	TwentySixthDay	26th day of the month
27	TwentySeventhDay	27th day of the month
28	TwentyEighthDay	28th day of the month

---

Code	Name	Description
29	TwentyNinthDay	29th day of the month
30	ThirtiethDay	30th day of the month
EOM	EOM	The end of the month. Use EOM for 31st day of the month.
FRN	FRN	The floating rate note convention or Eurodollar convention.
IMM	IMM	The International Money Market settlement date, i.e. the 3rd Wednesday of the month.
IMMCAD	IMMCAD	The last trading day/expiration day of the Canadian Derivatives Exchange.
IMMAUD	IMMAUD	The last trading day of the Sydney Futures Exchange Australian 90-day bank accepted bill futures contract.
IMMNZD	IMMNZD	The last trading day of the Sydney Futures Exchange New Zealand 90-day bank bill futures contract.
SFE	SFE	The Sydney Futures Exchange 90-day bank accepted bill futures settlement dates.
NONE	NONE	No adjustment
TBILL	TBILL	The 13-week and 26-week U.S. Treasury Bill auction dates.
MON	MON	Monday
TUE	TUE	Tuesday
WED	WED	Wednesday
THU	THU	Thursday
FRI	FRI	Friday
SAT	SAT	Saturday
SUN	SUN	Sunday

Used in components: [PaymentStreamCompoundingDates](#)

### 171.2.3871 PaymentStreamCompoundingSpread

The spread to be used for compounding. Used in scenarios where the interest payment is based on a compounding formula that uses a compounding spread in addition to the regular spread.

Type: [PriceOffset](#)

Used in components: [PaymentStream](#)

**171.2.3872 PaymentStreamCompoundingStartDateAdjusted**

The adjusted compounding start date.

Type: [LocalMktDate](#)

Used in components: [PaymentStreamCompoundingStartDate](#)

**171.2.3873 PaymentStreamCompoundingStartDate**

PaymentStreamCompoundingStartDate is a subcomponent of the PaymentStreamCompoundingDates component used to specify the start date for compounding.

Name	Mult.	Type	Description
<a href="#">PaymentStreamCompoundingStartDateUnadjusted</a>	[0..1]	LocalMktDate	
<a href="#">PaymentStreamCompoundingStartDateRelativeTo</a>	[0..1]	int	
<a href="#">PaymentStreamCompoundingStartDateOffsetPeriod</a>	[0..1]	int	Conditionally required when PaymentStreamCompoundingStartDateOffsetUnit(42649) is specified.
<a href="#">PaymentStreamCompoundingStartDateOffsetUnit</a>	[0..1]	CodeSet	Conditionally required when PaymentStreamCompoundingStartDateOffsetPeriod(42648) is specified.
<a href="#">PaymentStreamCompoundingStartDateOffsetDayType</a>	[0..1]	CodeSet	
<a href="#">PaymentStreamCompoundingStartDateAdjusted</a>	[0..1]	LocalMktDate	

Used in components: [PaymentStreamCompoundingDates](#)

**171.2.3874 PaymentStreamCompoundingStartDateOffsetDayType**

Specifies the day type of the relative compounding start date offset.

Type: [int](#)

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

---

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in components: [PaymentStreamCompoundingStartDate](#)

### **171.2.3875 PaymentStreamCompoundingStartDateOffsetPeriod**

Time unit multiplier for the relative compounding start date offset.

Type: [int](#)

Used in components: [PaymentStreamCompoundingStartDate](#)

### **171.2.3876 PaymentStreamCompoundingStartDateOffsetUnit**

Time unit associated with the relative compounding start date offset.

Type: [String](#)

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: [PaymentStreamCompoundingStartDate](#)

### **171.2.3877 PaymentStreamCompoundingStartDateRelativeTo**

Specifies the anchor date when the compounding start date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: **int**

Used in components: **PaymentStreamCompoundingStartDate**

### **171.2.3878 PaymentStreamCompoundingStartDateUnadjusted**

The unadjusted compounding start date.

Type: **LocalMktDate**

Used in components: **PaymentStreamCompoundingStartDate**

### **171.2.3879 PaymentStreamCompoundingXIDRef**

Reference to the stream which details the compounding fixed or floating rate.

Type: **XIDREF**

Used in components: **PaymentStream**

### **171.2.3880 PaymentStreamContractPrice**

The price per relevant unit for purposes of the calculation of a fixed amount for a dry voyage charter or time charter commodity swap.

Type: **Price**

Used in components: **PaymentStreamFixedRate**

### **171.2.3881 PaymentStreamContractPriceCurrency**

Specifies the currency of PaymentStreamContractPrice(41190). Uses ISO 4217 currency codes.

Type: **Currency**

Used in components: **PaymentStreamFixedRate**

**171.2.3882 PaymentStreamDayCount**

The day count convention used in the payment stream calculations.

Type: **int**

Allowed values in CouponDayCountCodeSet:

Code	Name	Description
0	OneOne	1/1. If parties specify the Day Count Fraction to be 1/1 then in calculating the applicable amount, 1 is simply input into the calculation as the relevant Day Count Fraction. See also 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (a).
1	ThirtyThreeSixtyUS	30/360 (30U/360 or Bond Basis). See also ISO 15022 MICO code 'A001'.
2	ThirtyThreeSixtySIA	30/360 (SIA). A variant of "30/360" - when Date1 and Date2 are both Feb. 28th or 29th convert them to 30th using the same logic in the conversion of 31st to 30th.
3	ThirtyThreeSixtyM	30/360M. Commonly used day count convention for US mortgage backed securities. Feb 28th (or 29th in a leap year) is always considered as a 30th for a start date. As a comparison, in the regular 30/360 day count as used by most US agency and corporate bonds, a start date of Feb 28th (or 29th in a leap year) is still considered as the 28th (or 29th) day of a month of 30 days.
4	ThirtyEThreeSixty	30E/360 (Eurobond Basis). See also ISO 15022 MICO code 'A007'.
5	ThirtyEThreeSixtyISDA	30E/360 (ISDA). Date adjustment rules are: (1) if Date1 is the last day of the month, then change Date1 to 30; (2) if D2 is the last day of the month (unless Date2 is the maturity date and Date2 is in February), then change Date2 to 30. See also 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (h).
6	ActThreeSixty	Act/360. See also ISO 15022 MICO code 'A004'.
7	ActThreeSixtyFiveFixed	Act/365 (FIXED). See also ISO 15022 MICO code 'A005'.
8	ActActAFB	Act/Act (AFB). See also ISO 15022 MICO code 'A010'.
9	ActActICMA	Act/Act (ICMA). See also ISO 15022 MICO code 'A006'.
10	ActActISMAUltimo	Act/Act (ICMA Ultimo). The Act/Act (ICMA Ultimo) differs from Act/Act (ICMA) method only that it assumes that regular coupons always fall on the last day of the month.
11	ActActISDA	Act/Act (ISDA). See also ISO 15022 MICO code 'A008'.

Code	Name	Description
12	BusTwoFiftyTwo	BUS/252. Used for Brazilian Real swaps, which is based on business days instead of calendar days. The number of business days divided by 252.
13	ThirtyEPlusThreeSixty	30E+/360. Variation on 30E/360. Date adjustment rules: (1) If Date1 falls on the 31st, then change it to the 30th; (2) If Date2 falls on the 31st, then change it to 1 and increase Month2 by one, i.e. next month.
14	ActThreeSixtyFiveL	Act/365L. See also ISO 15022 MICO code 'A009'.
15	NLThreeSixtyFive	NL365. See also ISO 15022 MICO code 'A014'.
16	NLThreeSixty	NL360. This is the same as Act/360, with the exception of leap days (29th February) which are ignored.
17	Act364	Act/364. The actual number of days between Date1 and Date2, divided by 364.
18	ThirtyThreeSixtyFive	30/365. Interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and a 365-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31 is assumed to be a 30 and the 28 February (or 29 February for a leap year) is assumed to be a 28 (or 29). See also ISO 15022 MICO code 'A002'.
19	ThirtyActual	30/Actual. Interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and the assumed number of days in a year in a way similar to the Actual/Actual (ICMA). Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31 is assumed to be a 30 and the 28 February (or 29 February for a leap year) is assumed to be a 28 (or 29). The assumed number of days in a year is computed as the actual number of days in the coupon period multiplied by the number of interest payments in the year. See also ISO 15022 MICO code 'A003'.
20	ThirtyThreeSixtyICMA	30/360 (ICMA or basis rule). Interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31 is assumed to be a 30 and the 28 February (or 29 February for a leap year) is assumed to be a 28 (or 29). It is the most commonly used 30/360 method for non-US straight and convertible bonds issued before 1 January 1999. See also ISO 15022 MICO code 'A011'.

Code	Name	Description
21	ThirtyETwoThreeSixty	30E2/360 (Eurobond basis model two). Interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for the last day of February whose day of the month value shall be adapted to the value of the first day of the interest period if the latter is higher and if the period is one of a regular schedule. This means that a 31 is assumed to be a 30 and the 28 February of a non-leap year is assumed to be equivalent to a 29 February when the first day of the interest period is a 29, or to a 30 February when the first day of the interest period is a 30 or a 31. The 29 February of a leap year is assumed to be equivalent to a 30 February when the first day of the interest period is a 30 or a 31. Similarly, if the coupon period starts on the last day of February, it is assumed to produce only one day of interest in February as if it was starting on a 30 February when the end of the period is a 30 or a 31, or two days of interest in February when the end of the period is a 29, or three days of interest in February when it is the 28 February of a non-leap year and the end of the period is before the 29. See also ISO 15022 MICO code 'A012'.
22	ThirtyEThreeThreeSixty	30E3/360 (Eurobond basis model three). Interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that a 31 is assumed to be a 30 and the 28 February (or 29 February for a leap year) is assumed to be equivalent to a 30 February. It is a variation of the 30E/360 (or Eurobond basis) method where the last day of February is always assumed to be a 30, even if it is the last day of the maturity coupon period. See also ISO 15022 MICO code 'A013'.
99	Other	Other. For other day count method. See also ISO 15022 MICO code 'OTHR'.

Used in components: [PaymentStream](#)

### 171.2.3883 PaymentStreamDaysAdjustmentIndicator

Indicates whether the contract specifies that the notional should be scaled by the number of days in range divided by the estimate trading days or not. The number of "days in range" refers to the number of returns that contribute to the realized volatility.

Type: **Boolean**

Used in components: **PaymentStreamFloatingRate**

### **171.2.3884 PaymentStreamDelayIndicator**

Applicable to credit default swaps on mortgage backed securities to specify whether payment delays are applicable to the fixed amount.

Residential mortgage backed securities typically have a payment delay of 5 days between the coupon date of the reference obligation and the payment date of the synthetic swap.

Commercial mortgage backed securities do not typically have a payment delay, with both payment dates (the coupon date of the reference obligation and the payment date of the synthetic swap) being on the 25th of each month.

Type: **Boolean**

Used in components: **PaymentStream**

### **171.2.3885 PaymentStreamDiscountRate**

Discount rate. The rate is expressed in decimal, e.g. 5% is expressed as 0.05.

Type: **Percentage**

Used in components: **PaymentStream**

### **171.2.3886 PaymentStreamDiscountRateDayCount**

The day count convention applied to the PaymentStreamDiscountRate(40745).

Type: **int**

Allowed values in CouponDayCountCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	OneOne	1/1. If parties specify the Day Count Fraction to be 1/1 then in calculating the applicable amount, 1 is simply input into the calculation as the relevant Day Count Fraction. See also 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (a).

Allowed values in PaymentStreamDiscountTypeCodeSet:

Code	Name	Description
0	Standard	Standard
1	FRA	Forward Rate Agreement (FRA)

Used in components: [PaymentStream](#)

### 171.2.3888 PaymentStreamFinalPricePaymentDateAdjusted

The adjusted final price payment date.

Type: [LocalMktDate](#)

Used in components: [PaymentStreamFinalPricePaymentDate](#)

### 171.2.3889 PaymentStreamFinalPricePaymentDate

PaymentStreamFinalPricePaymentDate is a subcomponent of the PaymentStreamPaymentDates component used to specify the final price payment date, e.g. for an equity return swap.

Name	Mult.	Type	Description
<a href="#">PaymentStreamFinalPricePaymentDateUnadjusted</a>	[0..1]	LocalMktDate	
<a href="#">PaymentStreamFinalPricePaymentDateRelativeTo</a>	[0..1]	int	
<a href="#">PaymentStreamFinalPricePaymentDateOffsetPeriod</a>	[0..1]	int	Conditionally required when PaymentStreamFinalPricePaymentDateOffsetUnit(42657) is specified.
<a href="#">PaymentStreamFinalPricePaymentDateOffsetUnit</a>	[0..1]	CodeSet	Conditionally required when PaymentStreamFinalPricePaymentDateOffsetPeriod(42656) is specified.
<a href="#">PaymentStreamFinalPricePaymentDateOffsetDayType</a>	[0..1]	CodeSet	
<a href="#">PaymentStreamFinalPricePaymentDateAdjusted</a>	[0..1]	LocalMktDate	

Used in components: [PaymentStreamPaymentDates](#)

**171.2.3890 PaymentStreamFinalPricePaymentDateOffsetDayType**

Specifies the day type of the relative final price payment date offset.

Type: **int**

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in components: **PaymentStreamFinalPricePaymentDate**

**171.2.3891 PaymentStreamFinalPricePaymentDateOffsetPeriod**

Time unit multiplier for the relative final price payment date offset.

Type: **int**

Used in components: **PaymentStreamFinalPricePaymentDate**

**171.2.3892 PaymentStreamFinalPricePaymentDateOffsetUnit**

Time unit associated with the relative final price payment date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: **PaymentStreamFinalPricePaymentDate**

### **171.2.3893 PaymentStreamFinalPricePaymentDateRelativeTo**

Specifies the anchor date when the final price payment date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: **int**

Used in components: **PaymentStreamFinalPricePaymentDate**

### **171.2.3894 PaymentStreamFinalPricePaymentDateUnadjusted**

The unadjusted final price payment date.

Type: **LocalMktDate**

Used in components: **PaymentStreamFinalPricePaymentDate**

### **171.2.3895 PaymentStreamFinalPrincipalExchangeIndicator**

Indicates whether there is a final exchange of principal on the termination date.

Type: **Boolean**

Used in components: **PaymentStream**

### **171.2.3896 PaymentStreamFinalRate**

The floating rate determined at the final reset. The rate is expressed in decimal form, e.g. 5% is represented as 0.05.

Type: **Percentage**

Used in components: **PaymentStreamFloatingRate**

### **171.2.3897 PaymentStreamFinalRatePrecision**

Specifies the rounding precision in terms of a number of decimal places. Note how a percentage rate rounding of 5 decimal places is expressed as a rounding precision of 7.

Type: **int**

Used in components: **PaymentStreamFloatingRate**

**171.2.3898 PaymentStreamFinalRateRoundingDirection**

Specifies the rounding direction.

Type: **char**

Allowed values in RoundingDirectionCodeSet:

---

Code	Name	Description
0	RoundToNearest	Round to nearest
1	RoundDown	Round down
2	RoundUp	Round up

---

Used in components: **PaymentStreamFloatingRate**

**171.2.3899 PaymentStreamFirstObservationDateAdjusted**

The adjusted initial price observation date.

Type: **LocalMktDate**

Used in components: **PaymentStreamFloatingRate**

**171.2.3900 PaymentStreamFirstObservationDateOffsetDayType**

Specifies the day type of the initial price observation date offset.

Type: **int**

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

---

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in components: **PaymentStreamFloatingRate**

**171.2.3901 PaymentStreamFirstObservationDateOffsetPeriod**

Time unit multiplier for the relative first observation date offset.

Type: **int**

Used in components: **PaymentStreamFloatingRate**

**171.2.3902 PaymentStreamFirstObservationDateOffsetUnit**

Time unit associated with the relative first observation date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: **PaymentStreamFloatingRate**

**171.2.3903 PaymentStreamFirstObservationDateRelativeTo**

Specifies the anchor date when the initial price observation date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: **int**

Used in components: **PaymentStreamFloatingRate**

**171.2.3904 PaymentStreamFirstObservationDateUnadjusted**

The unadjusted initial price observation date.

Type: **LocalMktDate**

Used in components: **PaymentStreamFloatingRate**

**171.2.3905 PaymentStreamFirstPaymentDateUnadjusted**

The unadjusted first payment date.

Type: [LocalMktDate](#)

Used in components: [PaymentStreamPaymentDates](#)

**171.2.3906 PaymentStreamFixedAmount**

The payment stream's fixed payment amount. In CDS an alternative to [PaymentStreamRate\(40784\)](#).

Type: [Amt](#)

Used in components: [PaymentStreamFixedRate](#)

**171.2.3907 PaymentStreamFixedAmountUnitOfMeasure**

Specifies the fixed payment amount unit of measure (UOM).

Type: [String](#)

Allowed values in [UnitOfMeasureCodeSet](#):

---

Code	Name	Description
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet
Bbl	Barrels	Barrels. Equal to 42 US gallons
CBM	CubicMeters	Cubic Meters
BDFT	BoardFeet	Board feet. Equal to 144 cubic inches
GJ	Gigajoules	gigajoules
Bu	Bushels	Bushels
kHR	HeatRate	Heat rate. The number of BTUs required to produce one kilowatt hour of electricity, typically 3,412.14 BTUs per 1 kWh.
Ccy	Currency	Amount of currency
kWh	KilowattHours	Kilowatt hours
CDD	CoolingDegreeDay	Cooling degree day
MHR	MegaHeatRate	Mega heat rate. The number of million BTUs required to produce one megawatt hour of electricity, typically 3.41214 million BTUs per 1 MWh.
CER	CertifiedEmissionsReduction	Certified emissions reduction

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
MMBtu	OneMillionBTU	One Million BTU

Used in components: [PaymentStreamFixedRate](#)

### 171.2.3908 PaymentStreamFixedRate

PaymentStreamFixedRate is a subcomponent of the PaymentStream component used to report the fixed rate or fixed payment amount of the stream.

Name	Mult.	Type	Description
<a href="#">PaymentStreamRate</a>	[0..1]	Percentage	Mutually exclusive with PaymentStreamFixedAmount(40785).
<a href="#">PaymentStreamFixedAmount</a>	[0..1]	Amt	Mutually exclusive with PaymentStreamRate(40784).
<a href="#">PaymentStreamRateOrAmountCurrency</a>	[0..1]	Currency	
<a href="#">PaymentStreamFixedAmountUnitOfMeasure</a>	[0..1]	CodeSet	
<a href="#">PaymentStreamTotalFixedAmount</a>	[0..1]	Amt	
<a href="#">PaymentStreamFutureValueNotional</a>	[0..1]	Amt	
<a href="#">PaymentStreamFutureValueDateAdjusted</a>	[0..1]	LocalMktDate	
<a href="#">PaymentStreamWorldScaleRate</a>	[0..1]	float	
<a href="#">PaymentStreamContractPrice</a>	[0..1]	Price	
<a href="#">PaymentStreamContractPriceCurrency</a>	[0..1]	Currency	

Used in components: [PaymentStream](#)

### 171.2.3909 PaymentStreamFixingDate

The fixing date. The type of date is specified in PaymentStreamFixingDateType(42662).

Type: [LocalMktDate](#)

Used in groups: [PaymentStreamFixingDateGrp](#)

### 171.2.3910 PaymentStreamFixingDateAdjusted

The adjusted fixing date.

Type: [LocalMktDate](#)

Used in components: [PaymentStreamResetDates](#)

### 171.2.3911 **PaymentStreamFixingDateBusinessCenter**

The business center calendar used to adjust the payment stream's fixing date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in groups: [PaymentStreamFixingDateBusinessCenterGrp](#)

### 171.2.3912 **PaymentStreamFixingDateBusinessCenterGrp**

[PaymentStreamFixingDateBusinessCenterGrp](#) is a repeating subcomponent within the [PaymentStreamResetDates](#) component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the [DateAdjustment](#) component in [Instrument](#).

Name	Mult.	Type	Description
<a href="#">NoPaymentStreamFixingDateBusinessCenters</a>	[1..1]	NumInGroup	
<a href="#">PaymentStreamFixingDateBusinessCenter</a>	[0..1]	String	Required if <a href="#">NoPaymentStreamFixingDateBusinessCenters(40950)</a> > 0.

Used in components: [PaymentStreamResetDates](#)

### 171.2.3913 **PaymentStreamFixingDateBusinessDayConvention**

The business day convention used to adjust the payment stream's fixing date. Used only to override the business day convention specified in the [DateAdjustment](#) component within the [Instrument](#) component.

Type: [int](#)

Allowed values in [BusinessDayConventionCodeSet](#):

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.

Code	Name	Description
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [PaymentStreamResetDates](#)

### 171.2.3914 PaymentStreamFixingDateGrp

PaymentStreamFixingDateGrp is a subcomponent of the PaymentStreamResetDates component used to specify predetermined fixing dates.

Name	Mult.	Type	Description
<a href="#">NoPaymentStreamFixingDates</a>	[1..1]	NumInGroup	
<a href="#">PaymentStreamFixingDate</a>	[0..1]	LocalMktDate	Required if NoPaymentStreamFixingDates(42660) > 0.
<a href="#">PaymentStreamFixingDateType</a>	[0..1]	CodeSet	When specified it applies not only to the current date instance but to all subsequent date instances in the group until overridden when a new type is specified.

Used in components: [PaymentStreamResetDates](#)

### 171.2.3915 PaymentStreamFixingDateOffsetDayType

Specifies the day type of the relative fixing date offset.

Type: [int](#)

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

---

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in components: [PaymentStreamResetDates](#)

### **171.2.3916 PaymentStreamFixingDateOffsetPeriod**

Time unit multiplier for the relative fixing date offset.

Type: [int](#)

Used in components: [PaymentStreamResetDates](#)

### **171.2.3917 PaymentStreamFixingDateOffsetUnit**

Time unit associated with the relative fixing date offset.

Type: [String](#)

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: [PaymentStreamResetDates](#)

### **171.2.3918 PaymentStreamFixingDateRelativeTo**

Specifies the anchor date when the fixing date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: **int**

Used in components: **PaymentStreamResetDates**

### **171.2.3919 PaymentStreamFixingDateType**

Specifies the type of fixing date (e.g. adjusted for holidays).

Type: **int**

Allowed values in NonDeliverableFixingDateTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Unadjusted	Unadjusted
1	Adjusted	Adjusted

---

Used in groups: **PaymentStreamFixingDateGrp**

### **171.2.3920 PaymentStreamFlatRateAmount**

Specifies the actual monetary value of the flat rate when PaymentStreamFlatRateIndicator(41180) = 'Y'.

Type: **Amt**

Used in components: **PaymentStream**

### **171.2.3921 PaymentStreamFlatRateCurrency**

Specifies the currency of the actual flat rate. Uses ISO 4217 currency codes.

Type: **Currency**

Used in components: **PaymentStream**

### **171.2.3922 PaymentStreamFlatRateIndicator**

When this element is specified and set to 'Y', the Flat Rate is the New Worldwide Tanker Nominal Freight Scale for the Freight Index Route taken at the Trade Date of the transaction "Fixed". If 'N' it is taken on each Pricing Date "Floating".

Type: **Boolean**

Used in components: **PaymentStream**

### 171.2.3923 **PaymentStreamFloatingRate**

PaymentStreamFloatingRate is a subcomponent of the PaymentStream component used to report the floating rate attributes of the stream.

Name	Mult.	Type	Description
PaymentStreamRateIndex	[0..1]	String	
PaymentStreamRateIndexSource	[0..1]	CodeSet	
PaymentStreamRateIndexID	[0..1]	String	Conditionally required when PaymentStreamRateIndexIDSource(43091) is specified.
PaymentStreamRateIndexIDSource	[0..1]	CodeSet	Conditionally required when PaymentStreamRateIndexID(43090) is specified.
PaymentStreamRateIndexCurveUnit	[0..1]	CodeSet	Conditionally required when PaymentStreamRateIndexCurvePeriod(40792) is specified.
PaymentStreamRateIndexCurvePeriod	[0..1]	int	Conditionally required when PaymentStreamRateIndexCurveUnit(40791) is specified.
PaymentStreamRateIndex2	[0..1]	String	
PaymentStreamRateIndex2Source	[0..1]	CodeSet	
PaymentStreamRateIndex2ID	[0..1]	String	Conditionally required when PaymentStreamRateIndex2IDSource(43115) is specified.
PaymentStreamRateIndex2IDSource	[0..1]	CodeSet	Conditionally required when PaymentStreamRateIndex2ID(43114) is specified.
PaymentStreamRateIndex2CurvePeriod	[0..1]	int	Conditionally required when PaymentStreamRateIndex2CurveUnit(41195) is specified.
PaymentStreamRateIndex2CurveUnit	[0..1]	CodeSet	Conditionally required when PaymentStreamRateIndex2CurvePeriod(41194) is specified.
PaymentStreamRateIndexLocation	[0..1]	String	
PaymentStreamRateIndexLevel	[0..1]	Qty	
PaymentStreamRateIndexUnitOfMeasure	[0..1]	CodeSet	

Name	Mult.	Type	Description
PaymentStreamSettlLevel	[0..1]	CodeSet	
PaymentStreamReferenceLevel	[0..1]	Qty	
PaymentStreamReferenceLevelUnitOfMeasure	[0..1]	CodeSet	
PaymentStreamReferenceLevelEqualsZeroIndicator	[0..1]	Boolean	
PaymentStreamRateMultiplier	[0..1]	float	
PaymentStreamRateSpread	[0..1]	PriceOffset	
PaymentStreamRateSpreadCurrency	[0..1]	Currency	
PaymentStreamRateSpreadUnitOfMeasure	[0..1]	CodeSet	
PaymentStreamRateConversionFactor	[0..1]	float	
PaymentStreamRateSpreadType	[0..1]	CodeSet	
PaymentStreamRateSpreadPositionType	[0..1]	CodeSet	
PaymentStreamRateTreatment	[0..1]	CodeSet	
PaymentStreamCapRate	[0..1]	Percentage	
PaymentStreamCapRateBuySide	[0..1]	CodeSet	
PaymentStreamCapRateSellSide	[0..1]	CodeSet	
PaymentStreamFloorRate	[0..1]	Percentage	
PaymentStreamFloorRateBuySide	[0..1]	CodeSet	
PaymentStreamFloorRateSellSide	[0..1]	CodeSet	
PaymentStreamInitialRate	[0..1]	Percentage	
PaymentStreamLastResetRate	[0..1]	Percentage	
PaymentStreamFinalRate	[0..1]	Percentage	
PaymentStreamFinalRateRoundingDirection	[0..1]	CodeSet	
PaymentStreamFinalRatePrecision	[0..1]	int	
PaymentStreamAveragingMethod	[0..1]	CodeSet	
PaymentStreamNegativeRateTreatment	[0..1]	CodeSet	
PaymentStreamCalculationLagPeriod	[0..1]	int	Conditionally required when PaymentStreamCalculationLagUnit(41210) is specified.
PaymentStreamCalculationLagUnit	[0..1]	CodeSet	Conditionally required when PaymentStreamCalculationLagPeriod(41209) is specified.

Name	Mult.	Type	Description
PaymentStreamFirstObservationDate-Unadjusted	[0..1]	LocalMktDate	
PaymentStreamFirstObservationDateRelativeTo	[0..1]	int	
PaymentStreamFirstObservationDateOffsetDayType	[0..1]	CodeSet	
PaymentStreamFirstObservationDateOffsetPeriod	[0..1]	int	Conditionally required when PaymentStreamFirstObservationOffsetUnit(41212) is specified.
PaymentStreamFirstObservationDateOffsetUnit	[0..1]	CodeSet	Conditionally required when PaymentStreamFirstObservationOffsetPeriod(41211) is specified.
PaymentStreamFirstObservationDateAdjusted	[0..1]	LocalMktDate	
PaymentStreamPricingDayType	[0..1]	CodeSet	
PaymentStreamPricingDayDistribution	[0..1]	CodeSet	
PaymentStreamPricingDayCount	[0..1]	int	
PaymentStreamPricingBusinessCalendar	[0..1]	String	
PaymentStreamPricingBusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the DateAdjustment component in Instrument. The specified value would be specific to this instance of pricing dates.
PaymentStreamPricingBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the DateAdjustment component in Instrument. The specified values would be specific to this instance of pricing dates.
PaymentStreamPricingDayGrp	[0..*]	Group	
PaymentStreamPricingDateGrp	[0..*]	Group	
PaymentStreamInflationLagPeriod	[0..1]	int	Conditionally required when PaymentStreamInflationLagUnit(40809) is specified.
PaymentStreamInflationLagUnit	[0..1]	CodeSet	Conditionally required when PaymentStreamInflationLagPeriod(40808) is specified.
PaymentStreamInflationLagDayType	[0..1]	CodeSet	
PaymentStreamInflationInterpolationMethod	[0..1]	CodeSet	
PaymentStreamInflationIndexSource	[0..1]	CodeSet	
PaymentStreamInflationPublicationSource	[0..1]	String	

Name	Mult.	Type	Description
PaymentStreamInflationInitialIndexLevel	[0..1]	float	
PaymentStreamInflationFallbackBondApplicable	[0..1]	Boolean	
PaymentStreamFRADiscounting	[0..1]	CodeSet	
PaymentStreamUnderlierRefID	[0..1]	String	
PaymentStreamFormula	[0..1]	Component	
DividendConditions	[0..1]	Component	
ReturnRateNotionalReset	[0..1]	Boolean	
ReturnRateGrp	[0..*]	Group	
PaymentStreamLinkInitialLevel	[0..1]	Price	
PaymentStreamLinkClosingLevelIndicator	[0..1]	Boolean	
PaymentStreamLinkExpiringLevelIndicator	[0..1]	Boolean	
PaymentStreamLinkEstimatedTradingDays	[0..1]	int	
PaymentStreamLinkStrikePrice	[0..1]	Price	
PaymentStreamLinkStrikePriceType	[0..1]	CodeSet	
PaymentStreamLinkMaximumBoundary	[0..1]	float	
PaymentStreamLinkMinimumBoundary	[0..1]	float	
PaymentStreamLinkNumberOfDataSeries	[0..1]	int	
PaymentStreamVarianceUnadjustedCap	[0..1]	float	
PaymentStreamRealizedVarianceMethod	[0..1]	CodeSet	
PaymentStreamDaysAdjustmentIndicator	[0..1]	Boolean	
PaymentStreamNearestExchangeContractRefID	[0..1]	String	
PaymentStreamVegaNotionalAmount	[0..1]	float	

Used in components: [PaymentStream](#)

**171.2.3924 PaymentStreamFloorRate**

The floor rate, if any, which applies to the floating rate. The floor rate (strike) is only required where the floating rate on a swap stream is floored at a certain strike level. The floor rate is assumed to be exclusive of any spread and is a per annum rate, expressed as a decimal. A floor rate of 5% would be represented as 0.05.

Type: **Percentage**

Used in components: **PaymentStreamFloatingRate**

**171.2.3925 PaymentStreamFloorRateBuySide**

Reference to the buyer of the floor rate option through its trade side.

Type: **int**

Allowed values in PaymentStreamFloorRateBuySideCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

---

Used in components: **PaymentStreamFloatingRate**

**171.2.3926 PaymentStreamFloorRateSellSide**

Reference to the seller of the floor rate option through its trade side.

Type: **int**

Allowed values in PaymentStreamFloorRateBuySideCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

---

Used in components: **PaymentStreamFloatingRate**

**171.2.3927 PaymentStreamFormula**

Contains an XML representation of the formula. Defined for flexibility in choice of language (MathML, OpenMath or text).

Type: [XMLData](#)

Used in groups: [PaymentStreamFormulaMathGrp](#)

**171.2.3928 PaymentStreamFormula**

PaymentStreamFormula is a subcomponent of the PaymentStreamFloatingRate component used to report the parameters for determining the floating rate of the stream e.g. for equity swaps.

---

Name	Mult.	Type	Description
<a href="#">PaymentStreamFormulaCurrency</a>	[0..1]	Currency	
<a href="#">PaymentStreamFormulaCurrencyDe-terminationMethod</a>	[0..1]	String	
<a href="#">PaymentStreamFormulaRefer-enceAmount</a>	[0..1]	int	
<a href="#">PaymentStreamFormulaMathGrp</a>	[0..*]	Group	
<a href="#">PaymentStreamFormulaImage</a>	[0..1]	Component	

---

Used in components: [PaymentStreamFloatingRate](#)

**171.2.3929 PaymentStreamFormulaCurrency**

The currency in which the formula amount is denominated. Uses ISO 4217 currency codes.

Type: [Currency](#)

Used in components: [PaymentStreamFormula](#)

**171.2.3930 PaymentStreamFormulaCurrencyDeterminationMethod**

Specifies the method according to which the formula amount currency is determined.

See <http://www.fpml.org/coding-scheme/determination-method> for values.

Type: [String](#)

Used in components: [PaymentStreamFormula](#)

**171.2.3931 PaymentStreamFormulaDesc**

A description of the math formula in PaymentStreamFormula(42684).

Type: **String**

Used in groups: **PaymentStreamFormulaMathGrp**

**171.2.3932 PaymentStreamFormulImage**

Image of the formula image when represented through an encoded clip in base64Binary.

Type: **data**

Used in components: **PaymentStreamFormulImage**

**171.2.3933 PaymentStreamFormulImage**

PaymentStreamFormulImage is a subcomponent of the PaymentStreamFormula component used to include a base64Binary-encoded image clip of the formula.

---

<b>Name</b>	<b>Mult.</b>	<b>Type</b>	<b>Description</b>
<b>PaymentStreamFormulImageLength</b>	[0..1]	Length	Conditionally required when PaymentStreamFormulImage(42653) is specified.
<b>PaymentStreamFormulImage</b>	[0..1]	data	Conditionally required when PaymentStreamFormulImageLength(42652) is specified.

---

Used in components: **PaymentStreamFormula**

**171.2.3934 PaymentStreamFormulImageLength**

Length in bytes of the PaymentStreamFormulImage(42563) field.

Type: **Length**

Used in components: **PaymentStreamFormulImage**

**171.2.3935 PaymentStreamFormulaLength**

Byte length of encoded (non-ASCII characters) PaymentStreamFormula(42648) field.

Type: **Length**

Used in groups: **PaymentStreamFormulaMathGrp**

**171.2.3936 PaymentStreamFormulaMathGrp**

PaymentStreamFormulaMathGrp is a repeating subcomponent within the PaymentStreamFormula component. It is used to specify the set of formulas, sub-formulas and descriptions from which the rate is derived.

Name	Mult.	Type	Description
NoPaymentStreamFormulas	[1..1]	NumInGroup	
PaymentStreamFormulaLength	[0..1]	Length	Required if NoPaymentStreamFormulas(42683) > 0.
PaymentStreamFormula	[0..1]	XMLData	Required if NoPaymentStreamFormulas(42683) > 0.
PaymentStreamFormulaDesc	[0..1]	String	

Used in components: **PaymentStreamFormula**

**171.2.3937 PaymentStreamFormulaReferenceAmount**

Specifies the reference amount when this term either corresponds to the standard ISDA Definition (either the 2002 Equity Definition for the Equity Amount, or the 2000 Definition for the Interest Amount), or refers to a term defined elsewhere in the swap document.

See [http://www.fixtradingcommunity.org/codelists#Payment\\_Amount\\_Relative\\_To](http://www.fixtradingcommunity.org/codelists#Payment_Amount_Relative_To) for code list of reference amounts.

Type: **int**

Used in components: **PaymentStreamFormula**

**171.2.3938 PaymentStreamFRADiscounting**

The method of Forward Rate Agreement (FRA) discounting, if any, that will apply.

Type: **int**

Allowed values in PaymentStreamFRADiscountingCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	None	None
1	ISDA	International Swaps and Derivatives Association (ISDA)
2	AFMA	Australian Financial Markets Association (AFMA)

---

Used in components: **PaymentStreamFloatingRate**

### **171.2.3939 PaymentStreamFutureValueDateAdjusted**

The adjusted value date of the future value amount.

Type: **LocalMktDate**

Used in components: **PaymentStreamFixedRate**

### **171.2.3940 PaymentStreamFutureValueNotional**

The future value notional is normally only required for certain non-deliverable interest rate swaps (e.g. Brazillian Real (BRL) vs. CETIP Interbank Deposit Rate (CDI)). The value is calculated as follows: Future Value Notional = Notional Amount \* (1 + Fixed Rate) ^ (Fixed Rate Day Count Fraction). The currency is the same as the stream notional.

Type: **Amt**

Used in components: **PaymentStreamFixedRate**

### **171.2.3941 PaymentStreamInflationFallbackBondApplicable**

Indicates whether a fallback bond as defined in the 2006 ISDA Inflation Derivatives Definitions, sections 1.3 and 1.8, is applicable or not. If not specified, the default value is "Y" (True/Yes).

Type: **Boolean**

Used in components: **PaymentStreamFloatingRate**

**171.2.3942 PaymentStreamInflationIndexSource**

The inflation index reference source.

Type: **int**

Allowed values in PaymentStreamRateIndexSourceCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Bloomberg	Bloomberg
1	Reuters	Reuters
2	Telerate	Telerate
99	Other	Other

---

Used in components: **PaymentStreamFloatingRate**

**171.2.3943 PaymentStreamInflationInitialIndexLevel**

Initial known index level for the first calculation period.

Type: **float**

Used in components: **PaymentStreamFloatingRate**

**171.2.3944 PaymentStreamInflationInterpolationMethod**

The method used when calculating the Inflation Index Level from multiple points - the most common is Linear.

Type: **int**

Allowed values in PaymentStreamInflationInterpolationMethodCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	None	None
1	LinearZeroYield	Linear zero yield

---

Used in components: **PaymentStreamFloatingRate**

**171.2.3945 PaymentStreamInflationLagDayType**

The inflation lag period day type.

Type: **int**

Allowed values in PaymentStreamInflationLagDayTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in components: **PaymentStreamFloatingRate**

**171.2.3946 PaymentStreamInflationLagPeriod**

Time unit multiplier for the inflation lag period. The lag period is the offsetting period from the payment date which determines the reference period for which the inflation index is observed.

Type: **int**

Used in components: **PaymentStreamFloatingRate**

**171.2.3947 PaymentStreamInflationLagUnit**

Time unit associated with the inflation lag period.

Type: **String**

Allowed values in PaymentStreamInflationLagUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month

---

Code	Name	Description
Yr	Year	Year

Used in components: [PaymentStreamFloatingRate](#)

#### **171.2.3948 PaymentStreamInflationPublicationSource**

The current main publication source such as relevant web site or a government body.

Type: [String](#)

Used in components: [PaymentStreamFloatingRate](#)

#### **171.2.3949 PaymentStreamInitialFixingDateAdjusted**

The adjusted initial fixing date.

Type: [LocalMktDate](#)

Used in components: [PaymentStreamResetDates](#)

#### **171.2.3950 PaymentStreamInitialFixingDateBusinessCenter**

The business center calendar used to adjust the payment stream's initial fixing date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in groups: [PaymentStreamInitialFixingDateBusinessCenterGrp](#)

#### **171.2.3951 PaymentStreamInitialFixingDateBusinessCenterGrp**

[PaymentStreamInitialFixingDateBusinessCenterGrp](#) is a repeating subcomponent within the [PaymentStreamResetDates](#) component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the [DateAdjustment](#) component in [Instrument](#).

Name	Mult.	Type	Description
NoPaymentStreamInitialFixingDate-BusinessCenters	[1..1]	NumInGroup	
PaymentStreamInitialFixingDateBusinessCenter	[0..1]	String	Required if NoPaymentStreamInitialFixingDate-BusinessCenters(40949) > 0.

Used in components: [PaymentStreamResetDates](#)

### 171.2.3952 PaymentStreamInitialFixingDateBusinessDayConvention

The business day convention used to adjust the payment stream's initial fixing date. Used only to override the business day convention specified in the DateAdjustment component within the Instrument component.

Type: [int](#)

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [PaymentStreamResetDates](#)

### 171.2.3953 PaymentStreamInitialFixingDateOffsetDayType

Specifies the day type of the relative initial fixing date offset.

Type: [int](#)

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

---

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in components: [PaymentStreamResetDates](#)

#### **171.2.3954 PaymentStreamInitialFixingDateOffsetPeriod**

Time unit multiplier for the relative initial fixing date offset.

Type: [int](#)

Used in components: [PaymentStreamResetDates](#)

#### **171.2.3955 PaymentStreamInitialFixingDateOffsetUnit**

Time unit associated with the relative initial fixing date offset.

Type: [String](#)

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: [PaymentStreamResetDates](#)

#### **171.2.3956 PaymentStreamInitialFixingDateRelativeTo**

Specifies the anchor date when the initial fixing date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: **int**

Used in components: **PaymentStreamResetDates**

#### **171.2.3957 PaymentStreamInitialPrincipalExchangeIndicator**

Indicates whether there is an initial exchange of principal on the effective date.

Type: **Boolean**

Used in components: **PaymentStream**

#### **171.2.3958 PaymentStreamInitialRate**

The initial floating rate reset agreed between the principal parties involved in the trade. This is assumed to be the first required reset rate for the first regular calculation period. It should only be included when the rate is not equal to the rate published on the source implied by the floating rate index. An initial rate of 5% would be represented as 0.05.

Type: **Percentage**

Used in components: **PaymentStreamFloatingRate**

#### **171.2.3959 PaymentStreamInterimPrincipalExchangeIndicator**

Indicates whether there are intermediate or interim exchanges of principal during the term of the swap.

Type: **Boolean**

Used in components: **PaymentStream**

#### **171.2.3960 PaymentStreamInterpolationMethod**

The method used when calculating the index rate from multiple points on the curve. The most common is linear method.

Type: **int**

Allowed values in **PaymentStreamInflationInterpolationMethodCodeSet**:

---

Code	Name	Description
0	None	None
1	LinearZeroYield	Linear zero yield

---

Used in components: [PaymentStream](#)

### 171.2.3961 [PaymentStreamInterpolationPeriod](#)

Defines applicable periods for interpolation.

Type: [int](#)

Allowed values in [PaymentStreamInterpolationPeriodCodeSet](#):

---

Code	Name	Description
0	Initial	Initial. Interpolation is applicable to the initial period only.
1	InitialAndFinal	Initial and final. Interpolation is applicable to the initial and final periods only.
2	Final	Final. Interpolation is applicable to the final period only.
3	AnyPeriod	Any period. Interpolation is applicable to any non-standard period.

---

Used in components: [PaymentStream](#)

### 171.2.3962 [PaymentStreamLastRegularPaymentDateUnadjusted](#)

The unadjusted last regular payment date.

Type: [LocalMktDate](#)

Used in components: [PaymentStreamPaymentDates](#)

### 171.2.3963 [PaymentStreamLastResetRate](#)

The floating rate determined at the most recent reset. The rate is expressed in decimal form, e.g. 5% is represented as 0.05.

Type: [Percentage](#)

Used in components: [PaymentStreamFloatingRate](#)

### **171.2.3964 PaymentStreamLinkClosingLevelIndicator**

Indicates whether the correlation or variance swap contract will ("Y") strike off the closing level of the default exchange traded contract or not.

Type: **Boolean**

Used in components: **PaymentStreamFloatingRate**

### **171.2.3965 PaymentStreamLinkEstimatedTradingDays**

The expected number of trading days in the variance or correlation swap stream.

Type: **int**

Used in components: **PaymentStreamFloatingRate**

### **171.2.3966 PaymentStreamLinkExpiringLevelIndicator**

Indicates whether the correlation or variance swap contract will ("Y") strike off the expiring level of the default exchange traded contract or not.

Type: **Boolean**

Used in components: **PaymentStreamFloatingRate**

### **171.2.3967 PaymentStreamLinkInitialLevel**

Price level at which the correlation or variance swap contract will strike.

Type: **Price**

Used in components: **PaymentStreamFloatingRate**

### **171.2.3968 PaymentStreamLinkMaximumBoundary**

Specifies the maximum or upper boundary for variance or strike determination.

For a variation swap stream all observations above this price level will be excluded from the variance calculation.

For a correlation swap stream the maximum boundary is a percentage of the strike price.

Type: **float**

Used in components: **PaymentStreamFloatingRate**

**171.2.3969 PaymentStreamLinkMinimumBoundary**

Specifies the minimum or lower boundary for variance or strike determination.

For a variation swap stream all observations below this price level will be excluded from the variance calculation.

For a correlation swap stream the minimum boundary is a percentage of the strike price.

Type: **float**

Used in components: **PaymentStreamFloatingRate**

**171.2.3970 PaymentStreamLinkNumberOfDataSeries**

Number of data series for a correlation swap. Normal market practice is that correlation data sets are drawn from geographic market areas, such as America, Europe and Asia Pacific. Each of these geographic areas will have its own data series to avoid contagion.

Type: **int**

Used in components: **PaymentStreamFloatingRate**

**171.2.3971 PaymentStreamLinkStrikePrice**

The strike price of a correlation or variance swap stream.

Type: **Price**

Used in components: **PaymentStreamFloatingRate**

**171.2.3972 PaymentStreamLinkStrikePriceType**

For a variance swap specifies how **PaymentStreamLinkStrikePrice(42673)** is expressed.

Type: **int**

Allowed values in **PaymentStreamLinkStrikePriceTypeCodeSet**:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Volatility	Volatility
1	Variance	Variance

---

Used in components: **PaymentStreamFloatingRate**

**171.2.3973 PaymentStreamMarketRate**

Used only for credit index trade. This contains the credit spread ("fair value") at which the trade was executed. The market rate varies over the life of the index depending on market conditions. This is the price of the index as quoted by trading desks.

Type: **int**

Used in components: **PaymentStream**

**171.2.3974 PaymentStreamMasterAgreementPaymentDatesIndicator**

When set to 'Y', it indicates that payment dates are specified in the relevant master agreement.

Type: **Boolean**

Used in components: **PaymentStreamPaymentDates**

**171.2.3975 PaymentStreamMaximumPaymentAmount**

Specifies the limit on the total payment amount.

Type: **Amt**

Used in components: **PaymentStream**

**171.2.3976 PaymentStreamMaximumPaymentCurrency**

Specifies the currency of total payment amount limit. Uses ISO 4217 currency codes.

Type: **Currency**

Used in components: **PaymentStream**

**171.2.3977 PaymentStreamMaximumTransactionAmount**

Specifies the limit on the payment amount that goes out in any particular calculation period.

Type: **Amt**

Used in components: **PaymentStream**

**171.2.3978 PaymentStreamMaximumTransactionCurrency**

Specifies the currency of the period payment amount limit. Uses ISO 4217 currency codes.

Type: **Currency**

Used in components: **PaymentStream**

**171.2.3979 PaymentStreamNearestExchangeContractRefID**

References a contract listed on an exchange through the instrument's UnderlyingSecurityID(309) which must be fully specified in an instance of the UnderlyingInstrument component.

Type: **String**

Used in components: **PaymentStreamFloatingRate**

**171.2.3980 PaymentStreamNegativeRateTreatment**

The specification of any provisions for calculating payment obligations when a floating rate is negative (either due to a quoted negative floating rate or by operation of a spread that is subtracted from the floating rate).

Type: **int**

Allowed values in PaymentStreamNegativeRateTreatmentCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	ZeroInterestRateMethod	Zero interest rate method
1	NegativeInterestRateMethod	Negative interest rate method

---

Used in components: **PaymentStreamFloatingRate**

**171.2.3981 PaymentStreamNonDeliverableFixingDateGrp**

PaymentStreamNonDeliverableFixingDate is a subcomponent of the PaymentStreamNonDeliverable-SettlTerms component used to specify predetermined fixing dates.

Name	Mult.	Type	Description
NoNonDeliverableFixingDates	[1..1]	NumInGroup	
NonDeliverableFixingDate	[0..1]	LocalMktDate	Required if NoNonDeliverableFixingDates(40825) > 0.
NonDeliverableFixingDateType	[0..1]	CodeSet	When specified it applies not only to the current date but to all subsequent dates in the group until overridden with a new type.

Used in components: [PaymentStreamNonDeliverableSettlTerms](#)

### 171.2.3982 PaymentStreamNonDeliverableFixingDatesBusinessCenter

The business center calendar used to adjust the payment stream's fixing date for the non-deliverable terms, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in groups: [PaymentStreamNonDeliverableFixingDatesBusinessCenterGrp](#)

### 171.2.3983 PaymentStreamNonDeliverableFixingDatesBusinessCenterGrp

PaymentStreamNonDeliverableFixingDatesBusinessCenterGrp is a repeating subcomponent within the PaymentStreamNonDeliverableSettlTerms component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the DateAdjustment component in Instrument.

Name	Mult.	Type	Description
NoPaymentStreamNonDeliverableFixingDatesBusinessCenters	[1..1]	NumInGroup	
PaymentStreamNonDeliverableFixingDatesBusinessCenter	[0..1]	String	Required if NoPaymentStreamNonDeliverableFixingDatesBusinessCenters(40946) > 0.

Used in components: [PaymentStreamNonDeliverableSettlTerms](#)

**171.2.3984 PaymentStreamNonDeliverableFixingDatesBusinessDayConvention**

The business day convention used to adjust the payment stream's fixing date for the non-deliverable settlement terms. Used only to override the business day convention specified in the DateAdjustment component within the Instrument component

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [PaymentStreamNonDeliverableSettlTerms](#)

**171.2.3985 PaymentStreamNonDeliverableFixingDatesOffsetDayType**

Specifies the day type of the relative non-deliverable fixing date offset.

Type: **int**

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: [PaymentStreamNonDeliverableSettlTerms](#)

**171.2.3986 PaymentStreamNonDeliverableFixingDatesOffsetPeriod**

Time unit multiplier for the relative non-deliverable fixing date offset.

Type: **int**

Used in components: **PaymentStreamNonDeliverableSettlTerms**

**171.2.3987 PaymentStreamNonDeliverableFixingDatesOffsetUnit**

Time unit associated with the relative non-deliverable fixing date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: **PaymentStreamNonDeliverableSettlTerms**

**171.2.3988 PaymentStreamNonDeliverableFixingDatesRelativeTo**

Specifies the anchor date when the non-deliverable fixing dates are relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: **int**

Used in components: **PaymentStreamNonDeliverableSettlTerms**

**171.2.3989 PaymentStreamNonDeliverableRefCurrency**

The non-deliverable settlement reference currency. Uses ISO 4217 currency codes.

Type: **Currency**

Used in components: **PaymentStreamNonDeliverableSettlTerms**

**171.2.3990 PaymentStreamNonDeliverableSettlRateSource**

Identifies the source of rate information.

Type: **int**

Allowed values in RateSourceCodeSet:

Code	Name	Description
0	Bloomberg	Bloomberg
1	Reuters	Reuters
2	Telerate	Telerate
3	ISDARateOption	ISDA Settlement Rate Option. The source of the currency conversion as specified by the ISDA terms in Annex A to the 1998 FX and Currency Option Definitions. See <a href="http://www.fpml.org/coding-scheme/settlement-rate-option">http://www.fpml.org/coding-scheme/settlement-rate-option</a>
99	Other	Other

Used in components: **PaymentStreamNonDeliverableSettlRateSource**

**171.2.3991 PaymentStreamNonDeliverableSettlRateSource**

PaymentStreamNonDeliverableSettlRateSource is a subcomponent of the PaymentStreamNonDeliverableSettlTerms component used to specify the rate source in the event of payment non-delivery.

Name	Mult.	Type	Description
<b>PaymentStreamNonDeliverableSettlRateSource</b>	[0..1]	CodeSet	
<b>PaymentStreamNonDeliverableSettlReferencePage</b>	[0..1]	String	Conditionally required when PaymentStreamNonDeliverableSettlRateSource(40371) = 3 (ISDA Settlement Rate Option) or 99 (Other).

Used in components: **PaymentStreamNonDeliverableSettlTerms**

**171.2.3992 PaymentStreamNonDeliverableSettlReferencePage**

Identifies the reference "page" from the rate source.

When `PaymentStreamNonDeliverableSettlRateSource(40371) = 3` (ISDA Settlement Rate Option) this contains the value from the scheme that reflects the terms of the Annex A to the ISDA 1998 FX and Currency Option Definitions. See: <http://www.fpml.org/coding-scheme/settlement-rate-option>

Type: **String**

Used in components: **PaymentStreamNonDeliverableSettlRateSource**

### 171.2.3993 **PaymentStreamNonDeliverableSettlTerms**

`PaymentStreamNonDeliverableSettlTerms` is a subcomponent of the `PaymentStream` component used to specify the non-deliverable settlement terms of the payment stream.

Name	Mult.	Type	Description
<code>PaymentStreamNonDeliverableRefCurrency</code>	[0..1]	Currency	
<code>PaymentStreamNonDeliverableFixing-DatesBusinessDayConvention</code>	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the <code>DateAdjustment</code> component in <code>Instrument</code> . The specified value would be specific to this instance of the payment stream's non-deliverable fixing dates.
<code>PaymentStreamNonDeliverableFixing-DatesBusinessCenterGrp</code>	[0..*]	Group	When specified, this overrides the business centers defined in the <code>DateAdjustment</code> component in <code>Instrument</code> . The specified values would be specific to this instance of the payment stream's non-deliverable fixing dates.
<code>PaymentStreamNonDeliverableFixing-DatesRelativeTo</code>	[0..1]	int	
<code>PaymentStreamNonDeliverableFixing-DatesOffsetPeriod</code>	[0..1]	int	Conditionally required when <code>PaymentStreamNonDeliverableFixingDatesOffsetUnit(40822)</code> is specified.
<code>PaymentStreamNonDeliverableFixing-DatesOffsetUnit</code>	[0..1]	CodeSet	Conditionally required when <code>PaymentStreamNonDeliverableFixingDatesOffsetPeriod(40821)</code> is specified.
<code>PaymentStreamNonDeliverableFixing-DatesOffsetDayType</code>	[0..1]	CodeSet	
<code>PaymentStreamNonDeliverableSettlRateSource</code>	[0..1]	Component	
<code>PaymentStreamNonDeliverableFixing-DateGrp</code>	[0..*]	Group	
<code>SettlRateDisruptionFallbackGrp</code>	[0..*]	Group	

Used in components: [PaymentStream](#)

#### **171.2.3994 PaymentStreamOtherDayCount**

The industry name of the day count convention not listed in [PaymentStreamDayCount\(40742\)](#).

Type: [String](#)

Used in components: [PaymentStream](#)

#### **171.2.3995 PaymentStreamPaymentDate**

The adjusted or unadjusted fixed stream payment date.

Type: [LocalMktDate](#)

Used in groups: [PaymentStreamPaymentDateGrp](#)

#### **171.2.3996 PaymentStreamPaymentDateBusinessCenter**

The business center calendar used to adjust the payment stream's payment date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in groups: [PaymentStreamPaymentDateBusinessCenterGrp](#)

#### **171.2.3997 PaymentStreamPaymentDateBusinessCenterGrp**

[PaymentStreamPaymentDateBusinessCenterGrp](#) is a repeating subcomponent within the [PaymentStreamPaymentDates](#) component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the [DateAdjustment](#) component in [Instrument](#).

---

Name	Mult.	Type	Description
<a href="#">NoPaymentStreamPaymentDateBusinessCenters</a>	[1..1]	NumInGroup	
<a href="#">PaymentStreamPaymentDateBusinessCenter</a>	[0..1]	String	Required if <a href="#">NoPaymentStreamPaymentDateBusinessCenters(40947)</a> > 0.

---

Used in components: [PaymentStreamPaymentDates](#)

**171.2.3998 PaymentStreamPaymentDateBusinessDayConvention**

The business day convention used to adjust the payment stream's payment date. Used only to override the business day convention specified in the DateAdjustment component within the Instrument component.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [PaymentStreamPaymentDates](#)

**171.2.3999 PaymentStreamPaymentDateGrp**

The PaymentStreamPaymentDateGrp is a repeating subcomponent of the PaymentStreamPaymentDates component used to detail fixed dates for swap stream payments.

Name	Mult.	Type	Description
<a href="#">NoPaymentStreamPaymentDates</a>	[1..1]	NumInGroup	
<a href="#">PaymentStreamPaymentDate</a>	[0..1]	LocalMktDate	Required if <a href="#">NoPaymentStreamPaymentDates(41220)</a> > 0.
<a href="#">PaymentStreamPaymentDateType</a>	[0..1]	CodeSet	When specified it applies not only to the current date but to all subsequent dates in the group until overridden with a new type.

Used in components: [PaymentStreamPaymentDates](#)

**171.2.4000 PaymentStreamPaymentDateOffsetDayType**

Specifies the day type of the relative payment date offset.

Type: **int**

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in components: [PaymentStreamPaymentDates](#)

**171.2.4001 PaymentStreamPaymentDateOffsetPeriod**

Time unit multiplier for the relative payment date offset.

Type: **int**

Used in components: [PaymentStreamPaymentDates](#)

**171.2.4002 PaymentStreamPaymentDateOffsetUnit**

Time unit multiplier for the relative initial fixing date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: [PaymentStreamPaymentDates](#)

**171.2.4003 PaymentStreamPaymentDateRelativeTo**

Specifies the anchor date when payment dates are relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: **int**

Used in components: **PaymentStreamPaymentDates**

**171.2.4004 PaymentStreamPaymentDates**

PaymentStreamPaymentDates is a subcomponent of the PaymentStream component used to specify the payment dates of the stream.

Name	Mult.	Type	Description
PaymentStreamPaymentDateBusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the DateAdjustment component in Instrument. The specified value would be specific to this instance of the payment stream's payment dates.
PaymentStreamPaymentDateBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the DateAdjustment component in Instrument. The specified values would be specific to this instance of the payment stream's payment dates.
PaymentStreamPaymentDateGrp	[0..*]	Group	
PaymentStreamPaymentFrequencyPeriod	[0..1]	int	Conditionally required when PaymentStreamPaymentFrequencyUnit(40754) is specified.
PaymentStreamPaymentFrequencyUnit	[0..1]	CodeSet	Conditionally required when PaymentStreamPaymentFrequencyPeriod(40753) is specified.
PaymentStreamPaymentRollConvention	[0..1]	CodeSet	When specified, this overrides the date roll convention defined in the DateAdjustment component in Instrument. The specified values would be specific to this instance of the stream payment dates
PaymentStreamFirstPaymentDateUnadjusted	[0..1]	LocalMktDate	
PaymentStreamLastRegularPaymentDateUnadjusted	[0..1]	LocalMktDate	

Name	Mult.	Type	Description
PaymentStreamPaymentDateRelativeTo	[0..1]	int	
PaymentStreamPaymentDateOffsetPeriod	[0..1]	int	Conditionally required when PaymentStreamPaymentDateOffsetUnit(40760) is specified.
PaymentStreamPaymentDateOffsetUnit	[0..1]	CodeSet	Conditionally required when PaymentStreamPaymentDateOffsetPeriod(40759) is specified.
PaymentStreamPaymentDateOffsetDayType	[0..1]	CodeSet	
PaymentStreamMasterAgreementPaymentDatesIndicator	[0..1]	Boolean	
PaymentStreamFinalPricePaymentDate	[0..1]	Component	

Used in components: [PaymentStream](#)

#### 171.2.4005 PaymentStreamPaymentDateType

Specifies the type of payment date. When specified it applies not only to the current date but to all subsequent dates in the group until overridden with a new type.

Type: [int](#)

Allowed values in OptionExerciseDateTypeCodeSet:

Code	Name	Description
0	Unadjusted	Unadjusted
1	Adjusted	Adjusted

Used in groups: [PaymentStreamPaymentDateGrp](#)

#### 171.2.4006 PaymentStreamPaymentFrequencyPeriod

Time unit multiplier for the frequency of payments.

Type: [int](#)

Used in components: [PaymentStreamPaymentDates](#)

**171.2.4007 PaymentStreamPaymentFrequencyUnit**

Time unit associated with the frequency of payments.

Type: **String**

Allowed values in PaymentStreamPaymentFrequencyUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year
T	Term	Term

---

Used in components: **PaymentStreamPaymentDates**

**171.2.4008 PaymentStreamPaymentRollConvention**

The convention for determining the sequence of end dates. It is used in conjunction with a specified frequency. Used only to override the roll convention specified in the DateAdjustment component within the Instrument component.

Type: **String**

Allowed values in DateRollConventionCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	FirstDay	1st day of the month
2	SecondDay	2nd day of the month
3	ThirdDay	3rd day of the month
4	FourthDay	4th day of the month
5	FifthDay	5th day of the month
6	SixthDay	6thd day of the month
7	SeventhDay	7th day of the month
8	EighthDay	8th day of the month
9	NinthDay	9th day of the month
10	TenthDay	10th day of the month

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
11	EleventhDay	11th day of the month
12	TwelvthDay	12th day of the month
13	ThirteenthDay	13th day of the month
14	ForteenthDay	14th day of the month
15	FifteenthDay	15th day of the month
16	SixteenthDay	16th day of the month
17	SeventeenthDay	17th day of the month
18	EighteenthDay	18th day of the month
19	NineteenthDay	19th day of the month
20	TwentiethDay	20th day of the month
21	TwentyFirstDay	21st day of the month
22	TwentySecondDay	22nd day of the month
23	TwentyThirdDay	23rd day of the month
24	TwentyFourthDay	24th day of the month
25	TwentyFifthDay	25th day of the month
26	TwentySixthDay	26th day of the month
27	TwentySeventhDay	27th day of the month
28	TwentyEighthDay	28th day of the month
29	TwentyNinthDay	29th day of the month
30	ThirtiethDay	30th day of the month
EOM	EOM	The end of the month. Use EOM for 31st day of the month.
FRN	FRN	The floating rate note convention or Eurodollar convention.
IMM	IMM	The International Money Market settlement date, i.e. the 3rd Wednesday of the month.
IMMCAD	IMMCAD	The last trading day/expiration day of the Canadian Derivatives Exchange.
IMMAUD	IMMAUD	The last trading day of the Sydney Futures Exchange Australian 90-day bank accepted bill futures contract.
IMMNZD	IMMNZD	The last trading day of the Sydney Futures Exchange New Zealand 90-day bank bill futures contract.
SFE	SFE	The Sydney Futures Exchange 90-day bank accepted bill futures settlement dates.
NONE	NONE	No adjustment
TBILL	TBILL	The 13-week and 26-week U.S. Treasury Bill auction dates.
MON	MON	Monday

---

Code	Name	Description
TUE	TUE	Tuesday
WED	WED	Wednesday
THU	THU	Thursday
FRI	FRI	Friday
SAT	SAT	Saturday
SUN	SUN	Sunday

---

Used in components: [PaymentStreamPaymentDates](#)

#### **171.2.4009 PaymentStreamPricingBusinessCalendar**

Specifies the business calendar to use for pricing.

See <http://www.fpml.org/coding-scheme/commodity-business-calendar> for values.

Type: [String](#)

Used in components: [PaymentStreamFloatingRate](#)

#### **171.2.4010 PaymentStreamPricingBusinessCenter**

The business center calendar used to adjust the payment stream's pricing dates, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in groups: [PaymentStreamPricingBusinessCenterGrp](#)

#### **171.2.4011 PaymentStreamPricingBusinessCenterGrp**

The `PaymentStreamPricingBusinessCenterGrp` is a repeating subcomponent of the `PaymentStreamFloatingRate` component used to specify the set of business centers whose calendars drive date adjustment. Used only to override the business centers defined in the `DateAdjustment` component in `Instrument`.

Name	Mult.	Type	Description
NoPaymentStreamPricingBusinessCenters	[1..1]	NumInGroup	
PaymentStreamPricingBusinessCenter	[0..1]	String	Required if NoPaymentStreamPricingBusinessCenters(41192) > 0.

Used in components: [PaymentStreamFloatingRate](#)

### 171.2.4012 PaymentStreamPricingBusinessDayConvention

The business day convention used to adjust the payment stream's pricing dates. Used only to override the business day convention specified in the DateAdjustment component within the Instrument component.

Type: [int](#)

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [PaymentStreamFloatingRate](#)

### 171.2.4013 PaymentStreamPricingDate

The adjusted or unadjusted fixed stream pricing date.

Type: [LocalMktDate](#)

Used in groups: [PaymentStreamPricingDateGrp](#)

**171.2.4014 PaymentStreamPricingDateGrp**

The PaymentStreamPricingDateGrp is a repeating subcomponent of the PaymentStreamFloatingRate component used to detail fixed pricing dates.

Name	Mult.	Type	Description
NoPaymentStreamPricingDates	[1..1]	NumInGroup	
PaymentStreamPricingDate	[0..1]	LocalMktDate	Required if NoPaymentStreamPricingDates(41224) > 0.
PaymentStreamPricingDateType	[0..1]	CodeSet	When specified it applies not only to the current date but to all subsequent dates in the group until overridden with a new type.

Used in components: [PaymentStreamFloatingRate](#)

**171.2.4015 PaymentStreamPricingDateType**

Specifies the type of pricing date. When specified it applies not only to the current date but to all subsequent dates in the group until overridden with a new type.

Type: [int](#)

Allowed values in OptionExerciseDateTypeCodeSet:

Code	Name	Description
0	Unadjusted	Unadjusted
1	Adjusted	Adjusted

Used in groups: [PaymentStreamPricingDateGrp](#)

**171.2.4016 PaymentStreamPricingDayCount**

The number of days over which pricing should take place.

Type: [int](#)

Used in components: [PaymentStreamFloatingRate](#)

**171.2.4017 PaymentStreamPricingDayDistribution**

The distribution of pricing days.

Type: **int**

Allowed values in PaymentStreamPricingDayDistributionCodeSet:

---

Code	Name	Description
0	All	All
1	First	First
2	Last	Last
3	Penultimate	Penultimate

---

Used in components: **PaymentStreamFloatingRate**

**171.2.4018 PaymentStreamPricingDayGrp**

The PaymentStreamPricingDayGrp is a repeating subcomponent of the PaymentStreamFloatingRate component used to detail periodic pricing days.

---

Name	Mult.	Type	Description
<b>NoPaymentStreamPricingDays</b>	[1..1]	NumInGroup	
<b>PaymentStreamPricingDayOfWeek</b>	[0..1]	CodeSet	Required if NoPaymentStreamPricingDays(41227) > 0.
<b>PaymentStreamPricingDayNumber</b>	[0..1]	int	

---

Used in components: **PaymentStreamFloatingRate**

**171.2.4019 PaymentStreamPricingDayNumber**

The occurrence of the day of week on which pricing takes place.

Type: **int**

Used in groups: **PaymentStreamPricingDayGrp**

**171.2.4020 PaymentStreamPricingDayOfWeek**

The day of the week on which pricing takes place.

Type: **int**

Allowed values in PaymentStreamPricingDayOfWeekCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	EveryDay	Every day (the default if not specified)
1	Monday	Monday
2	Tuesday	Tuesday
3	Wednesday	Wednesday
4	Thursday	Thursday
5	Friday	Friday
6	Saturday	Saturday
7	Sunday	Sunday

---

Used in groups: **PaymentStreamPricingDayGrp**

**171.2.4021 PaymentStreamPricingDayType**

Specifies the commodity pricing day type.

Type: **int**

Allowed values in ComplexEventDateOffsetDayTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in components: **PaymentStreamFloatingRate**

**171.2.4022 PaymentStreamRate**

The rate applicable to the fixed rate payment stream.

Type: **Percentage**

Used in components: **PaymentStreamFixedRate**

**171.2.4023 PaymentStreamRateConversionFactor**

The number to be multiplied by the derived floating rate of the payment stream in order to arrive at the payment rate. If omitted, the floating rate conversion factor is 1.

Type: **float**

Used in components: **PaymentStreamFloatingRate**

**171.2.4024 PaymentStreamRateCutoffDateOffsetDayType**

Specifies the day type of the relative rate cut-off date offset.

Type: **int**

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in components: **PaymentStreamResetDates**

**171.2.4025 PaymentStreamRateCutoffDateOffsetPeriod**

Time unit multiplier for the relative rate cut-off date offset.

Type: **int**

Used in components: **PaymentStreamResetDates**

**171.2.4026 PaymentStreamRateCutoffDateOffsetUnit**

Time unit associated with the relative rate cut-off date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: **PaymentStreamResetDates**

**171.2.4027 PaymentStreamRateIndex**

The payment stream floating rate index.

Type: **String**

Used in components: **PaymentStreamFloatingRate**

**171.2.4028 PaymentStreamRateIndex2**

The payment stream's second floating rate index.

Type: **String**

Used in components: **PaymentStreamFloatingRate**

**171.2.4029 PaymentStreamRateIndex2CurvePeriod**

Secondary time unit multiplier for the payment stream's floating rate index curve.

Type: **int**

Used in components: **PaymentStreamFloatingRate**

**171.2.4030 PaymentStreamRateIndex2CurveUnit**

Secondary time unit associated with the payment stream's floating rate index curve.

Type: **String**

Allowed values in PaymentStreamRateIndexCurveUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: **PaymentStreamFloatingRate**

**171.2.4031 PaymentStreamRateIndex2ID**

Security identifier of the second floating rate index.

Type: **String**

Used in components: **PaymentStreamFloatingRate**

**171.2.4032 PaymentStreamRateIndex2IDSource**

Source for the second floating rate index identified in PaymentStreamRateIndex2ID(43114).

Type: **String**

Allowed values in SecurityIDSourceCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	CUSIP	CUSIP
2	SEDOL	SEDOL
3	QUIK	QUIK
4	ISINNumber	ISIN
5	RICCode	RIC
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)

---

Code	Name	Description
7	ISOCountryCode	ISO Country Code
8	ExchangeSymbol	Exchange symbol
9	ConsolidatedTapeAssociation	Consolidated Tape Association (CTA) Symbol (SIAC CTS/CQS line format)
A	BloombergSymbol	Bloomberg Symbol
B	Wertpapier	Wertpapier
C	Dutch	Dutch
D	Valoren	Valoren
E	Sicovam	Sicovam
F	Belgian	Belgian
G	Common	"Common" (Clearstream and Euroclear)
H	ClearingHouse	Clearing house / Clearing organization
I	ISDAFpMLSpecification	ISDA/FpML product specification (XML in SecurityXML(1185))
J	OptionPriceReportingAuthority	Option Price Reporting Authority
K	ISDAFpMLURL	ISDA/FpML product URL (URL in SecurityID(48))
L	LetterOfCredit	Letter of credit
M	MarketplaceAssignedIdentifier	Marketplace-assigned Identifier
N	MarkitREDEntityCLIP	Markit RED entity CLIP
P	MarkitREDPairCLIP	Markit RED pair CLIP
Q	CFTCCommodityCode	CFTC commodity code
R	ISDACommodityReferencePrice	ISDA Commodity Reference Price
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
T	LegalEntityIdentifier	Legal entity identifier
U	Synthetic	Synthetic. Used to specify that the security identifier is synthetic for linking nested underliers when there is no market identifier for the collection.
V	FidessaInstrumentMnemonic	Fidessa Instrument Mnemonic (FIM)
W	IndexName	Index name. Standard name of the index or rate index, e.g. "LIBOR" or "iTraxx Australia".
X	UniformSymbol	Uniform Symbol (UMTF Symbol)
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in components: [PaymentStreamFloatingRate](#)

**171.2.4033 PaymentStreamRateIndex2Source**

The source of the payment stream's second floating rate index.

Type: **int**

Allowed values in PaymentStreamRateIndexSourceCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Bloomberg	Bloomberg
1	Reuters	Reuters
2	Telerate	Telerate
99	Other	Other

---

Used in components: **PaymentStreamFloatingRate**

**171.2.4034 PaymentStreamRateIndexCurvePeriod**

Time unit multiplier for the floating rate index.

Type: **int**

Used in components: **PaymentStreamFloatingRate**

**171.2.4035 PaymentStreamRateIndexCurveUnit**

Time unit associated with the floating rate index.

Type: **String**

Allowed values in PaymentStreamRateIndexCurveUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: **PaymentStreamFloatingRate**

**171.2.4036 PaymentStreamRateIndexID**

Security identifier of the floating rate index.

Type: **String**

Used in components: **PaymentStreamFloatingRate**

**171.2.4037 PaymentStreamRateIndexIDSource**

Source for the floating rate index identified in PaymentStreamRateIndexID(43090).

Type: **String**

Allowed values in SecurityIDSourceCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	CUSIP	CUSIP

V	FidessaInstrumentMnemonic	Fidessa Instrument Mnemonic (FIM)
W	IndexName	Index name. Standard name of the index or rate index, e.g. "LIBOR" or "iTraxx Australia".
X	UniformSymbol	Uniform Symbol (UMTF Symbol)
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

---

Used in components: [PaymentStreamFloatingRate](#)

#### **171.2.4038 PaymentStreamRateIndexLevel**

This is the weather Cooling Degree Days (CDD), Heating Degree Days (HDD) or HDD index level specified as the number of (amount of) weather index units specified by the parties in the related confirmation.

Type: [Qty](#)

Used in components: [PaymentStreamFloatingRate](#)

#### **171.2.4039 PaymentStreamRateIndexLocation**

Specifies the location of the floating rate index.

Type: [String](#)

Used in components: [PaymentStreamFloatingRate](#)

**171.2.4040 PaymentStreamRateIndexSource**

The source of the payment stream floating rate index.

Type: **int**

Allowed values in PaymentStreamRateIndexSourceCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Bloomberg	Bloomberg
1	Reuters	Reuters
2	Telerate	Telerate
99	Other	Other

---

Used in components: **PaymentStreamFloatingRate**

**171.2.4041 PaymentStreamRateIndexUnitOfMeasure**

The unit of measure (UOM) of the rate index level.

Type: **String**

Allowed values in UnitOfMeasureCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet
Bbl	Barrels	Barrels. Equal to 42 US gallons
CBM	CubicMeters	Cubic Meters
BDFT	BoardFeet	Board feet. Equal to 144 cubic inches
GJ	Gigajoules	gigajoules
Bu	Bushels	Bushels
kHR	HeatRate	Heat rate. The number of BTUs required to produce one kilowatt hour of electricity, typically 3,412.14 BTUs per 1 kWh.
Ccy	Currency	Amount of currency
kWh	KilowattHours	Kilowatt hours
CDD	CoolingDegreeDay	Cooling degree day

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
MHR	MegaHeatRate	Mega heat rate. The number of million BTUs required to produce one megawatt hour of electricity, typically 3.41214 million BTUs per 1 MWh.

Used in components: [PaymentStreamFloatingRate](#)

#### **171.2.4042 PaymentStreamRateMultiplier**

A rate multiplier to apply to the floating rate. A multiplier schedule is expressed as explicit multipliers and dates. In the case of a schedule, the step dates may be subject to adjustment in accordance with any adjustments specified in the calculationPeriodDatesAdjustments. The multiplier can be less than or greater than 1 (one). This element should only be included if the multiplier is not equal to 1 (one) for the term of the stream.

Type: [float](#)

Used in components: [PaymentStreamFloatingRate](#)

#### **171.2.4043 PaymentStreamRateOrAmountCurrency**

Specifies the currency in which PaymentStreamFixedAmount(40785) or PaymentStreamRate(40784) is denominated. Uses ISO 4271 currency codes.

Type: [Currency](#)

Used in components: [PaymentStreamFixedRate](#)

#### **171.2.4044 PaymentStreamRateSpread**

Spread from floating rate index.

Type: [PriceOffset](#)

Used in components: [PaymentStreamFloatingRate](#)

**171.2.4045 PaymentStreamRateSpreadCurrency**

Specifies the currency of the floating rate spread. Uses ISO 4217 currency codes.

Type: **Currency**

Used in components: **PaymentStreamFloatingRate**

**171.2.4046 PaymentStreamRateSpreadPositionType**

Identifies whether the rate spread is applied to a long or short position.

Type: **int**

Allowed values in PaymentStreamRateSpreadPositionTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Short	Short
1	Long	Long

---

Used in components: **PaymentStreamFloatingRate**

**171.2.4047 PaymentStreamRateSpreadType**

Identifies whether the rate spread is an absolute value to be added to the index rate or a percentage of the index rate.

Type: **int**

Allowed values in PaymentStreamRateSpreadTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Absolute	Absolute
1	Percentage	Percentage

---

Used in components: **PaymentStreamFloatingRate**

**171.2.4048 PaymentStreamRateSpreadUnitOfMeasure**

Species the unit of measure (UOM) of the floating rate spread.

Type: **String**

Allowed values in UnitOfMeasureCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet

Sqyd	SquareYard	Square yard
yd	Yard	Yard
MMbbl	MillionBarrels	Million Barrels
USD	USDollars	US Dollars

Used in components: [PaymentStreamFloatingRate](#)

#### 171.2.4049 PaymentStreamRateTreatment

Specifies the yield calculation treatment for the index.

Type: [int](#)

Allowed values in PaymentStreamRateTreatmentCodeSet:

Code	Name	Description
0	BondEquivalentYield	Bond equivalent yield
1	MoneyMarketYield	Money market yield

Used in components: [PaymentStreamFloatingRate](#)

### **171.2.4050 PaymentStreamRealizedVarianceMethod**

Indicates which price to use to satisfy the boundary condition.

Type: [int](#)

Allowed values in PaymentStreamRealizedVarianceMethodCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Previous	Previous. For a return on day T, the observed price on T-1 must be in range.
1	Last	Last. For a return on day T, the observed price on T must be in range.
2	Both	Both. For a return on day T, the observed prices on both T and T-1 must be in range.

Used in components: [PaymentStreamFloatingRate](#)

### **171.2.4051 PaymentStreamReferenceLevel**

This is the weather Cooling Degree Days (CDD), Heating Degree Days (HDD) or HDD reference level specified as the number of (amount of) weather index units specified by the parties in the related confirmation.

Type: [Qty](#)

Used in components: [PaymentStreamFloatingRate](#)

### **171.2.4052 PaymentStreamReferenceLevelEqualsZeroIndicator**

When set to 'Y', it indicates the weather reference level equals zero.

Type: [Boolean](#)

Used in components: [PaymentStreamFloatingRate](#)

**171.2.4053 PaymentStreamReferenceLevelUnitOfMeasure**

The unit of measure (UOM) of the rate reference level.

Type: **String**

Allowed values in UnitOfMeasureCodeSet:

Code	Name	Description
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet
Bbl	Barrels	Barrels. Equal to 42 US gallons
CBM	CubicMeters	Cubic Meters
BDFT	BoardFeet	Board feet. Equal to 144 cubic inches
GJ	Gigajoules	gigajoules
Bu	Bushels	Bushels
kHR	HeatRate	Heat rate. The number of BTUs required to produce one kilowatt hour of electricity, typically 3,412.14 BTUs per 1 kWh.
Ccy	Currency	Amount of currency
kWh	KilowattHours	Kilowatt hours
CDD	CoolingDegreeDay	Cooling degree day
MHR	MegaHeatRate	Mega heat rate. The number of million BTUs required to produce one megawatt hour of electricity, typically 3.41214 million BTUs per 1 MWh.
CER	CertifiedEmissionsReduction	Certified emissions reduction
MMBtu	OneMillionBTU	One Million BTU
CPD	CriticalPrecipDay	Critical precipitation day
MWh	MegawattHours	Megawatt hours
CRT	ClimateReserveTonnes	Climate reserve tonnes
thm	Therms	therms. Equal to 100,000 BTU
cwt	Hundredweight	Hundredweight(US). Equal to 100 lbs
tnCO2	TonsOfCarbonDioxide	Tons of carbon dioxide
day	Day	Days
dt	DryMetricTons	Dry metric tons
EnvAllwnc	EnvAllwncCert	Environmental allowance certificates
EnvCrd	EnvironmentalCredit	Environmental credit
EnvOfst	EnvironmentalOffset	Environmental Offset
g	Grams	Grams

<b>Code</b>	<b>Name</b>	<b>Description</b>
Gal	Gallons	Gallons
GT	GrossTons	Gross tons. Also known as long tons or imperial tons, equal to 2240 lbs
HDD	HeatingDegreeDay	Heating degree day
IPNT	IndexPoint	Index point
kg	Kilograms	Kilograms
kL	Kiloliters	kiloliters
kW-a	KilowattYear	Kilowatt year (electrical capacity)
kW-d	KilowattDay	Kilowatt day (electrical capacity)
kW-h	KilowattHour	Kilowatt hour (electrical capacity)
kW-M	KilowattMonth	Kilowatt month (electrical capacity)
kW-min	KilowattMinute	Kilowatt-Minute (electrical capacity)
L	Liters	liters
lbs	Pounds	pounds
MW-a	MegawattYear	Megawatt year (electrical capacity)
MW-d	MegawattDay	Megawatt day (electrical capacity)
MW-h	MegawattHour	Megawatt hour (electrical capacity)
MW-M	MegawattMonth	Megawatt month (electrical capacity)
MW-min	MegawattMinute	Megawatt minute (electrical capacity)
oz_tr	TroyOunces	Troy ounces
PRINC	PrincipalWithRelationToDebtInstrument	Principal with relation to debt instrument
t	MetricTons	Metric tons. Also known as Tonnes, equal to 1000 kg
tn	Tons	Tons (US). Equal to 2000 lbs
a	Are	Are
ac	Acre	Acre
cL	Centiliter	Centiliter
cM	Centimeter	Centimeter
DGE	DieselGallonEquivalent	Diesel gallon equivalent
ft	Foot	Foot
Gal_gb	GBGallon	GB Gallon
GGE	GasolineGallonEquivalent	Gasonline gallon equivalent
ha	Hectare	Hectare
in	Inch	Inch
kM	Kilometer	Kilometer

<b>Code</b>	<b>Name</b>	<b>Description</b>

mi	Mile	Mile
mL	Milliliter	Milliliter
mM	Millimeter	Millimeter
oz	USOunce	US ounce
pc	Piece	Piece
pt	USPint	US Pint
pt_gb	GBPint	GB pint
qt	USQuart	US Quart
qt_gb	GBQuart	GB Quart
SqcM	SquareCentimeter	Square centimeter
Sqft	SquareFoot	Square foot
Sqin	SquareInch	Square inch
SqkM	SquareKilometer	Square kilometer
SqM	SquareMeter	Square meter
Sqmi	SquareMile	Square mile
SqmM	SquareMillimeter	Square millimeter
Sqyd	SquareYard	Square yard
yd	Yard	Yard
MMbbl	MillionBarrels	Million Barrels
USD	USDollars	US Dollars

---

Used in components: [PaymentStreamFloatingRate](#)

#### **171.2.4054 PaymentStreamResetDateBusinessCenter**

The business center calendar used to adjust the payment stream's reset date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in groups: [PaymentStreamResetDateBusinessCenterGrp](#)

**171.2.4055 PaymentStreamResetDateBusinessCenterGrp**

PaymentStreamResetDateBusinessCenterGrp is a repeating subcomponent within the PaymentStreamResetDates component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the DateAdjustment component in Instrument.

Name	Mult.	Type	Description
NoPaymentStreamResetDateBusinessCenters	[1..1]	NumInGroup	
PaymentStreamResetDateBusinessCenter	[0..1]	String	Required if NoPaymentStreamResetDateBusinessCenters(40948) > 0.

Used in components: [PaymentStreamResetDates](#)

**171.2.4056 PaymentStreamResetDateBusinessDayConvention**

The business day convention used to adjust the payment stream's reset date. Used only to override the business day convention specified in the DateAdjustment component within the Instrument component.

Type: [int](#)

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [PaymentStreamResetDates](#)

**171.2.4057 PaymentStreamResetDateRelativeTo**

Specifies the anchor date when the reset dates are relative to an anchor date.

If the reset frequency is specified as daily this element must not be included.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: **int**

Used in components: **PaymentStreamResetDates**

**171.2.4058 PaymentStreamResetDates**

PaymentStreamResetDates is a subcomponent of the PaymentStream component used to specify the floating rate reset dates of the stream.

Name	Mult.	Type	Description
<b>PaymentStreamResetDateRelativeTo</b>	[0..1]	int	
<b>PaymentStreamResetDateBusiness-DayConvention</b>	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the DateAdjustment component in Instrument. The specified value would be specific to this instance of the payment stream's reset dates.
<b>PaymentStreamResetDateBusiness-CenterGrp</b>	[0..*]	Group	When specified, this overrides the business centers defined in the DateAdjustment component in Instrument. The specified values would be specific to this instance of the payment stream's reset dates.
<b>PaymentStreamResetFrequencyPeriod</b>	[0..1]	int	Conditionally required when PaymentStreamResetFrequencyUnit(40765) is specified.
<b>PaymentStreamResetFrequencyUnit</b>	[0..1]	CodeSet	Conditionally required when PaymentStreamResetFrequencyPeriod(40764) is specified.
<b>PaymentStreamResetWeeklyRollConvention</b>	[0..1]	CodeSet	When specified, this overrides the date roll convention defined in the DateAdjustment component in Instrument. The specified values would be specific to this instance of the stream floating rate reset dates.
<b>PaymentStreamInitialFixingDateRelativeTo</b>	[0..1]	int	

Name	Mult.	Type	Description
PaymentStreamInitialFixingDateBusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the DateAdjustment component in Instrument. The specified value would be specific to this instance of the payment stream's reset dates.
PaymentStreamInitialFixingDateBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the DateAdjustment component in Instrument. The specified values would be specific to this instance of the payment stream's reset dates.
PaymentStreamInitialFixingDateOffsetPeriod	[0..1]	int	Conditionally required when PaymentStreamInitialFixingDateOffsetUnit(40771) is specified.
PaymentStreamInitialFixingDateOffsetUnit	[0..1]	CodeSet	Conditionally required when PaymentStreamInitialFixingDateOffsetPeriod(40770) is specified.
PaymentStreamInitialFixingDateOffsetDayType	[0..1]	CodeSet	
PaymentStreamInitialFixingDateAdjusted	[0..1]	LocalMktDate	
PaymentStreamFixingDateRelativeTo	[0..1]	int	
PaymentStreamFixingDateBusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the DateAdjustment component in Instrument. The specified value would be specific to this instance of the payment stream's reset dates.
PaymentStreamFixingDateBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the DateAdjustment component in Instrument. The specified values would be specific to this instance of the payment stream's reset dates.
PaymentStreamFixingDateOffsetPeriod	[0..1]	int	Conditionally required when PaymentStreamFixingDateOffsetUnit(40778) is specified.
PaymentStreamFixingDateOffsetUnit	[0..1]	CodeSet	Conditionally required when PaymentStreamFixingDateOffsetPeriod(40777) is specified.
PaymentStreamFixingDateOffsetDayType	[0..1]	CodeSet	
PaymentStreamFixingDateAdjusted	[0..1]	LocalMktDate	

Name	Mult.	Type	Description
PaymentStreamRateCutoffDateOffset-Period	[0..1]	int	Conditionally required when PaymentStreamRateCutoffDateOffsetUnit(40782) is specified.
PaymentStreamRateCutoffDateOffsetUnit	[0..1]	CodeSet	Conditionally required when PaymentStreamRateCutoffDateOffsetPeriod(40783) is specified.
PaymentStreamRateCutoffDateOffset-DayType	[0..1]	CodeSet	
PaymentStreamFixingDateGrp	[0..*]	Group	

Used in components: [PaymentStream](#)

### 171.2.4059 PaymentStreamResetFrequencyPeriod

Time unit multiplier for the frequency of resets.

Type: [int](#)

Used in components: [PaymentStreamResetDates](#)

### 171.2.4060 PaymentStreamResetFrequencyUnit

Time unit associated with the frequency of resets.

Type: [String](#)

Allowed values in CouponFrequencyUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year
H	Hour	Hour
Min	Minute	Minute
S	Second	Second
T	Term	Term

Used in components: [PaymentStreamResetDates](#)

**171.2.4061 PaymentStreamResetWeeklyRollConvention**

Used to specify the day of the week in which the reset occurs for payments that reset on a weekly basis.

Type: **String**

Allowed values in PaymentStreamResetWeeklyRollConventionCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
MON	Monday	Monday
TUE	Tuesday	Tuesday
WED	Wednesday	Wednesday
THU	Thursday	Thursday
FRI	Friday	Friday
SAT	Saturday	Saturday
SUN	Sunday	Sunday

---

Used in components: **PaymentStreamResetDates**

**171.2.4062 PaymentStreamSettlCurrency**

Specifies the currency that the stream settles in (to support swaps that settle in a currency different from the notional currency). Uses ISO 4217 currency codes.

Type: **Currency**

Used in components: **PaymentStream**

**171.2.4063 PaymentStreamSettlLevel**

Specifies how weather index units are to be calculated.

Type: **int**

Allowed values in PaymentStreamSettlLevelCodeSet:

Code	Name	Description
0	Average	Average. The cumulative number of weather index units for each day in the calculation period divided by the number of days in the calculation period.
1	Maximum	Maximum. The maximum number of weather index units for any day in the calculation period.
2	Minimum	Minimum. The minimum number of weather index units for any day in the calculation period.
3	Cumulative	Cumulative. The cumulative number of weather index units for each day in the calculation period.

Used in components: [PaymentStreamFloatingRate](#)

#### 171.2.4064 PaymentStreamTotalFixedAmount

Specifies the total fixed payment amount.

Type: [Amt](#)

Used in components: [PaymentStreamFixedRate](#)

#### 171.2.4065 PaymentStreamType

Identifies the type of payment stream associated with the swap.

Type: [int](#)

Allowed values in PaymentStreamTypeCodeSet:

Code	Name	Description
0	Periodic	Periodic (default)
1	Initial	Initial
2	Single	Single
3	Dividend	Dividend
4	Interest	Interest
5	DividendReturn	Dividend return
6	PriceReturn	Price return
7	TotalReturn	Total return

---

Code	Name	Description
8	Variance	Variance
9	Correlation	Correlation

---

Used in components: [PaymentStream](#)

#### **171.2.4066 PaymentStreamUnderlierRefID**

References the dividend underlier through the instrument's UnderlyingSecurityID(309) which must be fully specified in an instance of the UnderlyingInstrument component.

Type: [String](#)

Used in components: [PaymentStreamFloatingRate](#)

#### **171.2.4067 PaymentStreamVarianceUnadjustedCap**

Indicates the scaling factor to be multiplied by the variance strike price thereby making variance cap applicable.

Type: [float](#)

Used in components: [PaymentStreamFloatingRate](#)

#### **171.2.4068 PaymentStreamVegaNotionalAmount**

"Vega Notional" represents the approximate gain/loss at maturity for a 1% difference between RVol (realised volatility) and KVol (strike volatility). It does not necessarily represent the Vega risk of the trade.

Type: [float](#)

Used in components: [PaymentStreamFloatingRate](#)

#### **171.2.4069 PaymentStreamWorldScaleRate**

The number of Worldscale points for purposes of the calculation of a fixed amount for a wet voyage charter commodity swap.

Type: [float](#)

Used in components: [PaymentStreamFixedRate](#)

**171.2.4070 PaymentStubEndDateAdjusted**

The adjusted stub end date.

Type: [LocalMktDate](#)

Used in components: [PaymentStubEndDate](#)

**171.2.4071 PaymentStubEndDateBusinessCenter**

The business center calendar used for date adjustment of the payment stub end date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in groups: [PaymentStubEndDateBusinessCenterGrp](#)

**171.2.4072 PaymentStubEndDateBusinessCenterGrp**

PaymentStubEndDateBusinessCenterGrp is a repeating subcomponent within the PaymentStubEndDate component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the DateAdjustment component in Instrument.

Name	Mult.	Type	Description
<a href="#">NoPaymentStubEndDateBusinessCenters</a>	[1..1]	NumInGroup	
<a href="#">PaymentStubEndDateBusinessCenter</a>	[0..1]	String	Required if <a href="#">NoPaymentStubEndDateBusinessCenters(42696)</a> > 0.

Used in components: [PaymentStubEndDate](#)

**171.2.4073 PaymentStubEndDateBusinessDayConvention**

The stub end date business day convention.

Type: [int](#)

Allowed values in [BusinessDayConventionCodeSet](#):

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [PaymentStubEndDate](#)

#### 171.2.4074 PaymentStubEndDate

PaymentStubEndDate is a subcomponent of the PaymentStubGrp component used to specify the end date of the payment stub.

Name	Mult.	Type	Description
<a href="#">PaymentStubEndDateUnadjusted</a>	[0..1]	LocalMktDate	
<a href="#">PaymentStubEndDateBusinessDay-Convention</a>	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the DateAdjustment component in Instrument. The specified value would be specific to this payment stub instance.
<a href="#">PaymentStubEndDateBusinessCenter-Grp</a>	[0..*]	Group	When specified, this overrides the business centers defined in the DateAdjustment component in Instrument. The specified values would be specific to this payment stub instance.
<a href="#">PaymentStubEndDateRelativeTo</a>	[0..1]	int	
<a href="#">PaymentStubEndDateOffsetPeriod</a>	[0..1]	int	Conditionally required when PaymentStubEndDateOffsetUnit(42693) is specified.
<a href="#">PaymentStubEndDateOffsetUnit</a>	[0..1]	CodeSet	Conditionally required when PaymentStubEndDateOffsetPeriod(42692) is specified.
<a href="#">PaymentStubEndDateOffsetDayType</a>	[0..1]	CodeSet	
<a href="#">PaymentStubEndDateAdjusted</a>	[0..1]	LocalMktDate	

Used in groups: [PaymentStubGrp](#)

### **171.2.4075 PaymentStubEndDateOffsetDayType**

Specifies the day type of the relative stub end date offset.

Type: [int](#)

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: [PaymentStubEndDate](#)

### **171.2.4076 PaymentStubEndDateOffsetPeriod**

Time unit multiplier for the relative stub end date offset.

Type: [int](#)

Used in components: [PaymentStubEndDate](#)

### **171.2.4077 PaymentStubEndDateOffsetUnit**

Time unit associated with the relative stub end date offset.

Type: [String](#)

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week

---

Code	Name	Description
Mo	Month	Month
Yr	Year	Year

---

Used in components: [PaymentStubEndDate](#)

#### **171.2.4078 PaymentStubEndDateRelativeTo**

Specifies the anchor date when the stub end date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: [int](#)

Used in components: [PaymentStubEndDate](#)

#### **171.2.4079 PaymentStubEndDateUnadjusted**

The unadjusted stub end date.

Type: [LocalMktDate](#)

Used in components: [PaymentStubEndDate](#)

#### **171.2.4080 PaymentStubFixedAmount**

A fixed payment amount for the stub.

Type: [Amt](#)

Used in groups: [PaymentStubGrp](#)

#### **171.2.4081 PaymentStubFixedCurrency**

The currency of the fixed payment amount. Uses ISO 4217 currency codes.

Type: [Currency](#)

Used in groups: [PaymentStubGrp](#)

**171.2.4082 PaymentStubGrp**

The PaymentStubGrp is a repeating subcomponent of the StreamGrp component used to specify front and back stubs of the payment stream.

Name	Mult.	Type	Description
NoPaymentStubs	[1..1]	NumInGroup	
PaymentStubType	[0..1]	CodeSet	Required if NoPaymentStubs(40872) > 0.
PaymentStubLength	[0..1]	CodeSet	
PaymentStubStartDate	[0..1]	Component	
PaymentStubEndDate	[0..1]	Component	
PaymentStubRate	[0..1]	Percentage	
PaymentStubFixedAmount	[0..1]	Amt	
PaymentStubFixedCurrency	[0..1]	Currency	
PaymentStubIndex	[0..1]	String	
PaymentStubIndexSource	[0..1]	CodeSet	
PaymentStubIndexCurvePeriod	[0..1]	int	Conditionally required when PaymentStubIndexCurveUnit(40881) is specified.
PaymentStubIndexCurveUnit	[0..1]	CodeSet	Conditionally required when PaymentStubIndexCurvePeriod(40880) is specified.
PaymentStubIndexRateMultiplier	[0..1]	float	
PaymentStubIndexRateSpread	[0..1]	PriceOffset	
PaymentStubIndexRateSpreadPositionType	[0..1]	CodeSet	
PaymentStubIndexRateTreatment	[0..1]	CodeSet	
PaymentStubIndexCapRate	[0..1]	Percentage	
PaymentStubIndexCapRateBuySide	[0..1]	CodeSet	
PaymentStubIndexCapRateSellSide	[0..1]	CodeSet	
PaymentStubIndexFloorRate	[0..1]	Percentage	
PaymentStubIndexFloorRateBuySide	[0..1]	CodeSet	
PaymentStubIndexFloorRateSellSide	[0..1]	CodeSet	
PaymentStubIndex2	[0..1]	String	
PaymentStubIndex2Source	[0..1]	CodeSet	
PaymentStubIndex2CurvePeriod	[0..1]	int	Conditionally required when PaymentStubIndex2CurveUnit(40895) is specified.

Name	Mult.	Type	Description
PaymentStubIndex2CurveUnit	[0..1]	CodeSet	Conditionally required when PaymentStubIndex2CurvePeriod(40894) is specified.
PaymentStubIndex2RateMultiplier	[0..1]	float	
PaymentStubIndex2RateSpread	[0..1]	PriceOffset	
PaymentStubIndex2RateSpreadPositionType	[0..1]	CodeSet	
PaymentStubIndex2RateTreatment	[0..1]	CodeSet	
PaymentStubIndex2CapRate	[0..1]	Percentage	
PaymentStubIndex2FloorRate	[0..1]	Percentage	

Used in groups: [StreamGrp](#)

#### **171.2.4083 PaymentStubIndex**

The stub floating rate index.

Type: [String](#)

Used in groups: [PaymentStubGrp](#)

#### **171.2.4084 PaymentStubIndex2**

The second stub floating rate index.

Type: [String](#)

Used in groups: [PaymentStubGrp](#)

#### **171.2.4085 PaymentStubIndex2CapRate**

The cap rate, if any, which applies to the second floating rate. The cap rate (strike) is only required where the floating rate on a swap stream is capped at a certain level. The cap rate is assumed to be exclusive of any spread and is a per annum rate, expressed as a decimal. A cap rate of 5% would be represented as 0.05.

Type: [Percentage](#)

Used in groups: [PaymentStubGrp](#)

**171.2.4086 PaymentStubIndex2CurvePeriod**

Secondary time unit multiplier for the stub floating rate index curve.

Type: **int**

Used in groups: **PaymentStubGrp**

**171.2.4087 PaymentStubIndex2CurveUnit**

Secondary time unit associated with the stub floating rate index curve.

Type: **String**

Allowed values in PaymentStreamRateIndexCurveUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in groups: **PaymentStubGrp**

**171.2.4088 PaymentStubIndex2FloorRate**

The floor rate, if any, which applies to the second floating rate. The floor rate (strike) is only required where the floating rate on a swap stream is floored at a certain strike level. The floor rate is assumed to be exclusive of any spread and is a per annum rate, expressed as a decimal. A floor rate of 5% would be represented as 0.05.

Type: **Percentage**

Used in groups: **PaymentStubGrp**

**171.2.4089 PaymentStubIndex2RateMultiplier**

A rate multiplier to apply to the second floating rate. The multiplier can be less than or greater than 1 (one). This element should only be included if the multiplier is not equal to 1 (one) for the term of the stream.

Type: **float**

Used in groups: **PaymentStubGrp**

#### **171.2.4090 PaymentStubIndex2RateSpread**

Spread from the second floating rate index.

Type: **PriceOffset**

Used in groups: **PaymentStubGrp**

#### **171.2.4091 PaymentStubIndex2RateSpreadPositionType**

Identifies whether the rate spread is applied to a long or short position.

Type: **int**

Allowed values in PaymentStreamRateSpreadPositionTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Short	Short
1	Long	Long

---

Used in groups: **PaymentStubGrp**

#### **171.2.4092 PaymentStubIndex2RateTreatment**

Specifies the yield calculation treatment for the second stub index.

Type: **int**

Allowed values in PaymentStreamRateTreatmentCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	BondEquivalentYield	Bond equivalent yield
1	MoneyMarketYield	Money market yield

---

Used in groups: **PaymentStubGrp**

**171.2.4093 PaymentStubIndex2Source**

The source of the second stub floating rate index.

Type: **int**

Allowed values in PaymentStreamRateIndexSourceCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Bloomberg	Bloomberg
1	Reuters	Reuters
2	Telerate	Telerate
99	Other	Other

---

Used in groups: **PaymentStubGrp**

**171.2.4094 PaymentStubIndexCapRate**

The cap rate, if any, which applies to the floating rate. The cap rate (strike) is only required where the floating rate on a swap stream is capped at a certain level. The cap rate is assumed to be exclusive of any spread and is a per annum rate, expressed as a decimal. A cap rate of 5% would be represented as 0.05.

Type: **Percentage**

Used in groups: **PaymentStubGrp**

**171.2.4095 PaymentStubIndexCapRateBuySide**

Reference to the buyer of the cap rate option through its trade side.

Type: **int**

Allowed values in PaymentStreamCapRateBuySideCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

---

Used in groups: **PaymentStubGrp**

**171.2.4096 PaymentStubIndexCapRateSellSide**

Reference to the seller of the cap rate option through its trade side.

Type: **int**

Allowed values in PaymentStreamCapRateBuySideCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

---

Used in groups: **PaymentStubGrp**

**171.2.4097 PaymentStubIndexCurvePeriod**

Time unit multiplier for the stub floating rate index.

Type: **int**

Used in groups: **PaymentStubGrp**

**171.2.4098 PaymentStubIndexCurveUnit**

Time unit associated with the stub floating rate index.

Type: **String**

Allowed values in PaymentStreamRateIndexCurveUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in groups: **PaymentStubGrp**

**171.2.4099 PaymentStubIndexFloorRate**

The floor rate, if any, which applies to the floating rate. The floor rate (strike) is only required where the floating rate on a swap stream is floored at a certain strike level. The floor rate is assumed to be exclusive of any spread and is a per annum rate, expressed as a decimal. A floor rate of 5% would be represented as 0.05.

Type: **Percentage**

Used in groups: **PaymentStubGrp**

**171.2.4100 PaymentStubIndexFloorRateBuySide**

Reference to the buyer of the floor rate option through its trade side.

Type: **int**

Allowed values in PaymentStreamFloorRateBuySideCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

---

Used in groups: **PaymentStubGrp**

**171.2.4101 PaymentStubIndexFloorRateSellSide**

Reference to the seller of the floor rate option through its trade side.

Type: **int**

Allowed values in PaymentStreamFloorRateBuySideCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

---

Used in groups: **PaymentStubGrp**

**171.2.4102 PaymentStubIndexRateMultiplier**

A rate multiplier to apply to the floating rate. The multiplier can be less than or greater than 1 (one). This element should only be included if the multiplier is not equal to 1 (one) for the term of the stream.

Type: **float**

Used in groups: **PaymentStubGrp**

**171.2.4103 PaymentStubIndexRateSpread**

Spread from floating rate index.

Type: **PriceOffset**

Used in groups: **PaymentStubGrp**

**171.2.4104 PaymentStubIndexRateSpreadPositionType**

Identifies whether the rate spread is applied to a long or short position.

Type: **int**

Allowed values in PaymentStreamRateSpreadPositionTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Short	Short
1	Long	Long

---

Used in groups: **PaymentStubGrp**

**171.2.4105 PaymentStubIndexRateTreatment**

Specifies the yield calculation treatment for the payment stub index.

Type: **int**

Allowed values in PaymentStreamRateTreatmentCodeSet:

---

Code	Name	Description
0	BondEquivalentYield	Bond equivalent yield
1	MoneyMarketYield	Money market yield

---

Used in groups: [PaymentStubGrp](#)

### 171.2.4106 PaymentStubIndexSource

The source of the stub floating rate index.

Type: [int](#)

Allowed values in PaymentStreamRateIndexSourceCodeSet:

---

Code	Name	Description
0	Bloomberg	Bloomberg
1	Reuters	Reuters
2	Telerate	Telerate
99	Other	Other

---

Used in groups: [PaymentStubGrp](#)

### 171.2.4107 PaymentStubLength

Optional indication whether stub is shorter or longer than the regular swap period.

Type: [int](#)

Allowed values in PaymentStubLengthCodeSet:

---

Code	Name	Description
0	Short	Short
1	Long	Long

---

Used in groups: [PaymentStubGrp](#)

**171.2.4108 PaymentStubRate**

The agreed upon fixed rate for this stub.

Type: **Percentage**

Used in groups: **PaymentStubGrp**

**171.2.4109 PaymentStubStartDateAdjusted**

The adjusted stub start date.

Type: **LocalMktDate**

Used in components: **PaymentStubStartDate**

**171.2.4110 PaymentStubStartDateBusinessCenter**

The business center calendar used for date adjustment of the payment stub start date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **PaymentStubStartDateBusinessCenterGrp**

**171.2.4111 PaymentStubStartDateBusinessCenterGrp**

PaymentStubStartDateBusinessCenterGrp is a repeating subcomponent within the PaymentStubStartDate component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the DateAdjustment component in Instrument.

Name	Mult.	Type	Description
<b>NoPaymentStubStartDateBusinessCenters</b>	[1..1]	NumInGroup	
<b>PaymentStubStartDateBusinessCenter</b>	[0..1]	String	Required if NoPaymentStubStartDateBusinessCenters(42705) > 0.

Used in components: **PaymentStubStartDate**

**171.2.4112 PaymentStubStartDateBusinessDayConvention**

The stub start date business day convention.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: **PaymentStubStartDate**

**171.2.4113 PaymentStubStartDate**

PaymentStubStartDate is a subcomponent of the PaymentStubGrp component used to specify the start date of the payment stub.

Name	Mult.	Type	Description
<b>PaymentStubStartDateUnadjusted</b>	[0..1]	LocalMktDate	
<b>PaymentStubStartDateBusinessDayConvention</b>	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the DateAdjustment component in Instrument. The specified value would be specific to this payment stub instance.
<b>PaymentStubStartDateBusinessCenterGrp</b>	[0..*]	Group	When specified, this overrides the business centers defined in the DateAdjustment component in Instrument. The specified values would be specific to this payment stub instance.
<b>PaymentStubStartDateRelativeTo</b>	[0..1]	int	
<b>PaymentStubStartDateOffsetPeriod</b>	[0..1]	int	Conditionally required when PaymentStubStartDateOffsetUnit(42702) is specified.

Name	Mult.	Type	Description
PaymentStubStartDateOffsetUnit	[0..1]	CodeSet	Conditionally required when PaymentStubStartDateOffsetPeriod(42701) is specified.
PaymentStubStartDateOffsetDayType	[0..1]	CodeSet	
PaymentStubStartDateAdjusted	[0..1]	LocalMktDate	

Used in groups: [PaymentStubGrp](#)

#### 171.2.4114 PaymentStubStartDateOffsetDayType

Specifies the day type of the relative stub start date offset.

Type: [int](#)

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: [PaymentStubStartDate](#)

#### 171.2.4115 PaymentStubStartDateOffsetPeriod

Time unit multiplier for the relative stub start date offset.

Type: [int](#)

Used in components: [PaymentStubStartDate](#)

**171.2.4116 PaymentStubStartDateOffsetUnit**

Time unit associated with the relative stub start date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: **PaymentStubStartDate**

**171.2.4117 PaymentStubStartDateRelativeTo**

Specifies the anchor date when the stub start date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: **int**

Used in components: **PaymentStubStartDate**

**171.2.4118 PaymentStubStartDateUnadjusted**

The unadjusted stub start date.

Type: **LocalMktDate**

Used in components: **PaymentStubStartDate**

**171.2.4119 PaymentStubType**

Stub type.

Type: **int**

Allowed values in PaymentStubTypeCodeSet:

---

Code	Name	Description
0	Initial	Initial
1	Final	Final
2	CompoundingInitial	Compounding initial
3	CompoundingFinal	Compounding final

---

Used in groups: [PaymentStubGrp](#)

### 171.2.4120 PaymentSubType

Used to further clarify the value of PaymentType(40213).

Type: [int](#)

Allowed values in PaymentSubTypeCodeSet:

---

Code	Name	Description
0	Initial	Initial (principal exchange)
1	Intermediate	Intermediate (principal exchange)
2	Final	Final (principal exchange)
3	Prepaid	Prepaid (premium forward)
4	Postpaid	Postpaid (premium forward)
5	Variable	Variable (premium forward)
6	Fixed	Fixed (premium forward)
7	Swap	Swap (premium). Indicates that the premium is to be paid in the style of payments under an IRS contract.
8	Conditional	Conditional (principal exchange on exercise)
9	FixedRate	Fixed rate. Applicable to PaymentType(40213)=14 (Rebate) for which PaymentFixedRate(43097) and its qualifiers supersede PaymentAmount(40217).
10	FloatingRate	Floating rate. Applicable to PaymentType(40213)=14 (Rebate) for which PaymentFloatingRateIndex(43098) and its qualifiers supersede PaymentAmount(40217).

---

Used in groups: [PaymentGrp](#)

**171.2.4121 PaymentText**

Free form text to specify additional information or enumeration description when a standard value does not apply. Identifies the payment type when PaymentType(40213) = 99 (Other).

Type: **String**

Used in groups: **PaymentGrp**

**171.2.4122 PaymentType**

Type of payment.

Type: **int**

Allowed values in PaymentTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Brokerage	Brokerage
1	UpfrontFee	Upfront fee
2	IndependentAmountCollateral	Independent amount / collateral
3	PrincipalExchange	Principal exchange
4	NovationTermination	Novation / termination
5	EarlyTerminationProvision	Early termination provision
6	CancelableProvision	Cancelable provision
7	ExtendibleProvision	Extendible provision
8	CapRateProvision	Cap rate provision
9	FloorRateProvision	Floor rate provision
10	OptionPremium	Option premium
11	SettlementPayment	Settlement payment
12	CashSettl	Cash settlement
13	SecurityLending	Security lending. Fee that the borrower of the security or commodity pays to the lender. The basis rate is specified in PaymentFixedRate(43097). A security lending fee payment may be periodic, in which case specify PaymentFrequencyPeriod(43102) and PaymentFrequencyUnit(43103).

Code	Name	Description
14	Rebate	Rebate. For contracts calling for rebate payment(s), e.g. Securities Lending, normally specified as a fixed or floating rate rather than a fixed amount. A rebate payment may be periodic, in which case specify PaymentFrequencyPeriod(43102) and PaymentFrequencyUnit(43103).
99	Other	Other

Used in groups: [PaymentGrp](#)

### 171.2.4123 PaymentUnitOfMeasure

Used to express the unit of measure (UOM) of the payment amount if not in the currency of the trade.

Type: [String](#)

Allowed values in UnitOfMeasureCodeSet:

Code	Name	Description
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet
Bbl	Barrels	Barrels. Equal to 42 US gallons
CBM	CubicMeters	Cubic Meters
BDFT	BoardFeet	Board feet. Equal to 144 cubic inches
GJ	Gigajoules	gigajoules
Bu	Bushels	Bushels
kHR	HeatRate	Heat rate. The number of BTUs required to produce one kilowatt hour of electricity, typically 3,412.14 BTUs per 1 kWh.
Ccy	Currency	Amount of currency
kWh	KilowattHours	Kilowatt hours
CDD	CoolingDegreeDay	Cooling degree day
MHR	MegaHeatRate	Mega heat rate. The number of million BTUs required to produce one megawatt hour of electricity, typically 3.41214 million BTUs per 1 MWh.
CER	CertifiedEmissionsReduction	Certified emissions reduction
MMBtu	OneMillionBTU	One Million BTU
CPD	CriticalPrecipDay	Critical precipitation day

<b>Code</b>	<b>Name</b>	<b>Description</b>
MWh	MegawattHours	Megawatt hours
CRT	ClimateReserveTonnes	Climate reserve tonnes
thm	Therms	therms. Equal to 100,000 BTU
cwt	Hundredweight	Hundredweight(US). Equal to 100 lbs
tnCO2	TonsOfCarbonDioxide	Tons of carbon dioxide
day	Day	Days
dt	DryMetricTons	Dry metric tons
EnvAllwnc	EnvAllwncCert	Environmental allowance certificates
EnvCrd	EnvironmentalCredit	Environmental credit
EnvOfst	EnvironmentalOffset	Environmental Offset
g	Grams	Grams
Gal	Gallons	Gallons
GT	GrossTons	Gross tons. Also known as long tons or imperial tons, equal to 2240 lbs
HDD	HeatingDegreeDay	Heating degree day
IPNT	IndexPoint	Index point
kg	Kilograms	Kilograms
kL	Kiloliters	kiloliters
kW-a	KilowattYear	Kilowatt year (electrical capacity)
kW-d	KilowattDay	Kilowatt day (electrical capacity)
kW-h	KilowattHour	Kilowatt hour (electrical capacity)
kW-M	KilowattMonth	Kilowatt month (electrical capacity)
kW-min	KilowattMinute	Kilowatt-Minute (electrical capacity)
L	Liters	liters
lbs	Pounds	pounds
MW-a	MegawattYear	Megawatt year (electrical capacity)
MW-d	MegawattDay	Megawatt day (electrical capacity)
MW-h	MegawattHour	Megawatt hour (electrical capacity)
MW-M	MegawattMonth	Megawatt month (electrical capacity)
MW-min	MegawattMinute	Megawatt minute (electrical capacity)
oz_tr	TroyOunces	Troy ounces
PRINC	PrincipalWithRelationToDebtInstrument	Principal with relation to debt instrument
t	MetricTons	Metric tons. Also known as Tonnes, equal to 1000 kg
tn	Tons	Tons (US). Equal to 2000 lbs

<b>Code</b>	<b>Name</b>	<b>Description</b>
a	Are	Are
ac	Acre	Acre
cL	Centiliter	Centiliter
cM	Centimeter	Centimeter
DGE	DieselGallonEquivalent	Diesel gallon equivalent
ft	Foot	Foot
Gal_gb	GBGallon	GB Gallon
GGE	GasolineGallonEquivalent	Gasonline gallon equivalent
ha	Hectare	Hectare
in	Inch	Inch
kM	Kilometer	Kilometer
M	Meter	Meter
mi	Mile	Mile
mL	Milliliter	Milliliter
mM	Millimeter	Millimeter
oz	USOunce	US ounce
pc	Piece	Piece
pt	USPint	US Pint
pt_gb	GBPint	GB pint
qt	USQuart	US Quart
qt_gb	GBQuart	GB Quart
SqcM	SquareCentimeter	Square centimeter
Sqft	SquareFoot	Square foot
Sqin	SquareInch	Square inch
SqkM	SquareKilometer	Square kilometer
SqM	SquareMeter	Square meter
Sqmi	SquareMile	Square mile
SqmM	SquareMillimeter	Square millimeter
Sqyd	SquareYard	Square yard
yd	Yard	Yard
MMbbl	MillionBarrels	Million Barrels
USD	USDollars	US Dollars

Used in groups: [PaymentGrp](#)

**171.2.4124 PayReportID**

Unique ID of the PayManagementReport(35=EA) message.

Type: **String**

Used in messages: **PayManagementReport**, **PayManagementReportAck**

**171.2.4125 PayReportRefID**

Reference identifier of the PayManagementReport(35=EA). To be used with PayReportTransType(2804)=1 (Replace).

Type: **String**

Used in messages: **PayManagementReport**

**171.2.4126 PayReportStatus**

Identifies status of the payment report.

Type: **int**

Allowed values in PayReportStatusCodeSet:

Code	Name	Description
0	Received	Received, not yet processed
1	Accepted	Accepted
2	Rejected	Rejected
3	Disputed	Disputed. Used when there is some type of mismatch that can be resolved.

Used in messages: **PayManagementReportAck**

**171.2.4127 PayReportTransType**

Identifies the message transaction type.

Type: **int**

Allowed values in PayReportTransTypeCodeSet:

---

Code	Name	Description
0	New	New
1	Replace	Replace
2	Status	Status. An unsolicited message reporting the current progress status of the payment.

---

Used in messages: [PayManagementReport](#)

#### **171.2.4128 PayRequestID**

Unique ID of the PayManagementRequest(35=DY) message.

Type: [String](#)

Used in messages: [PayManagementReport](#), [PayManagementRequest](#), [PayManagementRequestAck](#)

#### **171.2.4129 PayRequestRefID**

Reference identifier of the PayManagementRequest(35=DY). To be used with PayRequest-TransType(2811)=1 (Cancel).

Type: [String](#)

Used in messages: [PayManagementRequest](#)

#### **171.2.4130 PayRequestStatus**

Identifies status of the request being responded to.

Type: [int](#)

Allowed values in PayRequestStatusCodeSet:

---

Code	Name	Description
0	Received	Received, not yet processed
1	Accepted	Accepted
2	Rejected	Rejected
3	Disputed	Disputed. Used when there is some type of mismatch that can be resolved.

---

Used in messages: [PayManagementReport](#), [PayManagementRequestAck](#)

### **171.2.4131 PayRequestTransType**

Identifies the message transaction type.

Type: [int](#)

Allowed values in [PayRequestTransTypeCodeSet](#):

Code	Name	Description
0	New	New
1	Cancel	Cancel

Used in messages: [PayManagementRequest](#)

### **171.2.4132 PctAtRisk**

Percent at risk due to lowest possible call.

Type: [Percentage](#)

Used in components: [InstrumentExtension](#)

### **171.2.4133 PeggedPrice**

The price the order is currently pegged at

Type: [Price](#)

Used in messages: [ExecutionReport](#)

### **171.2.4134 PeggedRefPrice**

The value of the reference price that the order is pegged to.  $\text{PeggedRefPrice} + \text{PegOffsetValue} (211) = \text{PeggedPrice} (839)$  unless the limit price (44, [Price](#)) is breached. The values may not be exact due to rounding.

Type: [Price](#)

Used in messages: [ExecutionReport](#)

### 171.2.4135 PegInstructions

The Peg Instructions component block is used to tie the price of a security to a market event such as opening price, mid-price, best price. The Peg Instructions block may also be used to tie the price to the behavior of a related security.

Name	Mult.	Type	Description
PegOffsetValue	[0..1]	float	Amount (signed) added to the peg for a pegged order in the context of the PegOffsetType
PegPriceType	[0..1]	CodeSet	Defines the type of peg.
PegMoveType	[0..1]	CodeSet	Describes whether peg is static/fixed or floats
PegOffsetType	[0..1]	CodeSet	Type of Peg Offset (e.g. price offset, tick offset etc)
PegLimitType	[0..1]	CodeSet	Specifies nature of resulting pegged price (e.g. or better limit, strict limit etc)
PegRoundDirection	[0..1]	CodeSet	If the calculated peg price is not a valid tick price, specifies how to round the price (e.g. be more or less aggressive)
PegScope	[0..1]	CodeSet	The scope of the "related to" price of the peg (e.g. local, global etc)
PegSecurityIDSource	[0..1]	CodeSet	Required if PegSecurityID is specified.
PegSecurityID	[0..1]	String	Requires PegSecurityIDSource if specified.
PegSymbol	[0..1]	String	
PegSecurityDesc	[0..1]	String	

Used in groups: [ListOrdGrp](#)

Used in messages: [CrossOrderCancelReplaceRequest](#), [ExecutionReport](#), [MultilegOrderCancelReplace](#), [NewOrderCross](#), [NewOrderMultileg](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#)

### 171.2.4136 PegLimitType

Type of Peg Limit

Type: [int](#)

Allowed values in PegLimitTypeCodeSet:

---

Code	Name	Description
0	OrBetter	Or better (default) - price improvement allowed
1	Strict	Strict - limit is a strict limit
2	OrWorse	Or worse - for a buy the peg limit is a minimum and for a sell the peg limit is a maximum (for use for orders which have a price range)

---

Used in components: [PegInstructions](#)

### 171.2.4137 PegMoveType

Describes whether peg is static or floats

Type: [int](#)

Allowed values in PegMoveTypeCodeSet:

---

Code	Name	Description
0	Floating	Floating (default)
1	Fixed	Fixed

---

Used in components: [PegInstructions](#)

### 171.2.4138 PegOffsetType

Type of Peg Offset value

Type: [int](#)

Allowed values in PegOffsetTypeCodeSet:

---

Code	Name	Description
0	Price	Price (default)
1	BasisPoints	Basis Points
2	Ticks	Ticks
3	PriceTier	Price Tier / Level
4	Percentage	Percentage

---

Used in components: [PegInstructions](#)

### **171.2.4139 PegOffsetValue**

Amount (signed) added to the peg for a pegged order in the context of the PegOffsetType (836)  
(Prior to FIX 4.4 this field was of type PriceOffset)

Type: [float](#)

Used in components: [PegInstructions](#)

### **171.2.4140 PegPriceType**

Defines the type of peg.

Type: [int](#)

Allowed values in PegPriceTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	LastPeg	Last peg (last sale)
2	MidPricePeg	Mid-price peg (midprice of inside quote)
3	OpeningPeg	Opening peg
4	MarketPeg	Market peg
5	PrimaryPeg	Primary peg (primary market - buy at bid or sell at offer)
7	PegToVWAP	Peg to VWAP
8	TrailingStopPeg	Trailing Stop Peg
9	PegToLimitPrice	Peg to Limit Price
10	ShortSaleMinPricePeg	Short sale minimum price Peg. Short sale minimum price Peg (published price that a short sell order must meet in order to comply with regulatory requirements, e.g. SEC uptick rules).

---

Used in components: [PegInstructions](#)

### **171.2.4141 PegRoundDirection**

If the calculated peg price is not a valid tick price, specifies whether to round the price to be more or less aggressive

Type: **int**

Allowed values in PegRoundDirectionCodeSet:

Code	Name	Description
1	MoreAggressive	More aggressive - on a buy order round the price up to the nearest tick; on a sell order round down to the nearest tick
2	MorePassive	More passive - on a buy order round down to the nearest tick; on a sell order round up to the nearest tick

Used in components: **PegInstructions**

### **171.2.4142 PegScope**

The scope of the peg

Type: **int**

Allowed values in PegScopeCodeSet:

Code	Name	Description
1	Local	Local (Exchange, ECN, ATS)
2	National	National
3	Global	Global
4	NationalExcludingLocal	National excluding local

Used in components: **PegInstructions**

### **171.2.4143 PegSecurityDesc**

Security description of the security off whose prices the order will Peg.

Type: **String**

Used in components: **PegInstructions**

**171.2.4144 PegSecurityID**

Defines the identity of the security off whose prices the order will peg.

Type: **String**

Used in components: **PegInstructions**

**171.2.4145 PegSecurityIDSource**

Defines the identity of the security off whose prices the order will peg. Same values as SecurityIDSource (22)

Type: **String**

Allowed values in SecurityIDSourceCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	CUSIP	CUSIP
2	SEDOL	SEDOL
3	QUIK	QUIK
4	ISINNumber	ISIN
5	RICCode	RIC
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
7	ISOCountryCode	ISO Country Code
8	ExchangeSymbol	Exchange symbol
9	ConsolidatedTapeAssociation	Consolidated Tape Association (CTA) Symbol (SIAC CTS/CQS line format)
A	BloombergSymbol	Bloomberg Symbol
B	Wertpapier	Wertpapier
C	Dutch	Dutch
D	Valoren	Valoren
E	Sicovam	Sicovam
F	Belgian	Belgian
G	Common	"Common" (Clearstream and Euroclear)
H	ClearingHouse	Clearing house / Clearing organization
I	ISDAFpMLSpecification	ISDA/FpML product specification (XML in SecurityXML(1185))
J	OptionPriceReportingAuthority	Option Price Reporting Authority
K	ISDAFpMLURL	ISDA/FpML product URL (URL in SecurityID(48))

---

Code	Name	Description
L	LetterOfCredit	Letter of credit
M	MarketplaceAssignedIdentifier	Marketplace-assigned Identifier
N	MarkitREDEntityCLIP	Markit RED entity CLIP
P	MarkitREDPairCLIP	Markit RED pair CLIP
Q	CFTCCommodityCode	CFTC commodity code
R	ISDACommodityReferencePrice	ISDA Commodity Reference Price
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
T	LegalEntityIdentifier	Legal entity identifier
U	Synthetic	Synthetic. Used to specify that the security identifier is synthetic for linking nested underliers when there is no market identifier for the collection.
V	FidessaInstrumentMnemonic	Fidessa Instrument Mnemonic (FIM)
W	IndexName	Index name. Standard name of the index or rate index, e.g. "LIBOR" or "iTraxx Australia".
X	UniformSymbol	Uniform Symbol (UMTF Symbol)
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in components: [PegInstructions](#)

### 171.2.4146 PegSymbol

Defines the common, 'human understood' representation of the security off whose prices the order will Peg.

Type: [String](#)

Used in components: [PegInstructions](#)

### 171.2.4147 PhysicalSettlBusinessDays

The number of business days used in the determination of physical settlement. Its precise meaning depends on the context in which this element is used.

Type: [int](#)

Used in groups: [PhysicalSettlTermGrp](#)

**171.2.4148 PhysicalSettlCurrency**

Specifies the currency of physical settlement. Uses ISO 4217 currency codes.

Type: **Currency**

Used in groups: **PhysicalSettlTermGrp**

**171.2.4149 PhysicalSettlDeliverableObligationGrp**

The PhysicalSettlDeliverableObligationGrp is a repeating component within the PhysicalSettlTermGrp component used to report CDS physical settlement delivery obligations.

---

<b>Name</b>	<b>Mult.</b>	<b>Type</b>	<b>Description</b>
<b>NoPhysicalSettlDeliverableObligations</b>	[1..1]	NumInGroup	
<b>PhysicalSettlDeliverableObligation-Type</b>	[0..1]	String	Required if NoPhysicalSettlDeliverableObligations (40209) > 0.
<b>PhysicalSettlDeliverableObligationValue</b>	[0..1]	String	

---

Used in groups: **PhysicalSettlTermGrp**

**171.2.4150 PhysicalSettlDeliverableObligationType**

Specifies the type of deliverable obligation applicable for physical settlement. See <http://www.fixtradingcommunity.org> for code list for applicable deliverable obligation types.

Type: **String**

Used in groups: **PhysicalSettlDeliverableObligationGrp**

**171.2.4151 PhysicalSettlDeliverableObligationValue**

Physical settlement deliverable obligation value appropriate to PhysicalSettlDeliverableObligationType(40210). See [http://www.fixtradingcommunity.org/codelists#Deliverable\\_Obligation\\_Types](http://www.fixtradingcommunity.org/codelists#Deliverable_Obligation_Types) for applicable obligation type values.

Type: **String**

Used in groups: **PhysicalSettlDeliverableObligationGrp**

**171.2.4152 PhysicalSettlMaximumBusinessDays**

A maximum number of business days. Its precise meaning depends on the context in which this element is used. Intended to be used to limit a particular ISDA fallback provision.

Type: **int**

Used in groups: **PhysicalSettlTermGrp**

**171.2.4153 PhysicalSettlTermGrp**

The PhysicalSettlTermGrp is a repeating component within the Instrument component used to report physical settlement terms referenced from UnderlyingInstrument component.

---

Name	Mult.	Type	Description
NoPhysicalSettlTerms	[1..1]	NumInGroup	
PhysicalSettlDeliverableObligationGrp	[0..*]	Group	Required if NoPhysicalSettlTerms(40204) > 0.
PhysicalSettlCurrency	[0..1]	Currency	
PhysicalSettlBusinessDays	[0..1]	int	
PhysicalSettlMaximumBusinessDays	[0..1]	int	
PhysicalSettlTermXID	[0..1]	XID	

---

Used in components: **Instrument**

**171.2.4154 PhysicalSettlTermXID**

A named string value referenced by UnderlyingSettlTermXIDRef(41315).

Type: **XID**

Used in groups: **PhysicalSettlTermGrp**

**171.2.4155 Pool**

For Fixed Income, identifies MBS / ABS pool.

Type: **String**

Used in components: **Instrument**

**171.2.4156 PosAmt**

Position amount

Type: **Amt**

Used in groups: **PositionAmountData**

**171.2.4157 PosAmtMarketID**

Market associated with the position amount.

Type: **String**

Used in groups: **PositionAmountData**

**171.2.4158 PosAmtMarketSegmentID**

Market segment associated with the position amount.

Type: **String**

Used in groups: **PositionAmountData**

**171.2.4159 PosAmtPrice**

The price used to calculate the PosAmt(708).

Type: **Price**

Used in groups: **PositionAmountData**

**171.2.4160 PosAmtPriceType**

Specifies the type of price for PosAmtPrice(2876).

Type: **int**

Allowed values in PriceTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	Percentage	Percentage (i.e. percent of par) (often called "dollar price" for fixed income)

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
2	PerUnit	Per unit (i.e. per share or contract)
3	FixedAmount	Fixed amount (absolute value)
4	Discount	Discount - percentage points below par
5	Premium	Premium - percentage points over par
6	Spread	Spread (basis points spread). Usually the difference in yield between two switched bonds or a corporate bond traded spread-to-benchmark.
7	TEDPrice	TED Price
8	TEDYield	TED Yield
9	Yield	Yield
10	FixedCabinetTradePrice	Fixed cabinet trade price (primarily for listed futures and options)
11	VariableCabinetTradePrice	Variable cabinet trade price (primarily for listed futures and options)
12	PriceSpread	Price spread. Price spread is expressed based on market convention for the asset being priced or traded. For example, the difference between the prices of a multileg switch or strategy expressed in basis points for a CDS or TBA roll; a price value to be added to a reference price, such as a "pay up" for specified pools
13	ProductTicksInHalves	Product ticks in halves
14	ProductTicksInFourths	Product ticks in fourths
15	ProductTicksInEighths	Product ticks in eighths
16	ProductTicksInSixteenths	Product ticks in sixteenths
17	ProductTicksInThirtySeconds	Product ticks in thirty-seconds
18	ProductTicksInSixtyFourths	Product ticks in sixty-fourths
19	ProductTicksInOneTwentyEighths	Product ticks in one-twenty-eighths
20	NormalRateRepresentation	Normal rate representation (e.g. FX rate)
21	InverseRateRepresentation	Inverse rate representation (e.g. FX rate)
22	BasisPoints	Basis points. When the price is not spread based.
23	UpfrontPoints	Up front points. Used specifically for CDS pricing.
24	InterestRate	Interest rate. When the price is an interest rate. For example, used with benchmark reference rate.
25	PercentageNotional	Percentage of notional

Used in groups: **PositionAmountData**

**171.2.4161 PosAmtReason**

Specifies the reason for an amount type when reported on a position. Useful when multiple instances of the same amount type are reported.

Type: **int**

Allowed values in PosAmtReasonCodeSet:

Code	Name	Description
0	OptionsSettlement	Options settlement
1	PendingErosionAdjustment	Pending erosion adjustment
2	FinalErosionAdjustment	Final erosion adjustment
3	TearUpCouponAmount	Tear-up coupon amount
4	PriceAlignmentInterest	Price alignment interest. To minimize the impact of daily cash variation margin payments on the pricing of interest rate swaps, the Clearing House will charge interest on cumulative variation margin received and pay interest on cumulative variation margin paid in respect of these instruments. This interest element is known as price alignment interest.
5	DeliveryInvoiceCharges	Delivery invoice charges
6	DeliveryStorageCharges	Delivery storage charges

Used in groups: **PositionAmountData**

**171.2.4162 PosAmtStreamDesc**

Corresponds to the value in StreamDesc(40051) in the StreamGrp component.

Type: **String**

Used in groups: **PositionAmountData**

**171.2.4163 PosAmtType**

Type of Position amount

Type: **String**

Allowed values in PosAmtTypeCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
CASH	CashAmount	Cash amount (corporate event)
CRES	CashResidualAmount	Cash residual amount
FMTM	FinalMarkToMarketAmount	Final mark-to-market amount
IMTM	IncrementalMarkToMarketAmount	Incremental mark-to-market
PREM	PremiumAmount	Premium amount
SMTM	StartOfDayMarkToMarketAmount	Start of day mark-to-market
TVAR	TradeVariationAmount	Trade variation amount
VADJ	ValueAdjustedAmount	Value adjusted amount
SETL	SettlementValue	Settlement value
ICPN	InitialTradeCouponAmount	Initial trade coupon amount
ACPN	AccruedCouponAmount	Accrued coupon amount
CPN	CouponAmount	Coupon amount
IACPN	IncrementalAccruedCoupon	Incremental accrued coupon
CMTM	CollateralizedMarkToMarket	Collateralized mark-to-market
ICMTM	IncrementalCollateralizedMark-ToMarket	Incremental collateralized mark-to-market
DLV	CompensationAmount	Compensation amount
BANK	TotalBankedAmount	Total banked amount
COLAT	TotalCollateralizedAmount	Total collateralized amount
LSNV	LongPairedSwapNotionalValue	Long paired swap or swaption notional value
SSNV	ShortPairedSwapNotionalValue	Short paired swap or swaption notional value
SACPN	StartOfDayAccruedCoupon	Start-of-day accrued coupon
NPV	NetPresentValue	Net present value
SNPV	StartOfDayNetPresentValue	Start-of-day net present value
NCF	NetCashFlow	Net cash flow
PVFEES	PresentValueOfFees	Present value of all fees
PV01	PresentValueOneBasisPoints	Present value of one basis points. Change in value if yield curve shifts 0.01%.
5YREN	FiveYearEquivalentNotional	The five year equivalent notional amount
UMTM	UndiscountedMarkToMarket	Undiscounted mark-to-market
MTD	MarkToModel	Mark-to-model
VMTM	MarkToMarketVariance	Mark-to-market variance
VMTD	MarkToModelVariance	Mark-to-model variance
UPFRNT	UpfrontPayment	Upfront payment

Code	Name	Description
ENDV	EndVale	End value. Principal amount of a securities financing transaction on maturity date.
MGNLN	OutstandingMarginLoan	Outstanding margin loan. The amount of the outstanding margin loan. In the event that the loan has a short market value, PosAmt(708) would be a negative value.
LNVL	LoanValue	Loan value. The amount of the loan.

Used in groups: [PositionAmountData](#)

### 171.2.4164 PositionAmountData

The PositionAmountData component block is used to report netted amounts associated with position quantities. In the listed derivatives market the amount is generally expressing a type of futures variation or option premium. In the equities market this may be the net pay or collect on a given position.

Name	Mult.	Type	Description
NoPosAmt	[1..1]	NumInGroup	Number of Position Amount entries
PosAmtType	[0..1]	CodeSet	
PosAmt	[0..1]	Amt	
PosAmtStreamDesc	[0..1]	String	Used when the PosAmt(708) value corresponds to a specific stream in of a swap.
PositionCurrency	[0..1]	String	
PositionCurrencyCodeSource	[0..1]	CodeSet	
PositionFXRate	[0..1]	float	
PositionFXRateCalc	[0..1]	CodeSet	
PosAmtReason	[0..1]	CodeSet	
PosAmtMarketSegmentID	[0..1]	String	
PosAmtMarketID	[0..1]	String	
PosAmtPrice	[0..1]	Price	
PosAmtPriceType	[0..1]	CodeSet	

Used in messages: [AccountSummaryReport](#), [AllocationInstruction](#), [AllocationInstructionAlert](#), [AllocationReport](#), [AssignmentReport](#), [PositionMaintenanceReport](#), [PositionMaintenanceRequest](#), [PositionReport](#), [PositionTransferInstruction](#), [PositionTransferReport](#), [TradeCaptureReport](#), [TradeCaptureReportAck](#)

**171.2.4165 PositionCapacity**

Used to describe the ownership of the position.

Type: **int**

Allowed values in PositionCapacityCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Principal	Principal
1	Agent	Agent
2	Customer	Customer
3	Counterparty	Counterparty

---

Used in messages: **PositionMaintenanceReport**, **PositionReport**

**171.2.4166 PositionContingentPrice**

Risk adjusted price used to calculate variation margin on a position.

Type: **Price**

Used in messages: **AssignmentReport**, **PositionReport**

**171.2.4167 PositionCurrency**

The Currency in which the position Amount is denominated

Type: **String**

Used in groups: **PositionAmountData**

**171.2.4168 PositionCurrencyCodeSource**

Identifies class or source of the PositionCurrency(1055) value.

Type: **String**

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in groups: [PositionAmountData](#)

### 171.2.4169 PositionEffect

Indicates whether the resulting position after a trade should be an opening position or closing position. Used for omnibus accounting - where accounts are held on a gross basis instead of being netted together.

Type: [char](#)

Allowed values in PositionEffectCodeSet:

Code	Name	Description
C	Close	Close
F	FIFO	FIFO
O	Open	Open
R	Rolled	Rolled
N	CloseButNotifyOnOpen	Close but notify on open
D	Default	Default

Used in groups: [ListOrdGrp](#), [SideCrossOrdModGrp](#), [TrdCapRptAckSideGrp](#), [TrdCapRptSideGrp](#), [TrdMatchSideGrp](#)

Used in messages: [AllocationInstruction](#), [AllocationInstructionAlert](#), [AllocationReport](#), [ExecutionReport](#), [MultilegOrderCancelReplace](#), [NewOrderMultileg](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#)

**171.2.4170 PositionFXRate**

Foreign exchange rate used to compute the PosAmt(708) from the PositionCurrency(1055) and the Currency (15).

Type: **float**

Used in groups: **PositionAmountData**

**171.2.4171 PositionFXRateCalc**

Specifies whether or not PositionFXRate(2097) should be multiplied or divided.

Type: **char**

Allowed values in UnderlyingFXRateCalcCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Divide	Divide
M	Multiply	Multiply

---

Used in groups: **PositionAmountData**

**171.2.4172 PositionID**

Unique identifier for a position entity. Refer to PosMaintRptID(721) for a unique identifier of a position report message.

Type: **String**

Used in messages: **PositionMaintenanceReport, PositionReport**

**171.2.4173 PositionLimit**

Position Limit for a given exchange-traded product.

Type: **int**

Used in components: **Instrument**

**171.2.4174 PositionQty**

The PositionQty component block specifies the various types of position quantity in the position life-cycle including start-of-day, intraday, trade, adjustments, and end-of-day position quantities. Quantities are expressed in terms of long and short quantities.

Name	Mult.	Type	Description
NoPositions	[1..1]	NumInGroup	
PosType	[0..1]	CodeSet	Required if NoPositions > 1
LongQty	[0..1]	Qty	
ShortQty	[0..1]	Qty	
CoveredQty	[0..1]	Qty	Short quantity that is considered covered, e.g. used for short option position
PosQtyStatus	[0..1]	CodeSet	
QuantityDate	[0..1]	LocalMktDate	Date associated with the quantity being reported
PosQtyUnitOfMeasure	[0..1]	CodeSet	
PosQtyUnitOfMeasureCurrency	[0..1]	Currency	
PosQtyUnitOfMeasureCurrencyCodeSource	[0..1]	CodeSet	
NestedParties	[0..*]	Group	Optional repeating group - used to associate or distribute position to a specific party other than the party that currently owns the position.

Used in messages: [AdjustedPositionReport](#), [AssignmentReport](#), [PositionMaintenanceReport](#), [PositionMaintenanceRequest](#), [PositionReport](#), [PositionTransferInstruction](#), [PositionTransferReport](#)

**171.2.4175 PosMaintAction**

Maintenance Action to be performed.

Type: `int`

Allowed values in PosMaintActionCodeSet:

Code	Name	Description
1	New	New. Used to increment the overall transaction quantity.
2	Replace	Replace. Used to override the overall transaction quantity or specific add messages based on the reference ID.

---

Code	Name	Description
3	Cancel	Cancel. Used to remove the overall transaction quantity or specific add messages based on the reference ID.
4	Reverse	Reverse. Used to completely back-out the transaction such that the transaction never existed.

---

Used in messages: [PositionMaintenanceReport](#), [PositionMaintenanceRequest](#)

### 171.2.4176 PosMaintResult

Result of Position Maintenance Request.

Type: [int](#)

Allowed values in PosMaintResultCodeSet:

---

Code	Name	Description
0	SuccessfulCompletion	Successful Completion - no warnings or errors
1	Rejected	Rejected
99	Other	Other

---

Used in messages: [PositionMaintenanceReport](#)

### 171.2.4177 PosMaintRptID

Unique identifier for this position report

Type: [String](#)

Used in messages: [AdjustedPositionReport](#), [PositionMaintenanceReport](#), [PositionReport](#), [RequestForPositionsAck](#)

### 171.2.4178 PosMaintRptRefID

Reference to a PosMaintRptID (721) from a previous Position Maintenance Report that is being replaced or canceled.

Type: [String](#)

Used in messages: [AdjustedPositionReport](#), [PositionMaintenanceReport](#), [PositionMaintenanceRequest](#)

### 171.2.4179 PosMaintStatus

Status of Position Maintenance Request

Type: [int](#)

Allowed values in PosMaintStatusCodeSet:

---

Code	Name	Description
0	Accepted	Accepted
1	AcceptedWithWarnings	Accepted With Warnings
2	Rejected	Rejected
3	Completed	Completed
4	CompletedWithWarnings	Completed With Warnings

---

Used in messages: [PositionMaintenanceReport](#)

### 171.2.4180 PosQtyStatus

Status of this position.

Type: [int](#)

Allowed values in PosQtyStatusCodeSet:

---

Code	Name	Description
0	Submitted	Submitted
1	Accepted	Accepted
2	Rejected	Rejected

---

Used in groups: [PositionQty](#), [TradePositionQty](#)

**171.2.4181 PosQtyUnitOfMeasure**

Indicates the unit of measure of the position quantity when not expressed in contracts.

Type: **String**

Allowed values in UnitOfMeasureCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet
Bbl	Barrels	Barrels. Equal to 42 US gallons
CBM	CubicMeters	Cubic Meters
BDFT	BoardFeet	Board feet. Equal to 144 cubic inches
GJ	Gigajoules	gigajoules
Bu	Bushels	Bushels
kHR	HeatRate	Heat rate. The number of BTUs required to produce one kilowatt hour of electricity, typically 3,412.14 BTUs per 1 kWh.
Ccy	Currency	Amount of currency
kWh	KilowattHours	Kilowatt hours
CDD	CoolingDegreeDay	Cooling degree day
MHR	MegaHeatRate	Mega heat rate. The number of million BTUs required to produce one megawatt hour of electricity, typically 3.41214 million BTUs per 1 MWh.
CER	CertifiedEmissionsReduction	Certified emissions reduction
MMBtu	OneMillionBTU	One Million BTU
CPD	CriticalPrecipDay	Critical precipitation day
MWh	MegawattHours	Megawatt hours
CRT	ClimateReserveTonnes	Climate reserve tonnes
thm	Therms	therms. Equal to 100,000 BTU
cwt	Hundredweight	Hundredweight(US). Equal to 100 lbs
tnCO2	TonsOfCarbonDioxide	Tons of carbon dioxide
day	Day	Days
dt	DryMetricTons	Dry metric tons
EnvAllwnc	EnvAllwncCert	Environmental allowance certificates
EnvCrd	EnvironmentalCredit	Environmental credit
EnvOfst	EnvironmentalOffset	Environmental Offset
g	Grams	Grams

<b>Code</b>	<b>Name</b>	<b>Description</b>
Gal	Gallons	Gallons
GT	GrossTons	Gross tons. Also known as long tons or imperial tons, equal to 2240 lbs
HDD	HeatingDegreeDay	Heating degree day
IPNT	IndexPoint	Index point
kg	Kilograms	Kilograms
kL	Kiloliters	kiloliters
kW-a	KilowattYear	Kilowatt year (electrical capacity)
kW-d	KilowattDay	Kilowatt day (electrical capacity)
kW-h	KilowattHour	Kilowatt hour (electrical capacity)
kW-M	KilowattMonth	Kilowatt month (electrical capacity)
kW-min	KilowattMinute	Kilowatt-Minute (electrical capacity)
L	Liters	liters
lbs	Pounds	pounds
MW-a	MegawattYear	Megawatt year (electrical capacity)
MW-d	MegawattDay	Megawatt day (electrical capacity)
MW-h	MegawattHour	Megawatt hour (electrical capacity)
MW-M	MegawattMonth	Megawatt month (electrical capacity)
MW-min	MegawattMinute	Megawatt minute (electrical capacity)
oz_tr	TroyOunces	Troy ounces
PRINC	PrincipalWithRelationToDebtInstrument	Principal with relation to debt instrument
t	MetricTons	Metric tons. Also known as Tonnes, equal to 1000 kg
tn	Tons	Tons (US). Equal to 2000 lbs
a	Are	Are
ac	Acre	Acre
cL	Centiliter	Centiliter
cM	Centimeter	Centimeter
DGE	DieselGallonEquivalent	Diesel gallon equivalent
ft	Foot	Foot
Gal_gb	GBGallon	GB Gallon
GGE	GasolineGallonEquivalent	Gasonline gallon equivalent
ha	Hectare	Hectare
in	Inch	Inch
kM	Kilometer	Kilometer

Code	Name	Description
M	Meter	Meter
mi	Mile	Mile
mL	Milliliter	Milliliter
mM	Millimeter	Millimeter
oz	USOunce	US ounce
pc	Piece	Piece
pt	USPint	US Pint
pt_gb	GBPint	GB pint
qt	USQuart	US Quart
qt_gb	GBQuart	GB Quart
SqcM	SquareCentimeter	Square centimeter
Sqft	SquareFoot	Square foot
Sqin	SquareInch	Square inch
SqkM	SquareKilometer	Square kilometer
SqM	SquareMeter	Square meter
Sqmi	SquareMile	Square mile
SqmM	SquareMillimeter	Square millimeter
Sqyd	SquareYard	Square yard
yd	Yard	Yard
MMbbl	MillionBarrels	Million Barrels
USD	USDollars	US Dollars

Used in groups: [PositionQty](#)

#### 171.2.4182 PosQtyUnitOfMeasureCurrency

Indicates the currency of the unit of measure if position quantity is expressed in valuation rather than contracts. Conditionally required when PosQtyUnitOfMeasure(1836)=Ccy.

Type: [Currency](#)

Used in groups: [PositionQty](#)

#### 171.2.4183 PosQtyUnitOfMeasureCurrencyCodeSource

Identifies class or source of the PosQtyUnitOfMeasureCurrency(1835) value.

Type: **String**

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in groups: **PositionQty**

#### **171.2.4184 PosReportAction**

Indicates action that triggered the Position Report.

Type: **int**

Allowed values in PosMaintActionCodeSet:

Code	Name	Description
1	New	New. Used to increment the overall transaction quantity.
2	Replace	Replace. Used to override the overall transaction quantity or specific add messages based on the reference ID.
3	Cancel	Cancel. Used to remove the overall transaction quantity or specific add messages based on the reference ID.
4	Reverse	Reverse. Used to completely back-out the transaction such that the transaction never existed.

Used in messages: **PositionReport**

#### **171.2.4185 PosReqID**

Unique identifier for the position maintenance request as assigned by the submitter

Type: **String**

Used in messages: **AssignmentReport**, **PositionMaintenanceReport**, **PositionMaintenanceRequest**, **PositionReport**, **RequestForPositions**, **RequestForPositionsAck**

### **171.2.4186 PosReqResult**

Result of Request for Positions.

Type: **int**

Allowed values in PosReqResultCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	ValidRequest	Valid request
1	InvalidOrUnsupportedRequest	Invalid or unsupported request
2	NoPositionsFoundThatMatchCriteria	No positions found that match criteria
3	NotAuthorizedToRequestPositions	Not authorized to request positions
4	RequestForPositionNotSupported	Request for position not supported
99	Other	Other. Use Text(58) for further explanation.

---

Used in messages: **PositionReport**, **RequestForPositionsAck**

### **171.2.4187 PosReqStatus**

Status of Request for Positions

Type: **int**

Allowed values in PosReqStatusCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Completed	Completed
1	CompletedWithWarnings	Completed With Warnings
2	Rejected	Rejected

---

Used in messages: **RequestForPositionsAck**

**171.2.4188 PosReqType**

Used to specify the type of position request being made.

Type: **int**

Allowed values in PosReqTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Positions	Positions
1	Trades	Trades
2	Exercises	Exercises
3	Assignments	Assignments
4	SettlementActivity	Settlement Activity
5	BackoutMessage	Backout Message
6	DeltaPositions	Delta Positions
7	NetPosition	Net Position
8	LargePositionsReporting	Large Positions Reporting
9	ExercisePositionReportingSubmission	Exercise Position Reporting Submission
10	PositionLimitReportingSubmitting	Position Limit Reporting Submission

---

Used in messages: **AdjustedPositionReport**, **PositionReport**, **RequestForPositions**, **RequestForPositionsAck**

**171.2.4189 PossDupFlag**

Indicates possible retransmission of message with this sequence number

Type: **Boolean**

Allowed values in PossDupFlagCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
N	OriginalTransmission	Original transmission
Y	PossibleDuplicate	Possible duplicate

---

Used in components: **StandardHeader**

**171.2.4190 PossResend**

Indicates that message may contain information that has been sent under another sequence number.

Type: **Boolean**

Allowed values in PossResendCodeSet:

Code	Name	Description
N	OriginalTransmission	Original Transmission
Y	PossibleResend	Possible Resend

Used in components: **StandardHeader**

**171.2.4191 PosTransType**

Identifies the type of position transaction.

Type: **int**

Allowed values in PosTransTypeCodeSet:

Code	Name	Description
1	Exercise	Exercise
2	DoNotExercise	Do not exercise
3	PositionAdjustment	Position adjustment
4	PositionChangeSubmission	Position change submission / margin disposition
5	Pledge	Pledge
6	LargeTraderSubmission	Large trader submission
7	LargePositionsReportingSubmission	Large positions reporting submission
8	LongHoldings	Long holdings
9	InternalTransfer	Internal transfer. Changes due to transfer of positions within a firm.
10	TransferOfFirm	Transfer of firm. Changes due to transfer of all positions of a firm.
11	ExternalTransfer	External transfer. Changes due to transfer of positions between firms.
12	CorporateAction	Corporate action

---

Code	Name	Description
13	Notification	Notification. Information about a position that has been chosen for assignment.
14	PositionCreation	Position creation. Changes due to an option exercise causing a new futures position to be created.
15	Closeout	Close out. Information about a position that has been closed out.
16	Reopen	Reopen. Information about a position that has been reopened, i.e. reversal of a close out.

---

Used in messages: [PositionMaintenanceReport](#), [PositionMaintenanceRequest](#)

#### **171.2.4192 PostTradePaymentAccount**

The cash account on the books of the receiver of the request or the sender of the report to be debited or credited.

Type: [String](#)

Used in components: [PostTradePayment](#)

#### **171.2.4193 PostTradePaymentAmount**

The payment amount for the specified [PostTradePaymentType\(2824\)](#).

Type: [Amt](#)

Used in components: [PostTradePayment](#)

#### **171.2.4194 PostTradePaymentCalculationDate**

The (actual) date the periodic payments calculations are made.

Type: [LocalMktDate](#)

Used in components: [PostTradePayment](#)

#### **171.2.4195 PostTradePayment**

This component specifies the details of a payment between the parties involved.

Name	Mult.	Type	Description
PostTradePaymentType	[1..1]	String	
PostTradePaymentAmount	[1..1]	Amt	
PostTradePaymentCurrency	[0..1]	Currency	
PostTradePaymentCurrencyCodeSource	[0..1]	CodeSet	
PostTradePaymentCalculationDate	[1..1]	LocalMktDate	The date payment calculations are made. This may be earlier than the date in ClearingBusinessDate(715). When the report is sent unsolicited, this is the payment calculation date as determined by report sender.
PostTradePaymentValueDate	[1..1]	LocalMktDate	The date the payment is legally confirmed to settle.
PostTradePaymentFinalValueDate	[0..1]	LocalMktDate	The actual payment date in the event it differs from the date specified in PostTradePaymentValueDate(2826).
PostTradePaymentDebitOrCredit	[1..1]	CodeSet	
PostTradePaymentAccount	[1..1]	String	
PostTradePaymentID	[0..1]	String	
PostTradePaymentDesc	[0..1]	String	
EncodedPostTradePaymentDescLen	[0..1]	Length	Must be set if EncodedPostTradePaymentDesc(2814) field is specified and must immediately precede it.
EncodedPostTradePaymentDesc	[0..1]	data	Encoded (non-ASCII characters) representation of the PostTradePaymentDesc(2820) field in the encoded format specified via the MessageEncoding(347) field.
PostTradePaymentLinkID	[0..1]	String	
PostTradePaymentStatus	[0..1]	CodeSet	Used when PayReportTransType(2804)=2 (Status) to report actual payment status from payment service (i.e. after payment or remittance instruction with payment service).

Used in messages: [PayManagementReport](#), [PayManagementRequest](#)

### 171.2.4196 PostTradePaymentCurrency

Specifies the currency in which PostTradePaymentAmount(2817) is denominated.

PostTradePaymentCurrencyCodeSource(2956) may be used to disambiguate the code source scheme used, and ISO 4217 is the default scheme if absent.

Type: **Currency**

Used in components: **PostTradePayment**

#### **171.2.4197 PostTradePaymentCurrencyCodeSource**

Identifies class or source of the PostTradePaymentCurrency(2818) value.

Type: **String**

Allowed values in CurrencyCodeSourceCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in components: **PostTradePayment**

#### **171.2.4198 PostTradePaymentDebitOrCredit**

Payment side of this individual payment from the requesting firm's perspective.

Type: **int**

Allowed values in PostTradePaymentDebitOrCreditCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	DebitPay	Debit / Pay
1	CreditReceive	Credit / Receive

Used in components: **PostTradePayment**

#### **171.2.4199 PostTradePaymentDesc**

A short descriptive name given to the payment, e.g. Premium, Upfront, etc. The description may be used as reference.

Type: **String**

Used in components: **PostTradePayment**

#### **171.2.4200 PostTradePaymentFinalValueDate**

The actual or final payment date on which the payment was made.

Type: **LocalMktDate**

Used in components: **PostTradePayment**

#### **171.2.4201 PostTradePaymentID**

The identifier for the individual payment.

Type: **String**

Used in components: **PostTradePayment**

#### **171.2.4202 PostTradePaymentLinkID**

Used to link a group of payments together, e.g. cross-currency payments associated with a swap.

Type: **String**

Used in components: **PostTradePayment**

#### **171.2.4203 PostTradePaymentStatus**

Used to indicate the status of a post-trade payment.

Type: **int**

Allowed values in PostTradePaymentStatusCodeSet:

---

Code	Name	Description
0	New	New. Payment is awaiting confirmation from the recipient.
1	Initiated	Initiated. Payment is confirmed by the recipient and has been scheduled.
2	Pending	Pending. Payment has been instructed to the payment service but status is unknown.
3	Confirmed	Confirmed. Payment is complete and confirmed by the payment service.
4	Rejected	Rejected. Payment was rejected by the payment service.

---

Used in components: [PostTradePayment](#)

#### **171.2.4204 PostTradePaymentType**

Type of post-trade payment.

See ISITC "Payments Cash Purpose Codes" for list of payment type codes to use available at <https://isitc.org/market-practices/reference-data-and-standards-market-practice> and select "ISITC Classification Code List".

Type: [String](#)

Used in components: [PostTradePayment](#)

#### **171.2.4205 PostTradePaymentValueDate**

The adjusted (for holidays and other non-business days) payment date on which the payment is expected to settle.

Type: [LocalMktDate](#)

Used in components: [PostTradePayment](#)

#### **171.2.4206 PosType**

Used to identify the type of quantity that is being returned.

Type: [String](#)

Allowed values in PosTypeCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
ALC	AllocationTradeQty	Allocation Trade Qty
AS	OptionAssignment	Option Assignment
ASF	AsOfTradeQty	As-of Trade Qty
DLV	DeliveryQty	Delivery Qty
ETR	ElectronicTradeQty	Electronic Trade Qty
EX	OptionExerciseQty	Option Exercise Qty
FIN	EndOfDayQty	End-of-Day Qty
IAS	IntraSpreadQty	Intra-spread Qty
IES	InterSpreadQty	Inter-spread Qty
PA	AdjustmentQty	Adjustment Qty
PIT	PitTradeQty	Pit Trade Qty
SOD	StartOfDayQty	Start-of-Day Qty
SPL	IntegralSplit	Integral Split
TA	TransactionFromAssignment	Transaction from Assignment
TOT	TotalTransactionQty	Total Transaction Qty
TQ	TransactionQuantity	Transaction Quantity
TRF	TransferTradeQty	Transfer Trade Qty
TX	TransactionFromExercise	Transaction from Exercise
XM	CrossMarginQty	Cross Margin Qty
RCV	ReceiveQuantity	Receive Quantity
CAA	CorporateActionAdjustment	Corporate Action Adjustment
DN	DeliveryNoticeQty	Delivery Notice Qty
EP	ExchangeForPhysicalQty	Exchange for Physical Qty
PNTN	PrivatelyNegotiatedTradeQty	Privately negotiated Trade Qty (Non-regulated)
CEA	CreditEventAdjustment	Credit Event Adjustment
DLT	NetDeltaQty	Net Delta Qty
SEA	SuccessionEventAdjustment	Succession Event Adjustment
NET	NetQty	Net Qty
GRS	GrossQty	Gross Qty
ITD	IntradayQty	Intraday Qty
NDAS	GrossLongNonDeltaAdjustedSwap- tionPosition	Gross non-delta-adjusted swaption position
DAS	LongDeltaAdjustedPairedSwaption- Position	Delta-adjusted paired swaption position

Code	Name	Description
EXP	ExpiringQuantity	Expiring quantity. The position quantity on expiration day after the application of trade and post trade activity, but prior to the application of exercises and assignments.
UNEX	QuantityNotExercised	Quantity not exercised. The exercise quantity requested that was not allowed, e.g., the exercise quantity requested that exceeded the final long position.
REQ	RequestedExerciseQuantity	Requested exercise quantity. The exercise quantity requested. It may differ from the exercise quantity if it exceeds the final long position.
CFE	CashFuturesEquivalentQuantity	Cash futures equivalent quantity
SECLN	LoanOrBorrowedQuantity	Loan or borrowed quantity. The number of shares, par value of bonds or commodity contracts on loan or borrowed.

Used in groups: [PositionQty](#), [TradePositionQty](#)

### 171.2.4207 PosUndInstrmtGrp

Name	Mult.	Type	Description
<a href="#">NoUnderlyings</a>	[1..1]	NumInGroup	
<a href="#">UnderlyingInstrument</a>	[0..1]	Component	Insert here the set of "Underlying Instrument" (underlying symbology) fields defined in "Common Components of Application Messages". Required if NoUnderlyings > 0
<a href="#">UnderlyingSettlPrice</a>	[0..1]	Price	
<a href="#">UnderlyingSettlPriceType</a>	[0..1]	CodeSet	Values = Final, Theoretical
<a href="#">UnderlyingDeliveryAmount</a>	[0..1]	Amt	
<a href="#">UnderlyingAmount</a>	[0..*]	Group	Insert here the set of "Underlying Amount" fields defined in "Common Components of Application Messages"

Used in messages: [PositionReport](#)

### 171.2.4208 PreAllocGrp

Name	Mult.	Type	Description
NoAllocs	[1..1]	NumInGroup	Number of repeating groups for pre-trade allocation
AllocAccount	[0..1]	String	Required if NoAllocs > 0. Must be first field in repeating group.
AllocAcctIDSource	[0..1]	CodeSet	
AllocSettlCurrency	[0..1]	Currency	
AllocSettlCurrencyCodeSource	[0..1]	CodeSet	
IndividualAllocID	[0..1]	String	
AllocLegRefID	[0..1]	String	The field may not be used in NewOrderSingle(35=D), OrderCancelReplaceRequest(35=G), NewOrderList(35=E) or any other message where there are no legs.
NestedParties	[0..*]	Group	Insert here the set of "Nested Parties" (firm identification "nested" within additional repeating group) fields defined in "Common Components of Application Messages". Used for NestedPartyRole=Clearing Firm
AllocHandlInst	[0..1]	CodeSet	
AllocQty	[0..1]	Qty	
CustodialLotID	[0..1]	String	Only used for specific lot trades.
VersusPurchaseDate	[0..1]	LocalMktDate	Only used for specific lot trades. If this field is used, either VersusPurchasePrice(1754) or CurrentCostBasis(1755) should be specified.
VersusPurchasePrice	[0..1]	Price	Only used for specific lot trades. If this field is used, VersusPurchaseDate(1753) should be specified.
CurrentCostBasis	[0..1]	Amt	Only used for specific lot trades. If this field is used, VersusPurchaseDate(1753) should be specified

Used in groups: [ListOrdGrp](#), [SideCrossOrdModGrp](#)

Used in messages: [ExecutionReport](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#)

### 171.2.4209 PreallocMethod

Indicates the method of preallocation.

Type: **char**

Allowed values in PreallocMethodCodeSet:

Code	Name	Description
0	ProRata	Pro rata
1	DoNotProRata	Do not pro-rata - discuss first

Used in groups: [ListOrdGrp](#), [SideCrossOrdModGrp](#), [TrdCapRptAckSideGrp](#), [TrdCapRptSideGrp](#), [TrdMatchSideGrp](#)

Used in messages: [ExecutionReport](#), [MultilegOrderCancelReplace](#), [NewOrderMultileg](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#)

### 171.2.4210 PreAllocMlegGrp

Name	Mult.	Type	Description
<a href="#">NoAllocs</a>	[1..1]	NumInGroup	Number of repeating groups for pre-trade allocation
<a href="#">AllocAccount</a>	[0..1]	String	Required if NoAllocs > 0. Must be first field in repeating group.
<a href="#">AllocAcctIDSource</a>	[0..1]	CodeSet	
<a href="#">AllocSettlCurrency</a>	[0..1]	Currency	
<a href="#">AllocSettlCurrencyCodeSource</a>	[0..1]	CodeSet	
<a href="#">IndividualAllocID</a>	[0..1]	String	
<a href="#">AllocLegRefID</a>	[0..1]	String	
<a href="#">NestedParties3</a>	[0..*]	Group	Insert here the set of "NestedParties3" (firm identification "nested" within additional repeating group) fields defined in "Common Components of Application Messages"
<a href="#">AllocQty</a>	[0..1]	Qty	
<a href="#">CustodialLotID</a>	[0..1]	String	Only used for specific lot trades.
<a href="#">VersusPurchaseDate</a>	[0..1]	LocalMktDate	Only used for specific lot trades. If this field is used, either VersusPurchasePrice(1754) or CurrentCostBasis(1755) should be specified.
<a href="#">VersusPurchasePrice</a>	[0..1]	Price	Only used for specific lot trades. If this field is used, VersusPurchaseDate(1753) should be specified.

---

Name	Mult.	Type	Description
CurrentCostBasis	[0..1]	Amt	Only used for specific lot trades. If this field is used, VersusPurchaseDate(1753) should be specified

---

Used in messages: [MultilegOrderCancelReplace](#), [NewOrderMultileg](#)

### 171.2.4211 PreTradeAnonymity

Allows trader to explicitly request anonymity or disclosure in pre-trade market data feeds. Anonymity is relevant in markets where counterparties are regularly disclosed in order depth feeds. Disclosure is relevant when counterparties are not normally visible.

Type: [Boolean](#)

Used in components: [TradeReportOrderDetail](#)

Used in groups: [ListOrdGrp](#), [SideCrossOrdModGrp](#)

Used in messages: [ExecutionReport](#), [MultilegOrderCancelReplace](#), [NewOrderMultileg](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#), [QuoteRequest](#), [QuoteRequestReject](#), [QuoteResponse](#)

### 171.2.4212 PrevClosePx

Previous closing price of security.

Type: [Price](#)

Used in groups: [InstrmtStrkPxGrp](#), [ListOrdGrp](#), [QuotReqGrp](#), [QuotReqRjctGrp](#), [RFQReqGrp](#)

Used in messages: [CrossOrderCancelReplaceRequest](#), [MultilegOrderCancelReplace](#), [NewOrderCross](#), [NewOrderMultileg](#), [NewOrderSingle](#)

### 171.2.4213 PreviousAdjustedOpenInterest

Previous day's adjusted open interest.

Type: [Amt](#)

Used in messages: [SecurityDefinition](#), [SecurityDefinitionUpdateReport](#)

**171.2.4214 PreviousAllocGroupID**

When reporting a group change by the central counterparty to allocations of trades for the same instrument traded at the same price this identifies the previous group identifier.

Type: **String**

Used in groups: **TrdCapRptAckSideGrp, TrdCapRptSideGrp**

Used in messages: **AllocationReport**

**171.2.4215 PreviousClearingBusinessDate**

The date of the previous clearing business day.

Type: **LocalMktDate**

Used in messages: **PositionMaintenanceReport, PositionReport**

**171.2.4216 PreviouslyReported**

Indicates if the transaction was previously reported to the counterparty or market.

Type: **Boolean**

Allowed values in PreviouslyReportedCodeSet:

Code	Name	Description
N	NotReportedToCounterparty	Not reported to counterparty or market. In the context of RTS 13 Article 16 when a trade is reported to more than one "approved publication arrangement" (APA) the original report can be flagged as "original". This is the ESMA "ORGN" flag.
Y	PreviouslyReportedToCounterparty	Previously reported to counterparty or market. In the context of RTS 13 Article 16 when a trade is reported to more than one "approved publication arrangement" (APA) the additional reports need to be flagged as "duplicative" and this flag needs to be present on any occurrence (even when publishing to the market). This is also used for reporting directly to ESMA when the trade has been previously reported. This is the ESMA "DUPL" flag.

Used in groups: **MDFullGrp, MDIncGrp**

Used in messages: **AllocationInstruction, AllocationInstructionAlert, AllocationReport, ExecutionReport, TradeCaptureReport, TradeCaptureReportAck**

### **171.2.4217 PreviousUnadjustedOpenInterest**

Previous day's unadjusted open interest.

Type: **Amt**

Used in messages: **SecurityDefinition, SecurityDefinitionUpdateReport**

### **171.2.4218 Price**

Price per unit of quantity (e.g. per share)

Type: **Price**

Used in components: **TradeReportOrderDetail**

Used in groups: **BidCompRspGrp, InstrmtStrkPxGrp, ListOrdGrp, OrderEntryAckGrp, OrderEntryGrp, QuotReqGrp, QuotReqRjctGrp, SecurityRiskMetricGrp**

Used in messages: **Advertisement, CollateralAssignment, CollateralInquiry, CollateralReport, CollateralRequest, CollateralResponse, CrossOrderCancelReplaceRequest, ExecutionReport, IOI, MultilegOrderCancelReplace, NewOrderCross, NewOrderMultileg, NewOrderSingle, OrderCancelReplaceRequest, OrderMassActionReport, OrderMassActionRequest, QuoteResponse, QuoteStatusReport**

### **171.2.4219 Price2**

Price of the future part of a F/X swap order.

See Price (44) for description.

Type: **Price**

Used in groups: **ListOrdGrp, QuotReqGrp, QuotReqRjctGrp**

Used in messages: **NewOrderSingle, OrderCancelReplaceRequest**

### **171.2.4220 PriceDelta**

The rate of change in the price of a derivative with respect to the movement in the price of the underlying instrument(s) upon which the derivative instrument price is based.

This value is normally between -1.0 and 1.0.

Type: **float**

Used in groups: **MDFullGrp, MDIncGrp, SecurityRiskMetricGrp**

Used in messages: [ExecutionReport](#), [PositionReport](#), [TradeCaptureReport](#)

### 171.2.4221 PriceImprovement

Amount of price improvement.

Type: [PriceOffset](#)

Used in messages: [ExecutionReport](#)

### 171.2.4222 PriceLimits

---

Name	Mult.	Type	Description
<a href="#">PriceLimitType</a>	[0..1]	CodeSet	Describes the how the price limits are expressed
<a href="#">LowLimitPrice</a>	[0..1]	Price	Allowable low limit price for the trading day. A key parameter in validating order price. Used as the lower band for validating order prices. Orders submitted with prices below the lower limit will be rejected
<a href="#">HighLimitPrice</a>	[0..1]	Price	Allowable high limit price for the trading day. A key parameter in validating order price. Used as the upper band for validating order prices. Orders submitted with prices above the upper limit will be rejected
<a href="#">TradingReferencePrice</a>	[0..1]	Price	Reference price for the current trading price range usually representing the mid price between the <a href="#">HighLimitPrice</a> and <a href="#">LowLimitPrice</a> . The value may be the settlement price or closing price of the prior trading day.

---

Used in components: [BaseTradingRules](#)

Used in groups: [MDFullGrp](#), [MDIncGrp](#)

### 171.2.4223 PriceLimitType

Describes the how the price limits are expressed.

Type: [int](#)

Allowed values in [PriceLimitTypeCodeSet](#):

---

Code	Name	Description
0	Price	Price (default)
1	Ticks	Ticks
2	Percentage	Percentage

---

Used in components: [PriceLimits](#)

### 171.2.4224 PriceMarkup

Price offset of the markup denominated in the price type of the trade.

Type: [PriceOffset](#)

Used in messages: [TradeCaptureReport](#), [TradeCaptureReportAck](#)

### 171.2.4225 PriceMovementGrp

The PriceMovementGrp component is a repeatable block intended to contain theoretical profit and loss data at various price movement points account type(s) for which the price movement may apply to.

---

Name	Mult.	Type	Description
<a href="#">NoPriceMovements</a>	[1..1]	NumInGroup	
<a href="#">PriceMovementValueGrp</a>	[0..*]	Group	Required if <a href="#">NoPriceMovements(1919)</a> > 0.
<a href="#">ClearingAccountTypeGrp</a>	[0..*]	Group	

---

Used in groups: [SecListGrp](#)

### 171.2.4226 PriceMovementPoint

Price movement point up (positive integer) or down (negative integer) relative to the underlying price of the instrument.

Type: [int](#)

Used in groups: [PriceMovementValueGrp](#)

**171.2.4227 PriceMovementType**

Describes the format of the PriceMovementValue(1921).

Type: **int**

Allowed values in PriceMovementTypeCodeSet:

---

Code	Name	Description
0	Amount	Amount
1	Percentage	Percentage

---

Used in groups: **PriceMovementValueGrp**

**171.2.4228 PriceMovementValue**

Value at specific price movement point.

Type: **float**

Used in groups: **PriceMovementValueGrp**

**171.2.4229 PriceMovementValueGrp**

This PriceMovementValueGrp component is a repeatable block that will be utilized to represent a value relative to a specific price movement point.

---

Name	Mult.	Type	Description
<b>NoPriceMovementValues</b>	[1..1]	NumInGroup	
<b>PriceMovementValue</b>	[0..1]	float	Required if NoPriceMovementValues(1919) > 0.
<b>PriceMovementPoint</b>	[0..1]	int	
<b>PriceMovementType</b>	[0..1]	CodeSet	

---

Used in groups: **PriceMovementGrp**

**171.2.4230 PricePrecision**

Specifies the price decimal precision of the instrument.

Type: **int**

Used in messages: **TradeAggregationRequest**, **TradeCaptureReport**

**171.2.4231 PriceProtectionScope**

Defines the type of price protection the customer requires on their order.

Type: **char**

Allowed values in PriceProtectionScopeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	None	None
1	Local	Local (Exchange, ECN, ATS)
2	National	National (Across all national markets)
3	Global	Global (Across all markets)

---

Used in groups: **ListOrdGrp**

Used in messages: **CrossOrderCancelReplaceRequest**, **ExecutionReport**, **MultilegOrderCancelReplace**, **NewOrderCross**, **NewOrderMultileg**, **NewOrderSingle**, **OrderCancelReplaceRequest**

**171.2.4232 PriceQualifier**

Qualifier for price. May be used when the price needs to be explicitly qualified.

Type: **int**

Allowed values in PriceQualifierCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	AccruedInterestIsFactored	Accrued interest (if any) is factored into the price. The price is either "dirty" or the security is in default or soon to be defaulted. I.e. on fill there will be no separate accrued interest amount. This is often called a "flat" price.

---

Code	Name	Description
1	TaxIsFactored	Tax is factored into the price. The security's price includes applicable taxes, e.g. Japanese government bonds.
2	BondAmortizationIsFactored	The effect of bond amortization or the floating rate index offset is factored into the price. The security's price includes the effect of bond amortization or a floating rate index. For example this qualifier would apply to the normal pricing of index-linked UK gilt bonds but not to US or EU index-linked bonds.

Used in groups: [PriceQualifierGrp](#)

### 171.2.4233 PriceQualifierGrp

The PriceQualifierGrp component clarifies the composition of the price when standard market practice for the security calls for a price that is atypical when traded in other markets, or when a price can be expressed in more than one way.

Name	Mult.	Type	Description
<a href="#">NoPriceQualifiers</a>	[1..1]	NumInGroup	
<a href="#">PriceQualifier</a>	[0..1]	CodeSet	Required if NoPriceQualifiers(2709) > 0.

Used in groups: [MDFullGrp](#), [MDIncGrp](#), [QuotReqGrp](#), [QuotReqRjctGrp](#)

Used in messages: [AllocationInstruction](#), [AllocationInstructionAlert](#), [AllocationReport](#), [Confirmation](#), [ExecutionAck](#), [ExecutionReport](#), [IOI](#), [Quote](#), [QuoteResponse](#), [QuoteStatusReport](#), [TradeCaptureReport](#), [TradeCaptureReportAck](#)

### 171.2.4234 PriceQuoteCurrency

Default currency in which the price is quoted. Defined at the instrument level. Used in place of Currency (tag 15) to express the currency of a product when the former is implemented as the FX dealt currency.

Type: [Currency](#)

Used in components: [Instrument](#)

**171.2.4235 PriceQuoteCurrencyCodeSource**

Identifies class or source of the PriceQuoteCurrency(1524) value.

Type: **String**

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in components: **Instrument**

**171.2.4236 PriceQuoteMethod**

Method for price quotation

Type: **String**

Allowed values in PriceQuoteMethodCodeSet:

Code	Name	Description
STD	Standard	Standard, money per unit of a physical
INX	Index	Index
INT	InterestRateIndex	Interest rate Index
PCTPAR	PercentOfPar	Percent of Par

Used in components: **Instrument**

**171.2.4237 PriceRangePercentage**

Maximum range expressed as percentage.

Type: [Percentage](#)

Used in groups: [PriceRangeRuleGrp](#)

### 171.2.4238 PriceRangeProductComplex

Identifies an entire suite of products in the context of trading rules related to price ranges.

Type: [String](#)

Used in groups: [PriceRangeRuleGrp](#)

### 171.2.4239 PriceRangeRuleGrp

The PriceRangeRulesGrp component is used to specify the price range rules for a given product group or complex.

Name	Mult.	Type	Description
<a href="#">NoPriceRangeRules</a>	[1..1]	NumInGroup	
<a href="#">StartPriceRange</a>	[0..1]	Price	Required if NoPriceRangeRules(2550) > 0.
<a href="#">EndPriceRange</a>	[0..1]	Price	
<a href="#">PriceRangeValue</a>	[0..1]	Price	Mutually exclusive with PriceRangePercentage(2554).
<a href="#">PriceRangePercentage</a>	[0..1]	Percentage	Mutually exclusive with PriceRangeValue(2553).
<a href="#">PriceRangeRuleID</a>	[0..1]	String	Can be used to provide an identifier so that the rule can be reference via the ID elsewhere.
<a href="#">PriceRangeProductComplex</a>	[0..1]	String	Can be used to limit price range to specific product suite.

Used in components: [BaseTradingRules](#)

### 171.2.4240 PriceRangeRuleID

Identifier for a price range rule.

Type: [String](#)

Used in groups: [PriceRangeRuleGrp](#)

**171.2.4241 PriceRangeValue**

Maximum range expressed as absolute value.

Type: **Price**

Used in groups: **PriceRangeRuleGrp**

**171.2.4242 PriceType**

Code to represent the price type.

Type: **int**

Allowed values in PriceTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	Percentage	Percentage (i.e. percent of par) (often called "dollar price" for fixed income)
2	PerUnit	Per unit (i.e. per share or contract)
3	FixedAmount	Fixed amount (absolute value)
4	Discount	Discount - percentage points below par
5	Premium	Premium - percentage points over par
6	Spread	Spread (basis points spread). Usually the difference in yield between two switched bonds or a corporate bond traded spread-to-benchmark.
7	TEDPrice	TED Price
8	TEDYield	TED Yield
9	Yield	Yield
10	FixedCabinetTradePrice	Fixed cabinet trade price (primarily for listed futures and options)
11	VariableCabinetTradePrice	Variable cabinet trade price (primarily for listed futures and options)
12	PriceSpread	Price spread. Price spread is expressed based on market convention for the asset being priced or traded. For example, the difference between the prices of a multileg switch or strategy expressed in basis points for a CDS or TBA roll; a price value to be added to a reference price, such as a "pay up" for specified pools
13	ProductTicksInHalves	Product ticks in halves
14	ProductTicksInFourths	Product ticks in fourths

---

Code	Name	Description
15	ProductTicksInEighths	Product ticks in eighths
16	ProductTicksInSixteenths	Product ticks in sixteenths
17	ProductTicksInThirtySeconds	Product ticks in thirty-seconds
18	ProductTicksInSixtyFourths	Product ticks in sixty-fourths
19	ProductTicksInOneTwentyEighths	Product ticks in one-twenty-eighths
20	NormalRateRepresentation	Normal rate representation (e.g. FX rate)
21	InverseRateRepresentation	Inverse rate representation (e.g. FX rate)
22	BasisPoints	Basis points. When the price is not spread based.
23	UpfrontPoints	Up front points. Used specifically for CDS pricing.
24	InterestRate	Interest rate. When the price is an interest rate. For example, used with benchmark reference rate.
25	PercentageNotional	Percentage of notional

Used in components: [BaseTradingRules](#), [SettlTradeDetails](#)

Used in groups: [BidCompRspGrp](#), [InstrmtMatchSideGrp](#), [ListOrdGrp](#), [MDFullGrp](#), [MDIncGrp](#), [QuotReqGrp](#), [QuotReqRjctGrp](#)

Used in messages: [AllocationInstruction](#), [AllocationInstructionAlert](#), [AllocationReport](#), [CollateralAssignment](#), [CollateralInquiry](#), [CollateralReport](#), [CollateralRequest](#), [CollateralResponse](#), [Confirmation](#), [CrossOrderCancelReplaceRequest](#), [ExecutionAck](#), [ExecutionReport](#), [IOI](#), [MultilegOrderCancelReplace](#), [NewOrderCross](#), [NewOrderMultileg](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#), [PositionReport](#), [PositionTransferInstruction](#), [PositionTransferReport](#), [Quote](#), [QuoteResponse](#), [QuoteStatusReport](#), [TradeCaptureReport](#), [TradeCaptureReportAck](#)

### 171.2.4243 PriceUnitOfMeasure

Used to express the UOM of the price if different from the contract. In futures, this can be different for cross-rate products in which the price is quoted in units differently from the contract

Type: [String](#)

Allowed values in UnitOfMeasureCodeSet:

Code	Name	Description
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet

<b>Code</b>	<b>Name</b>	<b>Description</b>
Bbl	Barrels	Barrels. Equal to 42 US gallons
CBM	CubicMeters	Cubic Meters
BDFT	BoardFeet	Board feet. Equal to 144 cubic inches
GJ	Gigajoules	gigajoules
Bu	Bushels	Bushels
kHR	HeatRate	Heat rate. The number of BTUs required to produce one kilowatt hour of electricity, typically 3,412.14 BTUs per 1 kWh.
Ccy	Currency	Amount of currency
kWh	KilowattHours	Kilowatt hours
CDD	CoolingDegreeDay	Cooling degree day
MHR	MegaHeatRate	Mega heat rate. The number of million BTUs required to produce one megawatt hour of electricity, typically 3.41214 million BTUs per 1 MWh.
CER	CertifiedEmissionsReduction	Certified emissions reduction
MMBtu	OneMillionBTU	One Million BTU
CPD	CriticalPrecipDay	Critical precipitation day
MWh	MegawattHours	Megawatt hours
CRT	ClimateReserveTonnes	Climate reserve tonnes
thm	Therms	therms. Equal to 100,000 BTU
cwt	Hundredweight	Hundredweight(US). Equal to 100 lbs
tnCO2	TonsOfCarbonDioxide	Tons of carbon dioxide
day	Day	Days
dt	DryMetricTons	Dry metric tons
EnvAllwnc	EnvAllwncCert	Environmental allowance certificates
EnvCrd	EnvironmentalCredit	Environmental credit
EnvOfst	EnvironmentalOffset	Environmental Offset
g	Grams	Grams
Gal	Gallons	Gallons
GT	GrossTons	Gross tons. Also known as long tons or imperial tons, equal to 2240 lbs
HDD	HeatingDegreeDay	Heating degree day
IPNT	IndexPoint	Index point
kg	Kilograms	Kilograms
kL	Kiloliters	kiloliters
kW-a	KilowattYear	Kilowatt year (electrical capacity)

<b>Code</b>	<b>Name</b>	<b>Description</b>
kW-d	KilowattDay	Kilowatt day (electrical capacity)
kW-h	KilowattHour	Kilowatt hour (electrical capacity)
kW-M	KilowattMonth	Kilowatt month (electrical capacity)
kW-min	KilowattMinute	Kilowatt-Minute (electrical capacity)
L	Liters	liters
lbs	Pounds	pounds
MW-a	MegawattYear	Megawatt year (electrical capacity)
MW-d	MegawattDay	Megawatt day (electrical capacity)
MW-h	MegawattHour	Megawatt hour (electrical capacity)
MW-M	MegawattMonth	Megawatt month (electrical capacity)
MW-min	MegawattMinute	Megawatt minute (electrical capacity)
oz_tr	TroyOunces	Troy ounces
PRINC	PrincipalWithRelationToDebtInstrument	Principal with relation to debt instrument
t	MetricTons	Metric tons. Also known as Tonnes, equal to 1000 kg
tn	Tons	Tons (US). Equal to 2000 lbs
a	Are	Are
ac	Acre	Acre
cL	Centiliter	Centiliter
cM	Centimeter	Centimeter
DGE	DieselGallonEquivalent	Diesel gallon equivalent
ft	Foot	Foot
Gal_gb	GBGallon	GB Gallon
GGE	GasolineGallonEquivalent	Gasonline gallon equivalent
ha	Hectare	Hectare
in	Inch	Inch
kM	Kilometer	Kilometer
M	Meter	Meter
mi	Mile	Mile
mL	Milliliter	Milliliter
mM	Millimeter	Millimeter
oz	USOunce	US ounce
pc	Piece	Piece
pt	USPint	US Pint

<b>Code</b>	<b>Name</b>	<b>Description</b>
pt_gb	GBPint	GB pint
qt	USQuart	US Quart
qt_gb	GBQuart	GB Quart
SqcM	SquareCentimeter	Square centimeter
Sqft	SquareFoot	Square foot
Sqin	SquareInch	Square inch
SqkM	SquareKilometer	Square kilometer
SqM	SquareMeter	Square meter
Sqmi	SquareMile	Square mile
SqmM	SquareMillimeter	Square millimeter
Sqyd	SquareYard	Square yard
yd	Yard	Yard
MMbbl	MillionBarrels	Million Barrels
USD	USDollars	US Dollars

---

Used in components: [Instrument](#)

#### **171.2.4244 PriceUnitOfMeasureCurrency**

Indicates the currency of the price unit of measure. Conditionally required when PriceUnitOfMeasure(1191) = Ccy

Type: [Currency](#)

Used in components: [Instrument](#)

#### **171.2.4245 PriceUnitOfMeasureCurrencyCodeSource**

Identifies class or source of the PriceUnitOfMeasureCurrency(1717) value.

Type: [String](#)

Allowed values in CurrencyCodeSourceCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	CUSIP	CUSIP

---

Code	Name	Description
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in components: **Instrument**

#### **171.2.4246 PriceUnitOfMeasureQty**

Used to express the UOM Quantity of the price if different from the contract. In futures, this can be different for physically delivered products in which price is quoted in a unit size different from the contract, i.e. a Cattle Future contract has a UOMQty of 40,000 and a PriceUOMQty of 100.

Type: **Qty**

Used in components: **Instrument**

#### **171.2.4247 PricingDateAdjusted**

The adjusted pricing or fixing date.

Type: **LocalMktDate**

Used in components: **PricingDateTime**

#### **171.2.4248 PricingDateBusinessCenter**

The business center calendar used to adjust pricing or fixing dates, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **PricingDateBusinessCenterGrp**

**171.2.4249 PricingDateBusinessCenterGrp**

PricingDateBusinessCenterGrp is a repeating subcomponent of the PricingDateTime component used to specify the set of business centers whose calendars drive date adjustment. Used only to override the business centers defined in the DateAdjustment component in Instrument.

Name	Mult.	Type	Description
NoPricingDateBusinessCenters	[1..1]	NumInGroup	
PricingDateBusinessCenter	[0..1]	String	Required if NoPricingDateBusinessCenters(41230) > 0.

Used in components: [PricingDateTime](#)

**171.2.4250 PricingDateBusinessDayConvention**

The business day convention used to adjust pricing or fixing dates. Used only to override the business day convention defined in the DateAdjustment component within the Instrument component.

Type: [int](#)

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [PricingDateTime](#)

**171.2.4251 PricingDateTime**

The PricingDateTime component is a subcomponent of Instrument used to specify an adjusted or unadjusted pricing or fixing date and optionally the time, e.g. for a commodity or FX forward trade.

Name	Mult.	Type	Description
PricingDateUnadjusted	[0..1]	LocalMktDate	
PricingDateBusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the DateAdjustment component in Instrument. The specified value would be specific to this instance of pricing dates.
PricingDateBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the DateAdjustment component in Instrument. The specified values would be specific to this instance of pricing dates.
PricingDateAdjusted	[0..1]	LocalMktDate	
PricingTime	[0..1]	LocalMktTime	
PricingTimeBusinessCenter	[0..1]	String	

---

Used in components: **Instrument**

#### **171.2.4252 PricingDateUnadjusted**

The unadjusted pricing or fixing date.

Type: **LocalMktDate**

Used in components: **PricingDateTime**

#### **171.2.4253 PricingTime**

Specifies the local market time of the pricing or fixing.

Type: **LocalMktTime**

Used in components: **PricingDateTime**

#### **171.2.4254 PricingTimeBusinessCenter**

Specifies the business center for determining the pricing or fixing time. See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in components: **PricingDateTime**

**171.2.4255 PrimaryServiceLocationID**

Primary service location identifier.

Type: **String**

Used in groups: **MarketDataFeedTypes**

**171.2.4256 PriorityIndicator**

Indicates if a Cancel/Replace has caused an order to lose book priority.

Type: **int**

Allowed values in PriorityIndicatorCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	PriorityUnchanged	Priority unchanged
1	LostPriorityAsResultOfOrderChange	Lost Priority as result of order change

---

Used in messages: **ExecutionReport**

**171.2.4257 PriorSettlPrice**

Previous settlement price

Type: **Price**

Used in messages: **AdjustedPositionReport, AssignmentReport, PositionReport, SecurityDefinition, SecurityDefinitionUpdateReport**

**171.2.4258 PriorSpreadIndicator**

Indicates if requesting a rollover of prior day's spread submissions.

Type: **Boolean**

Used in messages: **PositionMaintenanceReport, PositionMaintenanceRequest**

**171.2.4259 PrivateQuote**

Specifies whether a quote is public, i.e. available to the market, or private, i.e. available to a specified counterparty only.

Type: **Boolean**

Allowed values in PrivateQuoteCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
Y	PrivateQuote	Private Quote
N	PublicQuote	Public Quote

---

Used in messages: **Quote**, **QuoteRequest**, **QuoteRequestReject**, **RFQRequest**

**171.2.4260 ProcessCode**

Processing code for sub-account. Absence of this field in AllocAccount (79) / AllocPrice (366) / AllocQty (80) / ProcessCode instance indicates regular trade.

Type: **char**

Allowed values in ProcessCodeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Regular	Regular
1	SoftDollar	Soft Dollar
2	StepIn	Step-In
3	StepOut	Step-Out
4	SoftDollarStepIn	Soft-dollar Step-In
5	SoftDollarStepOut	Soft-dollar Step-Out
6	PlanSponsor	Plan Sponsor

---

Used in groups: **AllocGrp**, **ListOrdGrp**, **TrdCapRptAckSideGrp**, **TrdCapRptSideGrp**

Used in messages: **Confirmation**, **CrossOrderCancelReplaceRequest**, **MultilegOrderCancelReplace**, **NewOrderCross**, **NewOrderMultileg**, **NewOrderSingle**

**171.2.4261 Product**

Indicates the type of product the security is associated with. See also the CFICode (461) and Security-Type (167) fields.

Type: **int**

Allowed values in ProductCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	AGENCY	AGENCY
2	COMMODITY	COMMODITY
3	CORPORATE	CORPORATE
4	CURRENCY	CURRENCY
5	EQUITY	EQUITY
6	GOVERNMENT	GOVERNMENT
7	INDEX	INDEX
8	LOAN	LOAN
9	MONEYMARKET	MONEYMARKET
10	MORTGAGE	MORTGAGE
11	MUNICIPAL	MUNICIPAL
12	OTHER	OTHER
13	FINANCING	FINANCING

---

Used in components: **Instrument**

Used in groups: **SecTypesGrp**, **SettlInstGrp**

Used in messages: **SecurityTypeRequest**, **SettlementInstructionRequest**

**171.2.4262 ProductComplex**

Identifies an entire suite of products for a given market. In Futures this may be "interest rates", "agricultural", "equity indexes", etc.

Type: **String**

Used in components: **Instrument**

**171.2.4263 ProgPeriodInterval**

Time in minutes between each ListStatus report sent by SellSide. Zero means don't send status.

Type: **int**

Used in messages: **BidRequest**, **NewOrderList**

**171.2.4264 ProgRptReqs**

Code to identify the desired frequency of progress reports.

Type: **int**

Allowed values in ProgRptReqsCodeSet:

---

Code	Name	Description
1	BuySideRequests	Buy-side explicitly requests status using Statue Request (default), the sell-side firm can, however, send a DONE status List SStatus Response in an unsolicited fashion
2	SellSideSends	Sell-side periodically sends status using List Status. Period optionally specified in ProgressPeriod.
3	RealTimeExecutionReports	Real-time execution reports (to be discourage)

---

Used in messages: **BidRequest**, **NewOrderList**

**171.2.4265 ProtectionTermBuyerNotifies**

The notifying party is the party that notifies the other party when a credit event has occurred by means of a credit event notice. If more than one party is referenced as being the notifying party then either party may notify the other of a credit event occurring.

ProtectionTermBuyerNotifies(40185)=Y indicates that the buyer notifies.

Type: **Boolean**

Used in groups: **ProtectionTermGrp**

**171.2.4266 ProtectionTermCurrency**

The currency of ProtectionTermNotional(40182). Uses ISO 4217 currency codes.

Type: **Currency**

Used in groups: **ProtectionTermGrp**

#### **171.2.4267 ProtectionTermEventBusinessCenter**

When used, the business center indicates the local time of the business center that replaces the Greenwich Mean Time in Section 3.3 of the 2003 ISDA Credit Derivatives Definitions. See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **ProtectionTermGrp**

#### **171.2.4268 ProtectionTermEventCurrency**

Applicable currency if ProtectionTermEventValue(40193) is an amount. Uses ISO 4217 currency codes.

Type: **Currency**

Used in groups: **ProtectionTermEventGrp**

#### **171.2.4269 ProtectionTermEventDayType**

Day type for events that specify a period and unit.

Type: **int**

Allowed values in ProtectionTermEventDayTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in groups: **ProtectionTermEventGrp**

**171.2.4270 ProtectionTermEventGrp**

The ProtectionTermEventGrp is a repeating component within the ProtectionTermGrp component used to report applicable CDS credit events.

Name	Mult.	Type	Description
NoProtectionTermEvents	[1..1]	NumInGroup	
ProtectionTermEventType	[0..1]	String	Required if NoProtectionTermEvents(40191) > 0.
ProtectionTermEventValue	[0..1]	String	
ProtectionTermEventCurrency	[0..1]	Currency	
ProtectionTermEventPeriod	[0..1]	int	Conditionally required when ProtectionTermEventUnit(40196) is specified.
ProtectionTermEventUnit	[0..1]	CodeSet	Conditionally required when ProtectionTermEventPeriod(40195) is specified.
ProtectionTermEventDayType	[0..1]	CodeSet	
ProtectionTermEventRateSource	[0..1]	String	
ProtectionTermEventQualifierGrp	[0..*]	Group	

Used in groups: [ProtectionTermGrp](#)

**171.2.4271 ProtectionTermEventMinimumSources**

The minimum number of the specified public information sources that must publish information that reasonably confirms that a credit event has occurred. The market convention is two.

Type: [int](#)

Used in groups: [ProtectionTermGrp](#)

**171.2.4272 ProtectionTermEventNewsSource**

Newspaper or electronic news service or source that may publish relevant information used in the determination of whether or not a credit event has occurred.

Type: [String](#)

Used in groups: [ProtectionTermEventNewsSourceGrp](#)

**171.2.4273 ProtectionTermEventNewsSourceGrp**

ProtectionTermEventNewsSourceGrp is a repeating subcomponent within the ProtectionTermGrp component. It is used to specify the particular newspapers or electronic news services and sources that may publish relevant information used in the determination of whether or not a credit event has occurred.

Name	Mult.	Type	Description
NoProtectionTermEventNewsSources	[1..1]	NumInGroup	
ProtectionTermEventNewsSource	[0..1]	String	Required if NoProtectionTermEventNewsSources(40951) > 0.

Used in groups: [ProtectionTermGrp](#)

**171.2.4274 ProtectionTermEventPeriod**

Time unit multiplier for protection term events.

Type: [int](#)

Used in groups: [ProtectionTermEventGrp](#)

**171.2.4275 ProtectionTermEventQualifier**

Protection term event qualifier. Used to further qualify ProtectionTermEventType(40192).

Type: [char](#)

Allowed values in ProtectionTermEventQualifierCodeSet:

Code	Name	Description
H	RestructuringMultipleHoldingObligations	Restructuring - multiple holding obligations. In relation to a restructuring credit event, unless multiple holder obligation is not specified restructurings are limited to multiple holder obligations. A multiple holder obligation means an obligation that is held by more than three holders that are not affiliates of each other and where at least two thirds of the holders must agree to the event that constitutes the restructuring credit event. ISDA 2003 Term: Multiple Holder Obligation.

Code	Name	Description
E	RestructuringMultipleCreditEvent-Notices	Restructuring - multiple credit event notices. Presence of this element and value set to 'true' indicates that Section 3.9 of the 2003 Credit Derivatives Definitions shall apply. Absence of this element indicates that Section 3.9 shall not apply. NOTE: Not allowed under ISDA Credit 1999.
C	FloatingRateInterestShortfall	Floating rate interest shortfall. Indicates compounding.

Used in groups: [ProtectionTermEventQualifierGrp](#)

### 171.2.4276 ProtectionTermEventQualifierGrp

The ProtectionTermEventQualifierGrp is a repeating component within the ProtectionTermEventGrp component used to specify qualifying attributes to the event.

Name	Mult.	Type	Description
<a href="#">NoProtectionTermEventQualifiers</a>	[1..1]	NumInGroup	
<a href="#">ProtectionTermEventQualifier</a>	[0..1]	CodeSet	Required if <a href="#">NoProtectionTermEventQualifiers(40199)</a> > 0.

Used in groups: [ProtectionTermEventGrp](#)

### 171.2.4277 ProtectionTermEventRateSource

Rate source for events that specify a rate source, e.g. Floating rate interest shortfall.

Type: [String](#)

Used in groups: [ProtectionTermEventGrp](#)

### 171.2.4278 ProtectionTermEventType

Specifies the type of credit event applicable to the protection terms.

See [http://www.fixtradingcommunity.org/codelists#Protection\\_Term\\_Event\\_Types](http://www.fixtradingcommunity.org/codelists#Protection_Term_Event_Types) for code list of applicable event types.

Type: [String](#)

Used in groups: [ProtectionTermEventGrp](#)

**171.2.4279 ProtectionTermEventUnit**

Time unit associated with protection term events.

Type: **String**

Allowed values in ProtectionTermEventUnitCodeSet:

---

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in groups: **ProtectionTermEventGrp**

**171.2.4280 ProtectionTermEventValue**

Protection term event value appropriate to ProtectionTermEventType(40192).

See [http://www.fixtradingcommunity.org/codelists#Protection\\_Term\\_Event\\_Types](http://www.fixtradingcommunity.org/codelists#Protection_Term_Event_Types) for applicable event type values.

Type: **String**

Used in groups: **ProtectionTermEventGrp**

**171.2.4281 ProtectionTermGrp**

The ProtectionTermGrp is a repeating component within the Instrument component used to report protection term details referenced from UnderlyingInstrument component.

---

Name	Mult.	Type	Description
<b>NoProtectionTerms</b>	[1..1]	NumInGroup	
<b>ProtectionTermNotional</b>	[0..1]	Amt	Required if NoProtectionTerms(40181) > 0.
<b>ProtectionTermCurrency</b>	[0..1]	Currency	
<b>ProtectionTermSellerNotifies</b>	[0..1]	Boolean	
<b>ProtectionTermBuyerNotifies</b>	[0..1]	Boolean	
<b>ProtectionTermEventBusinessCenter</b>	[0..1]	String	

---

Name	Mult.	Type	Description
ProtectionTermStandardSources	[0..1]	Boolean	
ProtectionTermEventMinimumSources	[0..1]	int	
ProtectionTermEventNewsSourceGrp	[0..*]	Group	
ProtectionTermEventGrp	[0..*]	Group	
ProtectionTermObligationGrp	[0..*]	Group	
ProtectionTermXID	[0..1]	XID	

Used in components: [Instrument](#)

### 171.2.4282 ProtectionTermNotional

The notional amount of protection coverage.

Type: [Amt](#)

Used in groups: [ProtectionTermGrp](#)

### 171.2.4283 ProtectionTermObligationGrp

The ProtectionTermObligationGrp is a repeating component within the ProtectionTermGrp component used to report applicable CDS obligations.

Name	Mult.	Type	Description
NoProtectionTermObligations	[1..1]	NumInGroup	
ProtectionTermObligationType	[0..1]	String	Required if NoProtectionTermObligations(40201) > 0.
ProtectionTermObligationValue	[0..1]	String	

Used in groups: [ProtectionTermGrp](#)

### 171.2.4284 ProtectionTermObligationType

Specifies the type of obligation applicable to the protection terms.

See [http://www.fixtradingcommunity.org/codelists#Protection\\_Term\\_Obligation\\_Types](http://www.fixtradingcommunity.org/codelists#Protection_Term_Obligation_Types) for code list of applicable obligation types.

Type: **String**

Used in groups: **ProtectionTermObligationGrp**

#### **171.2.4285 ProtectionTermObligationValue**

Protection term obligation value appropriate to ProtectionTermObligationType(40202).

See [http://www.fixtradingcommunity.org/codelists#Protection\\_Term\\_Obligation\\_Types](http://www.fixtradingcommunity.org/codelists#Protection_Term_Obligation_Types) for applicable obligation type values.

Type: **String**

Used in groups: **ProtectionTermObligationGrp**

#### **171.2.4286 ProtectionTermSellerNotifies**

The notifying party is the party that notifies the other party when a credit event has occurred by means of a credit event notice. If more than one party is referenced as being the notifying party then either party may notify the other of a credit event occurring.

ProtectionTermSellerNotifies(40184)=Y indicates that the seller notifies.

Type: **Boolean**

Used in groups: **ProtectionTermGrp**

#### **171.2.4287 ProtectionTermStandardSources**

Indicates whether ISDA defined Standard Public Sources are applicable (ProtectionTermStandardSources(40187)=Y) or not.

Type: **Boolean**

Used in groups: **ProtectionTermGrp**

#### **171.2.4288 ProtectionTermXID**

A named string value referenced by UnderlyingProtectionTermXIDRef(41314).

Type: **XID**

Used in groups: **ProtectionTermGrp**

**171.2.4289 ProvisionBreakFeeElection**

Type of fee elected for the break provision.

Type: **int**

Allowed values in ProvisionBreakFeeElectionCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	FlatFee	Flat fee
1	AmortizedFee	Amortized fee
2	FundingFee	Funding fee
3	FlatAndFundingFee	Flat fee and funding fee
4	AmortizedAndFundingFee	Amortized fee and funding fee

---

Used in groups: **ProvisionGrp**

**171.2.4290 ProvisionBreakFeeRate**

Break fee election rate when the break fee is proportional to the notional. A fee rate of 5% would be represented as "0.05".

Type: **Percentage**

Used in groups: **ProvisionGrp**

**171.2.4291 ProvisionCalculationAgent**

Used to identify the calculation agent. The calculation agent may be identified in ProvisionCalculation-Agent(40098) or in the ProvisionParties component.

Type: **int**

Allowed values in ProvisionCalculationAgentCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	ExercisingParty	Exercising party
1	NonExercisingParty	Non-exercising party
2	MasterAgreement	As specified in the master agreement
3	Supplement	As specified in the standard terms supplement

---

Code	Name	Description
------	------	-------------

Used in groups: [ProvisionGrp](#)

### 171.2.4292 ProvisionCashSettlCurrency

Specifies the currency of settlement. Uses ISO 4217 currency codes.

Type: [Currency](#)

Used in groups: [ProvisionGrp](#)

### 171.2.4293 ProvisionCashSettlCurrency2

Specifies the currency of settlement for a cross-currency provision. Uses ISO 4217 currency codes.

Type: [Currency](#)

Used in groups: [ProvisionGrp](#)

### 171.2.4294 ProvisionCashSettlMethod

An ISDA defined cash settlement method used for the determination of the applicable cash settlement amount. The method is defined in the 2006 ISDA Definitions, Section 18.3. Cash Settlement Methods, paragraph (e).

Type: [int](#)

Allowed values in ProvisionCashSettlMethodCodeSet:

Code	Name	Description
0	CashPrice	Cash price
1	CashPriceAlternate	Cash price alternate
2	ParYieldCurveAdjusted	Par yield curve adjusted
3	ZeroCouponYieldCurveAdjusted	Zero coupon yield curve adjusted
4	ParYieldCurveUnadjusted	Par yield curve unadjusted
5	CrossCurrency	Cross currency
6	CollateralizedPrice	Collateralized price

Used in groups: [ProvisionGrp](#)

**171.2.4295 ProvisionCashSettlPaymentDate**

The cash settlement payment date, unadjusted or adjusted depending on ProvisionCashSettlPaymentDateType(40173).

Type: [LocalMktDate](#)

Used in groups: [ProvisionCashSettlPaymentFixedDateGrp](#)

**171.2.4296 ProvisionCashSettlPaymentDateBusinessCenter**

The business center calendar used to adjust the provisional cash settlement payment's termination or relative termination date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in groups: [ProvisionCashSettlPaymentDateBusinessCenterGrp](#)

**171.2.4297 ProvisionCashSettlPaymentDateBusinessCenterGrp**

ProvisionCashSettlPaymentDateBusinessCenterGrp is a repeating subcomponent within the ProvisionCashSettlPaymentDates component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the DateAdjustment component in Instrument.

---

Name	Mult.	Type	Description
<a href="#">NoProvisionCashSettlPaymentDateBusinessCenters</a>	[1..1]	NumInGroup	
<a href="#">ProvisionCashSettlPaymentDateBusinessCenter</a>	[0..1]	String	Required if NoProvisionCashSettlPaymentDateBusinessCenters(40952) > 0.

---

Used in components: [ProvisionCashSettlPaymentDates](#)

**171.2.4298 ProvisionCashSettlPaymentDateBusinessDayConvention**

The business day convention used to adjust the provisional cash settlement payment's termination or relative termination date. Used only to override the business day convention specified in the DateAdjustment component within the Instrument component.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

---

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

---

Used in components: [ProvisionCashSettlPaymentDates](#)

#### **171.2.4299 ProvisionCashSettlPaymentDateOffsetDayType**

Specifies the day type of the provision's relative cash settlement payment date offset.

Type: **int**

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

---

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in components: [ProvisionCashSettlPaymentDates](#)

#### **171.2.4300 ProvisionCashSettlPaymentDateOffsetPeriod**

Time unit multiplier for the relative cash settlement payment date offset.

Type: **int**

Used in components: **ProvisionCashSettlPaymentDates**

#### **171.2.4301 ProvisionCashSettlPaymentDateOffsetUnit**

Time unit associated with the relative cash settlement payment date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: **ProvisionCashSettlPaymentDates**

#### **171.2.4302 ProvisionCashSettlPaymentDateRangeFirst**

First date in range when a settlement date range is provided.

Type: **LocalMktDate**

Used in components: **ProvisionCashSettlPaymentDates**

#### **171.2.4303 ProvisionCashSettlPaymentDateRangeLast**

The last date in range when a settlement date range is provided.

Type: **LocalMktDate**

Used in components: **ProvisionCashSettlPaymentDates**

#### **171.2.4304 ProvisionCashSettlPaymentDateRelativeTo**

Specifies the anchor date when the cash settlement payment date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: **int**

Used in components: **ProvisionCashSettlPaymentDates**

### 171.2.4305 ProvisionCashSettlPaymentDates

The ProvisionCashSettlPaymentDates component is a sub-component within the ProvisionGrp component used to report the cash settlement payment dates defined in the provision.

Name	Mult.	Type	Description
ProvisionCashSettlPaymentDateBusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the DateAdjustment component in Instrument. The specified value would be specific to this instance of the provisional cash settlement payment dates.
ProvisionCashSettlPaymentDateBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the DateAdjustment component in Instrument. The specified values would be specific to this instance of the provisional cash settlement payment dates.
ProvisionCashSettlPaymentDateRelativeTo	[0..1]	int	
ProvisionCashSettlPaymentDateOffsetPeriod	[0..1]	int	Conditionally required when ProvisionCashSettlPaymentDateOffsetUnit(40167) is specified.
ProvisionCashSettlPaymentDateOffsetUnit	[0..1]	CodeSet	Conditionally required when ProvisionCashSettlPaymentDateOffsetPeriod(40166) is specified.
ProvisionCashSettlPaymentDateOffsetDayType	[0..1]	CodeSet	
ProvisionCashSettlPaymentDateRangeFirst	[0..1]	LocalMktDate	
ProvisionCashSettlPaymentDateRangeLast	[0..1]	LocalMktDate	
ProvisionCashSettlPaymentFixedDateGrp	[0..*]	Group	

Used in groups: **ProvisionGrp**

### 171.2.4306 ProvisionCashSettlPaymentDateType

Specifies the type of date (e.g. adjusted for holidays).

Type: **int**

Allowed values in ProvisionCashSettlPaymentDateTypeCodeSet:

---

Code	Name	Description
0	Unadjusted	Unadjusted
1	Adjusted	Adjusted

---

Used in groups: **ProvisionCashSettlPaymentFixedDateGrp**

### **171.2.4307 ProvisionCashSettlPaymentFixedDateGrp**

The ProvisionCashSettlPaymentFixedDateGrp is a repeating component within the ProvisionCashSettlPaymentDates component used to report fixed cash settlement payment dates defined in the provision.

---

Name	Mult.	Type	Description
<b>NoProvisionCashSettlPaymentDates</b>	[1..1]	NumInGroup	
<b>ProvisionCashSettlPaymentDate</b>	[0..1]	LocalMktDate	Required if NoProvisionCashSettlPaymentDates (40171) > 0.
<b>ProvisionCashSettlPaymentDateType</b>	[0..1]	CodeSet	When specified it applies not only to the current date but to all subsequent dates in the group until overridden with a new type.

---

Used in components: **ProvisionCashSettlPaymentDates**

### **171.2.4308 ProvisionCashSettlQuoteReferencePage**

Identifies the reference "page" from the quote source.

Type: **String**

Used in components: **ProvisionCashSettlQuoteSource**

### **171.2.4309 ProvisionCashSettlQuoteSource**

Identifies the source of quote information.

Type: **int**

Allowed values in PaymentStreamRateIndexSourceCodeSet:

---

Code	Name	Description
0	Bloomberg	Bloomberg
1	Reuters	Reuters
2	Telerate	Telerate
99	Other	Other

---

Used in components: **ProvisionCashSettlQuoteSource**

### 171.2.4310 ProvisionCashSettlQuoteSource

The ProvisionCashSettlQuoteSource is a subcomponent of the ProvisionGrp component used to specify the reference source for currency or rate quote for cash settlement purposes.

---

Name	Mult.	Type	Description
<b>ProvisionCashSettlQuoteSource</b>	[0..1]	CodeSet	
<b>ProvisionCashSettlQuoteReferencePage</b>	[0..1]	String	

---

Used in groups: **ProvisionGrp**

### 171.2.4311 ProvisionCashSettlQuoteType

Identifies the type of quote to be used.

Type: **int**

Allowed values in ProvisionCashSettlQuoteTypeCodeSet:

---

Code	Name	Description
0	Bid	Bid
1	Mid	Mid
2	Offer	Offer

---

Code	Name	Description
3	ExercisingPartyPays	Exercising party pays. See 2000 ISDA Definitions, Section 17.2, Certain Definitions Relating to Cash Settlement, paragraph (j) for definition of "exercising party pays".

Used in groups: [ProvisionGrp](#)

### 171.2.4312 ProvisionCashSettlValueDateAdjusted

The adjusted cash settlement value date.

Type: [LocalMktDate](#)

Used in components: [ProvisionCashSettlValueDates](#)

### 171.2.4313 ProvisionCashSettlValueDateBusinessCenter

The business center calendar used to adjust the provision's cash settlement valuation date, e.g. "GBLO". See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in groups: [ProvisionCashSettlValueDateBusinessCenterGrp](#)

### 171.2.4314 ProvisionCashSettlValueDateBusinessCenterGrp

ProvisionCashSettlValueDateBusinessCenterGrp is a repeating subcomponent within the ProvisionCashSettlValueDate component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the DateAdjustment component in Instrument.

Name	Mult.	Type	Description
<a href="#">NoProvisionCashSettlValueDateBusinessCenters</a>	[1..1]	NumInGroup	
<a href="#">ProvisionCashSettlValueDateBusinessCenter</a>	[0..1]	String	Required if <a href="#">NoProvisionCashSettlValueDateBusinessCenters(40953)</a> > 0.

Used in components: [ProvisionCashSettlValueDates](#)

**171.2.4315 ProvisionCashSettlValueDateBusinessDayConvention**

The cash settlement valuation date adjustment business day convention. Used only to override the business day convention specified in the DateAdjustment component within the Instrument component.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

---

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

---

Used in components: [ProvisionCashSettlValueDates](#)

**171.2.4316 ProvisionCashSettlValueDateOffsetDayType**

Specifies the day type of the provision's relative cash settlement value date offset.

Type: **int**

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

---

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in components: [ProvisionCashSettlValueDates](#)

**171.2.4317 ProvisionCashSettlValueDateOffsetPeriod**

Time unit multiplier for the relative cash settlement value date offset.

Type: **int**

Used in components: **ProvisionCashSettlValueDates**

**171.2.4318 ProvisionCashSettlValueDateOffsetUnit**

Time unit associated with the relative cash settlement value date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: **ProvisionCashSettlValueDates**

**171.2.4319 ProvisionCashSettlValueDateRelativeTo**

Specifies the anchor date when the cash settlement value date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values

Type: **int**

Used in components: **ProvisionCashSettlValueDates**

**171.2.4320 ProvisionCashSettlValueDates**

The ProvisionCashSettlValueDates component is a subcomponent within the ProvisionGrp component used to report the cash settlement value date and time defined in the provision.

Name	Mult.	Type	Description
ProvisionCashSettlValueTime	[0..1]	LocalMktTime	
ProvisionCashSettlValueTimeBusinessCenter	[0..1]	String	
ProvisionCashSettlValueDateBusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the DateAdjustment component in Instrument. The specified value would be specific to this instance of the provisional cash settlement value date.
ProvisionCashSettlValueDateBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the DateAdjustment component in Instrument. The specified values would be specific to this instance of the provisional cash settlement value date.
ProvisionCashSettlValueDateRelativeTo	[0..1]	int	
ProvisionCashSettlValueDateOffsetPeriod	[0..1]	int	Conditionally required when ProvisionCashSettlValueDateOffsetUnit(40120) is specified.
ProvisionCashSettlValueDateOffsetUnit	[0..1]	CodeSet	Conditionally required when ProvisionCashSettlValueDateOffsetPeriod(40119) is specified.
ProvisionCashSettlValueDateOffsetDayType	[0..1]	CodeSet	
ProvisionCashSettlValueDateAdjusted	[0..1]	LocalMktDate	

Used in groups: [ProvisionGrp](#)

### 171.2.4321 ProvisionCashSettlValueTime

A time specified in 24-hour format, e.g. 11am would be represented as 11:00:00. The time of the cash settlement valuation date when the cash settlement amount will be determined according to the cash settlement method if the parties have not otherwise been able to agree to the cash settlement amount.

Type: [LocalMktTime](#)

Used in components: [ProvisionCashSettlValueDates](#)

**171.2.4322 ProvisionCashSettlValueTimeBusinessCenter**

Identifies the business center calendar used with the provision's cash settlement valuation time. See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in components: **ProvisionCashSettlValueDates**

**171.2.4323 ProvisionDateAdjusted**

The adjusted date of the provision.

Type: **LocalMktDate**

Used in groups: **ProvisionGrp**

**171.2.4324 ProvisionDateBusinessCenter**

The business center calendar used to adjust the instrument's provision's dates, e.g. "GBLO". See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **ProvisionDateBusinessCenterGrp**

**171.2.4325 ProvisionDateBusinessCenterGrp**

ProvisionDateBusinessCenterGrp is a repeating subcomponent within the ProvisionGrp component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the DateAdjustment component in Instrument.

---

<b>Name</b>	<b>Mult.</b>	<b>Type</b>	<b>Description</b>
<b>NoProvisionDateBusinessCenters</b>	[1..1]	NumInGroup	
<b>ProvisionDateBusinessCenter</b>	[0..1]	String	Required if NoProvisionDateBusinessCenters(40957) > 0.

---

Used in groups: **ProvisionGrp**

**171.2.4326 ProvisionDateBusinessDayConvention**

The business day convention used to adjust the instrument's provision's dates. Used only to override the business day convention specified in the DateAdjustment component within the Instrument component.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

---

Used in groups: **ProvisionGrp**

**171.2.4327 ProvisionDateTenorPeriod**

Time unit multiplier for the provision's tenor period.

Type: **int**

Used in groups: **ProvisionGrp**

**171.2.4328 ProvisionDateTenorUnit**

Time unit associated with the provision's tenor period.

Type: **String**

Allowed values in ProvisionDateTenorUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in groups: [ProvisionGrp](#)

### 171.2.4329 ProvisionDateUnadjusted

The unadjusted date of the provision.

Type: [LocalMktDate](#)

Used in groups: [ProvisionGrp](#)

### 171.2.4330 ProvisionGrp

The ProvisionGrp is a repeating subcomponent of the Instrument component used to detail the additional terms and conditions associated with the instrument.

Name	Mult.	Type	Description
<a href="#">NoProvisions</a>	[1..1]	NumInGroup	
<a href="#">ProvisionType</a>	[0..1]	CodeSet	Required if NoProvisions(40090) > 0.
<a href="#">ProvisionDateUnadjusted</a>	[0..1]	LocalMktDate	
<a href="#">ProvisionDateBusinessDayConvention</a>	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the DateAdjustment component in Instrument. The specified value would be specific to this instance of the instrument provisions.
<a href="#">ProvisionDateBusinessCenterGrp</a>	[0..*]	Group	When specified, this overrides the business centers defined in the DateAdjustment component in Instrument. The specified values would be specific to this instance of the instrument provisions.
<a href="#">ProvisionDateAdjusted</a>	[0..1]	LocalMktDate	
<a href="#">ProvisionDateTenorPeriod</a>	[0..1]	int	Conditionally required when ProvisionDateTenorUnit(40097) is specified.

Name	Mult.	Type	Description
ProvisionDateTenorUnit	[0..1]	CodeSet	Conditionally required when ProvisionDateTenorPeriod(40096) is specified.
ProvisionBreakFeeElection	[0..1]	CodeSet	
ProvisionBreakFeeRate	[0..1]	Percentage	
ProvisionCalculationAgent	[0..1]	CodeSet	
ProvisionOptionSinglePartyBuyerSide	[0..1]	CodeSet	
ProvisionOptionSinglePartySellerSide	[0..1]	CodeSet	
ProvisionCashSettlValueDates	[0..1]	Component	
ProvisionOptionExerciseDates	[0..1]	Component	
ProvisionOptionExpirationDate	[0..1]	Component	
ProvisionOptionRelevantUnderlying-Date	[0..1]	Component	
ProvisionOptionExerciseStyle	[0..1]	CodeSet	
ProvisionOptionExerciseMultipleNotional	[0..1]	Amt	
ProvisionOptionExerciseMinimumNotional	[0..1]	Amt	
ProvisionOptionExerciseMaximumNotional	[0..1]	Amt	
ProvisionOptionMinimumNumber	[0..1]	int	
ProvisionOptionMaximumNumber	[0..1]	int	
ProvisionOptionExerciseConfirmation	[0..1]	Boolean	
ProvisionCashSettlPaymentDates	[0..1]	Component	
ProvisionCashSettlMethod	[0..1]	CodeSet	
ProvisionCashSettlCurrency	[0..1]	Currency	
ProvisionCashSettlCurrency2	[0..1]	Currency	
ProvisionCashSettlQuoteType	[0..1]	CodeSet	
ProvisionCashSettlQuoteSource	[0..1]	Component	
ProvisionText	[0..1]	String	
EncodedProvisionTextLen	[0..1]	Length	Must be set if EncodedProvisionText(40987) field is specified and must immediately precede it.
EncodedProvisionText	[0..1]	data	Encoded (non-ASCII characters) representation of the ProvisionText(40113) field in the encoded format specified via the MessageEncoding(347) field.
ProvisionParties	[0..*]	Group	

Used in components: [Instrument](#)

#### **171.2.4331 ProvisionOptionExerciseBoundsFirstDateUnadjusted**

The unadjusted first date of a schedule. This can be used to restrict the range of exercise dates when they are relative.

Type: [LocalMktDate](#)

Used in components: [ProvisionOptionExerciseDates](#)

#### **171.2.4332 ProvisionOptionExerciseBoundsLastDateUnadjusted**

The unadjusted last date of a schedule. This can be used to restrict the range of exercise dates when they are relative.

Type: [LocalMktDate](#)

Used in components: [ProvisionOptionExerciseDates](#)

#### **171.2.4333 ProvisionOptionExerciseBusinessCenter**

The business center calendar used to adjust the instrument's provision's option exercise date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in groups: [ProvisionOptionExerciseBusinessCenterGrp](#)

#### **171.2.4334 ProvisionOptionExerciseBusinessCenterGrp**

[ProvisionOptionExerciseBusinessCenterGrp](#) is a repeating subcomponent within the [ProvisionOptionExerciseDates](#) component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the [DateAdjustment](#) component in [Instrument](#).

---

Name	Mult.	Type	Description
<a href="#">NoProvisionOptionExerciseBusinessCenters</a>	[1..1]	NumInGroup	

---

Name	Mult.	Type	Description
ProvisionOptionExerciseBusinessCenter	[0..1]	String	Required if NoProvisionOptionExerciseBusinessCenters(40954) > 0.

Used in components: [ProvisionOptionExerciseDates](#)

### 171.2.4335 ProvisionOptionExerciseBusinessDayConvention

The business day convention used to adjust the instrument's provision's option exercise date. Used only to override the business day convention specified in the DateAdjustment component within the Instrument component.

Type: [int](#)

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [ProvisionOptionExerciseDates](#)

### 171.2.4336 ProvisionOptionExerciseConfirmation

Used to indicate whether follow-up confirmation of exercise (written or electronic) is required following telephonic notice by the buyer to the seller or seller's agent.

Type: [Boolean](#)

Used in groups: [ProvisionGrp](#)

**171.2.4337 ProvisionOptionExerciseDates**

The ProvisionOptionExerciseDates is a subcomponent within the ProvisionGrp component used to report the option exercise dates and times defined in the provision.

Name	Mult.	Type	Description
ProvisionOptionExerciseBusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the DateAdjustment component in Instrument. The specified value would be specific to this instance of the provisional option exercise dates.
ProvisionOptionExerciseBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the DateAdjustment component in Instrument. The specified values would be specific to this instance of the provisional option exercise dates.
ProvisionOptionExerciseFixedDateGrp	[0..*]	Group	
ProvisionOptionExerciseEarliestDateOffsetPeriod	[0..1]	int	Conditionally required when ProvisionOptionExerciseEarliestDateUnit(40126) is specified.
ProvisionOptionExerciseEarliestDateOffsetUnit	[0..1]	CodeSet	Conditionally required when ProvisionOptionExerciseEarliestDatePeriod(40125) is specified.
ProvisionOptionExerciseFrequencyPeriod	[0..1]	int	Conditionally required when ProvisionOptionExerciseFrequencyUnit(40128) is specified.
ProvisionOptionExerciseFrequencyUnit	[0..1]	CodeSet	Conditionally required when ProvisionOptionExerciseFrequencyPeriod(40127) is specified.
ProvisionOptionExerciseStartDateUnadjusted	[0..1]	LocalMktDate	
ProvisionOptionExerciseStartDateRelativeTo	[0..1]	int	
ProvisionOptionExerciseStartDateOffsetPeriod	[0..1]	int	Conditionally required when ProvisionOptionExerciseStartDateOffsetUnit(40132) is specified.
ProvisionOptionExerciseStartDateOffsetUnit	[0..1]	CodeSet	Conditionally required when ProvisionOptionExerciseStartDateOffsetPeriod(40131) is specified.
ProvisionOptionExerciseStartDateOffsetDayType	[0..1]	CodeSet	
ProvisionOptionExerciseStartDateAdjusted	[0..1]	LocalMktDate	
ProvisionOptionExercisePeriodSkip	[0..1]	int	

Name	Mult.	Type	Description
ProvisionOptionExerciseBoundsFirst-DateUnadjusted	[0..1]	LocalMktDate	
ProvisionOptionExerciseBoundsLast-DateUnadjusted	[0..1]	LocalMktDate	
ProvisionOptionExerciseEarliestTime	[0..1]	LocalMktTime	
ProvisionOptionExerciseEarliestTime-BusinessCenter	[0..1]	String	
ProvisionOptionExerciseLatestTime	[0..1]	LocalMktTime	
ProvisionOptionExerciseLatestTime-BusinessCenter	[0..1]	String	

Used in groups: [ProvisionGrp](#)

#### 171.2.4338 ProvisionOptionExerciseEarliestDateOffsetPeriod

Time unit multiplier for the interval to the first (and possibly only) exercise date in the exercise period.

Type: [int](#)

Used in components: [ProvisionOptionExerciseDates](#)

#### 171.2.4339 ProvisionOptionExerciseEarliestDateOffsetUnit

Time unit associated with the interval to the first (and possibly only) exercise date in the exercise period.

Type: [String](#)

Allowed values in ProvisionOptionExerciseEarliestDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: [ProvisionOptionExerciseDates](#)

**171.2.4340 ProvisionOptionExerciseEarliestTime**

The earliest time at which notice of exercise can be given by the buyer to the seller (or seller's agent) i) on the expiration date, in the case of a European style option, (ii) on each bermuda option exercise date and the expiration date, in the case of a Bermuda style option the commencement date to, and including, the expiration date, in the case of an American option.

Type: [LocalMktTime](#)

Used in components: [ProvisionOptionExerciseDates](#)

**171.2.4341 ProvisionOptionExerciseEarliestTimeBusinessCenter**

Identifies the business center calendar used with the provision's earliest time for notice of exercise.

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in components: [ProvisionOptionExerciseDates](#)

**171.2.4342 ProvisionOptionExerciseFixedDate**

A predetermined option exercise date, unadjusted or adjusted depending on ProvisionOptionExerciseFixedDateType(40144).

Type: [LocalMktDate](#)

Used in groups: [ProvisionOptionExerciseFixedDateGrp](#)

**171.2.4343 ProvisionOptionExerciseFixedDateGrp**

The ProvisionOptionExerciseFixedDateGrp is a repeating component within the ProvisionOptionExerciseDates component used to report an array of unadjusted or adjusted fixed exercise dates.

Name	Mult.	Type	Description
<a href="#">NoProvisionOptionExerciseFixedDates</a>	[1..1]	NumInGroup	
<a href="#">ProvisionOptionExerciseFixedDate</a>	[0..1]	LocalMktDate	Required if NoProvisionOptionExerciseFixedDates (40142) > 0.
<a href="#">ProvisionOptionExerciseFixedDate-Type</a>	[0..1]	CodeSet	When specified it applies not only to the current date but to all subsequent dates in the group until overridden with a new type.

Used in components: [ProvisionOptionExerciseDates](#)

#### **171.2.4344 ProvisionOptionExerciseFixedDateType**

Specifies the type of date (e.g. adjusted for holidays).

Type: [int](#)

Allowed values in ProvisionOptionExerciseFixedDateTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Unadjusted	Unadjusted
1	Adjusted	Adjusted

---

Used in groups: [ProvisionOptionExerciseFixedDateGrp](#)

#### **171.2.4345 ProvisionOptionExerciseFrequencyPeriod**

Time unit multiplier for the frequency of subsequent exercise dates in the exercise period following the earliest exercise date. An interval of 1 day should be used to indicate an American style exercise period.

Type: [int](#)

Used in components: [ProvisionOptionExerciseDates](#)

#### **171.2.4346 ProvisionOptionExerciseFrequencyUnit**

Time unit associated with the frequency of subsequent exercise dates in the exercise period following the earliest exercise date.

Type: [String](#)

Allowed values in CouponFrequencyUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month

---

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
Yr	Year	Year
H	Hour	Hour
Min	Minute	Minute
S	Second	Second
T	Term	Term

---

Used in components: [ProvisionOptionExerciseDates](#)

#### **171.2.4347 ProvisionOptionExerciseLatestTime**

For a Bermuda or American style option, the latest time on an exercise business day (excluding the expiration date) within the exercise period that notice can be given by the buyer to the seller or seller's agent. Notice of exercise given after this time will be deemed to have been given on the next exercise business day.

Type: [LocalMktTime](#)

Used in components: [ProvisionOptionExerciseDates](#)

#### **171.2.4348 ProvisionOptionExerciseLatestTimeBusinessCenter**

Identifies the business center calendar used with the provision's latest time for notice of exercise.

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in components: [ProvisionOptionExerciseDates](#)

#### **171.2.4349 ProvisionOptionExerciseMaximumNotional**

The maximum notional amount that can be exercised on a given exercise date.

Type: [Amt](#)

Used in groups: [ProvisionGrp](#)

**171.2.4350 ProvisionOptionExerciseMinimumNotional**

The minimum notional amount that can be exercised on a given exercise date.

Type: **Amt**

Used in groups: **ProvisionGrp**

**171.2.4351 ProvisionOptionExerciseMultipleNotional**

A notional amount which restricts the amount of notional that can be exercised when partial exercise or multiple exercise is applicable. The integral multiple amount defines a lower limit of notional that can be exercised and also defines a unit multiple of notional that can be exercised, i.e. only integer multiples of this amount can be exercised.

Type: **Amt**

Used in groups: **ProvisionGrp**

**171.2.4352 ProvisionOptionExercisePeriodSkip**

The number of periods in the referenced date schedule that are between each date in the relative date schedule. Thus a skip of 2 would mean that dates are relative to every second date in the referenced schedule. If present this should have a value greater than 1.

Type: **int**

Used in components: **ProvisionOptionExerciseDates**

**171.2.4353 ProvisionOptionExerciseStartDateAdjusted**

The adjusted first day of the exercise period for an American style option.

Type: **LocalMktDate**

Used in components: **ProvisionOptionExerciseDates**

**171.2.4354 ProvisionOptionExerciseStartDateOffsetDayType**

Specifies the day type of the provision's relative option exercise start date offset.

Type: **int**

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: [ProvisionOptionExerciseDates](#)

#### **171.2.4355 ProvisionOptionExerciseStartDateOffsetPeriod**

Time unit multiplier for the relative option exercise start date offset.

Type: [int](#)

Used in components: [ProvisionOptionExerciseDates](#)

#### **171.2.4356 ProvisionOptionExerciseStartDateOffsetUnit**

Time unit associated with the relative option exercise start date offset.

Type: [String](#)

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: [ProvisionOptionExerciseDates](#)

**171.2.4357 ProvisionOptionExerciseStartDateRelativeTo**

Specifies the anchor date when the option exercise start date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: **int**

Used in components: **ProvisionOptionExerciseDates**

**171.2.4358 ProvisionOptionExerciseStartDateUnadjusted**

The unadjusted first day of the exercise period for an American style option.

Type: **LocalMktDate**

Used in components: **ProvisionOptionExerciseDates**

**171.2.4359 ProvisionOptionExerciseStyle**

The instrument provision option's exercise style.

Type: **int**

Allowed values in ExerciseStyleCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	European	European
1	American	American
2	Bermuda	Bermuda
99	Other	Other

---

Used in groups: **ProvisionGrp**

**171.2.4360 ProvisionOptionExpirationDateAdjusted**

The adjusted last date within an exercise period for an American style option. For a European style option it is the only date within the exercise period.

Type: **LocalMktDate**

Used in components: **ProvisionOptionExpirationDate**

**171.2.4361 ProvisionOptionExpirationDateBusinessCenter**

The business center calendar used to adjust the instrument's provision's option expiration date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **ProvisionOptionExpirationDateBusinessCenterGrp**

**171.2.4362 ProvisionOptionExpirationDateBusinessCenterGrp**

ProvisionOptionExpirationDateBusinessCenterGrp is a repeating subcomponent within the ProvisionOptionExpirationDate component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the DateAdjustment component in Instrument.

Name	Mult.	Type	Description
<b>NoProvisionOptionExpirationDateBusinessCenters</b>	[1..1]	NumInGroup	
<b>ProvisionOptionExpirationDateBusinessCenter</b>	[0..1]	String	Required if NoProvisionOptionExpirationDateBusinessCenters(40955) > 0.

Used in components: **ProvisionOptionExpirationDate**

**171.2.4363 ProvisionOptionExpirationDateBusinessDayConvention**

The business day convention used to adjust the instrument's provision's option expiration date. Used only to override the business day convention specified in the DateAdjustment component within the Instrument component.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)

Code	Name	Description
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [ProvisionOptionExpirationDate](#)

### 171.2.4364 ProvisionOptionExpirationDate

The ProvisionOptionExerciseDate is a subcomponent within the ProvisionGrp component used to report the option expiration date and times defined in the provision.

Name	Mult.	Type	Description
<a href="#">ProvisionOptionExpirationDateUnadjusted</a>	[0..1]	LocalMktDate	
<a href="#">ProvisionOptionExpirationDateBusinessDayConvention</a>	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the DateAdjustment component in Instrument. The specified value would be specific to this instance of the provisional option expiration date.
<a href="#">ProvisionOptionExpirationDateBusinessCenterGrp</a>	[0..*]	Group	When specified, this overrides the business centers defined in the DateAdjustment component in Instrument. The specified values would be specific to this instance of the provisional option expiration date.
<a href="#">ProvisionOptionExpirationDateRelativeTo</a>	[0..1]	int	
<a href="#">ProvisionOptionExpirationDateOffsetPeriod</a>	[0..1]	int	Conditionally required when ProvisionOptionExpirationDateOffsetUnit(40150) is specified.
<a href="#">ProvisionOptionExpirationDateOffsetUnit</a>	[0..1]	CodeSet	Conditionally required when ProvisionOptionExpirationDateOffsetPeriod(40149) is specified.
<a href="#">ProvisionOptionExpirationDateOffsetDayType</a>	[0..1]	CodeSet	

Name	Mult.	Type	Description
ProvisionOptionExpirationDateAdjusted	[0..1]	LocalMktDate	
ProvisionOptionExpirationTime	[0..1]	LocalMktTime	
ProvisionOptionExpirationTimeBusinessCenter	[0..1]	String	

Used in groups: [ProvisionGrp](#)

### 171.2.4365 ProvisionOptionExpirationDateOffsetDayType

Specifies the day type of the provision's relative option expiration date offset.

Type: [int](#)

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: [ProvisionOptionExpirationDate](#)

### 171.2.4366 ProvisionOptionExpirationDateOffsetPeriod

Time unit multiplier for the relative option expiration date offset.

Type: [int](#)

Used in components: [ProvisionOptionExpirationDate](#)

**171.2.4367 ProvisionOptionExpirationDateOffsetUnit**

Time unit associated with the relative option expiration date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: **ProvisionOptionExpirationDate**

**171.2.4368 ProvisionOptionExpirationDateRelativeTo**

Specifies the anchor date when the option expiration date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: **int**

Used in components: **ProvisionOptionExpirationDate**

**171.2.4369 ProvisionOptionExpirationDateUnadjusted**

The unadjusted last day within an exercise period for an American style option. For a European style option it is the only day within the exercise period.

Type: **LocalMktDate**

Used in components: **ProvisionOptionExpirationDate**

**171.2.4370 ProvisionOptionExpirationTime**

The latest time for exercise on the expiration date.

Type: **LocalMktTime**

Used in components: **ProvisionOptionExpirationDate**

### **171.2.4371 ProvisionOptionExpirationTimeBusinessCenter**

Identifies the business center calendar used with the provision's latest exercise time on expiration date.

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in components: **ProvisionOptionExpirationDate**

### **171.2.4372 ProvisionOptionMaximumNumber**

The maximum number of options that can be exercised on a given exercise date. If the number is not specified, it means that the maximum number of options corresponds to the remaining unexercised options.

Type: **int**

Used in groups: **ProvisionGrp**

### **171.2.4373 ProvisionOptionMinimumNumber**

The minimum number of options that can be exercised on a given exercise date.

Type: **int**

Used in groups: **ProvisionGrp**

### **171.2.4374 ProvisionOptionRelevantUnderlyingDateAdjusted**

The adjusted date on the underlying set by the exercise of an option. What this date is depends on the option (e.g. in a swaption it is the swap effective date, in an extendible/cancelable provision it is the swap termination date).

Type: **LocalMktDate**

Used in components: **ProvisionOptionRelevantUnderlyingDate**

### **171.2.4375 ProvisionOptionRelevantUnderlyingDateBusinessCenter**

The business center calendar used to adjust the instrument's provision's option underlying date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **ProvisionOptionRelevantUnderlyingDateBusinessCenterGrp**

### 171.2.4376 ProvisionOptionRelevantUnderlyingDateBusinessCenterGrp

ProvisionOptionRelevantUnderlyingDateBusinessCenterGrp is a repeating subcomponent within the ProvisionOptionRelevantUnderlyingDate component. It is used to specify the set of business centers whose calendars drive date adjustment. Used only to override the business centers defined in the DateAdjustment component in Instrument.

Name	Mult.	Type	Description
NoProvisionOptionRelevantUnderlyingDateBusinessCenters	[1..1]	NumInGroup	
ProvisionOptionRelevantUnderlyingDateBusinessCenter	[0..1]	String	Required if NoProvisionOptionRelevantUnderlyingDateBusinessCenters(40956) > 0.

Used in components: **ProvisionOptionRelevantUnderlyingDate**

### 171.2.4377 ProvisionOptionRelevantUnderlyingDateBusinessDayConvention

The business day convention used to adjust the instrument's provision's option underlying date. Used only to override the business day convention specified in the DateAdjustment component within the Instrument component.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.

Code	Name	Description
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [ProvisionOptionRelevantUnderlyingDate](#)

### 171.2.4378 ProvisionOptionRelevantUnderlyingDate

The ProvisionOptionRelevantUnderlyingDate is a subcomponent within the ProvisionGrp component used to report the option relevant underlying date defined in the provision.

Name	Mult.	Type	Description
<a href="#">ProvisionOptionRelevantUnderlying-DateUnadjusted</a>	[0..1]	LocalMktDate	
<a href="#">ProvisionOptionRelevantUnderlying-DateBusinessDayConvention</a>	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the DateAdjustment component in Instrument. The specified value would be specific to this instance of the provisional option relevant underlying date.
<a href="#">ProvisionOptionRelevantUnderlying-DateBusinessCenterGrp</a>	[0..*]	Group	When specified, this overrides the business centers defined in the DateAdjustment component in Instrument. The specified values would be specific to this instance of the provisional option relevant underlying date.
<a href="#">ProvisionOptionRelevantUnderlying-DateRelativeTo</a>	[0..1]	int	
<a href="#">ProvisionOptionRelevantUnderlying-DateOffsetPeriod</a>	[0..1]	int	Conditionally required when ProvisionOptionRelevantUnderlyingDateOffsetUnit(40160) is specified.
<a href="#">ProvisionOptionRelevantUnderlying-DateOffsetUnit</a>	[0..1]	CodeSet	Conditionally required when ProvisionOptionRelevantUnderlyingDateOffsetPeriod(40159) is specified.
<a href="#">ProvisionOptionRelevantUnderlying-DateOffsetDayType</a>	[0..1]	CodeSet	
<a href="#">ProvisionOptionRelevantUnderlying-DateAdjusted</a>	[0..1]	LocalMktDate	

Used in groups: [ProvisionGrp](#)

**171.2.4379 ProvisionOptionRelevantUnderlyingDateOffsetDayType**

Specifies the day type of the provision's relative option relevant underlying date offset.

Type: **int**

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

---

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in components: [ProvisionOptionRelevantUnderlyingDate](#)

**171.2.4380 ProvisionOptionRelevantUnderlyingDateOffsetPeriod**

Time unit multiplier for the relative option relevant underlying date offset.

Type: **int**

Used in components: [ProvisionOptionRelevantUnderlyingDate](#)

**171.2.4381 ProvisionOptionRelevantUnderlyingDateOffsetUnit**

Time unit associated with the relative option relevant underlying date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: [ProvisionOptionRelevantUnderlyingDate](#)

**171.2.4382 ProvisionOptionRelevantUnderlyingDateRelativeTo**

Specifies the anchor date when the date relevant to the underlying trade on exercise is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: **int**

Used in components: **ProvisionOptionRelevantUnderlyingDate**

**171.2.4383 ProvisionOptionRelevantUnderlyingDateUnadjusted**

The unadjusted date on the underlying set by the exercise of an option. What this date is depends on the option (e.g. in a swaption it is the swap effective date, in an extendible/cancelable provision it is the swap termination date).

Type: **LocalMktDate**

Used in components: **ProvisionOptionRelevantUnderlyingDate**

**171.2.4384 ProvisionOptionSinglePartyBuyerSide**

If optional early termination is not available to both parties then this component identifies the buyer of the option through its side of the trade.

Type: **int**

Allowed values in ProvisionOptionSinglePartyBuyerSideCodeSet:

---

Code	Name	Description
1	Buy	Buy
2	Sell	Sell

---

Used in groups: **ProvisionGrp**

**171.2.4385 ProvisionOptionSinglePartySellerSide**

If optional early termination is not available to both parties then this component identifies the seller of the option through its side of the trade.

Type: **int**

Allowed values in ProvisionOptionSinglePartyBuyerSideCodeSet:

Code	Name	Description
1	Buy	Buy
2	Sell	Sell

Used in groups: [ProvisionGrp](#)

### 171.2.4386 ProvisionParties

ProvisionParties is a repeating component within the Provision component used to report the parties identified in the contract provision.

Name	Mult.	Type	Description
<a href="#">NoProvisionPartyIDs</a>	[1..1]	NumInGroup	
<a href="#">ProvisionPartyID</a>	[0..1]	String	Required if NoProvisionPartyIDs(40174) > 0.
<a href="#">ProvisionPartyIDSource</a>	[0..1]	CodeSet	Required if NoProvisionPartyIDs(40174) > 0.
<a href="#">ProvisionPartyRole</a>	[0..1]	CodeSet	Required if NoProvisionPartyIDs(40174) > 0.
<a href="#">ProvisionPartyRoleQualifier</a>	[0..1]	CodeSet	
<a href="#">ProvisionPtysSubGrp</a>	[0..*]	Group	

Used in groups: [ProvisionGrp](#)

### 171.2.4387 ProvisionPartyID

The party identifier/code for the payment settlement party.

Type: [String](#)

Used in groups: [ProvisionParties](#)

### 171.2.4388 ProvisionPartyIDSource

Identifies class or source of the ProvisionPartyID(40175) value.

Type: [char](#)

Allowed values in PartyIDSourceCodeSet:

Code	Name	Description
1	KoreanInvestorID	Korean Investor ID
6	UKNationalInsuranceOrPension-Number	UK National Insurance or Pension Number
B	BIC	BIC (Bank Identification Code - SWIFT managed) code (ISO9362 - See "Appendix 6-B")
I	ISITCAcronym	Directed broker three character acronym as defined in ISITC "ETC Best Practice" guidelines document
2	TaiwaneseForeignInvestorID	Taiwanese Qualified Foreign Investor ID QFII/FID
7	USSocialSecurityNumber	US Social Security Number
C	GeneralIdentifier	Generally accepted market participant identifier (e.g. NASD mnemonic)
3	TaiwaneseTradingAcct	Taiwanese Trading Acct
8	USEmployerOrTaxIDNumber	US Employer or Tax ID Number
D	Proprietary	Proprietary / Custom code. Custom ID schema used between counterparties, trading platforms and repositories.
4	MalaysianCentralDepository	Malaysian Central Depository (MCD) number
9	AustralianBusinessNumber	Australian Business Number
E	ISOCountryCode	ISO Country Code
5	ChineseInvestorID	Chinese Investor ID
A	AustralianTaxFileNumber	Australian Tax File Number
F	SettlementEntityLocation	Settlement Entity Location (note if Local Market Settlement use "E=ISO Country Code") (see "Appendix 6-G" for valid values)
G	MIC	Market Identifier Code (ISO 10383) MIC
J	TaxID	Tax ID
H	CSDParticipant	CSD participant/member code (e.g. Euroclear, DTC, CREST or Kassenverein number)
K	AustralianCompanyNumber	Australian Company Number
L	AustralianRegisteredBodyNumber	Australian Registered Body Number
M	CFTCReportingFirmIdentifier	CFTC reporting firm identifier
N	LegalEntityIdentifier	Legal Entity Identifier (ISO 17442) LEI
O	InterimIdentifier	Interim identifier. An interim entity identifier assigned by a regulatory agency prior to an LEI (ISO 17442) being assigned.
P	ShortCodeIdentifier	Short code identifier. A generic means for trading venues, brokers, investment managers to convey a bilaterally agreed upon "short hand" code for an identifier that is a reference to a mapping between the parties.

Code	Name	Description
Q	NationalIDNaturalPerson	National ID of natural person. An identification number generally assigned by a government authority or agency to a natural person which is unique to the person it is assigned to. Examples include, but not limited to, "social security number", "pension number".
R	IndiaPermanentAccountNumber	India Permanent Account Number. Also referred to as PAN ID. An identifier issued by the Income Tax Department of India.
S	FDID	Firm designated identifier. Also referred to as FDID. A unique identifier required by the SEC for each trading account designated by Industry Members for purposes of reporting to CAT (Consolidated Audit Trail).
T	SPSAID	Special Segregated Account ID. Also referred to as SPSA ID. The Special Segregated Account identifier issued by Hong Kong Exchanges and Clearing.
U	MasterSPSAID	Master Special Segregated Account ID. Also referred to as Master SPSA ID. The master identifier issued by Hong Kong Exchanges and Clearing for the aggregation of SPSA IDs.

Used in groups: [ProvisionParties](#)

### 171.2.4389 ProvisionPartyRole

Identifies the type or role of ProvisionPartyID(40175) specified.

Type: [int](#)

Allowed values in PartyRoleCodeSet:

Code	Name	Description
1	ExecutingFirm	Executing Firm (formerly FIX 4.2 ExecBroker)
2	BrokerOfCredit	Broker of Credit (formerly FIX 4.2 BrokerOfCredit)
3	ClientID	Client ID (formerly FIX 4.2 ClientID)
4	ClearingFirm	Clearing Firm (formerly FIX 4.2 ClearingFirm)
5	InvestorID	Investor ID
6	IntroducingFirm	Introducing Firm
7	EnteringFirm	Entering Firm
8	Locate	Locate / Lending Firm (for short-sales)
9	FundManagerClientID	Fund Manager Client ID (for CIV)

<b>Code</b>	<b>Name</b>	<b>Description</b>
10	SettlementLocation	Settlement Location (formerly FIX 4.2 SettlLocation)
11	OrderOriginationTrader	Order Origination Trader (associated with Order Origination Firm - i.e. trader who initiates/submits the order)
12	ExecutingTrader	Executing Trader (associated with Executing Firm - actually executes)
13	OrderOriginationFirm	Order Origination Firm (e.g. buy-side firm)
14	GiveupClearingFirmDepr	Giveup Clearing Firm (firm to which trade is given up)
15	CorrespondantClearingFirm	Correspondant Clearing Firm
16	ExecutingSystem	Executing System
17	ContraFirm	Contra Firm
18	ContraClearingFirm	Contra Clearing Firm
19	SponsoringFirm	Sponsoring Firm
20	UnderlyingContraFirm	Underlying Contra Firm
21	ClearingOrganization	Clearing Organization
22	Exchange	Exchange. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
24	CustomerAccount	Customer Account
25	CorrespondentClearingOrganization	Correspondent Clearing Organization
26	CorrespondentBroker	Correspondent Broker
27	Buyer	Buyer/Seller (Receiver/Deliverer)
28	Custodian	Custodian
29	Intermediary	Intermediary
30	Agent	Agent
31	SubCustodian	Sub-custodian
32	Beneficiary	Beneficiary
33	InterestedParty	Interested party
34	RegulatoryBody	Regulatory body. In the context of regulatory reporting, this identifies the regulator the trade is being reported to.
35	LiquidityProvider	Liquidity provider
36	EnteringTrader	Entering trader
37	ContraTrader	Contra trader
38	PositionAccount	Position account. The account which positions are maintained. Typically represents the aggregation of one or more customer accounts.
39	ContraInvestorID	Contra Investor ID
40	TransferToFirm	Transfer to Firm

<b>Code</b>	<b>Name</b>	<b>Description</b>
41	ContraPositionAccount	Contra Position Account
42	ContraExchange	Contra Exchange
43	InternalCarryAccount	Internal Carry Account
44	OrderEntryOperatorID	Order Entry Operator ID
45	SecondaryAccountNumber	Secondary Account Number
46	ForeignFirm	Foreign Firm
47	ThirdPartyAllocationFirm	Third Party Allocation Firm
48	ClaimingAccount	Claiming Account
49	AssetManager	Asset Manager
50	PledgorAccount	Pledgor Account
51	PledgeeAccount	Pledgee Account
52	LargeTraderReportableAccount	Large Trader Reportable Account
53	TraderMnemonic	Trader mnemonic
54	SenderLocation	Sender Location
55	SessionID	Session ID
56	AcceptableCounterparty	Acceptable Counterparty
57	UnacceptableCounterparty	Unacceptable Counterparty
58	EnteringUnit	Entering Unit
59	ExecutingUnit	Executing Unit
60	IntroducingBroker	Introducing Broker
61	QuoteOriginator	Quote originator
62	ReportOriginator	Report originator
63	SystematicInternaliser	Systematic internaliser (SI)
64	MultilateralTradingFacility	Multilateral Trading Facility (MTF). Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
65	RegulatedMarket	Regulated Market (RM). Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
66	MarketMaker	Market Maker
67	InvestmentFirm	Investment Firm
68	HostCompetentAuthority	Host Competent Authority (Host CA)
69	HomeCompetentAuthority	Home Competent Authority (Home CA)
70	CompetentAuthorityLiquidity	Competent Authority of the most relevant market in terms of liquidity (CAL)

<b>Code</b>	<b>Name</b>	<b>Description</b>
71	CompetentAuthorityTransactionV- enue	Competent Authority of the Transaction (Execution) Venue (CATV)
72	ReportingIntermediary	Reporting intermediary. The medium or vendor used to report to a regulator, non-regulatory agency or data repository.
73	ExecutionVenue	Execution Venue. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
74	MarketDataEntryOriginator	Market data entry originator
75	LocationID	Location ID
76	DeskID	Desk ID
77	MarketDataMarket	Market data market
78	AllocationEntity	Allocation Entity
79	PrimeBroker	Prime Broker providing General Trade Services
80	StepOutFirm	Step-Out Firm (Prime Broker)
81	BrokerClearingID	Broker clearing identifier
82	CentralRegistrationDepository	Central Registration Depository (CRD)
83	ClearingAccount	Clearing Account
84	AcceptableSettlingCounterparty	Acceptable Settling Counterparty
85	UnacceptableSettlingCounterparty	Unacceptable Settling Counterparty
86	CLSMemberBank	CLS Member Bank
87	InConcertGroup	In Concert Group
88	InConcertControllingEntity	In Concert Controlling Entity
89	LargePositionsReportingAccount	Large Positions Reporting Account
90	SettlementFirm	Settlement Firm
91	SettlementAccount	Settlement account. The account to which individual payment obligations are aggregated for netting and funds movement. Typically represents the aggregation of many margin (performance bond) accounts.
92	ReportingMarketCenter	Reporting Market Center
93	RelatedReportingMarketCenter	Related Reporting Market Center
94	AwayMarket	Away Market. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
95	GiveupTradingFirm	Give-up (trading) firm
96	TakeupTradingFirm	Take-up (trading) firm
97	GiveupClearingFirm	Give-up clearing firm
98	TakeupClearingFirm	Take-up clearing firm

<b>Code</b>	<b>Name</b>	<b>Description</b>
99	OriginatingMarket	Originating Market. Identifies the Market using PartyIDSource(tag 447) = G (Market Identifier Code) where an order originated in the event that the order is sent to an alternative market for execution. Serves as an inverse of an away market.
100	MarginAccount	Margin account. Also referred to as "performance bond account". The margin account is the calculated margin requirements. Typically represents the aggregation of one or more position accounts.
101	CollateralAssetAccount	Collateral asset account. The account at which individual collateral assets are maintained. Typically, although not always, one-for-one with the settlement account.
102	DataRepository	Data repository. Multiple instances of this PartyRole may appear for reporting purposes.
103	CalculationAgent	Calculation agent
104	ExerciseNoticeSender	Sender of exercise notice
105	ExerciseNoticeReceiver	Receiver of exercise notice
106	RateReferenceBank	Rate reference bank. The bank providing the reference rate. Multiple instance of this PartyRole may appear.
107	Correspondent	Correspondent
109	BeneficiaryBank	Beneficiary's bank or depository institution. The institution in which the beneficiary, a person or an entity, has their account with. The institution may be a bank or non-bank institution.
110	Borrower	Borrower
111	PrimaryObligator	Primary obligator
112	Guarantor	Guarantor
113	ExcludedReferenceEntity	Excluded reference entity
114	DeterminingParty	Determining party
115	HedgingParty	Hedging party
116	ReportingEntity	Reporting entity. The entity that is reporting the information.
117	SalesPerson	Sales person. The person who is involved in the sales activities for their firm.
118	Operator	Operator. The person who has the capabilities and authorization to take certain actions; for example, setting entitlements, etc.
119	CSD	Central Securities Depository (CSD)
120	ICSD	International Central Securities Depository (ICSD)

Code	Name	Description
121	TradingSubAccount	Trading sub-account. Example of sub-accounts include a clearing account that has multiple trading sub-accounts, a trading account that has multiple trading sub-accounts belonging to different trading firms.
122	InvestmentDecisionMaker	Investment decision maker. In the context of ESMA RTS reporting, this is used to specify party responsible for the investment decision. See RTS 24, Annex, Table 2, Field 4.
123	PublishingIntermediary	Publishing intermediary. The medium or vendor used to publish to the market.
124	CSDParticipant	Central Securities Depository (CSD) Participant. In the context of EU SFTR reporting the identifier of the CSD participant or indirect participant of the reporting counterparty. Where both the CSD participant and indirect participant are involved in the transaction this should identify the indirect participant.
125	Issuer	Issuer. The issuer of the security.
126	ContraCustomerAccount	Contra Customer Account. Same as PartyRole(452) = 24 (Customer Account) but for the counterparty. Can be used whenever the parties component is not nested in a repeating group representing both sides.
127	ContraInvestmentDecisionMaker	Contra Investment Decision Maker. Same as PartyRole(452) = 122 (Investment Decision Maker) but for the counterparty. Can be used whenever the parties component is not nested in a repeating group representing both sides.

Used in groups: [ProvisionParties](#)

### 171.2.4390 ProvisionPartyRoleQualifier

Used to further qualify the value of ProvisionPartyRole(40177).

Type: [int](#)

Allowed values in PartyDetailRoleQualifierCodeSet:

Code	Name	Description
0	Agency	Agency
1	Principal	Principal
2	RisklessPrincipal	Riskless principal
3	GeneralClearingMember	General clearing member

<b>Code</b>	<b>Name</b>	<b>Description</b>
30	ExchangeOrderSubmitter	Exchange order submitter. Used to identify original or initial exchange order submitting broker when party role "1" (Executing Firm) appears more than once.
4	IndividualClearingMember	Individual clearing member
5	PreferredMarketMaker	Preferred market maker. Market maker getting a part of the matched quantity before primary or default market maker.
6	DirectedMarketMaker	Directed market maker. Single market maker to handle the order provided.
7	Bank	Bank
8	Hub	Hub. Indicates that the Intermediary party is a hub system or service provider.
9	PrimaryTrdRepository	Primary trade repository. Used to differentiate the principal trade repository from the Original or Additional trade repositories when there are multiple trade repositories being reported.
10	OrigTrdRepository	Original trade repository. Used to identify the trade repository to which the trade was originally reported if different from the current repository to which the trade is being reported.
11	AddnlIntlTrdRepository	Additional international trade repository. Used with InternationalSwapIndicator(2526) to identify the trade repository that is in addition to the local swaps data repository as required by U.S. law.
12	AddnlDomesticTrdRepository	Additional domestic trade repository. Used with MixedSwapIndicator(1929) to identify the trade repository that is in addition to the current trade repository when the assets in the swap are subject to two different domestic regulators.
13	RelatedExchange	Related exchange
14	OptionsExchange	Options exchange
15	SpecifiedExchange	Specified exchange
16	ConstituentExchange	Constituent exchange.
17	ExemptFromTradeReporting	Exempt from trade reporting. In the context of FINRA TRACE reporting requirements, this is used to indicate the ATS has been granted a regulatory exemption from reporting.
18	Current	Current. Can be used to convey an existing party identifier for the same party role in a single message.
19	New	New. Can be used to convey a future party identifier for the same party role in a single message.
20	DesignatedSponsor	Designated sponsor. Market maker jointly providing liquidity for the same security with other market makers.

Code	Name	Description
21	Specialist	Specialist. Market maker being the only one providing liquidity for a security.
22	Algorithm	Algorithm
23	FirmOrLegalEntity	Firm or legal entity
24	NaturalPerson	Natural person
25	RegularTrader	Regular trader. Standard trader profile.
26	HeadTrader	Head trader. Senior trader leading a group of regular traders.
27	Supervisor	Supervisor. Administrative user that has only limited rights for normal trading but possibly special rights for emergency actions.
28	TriParty	Tri-party. In the context of EU SFTR reporting, identifies the third party, not necessarily the custodian, to which the reporting counterparty has outsourced the post-trade processing of an SFT (if applicable).
29	Lender	Lender. In the context of EU SFTR reporting, identifies the agent lender involved in the securities lending transaction.

---

Used in groups: [ProvisionParties](#)

#### **171.2.4391 ProvisionPartySubID**

Party sub-identifier, if applicable, for ProvisionPartyID(40175).

Type: [String](#)

Used in groups: [ProvisionPtysSubGrp](#)

#### **171.2.4392 ProvisionPartySubIDType**

The type of ProvisionPartySubID(40179).

Type: [int](#)

Allowed values in PartySubIDTypeCodeSet:

Code	Name	Description
1	Firm	Firm
2	Person	Person

---

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
3	System	System
4	Application	Application
5	FullLegalNameOfFirm	Full legal name of firm
6	PostalAddress	Postal address
7	PhoneNumber	Phone number
8	EmailAddress	Email address
9	ContactName	Contact name
10	SecuritiesAccountNumber	Securities account number (for settlement instructions)
11	RegistrationNumber	Registration number (for settlement instructions and confirmations)
12	RegisteredAddressForConfirmation	Registered address (for confirmation purposes)
13	RegulatoryStatus	Regulatory status (for confirmation purposes)
14	RegistrationName	Registration name (for settlement instructions)
15	CashAccountNumber	Cash account number (for settlement instructions)
16	BIC	BIC
17	CSDParticipantMemberCode	CSD participant member code
18	RegisteredAddress	Registered address
19	FundAccountName	Fund account name
20	TelexNumber	Telex number
21	FaxNumber	Fax number
22	SecuritiesAccountName	Securities account name
23	CashAccountName	Cash account name
24	Department	Department
25	LocationDesk	Location desk
26	PositionAccountType	Position account type
27	SecurityLocateID	Security locate ID
28	MarketMaker	Market maker
29	EligibleCounterparty	Eligible counterparty
30	ProfessionalClient	Professional client
31	Location	Location
32	ExecutionVenue	Execution venue
33	CurrencyDeliveryIdentifier	Currency delivery identifier
34	AddressCity	Address City
35	AddressStateOrProvince	Address State/Province

---

Code	Name	Description
36	AddressPostalCode	Address Postal Code
37	AddressStreet	Address Street
38	AddressISOCountryCode	Address Country (ISO country code)
39	ISOCountryCode	ISO country code
40	MarketSegment	Market segment
41	CustomerAccountType	Customer account type
42	OmnibusAccount	Omnibus account
43	FundsSegregationType	Funds segregation type
44	GuaranteeFund	Guarantee fund. Identifies a guarantee fund related to an account. Used when one account has multiple funds of collateral, each guaranteeing different positions. Can be used for PartyRole(452) = Customer Account(24).
45	SwapDealer	Swap dealer. The US regulator's defined term for identifying the trade counterparty as "any person who holds itself out as a dealer in swaps, makes a market in swaps, regularly enters into swaps with counterparties as an ordinary course of business for its own account, or engages in activity causing itself to be commonly known in the trade as a dealer or market maker in swaps".
46	MajorParticipant	Major participant. When PartySubID(523)=Y the counterparty is not the swap dealer but is a major swap participant as defined in the regulations.
47	FinancialEntity	Financial entity. When PartySubID(523)=Y the counterparty is neither a swap dealer nor a major swap participant but is a financial entity as defined in the regulations.
48	USPerson	U.S. person. A legal term referring to any U.S. person or legal entity anywhere in the world that should be taxed under U.S. law.
49	ReportingEntityIndicator	Reporting entity indicator. Indicates the entity obligated or delegated to report to their regulator, a non-regulatory agency or data repository. Set PartySubID(523)=Y if true.
50	ElectedClearingRequirementException	Elected clearing requirement exception
51	BusinessCenter	Business center.
52	ReferenceText	Reference text
53	ShortMarkingExemptAccount	Short-marking exempt account
54	ParentFirmIdentifier	Parent firm identifier. Implementation-specific identifier of this party's parent entity.
55	ParentFirmName	Parent firm name. Full name of this party's parent entity.

Code	Name	Description
56	DealIdentifier	Deal identifier. The internal identifier assigned to the trade by this party, particularly by a Clearing Organization.
57	SystemTradeID	System trade identifier
58	SystemTradeSubID	System trade sub-identifier
59	FCMCode	Futures Commission Merchant (FCM) code. The FCM's code or identifier in relation to the PartyRole(452). For example, if PartyRole(452) is the exchange or clearinghouse, the FCM code/ID specified in PartySubID(523) is the FCM's identifier at the exchange or clearinghouse.
60	DlvryTrmlCode	Delivery terminal customer account/code. Usually used for gas delivery to identify whose account the gas is allocated to at the delivery terminal. Often referred to as "HUB" code.
61	VolntyRptEntity	Voluntary reporting entity. The entity voluntarily reporting the trade to the regulator. Set PartySubID(523)=Y if true.
62	RptObligJurisdiction	Reporting obligation jurisdiction. For a trade that falls under multiple jurisdictions this may be used to identify, through PartySubID(523), the reporting jurisdiction to which the party is obligated to report.
63	VolntyRptJurisdiction	Voluntary reporting jurisdiction. For a trade that falls under multiple jurisdictions this may be used to identify, through PartySubID(523), the regulatory jurisdiction to which the party is submitting a voluntary report.
64	CompanyActivities	Company activities. For regulatory reporting. ID values include: A = Assurance undertaking authorized in accordance with Directive 2002/83/EC C = Credit institution authorized in accordance with Directive 2006/48/EC F = Investment firm in accordance with Directive 2004/39/EC I = Insurance undertaking authorized in accordance with Directive 73/239/EC L = Alternative investment fund managed by AIFMs authorized or registered in accordance with Directive 2011/61/EC O = Institution for occupational retirement provision within the meaning of Article 6(a) of Directive 2003/41/EC R = Reinsurance undertaking authorized in accordance with Directive 2005/68/EC U = UCITS and its management company, authorized in accordance with Directive 2009/65/EC or blank in case of coverage by LEI or in case of non-financial counterparties. In the context of EU SFTR reporting use the appropriate 4- or 1-character code noted in the regulations. See SFTR ITS "Commission Implementing Regulation (EU) 2019/363" Annexes 1 and 2 for values.
65	EEAreaDomiciled	European Economic Area domiciled. ID values: Y or N

<b>Code</b>	<b>Name</b>	<b>Description</b>
66	ContractLinked	Contract linked to commercial or treasury financing for this counterparty. ID values: Y or N
67	ContractAbove	Contract above clearing threshold for this counterparty. ID values: Y or N
68	VolntyRptPty	Voluntary reporting party. When PartySubID(523)=Y, identifies that the trading party is reporting voluntarily when VoluntaryRegulatoryReport(1935)=Y.
69	EndUser	End user. When PartySubID(523)=Y, the counterparty is neither the swap dealer, major swap participant nor financial entity as defined in the regulations.
70	LocationOrJurisdiction	Location or jurisdiction. One or more instances may be used in combination with PartySubIDType(803) = 49 (Reporting entity indicator) or 102 (Data repository) to identify the jurisdiction, countries, regions or provinces for which the party is a reporting entity or data repository when that characteristic is ambiguous or where there are multiple locations. The party sub-ID value is either a jurisdiction acronym, a 2-character ISO 3166 country code, or a hyphenated combination of the country code and the standard post-office abbreviation for province, state or region if necessary. E.g. "US" for United States or "CA-QC" for Quebec Canada.
71	DerivativesDealer	Derivatives dealer. Indicates whether the party is a derivatives dealer or not (Y/N). The Canadian regulator's defined term for identifying the trade counterparty as "a person or company engaging in or holding himself, herself or itself out as engaging in the business of trading in derivatives in Ontario as principal or agent".
72	Domicile	Domicile. Country and optionally province, state or region of domicile. The party sub-ID value is either a 2-character ISO 3166 country code or a hyphenated combination of the country code and the standard post-office abbreviation of province, state or region if necessary. E.g. "US" for United States or "CA-QC" for Quebec Canada.
73	ExemptFromRecognition	Exempt from recognition. Used with party role 21 "Clearing Organization" to indicate exemption (Y/N). Identifies a clearing agency as exempt from oversight in Ontario, i.e. one that 1) only provides limited services and does not present significant risks or 2) is foreign-based, intends to operate in Ontario but is subject to regulatory oversight in another jurisdiction.

Code	Name	Description
74	Payer	Payer. Identifies the party as the payer of a particular payment stream or bullet payment by quoting the stream's StreamDesc(40051) (or LegStreamDesc(40243) or UnderlyingStreamDesc(40542)) or payment's PaymentDesc(43087) in the associated party sub-identifier field.
75	Receiver	Receiver. Identifies the party as the receiver of a particular payment stream or bullet payment by quoting the stream's StreamDesc(40051) (or LegStreamDesc(40243) or UnderlyingStreamDesc(40542)) or payment's PaymentDesc(43087) in the associated party sub-identifier field.
76	SystematicInternaliser	Systematic Internaliser (SI). In the context of ESMA reporting, this is used to indicate whether the specified party is a Systematic Internaliser or not for the security defined in the Instrument component (Y/N).
77	PublishingEntityIndicator	Publishing entity indicator. Indicates the entity obligated or delegated to publish to the market. Set PartySubID(523)=Y if true.
78	FirstName	First name. The first name(s) of a natural person. If multiple names, separate entries by a comma.
79	Surname	Surname. The surname(s) or lastname(s) of a natural person. If multiple names, separate entries by a comma.
80	DateOfBirth	Date of birth. The date of birth of a natural person in the format YYYYMMDD.
81	OrderTransmittingFirm	Order transmitting firm. Identifies whether the party specified in PartyID(448) is the firm that transmitted the order. In the context of RTS 22 Article 4, when "true" the PartySubID(523)=Y shall be set "by the transmitting firm within the transmitting firm's report where conditions for transmission specified in Article 4 were not satisfied."
82	OrderTransmittingFirmBuyer	Order transmitting firm for buyer. Identifies the firm that transmitted the order for the buyer. In the context of ESMA RTS 22, PartySubID(523)=Y is used to indicate the firm identified in PartyID(448) is the firm that transmitted the order for the buyer. "This shall be populated by the receiving firm within the receiving firm's report with the identification code provided by the transmitting firm."

Code	Name	Description
83	OrderTransmitterSeller	Order transmitter for seller. Identifies the order transmitting firm for the seller. In the context of ESMA RTS 22, PartySubID(523)=Y is used to indicate the firm identified in PartyID(448) is the firm that transmitted the order for the seller. "This shall be populated by the receiving firm within the receiving firm's report with the identification code provided by the transmitting firm."
84	LegalEntityIdentifier	Legal Entity Identifier (ISO 17442) LEI
85	SubSectorClassification	Sub-sector classification. Supplemental to party sub-ID type "64" (Company activities) for regulatory reporting. For EU SFTR reporting use the appropriate 4-character code noted in the regulations applying the conditional association rules. See SFTR ITS "Commission Implementing Regulation (EU) 2019/363" Annexes 1 and 2 for values.
86	PartySide	Party side. May be used, when appropriate, to explicitly indicate the transaction side of the party, e.g. Buyer, Seller, Lender, Borrower, Maker, Taker, etc. in the ID. In the context of EU SFTR reporting, use values as required by SFTR, "GIVE" and "TAKE" in the ID, to identify collateral giver and taker.
87	LegalRegistrationCountry	Legal registration country. ISO Country Code where the registered office of the party is located as specified in the LEI reference data.

Used in groups: [ProvisionPtysSubGrp](#)

### 171.2.4393 ProvisionPtysSubGrp

ProvisionPtysSubGrp is a repeating component within the ProvisionParties component used to extend information to be reported for the party.

Name	Mult.	Type	Description
NoProvisionPartySubIDs	[1..1]	NumInGroup	
ProvisionPartySubID	[0..1]	String	Required if NoProvisionPartySubIDs(40178) > 0.
ProvisionPartySubIDType	[0..1]	CodeSet	Required if NoProvisionPartySubIDs(40178) > 0.

Used in groups: [ProvisionParties](#)

**171.2.4394 ProvisionText**

Free form text to specify additional information or enumeration description when a standard value does not apply.

Type: **String**

Used in groups: **ProvisionGrp**

**171.2.4395 ProvisionType**

Type of provisions.

Type: **int**

Allowed values in ProvisionTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	MandatoryEarlyTermination	Mandatory early termination
1	OptionalEarlyTermination	Optional early termination
2	Cancelable	Cancelable
3	Extendable	Extendable. The contract can be extended by either party usually with a specific time notice prior to the expiry date. In the context of EU SFTR reporting this corresponds to "termination optionality" code "ETSB".
4	MutualEarlyTermination	Mutual early termination
5	Evergreen	Evergreen. The contract automatically renews after the expiry date until one party gives the other notice to terminate. In the context of EU SFTR reporting this corresponds to "termination optionality" code "EGRN".
6	Callable	Callable. Contract is callable.
7	Puttable	Puttable. Contract is puttable.

---

Used in groups: **ProvisionGrp**

**171.2.4396 PtysSubGrp**

---

Name	Mult.	Type	Description
NoPartySubIDs	[1..1]	NumInGroup	
PartySubID	[0..1]	String	
PartySubIDType	[0..1]	CodeSet	

---

Used in groups: [Parties](#)

### 171.2.4397 PublishTrdIndicator

Indicates if a trade should be reported via a market reporting service.

Type: [Boolean](#)

Allowed values in PublishTrdIndicatorCodeSet:

---

Code	Name	Description
N	DoNotReportTrade	Do Not Report Trade
Y	ReportTrade	Report Trade

---

Used in messages: [TradeCaptureReport](#), [TradeCaptureReportAck](#)

### 171.2.4398 PutOrCall

Indicates whether an option contract is a put, call, chooser or undetermined.

Type: [int](#)

Allowed values in PutOrCallCodeSet:

---

Code	Name	Description
0	Put	Put. Also used for the case in which the buyer of a Swaption has the right to enter into an IRS contract as a fixed-rate receiver or into a CDS contract as a seller of protection or for the case of a Floor.
1	Call	Call. Also used for the case in which the buyer of a Swaption has the right to enter into an IRS contract as a fixed-rate payer or into a CDS contract as a buyer of protection or for the case of a Cap.

---

Code	Name	Description
2	Other	Other. In the context of ESMA RTS 22 reporting, this value may be used when, at the time of execution, the option right cannot be determined.
3	Chooser	Chooser. Indicates that the option buyer may choose to buy or sell the underlying security on exercise or if a Swaption to pay or receive the underlying IRS cash flow stream or to buy or sell CDS protection.

Used in components: [Instrument](#)

### 171.2.4399 QtyType

Type of quantity specified in quantity field. ContractMultiplier (tag 231) is required when QtyType = 1 (Contracts). UnitOfMeasure (tag 996) and TimeUnit (tag 997) are required when QtyType = 2 (Units of Measure per Time Unit).

Type: [int](#)

Allowed values in QtyTypeCodeSet:

Code	Name	Description
0	Units	Units (shares, par, currency)
1	Contracts	Contracts
2	UnitsOfMeasurePerTimeUnit	Unit of Measure per Time Unit

Used in components: [SettlTradeDetails](#)

Used in groups: [InstrmtMatchSideGrp](#), [ListOrdGrp](#), [QuotReqGrp](#), [QuotReqRjctGrp](#), [SideCrossOrdModGrp](#)

Used in messages: [Advertisement](#), [AllocationInstruction](#), [AllocationInstructionAlert](#), [AllocationReport](#), [CollateralAssignment](#), [CollateralInquiry](#), [CollateralInquiryAck](#), [CollateralReport](#), [CollateralRequest](#), [CollateralResponse](#), [Confirmation](#), [ExecutionReport](#), [IOI](#), [MultilegOrderCancelReplace](#), [NewOrderMultileg](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#), [TradeCaptureReport](#), [TradeCaptureReportAck](#)

### 171.2.4400 Quantity

Overall/total quantity (e.g. number of shares)

(Prior to FIX 4.2 this field was of type int)

Type: Qty

Used in groups: InstrmtMatchSideGrp

Used in messages: Advertisement, AllocationInstruction, AllocationInstructionAlert, AllocationReport, AllocationReportAck, CollateralAssignment, CollateralInquiry, CollateralInquiryAck, CollateralReport, CollateralRequest, CollateralResponse

### 171.2.4401 QuantityDate

Date associated to the quantity that is being reported for the position.

Type: LocalMktDate

Used in groups: PositionQty, TradePositionQty

### 171.2.4402 QuotCxlEntriesGrp

---

Name	Mult.	Type	Description
NoQuoteEntries	[1..1]	NumInGroup	The number of securities (instruments) whose quotes are to be canceled. Not required when cancelling all quotes.
Instrument	[0..1]	Component	Insert here the set of "Instrument" (symbology) fields defined in "Common Components of Application Messages"
FinancingDetails	[0..1]	Component	Insert here the set of "FinancingDetails" (symbology) fields defined in "Common Components of Application Messages"
UndInstrmtGrp	[0..*]	Group	
InstrmtLegGrp	[0..*]	Group	

---

Used in messages: QuoteCancel

### 171.2.4403 QuoteAckStatus

Acknowledgement status of a Quote(35=S) or QuoteCancel(35=Z) message submission.

Type: int

Allowed values in QuoteAckStatusCodeSet:

---

Code	Name	Description
0	ReceivedNotYetProcessed	Received, not yet processed
1	Accepted	Accepted
2	Rejected	Rejected

---

Used in messages: [QuoteAck](#)

#### 171.2.4404 QuoteAttributeGrp

The QuoteAttributeGrp component provides additional attributes about the quote. Attributes included in this component are primarily "indicators" that may be associated with regulatory requirements and are typically not part of normal trading activities.

---

Name	Mult.	Type	Description
<a href="#">NoQuoteAttributes</a>	[1..1]	NumInGroup	
<a href="#">QuoteAttributeType</a>	[0..1]	CodeSet	Required if NoQuoteAttributes(2706) > 0.
<a href="#">QuoteAttributeValue</a>	[0..1]	String	Required if NoQuoteAttributes(2706) > 0.

---

Used in messages: [Quote](#), [QuoteAck](#), [QuoteStatusReport](#)

#### 171.2.4405 QuoteAttributeType

The type of attribute for the quote.

Type: [int](#)

Allowed values in QuoteAttributeTypeCodeSet:

---

Code	Name	Description
0	QuoteAboveStandardMarketSize	Quote is above standard market size. In the context of ESMA pre-trade transparency under MiFIR to make prices public, the quote size is above standard market size, therefore the price is not made public. Applicable for cash equities instruments.

---

Code	Name	Description
1	QuoteAboveSpecificInstrumentSize	Quote is above size specific to the instrument. In the context of ESMA pre-trade transparency under MiFID to make public prices, the quote size is above the size specific to the instrument, therefore the price is not or will not be made public. Applicable for non-cash equities instruments.
2	QuoteApplicableForLiquidityProvisionActivity	Quote applicable for liquidity provision activity. In the context of ESMA RTS 24 Article 3, when QuoteAttributeValue(2708)=Y, it signifies that the quote was submitted "as part of a market making strategy pursuant to Articles 17 and 18 of Directive 2014/65/EU, or is submitted as part of another activity in accordance with Article 3" (of RTS 24).
3	QuoteIssuerStatus	Quote issuer status. Indicate whether quote issuer is available or not. Can be used in the context of US CAT to indicate if a market maker's quote is open (O) or closed (C) whenever the quote is sent to an inter-dealer quotation system.
4	BidOrAskRequest	Bid or ask request. Indicate explicitly whether a request for a quote is a request for a bid or an ask.

Used in groups: [QuoteAttributeGrp](#)

#### 171.2.4406 QuoteAttributeValue

The value associated with the quote attribute type specified in QuoteAttributeType(2707).

Type: [String](#)

Used in groups: [QuoteAttributeGrp](#)

#### 171.2.4407 QuoteCancelType

Identifies the type of quote cancel.

Type: [int](#)

Allowed values in QuoteCancelTypeCodeSet:

Code	Name	Description
1	CancelForOneOrMoreSecurities	Cancel quotes for one or more securities
2	CancelForSecurityType	Cancel quotes for security type(s)

Code	Name	Description
3	CancelForUnderlyingSecurity	Cancel quotes for underlying security
4	CancelAllQuotes	Cancel all quotes
5	CancelSpecifiedSingleQuote	Cancel specified single quote. Cancel single quote specified in QuoteID(117) or SecondaryQuoteID(1751)
6	CancelByTypeOfQuote	Cancel by type of quote. Cancel quotes by type of quote specified in QuoteType(537)
7	CancelForSecurityIssuer	Cancel quotes for an issuer
8	CancelForIssuerOfUnderlyingSecurity	Cancel quotes for an issuer of underlying security

Used in messages: [MassQuoteAck](#), [QuoteAck](#), [QuoteCancel](#), [QuoteStatusReport](#)

### 171.2.4408 QuoteCondition

Space-delimited list of conditions describing a quote.

Type: [MultipleStringValue](#)

Allowed values in QuoteConditionCodeSet:

Code	Name	Description
A	Open	Open/Active
B	Closed	Closed/Inactive
C	ExchangeBest	Exchange Best
D	ConsolidatedBest	Consolidated Best
E	Locked	Locked
F	Crossed	Crossed
G	Depth	Depth
H	FastTrading	Fast Trading
I	NonFirm	Non-Firm
L	Manual	Manual/Slow Quote
J	OutrightPrice	Outright Price
K	ImpliedPrice	Implied Price
M	DepthOnOffer	Depth on Offer
N	DepthOnBid	Depth on Bid
O	Closing	Closing

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
P	NewsDissemination	News Dissemination
Q	TradingRange	Trading Range
R	OrderInflux	Order Influx
S	DueToRelated	Due to Related
T	NewsPending	News Pending
U	AdditionalInfo	Additional Info
V	AdditionalInfoDueToRelated	Additional Info due to related
W	Resume	Resume
X	ViewOfCommon	View of Common
Y	VolumeAlert	Volume Alert
Z	OrderImbalance	Order Imbalance
a	EquipmentChangeover	Equipment Changeover
b	NoOpen	No Open / No Resume
c	RegularETH	Regular ETH
d	AutomaticExecution	Automatic Execution
e	AutomaticExecutionETH	Automatic Execution ETH
f	FastMarketETH	Fast Market ETH
g	InactiveETH	Inactive ETH
h	Rotation	Rotation
i	RotationETH	Rotation ETH
j	Halt	Halt
k	HaltETH	Halt ETH
l	DueToNewsDissemination	Due to News Dissemination
m	DueToNewsPending	Due to News Pending
n	TradingResume	Trading Resume
o	OutOfSequence	Out of Sequence
p	BidSpecialist	Bid Specialist
q	OfferSpecialist	Offer Specialist
r	BidOfferSpecialist	Bid Offer Specialist
s	EndOfDaySAM	End of Day SAM
t	ForbiddenSAM	Forbidden SAM
u	FrozenSAM	Frozen SAM
v	PreOpeningSAM	PreOpening SAM
w	OpeningSAM	Opening SAM

---

---

Code	Name	Description
x	OpenSAM	Open SAM
y	SurveillanceSAM	Surveillance SAM
z	SuspendedSAM	Suspended SAM
0	ReservedSAM	Reserved SAM
1	NoActiveSAM	No Active SAM
2	Restricted	Restricted
3	RestOfBookVWAP	Rest of Book VWAP
4	BetterPricesInConditionalOrders	Better Prices in Conditional Orders
5	MedianPrice	Median Price
6	FullCurve	Full Curve
7	FlatCurve	Flat Curve

---

Used in components: [MDStatisticParameters](#)

Used in groups: [MDFullGrp](#), [MDIncGrp](#)

#### **171.2.4409 QuoteDisplayTime**

Time by which the quote will be displayed.

Type: [UTCTimestamp](#)

Used in groups: [QuotReqGrp](#)

#### **171.2.4410 QuoteEntryID**

Unique identifier for a quote. The QuoteEntryID stays with the quote as a static identifier even if the quote is updated.

Type: [String](#)

Used in groups: [MDFullGrp](#), [MDIncGrp](#), [QuotEntryAckGrp](#), [QuotEntryGrp](#)

#### **171.2.4411 QuoteEntryRejectReason**

Reason Quote Entry was rejected:

Type: [int](#)

## Allowed values in QuoteRejectReasonCodeSet:

Code	Name	Description
1	UnknownSymbol	Unknown symbol (security). In the context of IA FX Reject codes, Trade Request Rejection Category F, this may be used with QuoteStatus(297)=5 (Rejected) to indicate product is not supported, e.g. by the specific venue, tenor restrictions on the market participant(s) involved.
2	Exchange	Exchange (security) closed
3	QuoteRequestExceedsLimit	Quote Request exceeds limit
4	TooLateToEnter	Too late to enter
5	UnknownQuote	Unknown quote
6	DuplicateQuote	Duplicate quote
7	InvalidBid	Invalid bid/ask spread
8	InvalidPrice	Invalid price. In the context of IA FX Reject codes, Trade Request Rejection Category A-2, this may be used with QuoteStatus(297)=5 (Rejected) to indicate price is not valid due to "last look latency".
9	NotAuthorizedToQuoteSecurity	Not authorized to quote security
10	PriceExceedsCurrentPriceBand	Price exceeds current price band
11	QuoteLocked	Quote locked - unable to update/cancel
12	InvalidOrUnknownSecurityIssuer	Invalid or unknown security issuer
13	InvalidOrUnknownIssuerOfUnderlyingSecurity	Invalid or unknown issuer of underlying security
14	NotionalValueExceedsThreshold	Notional value exceeds threshold
15	PriceExceedsCurrentPriceBandDepr	Price exceeds current price band
16	ReferencePriceNotAvailable	Reference price not available
17	InsufficientCreditLimit	Insufficient credit limit. In the context of IA FX Reject codes, Trade Request Rejection Category C, this may be used with QuoteStatus(297)=5 (Rejected) to indicate credit limit is exceeded or not in place.
18	ExceededClipSizeLimit	Exceeded clip size limit
19	ExceededMaxNotionalOrderAmt	Exceeded maximum notional order amount
20	ExceededDV01PV01Limit	Exceeded DV01/PV01 limit
21	ExceededCS01Limit	Exceeded CS01 limit

Code	Name	Description
22	UnavailablePriceLiquidity	Unavailable price or liquidity. In the context of IA FX Reject codes, Trade Request Rejection Category B, this may be used with QuoteStatus(297)=5 (Rejected) to indicate the "Hit/lift" was not subjected to last look but pricing or liquidity is no longer available for execution.
23	InvalidMissingEntitlements	Invalid or missing entitlements. In the context of IA FX Reject codes, Trade Request Rejection Category D, this may be used with QuoteStatus(297)=5 (Rejected) to indicate the counterparty is not authorized or has missing entitlements.
24	UnknownAccounts	Unknown account(s). In the context of IA FX Reject codes, Trade Request Rejection Category D, this may be used with QuoteStatus(297)=5 (Rejected) to indicate the account/fund is unknown or not setup.
99	Other	Other. In the context of IA FX Reject codes, Trade Request Rejection Category E, order rejected due to other exceptions. Further detail may be provided in RejectText(1328) or Text(58), with preference for RejectText(1328) if field is present in the message.

Used in groups: [QuotEntryAckGrp](#)

### 171.2.4412 QuoteEntryStatus

Identifies the status of an individual quote. See also QuoteStatus(297) which is used for single Quotes.

Type: [int](#)

Allowed values in QuoteEntryStatusCodeSet:

Code	Name	Description
0	Accepted	Accepted
5	Rejected	Rejected
6	RemovedFromMarket	Removed from Market
7	Expired	Expired
12	LockedMarketWarning	Locked Market Warning
13	CrossMarketWarning	Cross Market Warning
14	CanceledDueToLockMarket	Canceled due to Lock Market
15	CanceledDueToCrossMarket	Canceled due to Cross Market

---

Code	Name	Description
16	Active	Active

---

Used in groups: [QuotEntryAckGrp](#)

### 171.2.4413 QuotelD

Unique identifier for quote

Type: [String](#)

Used in groups: [ListOrdGrp](#), [QuotReqGrp](#)

Used in messages: [CrossOrderCancelReplaceRequest](#), [MassQuote](#), [MassQuoteAck](#), [MultilegOrderCancelReplace](#), [NewOrderCross](#), [NewOrderMultileg](#), [NewOrderSingle](#), [Quote](#), [QuoteAck](#), [QuoteCancel](#), [QuoteResponse](#), [QuoteStatusReport](#), [QuoteStatusRequest](#)

### 171.2.4414 QuoteModelType

Quote model type

Type: [int](#)

Allowed values in QuoteModelTypeCodeSet:

---

Code	Name	Description
1	QuoteEntry	Quote entry. New quote is entered or previously submitted quote is updated in full without regard to amount executed when a subsequent quote (e.g. with the same QuotelD reference) is received by the Recipient of the quote message.
2	QuoteModification	Quote modification. Previously submitted quote must be present and is updated, taking into consideration the amount already executed when a subsequent quote (e.g. with the same QuotelD reference) is received by the Recipient of the quote message.

---

Used in messages: [MassQuote](#), [Quote](#)

**171.2.4415 QuoteMsgID**

Unique identifier for a quote message.

Type: **String**

Used in messages: **ExecutionReport, Quote, QuoteAck, QuoteCancel, QuoteResponse, QuoteStatusReport**

**171.2.4416 QuotEntryAckGrp**

<b>Name</b>	<b>Mult.</b>	<b>Type</b>	<b>Description</b>
<b>NoQuoteEntries</b>	[1..1]	NumInGroup	The number of quotes for this Symbol (QuoteSet) that follow in this message.

TradingSessionSubID	[0..1]	CodeSet	
SettlDate	[0..1]	LocalMktDate	Can be used with forex quotes to specify a specific "value date"
OrdType	[0..1]	CodeSet	Can be used to specify the type of order the quote is for
SettlDate2	[0..1]	LocalMktDate	Can be used with OrdType = "Forex - Swap" to specify the "value date" for the future portion of a F/X swap.

Name	Mult.	Type	Description
OrderQty2	[0..1]	Qty	Can be used with OrdType = "Forex - Swap" to specify the order quantity for the future portion of a F/X swap.
BidForwardPoints2	[0..1]	PriceOffset	Bid F/X forward points of the future portion of a F/X swap quote added to spot rate. May be a negative value
OfferForwardPoints2	[0..1]	PriceOffset	Offer F/X forward points of the future portion of a F/X swap quote added to spot rate. May be a negative value
Currency	[0..1]	Currency	Can be used to specify the currency of the quoted price.
CurrencyCodeSource	[0..1]	CodeSet	
BookingType	[0..1]	CodeSet	
OrderCapacity	[0..1]	CodeSet	
OrderRestrictions	[0..1]	CodeSet	

Used in groups: [QuotSetGrp](#)

### 171.2.4418 QuotePriceType

Code to represent price type requested in Quote.

If the Quote Request is for a Swap, values 1-8 apply to all legs.

Type: [int](#)

Allowed values in QuotePriceTypeCodeSet:

Code	Name	Description
1	Percent	Percentage (i.e. percent of par) (often called "dollar price" for fixed income)
2	PerShare	Per unit (i.e. per share or contract)
3	FixedAmount	Fixed Amount (absolute value)
4	Discount	Discount - percentage points below par
5	Premium	Premium - percentage points over par
6	Spread	Spread (basis points relative to benchmark). Usually the difference in yield between two switched bonds or a corporate bond traded spread-to-benchmark.

Code	Name	Description
7	TEDPrice	TED Price
8	TEDYield	TED Yield
9	YieldSpread	Yield Spread (swaps)
10	Yield	Yield
12	PriceSpread	Price spread. Price spread is expressed based on market convention for the asset being priced or traded. For example: the difference between the prices of a multileg swap or strategy expressed in basis points for a CDS or TBA roll; a price value to be added to a reference price, such as a "pay up" for specified pools.
13	ProductTicksInHalves	Product ticks in halves
14	ProductTicksInFourths	Product ticks in fourths
15	ProductTicksInEighths	Product ticks in eighths
16	ProductTicksInSixteenths	Product ticks in sixteenths
17	ProductTicksInThirtySeconds	Product ticks in thirty-seconds
18	ProductTicksInSixtyFourths	Product ticks in sixty-fourths
19	ProductTicksInOneTwentyEighths	Product ticks in one-twenty-eighths
20	NormalRateRepresentation	Normal rate representation (e.g. FX rate)
21	InverseRateRepresentation	Inverse rate representation (e.g. FX rate)
22	BasisPoints	Basis points. When the price is not spread based
23	UpFrontPoints	Up front points. Used specifically for CDS pricing.
24	InterestRate	Interest rate. When the price is an interest rate. For example, used with benchmark reference rate.
25	PercentageOfNotional	Percentage of notional

Used in groups: [QuotReqGrp](#), [QuotReqRjctGrp](#)

### 171.2.4419 QuoteQualifier

Code to qualify Quote use and other aspects of price negotiation.

Type: [char](#)

Allowed values in IOIQualifierCodeSet:

Code	Name	Description
A	AllOrNone	All or None (AON)
B	MarketOnClose	Market On Close (MOC) (held to close)
C	AtTheClose	At the close (around/not held to close)
D	VWAP	VWAP (Volume Weighted Average Price)
E	Axe	Axe. Indicates that a quote is an Axe, without specifying a side preference. Mutually exclusive with F(Axe on bid) and G(Axe on offer).
F	AxeOnBid	Axe on bid. Indicates that a quote is an Axe, with a preference to execute on the bid side. Mutually exclusive with E(Axe) and G (Axe on offer)
G	AxeOnOffer	Axe on offer. Indicates that a quote is an Axe, with a preference to execute on the offer side. Mutually exclusive with E(Axe) and F (Axe on bid)
H	ClientNaturalWorking	Client natural working. With reference to the AFME/IA Framework for Indications of Interest, this is to be used to denote IOIs of type C2 – Client Natural (Working). A client should be able to seek verification (from IOI publisher’s management/compliance) that, for any C2 IOIs received, there was a corresponding live client order for at least the advertised size prior to the IOI being generated. Resulting trades are expected to be of a riskless nature.
I	InTouchWith	In touch with. With reference to the AFME/IA Framework for Indications of Interest, this is to be used to denote IOIs of type P1 - Potential. Post-execution, a client should be able to seek verification (from IOI publisher’s management/ compliance) that, for any P1 IOIs received and executed against, there was by time of the execution, an opposing specific client order. Resulting trades are expected to be of a riskless nature. If the anticipated client order does not materialise, and the broker elects to commit capital, this must be disclosed prior to execution.
J	PositionWanted	Position wanted. With reference to the AFME/IA Framework for Indications of Interest, this is to be used to denote IOIs of type H2 – Position Wanted. Brokers will be likely be sourcing liquidity and therefore may advertise the size of IOI they wish; however, clients can expect the broker to honour the size of IOI shown. The presumption is that there is no intent to immediately unwind the position without notification, however, brokers may provide additional granularity to the category and may offer bilateral post trade commitments. Brokers will also offer clients a feedback mechanism.

<b>Code</b>	<b>Name</b>	<b>Description</b>
K	MarketMaking	Market making. With reference to the AFME/IA Framework for Indications of Interest, this is to be used to denote IOIs of type H3 – Market Making, no enforcement is required.
L	Limit	Limit
M	MoreBehind	More Behind
N	ClientNaturalBlock	Client natural block. With reference to the AFME/IA Framework for Indications of Interest, this is to be used to denote IOIs of type C1 - Client Natural (Block). A client should be able to seek verification (from IOI publisher's management/compliance) that, for any C1 IOIs received, there was a corresponding live client order for at least the advertised size prior to the IOI being generated. Resulting trades are expected to be of a riskless nature.
O	AtTheOpen	At the Open
P	TakingAPosition	Taking a Position
Q	AtTheMarket	At the Market (previously called Current Quote)
R	ReadyToTrade	Ready to Trade
S	PortfolioShown	Inventory or Portfolio Shown
T	ThroughTheDay	Through the Day
U	Unwind	Unwind. With reference to the AFME/IA Framework for Indications of Interest, this is to be used to denote IOIs of type H1 - Unwind. Brokers will be responsible for ensuring that the size of the IOI reflects the actual house position in the relevant business unit and should not inflate the size of the IOI. The presumption is that there is no intent to immediately replace the position without notification, however, brokers may provide additional granularity to the category and may offer bilateral post trade commitments. Brokers will also offer clients a feedback mechanism.
V	Versus	Versus
W	Indication	Indication - Working Away
X	CrossingOpportunity	Crossing Opportunity
Y	AtTheMidpoint	At the Midpoint
Z	PreOpen	Pre-open
1	QuantityNegotiable	Quantity is negotiable. When specified, the dealer may counter with a reduced quantity in its Quotes in response to QuoteRequest(35=R). All-or-none if omitted.
2	AllowLateBids	Allow late bids. When specified in QuoteRequest(35=R) the dealer may submit quotes after curtain time has elapsed.

Code	Name	Description
3	ImmediateOrCounter	Immediate or counter. When specified, the buy-side customer is permitted to counter a firm quote during wiretime.
4	AutoTrade	Auto trade. Trade is in an auto-trading mode whereby the best quote that satisfies user criteria as determined by the trading platform will be accepted automatically.
a	AutomaticSpot	Automatic spot. At completion of price negotiation based on spread the trading platform will propose a benchmark spot price which may be filled immediately by the dealer or countered.
b	PlatformCalculatedSpot	Platform calculated spot. At completion of price negotiation based on spread the trading platform will supply a benchmark spot price and immediately complete the trade reporting fill. There is no dealer last look.
c	OutsideSpread	Outside spread. The IOI is identifiable outside the current bid/offer.
d	DeferredSpot	Deferred spot. At a future time after completion of price negotiation based on spread and reported in StrikeTime(443) the trading platform will propose a benchmark spot price which may be filled immediately by the dealer or countered.
n	NegotiatedSpot	Negotiated spot. Once price negotiation based on spread is completed negotiation of the benchmark spot price proceeds immediately.

Used in groups: [QuotQualGrp](#)

### 171.2.4420 QuoteRejectReason

Reason Quote was rejected:

Type: [int](#)

Allowed values in QuoteRejectReasonCodeSet:

Code	Name	Description
1	UnknownSymbol	Unknown symbol (security). In the context of IA FX Reject codes, Trade Request Rejection Category F, this may be used with QuoteStatus(297)=5 (Rejected) to indicate product is not supported, e.g. by the specific venue, tenor restrictions on the market participant(s) involved.

<b>Code</b>	<b>Name</b>	<b>Description</b>
2	Exchange	Exchange (security) closed
3	QuoteRequestExceedsLimit	Quote Request exceeds limit
4	TooLateToEnter	Too late to enter
5	UnknownQuote	Unknown quote
6	DuplicateQuote	Duplicate quote
7	InvalidBid	Invalid bid/ask spread
8	InvalidPrice	Invalid price. In the context of IA FX Reject codes, Trade Request Rejection Category A-2, this may be used with QuoteStatus(297)=5 (Rejected) to indicate price is not valid due to "last look latency".
9	NotAuthorizedToQuoteSecurity	Not authorized to quote security
10	PriceExceedsCurrentPriceBand	Price exceeds current price band
11	QuoteLocked	Quote locked - unable to update/cancel
12	InvalidOrUnknownSecurityIssuer	Invalid or unknown security issuer
13	InvalidOrUnknownIssuerOfUnderlyingSecurity	Invalid or unknown issuer of underlying security
14	NotionalValueExceedsThreshold	Notional value exceeds threshold
15	PriceExceedsCurrentPriceBandDepr	Price exceeds current price band
16	ReferencePriceNotAvailable	Reference price not available
17	InsufficientCreditLimit	Insufficient credit limit. In the context of IA FX Reject codes, Trade Request Rejection Category C, this may be used with QuoteStatus(297)=5 (Rejected) to indicate credit limit is exceeded or not in place.
18	ExceededClipSizeLimit	Exceeded clip size limit
19	ExceededMaxNotionalOrderAmt	Exceeded maximum notional order amount
20	ExceededDV01PV01Limit	Exceeded DV01/PV01 limit
21	ExceededCS01Limit	Exceeded CS01 limit
22	UnavailablePriceLiquidity	Unavailable price or liquidity. In the context of IA FX Reject codes, Trade Request Rejection Category B, this may be used with QuoteStatus(297)=5 (Rejected) to indicate the "Hit/lift" was not subjected to last look but pricing or liquidity is no longer available for execution.
23	InvalidMissingEntitlements	Invalid or missing entitlements. In the context of IA FX Reject codes, Trade Request Rejection Category D, this may be used with QuoteStatus(297)=5 (Rejected) to indicate the counterparty is not authorized or has missing entitlements.

Code	Name	Description
24	UnknownAccounts	Unknown account(s). In the context of IA FX Reject codes, Trade Request Rejection Category D, this may be used with QuoteStatus(297)=5 (Rejected) to indicate the account/fund is unknown or not setup.
99	Other	Other. In the context of IA FX Reject codes, Trade Request Rejection Category E, order rejected due to other exceptions. Further detail may be provided in RejectText(1328) or Text(58), with preference for RejectText(1328) if field is present in the message.

Used in messages: [MassQuoteAck](#), [QuoteAck](#), [QuoteStatusReport](#)

#### 171.2.4421 QuoteReqID

Unique identifier for a QuoteRequest(35=R).

Type: [String](#)

Used in messages: [MassQuote](#), [MassQuoteAck](#), [Quote](#), [QuoteAck](#), [QuoteCancel](#), [QuoteRequest](#), [QuoteRequestReject](#), [QuoteResponse](#), [QuoteStatusReport](#)

#### 171.2.4422 QuoteRequestRejectReason

Reason quote request was rejected.

Type: [int](#)

Allowed values in QuoteRequestRejectReasonCodeSet:

Code	Name	Description
1	UnknownSymbol	Unknown Symbol (Security). In the context of IA FX Reject codes, Quote Rejection Category F, the RFQ is rejected due to unknown or unsupported product, e.g. by the specific venue, tenor restrictions on the market participant(s) involved.
2	Exchange	Exchange (Security) Closed
3	QuoteRequestExceedsLimit	Quote Request Exceeds Limit. In the context of IA FX Reject codes, Quote Rejection Category D, the RFQ is rejected due to risk limit exceeded or not in place.
4	TooLateToEnter	Too Late to enter

Code	Name	Description
5	InvalidPrice	Invalid Price
6	NotAuthorizedToRequestQuote	Not Authorized To Request Quote
7	NoMatchForInquiry	No Match For Inquiry
8	NoMarketForInstrument	No Market For Instrument. In the context of IA FX Reject codes, Quote Rejection Category F, the RFQ is rejected due to unknown or unsupported product.
9	NoInventory	No Inventory
10	Pass	Pass
11	InsufficientCredit	Insufficient credit. In the context of IA FX Reject codes, Quote Rejection Category A, the RFQ is rejected due to credit limit exceeded or not in place.
12	ExceededClipSizeLimit	Exceeded clip size limit
13	ExceededMaxNotionalOrderAmt	Exceeded maximum notional order amount
14	ExceededDV01PV01Limit	Exceeded DV01/PV01 limit
15	ExceededCS01Limit	Exceeded CS01 limit
16	UnavailablePriceLiquidity	Unavailable price or liquidity. In the context of IA FX Reject codes, Quote Rejection Category A, the RFQ is rejected due to unavailable price information.
17	UnmetRegulatoryRequirement	Unmet regulatory requirement. In the context of IA FX Reject codes, Quote Rejection Category B, the RFQ is rejected due to regulatory requirements not being met. For example, a RFQ is submitted into a SEF by a non-SEF participant, or an NDF was submitted into the trading platform.
18	UnknownAccounts	Unknown account(s). In the context of IA FX Reject codes, Quote Rejection Category F, the RFQ is rejected due to the account/fund is not setup or unknown.
19	InvalidMissingEntitlements	Invalid or missing entitlements. In the context of IA FX Reject codes, Quote Rejection Category F, the RFQ is rejected due to static data when the counterparty is not authorized or has missing entitlements.
99	Other	Other. In the context of IA FX Reject codes, Quote Rejection Category E, the RFQ is rejected due to other exceptions. Further detail may be provided in RejectText(1328) or Text(58), with preference for RejectText(1328) if field is present in the message.

Used in messages: [QuoteRequestReject](#)

**171.2.4423 QuoteRequestType**

Indicates the type of Quote Request being generated

Type: **int**

Allowed values in QuoteRequestTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	Manual	Manual
2	Automatic	Automatic
3	ConfirmQuote	Confirm quote

---

Used in groups: **QuotReqGrp**, **QuotReqRjctGrp**, **RFQReqGrp**

**171.2.4424 QuoteRespID**

Message reference for Quote Response

Type: **String**

Used in messages: **ExecutionReport**, **Quote**, **QuoteResponse**, **QuoteStatusReport**

**171.2.4425 QuoteResponseLevel**

Level of Response requested from receiver of quote messages. A default value should be bilaterally agreed.

Type: **int**

Allowed values in QuoteResponseLevelCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	NoAcknowledgement	No Acknowledgement
1	AcknowledgeOnlyNegativeOrErroneousQuotes	Acknowledge only negative or erroneous quotes
2	AcknowledgeEachQuoteMessage	Acknowledge each quote message
3	SummaryAcknowledgement	Summary Acknowledgement

---

Used in messages: **MassQuote**, **MassQuoteAck**, **Quote**, **QuoteCancel**

**171.2.4426 QuoteRespType**

Identifies the type of Quote Response.

Type: **int**

Allowed values in QuoteRespTypeCodeSet:

Code	Name	Description
1	Hit	Hit/Lift
2	Counter	Counter
3	Expired	Expired
4	Cover	Cover. Trade was done with another quote provider. Quote provider's original quoted price was the best price not traded (i.e. the cover price).
5	DoneAway	Done away. Trade was done with another quote provider.
6	Pass	Pass
7	EndTrade	End trade. Indicates an end to the trade negotiation.
8	TimedOut	Timed out
9	Tied	Tied. Trade was done with another quote provider. Quote provider's original quoted price was the same as the traded price.
10	TiedCover	Tied cover. Trade was done with another quote provider. Quote provider's original quoted price was the best price not traded. There were other quote provider(s) at the same price.
11	Accept	Accept. Used in a response to acknowledge an action communicated by the counterparty.
12	TerminateContract	Terminate contract. Used to communicate the termination of an existing contract.

Used in messages: **QuoteResponse**

**171.2.4427 QuoteSetID**

Unique id for the Quote Set.

Type: **String**

Used in groups: **QuotSetAckGrp, QuotSetGrp**

**171.2.4428 QuoteSetValidUntilTime**

Indicates expiration time of this particular QuoteSet (always expressed in UTC (Universal Time Coordinated, also known as "GMT"))

Type: [UTCTimestamp](#)

Used in groups: [QuotSetAckGrp](#), [QuotSetGrp](#)

**171.2.4429 QuoteSideIndicator**

Indicates whether single sided quotes are allowed.

Type: [Boolean](#)

Allowed values in QuoteSideIndicatorCodeSet:

---

Code	Name	Description
N	No	Single sided quotes are not allowed.
Y	Yes	Single sided quotes are allowed.

---

Used in components: [BaseTradingRules](#)

**171.2.4430 QuoteSizeRuleGrp**

Rules for minimum bid and offer sizes of quotes.

---

Name	Mult.	Type	Description
<a href="#">NoQuoteSizeRules</a>	[1..1]	NumInGroup	Number of quote size rules.
<a href="#">MinBidSize</a>	[0..1]	Qty	Required if <a href="#">NoQuoteSizeRules(2558)</a> > 0.
<a href="#">MinOfferSize</a>	[0..1]	Qty	Required if <a href="#">NoQuoteSizeRules(2558)</a> > 0.
<a href="#">FastMarketIndicator</a>	[0..1]	Boolean	Used to define the sizes applicable for fast market conditions.

---

Used in components: [BaseTradingRules](#)

**171.2.4431 QuoteStatus**

Identifies the status of the quote acknowledgement.

Type: **int**

Allowed values in QuoteStatusCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Accepted	Accepted
1	CancelForSymbol	Canceled for specific securities
2	CanceledForSecurityType	Canceled for specific SecurityTypes(167)
3	CanceledForUnderlying	Canceled for underlying
4	CanceledAll	Canceled all
5	Rejected	Rejected
6	RemovedFromMarket	Removed from market
7	Expired	Expired. In the context of IA FX Reject codes, Trade Request Rejection Category A-2, this may be used to indicate price or liquidity is unavailable due to "last look latency".
8	Query	Query
9	QuoteNotFound	Quote not found
10	Pending	Pending
11	Pass	Pass. In the context of IA FX Reject codes, Trade Request Rejection Category A-1, this is used by price maker to pass due to a "last look".
12	LockedMarketWarning	Locked market warning
13	CrossMarketWarning	Crossed market warning
14	CanceledDueToLockMarket	Canceled due to locked market
15	CanceledDueToCrossMarket	Canceled due to crossed market
16	Active	Active
17	Canceled	Canceled
18	UnsolicitedQuoteReplenishment	Unsolicited quote replenishment
19	PendingEndTrade	Pending end trade
20	TooLateToEnd	Too late to end
21	Traded	Traded
22	TradedAndRemoved	Traded and removed
23	ContractTerminates	Contract terminated. Indicates a contract has been or is being terminated.

---

Used in messages: [MassQuoteAck](#), [QuoteStatusReport](#)

### **171.2.4432 QuoteStatusReqID**

Unique identifier for Quote Status Request.

Type: [String](#)

Used in messages: [QuoteStatusReport](#), [QuoteStatusRequest](#)

### **171.2.4433 QuoteType**

Identifies the type of quote.

An indicative quote is used to inform a counterparty of a market. An indicative quote does not result directly in a trade.

A tradeable quote is submitted to a market and will result directly in a trade against other orders and quotes in a market.

A restricted tradeable quote is submitted to a market and within a certain restriction (possibly based upon price or quantity) will automatically trade against orders. Order that do not comply with restrictions are sent to the quote issuer who can choose to accept or decline the order.

A counter quote is used in the negotiation model. See Volume 7 - Product: Fixed Income for example usage.

Type: [int](#)

Allowed values in QuoteTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Indicative	Indicative
1	Tradeable	Tradeable
2	RestrictedTradeable	Restricted tradeable
3	Counter	Counter (tradeable)
4	InitiallyTradeable	Initially tradeable

Used in groups: [QuotReqGrp](#), [QuotReqRjctGrp](#)

Used in messages: [Quote](#), [QuoteResponse](#), [QuoteStatusReport](#)

**171.2.4435 QuotReqGrp**

Name	Mult.	Type	Description
NoRelatedSym	[1..1]	NumInGroup	Number of related symbols (instruments) in Request
Instrument	[1..1]	Component	Insert here the set of "Instrument" (symbology) fields defined in "Common Components of Application Messages"
FinancingDetails	[0..1]	Component	Insert here the set of "FinancingDetails" (symbology) fields defined in "Common Components of Application Messages"
UndInstrmtGrp	[0..*]	Group	
PrevClosePx	[0..1]	Price	Useful for verifying security identification
QuoteRequestType	[0..1]	CodeSet	Indicates the type of Quote Request (e.g. Manual vs. Automatic) being generated.
QuoteID	[0..1]	String	Can be used when QuoteRequestType(303) = 3(Confirm Quote).
SecondaryQuoteID	[0..1]	String	Can be used when QuoteRequestType(303) = 3(Confirm Quote).
QuoteType	[0..1]	CodeSet	Type of quote being requested from counterparty or market (e.g. Indicative, Firm, or Restricted Tradeable). Valid values used by FX in the request: 0 = Indicative, 1 = Tradeable; Absence implies a request for an indicative quote.
TradingSessionID	[0..1]	CodeSet	
TradingSessionSubID	[0..1]	CodeSet	
TradeOriginationDate	[0..1]	LocalMktDate	

Name	Mult.	Type	Description
NumOfCompetitors	[0..1]	int	
Side	[0..1]	CodeSet	If OrdType = "Forex - Swap", should be the side of the future portion of a F/X swap. The absence of a side implies that a two-sided quote is being requested. For single instrument use. FX values, 1 = Buy, 2 = Sell; This is from the perspective of the Initiator. If absent then a two-sided quote is being requested for spot or forward.
QtyType	[0..1]	CodeSet	Type of quantity specified in a quantity field. For FX, if used, should be "0".
OrderQtyData	[0..1]	Component	Conditionally required for single instrument quoting when applicable for the type of instrument.
MinQty	[0..1]	Qty	
SettlType	[0..1]	CodeSet	For NDFs either SettlType (specifying the tenor) or SettlDate must be specified.
SettlDate	[0..1]	LocalMktDate	Can be used (e.g. with forex quotes) to specify the desired "value date". For NDFs either SettlType (specifying the tenor) or SettlDate must be specified.
SettlDate2	[0..1]	LocalMktDate	Can be used with OrdType = "Forex - Swap" to specify the "value date" for the future portion of a F/X swap.
OrderQty2	[0..1]	Qty	Can be used with OrdType = "Forex - Swap" to specify the order quantity for the future portion of a F/X swap.
Currency	[0..1]	Currency	Can be used to specify the desired currency of the quoted price. May differ from the 'normal' trading currency of the instrument being quote requested.
CurrencyCodeSource	[0..1]	CodeSet	
SettlCurrency	[0..1]	Currency	Required for NDFs to specify the settlement currency (fixing currency).
SettlCurrencyCodeSource	[0..1]	CodeSet	
RateSource	[0..*]	Group	
Stipulations	[0..*]	Group	Insert here the set of "Stipulations" (repeating group of Fixed Income stipulations) fields defined in "Common Components of Application Messages"
Account	[0..1]	String	
AcctIDSource	[0..1]	CodeSet	

Name	Mult.	Type	Description
AccountType	[0..1]	CodeSet	
QuotReqLegsGrp	[0..*]	Group	
QuotQualGrp	[0..*]	Group	
TrdType	[0..1]	CodeSet	May be used by SEFs (Swap Execution Facilities) to indicate a block swap transaction.
RegulatoryTransactionType	[0..1]	CodeSet	
RegulatoryTradeIDGrp	[0..*]	Group	
NegotiationMethod	[0..1]	CodeSet	
QuotePriceType	[0..1]	CodeSet	Initiator can specify the price type the quote needs to be quoted at. If not specified, the Respondent has option to specify how quote is quoted.
PriceQualifierGrp	[0..*]	Group	
OrdType	[0..1]	CodeSet	Can be used to specify the type of order the quote request is for
ValidUntilTime	[0..1]	UTCTimestamp	Used by the quote initiator to indicate the period of time the resulting Quote must be valid until
ExpireTime	[0..1]	UTCTimestamp	The time when the request for quote or negotiation dialog will expire.
ResponseTime	[0..1]	UTCTimestamp	
QuoteDisplayTime	[0..1]	UTCTimestamp	
ExposureDuration	[0..1]	int	The (minimum or suggested) period of time a quote price is tradable before it becomes indicative (i.e. off-the-wire).
ExposureDurationUnit	[0..1]	CodeSet	
TransactTime	[0..1]	UTCTimestamp	Time transaction was entered
SpreadOrBenchmarkCurveData	[0..1]	Component	Insert here the set of "SpreadOrBenchmarkCurveData" (Fixed Income spread or benchmark curve) fields defined in "Common Components of Application Messages"
PriceType	[0..1]	CodeSet	
Price	[0..1]	Price	Quoted or target price
MidPx	[0..1]	Price	For OTC swaps, may be used to provide the estimated mid-market-mark.
Price2	[0..1]	Price	Can be used with OrdType = "Forex - Swap" to specify the Quoted or target price for the future portion of a F/X swap.

Name	Mult.	Type	Description
YieldData	[0..1]	Component	Insert here the set of "YieldData" (yield-related) fields defined in "Common Components of Application Messages"
Parties	[0..*]	Group	
TradeContinuation	[0..1]	CodeSet	Maybe used to indicate quote/negotiation is for the specified post-execution trade continuation or lifecycle event.
TradeContinuationText	[0..1]	String	
EncodedTradeContinuationTextLen	[0..1]	Length	Must be set if EncodedTradeContinuationText(2371) field is specified and must immediately precede it.
EncodedTradeContinuationText	[0..1]	data	Encoded (non-ASCII characters) representation of the TradeContinuationText(2374) field in the encoded format specified via the MessageEncoding(347) field.
StrikeTime	[0..1]	UTCTimestamp	Conditionally required when QuoteQual(695) = d (Deferred spot) is specified.

Used in messages: [QuoteRequest](#)

### 171.2.4436 QuotReqLegsGrp

Name	Mult.	Type	Description
NoLegs	[1..1]	NumInGroup	
InstrumentLeg	[0..1]	Component	Required if NoLegs(555) > 0.
LegOrderQty	[0..1]	Qty	
LegQty	[0..1]	Qty	The LegQty(687) field is deprecated. The use of LegOrderQty(685) is recommended instead.
LegMidPx	[0..1]	Price	For OTC swaps, may be used to provide the estimated mid-market mark.
LegSwapType	[0..1]	CodeSet	
LegSettlType	[0..1]	CodeSet	
LegSettlDate	[0..1]	LocalMktDate	
LegStipulations	[0..*]	Group	
NestedParties	[0..*]	Group	
LegBenchmarkCurveData	[0..1]	Component	

Name	Mult.	Type	Description
LegRefID	[0..1]	String	Use of LegRefID(654) in this component is deprecated. Recommend the use of LegID(1788) in the InstrumentLeg component.

Used in groups: [QuotReqGrp](#), [QuotReqRjctGrp](#)

### 171.2.4437 QuotReqRjctGrp

NoRelatedSym	[1..1]	NumInGroup	Number of related symbols (instruments) in Request
Instrument	[1..1]	Component	Insert here the set of "Instrument" (symbology) fields defined in "Common Components of Application Messages"
FinancingDetails	[0..1]	Component	Insert here the set of "FinancingDetails" (symbology) fields defined in "Common Components of Application Messages"
UndInstrmtGrp	[0..*]	Group	
PrevClosePx	[0..1]	Price	Useful for verifying security identification
QuoteRequestType	[0..1]	CodeSet	Indicates the type of Quote Request (e.g. Manual vs. Automatic) being generated.
QuoteType	[0..1]	CodeSet	Type of quote being requested from counterparty or market (e.g. Indicative, Firm, or Restricted Tradeable)
TradingSessionID	[0..1]	CodeSet	
TradingSessionSubID	[0..1]	CodeSet	
TradeOriginationDate	[0..1]	LocalMktDate	
Side	[0..1]	CodeSet	If OrdType = "Forex - Swap", should be the side of the future portion of a F/X swap. The absence of a side implies that a two-sided quote is being requested. Required if specified in Quote Request message.
QtyType	[0..1]	CodeSet	
OrderQtyData	[0..1]	Component	Insert here the set of "OrderQtyData" fields defined in "Common Components of Application Messages". Required if component is specified in Quote Request message.

Name	Mult.	Type	Description
SettlType	[0..1]	CodeSet	
SettlDate	[0..1]	LocalMktDate	Can be used (e.g. with forex quotes) to specify the desired "value date"
SettlDate2	[0..1]	LocalMktDate	Can be used with OrdType = "Forex - Swap" to specify the "value date" for the future portion of a F/X swap.
OrderQty2	[0..1]	Qty	Can be used with OrdType = "Forex - Swap" to specify the order quantity for the future portion of a F/X swap.
Currency	[0..1]	Currency	Can be used to specify the desired currency of the quoted price. May differ from the 'normal' trading currency of the instrument being quote requested.
CurrencyCodeSource	[0..1]	CodeSet	
Stipulations	[0..*]	Group	Insert here the set of "Stipulations" (repeating group of Fixed Income stipulations) fields defined in "Common Components of Application Messages"
Account	[0..1]	String	
AcctIDSource	[0..1]	CodeSet	
AccountType	[0..1]	CodeSet	
QuotReqLegsGrp	[0..*]	Group	
QuotQualGrp	[0..*]	Group	
NegotiationMethod	[0..1]	CodeSet	
QuotePriceType	[0..1]	CodeSet	Initiator can specify the price type the quote needs to be quoted at. If not specified, the Respondent has option to specify how quote is quoted.
PriceQualifierGrp	[0..*]	Group	
OrdType	[0..1]	CodeSet	Can be used to specify the type of order the quote request is for
ExpireTime	[0..1]	UTCTimestamp	The time when Quote Request will expire.
TransactTime	[0..1]	UTCTimestamp	Time transaction was entered
SpreadOrBenchmarkCurveData	[0..1]	Component	Insert here the set of "SpreadOrBenchmarkCurveData" (Fixed Income spread or benchmark curve) fields defined in "Common Components of Application Messages"
PriceType	[0..1]	CodeSet	
Price	[0..1]	Price	Quoted or target price

Name	Mult.	Type	Description
Price2	[0..1]	Price	Can be used with OrdType = "Forex - Swap" to specify the Quoted or target price for the future portion of a F/X swap.
YieldData	[0..1]	Component	Insert here the set of "YieldData" (yield-related) fields defined in "Common Components of Application Messages"
Parties	[0..*]	Group	Insert here the set of "Parties" (firm identification) fields defined in "Common Components of Application Messages"
StrikeTime	[0..1]	UTCTimestamp	Conditionally required when QuoteQual(695) = d (Deferred spot) is specified.

Used in messages: [QuoteRequestReject](#)

### 171.2.4438 QuotSetAckGrp

Name	Mult.	Type	Description
NoQuoteSets	[1..1]	NumInGroup	The number of sets of quotes in the message
QuoteSetID	[0..1]	String	First field in repeating group. Required if NoQuoteSets > 0
UnderlyingInstrument	[0..1]	Component	Insert here the set of "UnderlyingInstrument" (underlying symbology) fields defined in "Common Components of Application Messages". Required if NoQuoteSets > 0
QuoteSetValidUntilTime	[0..1]	UTCTimestamp	
TotNoQuoteEntries	[0..1]	int	Total number of quotes for the quote set across all messages. Should be the sum of all NoQuoteEntries in each message that has repeating quotes that are part of the same quote set. Required if NoQuoteEntries > 0
TotNoCxlQuotes	[0..1]	int	Total number of quotes canceled for the quote set across all messages.
TotNoAccQuotes	[0..1]	int	Total number of quotes accepted for the quote set across all messages.
TotNoRejQuotes	[0..1]	int	Total number of quotes rejected for the quote set across all messages.

Name	Mult.	Type	Description
LastFragment	[0..1]	CodeSet	Indicates whether this is the last fragment in a sequence of message fragments. Only required where message has been fragmented.
QuotEntryAckGrp	[0..*]	Group	

Used in messages: [MassQuoteAck](#)

### 171.2.4439 QuotSetGrp

Name	Mult.	Type	Description
NoQuoteSets	[1..1]	NumInGroup	The number of sets of quotes in the message
QuoteSetID	[1..1]	String	Sequential number for the Quote Set. For a given QuoteID - assumed to start at 1. Must be the first field in the repeating group.
UnderlyingInstrument	[0..1]	Component	Insert here the set of "UnderlyingInstrument" (underlying symbology) fields defined in "Common Components of Application Messages"
QuoteSetValidUntilTime	[0..1]	UTCTimestamp	
TotNoQuoteEntries	[1..1]	int	Total number of quotes for the quote set across all messages. Should be the sum of all NoQuoteEntries in each message that has repeating quotes that are part of the same quote set.
LastFragment	[0..1]	CodeSet	Indicates whether this is the last fragment in a sequence of message fragments. Only required where message has been fragmented.
QuotEntryGrp	[1..*]	Group	

Used in messages: [MassQuote](#)

### 171.2.4440 RateSource

Identifies the source of rate information.

For FX, the reference source to be used for the FX spot rate.

Type: [int](#)

Allowed values in RateSourceCodeSet:

Code	Name	Description
0	Bloomberg	Bloomberg
1	Reuters	Reuters
2	Telerate	Telerate
3	ISDARateOption	ISDA Settlement Rate Option. The source of the currency conversion as specified by the ISDA terms in Annex A to the 1998 FX and Currency Option Definitions. See <a href="http://www.fpml.org/coding-scheme/settlement-rate-option">http://www.fpml.org/coding-scheme/settlement-rate-option</a>
99	Other	Other

Used in groups: [RateSource](#)

#### 171.2.4441 RateSource

Name	Mult.	Type	Description
<a href="#">NoRateSources</a>	[1..1]	NumInGroup	
<a href="#">RateSource</a>	[0..1]	CodeSet	Required if NoRateSource(1445) > 0
<a href="#">RateSourceType</a>	[0..1]	CodeSet	Required if NoRateSources(1445) > 0
<a href="#">ReferencePage</a>	[0..1]	String	May be used when RateSource(1446)=99 (Other)
<a href="#">RateSourceReferemcePageHeading</a>	[0..1]	String	
<a href="#">FXBenchmarkRateFix</a>	[0..1]	String	

Used in groups: [MDFullGrp](#), [MDIncGrp](#), [QuotReqGrp](#)

Used in messages: [AllocationInstruction](#), [AllocationReport](#), [ExecutionReport](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#), [Quote](#), [TradeCaptureReport](#)

#### 171.2.4442 RateSourceReferemcePageHeading

Identifies the page heading from the rate source.

Type: [String](#)

Used in groups: [RateSource](#)

**171.2.4443 RateSourceType**

Indicates whether the rate source specified is a primary or secondary source.

Type: **int**

Allowed values in RateSourceTypeCodeSet:

Code	Name	Description
0	Primary	Primary
1	Secondary	Secondary

Used in groups: **RateSource**

**171.2.4444 RawData**

Unformatted raw data, can include bitmaps, word processor documents, etc.

Type: **data**

Used in messages: **Email, Logon, News, UserRequest**

**171.2.4445 RawDataLength**

Number of bytes in raw data field.

Type: **Length**

Used in messages: **Email, Logon, News, UserRequest**

**171.2.4446 RealizedVariance**

Actual or realized variance of an instrument used to calculate settlement prices, e.g. for variance futures.

Type: **float**

Used in groups: **ClearingPriceParametersGrp**

#### **171.2.4447 ReceivedDeptID**

Identifies the broker-dealer department that first took the order.

Type: **String**

Used in messages: **ExecutionReport**, **NewOrderSingle**, **OrderCancelReplaceRequest**

#### **171.2.4448 ReceivingDeptID**

An identifier representing the department or desk within the firm that received the order.

Type: **String**

Used in groups: **SideCrossOrdModGrp**

Used in messages: **ExecutionReport**, **NewOrderSingle**, **OrderCancelReplaceRequest**

#### **171.2.4449 RedemptionDate**

Return of investor's principal in a security. Bond redemption can occur before maturity date.(Note tag # was reserved in FIX 4.1, added in FIX 4.3) (prior to FIX 4.4 field was of type UTCDate)

Type: **LocalMktDate**

Used in components: **Instrument**

#### **171.2.4450 RefAllocID**

Reference identifier to be used with AllocTransType (71) = Replace or Cancel.

(Prior to FIX 4.1 this field was of type int)

Type: **String**

Used in messages: **AllocationInstruction**, **AllocationInstructionAlert**, **AllocationReport**

#### **171.2.4451 RefApplExtID**

The extension pack number associated with an application message.

Type: **int**

Used in groups: **MsgTypeGrp**

Used in messages: **BusinessMessageReject**, **Reject**

**171.2.4452 RefApplID**

Reference to the unique application identifier which corresponds to ApplID(1180) from the Application Sequence Group component

Type: **String**

Used in groups: **ApplIDReportGrp, ApplIDRequestAckGrp, ApplIDRequestGrp**

**171.2.4453 RefApplLastSeqNum**

Application sequence number of last message in transmission.

Type: **SeqNum**

Used in groups: **ApplIDReportGrp, ApplIDRequestAckGrp**

**171.2.4454 RefApplReqID**

Used to reference a previously submitted ApplReqID (1346) from within a subsequent ApplicationMessageRequest(MsgType=BW)

Type: **String**

Used in groups: **ApplIDRequestAckGrp, ApplIDRequestGrp**

**171.2.4455 RefApplVerID**

Specifies the service pack release being applied to a message at the session level. Enumerated field with values assigned at time of service pack release. Uses same values as ApplVerID

Type: **String**

Allowed values in ApplVerIDCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	FIX27	FIX27
1	FIX30	FIX30
2	FIX40	FIX40
3	FIX41	FIX41
4	FIX42	FIX42

---

---

Code	Name	Description
5	FIX43	FIX43
6	FIX44	FIX44
7	FIX50	FIX50
8	FIX50SP1	FIX50SP1
9	FIX50SP2	FIX50SP2
10	FIXLatest	FIXLatest

---

Used in groups: [MsgTypeGrp](#)

Used in messages: [BusinessMessageReject](#), [Reject](#)

#### **171.2.4456 RefCOrdID**

Used to reference an order via COrdID(11).

Type: [String](#)

Used in messages: [ExecutionReport](#), [NewOrderMultileg](#), [NewOrderSingle](#)

#### **171.2.4457 RefCompID**

Assigned value used to identify a firm.

Type: [String](#)

Used in groups: [CompIDReqGrp](#), [CompIDStatGrp](#)

#### **171.2.4458 RefCstmApplVerID**

Specifies a custom extension to a message being applied at the session level.

Type: [String](#)

Used in groups: [MsgTypeGrp](#)

Used in messages: [BusinessMessageReject](#), [Reject](#)

**171.2.4459 ReferenceDataDate**

Reference data entry's date-time of the type specified in ReferenceDataDateType(2748).

Type: **UTCTimestamp**

Used in groups: **ReferenceDataDateGrp**

**171.2.4460 ReferenceDataDateGrp**

Used to carry the different date-time stamps related to the reference data entry.

---

<b>Name</b>	<b>Mult.</b>	<b>Type</b>	<b>Description</b>
<b>NoReferenceDataDates</b>	[1..1]	NumInGroup	
<b>ReferenceDataDate</b>	[0..1]	UTCTimestamp	Required if NoReferenceDataDates(2746) > 0.
<b>ReferenceDataDateType</b>	[0..1]	CodeSet	

---

Used in components: **InstrumentExtension**

**171.2.4461 ReferenceDataDateType**

Reference data entry's date-time type.

Type: **int**

Allowed values in ReferenceDataDateTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	AdmitToTradeRequestDate	Date of request for admission to trading. In the context of MiFID II ESMA RTS 23 this is defined as "Date and time the issuer has approved admission to trading or trading in its financial instruments on a trading venue." (Reference: Annex I Table 3 Field 9)
1	AdmitToTradeApprovalDate	Date of approval of admission to trading. In the context of MiFID II ESMA RTS 23 this is defined as "Date and time of the request for admission to trading on the trading venue." (Reference: Annex I Table 3 Field 10)

---

Code	Name	Description
2	AdmitToTradeOrFirstTradeDate	Date of admission to trading or date of first trade. In the context of MiFID II ESMA RTS 23 this is defined as "Date and time of the admission to trading on the trading venue or the date and time when the instrument was first traded or an order or quote was first received by the trading venue." (Reference: Annex I Table 3 Field 11)
3	TerminationDate	Termination date. In the context of MiFID II ESMA RTS 23 this is defined as "Where available, the date and time when the financial instrument ceases to be traded or to be admitted to trading on the trading venue." (Reference: Annex I Table 3 Field 12)

Used in groups: [ReferenceDataDateGrp](#)

### 171.2.4462 ReferenceEntityType

Specifies the type of reference entity for first-to-default CDS basket contracts.

Type: [int](#)

Allowed values in ReferenceEntityTypeCodeSet:

Code	Name	Description
1	Asian	Asian
2	AustralianNewZealand	Australian and New Zealand
3	EuropeanEmergingMarkets	European emerging markets
4	Japanese	Japanese
5	NorthAmericanHighYield	North American high yield
6	NorthAmericanInsurance	North American insurance
7	NorthAmericanInvestmentGrade	North American investment grade
8	Singaporean	Singaporean
9	WesternEuropean	Western European
10	WesternEuropeanInsurance	Western European insurance

Used in components: [Instrument](#)

**171.2.4463 ReferencePage**

Identifies the reference "page" from the rate source.

For FX, the reference page to the spot rate to be used for the reference FX spot rate.

When RateSource(1446) = 3 (ISDA Settlement Rate Option) this contains the value from the scheme that reflects the terms of the Annex A to the ISDA 1998 FX and Currency Option Definitions. See: <http://www.fpml.org/coding-scheme/settlement-rate-option>

Type: **String**

Used in groups: **RateSource**

**171.2.4464 RefMsgType**

The MsgType (35) of the FIX message being referenced.

Type: **String**

Allowed values in MsgTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Heartbeat	Heartbeat. The Heartbeat monitors the status of the communication link and identifies when the last of a string of messages was not received.
1	TestRequest	TestRequest. The test request message forces a heartbeat from the opposing application. The test request message checks sequence numbers or verifies communication line status. The opposite application responds to the Test Request with a Heartbeat containing the TestReqID.
2	ResendRequest	ResendRequest. The resend request is sent by the receiving application to initiate the retransmission of messages. This function is utilized if a sequence number gap is detected, if the receiving application lost a message, or as a function of the initialization process.
3	Reject	Reject. The reject message should be issued when a message is received but cannot be properly processed due to a session-level rule violation. An example of when a reject may be appropriate would be the receipt of a message with invalid basic data which successfully passes de-encryption, CheckSum and BodyLength checks.

<b>Code</b>	<b>Name</b>	<b>Description</b>
4	SequenceReset	SequenceReset. The sequence reset message is used by the sending application to reset the incoming sequence number on the opposing side.
5	Logout	Logout. The logout message initiates or confirms the termination of a FIX session. Disconnection without the exchange of logout messages should be interpreted as an abnormal condition.
6	IOI	IOI. Indication of interest messages are used to market merchandise which the broker is buying or selling in either a proprietary or agency capacity. The indications can be time bound with a specific expiration value. Indications are distributed with the understanding that other firms may react to the message first and that the merchandise may no longer be available due to prior trade. Indication messages can be transmitted in various transaction types; NEW, CANCEL, and REPLACE. All message types other than NEW modify the state of the message identified in IOIRefID.
7	Advertisement	Advertisement. Advertisement messages are used to announce completed transactions. The advertisement message can be transmitted in various transaction types; NEW, CANCEL and REPLACE. All message types other than NEW modify the state of a previously transmitted advertisement identified in AdvRefID.
8	ExecutionReport	ExecutionReport. The execution report message is used to: 1. confirm the receipt of an order. 2. confirm changes to an existing order (i.e. accept cancel and replace requests). 3. relay order status information. 4. relay fill information on working orders. 5. relay fill information on tradeable or restricted tradeable quotes. 6. reject orders. 7. report post-trade fees calculations associated with a trade
9	OrderCancelReject	OrderCancelReject. The order cancel reject message is issued by the broker upon receipt of a cancel request or cancel/replace request message which cannot be honored.
A	Logon	Logon. The logon message authenticates a user establishing a connection to a remote system. The logon message must be the first message sent by the application requesting to initiate a FIX session.
B	News	News. The news message is a general free format message between the broker and institution. The message contains flags to identify the news item's urgency and to allow sorting by subject company (symbol). The News message can be originated at either the broker or institution side, or exchanges and other marketplace venues.

<b>Code</b>	<b>Name</b>	<b>Description</b>
C	Email	Email. The email message is similar to the format and purpose of the News message, however, it is intended for private use between two parties.
D	NewOrderSingle	NewOrderSingle. The new order message type is used by institutions wishing to electronically submit securities and forex orders to a broker for execution. The New Order message type may also be used by institutions or retail intermediaries wishing to electronically submit Collective Investment Vehicle (CIV) orders to a broker or fund manager for execution.
E	NewOrderList	NewOrderList. The NewOrderList Message can be used in one of two ways depending on which market conventions are being followed.
F	OrderCancelRequest	OrderCancelRequest. The order cancel request message requests the cancellation of all of the remaining quantity of an existing order. Note that the Order Cancel/Replace Request should be used to partially cancel (reduce) an order).
G	OrderCancelReplaceRequest	OrderCancelReplaceRequest. The order cancel/replace request is used to change the parameters of an existing order. Do not use this message to cancel the remaining quantity of an outstanding order, use the Order Cancel Request message for this purpose.
H	OrderStatusRequest	OrderStatusRequest. The order status request message is used by the institution to generate an order status message back from the broker.
J	AllocationInstruction	AllocationInstruction. The Allocation Instruction message provides the ability to specify how an order or set of orders should be subdivided amongst one or more accounts. In versions of FIX prior to version 4.4, this same message was known as the Allocation message. Note in versions of FIX prior to version 4.4, the allocation message was also used to communicate fee and expense details from the Sellside to the Buyside. This role has now been removed from the Allocation Instruction and is now performed by the new (to version 4.4) Allocation Report and Confirmation messages.,The Allocation Report message should be used for the Sell-side Initiated Allocation role as defined in previous versions of the protocol.
K	ListCancelRequest	ListCancelRequest. The List Cancel Request message type is used by institutions wishing to cancel previously submitted lists either before or during execution.

<b>Code</b>	<b>Name</b>	<b>Description</b>
L	ListExecute	ListExecute. The List Execute message type is used by institutions to instruct the broker to begin execution of a previously submitted list. This message may or may not be used, as it may be mirroring a phone conversation.
M	ListStatusRequest	ListStatusRequest. The list status request message type is used by institutions to instruct the broker to generate status messages for a list.
N	ListStatus	ListStatus. The list status message is issued as the response to a List Status Request message sent in an unsolicited fashion by the sell-side. It indicates the current state of the orders within the list as they exist at the broker's site. This message may also be used to respond to the List Cancel Request.
P	AllocationInstructionAck	AllocationInstructionAck. In versions of FIX prior to version 4.4, this message was known as the Allocation ACK message. The Allocation Instruction Ack message is used to acknowledge the receipt of and provide status for an Allocation Instruction message.
Q	DontKnowTrade	DontKnowTrade. The Don't Know Trade (DK) message notifies a trading partner that an electronically received execution has been rejected. This message can be thought of as an execution reject message.
R	QuoteRequest	QuoteRequest. In some markets it is the practice to request quotes from brokers prior to placement of an order. The quote request message is used for this purpose. This message is commonly referred to as a Request For Quote (RFQ)
S	Quote	Quote. The Quote message is used as the response to a Quote Request or a Quote Response message in both indicative, tradeable, and restricted tradeable quoting markets.
T	SettlementInstructions	SettlementInstructions. The Settlement Instructions message provides the broker's, the institution's, or the intermediary's instructions for trade settlement. This message has been designed so that it can be sent from the broker to the institution, from the institution to the broker, or from either to an independent "standing instructions" database or matching system or, for CIV, from an intermediary to a fund manager.
V	MarketDataRequest	MarketDataRequest. Some systems allow the transmission of real-time quote, order, trade, trade volume, open interest, and/or other price information on a subscription basis. A MarketDataRequest(35=V) is a general request for market data on specific securities or forex quotes. The values in the fields provided within the request will serve as further filter criteria for the result set.

Code	Name	Description
W	MarketDataSnapshotFullRefresh	MarketDataSnapshotFullRefresh. The Market Data messages are used as the response to a Market Data Request message. In all cases, one Market Data message refers only to one Market Data Request. It can be used to transmit a 2-sided book of orders or list of quotes, a list of trades, index values, opening, closing, settlement, high, low, or VWAP prices, the trade volume or open interest for a security, or any combination of these.
X	MarketDataIncrementalRefresh	MarketDataIncrementalRefresh. The Market Data message for incremental updates may contain any combination of new, changed, or deleted Market Data Entries, for any combination of instruments, with any combination of trades, imbalances, quotes, index values, open, close, settlement, high, low, and VWAP prices, trade volume and open interest so long as the maximum FIX message size is not exceeded. All of these types of Market Data Entries can be changed and deleted.
Y	MarketDataRequestReject	MarketDataRequestReject. The Market Data Request Reject is used when the broker cannot honor the Market Data Request, due to business or technical reasons. Brokers may choose to limit various parameters, such as the size of requests, whether just the top of book or the entire book may be displayed, and whether Full or Incremental updates must be used.
Z	QuoteCancel	QuoteCancel. The Quote Cancel message is used by an originator of quotes to cancel quotes. The Quote Cancel message supports cancellation of: <ul style="list-style-type: none"> <li>• All quotes.</li> <li>• Quotes for a specific symbol or security ID.</li> <li>• All quotes for a security type.</li> <li>• All quotes for an underlying</li> </ul>
a	QuoteStatusRequest	QuoteStatusRequest. The quote status request message is used for the following purposes in markets that employ tradeable or restricted tradeable quotes: <ul style="list-style-type: none"> <li>• For the issuer of a quote in a market to query the status of that quote (using the QuoteID to specify the target quote).</li> <li>• To subscribe and unsubscribe for Quote Status Report messages for one or more securities.</li> </ul>
b	MassQuoteAck	MassQuoteAck. Mass Quote Acknowledgement is used as the application level response to a Mass Quote message.
c	SecurityDefinitionRequest	SecurityDefinitionRequest. The SecurityDefinitionRequest(35=c) message is used for the following: <ol style="list-style-type: none"> <li>1. Request a specific security to be traded with the second party. The requested security can be defined as a multileg security made up of one or more instrument legs.</li> <li>2. Request a set of individual securities for a single market segment.</li> <li>3. Request all securities, independent of market segment.</li> </ol>

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
d	SecurityDefinition	SecurityDefinition. The SecurityDefinition(35=d) message is used for the following: 1. Accept the security defined in a SecurityDefinition(35=d) message. 2. Accept the security defined in a SecurityDefinition(35=d) message with changes to the definition and/or identity of the security. 3. Reject the security requested in a SecurityDefinition(35=d) message. 4. Respond to a request for securities within a specified market segment. 5. Convey comprehensive security definition for all market segments that the security participates in. 6. Convey the security's trading rules that differ from default rules for the market segment.
e	SecurityStatusRequest	SecurityStatusRequest. The Security Status Request message provides for the ability to request the status of a security. One or more Security Status messages are returned as a result of a Security Status Request message.
f	SecurityStatus	SecurityStatus. The Security Status message provides for the ability to report changes in status to a security. The Security Status message contains fields to indicate trading status, corporate actions, financial status of the company. The Security Status message is used by one trading entity (for instance an exchange) to report changes in the state of a security.
g	TradingSessionStatusRequest	TradingSessionStatusRequest. The Trading Session Status Request is used to request information on the status of a market. With the move to multiple sessions occurring for a given trading party (morning and evening sessions for instance) there is a need to be able to provide information on what product is trading on what market.
h	TradingSessionStatus	TradingSessionStatus. The Trading Session Status provides information on the status of a market. For markets multiple trading sessions on multiple-markets occurring (morning and evening sessions for instance), this message is able to provide information on what products are trading on what market during what trading session.
i	MassQuote	MassQuote. The Mass Quote message can contain quotes for multiple securities to support applications that allow for the mass quoting of an option series. Two levels of repeating groups have been provided to minimize the amount of data required to submit a set of quotes for a class of options (e.g. all option series for IBM).

---

Code	Name	Description
j	BusinessMessageReject	BusinessMessageReject. The Business Message Reject message can reject an application-level message which fulfills session-level rules and cannot be rejected via any other means. Note if the message fails a session-level rule (e.g. body length is incorrect), a session-level Reject message should be issued.
k	BidRequest	BidRequest. The BidRequest Message can be used in one of two ways depending on which market conventions are being followed. In the "Non disclosed" convention (e.g. US/European model) the BidRequest message can be used to request a bid based on the sector, country, index and liquidity information contained within the message itself. In the "Non disclosed" convention the entry repeating group is used to define liquidity of the program. See " Program/Basket/List Trading" for an example. In the "Disclosed" convention (e.g. Japanese model) the BidRequest message can be used to request bids based on the ListOrderDetail messages sent in advance of BidRequest message. In the "Disclosed" convention the list repeating group is used to define which ListOrderDetail messages a bid is being sort for and the directions of the required bids.
l	BidResponse	BidResponse. The Bid Response message can be used in one of two ways depending on which market conventions are being followed. In the "Non disclosed" convention the Bid Response message can be used to supply a bid based on the sector, country, index and liquidity information contained within the corresponding bid request message. See "Program/Basket/List Trading" for an example. In the "Disclosed" convention the Bid Response message can be used to supply bids based on the List Order Detail messages sent in advance of the corresponding Bid Request message.
m	ListStrikePrice	ListStrikePrice. The strike price message is used to exchange strike price information for principal trades. It can also be used to exchange reference prices for agency trades.
n	XMLnonFIX	XMLnonFIX.
o	RegistrationInstructions	RegistrationInstructions. The Registration Instructions message type may be used by institutions or retail intermediaries wishing to electronically submit registration information to a broker or fund manager (for CIV) for an order or for an allocation.
p	RegistrationInstructionsResponse	RegistrationInstructionsResponse. The Registration Instructions Response message type may be used by broker or fund manager (for CIV) in response to a Registration Instructions message submitted by an institution or retail intermediary for an order or for an allocation.

<b>Code</b>	<b>Name</b>	<b>Description</b>
q	OrderMassCancelRequest	OrderMassCancelRequest. The order mass cancel request message requests the cancellation of all of the remaining quantity of a group of orders matching criteria specified within the request. NOTE: This message can only be used to cancel order messages (reduce the full quantity).
r	OrderMassCancelReport	OrderMassCancelReport. The Order Mass Cancel Report is used to acknowledge an Order Mass Cancel Request. Note that each affected order that is canceled is acknowledged with a separate Execution Report or Order Cancel Reject message.
s	NewOrderCross	NewOrderCross. Used to submit a cross order into a market. The cross order contains two order sides (a buy and a sell). The cross order is identified by its CrossID.
t	CrossOrderCancelReplaceRequest	CrossOrderCancelReplaceRequest. Used to modify a cross order previously submitted using the New Order - Cross message. See Order Cancel Replace Request for details concerning message usage.
u	CrossOrderCancelRequest	CrossOrderCancelRequest. Used to fully cancel the remaining open quantity of a cross order.
v	SecurityTypeRequest	SecurityTypeRequest. The Security Type Request message is used to return a list of security types available from a counterparty or market.
w	SecurityTypes	SecurityTypes. The Security Type Request message is used to return a list of security types available from a counterparty or market.
x	SecurityListRequest	SecurityListRequest. The Security List Request message is used to return a list of securities from the counterparty that match criteria provided on the request
y	SecurityList	SecurityList. The Security List message is used to return a list of securities that matches the criteria specified in a Security List Request.
z	DerivativeSecurityListRequest	DerivativeSecurityListRequest. The Derivative Security List Request message is used to return a list of securities from the counterparty that match criteria provided on the request
AA	DerivativeSecurityList	DerivativeSecurityList. The Derivative Security List message is used to return a list of securities that matches the criteria specified in a Derivative Security List Request.
AB	NewOrderMultileg	NewOrderMultileg. The New Order - Multileg is provided to submit orders for securities that are made up of multiple securities, known as legs.

<b>Code</b>	<b>Name</b>	<b>Description</b>
AC	MultilegOrderCancelReplace	MultilegOrderCancelReplace. Used to modify a multileg order previously submitted using the New Order - Multileg message. See Order Cancel Replace Request for details concerning message usage.
AD	TradeCaptureReportRequest	TradeCaptureReportRequest. The Trade Capture Report Request can be used to: <ul style="list-style-type: none"> <li>• Request one or more trade capture reports based upon selection criteria provided on the trade capture report request.</li> <li>• Subscribe for trade capture reports based upon selection criteria provided on the trade capture report request.</li> </ul>
AE	TradeCaptureReport	TradeCaptureReport. The Trade Capture Report message can be: <ul style="list-style-type: none"> <li>- Used to report trades between counterparties.</li> <li>- Used to report trades to a trade matching system.</li> <li>- Sent unsolicited between counterparties.</li> <li>- Sent as a reply to a Trade Capture Report Request.</li> <li>- Used to report unmatched and matched trades.</li> </ul>
AF	OrderMassStatusRequest	OrderMassStatusRequest. The order mass status request message requests the status for orders matching criteria specified within the request.
AG	QuoteRequestReject	QuoteRequestReject. The Quote Request Reject message is used to reject Quote Request messages for all quoting models.
AH	RFQRequest	RFQRequest. In tradeable and restricted tradeable quoting markets – Quote Requests are issued by counterparties interested in ascertaining the market for an instrument. Quote Requests are then distributed by the market to liquidity providers who make markets in the instrument. The RFQ Request is used by liquidity providers to indicate to the market for which instruments they are interested in receiving Quote Requests. It can be used to register interest in receiving quote requests for a single instrument or for multiple instruments
AI	QuoteStatusReport	QuoteStatusReport. The quote status report message is used: <ul style="list-style-type: none"> <li>• as the response to a Quote Status Request message.</li> <li>• as a response to a Quote Cancel message.</li> <li>• as a response to a Quote Response message in a negotiation dialog (see Volume 7 – PRODUCT: FIXED INCOME and USER GROUP: EXCHANGES AND MARKETS)</li> </ul>
AJ	QuoteResponse	QuoteResponse. The QuoteResponse(35=AJ) message is used for the following purposes: <ol style="list-style-type: none"> <li>1. Respond to an IOI(35=6) message.</li> <li>2. Respond to a Quote(35=S) message.</li> <li>3. Counter a Quote.</li> <li>4. End a negotiation dialog.</li> <li>5. Follow-up or end a QuoteRequest(35=R) dialog that did not receive a response.</li> </ol>

<b>Code</b>	<b>Name</b>	<b>Description</b>
AK	Confirmation	Confirmation. The Confirmation messages are used to provide individual trade level confirmations from the sell side to the buy side. In versions of FIX prior to version 4.4, this role was performed by the allocation message. Unlike the allocation message, the confirmation message operates at an allocation account (trade) level rather than block level, allowing for the affirmation or rejection of individual confirmations.
AL	PositionMaintenanceRequest	PositionMaintenanceRequest. The Position Maintenance Request message allows the position owner to submit requests to the holder of a position which will result in a specific action being taken which will affect the position. Generally, the holder of the position is a central counter party or clearing organization but can also be a party providing investment services.
AM	PositionMaintenanceReport	PositionMaintenanceReport. The Position Maintenance Report message is sent by the holder of a position in response to a Position Maintenance Request and is used to confirm that a request has been successfully processed or rejected.
AN	RequestForPositions	RequestForPositions. The Request For Positions message is used by the owner of a position to request a Position Report from the holder of the position, usually the central counter party or clearing organization. The request can be made at several levels of granularity.
AO	RequestForPositionsAck	RequestForPositionsAck. The Request for Positions Ack message is returned by the holder of the position in response to a Request for Positions message. The purpose of the message is to acknowledge that a request has been received and is being processed.
AP	PositionReport	PositionReport. The Position Report message is returned by the holder of a position in response to a Request for Position message. The purpose of the message is to report all aspects of a position and may be provided on a standing basis to report end of day positions to an owner.

<b>Code</b>	<b>Name</b>	<b>Description</b>
AQ	TradeCaptureReportRequestAck	TradeCaptureReportRequestAck. The Trade Capture Request Ack message is used to: - Provide an acknowledgement to a Trade Capture Report Request in the case where the Trade Capture Report Request is used to specify a subscription or delivery of reports via an out-of-band ResponseTransmissionMethod. - Provide an acknowledgement to a Trade Capture Report Request in the case when the return of the Trade Capture Reports matching that request will be delayed or delivered asynchronously. This is useful in distributed trading system environments. - Indicate that no trades were found that matched the selection criteria specified on the Trade Capture Report Request or the Trade Capture Report Request was invalid for some business reason, such as request is not authorized, invalid or unknown instrument, party, trading session, etc.
AR	TradeCaptureReportAck	TradeCaptureReportAck. The Trade Capture Report Ack message can be: - Used to acknowledge trade capture reports received from a counterparty. - Used to reject a trade capture report received from a counterparty.
AS	AllocationReport	AllocationReport. Sent from sell-side to buy-side, sell-side to 3rd-party or 3rd-party to buy-side, the Allocation Report (Claim) provides account breakdown of an order or set of orders plus any additional follow-up front-office information developed post-trade during the trade allocation, matching and calculation phase. In versions of FIX prior to version 4.4, this functionality was provided through the Allocation message. Depending on the needs of the market and the timing of "confirmed" status, the role of Allocation Report can be taken over in whole or in part by the Confirmation message.
AT	AllocationReportAck	AllocationReportAck. The Allocation Report Ack message is used to acknowledge the receipt of and provide status for an Allocation Report message.
AU	ConfirmationAck	ConfirmationAck. The Confirmation Ack (aka Affirmation) message is used to respond to a Confirmation message.
AV	SettlementInstructionRequest	SettlementInstructionRequest. The Settlement Instruction Request message is used to request standing settlement instructions from another party.
AW	AssignmentReport	AssignmentReport. Assignment Reports are sent from a clearing house to counterparties, such as a clearing firm as a result of the assignment process.

Code	Name	Description
AX	CollateralRequest	CollateralRequest. An initiator that requires collateral from a respondent sends a Collateral Request. The initiator can be either counterparty to a trade in a two party model or an intermediary such as an ATS or clearinghouse in a three party model. A Collateral Assignment is expected as a response to a request for collateral.
AY	CollateralAssignment	CollateralAssignment. Used to assign collateral to cover a trading position. This message can be sent unsolicited or in reply to a Collateral Request message.
AZ	CollateralResponse	CollateralResponse. Used to respond to a Collateral Assignment message.
BA	CollateralReport	CollateralReport. Used to report collateral status when responding to a Collateral Inquiry message.
BB	CollateralInquiry	CollateralInquiry. Used to inquire for collateral status.
BC	NetworkCounterpartySystemStatus-Request	NetworkCounterpartySystemStatusRequest. This message is send either immediately after logging on to inform a network (counterparty system) of the type of updates required or to at any other time in the FIX conversation to change the nature of the types of status updates required. It can also be used with a NetworkRequestType of Snapshot to request a one-off report of the status of a network (or counterparty) system. Finally this message can also be used to cancel a request to receive updates into the status of the counterparties on a network by sending a NetworkRequestStatusMessage with a NetworkRequestType of StopSubscribing.
BD	NetworkCounterpartySystemStatus-Response	NetworkCounterpartySystemStatusResponse. This message is sent in response to a Network (Counterparty System) Status Request Message.
BE	UserRequest	UserRequest. This message is used to initiate a user action, logon, logout or password change. It can also be used to request a report on a user's status.
BF	UserResponse	UserResponse. This message is used to respond to a user request message, it reports the status of the user after the completion of any action requested in the user request message.
BG	CollateralInquiryAck	CollateralInquiryAck. Used to respond to a Collateral Inquiry in the following situations: <ul style="list-style-type: none"> <li>• When the CollateralInquiry will result in an out of band response (such as a file transfer).</li> <li>• When the inquiry is otherwise valid but no collateral is found to match the criteria specified on the Collateral Inquiry message.</li> <li>• When the Collateral Inquiry is invalid based upon the business rules of the counterparty.</li> </ul>

<b>Code</b>	<b>Name</b>	<b>Description</b>
BH	ConfirmationRequest	ConfirmationRequest. The Confirmation Request message is used to request a Confirmation message.
BO	ContraryIntentionReport	ContraryIntentionReport. The Contrary Intention Report is used for reporting of contrary expiration quantities for Saturday expiring options. This information is required by options exchanges for regulatory purposes.
BP	SecurityDefinitionUpdateReport	SecurityDefinitionUpdateReport. This message is used for reporting updates to a product security master file. Updates could be the result of corporate actions or other business events. Updates may include additions, modifications or deletions.
BK	SecurityListUpdateReport	SecurityListUpdateReport. The Security List Update Report is used for reporting updates to a Contract Security Masterfile. Updates could be due to Corporate Actions or other business events. Update may include additions, modifications and deletions.
BL	AdjustedPositionReport	AdjustedPositionReport. Used to report changes in position, primarily in equity options, due to modifications to the underlying due to corporate actions
BM	AllocationInstructionAlert	AllocationInstructionAlert. This message is used in a 3-party allocation model (buy-side and sell-side using a central clearing entity) where notification of group creation and group updates to counterparties is needed. The message will also carry trade information that comprised the group to the counterparties.
BN	ExecutionAck	ExecutionAck. The Execution Report Acknowledgement message is an optional message that provides dual functionality to notify a trading partner that an electronically received execution has either been accepted or rejected (DK'd).
BJ	TradingSessionList	TradingSessionList. The Trading Session List message is sent as a response to a Trading Session List Request. The Trading Session List should contain the characteristics of the trading session and the current state of the trading session.
BI	TradingSessionListRequest	TradingSessionListRequest. The Trading Session List Request is used to request a list of trading sessions available in a market place and the state of those trading sessions. A successful request will result in a response from the counterparty of a Trading Session List (MsgType=BJ) message that contains a list of zero or more trading sessions.
BQ	SettlementObligationReport	SettlementObligationReport. The Settlement Obligation Report message provides a central counterparty, institution, or individual counterparty with a capacity for reporting the final details of a currency settlement obligation.

Code	Name	Description
BR	DerivativeSecurityListUpdateReport	DerivativeSecurityListUpdateReport. The Derivative Security List Update Report message is used to send updates to an option family or the strikes that comprise an option family.
BS	TradingSessionListUpdateReport	TradingSessionListUpdateReport. The Trading Session List Update Report is used by marketplaces to provide intra-day updates of trading sessions when there are changes to one or more trading sessions.
BT	MarketDefinitionRequest	MarketDefinitionRequest. The Market Definition Request message is used to request for market structure information from the Respondent that receives this request.
BU	MarketDefinition	MarketDefinition. The MarketDefinition(35=BU) message is used to respond to MarketDefinitionRequest(35=BT). In a subscription, it will be used to provide the initial snapshot of the information requested. Subsequent updates are provided by the MarketDefinitionUpdateReport(35=BV).
BV	MarketDefinitionUpdateReport	MarketDefinitionUpdateReport. In a subscription for market structure information, this message is used once the initial snapshot of the information has been sent using the MarketDefinition(35=BU) message.
BW	ApplicationMessageRequest	ApplicationMessageRequest. This message is used to request a retransmission of a set of one or more messages generated by the application specified in RefApplID (1355).
BX	ApplicationMessageRequestAck	ApplicationMessageRequestAck. This message is used to acknowledge an Application Message Request providing a status on the request (i.e. whether successful or not). This message does not provide the actual content of the messages to be resent.
BY	ApplicationMessageReport	ApplicationMessageReport. This message is used for three difference purposes: to reset the ApplSeqNum (1181) of a specified ApplID (1180). to indicate that the last message has been sent for a particular ApplID, or as a keep-alive mechanism for ApplIDs with infrequent message traffic.
BZ	OrderMassActionReport	OrderMassActionReport. The Order Mass Action Report is used to acknowledge an Order Mass Action Request. Note that each affected order that is suspended or released or canceled is acknowledged with a separate Execution Report for each order.
CA	OrderMassActionRequest	OrderMassActionRequest. The Order Mass Action Request message can be used to request the suspension or release of a group of orders that match the criteria specified within the request. This is equivalent to individual Order Cancel Replace Requests for each order with or without adding "S" to the ExecInst values. It can also be used for mass order cancellation.

<b>Code</b>	<b>Name</b>	<b>Description</b>
CB	UserNotification	UserNotification. The User Notification message is used to notify one or more users of an event or information from the sender of the message. This message is usually sent unsolicited from a marketplace (e.g. Exchange, ECN) to a market participant.
CC	StreamAssignmentRequest	StreamAssignmentRequest. In certain markets where market data aggregators fan out to end clients the pricing streams provided by the price makers, the price maker may assign the clients to certain pricing streams that the price maker publishes via the aggregator. An example of this use is in the FX markets where clients may be assigned to different pricing streams based on volume bands and currency pairs.
CD	StreamAssignmentReport	StreamAssignmentReport. The StreamAssignmentReport message is in response to the StreamAssignmentRequest message. It provides information back to the aggregator as to which clients to assign to receive which price stream based on requested CCY pair. This message can be sent unsolicited to the Aggregator from the Price Maker.
CE	StreamAssignmentReportACK	StreamAssignmentReportACK. This message is used to respond to the Stream Assignment Report, to either accept or reject an unsolicited assignment.
CF	PartyDetailsListRequest	PartyDetailsListRequest. The PartyDetailsListRequest is used to request party detail information.
CG	PartyDetailsListReport	PartyDetailsListReport. The PartyDetailsListReport message is used to disseminate party details between counterparties. PartyDetailsListReport messages may be sent in response to a PartyDetailsListRequest message or sent unsolicited.

<b>Code</b>	<b>Name</b>	<b>Description</b>
CH	MarginRequirementInquiry	MarginRequirementInquiry. The purpose of this message is to initiate a margin requirement inquiry for a margin account. The inquiry may be submitted at the detail level or the summary level. It can also be used to inquire margin excess/deficit or net position information. Margin excess/deficit will provide information about the surplus or shortfall compared to the previous trading day or a more recent margin calculation. An inquiry for net position information will trigger one or more PositionReport messages instead of one or more MarginRequirementReport messages. If the inquiry is made at the detail level, an Instrument block must be provided with the desired level of detail. If the inquiry is made at the summary level, the Instrument block is not provided, implying a summary request is being made. For example, if the inquiring firm specifies the Security Type of "FUT" in the Instrument block, then a detail report will be generated containing the margin requirements for all futures positions for the inquiring account. Similarly, if the inquiry is made at the summary level, the report will contain the total margin requirement aggregated to the margin account level.
CI	MarginRequirementInquiryAck	MarginRequirementInquiryAck. Used to respond to a Margin Requirement Inquiry.
CJ	MarginRequirementReport	MarginRequirementReport. The Margin Requirement Report returns information about margin requirement either as an overview across all margin accounts or on a detailed level due to the inquiry making use of the optional Instrument component block. Application sequencing can be used to re-request a range of reports.
CK	PartyDetailsListUpdateReport	PartyDetailsListUpdateReport. The PartyDetailsListUpdateReport(35=CK) is used to disseminate updates to party detail information.
CL	PartyRiskLimitsRequest	PartyRiskLimitsRequest. The PartyRiskLimitsRequest message is used to request for risk information for specific parties, specific party roles or specific instruments.
CM	PartyRiskLimitsReport	PartyRiskLimitsReport. The PartyRiskLimitsReport message is used to communicate party risk limits. The message can either be sent as a response to the PartyRiskLimitsRequest message or can be published unsolicited.
CN	SecurityMassStatusRequest	SecurityMassStatusRequest.
CO	SecurityMassStatus	SecurityMassStatus.

Code	Name	Description
CQ	AccountSummaryReport	AccountSummaryReport. The AccountSummaryReport is provided by the clearinghouse to its clearing members on a daily basis. It contains margin, settlement, collateral and pay/collect data for each clearing member level account type. Clearing member account types will be described through use of the Parties component and PtysSubGrp sub-component. In certain usages, the clearing members can send the AccountSummaryReport message to the clearinghouse as needed. For example, clearing members can send this message to the clearinghouse to identify the value of collateral for each customer (to satisfy CFTC Legally Segregated Operationally Commingled (LSOC) regulatory reporting obligations). Clearing organizations can also send the AccountSummaryReport message to regulators to meet regulatory reporting obligations. For example, clearing organizations can use this message to submit daily reports for each clearing member ("CM") by house origin and by each customer origin for all futures, options, and swaps positions, and all securities positions held in a segregated account or pursuant to a cross margining agreement, to a regulator (e.g. to the CFTC to meet Part 39, Section 39.19 reporting obligations).
CR	PartyRiskLimitsUpdateReport	PartyRiskLimitsUpdateReport. The PartyRiskLimitsUpdateReport(35=CR) is used to convey incremental changes to risk limits. It is similar to the regular report but uses the PartyRiskLimitsUpdateGrp component instead of the PartyRiskLimitsGrp component to include an update action.
CS	PartyRiskLimitsDefinitionRequest	PartyRiskLimitsDefinitionRequest. PartyRiskLimitDefinitionRequest is used for defining new risk limits.
CT	PartyRiskLimitsDefinitionRequestAck	PartyRiskLimitsDefinitionRequestAck. PartyRiskLimitDefinitionRequestAck is used for accepting (with or without changes) or rejecting the definition of risk limits.
CU	PartyEntitlementsRequest	PartyEntitlementsRequest. The PartyEntitlementsRequest message is used to request for entitlement information for one or more party(-ies), specific party role(s), or specific instrument(s).
CV	PartyEntitlementsReport	PartyEntitlementsReport. The PartyEntitlementsReport is used to report entitlements for one or more parties, party role(s), or specific instrument(s).

<b>Code</b>	<b>Name</b>	<b>Description</b>
CW	QuoteAck	QuoteAck. The QuoteAck(35=CW) message is used to acknowledge a Quote(35=S) submittal or request to cancel an individual quote using the QuoteCancel(35=Z) message during a Quote/Negotiation dialog.
CX	PartyDetailsDefinitionRequest	PartyDetailsDefinitionRequest. The PartyDetailsDefinitionRequest(35=CX) is used for defining new parties and modifying or deleting existing parties information, including the relationships between parties. The recipient of the message responds with a PartyDetailsDefinitionRequestAck(35=CY) to indicate whether the request was accepted or rejected.
CY	PartyDetailsDefinitionRequestAck	PartyDetailsDefinitionRequestAck. The PartyDetailsDefinitionRequestAck(35=CY) is used as a response to the PartyDetailsDefinitionRequest(35=CX) message. The request can be accepted (with or without changes) or rejected.
CZ	PartyEntitlementsUpdateReport	PartyEntitlementsUpdateReport. The PartyEntitlementsUpdateReport(35=CZ) is used to convey incremental changes to party entitlements. It is similar to the PartyEntitlementsReport(35=CV). This message uses the PartyEntitlementsUpdateGrp component which includes the ability to specify an update action using ListUpdateAction(1324).
DA	PartyEntitlementsDefinitionRequest	PartyEntitlementsDefinitionRequest. The PartyEntitlementsDefinitionRequest(35=DA) is used for defining new entitlements, and modifying or deleting existing entitlements for the specified party(-ies).
DB	PartyEntitlementsDefinitionRequestAck	PartyEntitlementsDefinitionRequestAck. The PartyEntitlementsDefinitionRequestAck(35=DB) is used as a response to the PartyEntitlementsDefinitionRequest(35=DA) to accept (with or without changes) or reject the definition of party entitlements.
DC	TradeMatchReport	TradeMatchReport. The TradeMatchReport(35=DC) message is used by exchanges and ECN's to report matched trades to central counterparties (CCPs) as an atomic event. The message is used to express the one-to-one, one-to-many and many-to-many matches as well as implied matches in which more complex instruments can match with simpler instruments.
DD	TradeMatchReportAck	TradeMatchReportAck. The TradeMatchReportAck(35=DD) is used to respond to the TradeMatchReport(35=DC) message. It may be used to report on the status of the request (e.g. accepting the request or rejecting the request).

<b>Code</b>	<b>Name</b>	<b>Description</b>
DE	PartyRiskLimitsReportAck	PartyRiskLimitsReportAck. PartyRiskLimitsReportAck is an optional message used as a response to the PartyRiskLimitReport(35=CM) or PartyRiskLimitUpdateReport(35=CR) messages to acknowledge or reject those messages.
DF	PartyRiskLimitCheckRequest	PartyRiskLimitCheckRequest. PartyRiskLimitCheckRequest is used to request for approval of credit or risk limit amount intended to be used by a party in a transaction from another party that holds the information.
DG	PartyRiskLimitCheckRequestAck	PartyRiskLimitCheckRequestAck. PartyRiskLimitCheckRequestAck is used to acknowledge a PartyRiskLimitCheckRequest(35=DF) message and to respond whether the limit check request was approved or not. When used to accept the PartyRiskLimitCheckRequest(35=DF) message the Respondent may also include the limit amount that was approved.
DH	PartyActionRequest	PartyActionRequest. The PartyActionRequest message is used suspend or halt the specified party from further trading activities at the Respondent. The Respondent must respond with a PartyActionReport(35=DI) message.
DI	PartyActionReport	PartyActionReport. Used to respond to the PartyActionRequest(35=DH) message, indicating whether the request has been received, accepted or rejected. Can also be used in an unsolicited manner to report party actions, e.g. reinstatements after a manual intervention out of band.
DJ	MassOrder	MassOrder. The MassOrder(35=DJ) message can be used to add, modify or delete multiple unrelated orders with a single message. Apart from clearing related attributes, only the key order attributes for high performance trading are available.
DK	MassOrderAck	MassOrderAck. The mass order acknowledgement message is used to acknowledge the receipt of and the status for a MassOrder(35=DJ) message.
DL	PositionTransferInstruction	PositionTransferInstruction. The PositionTransferInstruction(35=DL) is sent by clearing firms to CCPs to initiate position transfers, or to accept or decline position transfers.
DM	PositionTransferInstructionAck	PositionTransferInstructionAck. The PositionTransferInstructionAck(35=DM) is sent by CCPs to clearing firms to acknowledge position transfer instructions, and to report errors processing position transfer instructions.

<b>Code</b>	<b>Name</b>	<b>Description</b>
DN	PositionTransferReport	PositionTransferReport. The PositionTransferReport(35=DN) is sent by CCPs to clearing firms indicating of positions that are to be transferred to the clearing firm, or to report on status of the transfer to the clearing firms involved in the transfer process.
DO	MarketDataStatisticsRequest	MarketDataStatisticsRequest. The MarketDataStatisticsRequest(35=DO) is used to request for statistical data. The simple form is to use an identifier (MDStatisticID(2475)) assigned by the market place which would denote a pre-defined statistical report. Alternatively, or also in addition, the request can define a number of parameters for the desired statistical information.
DP	MarketDataStatisticsReport	MarketDataStatisticsReport. The MarketDataStatisticsReport(35=DP) is used to provide unsolicited statistical information or in response to a specific request. Each report contains a set of statistics for a single entity which could be a market, a market segment, a security list or an instrument.
DQ	CollateralReportAck	CollateralReportAck. CollateralReportAck(35=DQ) is used as a response to the CollateralReport(35=BA). It can be used to reject a CollateralReport(35=BA) when the content of the report is invalid based on the business rules of the receiver. The message may also be used to acknowledge receipt of a valid CollateralReport(35=BA).
DR	MarketDataReport	MarketDataReport. The MarketDataReport(35=DR) message is used to provide delimiting references (e.g. start and end markers in a continuous broadcast) and details about the number of market data messages sent in a given distribution cycle.
DS	CrossRequest	CrossRequest. The CrossRequest(35=DS) message is used to indicate the submission of orders or quotes that may result in a crossed trade.
DT	CrossRequestAck	CrossRequestAck. The CrossRequestAck(35=DT) message is used to confirm the receipt of a CrossRequest(35=DS) message.
DU	AllocationInstructionAlertRequest	AllocationInstructionAlertRequest. This message is used in a clearinghouse 3-party allocation model to request for AllocationInstructionAlert(35=BM) from the clearinghouse. The request may be used to obtain a one-time notification of the status of an allocation group.

Code	Name	Description
DV	AllocationInstructionAlertRequestAck	AllocationInstructionAlertRequestAck. This message is used in a clearinghouse 3-party allocation model to acknowledge a AllocationInstructionAlertRequest(35=DU) message for an AllocationInstructionAlert(35=BM) message from the clearinghouse.
DW	TradeAggregationRequest	TradeAggregationRequest. TradeAggregationRequest(35=DW) is used to request that the identified trades between the initiator and respondent be aggregated together for further processing.
DX	TradeAggregationReport	TradeAggregationReport. TradeAggregationReport(35=DX) is used to respond to the TradeAggregationRequest(35=DW) message. It provides the status of the request (e.g. accepted or rejected) and may also provide additional information supplied by the respondent.
EA	PayManagementReport	PayManagementReport. PayManagementReport(35=EA) may be used to respond to the PayManagementRequest(35=DY) message. It provides the status of the request (e.g. accepted, disputed) and may provide additional information related to the request. PayManagementReport(35=EA) may also be sent unsolicited by the broker to a client. In which case the client may acknowledge and resolve disputes out-of-band or with a simple PayManagementReportAck(35=EB). PayManagementReport(35=EA) may also be sent unsolicited to report the progress status of the payment itself with PayReportTransType(2804)=2 (Status).
EB	PayManagementReportAck	PayManagementReportAck. PayManagementReportAck(35=EB) is used as a response to the PayManagementReport(35=EA) message. It may be used to accept, reject or dispute the details of the PayManagementReport(35=EA) depending on the business rules of the receiver. This message may also be used to acknowledge the receipt of a PayManagementReport(35=EA) message.
DY	PayManagementRequest	PayManagementRequest. PayManagementRequest(35=DY) message is used to communicate a future or expected payment to be made or received related to a trade or contract after its settlement.
DZ	PayManagementRequestAck	PayManagementRequestAck. PayManagementRequestAck(35=DZ) is used to acknowledge the receipt of the PayManagementRequest(35=DY) message (i.e. a technical acknowledgement of receipt). Acceptance or rejection of the request is reported in the corresponding PayManagementReport(35=EA).

Code	Name	Description
EC	SettlementStatusRequest	SettlementStatusRequest. SettlementStatusRequest(35=EC) is used to request for the settlement status of a trade.
ED	SettlementStatusRequestAck	SettlementStatusRequestAck. SettlementStatusRequestAck(35=ED) is used to respond to the SettlementStatusRequest(35=EC) to acknowledge the request and provide status for the request message.
EE	SettlementStatusReport	SettlementStatusReport. SettlementStatusReport(35=EE) is a response to the SettlementStatusRequest(35=EC) to provide settlement status for the requested trade. It may also be sent unsolicited without an explicit request message by the party able to provide the settlement status for the trade identified in the report message.
EF	SettlementStatusReportAck	SettlementStatusReportAck. SettlementStatusReportAck(35=EF) is used to respond to the SettlementStatusReport(35=EE) to acknowledge or reject the report.
EG	SecurityRiskMetricsReport	SecurityRiskMetricsReport. SecurityRiskMetricsReport(35=EG) is used for publishing the risk metrics, valuation metrics or analytics of one or more securities, or for an option series.

Used in groups: [MsgTypeGrp](#)

Used in messages: [BusinessMessageReject](#), [Reject](#)

### **171.2.4465 RefOrderID**

The ID reference to the order being hit or taken.

For pre-trade credit/risk limit check process, this is the reference to the placed order, quote request or quote for the credit/risk limit check.

Type: [String](#)

Used in components: [TradeReportOrderDetail](#)

Used in groups: [ListOrdGrp](#)

Used in messages: [ExecutionReport](#), [NewOrderMultileg](#), [NewOrderSingle](#), [PartyRiskLimitCheckRequest](#), [PartyRiskLimitCheckRequestAck](#), [Quote](#)

**171.2.4466 RefOrderIDSource**

Used to specify the source for the identifier in RefOrderID(1080). This can be an identifier provided in order depth market data when hitting (taking) a specific order or to identify what type of order or quote reference is being provided when seeking credit limit check. In the context of US CAT this can be used to identify related orders and quotes which are parent, previous, or manual orders or quotes. Previous relates to orders changing their unique system assigned order identifier.

Type: **char**

Allowed values in RefOrderIDSourceCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	SecondaryOrderID	Secondary order ID. Can be used to refer to an additional order identifier assigned by the party accepting an order, e.g. SecondaryOrderID(198).
1	OrderID	Order ID. Can be used to refer to an order identifier assigned by the party accepting an order, e.g. OrderID(37).
2	MDEntryID	Market data entry ID. Can be used to refer to a market data entry identifier provided with market data, e.g. MDEntryID(278).
3	QuoteEntryID	Quote entry ID. Can be used to refer to a quote identifier provided with market data or quote, e.g. QuoteEntryID(299).
4	OriginalOrderID	Original order ID. Can be used to refer to an initial order identifier assigned by the party accepting an order, e.g. OrderID(37) that changed.
5	QuoteID	Quote ID. Can be used to refer to a quote identifier assigned by the party issuing the quote, e.g. QuoteID(117).
6	QuoteReqID	Quote request ID. Can be used to refer to a quote identifier or quote request identifier assigned by the party issuing the request, e.g. QuoteReqID(131).
7	PreviousOrderIdentifier	Previous order identifier. Can be used when previously assigned (unique) system order identifier has changed.
8	PreviousQuoteIdentifier	Previous quote identifier. Can be used when previously assigned (unique) quote identifier has changed.
9	ParentOrderIdentifier	Parent order identifier. Can be used where orders are split into child orders and need to refer back to their parent order.
A	ManualOrderIdentifier	Manual order identifier. Can be used to refer to a manually received order that is being replaced by an electronically received order.

Used in groups: [ListOrdGrp](#)

Used in messages: [ExecutionReport](#), [NewOrderMultileg](#), [NewOrderSingle](#), [PartyRiskLimitCheckRequest](#), [PartyRiskLimitCheckRequestAck](#), [Quote](#)

### **171.2.4467 RefOrdIDReason**

The reason for updating the RefOrdID

Type: [int](#)

Allowed values in RefOrdIDReasonCodeSet:

Code	Name	Description
0	GTCFromPreviousDay	GTC from previous day
1	PartialFillRemaining	Partial Fill Remaining
2	OrderChanged	Order Changed

Used in components: [TradeReportOrderDetail](#)

### **171.2.4468 RefreshIndicator**

Set by the sender to tell the receiver to perform an immediate refresh of the book due to disruptions in the accompanying real-time feed

'Y' - Mandatory refresh by all participants

'N' - Process as required

Type: [Boolean](#)

Used in messages: [MarketDataSnapshotFullRefresh](#)

### **171.2.4469 RefreshQty**

Defines the quantity used to refresh DisplayQty.

Type: [Qty](#)

Used in components: [DisplayInstruction](#)

**171.2.4470 RefRiskLimitCheckID**

The reference identifier of the PartyRiskLimitCheckRequest(35=DF) message, or a similar out of band message, that contained the approval for the risk/credit limit check request.

Type: **String**

Used in groups: **TrdCapRptSideGrp**

Used in messages: **AllocationInstruction, AllocationReport, ExecutionReport**

**171.2.4471 RefRiskLimitCheckIDType**

Specifies which type of identifier is specified in RefRiskLimitCheckID(2334) field.

Type: **int**

Allowed values in RefRiskLimitCheckIDTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	RiskLimitRequestID	RiskLimitRequestID(1666)
1	RiskLimitCheckID	RiskLimitCheckID(2319)
3	OutOfBandID	Out of band identifier

---

Used in groups: **TrdCapRptSideGrp**

Used in messages: **AllocationInstruction, AllocationReport, ExecutionReport**

**171.2.4472 RefSeqNum**

Reference message sequence number

Type: **SeqNum**

Used in messages: **BusinessMessageReject, Reject**

**171.2.4473 RefSubID**

Assigned value used to identify specific elements within a firm.

Type: **String**

Used in groups: **ComplDReqGrp, ComplDStatGrp**

#### **171.2.4474 RefTagID**

The tag number of the FIX field being referenced.

Type: **int**

Used in messages: **Reject**

#### **171.2.4475 RefTickTableID**

Spread table code referred by the security or symbol.

Type: **int**

Used in components: **Instrument**

#### **171.2.4476 RegistAcctType**

For CIV - a fund manager-defined code identifying which of the fund manager's account types is required.

Type: **String**

Used in messages: **RegistrationInstructions**

#### **171.2.4477 RegistDtls**

Set of Registration name and address details, possibly including phone, fax etc.

Type: **String**

Used in groups: **RgstDtlsGrp**

#### **171.2.4478 RegistEmail**

Email address relating to Registration name and address details

Type: **String**

Used in groups: **RgstDtlsGrp**

**171.2.4479 RegistID**

Unique identifier of the registration details as assigned by institution or intermediary.

Type: **String**

Used in messages: **CrossOrderCancelReplaceRequest, ExecutionReport, MultilegOrderCancelReplace, NewOrderCross, NewOrderList, NewOrderMultileg, NewOrderSingle, OrderCancelReplaceRequest, RegistrationInstructions, RegistrationInstructionsResponse**

**171.2.4480 RegistRefID**

Reference identifier for the RegistID(513) with Cancel and Replace RegistTransType(514) transaction types.

Type: **String**

Used in messages: **RegistrationInstructions, RegistrationInstructionsResponse**

**171.2.4481 RegistRejReasonCode**

Reason(s) why Registration Instructions has been rejected.

The reason may be further amplified in the RegistRejReasonCode field.

Possible values of reason code include:

Type: **int**

Allowed values in RegistRejReasonCodeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	InvalidAccountType	Invalid/unacceptable Account Type
2	InvalidTaxExemptType	Invalid/unacceptable Tax Exempt Type
3	InvalidOwnershipType	Invalid/unacceptable Ownership Type
4	NoRegDetails	Invalid/unacceptable No Reg Details
5	InvalidRegSeqNo	Invalid/unacceptable Reg Seq No
6	InvalidRegDetails	Invalid/unacceptable Reg Details
7	InvalidMailingDetails	Invalid/unacceptable Mailing Details
8	InvalidMailingInstructions	Invalid/unacceptable Mailing Instructions
9	InvalidInvestorID	Invalid/unacceptable Investor ID
10	InvalidInvestorIDSource	Invalid/unacceptable Investor ID Source

---

Code	Name	Description
11	InvalidDateOfBirth	Invalid/unacceptable Date Of Birth
12	InvalidCountry	Invalid/unacceptable Investor Country Of Residence
13	InvalidDistribInstns	Invalid/unacceptable No Distrib Instns
14	InvalidPercentage	Invalid/unacceptable Distrib Percentage
15	InvalidPaymentMethod	Invalid/unacceptable Distrib Payment Method
16	InvalidAccountName	Invalid/unacceptable Cash Distrib Agent Acct Name
17	InvalidAgentCode	Invalid/unacceptable Cash Distrib Agent Code
18	InvalidAccountNum	Invalid/unacceptable Cash Distrib Agent Acct Num
99	Other	Other

Used in messages: [RegistrationInstructionsResponse](#)

#### 171.2.4482 RegistRejReasonText

Text indicating reason(s) why a Registration Instruction has been rejected.

Type: [String](#)

Used in messages: [RegistrationInstructionsResponse](#)

#### 171.2.4483 RegistStatus

Registration status as returned by the broker or (for CIV) the fund manager:

Type: [char](#)

Allowed values in RegistStatusCodeSet:

Code	Name	Description
A	Accepted	Accepted
R	Rejected	Rejected
H	Held	Held
N	Reminder	Reminder - i.e. Registration Instructions are still outstanding

Used in messages: [PositionReport](#), [RegistrationInstructionsResponse](#)

**171.2.4484 RegistTransType**

Identifies Registration Instructions transaction type

Type: **char**

Allowed values in RegistTransTypeCodeSet:

---

Code	Name	Description
0	New	New
2	Cancel	Cancel
1	Replace	Replace

---

Used in messages: **RegistrationInstructions**, **RegistrationInstructionsResponse**

**171.2.4485 RegulatoryLegRefID**

Identifies the leg of the trade the entry applies to by referencing the leg's LegID(1788).

Type: **String**

Used in groups: **RegulatoryTradeIDGrp**

**171.2.4486 RegulatoryReportType**

Type of regulatory report.

Type: **int**

Allowed values in RegulatoryReportTypeCodeSet:

---

Code	Name	Description
0	RT	Real-time (RT). Report of data relating to a regulated transaction including price and volume that is to be disseminated publicly. If dissemination is to be suppressed due to an end user exception or to local regulatory rules that allow suppression of certain types of transactions use TradePublishIndicator(1390)=0.
1	PET	Primary economic terms (PET). Report to regulators of the full terms of a regulated transaction included in the legal confirmation.

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
2	Snapshot	Snapshot. Periodic report of full primary economic terms data throughout the life cycle of a regulated transaction.
3	Confirmation	Confirmation. Report from a clearing organization of a cleared regulated transaction.
4	RTPET	Combination of RT and PET. A single report combining the requirements of both real-time and full primary economy terms of a regulated transaction.
5	PETConfirmation	Combination of PET and confirmation. A single report combining the requirements of both full primary economic terms of a regulated transaction report and confirmation.
6	RTPETConfirmation	Combination of RT, PET and confirmation. A single report combining the requirements of real-time and full primary economic terms of a regulated transaction report, and confirmation.
7	PostTrade	Post-trade valuation. Periodic report of the ongoing mark-to-market value of a regulated transaction.
8	Verification	Verification. Used by the trading counterparty to report its full primary economic terms of a regulated transaction separately to the repository.
9	PstTrdEvnt	Post-trade event. Report of a regulated transaction continuation event that does not fall within the requirements for real-time reporting.
10	PstTrdEvntRTReportable	Post trade event RT reportable. Report of a regulated transaction continuation event that falls within the requirements for real-time reporting and public dissemination. If dissemination is to be suppressed due to an end user exception or to local regulatory rules that allow suppression of certain types of transactions, use TradePublishIndicator(1390) = 0 (Do not publish trade).
11	LMTF	Limited Details Trade. Designates a trade in instruments specified in ESMA RTS 2 Article 11 (1)(a)(i) for immediate publication of all details except the quantity. This is ESMA RTS 2 deferral flag "LMTF".
12	DATF	Daily Aggregated Trade. Designates a trade in instruments specified in ESMA RTS 2 Article 11 (1)(a)(ii) for aggregated publication of at least 5 transactions before 9:00 a.m. local time next day. This is ESMA RTS 2 deferral flag "DATF".
13	VOLO	Volume Omission Trade. Designates a trade in instruments specified in ESMA RTS 2 Article 11 (1)(b) for immediate publication of all details except the quantity. This is ESMA RTS 2 deferral flag "VOLO".

<b>Code</b>	<b>Name</b>	<b>Description</b>
14	FWAF	Four Weeks Aggregation Trade. Designates a trade in instruments specified in ESMA RTS 2 Article 11 (1)(c) (non-sovereign debt only) for aggregated publication of transactions executed over the course of one calendar week before 9:00 a.m. local time following Tuesday. This is ESMA RTS 2 deferral flag "FWAF".
15	IDAF	Indefinite Aggregation Trade. Designates a trade in instruments specified in ESMA RTS 2 Article 11 (1)(d) (sovereign debt only) for aggregated publication of transactions executed over the course of one calendar week before 9:00 a.m. local time following Tuesday. This is ESMA RTS 2 deferral flag "IDAF".
16	VOLW	Volume Omission Trade Eligible for Subsequent Aggregated Enrichment. Designates a trade in instruments specified in ESMA RTS 2 Article 11 (1)(b) and (d) consecutively (sovereign debt only) for immediate publication of all details except the quantity. This is ESMA RTS 2 deferral flag "VOLW".
17	FULF	Full Details Trade of "Limited Details Trade". Full details of a previously reported "limited details trade (LMTF)". Designates a trade in instruments specified in ESMA RTS 2 Article 11 (1)(a)(i) which is a follow-up publication of all details before 7pm local time on the second day after initial publication. This is ESMA RTS deferral flag "FULF".
18	FULA	Full Details of "Daily Aggregated Trade". Full details of a previously reported "daily aggregated trade (DATF)". Designates a trade in instruments specified in RTS 2 Article 11 (1)(a)(ii) which is a follow-up publication of the individual transaction with full details before 7pm local time on the second day after initial publication. This is ESMA RTS 2 deferral flag "FULA".
19	FULV	Full Details of "Volume Omission Trade". Full details of a previously reported "volume omission trade (VOLO)". Designates a trade in instruments specified in ESMA RTS 2 Article 11 (1)(b) which is a follow-up publication of all details before 9 am local time four weeks after initial publication. This is ESMA RTS 2 deferral flag "FULV".
20	FULJ	Full Details of "Four Weeks Aggregation Trade". Full details of a previously reported "four weeks aggregation trade (FWAF)". Designates a trade in instruments specified in ESMA RTS 2 Article 11 (1)(c) (non-sovereign debt only) which is a follow-up publication of the individual transaction with full details before 9 am local time four weeks after initial publication. This is ESMA RTS 2 deferral flag "FULJ".

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
21	COAF	Full Details in Aggregated Form of "Volume Omission Trade Eligible for Subsequent Aggregated Enrichment". Full details of a previously reported "volume omission trade eligible for subsequent aggregated enrichment (VOLW)". Designates a trade report in instruments specified in ESMA RTS 2 Article 11(1)(b) and (d) consecutively which is an aggregated publication of transactions executed over the course of one calendar week before 9:00 a.m. CET local time the following Tuesday four weeks after initial publication. This is ESMA RTS 2 deferral flag "COAF".
22	Order	Order. Report for order handling events to enter, change or delete orders. In the context of US CAT this is used for the event types MENO, MEOM, MEOJ, and MEOC.
23	ChildOrder	Child order. Report for child order handling events to enter, change or delete child orders. Child orders are created when a (parent) order is split into multiple (child) orders. In the context of US CAT this is used for the event types MECO, MECOM, and MECOC.
24	OrderRoute	Order route. Reported when an order is routed between market participants and/or execution venues such as an exchange. In the context of US CAT this is used for the event types MEOR, MEOA and MEIR.
25	Trade	Trade. Report for trade handling events to enter, change or delete trades. In the context of US CAT this is used for the event types MEOT, MEOF and MEFA.
26	Quote	Quote. Report for quote handling events to enter, change or delete quotes. In the context of US CAT this is used for the event types MENQ, MEQR, and MEQC.
27	Supplement	Supplement. Reported when an order, quote or trade report is split across multiple messages. The recipient must be able to create the full report by combining the initial and supplement reports. In the context of US CAT this is used for the event types MENOS, MEOMS and MEOTS.
28	NewTransaction	New transaction. In the context of EU SFTR reporting this corresponds to "action type" "NEWT".
29	TransactionCorrection	Transaction correction. In the context of EU SFTR reporting this corresponds to "action type" "CORR".
30	TransactionModification	Transaction modification. In the context of EU SFTR reporting this corresponds to "action type" "MODI".

---

Code	Name	Description
31	CollateralUpdate	Collateral update. In the context of EU SFTR reporting this corresponds to "action type" "COLU" if CollStatus(910)=3 (Assigned (Accepted)), or "REUU" if CollStatus(910)=5 (Reused).
32	MarginUpdate	Margin update. In the context of EU SFTR reporting this corresponds to "action type" "MARU".
33	TransactionReportedInError	Transaction reported in error. In the context of EU SFTR reporting this corresponds to "action type" "EROR".
34	TerminationEarlyTermination	Termination / Early termination. In the context of EU SFTR reporting this corresponds to "action type" "ETRM".

---

Used in groups: [MDFullGrp](#), [MDIncGrp](#)

Used in messages: [CollateralReport](#), [ExecutionReport](#), [MarginRequirementReport](#), [NewOrderSingle](#), [PositionReport](#), [Quote](#), [QuoteStatusReport](#), [TradeCaptureReport](#)

#### **171.2.4487 RegulatoryReportTypeBusinessDate**

The business date on which the event identified in [RegulatoryReportType\(1934\)](#) took place.

Type: [LocalMktDate](#)

Used in messages: [CollateralReport](#), [MarginRequirementReport](#), [PositionReport](#), [TradeCaptureReport](#)

#### **171.2.4488 RegulatoryTradeID**

Trade identifier required by government regulators or other regulatory organizations for regulatory reporting purposes. For example, unique swap identifier (USI) as required by the U.S. Commodity Futures Trading Commission.

Type: [String](#)

Used in groups: [RegulatoryTradeIDGrp](#)

#### **171.2.4489 RegulatoryTradeIDEvent**

Identifies the event which caused origination of the identifier in [RegulatoryTradeID\(1903\)](#). When more than one event is the cause, use the higher enumeration value. For example, if the identifier is

originated due to an allocated trade which was cleared and reported, use the enumeration value 2 (Clearing).

Type: **int**

Allowed values in RegulatoryTradeIDEventCodeSet:

Code	Name	Description
0	InitialBlockTrade	Initial block trade.
1	Allocation	Allocation. Determination that the block trade will not be further allocated.
2	Clearing	Clearing
3	Compression	Compression
4	Novation	Novation
5	Termination	Termination
6	PostTrdVal	Post-trade valuation

Used in groups: **RegulatoryTradeIDGrp**

### 171.2.4490 RegulatoryTradeIDGrp

The RegulatoryTradeIDGrp is a repeating component within the TradeCaptureReport message used to report the source, value and relationship of multiple identifiers for the same trade or position.

This component can be used to meet regulatory trade reporting requirements where identifiers such as the Unique Swaps Identifier (USI) in the US or the Unique Trade Identifier (UTI) in Europe and Canada are required to be reported, showing the chaining of these identifiers as needed.

Name	Mult.	Type	Description
NoRegulatoryTradeIDs	[1..1]	NumInGroup	
RegulatoryTradeID	[0..1]	String	Required if NoRegulatoryTradeIDs(1907) > 0.
RegulatoryTradeIDSource	[0..1]	CodeSet	
RegulatoryTradeIDEvent	[0..1]	CodeSet	
RegulatoryTradeIDType	[0..1]	CodeSet	
RegulatoryLegRefID	[0..1]	String	This field may be is used for multi-leg trades sent as a single message to indicate that the entry applies only to a specific leg.
RegulatoryTradeIDScope	[0..1]	CodeSet	

Used in groups: [QuotReqGrp](#)

Used in messages: [AllocationInstruction](#), [AllocationInstructionAck](#), [AllocationReport](#), [AllocationReportAck](#), [CollateralReport](#), [Confirmation](#), [ConfirmationAck](#), [ExecutionAck](#), [ExecutionReport](#), [PositionMaintenanceReport](#), [PositionReport](#), [SettlementStatusReport](#), [SettlementStatusRequest](#), [TradeCaptureReport](#)

### 171.2.4491 RegulatoryTradeIDScope

Specifies the scope to which the RegulatoryTradeID(1903) applies. Used when a trade must be assigned more than one identifier, e.g. one for the clearing member and another for the client on a cleared trade as with the principal model in Europe.

Type: [int](#)

Allowed values in RegulatoryTradeIDScopeCodeSet:

---

Code	Name	Description
1	ClearingMember	Clearing member
2	Client	Client

---

Used in groups: [RegulatoryTradeIDGrp](#)

### 171.2.4492 RegulatoryTradeIDSource

Identifies the reporting entity that originated the value in RegulatoryTradeID(1903). The reporting entity identifier may be assigned by a regulator or from a supported standard identifier source scheme.

Type: [String](#)

Allowed values in RegulatoryTradeIDSourceCodeSet:

---

Code	Name	Description
1	UniqueTransactionIdentifier	Unique Transaction Identifier (ISO 23897)

---

Used in groups: [RegulatoryTradeIDGrp](#)

**171.2.4493 RegulatoryTradeIDType**

Specifies the type of trade identifier provided in RegulatoryTradeID(1903).

Contextual hierarchy of events for the same trade or transaction maybe captured through use of the different RegulatoryTradeIDType(1906) values using multiple instances of the repeating group as needed for regulatory reporting.

Type: **int**

Allowed values in RegulatoryTradeIDTypeCodeSet:

Code	Name	Description
0	Current	Current. The default if not specified.
1	Previous	Previous. The previous trade's identifier when reporting a cleared trade or novation of a previous trade.
2	Block	Block. The block trade's identifier when reporting an allocated subtrade.
3	Related	Related. The related trade identifier when reporting a mixed swap.
4	ClearedBlockTrade	Cleared block trade. Assigned by the CCP to a bunched order/trade when it needs to be cleared with the standby clearing firm prior to post-trade allocation.
5	TradingVenueTransactionIdentifier	Trading venue transaction identifier. Assigned by the trading venue to a transaction. In the context of ESMA RTS 22 and RTS 24, this is a unique transaction identification "number generated by trading venues and disseminated to both the buying and selling parties in accordance with Article 12 of [RTS 24 on the maintenance of relevant data relating to orders in financial instruments under Article 25 of Regulation 600/2014 EU]." (quoted text from RTS 22). "Uniqueness" may be defined per relevant regulations.
6	ReportTrackingNumber	Report tracking number. In the context of EMIR Refit this is a "unique code assigned to the execution of an order and common for a group of reports related to the same execution" (see Q28 in <a href="https://www.esma.europa.eu/sites/default/files/library/esma74-362-2281_final_report_guidelines_emir_refit.pdf">https://www.esma.europa.eu/sites/default/files/library/esma74-362-2281_final_report_guidelines_emir_refit.pdf</a> ). Also referred to as the RTN.

Used in groups: **RegulatoryTradeIDGrp**

**171.2.4494 RegulatoryTransactionType**

Specifies the regulatory mandate or rule that the transaction complies with.

Type: **int**

Allowed values in RegulatoryTransactionTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	None	None (default if not specified). The transaction does not fall under any special regulatory rule or mandate.
1	SEFRequiredTransaction	Swap Execution Facility (SEF) required transaction. The transaction is a "Required" transaction under Dodd-Frank Act SEF Rules. "Required" transactions are subject to the trade execution mandate under section 2(h)(8) of the CEA and are not block trades.
2	SEFPermittedTransaction	Swap Execution Facility (SEF) permitted transaction. The transaction is a "Permitted" transaction under Dodd-Frank Act SEF Rules. "Permitted" transactions are not subject to the clearing and trade execution mandates, illiquid or bespoke swaps, or block trades.

---

Used in groups: **QuotReqGrp**

Used in messages: **ExecutionReport, QuoteResponse, TradeCaptureReport**

**171.2.4495 RejectText**

Identifies the reason for rejection.

Type: **String**

Used in groups: **PartyDetailAckGrp, PartyEntitlementAckGrp, PartyRiskLimitsAckGrp**

Used in messages: **AllocationInstructionAck, AllocationInstructionAlertRequestAck, AllocationReportAck, CollateralReportAck, CollateralResponse, ExecutionReport, MassOrderAck, OrderCancelReject, PartyActionReport, PartyDetailsListReport, PartyEntitlementsReport, PartyRiskLimitCheckRequestAck, PartyRiskLimitsReport, PartyRiskLimitsReportAck, PayManagementReport, PayManagementReportAck, PositionMaintenanceReport, PositionTransferInstructionAck, PositionTransferReport, QuoteAck, QuoteStatusReport, SettlementStatusReportAck, SettlementStatusRequestAck, TradeAggregationReport, TradeCaptureReport, TradeCaptureReportAck, TradeMatchReportAck**

**171.2.4496 RelatedClosePrice**

Closing price of the underlying required to calculate the RealizedVariance(2587).

Type: **Price**

Used in groups: **ClearingPriceParametersGrp**

**171.2.4497 RelatedHighPrice**

Upper boundary for the price of a related entity, e.g. price of the underlying instrument in an Underlying Price Contingency (UPC) order.

Type: **Price**

Used in messages: **ExecutionReport, MultilegOrderCancelReplace, NewOrderMultileg**

**171.2.4498 RelatedInstrumentGrp**

The RelatedInstrumentGrp is a repeating component at the same hierarchical level as the Instrument component, describing relationships and linkages between the Instrument, UnderlyingInstrument and InstrumentLeg entries. If all instances of the UnderlyingInstrument in the message are true underliers of the Instrument then the RelatedInstrumentGrp component is not needed. If any instance of the UnderlyingInstrument has a different relationship, e.g. underlier of an InstrumentLeg, stream, equity equivalent or nearest exchange-traded contract or there are multiple instances of InstrumentLeg, then an entry for every relationship should be included in this component. When the RelatedInstrumentGrp appears within a repeating group, each entry only apply to the Instrument component at the same hierarchical level.

In messages, such as Email(35=C) and News(35=B), where Instrument and the InstrumentLeg are within their repeating groups, the RelatedInstrumentGrp component may be used to link legs and underliers to their appropriate base Instrument.

---

<b>Name</b>	<b>Mult.</b>	<b>Type</b>	<b>Description</b>
<b>NoRelatedInstruments</b>	[1..1]	NumInGroup	
<b>RelatedInstrumentType</b>	[0..1]	CodeSet	Conditionally required when NoRelatedInstruments > 0

---

Name	Mult.	Type	Description
RelatedSymbol	[0..1]	String	Either RelatedSymbol(1649) or RelatedSecurityID(1650) must be specified. For RelatedInstrumentType(1648)=1 ("hedges for" instrument) this would be the instrument being used to offset the option Instrument. If one of the "related to" fields is specified, this is the UnderlyingSymbol(311) of an underlying instrument defining the related security in the current message.
RelatedSecurityID	[0..1]	String	Either RelatedSymbol(1649) or RelatedSecurityID(1650) must be specified. If one of the "related to" fields is specified, this is the UnderlyingSecurityID(309) of an underlying instrument defining the related security in the current message.
RelatedSecurityIDSource	[0..1]	CodeSet	Conditionally required when RelatedSecurityID(1650) is specified.
RelatedSecurityType	[0..1]	CodeSet	May be omitted if RelatedSecurityID(1650) or RelatedSymbol(1649) refers to an underlying instrument in the current message.
RelatedMaturityMonthYear	[0..1]	MonthYear	May be omitted if RelatedSecurityID(1650) or RelatedSymbol(1649) refers to an underlying instrument in the current message.
RelatedToSecurityID	[0..1]	String	Mutually exclusive with RelatedToStreamXIDRef(2415) and RelatedToDividendPeriodXIDRef(2417). If correlation is with the security in Instrument component then all "related to" fields may be omitted.
RelatedToSecurityIDSource	[0..1]	CodeSet	Conditionally required when RelatedToSecurityID(2413) is specified.
RelatedToStreamXIDRef	[0..1]	XIDREF	Mutually exclusive with RelatedToSecurityID(2413) and RelatedToDividendPeriodXIDRef(2417). If correlation is with the security in Instrument component then all "related to" fields may be omitted.
RelatedToDividendPeriodXIDRef	[0..1]	XIDREF	Mutually exclusive with RelatedToSecurityID(2413) and RelatedToStreamXIDRef(2415). If correlation is with the security in Instrument component then all "related to" fields may be omitted.

Used in groups: [InstrmtGrp](#), [InstrmtMDReqGrp](#), [MDIncGrp](#), [SecListGrp](#), [SecLstUpdRelSymGrp](#), [SecMassStatGrp](#)

Used in messages: [Advertisement](#), [IOI](#), [MarketDataSnapshotFullRefresh](#), [MarketDataStatisticsReport](#), [MarketDataStatisticsRequest](#), [PositionMaintenanceReport](#), [PositionMaintenanceRequest](#), [PositionReport](#), [SecurityDefinition](#), [SecurityDefinitionRequest](#), [SecurityDefinitionUpdateReport](#), [SecurityListRequest](#), [SecurityStatus](#), [SecurityStatusRequest](#), [TradeCaptureReport](#)

### 171.2.4499 RelatedInstrumentType

The type of instrument relationship

Type: [int](#)

Allowed values in RelatedInstrumentTypeCodeSet:

Code	Name	Description
1	HedgesForInstrument	"hedges for" instrument
2	Underlier	Underlier
3	EquityEquivalent	Equity equivalent
4	NearestExchangeTradedContract	Nearest exchange traded contract
5	RetailEquivalent	Retail equivalent of wholesale instrument.
6	Leg	Leg. Used to associate or link InstrumentLeg to Instrument in messages where there can be multiple instruments, such as in Email(35=C) and News(35=B) messages.

Used in groups: [RelatedInstrumentGrp](#)

### 171.2.4500 RelatedLowPrice

Lower boundary for the price of a related entity, e.g. price of the underlying instrument in an Underlying Price Contingency (UPC) order.

Type: [Price](#)

Used in messages: [ExecutionReport](#), [MultilegOrderCancelReplace](#), [NewOrderMultileg](#)

### 171.2.4501 RelatedMarketSegmentGrp

This component is used to identify market segments that are related to each other for a business purpose. This component should not be used in lieu of available explicit FIX fields that denote specific

relationships (e.g. ParentMktSegmID(1325) for parent market segments), but rather should be used when no such fields exist.

Name	Mult.	Type	Description
NoRelatedMarketSegments	[1..1]	NumInGroup	Number of market segments.
RelatedMarketSegmentID	[0..1]	String	Required if NoRelatedMarketSegments (2545) > 0.
MarketSegmentRelationship	[0..1]	CodeSet	

Used in messages: [MarketDefinition](#), [MarketDefinitionUpdateReport](#)

#### 171.2.4502 RelatedMarketSegmentID

Identifies a related market segment.

Type: [String](#)

Used in groups: [RelatedMarketSegmentGrp](#)

#### 171.2.4503 RelatedMaturityMonthYear

Expiration date for the related instrument contract.

Type: [MonthYear](#)

Used in groups: [RelatedInstrumentGrp](#)

#### 171.2.4504 RelatedOrderGrp

This component is used to identify orders that are related to the order identified outside of this component for a business purpose. For example, the bundling of multiple orders into a single order. This component should not be used in lieu of explicit FIX fields that denote specific semantic relationships, but rather should be used when no such fields exist.

Name	Mult.	Type	Description
NoOrders	[1..1]	NumInGroup	
RelatedOrderID	[0..1]	String	Required if NoOrders(73) > 0.
RelatedOrderIDSource	[0..1]	CodeSet	The same value must be used for all orders having the same OrderRelationship(2890) value.

Name	Mult.	Type	Description
RelatedOrderTime	[0..1]	UTCTimestamp	
RelatedOrderQty	[0..1]	Qty	
OrderRelationship	[0..1]	CodeSet	May be used to explicitly express the type of relationship or to provide orders having different relationships.
OrderOriginationFirmID	[0..1]	String	May be used when aggregating orders that were originally submitted by different firms, e.g. due to a merger or acquisition.

Used in components: [TradeReportOrderDetail](#)

Used in messages: [ExecutionReport](#)

#### 171.2.4505 RelatedOrderID

Identifier of a related order.

Type: [String](#)

Used in groups: [RelatedOrderGrp](#)

#### 171.2.4506 RelatedOrderIDSource

Describes the source of the identifier that [RelatedOrderID\(2887\)](#) represents.

Type: [int](#)

Allowed values in [RelatedOrderIDSourceCodeSet](#):

Code	Name	Description
0	NonFIXSource	Non-FIX Source
1	SystemOrderIdentifier	Order identifier. Can be used to refer to an order identifier assigned by the party accepting the order, e.g. <a href="#">OrderID(37)</a> .
2	ClientOrderIdentifier	Client order identifier. Can be used to refer to an order identifier assigned by the party initiating the order, e.g. <a href="#">CLOrID(11)</a> .
3	SecondaryOrderIdentifier	Secondary order identifier. Can be used to refer to an additional order identifier assigned by the party accepting the order, e.g. <a href="#">SecondaryOrderID(198)</a> .

---

Code	Name	Description
4	SecondaryClientOrderIdentifier	Secondary client order identifier. Can be used to refer to an additional order identifier assigned by the party initiating the order, e.g. SecondaryCOrdID(526).

---

Used in groups: [RelatedOrderGrp](#)

#### **171.2.4507 RelatedOrderQty**

Quantity of the related order which can be less than its total quantity. For example, when only parts of an order contribute to an aggregated order.

Type: [Qty](#)

Used in groups: [RelatedOrderGrp](#)

#### **171.2.4508 RelatedOrderTime**

Timestamp for the assignment of a (unique) identifier to an order.

Type: [UTCTimestamp](#)

Used in groups: [RelatedOrderGrp](#)

#### **171.2.4509 RelatedPartyDetailAltID**

An alternate party identifier for the party specified in RelatedPartyID(1563).

Type: [String](#)

Used in groups: [RelatedPartyDetailAltIDGrp](#)

#### **171.2.4510 RelatedPartyDetailAltIDGrp**

Alternative identifiers for parties related to the party specified in the PartyDetailGrp.

### 171.2.4511 RelatedPartyDetailAltIDSource

Identifies the source of the RelatedPartyDetailAltID(1570) value.

Type: **char**

Allowed values in PartyIDSourceCodeSet:

Code	Name	Description
1	KoreanInvestorID	Korean Investor ID
6	UKNationalInsuranceOrPension- Number	UK National Insurance or Pension Number
B	BIC	BIC (Bank Identification Code - SWIFT managed) code (ISO9362 - See "Appendix 6-B")
I	ISITCAcronym	Directed broker three character acronym as defined in ISITC "ETC Best Practice" guidelines document
2	TaiwaneseForeignInvestorID	Taiwanese Qualified Foreign Investor ID QFII/FID
7	USSocialSecurityNumber	US Social Security Number
C	GeneralIdentifier	Generally accepted market participant identifier (e.g. NASD mnemonic)
3	TaiwaneseTradingAcct	Taiwanese Trading Acct
8	USEmployerOrTaxIDNumber	US Employer or Tax ID Number
D	Proprietary	Proprietary / Custom code. Custom ID schema used between counterparties, trading platforms and repositories.
4	MalaysianCentralDepository	Malaysian Central Depository (MCD) number
9	AustralianBusinessNumber	Australian Business Number
E	ISOCountryCode	ISO Country Code
5	ChineseInvestorID	Chinese Investor ID
A	AustralianTaxFileNumber	Australian Tax File Number
F	SettlementEntityLocation	Settlement Entity Location (note if Local Market Settlement use "E=ISO Country Code") (see "Appendix 6-G" for valid values)

Code	Name	Description
G	MIC	Market Identifier Code (ISO 10383) MIC
J	TaxID	Tax ID
H	CSDParticipant	CSD participant/member code (e.g. Euroclear, DTC, CREST or Kassenverein number)
K	AustralianCompanyNumber	Australian Company Number
L	AustralianRegisteredBodyNumber	Australian Registered Body Number
M	CFTCReportingFirmIdentifier	CFTC reporting firm identifier
N	LegalEntityIdentifier	Legal Entity Identifier (ISO 17442) LEI
O	InterimIdentifier	Interim identifier. An interim entity identifier assigned by a regulatory agency prior to an LEI (ISO 17442) being assigned.
P	ShortCodeIdentifier	Short code identifier. A generic means for trading venues, brokers, investment managers to convey a bilaterally agreed upon "short hand" code for an identifier that is a reference to a mapping between the parties.
Q	NationalIDNaturalPerson	National ID of natural person. An identification number generally assigned by a government authority or agency to a natural person which is unique to the person it is assigned to. Examples include, but not limited to, "social security number", "pension number".
R	IndiaPermanentAccountNumber	India Permanent Account Number. Also referred to as PAN ID. An identifier issued by the Income Tax Department of India.
S	FDID	Firm designated identifier. Also referred to as FDID. A unique identifier required by the SEC for each trading account designated by Industry Members for purposes of reporting to CAT (Consolidated Audit Trail).
T	SPSAID	Special Segregated Account ID. Also referred to as SPSA ID. The Special Segregated Account identifier issued by Hong Kong Exchanges and Clearing.
U	MasterSPSAID	Master Special Segregated Account ID. Also referred to as Master SPSA ID. The master identifier issued by Hong Kong Exchanges and Clearing for the aggregation of SPSA IDs.

Used in groups: [RelatedPartyDetailAltIDGrp](#)

### 171.2.4512 RelatedPartyDetailAltSubGrp

Sub identifiers for related parties alternate identifiers.

Name	Mult.	Type	Description
NoRelatedPartyDetailAltSubIDs	[1..1]	NumInGroup	
RelatedPartyDetailAltSubID	[0..1]	String	Required when NoRelatedPartyDetailAltSubIDs > 0.
RelatedPartyDetailAltSubIDType	[0..1]	CodeSet	Required when NoRelatedPartyDetailAltSubIDs > 0.

Used in groups: [RelatedPartyDetailAltIDGrp](#)

### 171.2.4513 RelatedPartyDetailAltSubID

Sub-identifier for the party specified in RelatedPartyDetailAltID(1570).

Type: [String](#)

Used in groups: [RelatedPartyDetailAltSubGrp](#)

### 171.2.4514 RelatedPartyDetailAltSubIDType

Type of RelatedPartyDetailAltSubID(1573) value.

Type: [int](#)

Allowed values in PartySubIDTypeCodeSet:

Code	Name	Description
1	Firm	Firm
2	Person	Person
3	System	System
4	Application	Application
5	FullLegalNameOfFirm	Full legal name of firm
6	PostalAddress	Postal address
7	PhoneNumber	Phone number
8	EmailAddress	Email address
9	ContactName	Contact name
10	SecuritiesAccountNumber	Securities account number (for settlement instructions)
11	RegistrationNumber	Registration number (for settlement instructions and confirmations)

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
12	RegisteredAddressForConfirmation	Registered address (for confirmation purposes)
13	RegulatoryStatus	Regulatory status (for confirmation purposes)
14	RegistrationName	Registration name (for settlement instructions)
15	CashAccountNumber	Cash account number (for settlement instructions)
16	BIC	BIC
17	CSDParticipantMemberCode	CSD participant member code
18	RegisteredAddress	Registered address
19	FundAccountName	Fund account name
20	TelexNumber	Telex number
21	FaxNumber	Fax number
22	SecuritiesAccountName	Securities account name
23	CashAccountName	Cash account name
24	Department	Department
25	LocationDesk	Location desk
26	PositionAccountType	Position account type
27	SecurityLocateID	Security locate ID
28	MarketMaker	Market maker
29	EligibleCounterparty	Eligible counterparty
30	ProfessionalClient	Professional client
31	Location	Location
32	ExecutionVenue	Execution venue
33	CurrencyDeliveryIdentifier	Currency delivery identifier
34	AddressCity	Address City
35	AddressStateOrProvince	Address State/Province
36	AddressPostalCode	Address Postal Code
37	AddressStreet	Address Street
38	AddressISOCountryCode	Address Country (ISO country code)
39	ISOCountryCode	ISO country code
40	MarketSegment	Market segment
41	CustomerAccountType	Customer account type
42	OmnibusAccount	Omnibus account
43	FundsSegregationType	Funds segregation type

---

Code	Name	Description
44	GuaranteeFund	Guarantee fund. Identifies a guarantee fund related to an account. Used when one account has multiple funds of collateral, each guaranteeing different positions. Can be used for PartyRole(452) = Customer Account(24).
45	SwapDealer	Swap dealer. The US regulator's defined term for identifying the trade counterparty as "any person who holds itself out as a dealer in swaps, makes a market in swaps, regularly enters into swaps with counterparties as an ordinary course of business for its own account, or engages in activity causing itself to be commonly known in the trade as a dealer or market maker in swaps".
46	MajorParticipant	Major participant. When PartySubID(523)=Y the counterparty is not the swap dealer but is a major swap participant as defined in the regulations.
47	FinancialEntity	Financial entity. When PartySubID(523)=Y the counterparty is neither a swap dealer nor a major swap participant but is a financial entity as defined in the regulations.
48	USPerson	U.S. person. A legal term referring to any U.S. person or legal entity anywhere in the world that should be taxed under U.S. law.
49	ReportingEntityIndicator	Reporting entity indicator. Indicates the entity obligated or delegated to report to their regulator, a non-regulatory agency or data repository. Set PartySubID(523)=Y if true.
50	ElectedClearingRequirementException	Elected clearing requirement exception
51	BusinessCenter	Business center.
52	ReferenceText	Reference text
53	ShortMarkingExemptAccount	Short-marking exempt account
54	ParentFirmIdentifier	Parent firm identifier. Implementation-specific identifier of this party's parent entity.
55	ParentFirmName	Parent firm name. Full name of this party's parent entity.
56	DealIdentifier	Deal identifier. The internal identifier assigned to the trade by this party, particularly by a Clearing Organization.
57	SystemTradeID	System trade identifier
58	SystemTradeSubID	System trade sub-identifier
59	FCMCode	Futures Commission Merchant (FCM) code. The FCM's code or identifier in relation to the PartyRole(452). For example, if PartyRole(452) is the exchange or clearinghouse, the FCM code/ID specified in PartySubID(523) is the FCM's identifier at the exchange or clearinghouse.

Code	Name	Description
60	DlvryTrmlCode	Delivery terminal customer account/code. Usually used for gas delivery to identify whose account the gas is allocated to at the delivery terminal. Often referred to as "HUB" code.
61	VolntyRptEntity	Voluntary reporting entity. The entity voluntarily reporting the trade to the regulator. Set PartySubID(523)=Y if true.
62	RptObligJurisdiction	Reporting obligation jurisdiction. For a trade that falls under multiple jurisdictions this may be used to identify, through PartySubID(523), the reporting jurisdiction to which the party is obligated to report.
63	VolntyRptJurisdiction	Voluntary reporting jurisdiction. For a trade that falls under multiple jurisdictions this may be used to identify, through PartySubID(523), the regulatory jurisdiction to which the party is submitting a voluntary report.
64	CompanyActivities	Company activities. For regulatory reporting. ID values include: A = Assurance undertaking authorized in accordance with Directive 2002/83/EC C=Credit institution authorized in accordance with Directive 2006/48/EC F=Investment firm in accordance with Directive 2004/39/EC I=Insurance undertaking authorized in accordance with Directive 73/239/EC L=Alternative investment fund managed by AIFMs authorized or registered in accordance with Directive 2011/61/EC O=Institution for occupational retirement provision within the meaning of Article 6(a) of Directive 2003/41/EC R=Reinsurance undertaking authorized in accordance with Directive 2005/68/EC U=UCITS and its management company, authorized in accordance with Directive 2009/65/EC or blank in case of coverage by LEI or in case of non-financial counterparties. In the context of EU SFTR reporting use the appropriate 4- or 1-character code noted in the regulations. See SFTR ITS "Commission Implementing Regulation (EU) 2019/363" Annexes 1 and 2 for values.
65	EEAreaDomiciled	European Economic Area domiciled. ID values: Y or N
66	ContractLinked	Contract linked to commercial or treasury financing for this counterparty. ID values: Y or N
67	ContractAbove	Contract above clearing threshold for this counterparty. ID values: Y or N
68	VolntyRptPty	Voluntary reporting party. When PartySubID(523)=Y, identifies that the trading party is reporting voluntarily when VoluntaryRegulatoryReport(1935)=Y.
69	EndUser	End user. When PartySubID(523)=Y, the counterparty is neither the swap dealer, major swap participant nor financial entity as defined in the regulations.

Code	Name	Description
70	LocationOrJurisdiction	Location or jurisdiction. One or more instances may be used in combination with PartySubIDType(803) = 49 (Reporting entity indicator) or 102 (Data repository) to identify the jurisdiction, countries, regions or provinces for which the party is a reporting entity or data repository when that characteristic is ambiguous or where there are multiple locations. The party sub-ID value is either a jurisdiction acronym, a 2-character ISO 3166 country code, or a hyphenated combination of the country code and the standard post-office abbreviation for province, state or region if necessary. E.g. "US" for United States or "CA-QC" for Quebec Canada.
71	DerivativesDealer	Derivatives dealer. Indicates whether the party is a derivatives dealer or not (Y/N). The Canadian regulator's defined term for identifying the trade counterparty as "a person or company engaging in or holding himself, herself or itself out as engaging in the business of trading in derivatives in Ontario as principal or agent".
72	Domicile	Domicile. Country and optionally province, state or region of domicile. The party sub-ID value is either a 2-character ISO 3166 country code or a hyphenated combination of the country code and the standard post-office abbreviation of province, state or region if necessary. E.g. "US" for United States or "CA-QC" for Quebec Canada.
73	ExemptFromRecognition	Exempt from recognition. Used with party role 21 "Clearing Organization" to indicate exemption (Y/N). Identifies a clearing agency as exempt from oversight in Ontario, i.e. one that 1) only provides limited services and does not present significant risks or 2) is foreign-based, intends to operate in Ontario but is subject to regulatory oversight in another jurisdiction.
74	Payer	Payer. Identifies the party as the payer of a particular payment stream or bullet payment by quoting the stream's StreamDesc(40051) (or LegStreamDesc(40243) or UnderlyingStreamDesc(40542)) or payment's PaymentDesc(43087) in the associated party sub-identifier field.
75	Receiver	Receiver. Identifies the party as the receiver of a particular payment stream or bullet payment by quoting the stream's StreamDesc(40051) (or LegStreamDesc(40243) or UnderlyingStreamDesc(40542)) or payment's PaymentDesc(43087) in the associated party sub-identifier field.

Code	Name	Description
76	SystematicInternaliser	Systematic Internaliser (SI). In the context of ESMA reporting, this is used to indicate whether the specified party is a Systematic Internaliser or not for the security defined in the Instrument component (Y/N).
77	PublishingEntityIndicator	Publishing entity indicator. Indicates the entity obligated or delegated to publish to the market. Set PartySubID(523)=Y if true.
78	FirstName	First name. The first name(s) of a natural person. If multiple names, separate entries by a comma.
79	Surname	Surname. The surname(s) or lastname(s) of a natural person. If multiple names, separate entries by a comma.
80	DateOfBirth	Date of birth. The date of birth of a natural person in the format YYYYMMDD.
81	OrderTransmittingFirm	Order transmitting firm. Identifies whether the party specified in PartyID(448) is the firm that transmitted the order. In the context of RTS 22 Article 4, when "true" the PartySubID(523)=Y shall be set "by the transmitting firm within the transmitting firm's report where conditions for transmission specified in Article 4 were not satisfied."
82	OrderTransmittingFirmBuyer	Order transmitting firm for buyer. Identifies the firm that transmitted the order for the buyer. In the context of ESMA RTS 22, PartySubID(523)=Y is used to indicate the firm identified in PartyID(448) is the firm that transmitted the order for the buyer. "This shall be populated by the receiving firm within the receiving firm's report with the identification code provided by the transmitting firm."
83	OrderTransmitterSeller	Order transmitter for seller. Identifies the order transmitting firm for the seller. In the context of ESMA RTS 22, PartySubID(523)=Y is used to indicate the firm identified in PartyID(448) is the firm that transmitted the order for the seller. "This shall be populated by the receiving firm within the receiving firm's report with the identification code provided by the transmitting firm."
84	LegalEntityIdentifier	Legal Entity Identifier (ISO 17442) LEI
85	SubSectorClassification	Sub-sector classification. Supplemental to party sub-ID type "64" (Company activities) for regulatory reporting. For EU SFTR reporting use the appropriate 4-character code noted in the regulations applying the conditional association rules. See SFTR ITS "Commission Implementing Regulation (EU) 2019/363" Annexes 1 and 2 for values.

Code	Name	Description
86	PartySide	Party side. May be used, when appropriate, to explicitly indicate the transaction side of the party, e.g. Buyer, Seller, Lender, Borrower, Maker, Taker, etc. in the ID. In the context of EU SFTR reporting, use values as required by SFTR, "GIVE" and "TAKE" in the ID, to identify collateral giver and taker.
87	LegalRegistrationCountry	Legal registration country. ISO Country Code where the registered office of the party is located as specified in the LEI reference data.

Used in groups: [RelatedPartyDetailAltSubGrp](#)

### 171.2.4515 RelatedPartyDetailGrp

Party details for parties related to the Party specified in the PartyDetailGrp.

Name	Mult.	Type	Description
NoRelatedPartyDetailID	[1..1]	NumInGroup	
RelatedPartyDetailID	[0..1]	String	Required if NoRelatedPartyDetails > 0.
RelatedPartyDetailIDSource	[0..1]	CodeSet	Required if NoRelatedPartyDetails > 0.
RelatedPartyDetailRole	[0..1]	CodeSet	Required if NoRelatedPartyDetails > 0.
RelatedPartyDetailRoleQualifier	[0..1]	CodeSet	
RelatedPartyDetailSubGrp	[0..*]	Group	
RelatedPartyDetailAltIDGrp	[0..*]	Group	
PartyRelationshipGrp	[0..*]	Group	

Used in groups: [PartyDetailGrp](#)

Used in messages: [PartyActionReport](#), [PartyActionRequest](#), [PartyRiskLimitCheckRequest](#), [PartyRiskLimitCheckRequestAck](#)

### 171.2.4516 RelatedPartyDetailID

Party identifier for the party related to the party specified in PartyDetailID(1691).

Type: [String](#)

Used in groups: [RelatedPartyDetailGrp](#)

**171.2.4517 RelatedPartyDetailIDSource**

Identifies the source of the RelatedPartyDetailID(1563).

Type: **char**

Allowed values in PartyIDSourceCodeSet:

Code	Name	Description
1	KoreanInvestorID	Korean Investor ID
6	UKNationalInsuranceOrPension-Number	UK National Insurance or Pension Number
B	BIC	BIC (Bank Identification Code - SWIFT managed) code (ISO9362 - See "Appendix 6-B")
I	ISITCAcronym	Directed broker three character acronym as defined in ISITC "ETC Best Practice" guidelines document
2	TaiwaneseForeignInvestorID	Taiwanese Qualified Foreign Investor ID QFII/FID
7	USSocialSecurityNumber	US Social Security Number
C	GeneralIdentifier	Generally accepted market participant identifier (e.g. NASD mnemonic)
3	TaiwaneseTradingAcct	Taiwanese Trading Acct
8	USEmployerOrTaxIDNumber	US Employer or Tax ID Number
D	Proprietary	Proprietary / Custom code. Custom ID schema used between counterparties, trading platforms and repositories.
4	MalaysianCentralDepository	Malaysian Central Depository (MCD) number
9	AustralianBusinessNumber	Australian Business Number
E	ISOCountryCode	ISO Country Code
5	ChineseInvestorID	Chinese Investor ID
A	AustralianTaxFileNumber	Australian Tax File Number
F	SettlementEntityLocation	Settlement Entity Location (note if Local Market Settlement use "E=ISO Country Code") (see "Appendix 6-G" for valid values)
G	MIC	Market Identifier Code (ISO 10383) MIC
J	TaxID	Tax ID
H	CSDParticipant	CSD participant/member code (e.g. Euroclear, DTC, CREST or Kassenverein number)
K	AustralianCompanyNumber	Australian Company Number
L	AustralianRegisteredBodyNumber	Australian Registered Body Number
M	CFTCReportingFirmIdentifier	CFTC reporting firm identifier
N	LegalEntityIdentifier	Legal Entity Identifier (ISO 17442) LEI

Code	Name	Description
O	InterimIdentifier	Interim identifier. An interim entity identifier assigned by a regulatory agency prior to an LEI (ISO 17442) being assigned.
P	ShortCodeIdentifier	Short code identifier. A generic means for trading venues, brokers, investment managers to convey a bilaterally agreed upon "short hand" code for an identifier that is a reference to a mapping between the parties.
Q	NationalIDNaturalPerson	National ID of natural person. An identification number generally assigned by a government authority or agency to a natural person which is unique to the person it is assigned to. Examples include, but not limited to, "social security number", "pension number".
R	IndiaPermanentAccountNumber	India Permanent Account Number. Also referred to as PAN ID. An identifier issued by the Income Tax Department of India.
S	FDID	Firm designated identifier. Also referred to as FDID. A unique identifier required by the SEC for each trading account designated by Industry Members for purposes of reporting to CAT (Consolidated Audit Trail).
T	SPSAID	Special Segregated Account ID. Also referred to as SPSA ID. The Special Segregated Account identifier issued by Hong Kong Exchanges and Clearing.
U	MasterSPSAID	Master Special Segregated Account ID. Also referred to as Master SPSA ID. The master identifier issued by Hong Kong Exchanges and Clearing for the aggregation of SPSA IDs.

Used in groups: [RelatedPartyDetailGrp](#)

### 171.2.4518 RelatedPartyDetailRole

Identifies the type or role of the RelatedPartyDetailID(1563) specified.

Type: [int](#)

Allowed values in PartyRoleCodeSet:

Code	Name	Description
1	ExecutingFirm	Executing Firm (formerly FIX 4.2 ExecBroker)
2	BrokerOfCredit	Broker of Credit (formerly FIX 4.2 BrokerOfCredit)
3	ClientID	Client ID (formerly FIX 4.2 ClientID)
4	ClearingFirm	Clearing Firm (formerly FIX 4.2 ClearingFirm)

<b>Code</b>	<b>Name</b>	<b>Description</b>
5	InvestorID	Investor ID
6	IntroducingFirm	Introducing Firm
7	EnteringFirm	Entering Firm
8	Locate	Locate / Lending Firm (for short-sales)
9	FundManagerClientID	Fund Manager Client ID (for CIV)
10	SettlementLocation	Settlement Location (formerly FIX 4.2 SettLocation)
11	OrderOriginationTrader	Order Origination Trader (associated with Order Origination Firm - i.e. trader who initiates/submits the order)
12	ExecutingTrader	Executing Trader (associated with Executing Firm - actually executes)
13	OrderOriginationFirm	Order Origination Firm (e.g. buy-side firm)
14	GiveupClearingFirmDepr	Giveup Clearing Firm (firm to which trade is given up)
15	CorrespondantClearingFirm	Correspondant Clearing Firm
16	ExecutingSystem	Executing System
17	ContraFirm	Contra Firm
18	ContraClearingFirm	Contra Clearing Firm
19	SponsoringFirm	Sponsoring Firm
20	UnderlyingContraFirm	Underlying Contra Firm
21	ClearingOrganization	Clearing Organization
22	Exchange	Exchange. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
24	CustomerAccount	Customer Account
25	CorrespondentClearingOrganization	Correspondent Clearing Organization
26	CorrespondentBroker	Correspondent Broker
27	Buyer	Buyer/Seller (Receiver/Deliverer)
28	Custodian	Custodian
29	Intermediary	Intermediary
30	Agent	Agent
31	SubCustodian	Sub-custodian
32	Beneficiary	Beneficiary
33	InterestedParty	Interested party
34	RegulatoryBody	Regulatory body. In the context of regulatory reporting, this identifies the regulator the trade is being reported to.
35	LiquidityProvider	Liquidity provider
36	EnteringTrader	Entering trader

<b>Code</b>	<b>Name</b>	<b>Description</b>
37	ContraTrader	Contra trader
38	PositionAccount	Position account. The account which positions are maintained. Typically represents the aggregation of one or more customer accounts.
39	ContraInvestorID	Contra Investor ID
40	TransferToFirm	Transfer to Firm
41	ContraPositionAccount	Contra Position Account
42	ContraExchange	Contra Exchange
43	InternalCarryAccount	Internal Carry Account
44	OrderEntryOperatorID	Order Entry Operator ID
45	SecondaryAccountNumber	Secondary Account Number
46	ForeignFirm	Foreign Firm
47	ThirdPartyAllocationFirm	Third Party Allocation Firm
48	ClaimingAccount	Claiming Account
49	AssetManager	Asset Manager
50	PledgorAccount	Pledgor Account
51	PledgeeAccount	Pledgee Account
52	LargeTraderReportableAccount	Large Trader Reportable Account
53	TraderMnemonic	Trader mnemonic
54	SenderLocation	Sender Location
55	SessionID	Session ID
56	AcceptableCounterparty	Acceptable Counterparty
57	UnacceptableCounterparty	Unacceptable Counterparty
58	EnteringUnit	Entering Unit
59	ExecutingUnit	Executing Unit
60	IntroducingBroker	Introducing Broker
61	QuoteOriginator	Quote originator
62	ReportOriginator	Report originator
63	SystematicInternaliser	Systematic internaliser (SI)
64	MultilateralTradingFacility	Multilateral Trading Facility (MTF). Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
65	RegulatedMarket	Regulated Market (RM). Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
66	MarketMaker	Market Maker

<b>Code</b>	<b>Name</b>	<b>Description</b>
67	InvestmentFirm	Investment Firm
68	HostCompetentAuthority	Host Competent Authority (Host CA)
69	HomeCompetentAuthority	Home Competent Authority (Home CA)
70	CompetentAuthorityLiquidity	Competent Authority of the most relevant market in terms of liquidity (CAL)
71	CompetentAuthorityTransactionVenue	Competent Authority of the Transaction (Execution) Venue (CATV)
72	ReportingIntermediary	Reporting intermediary. The medium or vendor used to report to a regulator, non-regulatory agency or data repository.
73	ExecutionVenue	Execution Venue. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
74	MarketDataEntryOriginator	Market data entry originator
75	LocationID	Location ID
76	DeskID	Desk ID
77	MarketDataMarket	Market data market
78	AllocationEntity	Allocation Entity
79	PrimeBroker	Prime Broker providing General Trade Services
80	StepOutFirm	Step-Out Firm (Prime Broker)
81	BrokerClearingID	Broker clearing identifier
82	CentralRegistrationDepository	Central Registration Depository (CRD)
83	ClearingAccount	Clearing Account
84	AcceptableSettlingCounterparty	Acceptable Settling Counterparty
85	UnacceptableSettlingCounterparty	Unacceptable Settling Counterparty
86	CLSMemberBank	CLS Member Bank
87	InConcertGroup	In Concert Group
88	InConcertControllingEntity	In Concert Controlling Entity
89	LargePositionsReportingAccount	Large Positions Reporting Account
90	SettlementFirm	Settlement Firm
91	SettlementAccount	Settlement account. The account to which individual payment obligations are aggregated for netting and funds movement. Typically represents the aggregation of many margin (performance bond) accounts.
92	ReportingMarketCenter	Reporting Market Center
93	RelatedReportingMarketCenter	Related Reporting Market Center
94	AwayMarket	Away Market. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.

<b>Code</b>	<b>Name</b>	<b>Description</b>
95	GiveupTradingFirm	Give-up (trading) firm
96	TakeupTradingFirm	Take-up (trading) firm
97	GiveupClearingFirm	Give-up clearing firm
98	TakeupClearingFirm	Take-up clearing firm
99	OriginatingMarket	Originating Market. Identifies the Market using PartyIDSource(tag 447) = G (Market Identifier Code) where an order originated in the event that the order is sent to an alternative market for execution. Serves as an inverse of an away market.
100	MarginAccount	Margin account. Also referred to as "performance bond account". The margin account is the calculated margin requirements. Typically represents the aggregation of one or more position accounts.
101	CollateralAssetAccount	Collateral asset account. The account at which individual collateral assets are maintained. Typically, although not always, one-for-one with the settlement account.
102	DataRepository	Data repository. Multiple instances of this PartyRole may appear for reporting purposes.
103	CalculationAgent	Calculation agent
104	ExerciseNoticeSender	Sender of exercise notice
105	ExerciseNoticeReceiver	Receiver of exercise notice
106	RateReferenceBank	Rate reference bank. The bank providing the reference rate. Multiple instance of this PartyRole may appear.
107	Correspondent	Correspondent
109	BeneficiaryBank	Beneficiary's bank or depository institution. The institution in which the beneficiary, a person or an entity, has their account with. The institution may be a bank or non-bank institution.
110	Borrower	Borrower
111	PrimaryObligator	Primary obligator
112	Guarantor	Guarantor
113	ExcludedReferenceEntity	Excluded reference entity
114	DeterminingParty	Determining party
115	HedgingParty	Hedging party
116	ReportingEntity	Reporting entity. The entity that is reporting the information.
117	SalesPerson	Sales person. The person who is involved in the sales activities for their firm.

Code	Name	Description
118	Operator	Operator. The person who has the capabilities and authorization to take certain actions; for example, setting entitlements, etc.
119	CSD	Central Securities Depository (CSD)
120	ICSD	International Central Securities Depository (ICSD)
121	TradingSubAccount	Trading sub-account. Example of sub-accounts include a clearing account that has multiple trading sub-accounts, a trading account that has multiple trading sub-accounts belonging to different trading firms.
122	InvestmentDecisionMaker	Investment decision maker. In the context of ESMA RTS reporting, this is used to specify party responsible for the investment decision. See RTS 24, Annex, Table 2, Field 4.
123	PublishingIntermediary	Publishing intermediary. The medium or vendor used to publish to the market.
124	CSDParticipant	Central Securities Depository (CSD) Participant. In the context of EU SFTR reporting the identifier of the CSD participant or indirect participant of the reporting counterparty. Where both the CSD participant and indirect participant are involved in the transaction this should identify the indirect participant.
125	Issuer	Issuer. The issuer of the security.
126	ContraCustomerAccount	Contra Customer Account. Same as PartyRole(452) = 24 (Customer Account) but for the counterparty. Can be used whenever the parties component is not nested in a repeating group representing both sides.
127	ContraInvestmentDecisionMaker	Contra Investment Decision Maker. Same as PartyRole(452) = 122 (Investment Decision Maker) but for the counterparty. Can be used whenever the parties component is not nested in a repeating group representing both sides.

Used in groups: [RelatedPartyDetailGrp](#)

### 171.2.4519 RelatedPartyDetailRoleQualifier

Qualifies the value of RelatedPartyRole(1565)

Type: **int**

Allowed values in PartyDetailRoleQualifierCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Agency	Agency
1	Principal	Principal
2	RisklessPrincipal	Riskless principal
3	GeneralClearingMember	General clearing member
30	ExchangeOrderSubmitter	Exchange order submitter. Used to identify original or initial exchange order submitting broker when party role "1" (Executing Firm) appears more than once.
4	IndividualClearingMember	Individual clearing member
5	PreferredMarketMaker	Preferred market maker. Market maker getting a part of the matched quantity before primary or default market maker.
6	DirectedMarketMaker	Directed market maker. Single market maker to handle the order provided.
7	Bank	Bank
8	Hub	Hub. Indicates that the Intermediary party is a hub system or service provider.
9	PrimaryTrdRepository	Primary trade repository. Used to differentiate the principal trade repository from the Original or Additional trade repositories when there are multiple trade repositories being reported.
10	OrigTrdRepository	Original trade repository. Used to identify the trade repository to which the trade was originally reported if different from the current repository to which the trade is being reported.
11	AddtnIntlTrdRepository	Additional international trade repository. Used with InternationalSwapIndicator(2526) to identify the trade repository that is in addition to the local swaps data repository as required by U.S. law.
12	AddtnlDomesticTrdRepository	Additional domestic trade repository. Used with MixedSwapIndicator(1929) to identify the trade repository that is in addition to the current trade repository when the assets in the swap are subject to two different domestic regulators.
13	RelatedExchange	Related exchange
14	OptionsExchange	Options exchange
15	SpecifiedExchange	Specified exchange
16	ConstituentExchange	Constituent exchange.
17	ExemptFromTradeReporting	Exempt from trade reporting. In the context of FINRA TRACE reporting requirements, this is used to indicate the ATS has been granted a regulatory exemption from reporting.
18	Current	Current. Can be used to convey an existing party identifier for the same party role in a single message.

Code	Name	Description
19	New	New. Can be used to convey a future party identifier for the same party role in a single message.
20	DesignatedSponsor	Designated sponsor. Market maker jointly providing liquidity for the same security with other market makers.
21	Specialist	Specialist. Market maker being the only one providing liquidity for a security.
22	Algorithm	Algorithm
23	FirmOrLegalEntity	Firm or legal entity
24	NaturalPerson	Natural person
25	RegularTrader	Regular trader. Standard trader profile.
26	HeadTrader	Head trader. Senior trader leading a group of regular traders.
27	Supervisor	Supervisor. Administrative user that has only limited rights for normal trading but possibly special rights for emergency actions.
28	TriParty	Tri-party. In the context of EU SFTR reporting, identifies the third party, not necessarily the custodian, to which the reporting counterparty has outsourced the post-trade processing of an SFT (if applicable).
29	Lender	Lender. In the context of EU SFTR reporting, identifies the agent lender involved in the securities lending transaction.

### 171.2.4520 RelatedPartyDetailSubGrp

PartySubGrp for related parties.

Name	Mult.	Type	Description
<a href="#">NoRelatedPartyDetailSubIDs</a>	[1..1]	NumInGroup	
<a href="#">RelatedPartyDetailSubID</a>	[0..1]	String	Required when NoRelatedPartyDetailSubIDs > 0.
<a href="#">RelatedPartyDetailSubIDType</a>	[0..1]	CodeSet	Required when NoRelatedPartyDetailSubIDs > 0.

Used in groups: [RelatedPartyDetailGrp](#)

**171.2.4521 RelatedPartyDetailSubID**

Sub-identifier for the party specified in RelatedPartyID(1563).

Type: **String**

Used in groups: **RelatedPartyDetailSubGrp**

**171.2.4522 RelatedPartyDetailSubIDType**

Type of RelatedPartyDetailSubID(1567) value.

Type: **int**

Allowed values in PartySubIDTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	Firm	Firm
2	Person	Person
3	System	System
4	Application	Application
5	FullLegalNameOfFirm	Full legal name of firm
6	PostalAddress	Postal address
7	PhoneNumber	Phone number
8	EmailAddress	Email address
9	ContactName	Contact name
10	SecuritiesAccountNumber	Securities account number (for settlement instructions)
11	RegistrationNumber	Registration number (for settlement instructions and confirmations)
12	RegisteredAddressForConfirmation	Registered address (for confirmation purposes)
13	RegulatoryStatus	Regulatory status (for confirmation purposes)
14	RegistrationName	Registration name (for settlement instructions)
15	CashAccountNumber	Cash account number (for settlement instructions)
16	BIC	BIC
17	CSDParticipantMemberCode	CSD participant member code
18	RegisteredAddress	Registered address
19	FundAccountName	Fund account name
20	TelexNumber	Telex number
21	FaxNumber	Fax number

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
22	SecuritiesAccountName	Securities account name
23	CashAccountName	Cash account name
24	Department	Department
25	LocationDesk	Location desk
26	PositionAccountType	Position account type
27	SecurityLocateID	Security locate ID
28	MarketMaker	Market maker
29	EligibleCounterparty	Eligible counterparty
30	ProfessionalClient	Professional client
31	Location	Location
32	ExecutionVenue	Execution venue
33	CurrencyDeliveryIdentifier	Currency delivery identifier
34	AddressCity	Address City
35	AddressStateOrProvince	Address State/Province
36	AddressPostalCode	Address Postal Code
37	AddressStreet	Address Street
38	AddressISOCountryCode	Address Country (ISO country code)
39	ISOCountryCode	ISO country code
40	MarketSegment	Market segment
41	CustomerAccountType	Customer account type
42	OmnibusAccount	Omnibus account
43	FundsSegregationType	Funds segregation type
44	GuaranteeFund	Guarantee fund. Identifies a guarantee fund related to an account. Used when one account has multiple funds of collateral, each guaranteeing different positions. Can be used for PartyRole(452) = Customer Account(24).
45	SwapDealer	Swap dealer. The US regulator's defined term for identifying the trade counterparty as "any person who holds itself out as a dealer in swaps, makes a market in swaps, regularly enters into swaps with counterparties as an ordinary course of business for its own account, or engages in activity causing itself to be commonly known in the trade as a dealer or market maker in swaps".
46	MajorParticipant	Major participant. When PartySubID(523)=Y the counterparty is not the swap dealer but is a major swap participant as defined in the regulations.

<b>Code</b>	<b>Name</b>	<b>Description</b>
47	FinancialEntity	Financial entity. When PartySubID(523)=Y the counterparty is neither a swap dealer nor a major swap participant but is a financial entity as defined in the regulations.
48	USPerson	U.S. person. A legal term referring to any U.S. person or legal entity anywhere in the world that should be taxed under U.S. law.
49	ReportingEntityIndicator	Reporting entity indicator. Indicates the entity obligated or delegated to report to their regulator, a non-regulatory agency or data repository. Set PartySubID(523)=Y if true.
50	ElectedClearingRequirementException	Elected clearing requirement exception
51	BusinessCenter	Business center.
52	ReferenceText	Reference text
53	ShortMarkingExemptAccount	Short-marking exempt account
54	ParentFirmIdentifier	Parent firm identifier. Implementation-specific identifier of this party's parent entity.
55	ParentFirmName	Parent firm name. Full name of this party's parent entity.
56	DealIdentifier	Deal identifier. The internal identifier assigned to the trade by this party, particularly by a Clearing Organization.
57	SystemTradeID	System trade identifier
58	SystemTradeSubID	System trade sub-identifier
59	FCMCode	Futures Commission Merchant (FCM) code. The FCM's code or identifier in relation to the PartyRole(452). For example, if PartyRole(452) is the exchange or clearinghouse, the FCM code/ID specified in PartySubID(523) is the FCM's identifier at the exchange or clearinghouse.
60	DlvryTrmlCode	Delivery terminal customer account/code. Usually used for gas delivery to identify whose account the gas is allocated to at the delivery terminal. Often referred to as "HUB" code.
61	VolntyRptEntity	Voluntary reporting entity. The entity voluntarily reporting the trade to the regulator. Set PartySubID(523)=Y if true.
62	RptObligJursdctn	Reporting obligation jurisdiction. For a trade that falls under multiple jurisdictions this may be used to identify, through PartySubID(523), the reporting jurisdiction to which the party is obligated to report.
63	VolntyRptJursdctn	Voluntary reporting jurisdiction. For a trade that falls under multiple jurisdictions this may be used to identify, through PartySubID(523), the regulatory jurisdiction to which the party is submitting a voluntary report.

Code	Name	Description
64	CompanyActivities	Company activities. For regulatory reporting. ID values include: A = Assurance undertaking authorized in accordance with Directive 2002/83/EC C=Credit institution authorized in accordance with Directive 2006/48/EC F=Investment firm in accordance with Directive 2004/39/EC I=Insurance undertaking authorized in accordance with Directive 73/239/EC L=Alternative investment fund managed by AIFMs authorized or registered in accordance with Directive 2011/61/EC O=Institution for occupational retirement provision within the meaning of Article 6(a0 of Directive 2003/41/EC R=Reinsurance undertaking authorized in accordance with Directive 2005/68/EC U=UCITS and its management company, authorized in accordance with Directive 2009/65/EC or blank in case of coverage by LEI or in case of non-financial counterparties. In the context of EU SFTR reporting use the appropriate 4- or 1-character code noted in the regulations. See SFTR ITS "Commission Implementing Regulation (EU) 2019/363" Annexes 1 and 2 for values.
65	EEAreaDomiciled	European Economic Area domiciled. ID values: Y or N
66	ContractLinked	Contract linked to commercial or treasury financing for this counterparty. ID values: Y or N
67	ContractAbove	Contract above clearing threshold for this counterparty. ID values: Y or N
68	VolntyRptPty	Voluntary reporting party. When PartySubID(523)=Y, identifies that the trading party is reporting voluntarily when VoluntaryRegulatoryReport(1935)=Y.
69	EndUser	End user. When PartySubID(523)=Y, the counterparty is neither the swap dealer, major swap participant nor financial entity as defined in the regulations.
70	LocationOrJurisdiction	Location or jurisdiction. One or more instances may be used in combination with PartySubIDType(803) = 49 (Reporting entity indicator) or 102 (Data repository) to identify the jurisdiction, countries, regions or provinces for which the party is a reporting entity or data repository when that characteristic is ambiguous or where there are multiple locations. The party sub-ID value is either a jurisdiction acronym, a 2-character ISO 3166 country code, or a hyphenated combination of the country code and the standard post-office abbreviation for province, state or region if necessary. E.g. "US" for United States or "CA-QC" for Quebec Canada.

Code	Name	Description
71	DerivativesDealer	Derivatives dealer. Indicates whether the party is a derivatives dealer or not (Y/N). The Canadian regulator's defined term for identifying the trade counterparty as "a person or company engaging in or holding himself, herself or itself out as engaging in the business of trading in derivatives in Ontario as principal or agent".
72	Domicile	Domicile. Country and optionally province, state or region of domicile. The party sub-ID value is either a 2-character ISO 3166 country code or a hyphenated combination of the country code and the standard post-office abbreviation of province, state or region if necessary. E.g. "US" for United States or "CA-QC" for Quebec Canada.
73	ExemptFromRecognition	Exempt from recognition. Used with party role 21 "Clearing Organization" to indicate exemption (Y/N). Identifies a clearing agency as exempt from oversight in Ontario, i.e. one that 1) only provides limited services and does not present significant risks or 2) is foreign-based, intends to operate in Ontario but is subject to regulatory oversight in another jurisdiction.
74	Payer	Payer. Identifies the party as the payer of a particular payment stream or bullet payment by quoting the stream's StreamDesc(40051) (or LegStreamDesc(40243) or UnderlyingStreamDesc(40542)) or payment's PaymentDesc(43087) in the associated party sub-identifier field.
75	Receiver	Receiver. Identifies the party as the receiver of a particular payment stream or bullet payment by quoting the stream's StreamDesc(40051) (or LegStreamDesc(40243) or UnderlyingStreamDesc(40542)) or payment's PaymentDesc(43087) in the associated party sub-identifier field.
76	SystematicInternaliser	Systematic Internaliser (SI). In the context of ESMA reporting, this is used to indicate whether the specified party is a Systematic Internaliser or not for the security defined in the Instrument component (Y/N).
77	PublishingEntityIndicator	Publishing entity indicator. Indicates the entity obligated or delegated to publish to the market. Set PartySubID(523)=Y if true.
78	FirstName	First name. The first name(s) of a natural person. If multiple names, separate entries by a comma.
79	Surname	Surname. The surname(s) or lastname(s) of a natural person. If multiple names, separate entries by a comma.

Code	Name	Description
80	DateOfBirth	Date of birth. The date of birth of a natural person in the format YYYYMMDD.
81	OrderTransmittingFirm	Order transmitting firm. Identifies whether the party specified in PartyID(448) is the firm that transmitted the order. In the context of RTS 22 Article 4, when "true" the PartySubID(523)=Y shall be set "by the transmitting firm within the transmitting firm's report where conditions for transmission specified in Article 4 were not satisfied."
82	OrderTransmittingFirmBuyer	Order transmitting firm for buyer. Identifies the firm that transmitted the order for the buyer. In the context of ESMA RTS 22, PartySubID(523)=Y is used to indicate the firm identified in PartyID(448) is the firm that transmitted the order for the buyer. "This shall be populated by the receiving firm within the receiving firm's report with the identification code provided by the transmitting firm."
83	OrderTransmitterSeller	Order transmitter for seller. Identifies the order transmitting firm for the seller. In the context of ESMA RTS 22, PartySubID(523)=Y is used to indicate the firm identified in PartyID(448) is the firm that transmitted the order for the seller. "This shall be populated by the receiving firm within the receiving firm's report with the identification code provided by the transmitting firm."
84	LegalEntityIdentifier	Legal Entity Identifier (ISO 17442) LEI
85	SubSectorClassification	Sub-sector classification. Supplemental to party sub-ID type "64" (Company activities) for regulatory reporting. For EU SFTR reporting use the appropriate 4-character code noted in the regulations applying the conditional association rules. See SFTR ITS "Commission Implementing Regulation (EU) 2019/363" Annexes 1 and 2 for values.
86	PartySide	Party side. May be used, when appropriate, to explicitly indicate the transaction side of the party, e.g. Buyer, Seller, Lender, Borrower, Maker, Taker, etc. in the ID. In the context of EU SFTR reporting, use values as required by SFTR, "GIVE" and "TAKE" in the ID, to identify collateral giver and taker.
87	LegalRegistrationCountry	Legal registration country. ISO Country Code where the registered office of the party is located as specified in the LEI reference data.

Used in groups: [RelatedPartyDetailSubGrp](#)

**171.2.4523 RelatedPositionDate**

Used to help identify the position when RelatedPositionID(1862) is not unique across multiple days. This date is generally the creation date of the identifier.

Type: **LocalMktDate**

Used in groups: **RelatedPositionGrp**

**171.2.4524 RelatedPositionGrp**

This component is used to identify positions that are related to each other or to other trades. This should not be used in lieu of explicit FIX fields that denote specific semantic relationships, but rather should be used when no such fields exist.

---

Name	Mult.	Type	Description
<b>NoRelatedPositions</b>	[1..1]	NumInGroup	
<b>RelatedPositionID</b>	[0..1]	String	Required if NoRelatedPositions(1861) > 0.
<b>RelatedPositionIDSource</b>	[0..1]	CodeSet	
<b>RelatedPositionDate</b>	[0..1]	LocalMktDate	

---

Used in groups: **TrdCapRptAckSideGrp**, **TrdCapRptSideGrp**

**171.2.4525 RelatedPositionID**

Identifier of a related position.

Type: **String**

Used in groups: **RelatedPositionGrp**

**171.2.4526 RelatedPositionIDSource**

Describes the source of the identifier that RelatedPositionID(1862) represents.

Type: **int**

Allowed values in RelatedPositionIDSourceCodeSet:

---

Code	Name	Description
1	PosMaintRptID	Position maintenance report ID - PosMaintRptID(721)
2	TransferID	Position transfer ID - TransferID(2437)
3	PositionEntityID	Position entity ID - PositionID(2618)

---

Used in groups: [RelatedPositionGrp](#)

### 171.2.4527 RelatedPriceSource

Source for the price of a related entity, e.g. price of the underlying instrument in an Underlying Price Contingency (UPC) order. Can be used together with RelatedHighPrice (1819) and/or RelatedLowPrice (1820).

Type: [int](#)

Allowed values in RelatedPriceSourceCodeSet:

---

Code	Name	Description
1	NBBid	NBB (National Best Bid)
2	NBOffer	NBO (National Best Offer)

---

Used in messages: [ExecutionReport](#), [MultilegOrderCancelReplace](#), [NewOrderMultileg](#)

### 171.2.4528 RelatedRegulatoryTradeIDSource

Specifies the identifier of the reporting entity as assigned by regulatory agency.

Type: [String](#)

Used in groups: [RelatedTradeGrp](#)

### 171.2.4529 RelatedSecurityID

Related security identifier value of RelatedSecurityIDSource(1651) type.

Type: [String](#)

Used in groups: [RelatedInstrumentGrp](#)

**171.2.4530 RelatedSecurityIDSource**

Identifies class or source of the RelatedSecurityID (1650) value.

Type: **String**

Allowed values in SecurityIDSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
3	QUIK	QUIK
4	ISINNumber	ISIN
5	RICCode	RIC
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
7	ISOCountryCode	ISO Country Code
8	ExchangeSymbol	Exchange symbol
9	ConsolidatedTapeAssociation	Consolidated Tape Association (CTA) Symbol (SIAC CTS/CQS line format)
A	BloombergSymbol	Bloomberg Symbol
B	Wertpapier	Wertpapier
C	Dutch	Dutch
D	Valoren	Valoren
E	Sicovam	Sicovam
F	Belgian	Belgian
G	Common	"Common" (Clearstream and Euroclear)
H	ClearingHouse	Clearing house / Clearing organization
I	ISDAFpMLSpecification	ISDA/FpML product specification (XML in SecurityXML(1185))
J	OptionPriceReportingAuthority	Option Price Reporting Authority
K	ISDAFpMLURL	ISDA/FpML product URL (URL in SecurityID(48))
L	LetterOfCredit	Letter of credit
M	MarketplaceAssignedIdentifier	Marketplace-assigned Identifier
N	MarkitREDEntityCLIP	Markit RED entity CLIP
P	MarkitREDPairCLIP	Markit RED pair CLIP
Q	CFTCCommodityCode	CFTC commodity code
R	ISDACommodityReferencePrice	ISDA Commodity Reference Price

Code	Name	Description
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
T	LegalEntityIdentifier	Legal entity identifier
U	Synthetic	Synthetic. Used to specify that the security identifier is synthetic for linking nested underliers when there is no market identifier for the collection.
V	FidessaInstrumentMnemonic	Fidessa Instrument Mnemonic (FIM)
W	IndexName	Index name. Standard name of the index or rate index, e.g. "LIBOR" or "iTraxx Australia".
X	UniformSymbol	Uniform Symbol (UMTF Symbol)
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in groups: [RelatedInstrumentGrp](#)

### 171.2.4531 RelatedSecurityType

Security type of the related instrument.

Type: [String](#)

Allowed values in SecurityTypeCodeSet:

Code	Name	Description
ABS	AssetBackedSecurities	Asset-backed Securities

XCN	ExtendedCommNote	Extended Comm Note
CFD	ContractForDifference	Contract for difference
YCD	YankeeCertificateOfDeposit	Yankee Certificate Of Deposit
BAB	BankAcceptedBill	Bank Accepted Bill. Also known as Bank Bill.
CRLNSWAP	CorrelationSwap	Correlation swap
BNST	ShortTermBankNote	Short Term Bank Note
DVDNDSWAP	DividendSwap	Dividend swap
CLCP	CallableCommercialPaper	Callable Commercial Paper
EQBSKT	EquityBasket	Equity basket
CN	CommercialNote	Commercial Note
EQFWD	EquityForward	Equity forward
CPIB	InterestBearingCommercialPaper	Interest Bearing Commercial Paper
RTRNSWAP	ReturnSwap	Return swap
EUMTN	EuroMediumTermNote	Euro Medium Term Note
VARSWAP	VarianceSwap	Variance swap
EUNCP	EuroNegotiableCommercialPaper	Euro Negotiable Commercial Paper
PRTFLIOSWAP	PortfolioSwaps	Portfolio swap

Code	Name	Description
EUSTLQN	EuroStructuredLiquidityNote	Euro Structured Liquidity Note
FUTSWAP	FuturesOnASwap	Futures on a Swap
EUTD	EuroTimeDeposit	Euro Time Deposit
FWDSWAP	ForwardsOnASwap	Forwards on a Swap
FWDFRTAGMT	ForwardFreightAgreement	Forward Freight Agreement
JCD	JumboCertificateOfDeposit	Jumbo Certificate of Deposit
MMF	MoneyMarketFund	Money Market Fund
SPREADBET	SpreadBetting	Spread Betting
ETC	ExchangeTradedCommodity	Exchange traded commodity
MN	MasterNote	Master Note. Short term notes issued by Federal Farm Credit Banks Funding Corporation to provide loans and funding under Federal Farm Credit System (FFCS).
NCD	NegotiableCertificateOfDeposit	Negotiable Certificate of Deposit
NCP	NegotiableCommercialPaper	Negotiable Commercial Paper
RCD	RetailCertificateOfDeposit	Retail Certificate of Deposit
TDR	TermDepositReceipt	Term Deposit Receipt

Used in groups: [RelatedInstrumentGrp](#)

### 171.2.4532 RelatedSymbol

Ticker symbol of the related security. Common "human understood" representation of the security.

Type: [String](#)

Used in groups: [RelatedInstrumentGrp](#)

### 171.2.4533 RelatedToDividendPeriodXIDRef

The DividendPeriodXID(42293) of the stream dividend period with which the related instrument has correlation.

Type: [XIDREF](#)

Used in groups: [RelatedInstrumentGrp](#)

**171.2.4534 RelatedToSecurityID**

The security identifier of the instrument, instrument leg or underlying instrument with which the related instrument has correlation.

Type: **String**

Used in groups: **RelatedInstrumentGrp**

**171.2.4535 RelatedToSecurityIDSource**

Identifies class or source of the RelatedToSecurityID(2413) value.

Type: **String**

Allowed values in SecurityIDSourceCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	CUSIP	CUSIP
2	SEDOL	SEDOL
3	QUIK	QUIK
4	ISINNumber	ISIN
5	RICCode	RIC
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
7	ISOCountryCode	ISO Country Code
8	ExchangeSymbol	Exchange symbol
9	ConsolidatedTapeAssociation	Consolidated Tape Association (CTA) Symbol (SIAC CTS/CQS line format)
A	BloombergSymbol	Bloomberg Symbol
B	Wertpapier	Wertpapier
C	Dutch	Dutch
D	Valoren	Valoren
E	Sicovam	Sicovam
F	Belgian	Belgian
G	Common	"Common" (Clearstream and Euroclear)
H	ClearingHouse	Clearing house / Clearing organization
I	ISDAFpMLSpecification	ISDA/FpML product specification (XML in SecurityXML(1185))
J	OptionPriceReportingAuthority	Option Price Reporting Authority
K	ISDAFpMLURL	ISDA/FpML product URL (URL in SecurityID(48))

---

Code	Name	Description
L	LetterOfCredit	Letter of credit
M	MarketplaceAssignedIdentifier	Marketplace-assigned Identifier
N	MarkitREDEntityCLIP	Markit RED entity CLIP
P	MarkitREDPairCLIP	Markit RED pair CLIP
Q	CFTCCommodityCode	CFTC commodity code
R	ISDACommodityReferencePrice	ISDA Commodity Reference Price
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
T	LegalEntityIdentifier	Legal entity identifier
U	Synthetic	Synthetic. Used to specify that the security identifier is synthetic for linking nested underliers when there is no market identifier for the collection.
V	FidessaInstrumentMnemonic	Fidessa Instrument Mnemonic (FIM)
W	IndexName	Index name. Standard name of the index or rate index, e.g. "LIBOR" or "iTraxx Australia".
X	UniformSymbol	Uniform Symbol (UMTF Symbol)
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in groups: [RelatedInstrumentGrp](#)

#### **171.2.4536 RelatedToStreamXIDRef**

StreamXID(41303), LegStreamXID(41700) or UnderlyingStreamXID(42016) of the stream with which the related instrument has correlation.

Type: [XIDREF](#)

Used in groups: [RelatedInstrumentGrp](#)

#### **171.2.4537 RelatedTradeDate**

Date of a related trade.

Type: [LocalMktDate](#)

Used in groups: [RelatedTradeGrp](#)

**171.2.4538 RelatedTradeGrp**

This component is used to identify trades that are related to each other for a business purpose, such as netting of forwards. This component should not be used in lieu of explicit FIX fields that denote specific semantic relationships, but rather should be used when no such fields exist.

Name	Mult.	Type	Description
NoRelatedTrades	[1..1]	NumInGroup	
RelatedTradeID	[0..1]	String	Required if NoRelatedTrades(1855) > 0.
RelatedTradeIDSource	[0..1]	CodeSet	
RelatedRegulatoryTradeIDSource	[0..1]	String	Optionally used for RelatedTradeIDSource(1857)=6(Regulatory trade ID) when RelatedTradeID(1856) is not unique across multiple reporting entities.
RelatedTradeDate	[0..1]	LocalMktDate	Optionally used to help identify the trade when RelatedTradeID(1856) is not unique across multiple days.
RelatedTradeMarketID	[0..1]	Exchange	Optionally used to help identify the trade when RelatedTradeID(1856) is not unique across multiple markets.
RelatedTradeQuantity	[0..1]	Qty	

Used in groups: [MDFullGrp](#), [MDIncGrp](#), [TrdCapRptAckSideGrp](#), [TrdCapRptSideGrp](#)

Used in messages: [PayManagementReport](#), [PayManagementRequest](#), [PositionMaintenanceReport](#), [PositionReport](#)

**171.2.4539 RelatedTradeID**

Identifier of a related trade.

Type: [String](#)

Used in groups: [RelatedTradeGrp](#)

**171.2.4540 RelatedTradeIDSource**

Describes the source of the identifier that RelatedTradeID(1856) represents.

Type: [int](#)

Allowed values in RelatedTradeIDSourceCodeSet:

Code	Name	Description
0	NonFIXSource	Non-FIX source
1	TradeID	Trade ID
2	SecondaryTradeID	Secondary trade ID
3	TradeReportID	Trade report ID
4	FirmTradeID	Firm trade ID
5	SecondaryFirmTradeID	Secondary firm Trade ID
6	RegulatoryTradeID	Regulatory trade ID

Used in groups: [RelatedTradeGrp](#)

#### **171.2.4541 RelatedTradeMarketID**

Market of execution of related trade.

Type: [Exchange](#)

Used in groups: [RelatedTradeGrp](#)

#### **171.2.4542 RelatedTradeQuantity**

Quantity of the related trade which can be less than or equal to the actual quantity of the related trade. For example, when one trade offsets another across asset classes.

Type: [Qty](#)

Used in groups: [RelatedTradeGrp](#)

#### **171.2.4543 RelativeValue**

The valuation of an instrument relative to a base measurement specified in RelativeValueType(2530). This value can be negative.

Type: [float](#)

Used in groups: [RelativeValueGrp](#)

### 171.2.4544 RelativeValueGrp

The RelativeValueGrp component is used to convey relative valuation metrics or analytics for a given instrument.

Name	Mult.	Type	Description
NoRelativeValues	[1..1]	NumInGroup	
RelativeValueType	[0..1]	CodeSet	Required if NoRelativeValues(2529) > 0.
RelativeValue	[0..1]	float	Required if NoRelativeValues(2529) > 0.
RelativeValueSide	[0..1]	CodeSet	
RelativeValueTimestamp	[0..1]	UTCTimestamp	

Used in groups: [SecurityRiskMetricGrp](#)

Used in messages: [ExecutionReport](#), [IOI](#), [Quote](#)

### 171.2.4545 RelativeValueSide

Specifies the side of the relative value.

Type: [int](#)

Allowed values in RelativeValueSideCodeSet:

Code	Name	Description
1	Bid	Bid
2	Mid	Mid
3	Offer	Offer

Used in groups: [RelativeValueGrp](#)

### 171.2.4546 RelativeValueTimestamp

Timestamp at which the relative valuation metric or analytic is calculated or captured.

Type: [UTCTimestamp](#)

Used in groups: [RelativeValueGrp](#)

**171.2.4547 RelativeValueType**

Indicates the type of relative value measurement being specified.

Type: **int**

Allowed values in RelativeValueTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	ASWSpread	Asset Swap Spread. ASW Spread. The asset swap spread is the difference in the bond's yield (yield to maturity) and a floating interest rate (usually LIBOR), expressed in basis points.
2	OIS	Overnight Indexed Swap Spread. OIS Spread. The overnight indexed swap spread is the spread, expressed in basis points, between the bond yield (the fixed rate) and an overnight indexed rate (e.g. Fed Funds rate, EONIA, SONIA, etc.) (the floating rate).
3	ZSpread	Zero Volatility Spread. Z-Spread. The zero coupon spread is the constant spread added to the reference zero coupon yield curve (usually Treasury spot rate curve), expressed in basis points, to derive the adjusted yield curve used to determine the present value of the cash flows so that it equals the dirty price of the bond (i.e. accrued interest factored in).
4	DiscountMargin	Discount Margin. The DM is the spread, expressed in basis points, added to the bond's reference rate that will equate the bond's cash flows to its current price.
5	ISpread	Interpolated Spread. I-Spread or I-Curve spread. The spread, expressed in basis points, added to an interpolated point on the reference yield curve.
6	OAS	Option Adjusted Spread. OAS or OA-spread. Used to evaluate bonds with embedded (callable or put-able) options. The option adjusted spread is a constant spread, expressed in basis points, applied to each point on the spot rate curve (usually Treasury spot rate curve) where the bond's cash flow is received, such that the price of the bond is the same as the present value of its cash flows.
7	GSpread	G-Spread. The spread difference between the bond's yield and the interpolated yield from the government reference yield curve, expressed in basis points. It represents the curve adjusted value of the bond by accounting for the difference between the bond's benchmark yield and the interpolated government reference yield at the same point on the curve that matches the bond's remaining life.

---

Code	Name	Description
8	CDSBasis	CDS Basis. Also referred to as CDS Bond Basis. The CDS basis is the spread difference between the CDS spread or premium for the obligor and the Z-Spread or the ASW spread of the same reference or obligor bond, expressed in basis points.
9	CDSInterpolatedBasis	CDS Interpolated Basis. Also referred to as CDS Bond Interpolated Basis. The CDS interpolated basis is the difference between the reference or obligor bond's Z Spread or ASW spread and an interpolated point on CDS curve that matches the maturity of the reference bond, expressed in basis points.
10	DV01	DV01. The currency value change in response to a move of one basis point in the yield of the instrument. Typically used as a measure of interest rate risk of a single bond. Also known as "basis point value" or BPV.
11	PV01	PV01. The present value change in response to a move of one basis point all along the yield curve used for the instrument. In certain cases the DV01 and PV01 values may be the same.
12	CS01	CS01. Credit spread sensitivity. Represents the change in value of a (CDS) transaction for a one basis point change in the credit spread.

Used in groups: [RelativeValueGrp](#)

### 171.2.4548 ReleaseInstruction

Instruction to define conditions under which to release a locked order or parts of it.

Type: [int](#)

Allowed values in ReleaseInstructionCodeSet:

Code	Name	Description
1	ISO	Intermarket Sweep Order (ISO)
2	NoAwayMarketBetterCheck	No Away Market Better check

Used in messages: [ExecutionReport](#), [OrderCancelReplaceRequest](#)

### 171.2.4549 ReleaseQty

Quantity to be made available, i.e. released from a lock.

Type: Qty

Used in messages: [ExecutionReport](#), [OrderCancelReplaceRequest](#)

### 171.2.4550 RelSymDerivSecGrp

Name	Mult.	Type	Description
NoRelatedSym	[1..1]	NumInGroup	Specifies the number of repeating symbols (instruments) specified
Instrument	[0..1]	Component	
SecondaryPriceLimits	[0..1]	Component	Secondary price limit rules
Currency	[0..1]	Currency	
CurrencyCodeSource	[0..1]	CodeSet	
CorporateAction	[0..1]	CodeSet	Identifies the type of Corporate Action
InstrumentExtension	[0..1]	Component	
InstrmtLegGrp	[0..*]	Group	
RelSymTransactTime	[0..1]	UTCTimestamp	
NumOfSimpleInstruments	[0..1]	int	Number of simple instruments.
Text	[0..1]	String	Comment, instructions, or other identifying information.
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.

Used in messages: [DerivativeSecurityList](#)

### 171.2.4551 RelSymDerivSecUpdGrp

Name	Mult.	Type	Description
NoRelatedSym	[1..1]	NumInGroup	
ListUpdateAction	[0..1]	CodeSet	If provided, then Instrument occurrence has explicitly changed
CorporateAction	[0..1]	CodeSet	
Instrument	[0..1]	Component	

Name	Mult.	Type	Description
InstrumentExtension	[0..1]	Component	
SecondaryPriceLimits	[0..1]	Component	Secondary price limit rules
Currency	[0..1]	Currency	
CurrencyCodeSource	[0..1]	CodeSet	
InstrmtLegGrp	[0..*]	Group	
RelSymTransactTime	[0..1]	UTCTimestamp	
Text	[0..1]	String	Comment, instructions, or other identifying information.
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.

Used in messages: [DerivativeSecurityListUpdateReport](#)

#### 171.2.4552 RelSymTransactTime

See TransactTime(60)

Type: [UTCTimestamp](#)

Used in groups: [RelSymDerivSecGrp](#), [RelSymDerivSecUpdGrp](#), [SecListGrp](#), [SecLstUpdRelSymGrp](#)

#### 171.2.4553 RemunerationIndicator

Indicates whether the trade price was adjusted for compensation (i.e. includes a mark-up, mark-down or commission) in the price paid.

Type: [int](#)

Allowed values in RemunerationIndicatorCodeSet:

Code	Name	Description
0	NoRemunerationPaid	No remuneration paid
1	RemunerationPaid	Remuneration paid

Used in groups: [TrdCapRptSideGrp](#)

#### **171.2.4554 ReplaceText**

Identifies the reason for amendment.

Type: **String**

Used in messages: **PayManagementReport**

#### **171.2.4555 RepoCollateralSecurityType**

Identifies the collateral used in the transaction.

Valid values: see SecurityType (167) field (Note tag # was reserved in FIX 4.1, added in FIX 4.3)

Type: **String**

Used in components: **Instrument**

#### **171.2.4556 ReportedPx**

Reported price (used to differentiate from AvgPx on a confirmation of a marked-up or marked-down principal trade)

Type: **Price**

Used in messages: **Confirmation**

#### **171.2.4557 ReportedPxDiff**

Indicates that the reported price that is different from the market price. The price difference should be stated by using field 828 TrdType and, if required, field 829 TrdSubType

Type: **Boolean**

Used in messages: **TradeCaptureReport**

#### **171.2.4558 ReportingPx**

Represents the reportable price on fill when an instance of the Parties component with PartyRole(452) = 73 (Execution Venue) is present to prevent having to compute running totals.

Type: **Price**

Used in messages: **ExecutionReport**

**171.2.4559 ReportingQty**

Represents the reportable quantity on fill when an instance of the Parties component with Party-Role(452) = 73 (Execution Venue) is present to prevent having to compute running totals.

Type: Qty

Used in messages: ExecutionReport

**171.2.4560 ReportToExch**

Identifies party of trade responsible for exchange reporting.

Type: Boolean

Allowed values in ReportToExchCodeSet:

Code	Name	Description
N	SenderReports	Indicates the party sending message will report trade
Y	ReceiverReports	Indicates the party receiving message must report trade

Used in messages: ExecutionReport

**171.2.4561 RepurchaseRate**

Percent of par at which a Repo will be repaid. Represented as a percent, e.g. .9525 represents 95-/4 percent of par. (Note tag # was reserved in FIX 4.1, added in FIX 4.3)

Type: Percentage

Used in components: Instrument

**171.2.4562 RepurchaseTerm**

Number of business days before repurchase of a repo. (Note tag # was reserved in FIX 4.1, added in FIX 4.3)

Type: int

Used in components: Instrument

**171.2.4563 RequestedPartyRole**

Identifies the type or role of party that has been requested.

Type: **int**

Allowed values in PartyRoleCodeSet:

Code	Name	Description
1	ExecutingFirm	Executing Firm (formerly FIX 4.2 ExecBroker)
2	BrokerOfCredit	Broker of Credit (formerly FIX 4.2 BrokerOfCredit)
3	ClientID	Client ID (formerly FIX 4.2 ClientID)
4	ClearingFirm	Clearing Firm (formerly FIX 4.2 ClearingFirm)
5	InvestorID	Investor ID
6	IntroducingFirm	Introducing Firm
7	EnteringFirm	Entering Firm
8	Locate	Locate / Lending Firm (for short-sales)
9	FundManagerClientID	Fund Manager Client ID (for CIV)
10	SettlementLocation	Settlement Location (formerly FIX 4.2 SettlLocation)
11	OrderOriginationTrader	Order Origination Trader (associated with Order Origination Firm - i.e. trader who initiates/submits the order)
12	ExecutingTrader	Executing Trader (associated with Executing Firm - actually executes)
13	OrderOriginationFirm	Order Origination Firm (e.g. buy-side firm)
14	GiveupClearingFirmDepr	Giveup Clearing Firm (firm to which trade is given up)
15	CorrespondantClearingFirm	Correspondant Clearing Firm
16	ExecutingSystem	Executing System
17	ContraFirm	Contra Firm
18	ContraClearingFirm	Contra Clearing Firm
19	SponsoringFirm	Sponsoring Firm
20	UnderlyingContraFirm	Underlying Contra Firm
21	ClearingOrganization	Clearing Organization
22	Exchange	Exchange. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
24	CustomerAccount	Customer Account
25	CorrespondentClearingOrganization	Correspondent Clearing Organization
26	CorrespondentBroker	Correspondent Broker
27	Buyer	Buyer/Seller (Receiver/Deliverer)

<b>Code</b>	<b>Name</b>	<b>Description</b>
28	Custodian	Custodian
29	Intermediary	Intermediary
30	Agent	Agent
31	SubCustodian	Sub-custodian
32	Beneficiary	Beneficiary
33	InterestedParty	Interested party
34	RegulatoryBody	Regulatory body. In the context of regulatory reporting, this identifies the regulator the trade is being reported to.
35	LiquidityProvider	Liquidity provider
36	EnteringTrader	Entering trader
37	ContraTrader	Contra trader
38	PositionAccount	Position account. The account which positions are maintained. Typically represents the aggregation of one or more customer accounts.
39	ContraInvestorID	Contra Investor ID
40	TransferToFirm	Transfer to Firm
41	ContraPositionAccount	Contra Position Account
42	ContraExchange	Contra Exchange
43	InternalCarryAccount	Internal Carry Account
44	OrderEntryOperatorID	Order Entry Operator ID
45	SecondaryAccountNumber	Secondary Account Number
46	ForeignFirm	Foreign Firm
47	ThirdPartyAllocationFirm	Third Party Allocation Firm
48	ClaimingAccount	Claiming Account
49	AssetManager	Asset Manager
50	PledgorAccount	Pledgor Account
51	PledgeeAccount	Pledgee Account
52	LargeTraderReportableAccount	Large Trader Reportable Account
53	TraderMnemonic	Trader mnemonic
54	SenderLocation	Sender Location
55	SessionID	Session ID
56	AcceptableCounterparty	Acceptable Counterparty
57	UnacceptableCounterparty	Unacceptable Counterparty
58	EnteringUnit	Entering Unit
59	ExecutingUnit	Executing Unit

<b>Code</b>	<b>Name</b>	<b>Description</b>
60	IntroducingBroker	Introducing Broker
61	QuoteOriginator	Quote originator
62	ReportOriginator	Report originator
63	SystematicInternaliser	Systematic internaliser (SI)
64	MultilateralTradingFacility	Multilateral Trading Facility (MTF). Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
65	RegulatedMarket	Regulated Market (RM). Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
66	MarketMaker	Market Maker
67	InvestmentFirm	Investment Firm
68	HostCompetentAuthority	Host Competent Authority (Host CA)
69	HomeCompetentAuthority	Home Competent Authority (Home CA)
70	CompetentAuthorityLiquidity	Competent Authority of the most relevant market in terms of liquidity (CAL)
71	CompetentAuthorityTransactionVenue	Competent Authority of the Transaction (Execution) Venue (CATV)
72	ReportingIntermediary	Reporting intermediary. The medium or vendor used to report to a regulator, non-regulatory agency or data repository.
73	ExecutionVenue	Execution Venue. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
74	MarketDataEntryOriginator	Market data entry originator
75	LocationID	Location ID
76	DeskID	Desk ID
77	MarketDataMarket	Market data market
78	AllocationEntity	Allocation Entity
79	PrimeBroker	Prime Broker providing General Trade Services
80	StepOutFirm	Step-Out Firm (Prime Broker)
81	BrokerClearingID	Broker clearing identifier
82	CentralRegistrationDepository	Central Registration Depository (CRD)
83	ClearingAccount	Clearing Account
84	AcceptableSettlingCounterparty	Acceptable Settling Counterparty
85	UnacceptableSettlingCounterparty	Unacceptable Settling Counterparty
86	CLSMemberBank	CLS Member Bank
87	InConcertGroup	In Concert Group
88	InConcertControllingEntity	In Concert Controlling Entity

<b>Code</b>	<b>Name</b>	<b>Description</b>
89	LargePositionsReportingAccount	Large Positions Reporting Account
90	SettlementFirm	Settlement Firm
91	SettlementAccount	Settlement account. The account to which individual payment obligations are aggregated for netting and funds movement. Typically represents the aggregation of many margin (performance bond) accounts.
92	ReportingMarketCenter	Reporting Market Center
93	RelatedReportingMarketCenter	Related Reporting Market Center
94	AwayMarket	Away Market. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
95	GiveupTradingFirm	Give-up (trading) firm
96	TakeupTradingFirm	Take-up (trading) firm
97	GiveupClearingFirm	Give-up clearing firm
98	TakeupClearingFirm	Take-up clearing firm
99	OriginatingMarket	Originating Market. Identifies the Market using PartyIDSource(tag 447) = G (Market Identifier Code) where an order originated in the event that the order is sent to an alternative market for execution. Serves as an inverse of an away market.
100	MarginAccount	Margin account. Also referred to as "performance bond account". The margin account is the calculated margin requirements. Typically represents the aggregation of one or more position accounts.
101	CollateralAssetAccount	Collateral asset account. The account at which individual collateral assets are maintained. Typically, although not always, one-for-one with the settlement account.
102	DataRepository	Data repository. Multiple instances of this PartyRole may appear for reporting purposes.
103	CalculationAgent	Calculation agent
104	ExerciseNoticeSender	Sender of exercise notice
105	ExerciseNoticeReceiver	Receiver of exercise notice
106	RateReferenceBank	Rate reference bank. The bank providing the reference rate. Multiple instance of this PartyRole may appear.
107	Correspondent	Correspondent
109	BeneficiaryBank	Beneficiary's bank or depository institution. The institution in which the beneficiary, a person or an entity, has their account with. The institution may be a bank or non-bank institution.
110	Borrower	Borrower

Code	Name	Description
111	PrimaryObligator	Primary obligator
112	Guarantor	Guarantor
113	ExcludedReferenceEntity	Excluded reference entity
114	DeterminingParty	Determining party
115	HedgingParty	Hedging party
116	ReportingEntity	Reporting entity. The entity that is reporting the information.
117	SalesPerson	Sales person. The person who is involved in the sales activities for their firm.
118	Operator	Operator. The person who has the capabilities and authorization to take certain actions; for example, setting entitlements, etc.
119	CSD	Central Securities Depository (CSD)
120	ICSD	International Central Securities Depository (ICSD)
121	TradingSubAccount	Trading sub-account. Example of sub-accounts include a clearing account that has multiple trading sub-accounts, a trading account that has multiple trading sub-accounts belonging to different trading firms.
122	InvestmentDecisionMaker	Investment decision maker. In the context of ESMA RTS reporting, this is used to specify party responsible for the investment decision. See RTS 24, Annex, Table 2, Field 4.
123	PublishingIntermediary	Publishing intermediary. The medium or vendor used to publish to the market.
124	CSDParticipant	Central Securities Depository (CSD) Participant. In the context of EU SFTR reporting the identifier of the CSD participant or indirect participant of the reporting counterparty. Where both the CSD participant and indirect participant are involved in the transaction this should identify the indirect participant.
125	Issuer	Issuer. The issuer of the security.
126	ContraCustomerAccount	Contra Customer Account. Same as PartyRole(452) = 24 (Customer Account) but for the counterparty. Can be used whenever the parties component is not nested in a repeating group representing both sides.
127	ContraInvestmentDecisionMaker	Contra Investment Decision Maker. Same as PartyRole(452) = 122 (Investment Decision Maker) but for the counterparty. Can be used whenever the parties component is not nested in a repeating group representing both sides.

Used in groups: [RequestedPartyRoleGrp](#)

**171.2.4564 RequestedPartyRoleGrp**

Used to specify one or more PartyRoles as part of a request.

Name	Mult.	Type	Description
NoRequestedPartyRoles	[1..1]	NumInGroup	
RequestedPartyRole	[0..1]	CodeSet	Identifies the type of party role requested. Required if NoRequestedPartyRoles > 0.
RequestedPartyRoleQualifier	[0..1]	CodeSet	

Used in messages: [PartyDetailsListRequest](#), [PartyEntitlementsRequest](#), [PartyRiskLimitsRequest](#)

**171.2.4565 RequestedPartyRoleQualifier**

Used to further qualify the value of RequestedPartyRole(1509).

Type: **int**

Allowed values in PartyDetailRoleQualifierCodeSet:

Code	Name	Description
0	Agency	Agency
1	Principal	Principal
2	RisklessPrincipal	Riskless principal
3	GeneralClearingMember	General clearing member
30	ExchangeOrderSubmitter	Exchange order submitter. Used to identify original or initial exchange order submitting broker when party role "1" (Executing Firm) appears more than once.
4	IndividualClearingMember	Individual clearing member
5	PreferredMarketMaker	Preferred market maker. Market maker getting a part of the matched quantity before primary or default market maker.
6	DirectedMarketMaker	Directed market maker. Single market maker to handle the order provided.
7	Bank	Bank
8	Hub	Hub. Indicates that the Intermediary party is a hub system or service provider.

<b>Code</b>	<b>Name</b>	<b>Description</b>
9	PrimaryTrdRepository	Primary trade repository. Used to differentiate the principal trade repository from the Original or Additional trade repositories when there are multiple trade repositories being reported.
10	OrigTrdRepository	Original trade repository. Used to identify the trade repository to which the trade was originally reported if different from the current repository to which the trade is being reported.
11	AddnlIntlTrdRepository	Additional international trade repository. Used with InternationalSwapIndicator(2526) to identify the trade repository that is in addition to the local swaps data repository as required by U.S. law.
12	AddnlDomesticTrdRepository	Additional domestic trade repository. Used with MixedSwapIndicator(1929) to identify the trade repository that is in addition to the current trade repository when the assets in the swap are subject to two different domestic regulators.
13	RelatedExchange	Related exchange
14	OptionsExchange	Options exchange
15	SpecifiedExchange	Specified exchange
16	ConstituentExchange	Constituent exchange.
17	ExemptFromTradeReporting	Exempt from trade reporting. In the context of FINRA TRACE reporting requirements, this is used to indicate the ATS has been granted a regulatory exemption from reporting.
18	Current	Current. Can be used to convey an existing party identifier for the same party role in a single message.
19	New	New. Can be used to convey a future party identifier for the same party role in a single message.
20	DesignatedSponsor	Designated sponsor. Market maker jointly providing liquidity for the same security with other market makers.
21	Specialist	Specialist. Market maker being the only one providing liquidity for a security.
22	Algorithm	Algorithm
23	FirmOrLegalEntity	Firm or legal entity
24	NaturalPerson	Natural person
25	RegularTrader	Regular trader. Standard trader profile.
26	HeadTrader	Head trader. Senior trader leading a group of regular traders.
27	Supervisor	Supervisor. Administrative user that has only limited rights for normal trading but possibly special rights for emergency actions.

Code	Name	Description
28	TriParty	Tri-party. In the context of EU SFTR reporting, identifies the third party, not necessarily the custodian, to which the reporting counterparty has outsourced the post-trade processing of an SFT (if applicable).
29	Lender	Lender. In the context of EU SFTR reporting, identifies the agent lender involved in the securities lending transaction.

Used in groups: [RequestedPartyRoleGrp](#)

### 171.2.4566 RequestedRiskLimitTypesGrp

List of risk limit types being requested.

Name	Mult.	Type	Description
<a href="#">NoRequestedRiskLimitType</a>	[1..1]	NumInGroup	
<a href="#">RiskLimitType</a>	[0..1]	CodeSet	Required if <a href="#">NoRequestedRiskLimitType</a> > 0.

Used in messages: [PartyRiskLimitsRequest](#)

### 171.2.4567 RequestingPartyGrp

Identifies the party making the request.

Name	Mult.	Type	Description
<a href="#">NoRequestingPartyIDs</a>	[1..1]	NumInGroup	
<a href="#">RequestingPartyID</a>	[0..1]	String	Required when <a href="#">NoRequestingPartyIDs</a> > 0.

### 171.2.4568 RequestingPartyID

Party identifier for the requesting party.

Type: **String**

Used in groups: **RequestingPartyGrp**

### 171.2.4569 RequestingPartyIDSource

Identifies the source of the RequestingPartyID(1658) value.

Type: **char**

Allowed values in PartyIDSourceCodeSet:

Code	Name	Description
1	KoreanInvestorID	Korean Investor ID
6	UKNationalInsuranceOrPension-Number	UK National Insurance or Pension Number
B	BIC	BIC (Bank Identification Code - SWIFT managed) code (ISO9362 - See "Appendix 6-B")
I	ISITCAcronym	Directed broker three character acronym as defined in ISITC "ETC Best Practice" guidelines document
2	TaiwaneseForeignInvestorID	Taiwanese Qualified Foreign Investor ID QFI/FID
7	USSocialSecurityNumber	US Social Security Number
C	GeneralIdentifier	Generally accepted market participant identifier (e.g. NASD mnemonic)
3	TaiwaneseTradingAcct	Taiwanese Trading Acct
8	USEmployerOrTaxIDNumber	US Employer or Tax ID Number
D	Proprietary	Proprietary / Custom code. Custom ID schema used between counterparties, trading platforms and repositories.
4	MalaysianCentralDepository	Malaysian Central Depository (MCD) number
9	AustralianBusinessNumber	Australian Business Number
E	ISOCountryCode	ISO Country Code
5	ChineseInvestorID	Chinese Investor ID

Code	Name	Description
A	AustralianTaxFileNumber	Australian Tax File Number
F	SettlementEntityLocation	Settlement Entity Location (note if Local Market Settlement use "E=ISO Country Code") (see "Appendix 6-G" for valid values)
G	MIC	Market Identifier Code (ISO 10383) MIC
J	TaxID	Tax ID
H	CSDParticipant	CSD participant/member code (e.g. Euroclear, DTC, CREST or Kassenverein number)
K	AustralianCompanyNumber	Australian Company Number
L	AustralianRegisteredBodyNumber	Australian Registered Body Number
M	CFTCReportingFirmIdentifier	CFTC reporting firm identifier
N	LegalEntityIdentifier	Legal Entity Identifier (ISO 17442) LEI
O	InterimIdentifier	Interim identifier. An interim entity identifier assigned by a regulatory agency prior to an LEI (ISO 17442) being assigned.
P	ShortCodeIdentifier	Short code identifier. A generic means for trading venues, brokers, investment managers to convey a bilaterally agreed upon "short hand" code for an identifier that is a reference to a mapping between the parties.
Q	NationalIDNaturalPerson	National ID of natural person. An identification number generally assigned by a government authority or agency to a natural person which is unique to the person it is assigned to. Examples include, but not limited to, "social security number", "pension number".
R	IndiaPermanentAccountNumber	India Permanent Account Number. Also referred to as PAN ID. An identifier issued by the Income Tax Department of India.
S	FDID	Firm designated identifier. Also referred to as FDID. A unique identifier required by the SEC for each trading account designated by Industry Members for purposes of reporting to CAT (Consolidated Audit Trail).
T	SPSAID	Special Segregated Account ID. Also referred to as SPSA ID. The Special Segregated Account identifier issued by Hong Kong Exchanges and Clearing.
U	MasterSPSAID	Master Special Segregated Account ID. Also referred to as Master SPSA ID. The master identifier issued by Hong Kong Exchanges and Clearing for the aggregation of SPSA IDs.

Used in groups: [RequestingPartyGrp](#)

**171.2.4570 RequestingPartyRole**

Identifies the type or role of the RequestingPartyID(1658) specified.

Type: **int**

Allowed values in PartyRoleCodeSet:

Code	Name	Description
1	ExecutingFirm	Executing Firm (formerly FIX 4.2 ExecBroker)
2	BrokerOfCredit	Broker of Credit (formerly FIX 4.2 BrokerOfCredit)
3	ClientID	Client ID (formerly FIX 4.2 ClientID)
4	ClearingFirm	Clearing Firm (formerly FIX 4.2 ClearingFirm)
5	InvestorID	Investor ID
6	IntroducingFirm	Introducing Firm
7	EnteringFirm	Entering Firm
8	Locate	Locate / Lending Firm (for short-sales)
9	FundManagerClientID	Fund Manager Client ID (for CIV)
10	SettlementLocation	Settlement Location (formerly FIX 4.2 SettLocation)
11	OrderOriginationTrader	Order Origination Trader (associated with Order Origination Firm - i.e. trader who initiates/submits the order)
12	ExecutingTrader	Executing Trader (associated with Executing Firm - actually executes)
13	OrderOriginationFirm	Order Origination Firm (e.g. buy-side firm)
14	GiveupClearingFirmDepr	Giveup Clearing Firm (firm to which trade is given up)
15	CorrespondantClearingFirm	Correspondant Clearing Firm
16	ExecutingSystem	Executing System
17	ContraFirm	Contra Firm
18	ContraClearingFirm	Contra Clearing Firm
19	SponsoringFirm	Sponsoring Firm
20	UnderlyingContraFirm	Underlying Contra Firm
21	ClearingOrganization	Clearing Organization
22	Exchange	Exchange. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
24	CustomerAccount	Customer Account
25	CorrespondentClearingOrganization	Correspondent Clearing Organization
26	CorrespondentBroker	Correspondent Broker
27	Buyer	Buyer/Seller (Receiver/Deliverer)

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
28	Custodian	Custodian
29	Intermediary	Intermediary
30	Agent	Agent
31	SubCustodian	Sub-custodian
32	Beneficiary	Beneficiary
33	InterestedParty	Interested party
34	RegulatoryBody	Regulatory body. In the context of regulatory reporting, this identifies the regulator the trade is being reported to.
35	LiquidityProvider	Liquidity provider
36	EnteringTrader	Entering trader
37	ContraTrader	Contra trader
38	PositionAccount	Position account. The account which positions are maintained. Typically represents the aggregation of one or more customer accounts.
39	ContraInvestorID	Contra Investor ID
40	TransferToFirm	Transfer to Firm
41	ContraPositionAccount	Contra Position Account
42	ContraExchange	Contra Exchange
43	InternalCarryAccount	Internal Carry Account
44	OrderEntryOperatorID	Order Entry Operator ID
45	SecondaryAccountNumber	Secondary Account Number
46	ForeignFirm	Foreign Firm
47	ThirdPartyAllocationFirm	Third Party Allocation Firm
48	ClaimingAccount	Claiming Account
49	AssetManager	Asset Manager
50	PledgorAccount	Pledgor Account
51	PledgeeAccount	Pledgee Account
52	LargeTraderReportableAccount	Large Trader Reportable Account
53	TraderMnemonic	Trader mnemonic
54	SenderLocation	Sender Location
55	SessionID	Session ID
56	AcceptableCounterparty	Acceptable Counterparty
57	UnacceptableCounterparty	Unacceptable Counterparty
58	EnteringUnit	Entering Unit
59	ExecutingUnit	Executing Unit

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
60	IntroducingBroker	Introducing Broker
61	QuoteOriginator	Quote originator
62	ReportOriginator	Report originator
63	SystematicInternaliser	Systematic internaliser (SI)
64	MultilateralTradingFacility	Multilateral Trading Facility (MTF). Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
65	RegulatedMarket	Regulated Market (RM). Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
66	MarketMaker	Market Maker
67	InvestmentFirm	Investment Firm
68	HostCompetentAuthority	Host Competent Authority (Host CA)
69	HomeCompetentAuthority	Home Competent Authority (Home CA)
70	CompetentAuthorityLiquidity	Competent Authority of the most relevant market in terms of liquidity (CAL)
71	CompetentAuthorityTransactionVenue	Competent Authority of the Transaction (Execution) Venue (CATV)
72	ReportingIntermediary	Reporting intermediary. The medium or vendor used to report to a regulator, non-regulatory agency or data repository.
73	ExecutionVenue	Execution Venue. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
74	MarketDataEntryOriginator	Market data entry originator
75	LocationID	Location ID
76	DeskID	Desk ID
77	MarketDataMarket	Market data market
78	AllocationEntity	Allocation Entity
79	PrimeBroker	Prime Broker providing General Trade Services
80	StepOutFirm	Step-Out Firm (Prime Broker)
81	BrokerClearingID	Broker clearing identifier
82	CentralRegistrationDepository	Central Registration Depository (CRD)
83	ClearingAccount	Clearing Account
84	AcceptableSettlingCounterparty	Acceptable Settling Counterparty
85	UnacceptableSettlingCounterparty	Unacceptable Settling Counterparty
86	CLSMemberBank	CLS Member Bank
87	InConcertGroup	In Concert Group
88	InConcertControllingEntity	In Concert Controlling Entity

<b>Code</b>	<b>Name</b>	<b>Description</b>
89	LargePositionsReportingAccount	Large Positions Reporting Account
90	SettlementFirm	Settlement Firm
91	SettlementAccount	Settlement account. The account to which individual payment obligations are aggregated for netting and funds movement. Typically represents the aggregation of many margin (performance bond) accounts.
92	ReportingMarketCenter	Reporting Market Center
93	RelatedReportingMarketCenter	Related Reporting Market Center
94	AwayMarket	Away Market. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
95	GiveupTradingFirm	Give-up (trading) firm
96	TakeupTradingFirm	Take-up (trading) firm
97	GiveupClearingFirm	Give-up clearing firm
98	TakeupClearingFirm	Take-up clearing firm
99	OriginatingMarket	Originating Market. Identifies the Market using PartyIDSource(tag 447) = G (Market Identifier Code) where an order originated in the event that the order is sent to an alternative market for execution. Serves as an inverse of an away market.
100	MarginAccount	Margin account. Also referred to as "performance bond account". The margin account is the calculated margin requirements. Typically represents the aggregation of one or more position accounts.
101	CollateralAssetAccount	Collateral asset account. The account at which individual collateral assets are maintained. Typically, although not always, one-for-one with the settlement account.
102	DataRepository	Data repository. Multiple instances of this PartyRole may appear for reporting purposes.
103	CalculationAgent	Calculation agent
104	ExerciseNoticeSender	Sender of exercise notice
105	ExerciseNoticeReceiver	Receiver of exercise notice
106	RateReferenceBank	Rate reference bank. The bank providing the reference rate. Multiple instance of this PartyRole may appear.
107	Correspondent	Correspondent
109	BeneficiaryBank	Beneficiary's bank or depository institution. The institution in which the beneficiary, a person or an entity, has their account with. The institution may be a bank or non-bank institution.
110	Borrower	Borrower

Code	Name	Description
111	PrimaryObligator	Primary obligator
112	Guarantor	Guarantor
113	ExcludedReferenceEntity	Excluded reference entity
114	DeterminingParty	Determining party
115	HedgingParty	Hedging party
116	ReportingEntity	Reporting entity. The entity that is reporting the information.
117	SalesPerson	Sales person. The person who is involved in the sales activities for their firm.
118	Operator	Operator. The person who has the capabilities and authorization to take certain actions; for example, setting entitlements, etc.
119	CSD	Central Securities Depository (CSD)
120	ICSD	International Central Securities Depository (ICSD)
121	TradingSubAccount	Trading sub-account. Example of sub-accounts include a clearing account that has multiple trading sub-accounts, a trading account that has multiple trading sub-accounts belonging to different trading firms.
122	InvestmentDecisionMaker	Investment decision maker. In the context of ESMA RTS reporting, this is used to specify party responsible for the investment decision. See RTS 24, Annex, Table 2, Field 4.
123	PublishingIntermediary	Publishing intermediary. The medium or vendor used to publish to the market.
124	CSDParticipant	Central Securities Depository (CSD) Participant. In the context of EU SFTR reporting the identifier of the CSD participant or indirect participant of the reporting counterparty. Where both the CSD participant and indirect participant are involved in the transaction this should identify the indirect participant.
125	Issuer	Issuer. The issuer of the security.
126	ContraCustomerAccount	Contra Customer Account. Same as PartyRole(452) = 24 (Customer Account) but for the counterparty. Can be used whenever the parties component is not nested in a repeating group representing both sides.
127	ContraInvestmentDecisionMaker	Contra Investment Decision Maker. Same as PartyRole(452) = 122 (Investment Decision Maker) but for the counterparty. Can be used whenever the parties component is not nested in a repeating group representing both sides.

Used in groups: [RequestingPartyGrp](#)

**171.2.4571 RequestingPartyRoleQualifier**

Qualifies the value of RequestingPartyRole(1660).

Type: **int**

Allowed values in PartyDetailRoleQualifierCodeSet:

Code	Name	Description
0	Agency	Agency
1	Principal	Principal
2	RisklessPrincipal	Riskless principal
3	GeneralClearingMember	General clearing member
30	ExchangeOrderSubmitter	Exchange order submitter. Used to identify original or initial exchange order submitting broker when party role "1" (Executing Firm) appears more than once.
4	IndividualClearingMember	Individual clearing member
5	PreferredMarketMaker	Preferred market maker. Market maker getting a part of the matched quantity before primary or default market maker.
6	DirectedMarketMaker	Directed market maker. Single market maker to handle the order provided.
7	Bank	Bank
8	Hub	Hub. Indicates that the Intermediary party is a hub system or service provider.
9	PrimaryTrdRepository	Primary trade repository. Used to differentiate the principal trade repository from the Original or Additional trade repositories when there are multiple trade repositories being reported.
10	OrigTrdRepository	Original trade repository. Used to identify the trade repository to which the trade was originally reported if different from the current repository to which the trade is being reported.
11	AddtnlIntlTrdRepository	Additional international trade repository. Used with InternationalSwapIndicator(2526) to identify the trade repository that is in addition to the local swaps data repository as required by U.S. law.
12	AddtnlDomesticTrdRepository	Additional domestic trade repository. Used with MixedSwapIndicator(1929) to identify the trade repository that is in addition to the current trade repository when the assets in the swap are subject to two different domestic regulators.
13	RelatedExchange	Related exchange
14	OptionsExchange	Options exchange

Code	Name	Description
15	SpecifiedExchange	Specified exchange
16	ConstituentExchange	Constituent exchange.
17	ExemptFromTradeReporting	Exempt from trade reporting. In the context of FINRA TRACE reporting requirements, this is used to indicate the ATS has been granted a regulatory exemption from reporting.
18	Current	Current. Can be used to convey an existing party identifier for the same party role in a single message.
19	New	New. Can be used to convey a future party identifier for the same party role in a single message.
20	DesignatedSponsor	Designated sponsor. Market maker jointly providing liquidity for the same security with other market makers.
21	Specialist	Specialist. Market maker being the only one providing liquidity for a security.
22	Algorithm	Algorithm
23	FirmOrLegalEntity	Firm or legal entity
24	NaturalPerson	Natural person
25	RegularTrader	Regular trader. Standard trader profile.
26	HeadTrader	Head trader. Senior trader leading a group of regular traders.
27	Supervisor	Supervisor. Administrative user that has only limited rights for normal trading but possibly special rights for emergency actions.
28	TriParty	Tri-party. In the context of EU SFTR reporting, identifies the third party, not necessarily the custodian, to which the reporting counterparty has outsourced the post-trade processing of an SFT (if applicable).
29	Lender	Lender. In the context of EU SFTR reporting, identifies the agent lender involved in the securities lending transaction.

Type of RequestingPartySubID(1662) value.

Type: [int](#)

Allowed values in PartySubIDTypeCodeSet:

Code	Name	Description
1	Firm	Firm
2	Person	Person
3	System	System
4	Application	Application
5	FullLegalNameOfFirm	Full legal name of firm
6	PostalAddress	Postal address
7	PhoneNumber	Phone number
8	EmailAddress	Email address
9	ContactName	Contact name
10	SecuritiesAccountNumber	Securities account number (for settlement instructions)
11	RegistrationNumber	Registration number (for settlement instructions and confirmations)
12	RegisteredAddressForConfirmation	Registered address (for confirmation purposes)
13	RegulatoryStatus	Regulatory status (for confirmation purposes)

<b>Code</b>	<b>Name</b>	<b>Description</b>
14	RegistrationName	Registration name (for settlement instructions)
15	CashAccountNumber	Cash account number (for settlement instructions)
16	BIC	BIC
17	CSDParticipantMemberCode	CSD participant member code
18	RegisteredAddress	Registered address
19	FundAccountName	Fund account name
20	TelexNumber	Telex number
21	FaxNumber	Fax number
22	SecuritiesAccountName	Securities account name
23	CashAccountName	Cash account name
24	Department	Department
25	LocationDesk	Location desk
26	PositionAccountType	Position account type
27	SecurityLocateID	Security locate ID
28	MarketMaker	Market maker
29	EligibleCounterparty	Eligible counterparty
30	ProfessionalClient	Professional client
31	Location	Location
32	ExecutionVenue	Execution venue
33	CurrencyDeliveryIdentifier	Currency delivery identifier
34	AddressCity	Address City
35	AddressStateOrProvince	Address State/Province
36	AddressPostalCode	Address Postal Code
37	AddressStreet	Address Street
38	AddressISOCountryCode	Address Country (ISO country code)
39	ISOCountryCode	ISO country code
40	MarketSegment	Market segment
41	CustomerAccountType	Customer account type
42	OmnibusAccount	Omnibus account
43	FundsSegregationType	Funds segregation type
44	GuaranteeFund	Guarantee fund. Identifies a guarantee fund related to an account. Used when one account has multiple funds of collateral, each guaranteeing different positions. Can be used for PartyRole(452) = Customer Account(24).

<b>Code</b>	<b>Name</b>	<b>Description</b>
45	SwapDealer	Swap dealer. The US regulator's defined term for identifying the trade counterparty as "any person who holds itself out as a dealer in swaps, makes a market in swaps, regularly enters into swaps with counterparties as an ordinary course of business for its own account, or engages in activity causing itself to be commonly known in the trade as a dealer or market maker in swaps".
46	MajorParticipant	Major participant. When PartySubID(523)=Y the counterparty is not the swap dealer but is a major swap participant as defined in the regulations.
47	FinancialEntity	Financial entity. When PartySubID(523)=Y the counterparty is neither a swap dealer nor a major swap participant but is a financial entity as defined in the regulations.
48	USPerson	U.S. person. A legal term referring to any U.S. person or legal entity anywhere in the world that should be taxed under U.S. law.
49	ReportingEntityIndicator	Reporting entity indicator. Indicates the entity obligated or delegated to report to their regulator, a non-regulatory agency or data repository. Set PartySubID(523)=Y if true.
50	ElectedClearingRequirementException	Elected clearing requirement exception
51	BusinessCenter	Business center.
52	ReferenceText	Reference text
53	ShortMarkingExemptAccount	Short-marking exempt account
54	ParentFirmIdentifier	Parent firm identifier. Implementation-specific identifier of this party's parent entity.
55	ParentFirmName	Parent firm name. Full name of this party's parent entity.
56	DealIdentifier	Deal identifier. The internal identifier assigned to the trade by this party, particularly by a Clearing Organization.
57	SystemTradeID	System trade identifier
58	SystemTradeSubID	System trade sub-identifier
59	FCMCode	Futures Commission Merchant (FCM) code. The FCM's code or identifier in relation to the PartyRole(452). For example, if PartyRole(452) is the exchange or clearinghouse, the FCM code/ID specified in PartySubID(523) is the FCM's identifier at the exchange or clearinghouse.
60	DlvryTrmlCode	Delivery terminal customer account/code. Usually used for gas delivery to identify whose account the gas is allocated to at the delivery terminal. Often referred to as "HUB" code.

Code	Name	Description
61	VolntyRptEntity	Voluntary reporting entity. The entity voluntarily reporting the trade to the regulator. Set PartySubID(523)=Y if true.
62	RptObligJurisdiction	Reporting obligation jurisdiction. For a trade that falls under multiple jurisdictions this may be used to identify, through PartySubID(523), the reporting jurisdiction to which the party is obligated to report.
63	VolntyRptJurisdiction	Voluntary reporting jurisdiction. For a trade that falls under multiple jurisdictions this may be used to identify, through PartySubID(523), the regulatory jurisdiction to which the party is submitting a voluntary report.
64	CompanyActivities	Company activities. For regulatory reporting. ID values include: A = Assurance undertaking authorized in accordance with Directive 2002/83/EC C=Credit institution authorized in accordance with Directive 2006/48/EC F=Investment firm in accordance with Directive 2004/39/EC I=Insurance undertaking authorized in accordance with Directive 73/239/EC L=Alternative investment fund managed by AIFMs authorized or registered in accordance with Directive 2011/61/EC O=Institution for occupational retirement provision within the meaning of Article 6(a) of Directive 2003/41/EC R=Reinsurance undertaking authorized in accordance with Directive 2005/68/EC U=UCITS and its management company, authorized in accordance with Directive 2009/65/EC or blank in case of coverage by LEI or in case of non-financial counterparties. In the context of EU SFTR reporting use the appropriate 4- or 1-character code noted in the regulations. See SFTR ITS "Commission Implementing Regulation (EU) 2019/363" Annexes 1 and 2 for values.
65	EEAreaDomiciled	European Economic Area domiciled. ID values: Y or N
66	ContractLinked	Contract linked to commercial or treasury financing for this counterparty. ID values: Y or N
67	ContractAbove	Contract above clearing threshold for this counterparty. ID values: Y or N
68	VolntyRptPty	Voluntary reporting party. When PartySubID(523)=Y, identifies that the trading party is reporting voluntarily when VoluntaryRegulatoryReport(1935)=Y.
69	EndUser	End user. When PartySubID(523)=Y, the counterparty is neither the swap dealer, major swap participant nor financial entity as defined in the regulations.

Code	Name	Description
70	LocationOrJurisdiction	Location or jurisdiction. One or more instances may be used in combination with PartySubIDType(803) = 49 (Reporting entity indicator) or 102 (Data repository) to identify the jurisdiction, countries, regions or provinces for which the party is a reporting entity or data repository when that characteristic is ambiguous or where there are multiple locations. The party sub-ID value is either a jurisdiction acronym, a 2-character ISO 3166 country code, or a hyphenated combination of the country code and the standard post-office abbreviation for province, state or region if necessary. E.g. "US" for United States or "CA-QC" for Quebec Canada.
71	DerivativesDealer	Derivatives dealer. Indicates whether the party is a derivatives dealer or not (Y/N). The Canadian regulator's defined term for identifying the trade counterparty as "a person or company engaging in or holding himself, herself or itself out as engaging in the business of trading in derivatives in Ontario as principal or agent".
72	Domicile	Domicile. Country and optionally province, state or region of domicile. The party sub-ID value is either a 2-character ISO 3166 country code or a hyphenated combination of the country code and the standard post-office abbreviation of province, state or region if necessary. E.g. "US" for United States or "CA-QC" for Quebec Canada.
73	ExemptFromRecognition	Exempt from recognition. Used with party role 21 "Clearing Organization" to indicate exemption (Y/N). Identifies a clearing agency as exempt from oversight in Ontario, i.e. one that 1) only provides limited services and does not present significant risks or 2) is foreign-based, intends to operate in Ontario but is subject to regulatory oversight in another jurisdiction.
74	Payer	Payer. Identifies the party as the payer of a particular payment stream or bullet payment by quoting the stream's StreamDesc(40051) (or LegStreamDesc(40243) or UnderlyingStreamDesc(40542)) or payment's PaymentDesc(43087) in the associated party sub-identifier field.
75	Receiver	Receiver. Identifies the party as the receiver of a particular payment stream or bullet payment by quoting the stream's StreamDesc(40051) (or LegStreamDesc(40243) or UnderlyingStreamDesc(40542)) or payment's PaymentDesc(43087) in the associated party sub-identifier field.

Code	Name	Description
76	SystematicInternaliser	Systematic Internaliser (SI). In the context of ESMA reporting, this is used to indicate whether the specified party is a Systematic Internaliser or not for the security defined in the Instrument component (Y/N).
77	PublishingEntityIndicator	Publishing entity indicator. Indicates the entity obligated or delegated to publish to the market. Set PartySubID(523)=Y if true.
78	FirstName	First name. The first name(s) of a natural person. If multiple names, separate entries by a comma.
79	Surname	Surname. The surname(s) or lastname(s) of a natural person. If multiple names, separate entries by a comma.
80	DateOfBirth	Date of birth. The date of birth of a natural person in the format YYYYMMDD.
81	OrderTransmittingFirm	Order transmitting firm. Identifies whether the party specified in PartyID(448) is the firm that transmitted the order. In the context of RTS 22 Article 4, when "true" the PartySubID(523)=Y shall be set "by the transmitting firm within the transmitting firm's report where conditions for transmission specified in Article 4 were not satisfied."
82	OrderTransmittingFirmBuyer	Order transmitting firm for buyer. Identifies the firm that transmitted the order for the buyer. In the context of ESMA RTS 22, PartySubID(523)=Y is used to indicate the firm identified in PartyID(448) is the firm that transmitted the order for the buyer. "This shall be populated by the receiving firm within the receiving firm's report with the identification code provided by the transmitting firm."
83	OrderTransmitterSeller	Order transmitter for seller. Identifies the order transmitting firm for the seller. In the context of ESMA RTS 22, PartySubID(523)=Y is used to indicate the firm identified in PartyID(448) is the firm that transmitted the order for the seller. "This shall be populated by the receiving firm within the receiving firm's report with the identification code provided by the transmitting firm."
84	LegalEntityIdentifier	Legal Entity Identifier (ISO 17442) LEI
85	SubSectorClassification	Sub-sector classification. Supplemental to party sub-ID type "64" (Company activities) for regulatory reporting. For EU SFTR reporting use the appropriate 4-character code noted in the regulations applying the conditional association rules. See SFTR ITS "Commission Implementing Regulation (EU) 2019/363" Annexes 1 and 2 for values.

Code	Name	Description
86	PartySide	Party side. May be used, when appropriate, to explicitly indicate the transaction side of the party, e.g. Buyer, Seller, Lender, Borrower, Maker, Taker, etc. in the ID. In the context of EU SFTR reporting, use values as required by SFTR, "GIVE" and "TAKE" in the ID, to identify collateral giver and taker.
87	LegalRegistrationCountry	Legal registration country. ISO Country Code where the registered office of the party is located as specified in the LEI reference data.

Used in groups: [RequestingPartySubGrp](#)

### 171.2.4575 RequestResult

Result of a request as identified by the appropriate request ID field

Type: [int](#)

Allowed values in RequestResultCodeSet:

Code	Name	Description
0	ValidRequest	Valid request
1	InvalidOrUnsupportedRequest	Invalid or unsupported request
2	NoDataFound	No data found that match selection criteria
3	NotAuthorized	Not authorized to retrieve data
4	DataTemporarilyUnavailable	Data temporarily unavailable
5	RequestForDataNotSupported	Request for data not supported
99	Other	Other (further information in RejectText (1328) field)

Used in messages: [PartyDetailsListReport](#), [PartyEntitlementsReport](#), [PartyRiskLimitsReport](#)

### 171.2.4576 ResetSeqNumFlag

Indicates that both sides of the FIX session should reset sequence numbers.

Type: [Boolean](#)

Allowed values in ResetSeqNumFlagCodeSet:

Code	Name	Description
N	No	No
Y	Yes	Yes, reset sequence numbers

Used in messages: [Logon](#)

### 171.2.4577 RespondentType

Specifies the type of respondents requested.

Type: [int](#)

Allowed values in RespondentTypeCodeSet:

Code	Name	Description
1	AllMarketParticipants	All market participants
2	SpecifiedMarketParticipants	Specified market participants
3	AllMarketMakers	All Market Makers
4	PrimaryMarketMaker	Primary Market Maker(s)

Used in messages: [QuoteRequest](#), [QuoteRequestReject](#)

### 171.2.4578 ResponseDestination

URI (Uniform Resource Identifier) for details) or other pre-arranged value. Used in conjunction with ResponseTransportType (725) value of Out-of-Band to identify the out-of-band destination.

See "Appendix 6-B FIX Fields Based Upon Other Standards"

Type: [String](#)

Used in messages: [CollateralInquiry](#), [CollateralInquiryAck](#), [MarginRequirementInquiry](#), [MarginRequirementInquiryAck](#), [RequestForPositions](#), [RequestForPositionsAck](#), [TradeCaptureReportAck](#), [TradeCaptureReportRequest](#), [TradeCaptureReportRequestAck](#)

### 171.2.4579 ResponseTime

The time by which a meaningful response should arrive back (always expressed in UTC (Universal Time Coordinated, also known as "GMT")).

Type: [UTCTimestamp](#)

Used in groups: [QuotReqGrp](#)

### 171.2.4580 ResponseTransportType

Identifies how the response to the request should be transmitted.

Type: [int](#)

Allowed values in ResponseTransportTypeCodeSet:

---

Code	Name	Description
0	Inband	In-band (default). Transport of the request was sent over in-band.
1	OutOfBand	Out of band. Pre-arranged out-of-band delivery mechanism (e.g. FTP, HTTP, NDM, etc.) between counterparties. Details specified via ResponseDestination(726).

---

Used in messages: [CollateralInquiry](#), [CollateralInquiryAck](#), [MarginRequirementInquiry](#), [MarginRequirementInquiryAck](#), [RequestForPositions](#), [RequestForPositionsAck](#), [TradeCaptureReportAck](#), [TradeCaptureReportRequest](#), [TradeCaptureReportRequestAck](#)

### 171.2.4581 RestructuringType

A category of CDS credit event in which the underlying bond experiences a restructuring.

Used to define a CDS instrument.

Type: [String](#)

Allowed values in RestructuringTypeCodeSet:

---

Code	Name	Description
FR	FullRestructuring	Full Restructuring
MR	ModifiedRestructuring	Modified Restructuring
MM	ModifiedModRestructuring	Modified Mod Restructuring
XR	NoRestructuringSpecified	No Restructuring specified

---

Used in components: [Instrument](#)

**171.2.4582 ReturnRateAmountRelativeTo**

Specifies the reference amount when the return rate amount is relative to another amount in the trade.

See [http://www.fixtradingcommunity.org/codelists#Payment\\_Amount\\_Relative\\_To](http://www.fixtradingcommunity.org/codelists#Payment_Amount_Relative_To) for code list of relative amounts.

Type: **int**

Used in groups: **ReturnRateGrp**

**171.2.4583 ReturnRateCashFlowType**

Specifies the type of cash flows, e.g. coupon payment, premium fee, settlement fee, etc.

See <http://www.fpml.org/coding-scheme/cashflow-type> for values.

Type: **String**

Used in groups: **ReturnRateGrp**

**171.2.4584 ReturnRateCommissionAmount**

The commission amount.

Type: **Amt**

Used in groups: **ReturnRateGrp**

**171.2.4585 ReturnRateCommissionBasis**

Specifies the basis or unit used to calculate the commission.

Type: **char**

Allowed values in CommTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	PerUnit	Amount per unit. Implying shares, par, currency, physical unit etc. Use CommissionUnitOfMeasure(1238) to clarify for commodities.
2	Percent	Percent

---

Code	Name	Description
3	Absolute	Absolute. Total monetary amount.
4	PercentageWaivedCashDiscount	Percentage waived, cash discount basis. For use with CIV buy orders.
5	PercentageWaivedEnhancedUnits	Percentage waived, enhanced units basis. For use with CIV buy orders.
6	PointsPerBondOrContract	Points per bond or contract. Specify ContractMultiplier(231) in the Instrument component if the security is denominated in a size other than the market convention, e.g. 1000 par for bonds.
7	BasisPoints	Basis points. The commission is expressed in basis points in reference to the gross price of the reference asset.
8	AmountPerContract	Amount per contract. Specify ContractMultiplier(231) in the Instrument component if the security is denominated in a size other than the market convention.

Used in groups: [ReturnRateGrp](#)

#### 171.2.4586 ReturnRateCommissionCurrency

Specifies the currency the commission amount is denominated in. Uses ISO 4217 currency codes.

Type: [Currency](#)

Used in groups: [ReturnRateGrp](#)

#### 171.2.4587 ReturnRateDateGrp

ReturnRateDateGrp is a repeating subcomponent within the ReturnRateGrp component. It is used to specify the equity and dividend valuation dates for an equity return swap payment stream.

Name	Mult.	Type	Description
<a href="#">NoReturnRateDates</a>	[1..1]	NumInGroup	
<a href="#">ReturnRateDateMode</a>	[0..1]	CodeSet	Required if NoReturnRateDates(42709) > 0.
<a href="#">ReturnRateValuationDateGrp</a>	[0..*]	Group	
<a href="#">ReturnRateValuationDateRelativeTo</a>	[0..1]	int	
<a href="#">ReturnRateValuationDateOffsetPeriod</a>	[0..1]	int	Conditionally required when ReturnRateValuationDateOffsetUnit(42713) is specified.

Name	Mult.	Type	Description
ReturnRateValuationDateOffsetUnit	[0..1]	CodeSet	Conditionally required when ReturnRateValuationDateOffsetPeriod(42712) is specified.
ReturnRateValuationDateOffsetDayType	[0..1]	CodeSet	
ReturnRateValuationStartDateUnadjusted	[0..1]	LocalMktDate	
ReturnRateValuationStartDateRelativeTo	[0..1]	int	
ReturnRateValuationStartDateOffsetPeriod	[0..1]	int	Conditionally required when ReturnRateValuationStartDateOffsetUnit(42718) is specified.
ReturnRateValuationStartDateOffsetUnit	[0..1]	CodeSet	Conditionally required when ReturnRateValuationStartDateOffsetPeriod(42717) is specified.
ReturnRateValuationStartDateOffsetDayType	[0..1]	CodeSet	
ReturnRateValuationStartDateAdjusted	[0..1]	LocalMktDate	
ReturnRateValuationEndDateUnadjusted	[0..1]	LocalMktDate	
ReturnRateValuationEndDateRelativeTo	[0..1]	int	
ReturnRateValuationEndDateOffsetPeriod	[0..1]	int	Conditionally required when ReturnRateValuationEndDateOffsetUnit(42724) is specified.
ReturnRateValuationEndDateOffsetUnit	[0..1]	CodeSet	Conditionally required when ReturnRateValuationEndDateOffsetPeriod(42723) is specified.
ReturnRateValuationEndDateOffsetDayType	[0..1]	CodeSet	
ReturnRateValuationEndDateAdjusted	[0..1]	LocalMktDate	
ReturnRateValuationFrequencyPeriod	[0..1]	int	Conditionally required when ReturnRateValuationFrequencyUnit(42728) is specified.
ReturnRateValuationFrequencyUnit	[0..1]	CodeSet	Conditionally required when ReturnRateValuationFrequencyPeriod(42727) is specified.

Name	Mult.	Type	Description
<a href="#">ReturnRateValuationFrequencyRoll-Convention</a>	[0..1]	CodeSet	When specified, this overrides the date roll convention defined in the DateAdjustment component in Instrument. The specified values would be specific to this instance of the payment stream return rate valuation dates.
<a href="#">ReturnRateValuationDateBusinessDay-Convention</a>	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the DateAdjustment component in Instrument. The specified value would be specific to payment stream return rate valuation dates.
<a href="#">ReturnRateValuationDateBusinessCenterGrp</a>	[0..*]	Group	When specified, this overrides the business day convention defined in the DateAdjustment component in Instrument. The specified values would be specific to payment stream return rate valuation dates.

Used in groups: [ReturnRateGrp](#)

### 171.2.4588 ReturnRateDateMode

Specifies the valuation type applicable to the return rate date.

Type: [int](#)

Allowed values in ReturnRateDateModeCodeSet:

Code	Name	Description
0	PriceValuation	Price valuation
1	DividendValuation	Dividend valuation

Used in groups: [ReturnRateDateGrp](#)

### 171.2.4589 ReturnRateDeterminationMethod

Specifies the method by which the underlier prices are determined.

See <http://www.fpml.org/coding-scheme/determination-method> for values.

Type: [String](#)

Used in groups: [ReturnRateGrp](#)

**171.2.4590 ReturnRateFinalPriceFallback**

Specifies the fallback provision for the hedging party in the determination of the final price.

Type: **int**

Allowed values in ComplexEventPVFinalPriceElectionFallbackCodeSet:

Code	Name	Description
0	Close	Close. In respect of the "early final valuation date", the provisions for "future present value close" shall apply.
1	HedgeElection	Hedge election. In respect of the "early final valuation date", the provisions for "future present value hedge execution" shall apply.

Used in groups: **ReturnRateGrp**

**171.2.4591 ReturnRateFXConversionGrp**

ReturnRateFXConversionGrp is a repeating subcomponent within the ReturnRateGrp component. It is used to specify the FX conversion rates for an equity return swap payment stream.

Name	Mult.	Type	Description
<b>NoReturnRateFXConversions</b>	[1..1]	NumInGroup	
<b>ReturnRateFXCurrencySymbol</b>	[0..1]	String	Required if NoReturnRateFXConversions(42731) > 0.
<b>ReturnRateFXRate</b>	[0..1]	float	Required if NoReturnRateFXConversions(42731) > 0.
<b>ReturnRateFXRateCalc</b>	[0..1]	CodeSet	

Used in groups: **ReturnRateGrp**

**171.2.4592 ReturnRateFXCurrencySymbol**

Specifies the currency pair for the FX conversion expressed using the CCY1/CCY2 convention. Uses ISO 4217 currency codes.

Type: **String**

Used in groups: **ReturnRateFXConversionGrp**

**171.2.4593 ReturnRateFXRate**

The rate of exchange between the two currencies specified in ReturnRateFXCurrencySymbol(42732).

Type: **float**

Used in groups: **ReturnRateFXConversionGrp**

**171.2.4594 ReturnRateFXRateCalc**

Specifies whether ReturnRateFXRate(42733) should be multiplied or divided.

Type: **char**

Allowed values in SettlCurrFxRateCalcCodeSet:

Code	Name	Description
M	Multiply	Multiply
D	Divide	Divide

Used in groups: **ReturnRateFXConversionGrp**

**171.2.4595 ReturnRateGrp**

ReturnRateGrp is a repeating subcomponent within the PaymentStreamFloatingRate component. It is used to specify the multiple return rates for an equity return swap payment stream.

Name	Mult.	Type	Description
NoReturnRates	[1..1]	NumInGroup	
ReturnRatePriceSequence	[0..1]	CodeSet	Required if NoReturnRates(42735) > 0.
ReturnRateCommissionBasis	[0..1]	CodeSet	
ReturnRateCommissionAmount	[0..1]	Amt	
ReturnRateCommissionCurrency	[0..1]	Currency	If not specified, this is defaulted to the reporting currency.
ReturnRateTotalCommissionPerTrade	[0..1]	Amt	
ReturnRateDeterminationMethod	[0..1]	String	
ReturnRatePriceGrp	[0..*]	Group	
ReturnRateFXConversionGrp	[0..*]	Group	

Name	Mult.	Type	Description
ReturnRateAmountRelativeTo	[0..1]	int	
ReturnRateQuoteMeasureType	[0..1]	String	
ReturnRateQuoteUnits	[0..1]	String	
ReturnRateQuoteMethod	[0..1]	CodeSet	
ReturnRateQuoteCurrency	[0..1]	Currency	
ReturnRateQuoteCurrencyType	[0..1]	String	
ReturnRateQuoteTimeType	[0..1]	CodeSet	Mutually exclusive with ReturnRateQuoteTime(42749).
ReturnRateQuoteTime	[0..1]	LocalMktTime	Mutually exclusive with ReturnRateQuoteTimeType(42748).
ReturnRateQuoteDate	[0..1]	LocalMktDate	
ReturnRateQuoteExpirationTime	[0..1]	LocalMktTime	
ReturnRateQuoteBusinessCenter	[0..1]	String	
ReturnRateQuoteExchange	[0..1]	Exchange	
ReturnRateInformationSourceGrp	[0..*]	Group	
ReturnRateQuotePricingModel	[0..1]	String	
ReturnRateCashFlowType	[0..1]	String	
ReturnRateDateGrp	[0..*]	Group	
ReturnRateValuationTimeType	[0..1]	CodeSet	Mutually exclusive with ReturnRateValuationTime(42757).
ReturnRateValuationTime	[0..1]	LocalMktTime	Mutually exclusive with ReturnRateValuationTimeType(42756).
ReturnRateValuationTimeBusiness-Center	[0..1]	String	
ReturnRateValuationPriceOption	[0..1]	CodeSet	
ReturnRateFinalPriceFallback	[0..1]	CodeSet	

Used in components: [PaymentStreamFloatingRate](#)

### 171.2.4596 ReturnRateInformationSource

Identifies the source of rate information. For FX the references source to be used for the FX spot rate.

Type: `int`

Allowed values in RateSourceCodeSet:

Code	Name	Description
0	Bloomberg	Bloomberg
1	Reuters	Reuters
2	Telerate	Telerate
3	ISDARateOption	ISDA Settlement Rate Option. The source of the currency conversion as specified by the ISDA terms in Annex A to the 1998 FX and Currency Option Definitions. See <a href="http://www.fpml.org/coding-scheme/settlement-rate-option">http://www.fpml.org/coding-scheme/settlement-rate-option</a>
99	Other	Other

Used in groups: [ReturnRateInformationSourceGrp](#)

#### 171.2.4597 ReturnRateInformationSourceGrp

ReturnRateInformationSourceGrp is a repeating subcomponent within the ReturnRateGrp component. It is used to specify the information sources for equity prices and FX rates for an equity return swap payment stream.

Name	Mult.	Type	Description
<a href="#">NoReturnRateInformationSources</a>	[1..1]	NumInGroup	
<a href="#">ReturnRateInformationSource</a>	[0..1]	CodeSet	Required if <a href="#">NoReturnRateInformationSources(42761)</a> > 0.
<a href="#">ReturnRateReferencePage</a>	[0..1]	String	
<a href="#">ReturnRateReferencePageHeading</a>	[0..1]	String	

Used in groups: [ReturnRateGrp](#)

#### 171.2.4598 ReturnRateNotionalReset

Indicates whether the term "Equity Notional Reset" as defined in the ISDA 2002 Equity Derivatives Definitions is applicable ("Y") or not.

Type: [Boolean](#)

Used in components: [PaymentStreamFloatingRate](#)

**171.2.4599 ReturnRatePrice**

Specifies the price of the underlying swap asset.

Type: **Price**

Used in groups: **ReturnRatePriceGrp**

**171.2.4600 ReturnRatePriceBasis**

The basis of the return price.

Type: **int**

Allowed values in ReturnRatePriceBasisCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Gross	Gross.
1	Net	Net
2	Accrued	Accrued
3	CleanNet	Clean net

---

Used in groups: **ReturnRatePriceGrp**

**171.2.4601 ReturnRatePriceCurrency**

Specifies the currency of the price of the underlying swap asset. Uses ISO 4217 currency codes.

Type: **Currency**

Used in groups: **ReturnRatePriceGrp**

**171.2.4602 ReturnRatePriceGrp**

ReturnRatePriceGrp is a repeating subcomponent within the ReturnRateGrp component. It is used to specify the return rate prices for an equity return swap payment stream.

---

<b>Name</b>	<b>Mult.</b>	<b>Type</b>	<b>Description</b>
<b>NoReturnRatePrices</b>	[1..1]	NumInGroup	

---

Name	Mult.	Type	Description
ReturnRatePriceBasis	[0..1]	CodeSet	Required if NoReturnRatePrices(42765) > 0.
ReturnRatePrice	[0..1]	Price	
ReturnRatePriceCurrency	[0..1]	Currency	
ReturnRatePriceType	[0..1]	CodeSet	

Used in groups: [ReturnRateGrp](#)

### 171.2.4603 ReturnRatePriceSequence

Specifies the type of price sequence of the return rate.

Type: [int](#)

Allowed values in ReturnRatePriceSequenceCodeSet:

Code	Name	Description
0	Initial	Initial
1	Interim	Interim
2	Final	Final

Used in groups: [ReturnRateGrp](#)

### 171.2.4604 ReturnRatePriceType

Specifies whether the ReturnRatePrice(42767) is expressed in absolute or relative terms.

Type: [int](#)

Allowed values in ReturnRatePriceTypeCodeSet:

Code	Name	Description
0	AbsoluteTerms	Absolute terms
1	PercentageOfNotional	Percentage of notional

Used in groups: [ReturnRatePriceGrp](#)

#### **171.2.4605 ReturnRateQuoteBusinessCenter**

The business center calendar used for adjustments associated with ReturnRateQuoteTimeType(42748) or ReturnRateQuoteTime(42749) and ReturnRateQuoteDate(42750), e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **ReturnRateGrp**

#### **171.2.4606 ReturnRateQuoteCurrency**

Specifies the currency the return rate quote is denominated in. Uses ISO 4217 Currency Code.

Type: **Currency**

Used in groups: **ReturnRateGrp**

#### **171.2.4607 ReturnRateQuoteCurrencyType**

Specifies the type of currency, e.g. settlement currency, base currency, etc., that the quote is reported in.

See <http://www.fpml.org/coding-scheme/reporting-currency-type> for values.

Type: **String**

Used in groups: **ReturnRateGrp**

#### **171.2.4608 ReturnRateQuoteDate**

The date when the quote is to be generated.

Type: **LocalMktDate**

Used in groups: **ReturnRateGrp**

#### **171.2.4609 ReturnRateQuoteExchange**

Specifies the exchange (e.g. stock or listed futures/options exchange) from which the quote is obtained.

Type: **Exchange**

Used in groups: **ReturnRateGrp**

**171.2.4610 ReturnRateQuoteExpirationTime**

The time when the quote ceases to be valid.

Type: [LocalMktTime](#)

Used in groups: [ReturnRateGrp](#)

**171.2.4611 ReturnRateQuoteMeasureType**

Specifies the type of the measure applied to the return rate's asset, e.g. valuation, sensitivity risk. This could be an NPV, a cash flow, a clean price, etc.

See <http://www.fpml.org/coding-scheme/asset-measure> for values.

Type: [String](#)

Used in groups: [ReturnRateGrp](#)

**171.2.4612 ReturnRateQuoteMethod**

Specifies the type of quote used to determine the return rate of the swap.

Type: [int](#)

Allowed values in CashSettlQuoteMethodCodeSet:

---

Code	Name	Description
0	Bid	Bid
1	Mid	Mid
2	Offer	Offer

---

Used in groups: [ReturnRateGrp](#)

**171.2.4613 ReturnRateQuotePricingModel**

Specifies the pricing model used to evaluate the underlying asset price.

See <http://www.fpml.org/coding-scheme/pricing-model> for values.

Type: [String](#)

Used in groups: [ReturnRateGrp](#)

**171.2.4614 ReturnRateQuoteTime**

The time when the quote is to be generated.

Type: **LocalMktTime**

Used in groups: **ReturnRateGrp**

**171.2.4615 ReturnRateQuoteTimeType**

Specifies how or the timing when the quote is to be obtained.

Type: **int**

Allowed values in ReturnRateQuoteTimeTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Open	Open. The official opening time of the exchange on valuation date.
1	OfficialSettlPx	Official settlement price time. The time at which the official settlement price is determined.
2	Xetra	XETRA. The time at which the official settlement price (following the auction by the exchange) is determined by the exchange.
3	Close	Close. The official closing time of the exchange on valuation date.
4	DerivativesClose	Derivatives close. The official closing time for derivative trading of the exchange on valuation date.
5	High	High. The high price for the day.
6	Low	Low. The low price for the day.
7	AsSpecifiedInMasterConfirmation	As specified in the master confirmation

---

Used in groups: **ReturnRateGrp**

**171.2.4616 ReturnRateQuoteUnits**

Specifies the units that the measure is expressed in. If not specified, the default is a price/value in currency units.

See <http://www.fpml.org/coding-scheme/price-quote-units> for values.

Type: **String**

Used in groups: **ReturnRateGrp**

#### **171.2.4617 ReturnRateReferencePage**

Identifies the reference "page" from the rate source.

For FX, the reference page to the spot rate to be used for the reference FX spot rate.

When ReturnRateInformationSource(42762) = 3 (ISDA Settlement Rate Option) this contains the value from the scheme that reflects the terms of the Annex A to the ISDA 1998 FX and Currency Option Definitions.

See: <http://www.fpml.org/coding-scheme/settlement-rate-option>

Type: **String**

Used in groups: **ReturnRateInformationSourceGrp**

#### **171.2.4618 ReturnRateReferencePageHeading**

Identifies the page heading from the rate source.

Type: **String**

Used in groups: **ReturnRateInformationSourceGrp**

#### **171.2.4619 ReturnRateTotalCommissionPerTrade**

The total commission per trade.

Type: **Amt**

Used in groups: **ReturnRateGrp**

#### **171.2.4620 ReturnRateValuationDate**

The return rate valuation date. Type of date is specified in ReturnRateValuationDateType(42774).

Type: **LocalMktDate**

Used in groups: **ReturnRateValuationDateGrp**

#### **171.2.4621 ReturnRateValuationDateBusinessCenter**

The business center calendar used for date adjustment of the return rate valuation unadjusted or relative dates, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **ReturnRateValuationDateBusinessCenterGrp**

### 171.2.4622 ReturnRateValuationDateBusinessCenterGrp

ReturnRateValuationDateBusinessCenterGrp is a repeating subcomponent within the ReturnRateValuationDateGrp component. It is used to specify the valuation date business center adjustments for an equity return swap payment stream.

Name	Mult.	Type	Description
NoReturnRateValuationDateBusinessCenters	[1..1]	NumInGroup	
ReturnRateValuationDateBusinessCenter	[0..1]	String	Required if NoReturnRateValuationDateBusinessCenters(42770) > 0.

Used in groups: **ReturnRateDateGrp**

### 171.2.4623 ReturnRateValuationDateBusinessDayConvention

The return rate valuation dates business day convention.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in groups: **ReturnRateDateGrp**

**171.2.4624 ReturnRateValuationDateGrp**

ReturnRateValuationDateGrp is a repeating subcomponent within the ReturnRateDateGrp component. It is used to specify the fixed valuation dates for an equity return swap payment stream.

Name	Mult.	Type	Description
NoReturnRateValuationDates	[1..1]	NumInGroup	
ReturnRateValuationDate	[0..1]	LocalMktDate	Required if NoReturnRateValuationDates(42772) > 0.
ReturnRateValuationDateType	[0..1]	CodeSet	When specified it applies not only to the current date instance but to all subsequent date instances in the group until overridden when a new type is specified.

Used in groups: [ReturnRateDateGrp](#)

**171.2.4625 ReturnRateValuationDateOffsetDayType**

Specifies the day type of the relative return rate valuation date offset.

Type: [int](#)

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in groups: [ReturnRateDateGrp](#)

**171.2.4626 ReturnRateValuationDateOffsetPeriod**

Time unit multiplier for the relative return rate valuation date offset.

Type: **int**

Used in groups: **ReturnRateDateGrp**

#### **171.2.4627 ReturnRateValuationDateOffsetUnit**

Time unit associated with the relative return rate valuation date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in groups: **ReturnRateDateGrp**

#### **171.2.4628 ReturnRateValuationDateRelativeTo**

Specifies the anchor date when the return rate valuation dates are relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: **int**

Used in groups: **ReturnRateDateGrp**

#### **171.2.4629 ReturnRateValuationDateType**

Specifies the type of return rate valuation date (e.g. adjusted for holidays).

Type: **int**

Allowed values in NonDeliverableFixingDateTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Unadjusted	Unadjusted

---

---

Code	Name	Description
1	Adjusted	Adjusted

---

Used in groups: [ReturnRateValuationDateGrp](#)

#### **171.2.4630 ReturnRateValuationEndDateAdjusted**

The adjusted end date for return rate valuation. This can be used to restrict the range of dates when they are relative.

Type: [LocalMktDate](#)

Used in groups: [ReturnRateDateGrp](#)

#### **171.2.4631 ReturnRateValuationEndDateOffsetDayType**

Specifies the day type of the relative return rate valuation end date offset.

Type: [int](#)

Allowed values in [PaymentStreamPaymentDateOffsetDayTypeCodeSet](#):

---

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in groups: [ReturnRateDateGrp](#)

#### **171.2.4632 ReturnRateValuationEndDateOffsetPeriod**

Time unit multiplier for the relative return rate valuation end date offset.

Type: [int](#)

Used in groups: [ReturnRateDateGrp](#)

**171.2.4633 ReturnRateValuationEndDateOffsetUnit**

Time unit associated with the relative return rate valuation end date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in groups: **ReturnRateDateGrp**

**171.2.4634 ReturnRateValuationEndDateRelativeTo**

Specifies the anchor date when the return rate valuation end date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: **int**

Used in groups: **ReturnRateDateGrp**

**171.2.4635 ReturnRateValuationEndDateUnadjusted**

The unadjusted end date for return rate valuation. This can be used to restrict the range of dates when they are relative.

Type: **LocalMktDate**

Used in groups: **ReturnRateDateGrp**

**171.2.4636 ReturnRateValuationFrequencyPeriod**

Time unit multiplier for the frequency at which return rate valuation dates occur.

Type: **int**

Used in groups: **ReturnRateDateGrp**

**171.2.4637 ReturnRateValuationFrequencyRollConvention**

The convention for determining the sequence of return rate valuation dates. It is used in conjunction with a specified frequency.

Type: **String**

Allowed values in DateRollConventionCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	FirstDay	1st day of the month
2	SecondDay	2nd day of the month
3	ThirdDay	3rd day of the month
4	FourthDay	4th day of the month
5	FifthDay	5th day of the month
6	SixthDay	6th day of the month
7	SeventhDay	7th day of the month
8	EighthDay	8th day of the month
9	NinthDay	9th day of the month
10	TenthDay	10th day of the month
11	EleventhDay	11th day of the month
12	TwelvthDay	12th day of the month
13	ThirteenthDay	13th day of the month
14	ForteenthDay	14th day of the month
15	FifteenthDay	15th day of the month
16	SixteenthDay	16th day of the month
17	SeventeenthDay	17th day of the month
18	EighteenthDay	18th day of the month
19	NineteenthDay	19th day of the month
20	TwentiethDay	20th day of the month
21	TwentyFirstDay	21st day of the month
22	TwentySecondDay	22nd day of the month
23	TwentyThirdDay	23rd day of the month
24	TwentyFourthDay	24th day of the month
25	TwentyFifthDay	25th day of the month
26	TwentySixthDay	26th day of the month
27	TwentySeventhDay	27th day of the month
28	TwentyEighthDay	28th day of the month

---

Code	Name	Description
29	TwentyNinthDay	29th day of the month
30	ThirtiethDay	30th day of the month
EOM	EOM	The end of the month. Use EOM for 31st day of the month.
FRN	FRN	The floating rate note convention or Eurodollar convention.
IMM	IMM	The International Money Market settlement date, i.e. the 3rd Wednesday of the month.
IMMCAD	IMMCAD	The last trading day/expiration day of the Canadian Derivatives Exchange.
IMMAUD	IMMAUD	The last trading day of the Sydney Futures Exchange Australian 90-day bank accepted bill futures contract.
IMMNZD	IMMNZD	The last trading day of the Sydney Futures Exchange New Zealand 90-day bank bill futures contract.
SFE	SFE	The Sydney Futures Exchange 90-day bank accepted bill futures settlement dates.
NONE	NONE	No adjustment
TBILL	TBILL	The 13-week and 26-week U.S. Treasury Bill auction dates.
MON	MON	Monday
TUE	TUE	Tuesday
WED	WED	Wednesday
THU	THU	Thursday
FRI	FRI	Friday
SAT	SAT	Saturday
SUN	SUN	Sunday

Used in groups: [ReturnRateDateGrp](#)

### 171.2.4638 ReturnRateValuationFrequencyUnit

Time unit associated with the frequency at which return rate valuation dates occur.

Type: [String](#)

Allowed values in CouponFrequencyUnitCodeSet:

Code	Name	Description
D	Day	Day

---

Code	Name	Description
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year
H	Hour	Hour
Min	Minute	Minute
S	Second	Second
T	Term	Term

---

Used in groups: [ReturnRateDateGrp](#)

### **171.2.4639 ReturnRateValuationPriceOption**

Indicates whether an ISDA price option applies, and if applicable which type of price.

Type: [int](#)

Allowed values in ReturnRateValuationPriceOptionCodeSet:

---

Code	Name	Description
0	None	None (the default)
1	FuturesPrice	Futures price. The official settlement price as announced by the related futures exchange is applicable.
2	OptionsPrice	Options price. The official settlement price as announced by the related options exchange is applicable.

---

Used in groups: [ReturnRateGrp](#)

### **171.2.4640 ReturnRateValuationStartDateAdjusted**

The adjusted start date for return rate valuation. This can be used to restrict the range of dates when they are relative.

Type: [LocalMktDate](#)

Used in groups: [ReturnRateDateGrp](#)

**171.2.4641 ReturnRateValuationStartDateOffsetDayType**

Specifies the day type of the relative return rate valuation start date offset.

Type: **int**

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

---

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in groups: **ReturnRateDateGrp**

**171.2.4642 ReturnRateValuationStartDateOffsetPeriod**

Time unit multiplier for the relative return rate valuation start date offset.

Type: **int**

Used in groups: **ReturnRateDateGrp**

**171.2.4643 ReturnRateValuationStartDateOffsetUnit**

Time unit associated with the relative return rate valuation start date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in groups: **ReturnRateDateGrp**

**171.2.4644 ReturnRateValuationStartDateRelativeTo**

Specifies the anchor date when the return rate valuation start date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: **int**

Used in groups: **ReturnRateDateGrp**

**171.2.4645 ReturnRateValuationStartDateUnadjusted**

The unadjusted start date for return rate valuation. This can be used to restrict the range of dates when they are relative.

Type: **LocalMktDate**

Used in groups: **ReturnRateDateGrp**

**171.2.4646 ReturnRateValuationTime**

The time at which the calculation agent values the underlying asset.

Type: **LocalMktTime**

Used in groups: **ReturnRateGrp**

**171.2.4647 ReturnRateValuationTimeBusinessCenter**

The business center calendar used for adjustments associated with **ReturnRateValuationTime-  
Type(42756)** or **ReturnRateValuationTime(42757)**, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **ReturnRateGrp**

**171.2.4648 ReturnRateValuationTimeType**

Specifies the timing at which the calculation agent values the underlying.

Type: **int**

Allowed values in **ReturnRateQuoteTimeTypeCodeSet**:

Code	Name	Description
0	Open	Open. The official opening time of the exchange on valuation date.
1	OfficialSettlPx	Official settlement price time. The time at which the official settlement price is determined.
2	Xetra	XETRA. The time at which the official settlement price (following the auction by the exchange) is determined by the exchange.
3	Close	Close. The official closing time of the exchange on valuation date.
4	DerivativesClose	Derivatives close. The official closing time for derivative trading of the exchange on valuation date.
5	High	High. The high price for the day.
6	Low	Low. The low price for the day.
7	AsSpecifiedInMasterConfirmation	As specified in the master confirmation

Used in groups: [ReturnRateGrp](#)

### 171.2.4649 ReturnTrigger

Indicates the type of return or payout trigger for the swap or forward.

Type: [int](#)

Allowed values in ReturnTriggerCodeSet:

Code	Name	Description
1	Dividend	Dividend
2	Variance	Variance
3	Volatility	Volatility
4	TotalReturn	Total return
5	ContractForDifference	Contract for difference
6	CreditDefault	Credit default
7	SpreadBet	Spread bet
8	Price	Price
9	ForwardPriceUnderlyingInstrument	Forward price of underlying instrument
99	Other	Other

Used in components: [Instrument](#)

**171.2.4650 ReversalIndicator**

Indicates a trade that reverses a previous trade.

Type: **Boolean**

Used in messages: **AllocationInstruction, AllocationInstructionAlert, AllocationReport**

**171.2.4651 RFQReqGrp**

---

<b>Name</b>	<b>Mult.</b>	<b>Type</b>	<b>Description</b>
<b>NoRelatedSym</b>	[1..1]	NumInGroup	Number of related symbols (instruments) in Request
<b>Instrument</b>	[1..1]	Component	Insert here the set of "Instrument" (symbology) fields defined in "Common Components of Application Messages"
<b>UndInstrmtGrp</b>	[0..*]	Group	
<b>InstrmtLegGrp</b>	[0..*]	Group	
<b>PrevClosePx</b>	[0..1]	Price	Useful for verifying security identification
<b>QuoteRequestType</b>	[0..1]	CodeSet	Indicates the type of Quote Request (e.g. Manual vs. Automatic) being generated.
<b>QuoteType</b>	[0..1]	CodeSet	Type of quote being requested from counterparty or market (e.g. Indicative, Firm, or Restricted Tradeable)
<b>TradingSessionID</b>	[0..1]	CodeSet	
<b>TradingSessionSubID</b>	[0..1]	CodeSet	

---

Used in messages: **RFQRequest**

**171.2.4652 RFQReqID**

RFQ Request ID - used to identify an RFQ Request.

Type: **String**

Used in messages: **QuoteRequest, QuoteRequestReject, RFQRequest**

**171.2.4653 RgstDistInstGrp**

Name	Mult.	Type	Description
NoDistribInsts	[1..1]	NumInGroup	Number of Distribution instructions in this message (number of repeating groups to follow)
DistribPaymentMethod	[0..1]	CodeSet	Must be first field in the repeating group if NoDistribInsts > 0.
DistribPercentage	[0..1]	Percentage	
CashDistribCurr	[0..1]	Currency	
CashDistribAgentName	[0..1]	String	
CashDistribAgentCode	[0..1]	String	
CashDistribAgentAcctNumber	[0..1]	String	
CashDistribPayRef	[0..1]	String	
CashDistribAgentAcctName	[0..1]	String	

Used in messages: [RegistrationInstructions](#)

**171.2.4654 RgstDtlsGrp**

Name	Mult.	Type	Description
NoRegistDtls	[1..1]	NumInGroup	Number of registration details in this message (number of repeating groups to follow)
RegistDtls	[0..1]	String	Must be first field in the repeating group
RegistEmail	[0..1]	String	
MailingDtls	[0..1]	String	
MailingInst	[0..1]	String	
NestedParties	[0..*]	Group	Insert here the set of "Nested Parties" (firm identification "nested" within additional repeating group) fields defined in "Common Components of Application Messages". Used for NestedPartyRole=InvestorID
OwnerType	[0..1]	CodeSet	
DateOfBirth	[0..1]	LocalMktDate	
InvestorCountryOfResidence	[0..1]	Country	

Used in messages: [RegistrationInstructions](#)

**171.2.4655 Rho**

The security's value rate of change in response to a 1% change in (risk-free) interest rate. Measures the security's sensitivity to interest rate change.

Type: **float**

Used in groups: **SecurityRiskMetricGrp**

**171.2.4656 RiskFreeRate**

Interest rate. Usually some form of short term rate.

Type: **float**

Used in groups: **ClearingPriceParametersGrp**

Used in messages: **ExecutionReport**, **MultilegOrderCancelReplace**, **NewOrderMultileg**, **SecurityRiskMetricsReport**, **TradeCaptureReport**

**171.2.4657 RiskInstrumentMultiplier**

Multiplier applied to the transaction amount for comparison with risk limits. Default if not specified is 1.0.

Type: **float**

Used in groups: **RiskInstrumentScopeGrp**

**171.2.4658 RiskInstrumentScopeGrp**

Repeating group of InstrumentScope Components. Used to specify the instruments to which a request applies.

<b>Name</b>	<b>Mult.</b>	<b>Type</b>	<b>Description</b>
<b>NoRiskInstrumentScopes</b>	[1..1]	NumInGroup	
<b>InstrumentScopeOperator</b>	[0..1]	CodeSet	Required when NoRiskInstrumentScopes > 0.
<b>InstrumentScope</b>	[0..1]	Component	
<b>RiskInstrumentMultiplier</b>	[0..1]	float	

Used in groups: **RiskLimitsGrp**

Used in messages: **PartyRiskLimitsRequest**

**171.2.4659 RiskLimitAction**

Identifies the action to take or risk model to assume should risk limit be exceeded or breached for the specified party.

Type: **int**

Allowed values in RiskLimitActionCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	QueueInbound	Queue inbound
1	QueueOutbound	Queue outbound
2	Reject	Reject
3	Disconnect	Disconnect
4	Warning	Warning
5	PingCreditCheckWithRevalidation	Ping credit check model with revalidation. Each subsequent order, quote request or quote submission by the Credit. User must obtain pre-approval. Any open orders, quote requests or quotes are to be cancelled.
6	PingCreditCheckNoRevalidation	Ping credit check model without revalidation. Each subsequent order, quote request or quote submission by the Credit. User must obtain pre-approval. Any open orders, quote requests or quotes will remain active.
7	PushCreditCheckWithRevalidation	Push credit check model with revalidation. Each subsequent order, quote request or quote submission by the Credit. User must be checked against the limit amounts pushed to the trading platform. Any open orders, quote requests or quotes are. to be cancelled.
8	PushCreditCheckNoRevalidation	Push credit check model without revalidation. Each subsequent order, quote request or quote submission by the Credit. User must be checked against the limit amounts pushed to the trading platform. Any open orders, quote requests or quotes will. remain active.
9	Suspend	Suspend. Suspend the Credit User from trading once limit(s) is breached. This is. considered a "soft" stop.
10	HaltTrading	Halt trading. Halt or stop the Credit User from trading once limit(s) is breached. This is considered a "hard" stop and may require more involved actions to reinstate the Credit User's ability. to trade.

---

Used in groups: **RiskLimitTypesGrp**

#### **171.2.4660 RiskLimitAmount**

Specifies the risk limit amount.

Type: **Amt**

Used in groups: **RiskLimitTypesGrp**

#### **171.2.4661 RiskLimitApprovedAmount**

The credit/risk limit amount approved.

Type: **Amt**

Used in messages: **PartyRiskLimitCheckRequestAck**

#### **171.2.4662 RiskLimitCheckAmount**

Specifies the amount being requested for approval.

Type: **Amt**

Used in messages: **PartyRiskLimitCheckRequest, PartyRiskLimitCheckRequestAck**

#### **171.2.4663 RiskLimitCheckID**

The unique and static identifier, at the business entity level, of a risk limit check request.

Type: **String**

Used in messages: **PartyRiskLimitCheckRequest, PartyRiskLimitCheckRequestAck**

#### **171.2.4664 RiskLimitCheckModelType**

Specifies the type of credit limit check model workflow to apply for the specified party

Type: **int**

Allowed values in **RiskLimitCheckModelTypeCodeSet**:

Code	Name	Description
0	None	None (default if not specified). No specified limit check model is defined. Limit checks for the party will be based on parameters defined.
1	PlusOneModel	PlusOne model. A pre-trade credit limit check model which allows trades to occur until it is determined by the clearinghouse or other designated limit checker that the party's limit(s) was breached by the most recent trade executed.
2	PingModel	Ping model. A pre-trade credit limit check model which requires the execution venue to obtain limit approval from the Credit Provider for every transaction about to be conducted by the Credit User.
3	PushModel	Push model. A pre-trade credit limit check model in which the Credit Provider "pushes" to the execution venue the credit limit information allocated to each of the Credit Provider's counterparty or customer.

Used in groups: [PartyRiskLimitsAckGrp](#), [PartyRiskLimitsGrp](#), [PartyRiskLimitsUpdateGrp](#)

#### **171.2.4665 RiskLimitCheckRequestID**

The unique identifier of the PartyRiskLimitCheckRequest(35=DF) message.

Type: [String](#)

Used in messages: [PartyRiskLimitCheckRequest](#), [PartyRiskLimitCheckRequestAck](#)

#### **171.2.4666 RiskLimitCheckRequestRefID**

Specifies the message reference identifier of the risk limit check request message.

Type: [int](#)

Used in messages: [PartyRiskLimitCheckRequest](#), [PartyRiskLimitCheckRequestAck](#)

#### **171.2.4667 RiskLimitCheckRequestResult**

Result of the credit limit check request.

Type: [int](#)

Allowed values in RiskLimitCheckRequestResultCodeSet:

Code	Name	Description
0	Successful	Successful (default)
1	InvalidParty	Invalid party
2	ReqExceedsCreditLimit	Requested amount exceeds credit limit
3	ReqExceedsClipSizeLimit	Requested amount exceeds clip size limit
4	ReqExceedsMaxNotional	Request exceeds maximum notional order amount
99	Other	Other

Used in messages: [PartyRiskLimitCheckRequestAck](#)

### 171.2.4668 RiskLimitCheckRequestStatus

Indicates the status of the risk limit check request.

Type: [int](#)

Allowed values in RiskLimitCheckRequestStatusCodeSet:

Code	Name	Description
0	Approved	Approved. Request has been accepted and processed. The credit amount requested has been reserved for the transaction.
1	PartiallyApproved	Partially approved. Only a partial amount of the credit amount requested has been approved and has been reserved for the transaction.
2	Rejected	Rejected
3	ApprovalPending	Approval pending
4	Cancelled	Cancelled

Used in messages: [PartyRiskLimitCheckRequestAck](#)

### 171.2.4669 RiskLimitCheckRequestType

Specifies the type of limit amount check being requested.

Type: [int](#)

Allowed values in RiskLimitCheckRequestTypeCodeSet:

Code	Name	Description
0	AllOrNone	All or none (default if not specified). The limit check request is for the full amount requested or none at all. Request can only be responded to with a full approval of the amount requested or a rejection of the request.
1	Partial	Partial. The requester will accept a partial approval of the requested credit limit amount.

Used in messages: [PartyRiskLimitCheckRequest](#)

### 171.2.4670 RiskLimitCheckStatus

Indicates the status of the risk limit check performed on a trade.

Type: [int](#)

Allowed values in RiskLimitCheckStatusCodeSet:

Code	Name	Description
0	Accepted	Accepted. For use when none of the more specific status enumerations apply.
1	Rejected	Rejected. For use when none of the more specific status enumerations apply.
2	ClaimRequired	Claim required. Indicates that the clearing firm is required to accept or decline the trade.
3	PreDefinedLimitCheckSucceeded	Pre-defined limit check succeeded. Indicates a check enforced automatically by the clearing house.
4	PreDefinedLimitCheckFailed	Pre-defined limit check failed. Indicates a check enforced automatically by the clearing house.
5	PreDefinedAutoAcceptRuleInvoked	Pre-defined auto-accept rule invoked. Indicates that the clearing firm is required to accept or decline the trade because no limit or rule applies.
6	PreDefinedAutoRejectRuleInvoked	Pre-defined auto-reject rule invoked. Indicates a check enforced automatically by the clearing house. Note that clearing house rules of engagement may still require a clearing firm accept or reject the trade.
7	AcceptedByClearingFirm	Accepted by clearing firm. Indicates that explicit action by the clearing firm, and not an automatic check by the clearing house, was the basis for accepting the trade.

Code	Name	Description
8	RejectedByClearingFirm	Rejected by clearing firm. Indicates that explicit action by the clearing firm, and not an automatic check by the clearing house, was the basis for rejecting the trade.
9	Pending	Pending. Indicates that one or more side level risk checks are in progress.
10	AcceptedByCreditHub	Accepted by credit hub. Indicates that a credit hub accepted the trade. An identifier assigned by the credit hub may appear in the appropriate RefRiskLimitCheckID(2334) field.
11	RejectedByCreditHub	Rejected by credit hub. Indicates that a credit hub rejected the trade.
12	PendingCreditHubCheck	Pending credit hub check. Indicates that a check is pending at a credit hub.
13	AcceptedByExecVenue	Accepted by execution venue. Indicates acceptance by an execution venue, such as a SEF.
14	RejectedByExecVenue	Rejected by execution venue. Indicates that the trade was rejected by an execution venue, such as a SEF.

Used in messages: [AllocationInstruction](#), [AllocationReport](#), [TradeCaptureReport](#), [TradeCaptureReportAck](#)

### 171.2.4671 RiskLimitCheckTransType

Specifies the transaction type of the risk limit check request.

Type: [int](#)

Allowed values in RiskLimitCheckTransTypeCodeSet:

Code	Name	Description
0	New	New
1	Cancel	Cancel
2	Replace	Replace

Used in messages: [PartyRiskLimitCheckRequest](#), [PartyRiskLimitCheckRequestAck](#)

### 171.2.4672 RiskLimitCheckType

Specifies the type of limit check message.

Type: **int**

Allowed values in RiskLimitCheckTypeCodeSet:

---

Code	Name	Description
0	Submit	Submit. Indicates a submission for a limit check. The RiskLimitCheckTransType(2320) indicates whether the submission is a new request, a cancel or replace/amend of a prior submission.
1	LimitConsumed	Limit consumed. Indicates that the limit reserved by a prior request has been used or consumed by a transaction that occurred.

---

Used in messages: **PartyRiskLimitCheckRequest**, **PartyRiskLimitCheckRequestAck**

### **171.2.4673 RiskLimitCurrency**

Used to specify the currency of the risk limit amount.

Type: **Currency**

Used in groups: **RiskLimitTypesGrp**

### **171.2.4674 RiskLimitCurrencyCodeSource**

Identifies class or source of the RiskLimitCurrency(1532) value.

Type: **String**

Allowed values in CurrencyCodeSourceCodeSet:

---

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

---

Used in groups: [RiskLimitTypesGrp](#)

### **171.2.4675 RiskLimitID**

Unique reference identifier for a specific risk limit defined for the specified party.

Type: [String](#)

Used in groups: [PartyRiskLimitsAckGrp](#), [PartyRiskLimitsGrp](#), [PartyRiskLimitsUpdateGrp](#)

Used in messages: [PartyRiskLimitCheckRequest](#), [PartyRiskLimitCheckRequestAck](#)

### **171.2.4676 RiskLimitPlatform**

The area to which risk limit is applicable. This can be a trading platform or an offering.

Type: [String](#)

Used in groups: [RiskLimitTypesGrp](#)

Used in messages: [PartyRiskLimitsRequest](#)

### **171.2.4677 RiskLimitReportID**

Identifier for the PartyRiskLimitsReport

Type: [String](#)

Used in messages: [PartyRiskLimitsReport](#), [PartyRiskLimitsReportAck](#), [PartyRiskLimitsUpdateReport](#)

### **171.2.4678 RiskLimitReportRejectReason**

The reason for rejecting the PartyRiskLimitsReport(35=CM) or PartyRiskLimitsUpdateReport(35=CR).

Type: [int](#)

Allowed values in RiskLimitReportRejectReasonCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	UnkRiskLmtRprtID	Unknown RiskLimitReportID(1667)
1	UnkPty	Unknown party
99	Other	Other

---

Used in messages: [PartyRiskLimitsReportAck](#)

**171.2.4679 RiskLimitReportStatus**

Status of risk limit report.

Type: **int**

Allowed values in RiskLimitReportStatusCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Accepted	Accepted
1	Rejected	Rejected

---

Used in messages: **PartyRiskLimitsReportAck**

**171.2.4680 RiskLimitRequestID**

Unique identifier for the PartyRiskLimitsRequest

Type: **String**

Used in messages: **PartyRiskLimitsDefinitionRequest**, **PartyRiskLimitsDefinitionRequestAck**, **PartyRiskLimitsReport**, **PartyRiskLimitsReportAck**, **PartyRiskLimitsRequest**, **PartyRiskLimitsUpdateReport**

**171.2.4681 RiskLimitRequestResult**

Result of risk limit definition request.

Type: **int**

Allowed values in RiskLimitRequestResultCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Successful	Successful (default)
1	InvalidParty	Invalid party(-ies)
2	InvalidRelatedParty	Invalid related party(-ies)
3	InvalidRiskLimitType	Invalid risk limit type(s)
4	InvalidRiskLimitID	Invalid risk limit ID(s)
5	InvalidRiskLimitAmount	Invalid risk limit amount(s)

---

Code	Name	Description
6	InvalidRiskWarningLevelAction	Invalid risk/warning level action(s)
7	InvalidRiskInstrumentScope	Invalid risk instrument scope(s)
8	RiskLimitActionsNotSupported	Risk limit actions not supported
9	WarningLevelsNotSupported	Warning levels not supported
10	WarningLevelActionsNotSupported	Warning level actions not supported
11	RiskInstrumentScopeNotSupported	Risk instrument scope not supported
12	RiskLimitNotApprovedForParty	Risk limit not approved for party(-ies)
13	RiskLimitAlreadyDefinedForParty	Risk limit already defined for party(-ies)
14	InstrumentNotApprovedForParty	Instrument not approved for party(-ies)
98	NotAuthorized	Not authorized
99	Other	Other

---

Used in messages: [PartyRiskLimitsDefinitionRequestAck](#)

#### **171.2.4682 RiskLimitRequestStatus**

Status of risk limit definition request.

Type: [int](#)

Allowed values in [PartyDetailRequestStatusCodeSet](#):

Code	Name	Description
0	Accepted	Accepted
1	AcceptedWithChanges	Accepted with changes
2	Rejected	Rejected
3	AcceptancePending	Acceptance pending

---

Used in messages: [PartyRiskLimitsDefinitionRequestAck](#)

#### **171.2.4683 RiskLimitRequestType**

Type of risk limit information.

Type: [int](#)

Allowed values in RiskLimitRequestTypeCodeSet:

Code	Name	Description
1	Definitions	Definitions(Default)
2	Utilization	Utilization
3	DefinitionsAndUtilizations	Definitions and utilization

Used in messages: [PartyRiskLimitsReport](#), [PartyRiskLimitsRequest](#), [PartyRiskLimitsUpdateReport](#)

### 171.2.4684 RiskLimitResult

Result of risk limit definition for one party.

Type: **int**

Allowed values in RiskLimitRequestResultCodeSet:

Code	Name	Description
0	Successful	Successful (default)
1	InvalidParty	Invalid party(-ies)
2	InvalidRelatedParty	Invalid related party(-ies)
3	InvalidRiskLimitType	Invalid risk limit type(s)
4	InvalidRiskLimitID	Invalid risk limit ID(s)
5	InvalidRiskLimitAmount	Invalid risk limit amount(s)
6	InvalidRiskWarningLevelAction	Invalid risk/warning level action(s)
7	InvalidRiskInstrumentScope	Invalid risk instrument scope(s)
8	RiskLimitActionsNotSupported	Risk limit actions not supported
9	WarningLevelsNotSupported	Warning levels not supported
10	WarningLevelActionsNotSupported	Warning level actions not supported
11	RiskInstrumentScopeNotSupported	Risk instrument scope not supported
12	RiskLimitNotApprovedForParty	Risk limit not approved for party(-ies)
13	RiskLimitAlreadyDefinedForParty	Risk limit already defined for party(-ies)
14	InstrumentNotApprovedForParty	Instrument not approved for party(-ies)
98	NotAuthorized	Not authorized
99	Other	Other

Used in groups: [PartyRiskLimitsAckGrp](#)

**171.2.4685 RiskLimitsGrp**

Repeating group of risk limits.

Name	Mult.	Type	Description
NoRiskLimits	[1..1]	NumInGroup	
RiskLimitTypesGrp	[0..*]	Group	Required if NoRiskLimits(1669) > 0.
RiskInstrumentScopeGrp	[0..*]	Group	

Used in groups: [PartyRiskLimitsAckGrp](#), [PartyRiskLimitsGrp](#), [PartyRiskLimitsUpdateGrp](#)

**171.2.4686 RiskLimitStatus**

Status of risk limit definition for one party.

Type: [int](#)

Allowed values in PartyDetailDefinitionStatusCodeSet:

Code	Name	Description
0	Accepted	Accepted
1	AcceptedWithChanges	Accepted with changes
2	Rejected	Rejected

Used in groups: [PartyRiskLimitsAckGrp](#)

**171.2.4687 RiskLimitType**

Used to specify the type of risk limit amount or position limit quantity or margin requirement amounts.

Type: [int](#)

Allowed values in RiskLimitTypeCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	CreditLimit	Credit limit. The credit limit provided by one party to another for trading.
1	GrossLimit	Gross limit
2	NetLimit	Net limit
3	Exposure	Exposure
4	LongLimit	Long limit
5	ShortLimit	Short limit
6	CashMargin	Cash margin
7	AdditionalMargin	Additional margin
8	TotalMargin	Total margin
9	LimitConsumed	Limit consumed. The limit used in the recent transaction.
10	ClipSize	Clip size/notional limit per time period. The total notional amount limit allowed to be executed within a defined period of time or velocity. The defined period of time may be specified by the RiskLimitVelocityPeriod(2336) and RiskLimitVelocityUnit(2337).
11	MaxNotionalOrderSize	Maximum notional order size
12	DV01PV01Limit	DV01/PV01 limit. The maximum dollar value change resulting from a move of 1 basis point in the yield curve. This limits the interest rate risk exposure. Also known as "basis point value" or BPV.
13	CS01Limit	CS01 limit. Credit spread sensitivity. Represents the change in market value of a CDS for a one basis point change in the credit spread. This limits the credit risk exposure of a CDS. Also known as "risky-DV01".
14	VolumeLimitPerTimePeriod	Volume limit per time period. The total number of shares, bonds or contracts allowed to be executed within a defined period of time or velocity. The defined period of time may be specified by the RiskLimitVelocityPeriod(2336) and RiskLimitVelocityUnit(2337).
15	VolFilledPctOrdVolTmPeriod	Volume filled as percent of ordered volume per time period. The total number of shares, bonds or contracts executed as a percentage of the total ordered shares, contracts or notional amount for a specified security, instrument, symbol, or underlying, over a defined period of time or velocity. The defined period of time may be specified by the RiskLimitVelocityPeriod(2336) and RiskLimitVelocityUnit(2337).

Code	Name	Description
16	NotlFilledPctNotlTmPeriod	Notional filled as percent of notional per time period. The total notional amount executed as a percentage of the total ordered shares, contracts or notional amount for a specified security, instrument, symbol, or underlying, over a defined period of time or velocity. The defined period of time may be specified by the RiskLimitVelocityPeriod(2336) and RiskLimitVelocityUnit(2337).
17	TransactionExecutionLimitPer-TimePeriod	Transaction/execution limit per time period. The total number of transactions or execution fills allowed within a defined period of time or velocity. The defined period of time may be specified by the RiskLimitVelocityPeriod(2336) and RiskLimitVelocityUnit(2337).

Used in groups: [RequestedRiskLimitTypesGrp](#), [RiskLimitTypesGrp](#)

### 171.2.4688 RiskLimitTypesGrp

Repeating group of risk limit types and values.

Name	Mult.	Type	Description
<a href="#">NoRiskLimitTypes</a>	[1..1]	NumInGroup	
<a href="#">RiskLimitType</a>	[0..1]	CodeSet	Required if NoRiskLimitTypes(1529) > 0.
<a href="#">RiskLimitAmount</a>	[0..1]	Amt	
<a href="#">RiskLimitAction</a>	[0..1]	CodeSet	
<a href="#">RiskLimitUtilizationAmount</a>	[0..1]	Amt	Not applicable in a request.
<a href="#">RiskLimitUtilizationPercent</a>	[0..1]	Percentage	Not applicable in a request.
<a href="#">RiskLimitCurrency</a>	[0..1]	Currency	
<a href="#">RiskLimitCurrencyCodeSource</a>	[0..1]	CodeSet	
<a href="#">RiskLimitPlatform</a>	[0..1]	String	
<a href="#">RiskLimitVelocityPeriod</a>	[0..1]	int	Conditionally required when RiskLimitType(1530) = 10 (Clip size)
<a href="#">RiskLimitVelocityUnit</a>	[0..1]	CodeSet	
<a href="#">RiskWarningLevelGrp</a>	[0..*]	Group	

Used in groups: [RiskLimitsGrp](#)

**171.2.4689 RiskLimitUtilizationAmount**

Absolute amount of utilization of a party's set risk limit.

Type: **Amt**

Used in groups: **RiskLimitTypesGrp**

**171.2.4690 RiskLimitUtilizationPercent**

Percentage of utilization of a party's set risk limit.

Type: **Percentage**

Used in groups: **RiskLimitTypesGrp**

**171.2.4691 RiskLimitVelocityPeriod**

The time interval for which the clip size limit applies. The velocity time unit is expressed in RiskLimitVelocityUnit(2337).

Type: **int**

Used in groups: **RiskLimitTypesGrp**

**171.2.4692 RiskLimitVelocityUnit**

Unit of time in which RiskLimitVelocityPeriod(2336) is expressed.

Type: **String**

Allowed values in TimeUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
H	Hour	Hour
Min	Minute	Minute
S	Second	Second
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year
Q	Quarter	Quarter

---

---

Code	Name	Description
EOM	EndOfMonth	End of Month. End of Month identifies a relative time unit, e.g. until the third Friday of each month.
F	Flexible	Flexible. A flexible time unit indicates that a specific time unit for the contract is currently undetermined.

---

Used in groups: [RiskLimitTypesGrp](#)

### 171.2.4693 RiskMetricsSecurityGroup

Describes a group of related instruments for which risk metrics are provided.

Type: [String](#)

Used in messages: [SecurityRiskMetricsReport](#)

### 171.2.4694 RiskMetricsSecuritySubGroup

Describes a sub-group of a group identified by [RiskMetricsSecurityGroup\(2989\)](#).

Type: [String](#)

Used in messages: [SecurityRiskMetricsReport](#)

### 171.2.4695 RiskWarningLevelAction

Action to take should warning level be exceeded.

Type: [int](#)

Allowed values in [RiskLimitActionCodeSet](#):

---

Code	Name	Description
0	QueueInbound	Queue inbound
1	QueueOutbound	Queue outbound
2	Reject	Reject
3	Disconnect	Disconnect
4	Warning	Warning

---

Code	Name	Description
5	PingCreditCheckWithRevalidation	Ping credit check model with revalidation. Each subsequent order, quote request or quote submission by the Credit. User must obtain pre-approval. Any open orders, quote requests or quotes are to be cancelled.
6	PingCreditCheckNoRevalidation	Ping credit check model without revalidation. Each subsequent order, quote request or quote submission by the Credit. User must obtain pre-approval. Any open orders, quote requests or quotes will remain active.
7	PushCreditCheckWithRevalidation	Push credit check model with revalidation. Each subsequent order, quote request or quote submission by the Credit. User must be checked against the limit amounts pushed to the trading platform. Any open orders, quote requests or quotes are. to be cancelled.
8	PushCreditCheckNoRevalidation	Push credit check model without revalidation. Each subsequent order, quote request or quote submission by the Credit. User must be checked against the limit amounts pushed to the trading platform. Any open orders, quote requests or quotes will. remain active.
9	Suspend	Suspend. Suspend the Credit User from trading once limit(s) is breached. This is. considered a "soft" stop.
10	HaltTrading	Halt trading. Halt or stop the Credit User from trading once limit(s) is breached. This is considered a "hard" stop and may require more involved actions to reinstate the Credit User's ability. to trade.

---

Used in groups: [RiskWarningLevelGrp](#)

#### **171.2.4696 RiskWarningLevelAmount**

Amount at which a warning is issued.

Type: [int](#)

Used in groups: [RiskWarningLevelGrp](#)

#### **171.2.4697 RiskWarningLevelGrp**

Risk warning levels.

Name	Mult.	Type	Description
NoRiskWarningLevels	[1..1]	NumInGroup	
RiskWarningLevelAction	[0..1]	CodeSet	Required if NoRiskWarningLevels(1559) > 0.
RiskWarningLevelPercent	[0..1]	Percentage	Conditionally required when RiskWarningLevelAmount(1768) is not provided.
RiskWarningLevelAmount	[0..1]	int	Conditionally required when RiskWarningLevelPercent(1560) is not provided.
RiskWarningLevelName	[0..1]	String	

---

Used in groups: [RiskLimitTypesGrp](#)

#### **171.2.4698 RiskWarningLevelName**

Name or error message associated with the risk warning level.

Type: [String](#)

Used in groups: [RiskWarningLevelGrp](#)

#### **171.2.4699 RiskWarningLevelPercent**

Percent of risk limit at which a warning is issued.

Type: [Percentage](#)

Used in groups: [RiskWarningLevelGrp](#)

#### **171.2.4700 RndPx**

Specifies average price rounded to quoted precision.

Type: [Price](#)

Used in messages: [AllocationInstruction](#), [AllocationInstructionAlert](#), [AllocationReport](#), [TradeCaptureReport](#), [TradeCaptureReportAck](#)

#### **171.2.4701 RootParties**

The RootParties component block is a version of the Parties component block used to provide root information regarding the owning and entering parties of a transaction.

Name	Mult.	Type	Description
NoRootPartyIDs	[1..1]	NumInGroup	Repeating group below should contain unique combinations of RootPartyID, RootPartyIDSource, and RootPartyRole
RootPartyID	[0..1]	String	Used to identify source of RootPartyID. Required if RootPartyIDSource is specified. Required if NoRootPartyIDs > 0.
RootPartyIDSource	[0..1]	CodeSet	Used to identify class source of RootPartyID value (e.g. BIC). Required if RootPartyID is specified. Required if NoRootPartyIDs > 0.
RootPartyRole	[0..1]	CodeSet	Identifies the type of RootPartyID (e.g. Executing Broker). Required if NoRootPartyIDs > 0.
RootPartyRoleQualifier	[0..1]	CodeSet	
RootSubParties	[0..*]	Group	Repeating group of RootParty sub-identifiers.

Used in messages: [CrossOrderCancelReplaceRequest](#), [CrossOrderCancelRequest](#), [NewOrderCross](#), [NewOrderList](#), [QuoteRequest](#), [QuoteRequestReject](#), [TradeCaptureReport](#), [TradeCaptureReportAck](#)

### 171.2.4702 RootPartyID

PartyID value within a root parties component. Same values as PartyID (448)

Type: [String](#)

Used in groups: [RootParties](#)

### 171.2.4703 RootPartyIDSource

PartyIDSource value within a root parties component. Same values as PartyIDSource (447)

Type: [char](#)

Allowed values in PartyIDSourceCodeSet:

Code	Name	Description
1	KoreanInvestorID	Korean Investor ID
6	UKNationalInsuranceOrPension-Number	UK National Insurance or Pension Number

<b>Code</b>	<b>Name</b>	<b>Description</b>
B	BIC	BIC (Bank Identification Code - SWIFT managed) code (ISO9362 - See "Appendix 6-B")
I	ISITCAcronym	Directed broker three character acronym as defined in ISITC "ETC Best Practice" guidelines document
2	TaiwaneseForeignInvestorID	Taiwanese Qualified Foreign Investor ID QFII/FID
7	USSocialSecurityNumber	US Social Security Number
C	GeneralIdentifier	Generally accepted market participant identifier (e.g. NASD mnemonic)
3	TaiwaneseTradingAcct	Taiwanese Trading Acct
8	USEmployerOrTaxIDNumber	US Employer or Tax ID Number
D	Proprietary	Proprietary / Custom code. Custom ID schema used between counterparties, trading platforms and repositories.
4	MalaysianCentralDepository	Malaysian Central Depository (MCD) number
9	AustralianBusinessNumber	Australian Business Number
E	ISOCountryCode	ISO Country Code
5	ChineseInvestorID	Chinese Investor ID
A	AustralianTaxFileNumber	Australian Tax File Number
F	SettlementEntityLocation	Settlement Entity Location (note if Local Market Settlement use "E=ISO Country Code") (see "Appendix 6-G" for valid values)
G	MIC	Market Identifier Code (ISO 10383) MIC
J	TaxID	Tax ID
H	CSDParticipant	CSD participant/member code (e.g. Euroclear, DTC, CREST or Kassenverein number)
K	AustralianCompanyNumber	Australian Company Number
L	AustralianRegisteredBodyNumber	Australian Registered Body Number
M	CFTCReportingFirmIdentifier	CFTC reporting firm identifier
N	LegalEntityIdentifier	Legal Entity Identifier (ISO 17442) LEI
O	InterimIdentifier	Interim identifier. An interim entity identifier assigned by a regulatory agency prior to an LEI (ISO 17442) being assigned.
P	ShortCodeIdentifier	Short code identifier. A generic means for trading venues, brokers, investment managers to convey a bilaterally agreed upon "short hand" code for an identifier that is a reference to a mapping between the parties.

Code	Name	Description
Q	NationalIDNaturalPerson	National ID of natural person. An identification number generally assigned by a government authority or agency to a natural person which is unique to the person it is assigned to. Examples include, but not limited to, "social security number", "pension number".
R	IndiaPermanentAccountNumber	India Permanent Account Number. Also referred to as PAN ID. An identifier issued by the Income Tax Department of India.
S	FDID	Firm designated identifier. Also referred to as FDID. A unique identifier required by the SEC for each trading account designated by Industry Members for purposes of reporting to CAT (Consolidated Audit Trail).
T	SPSAID	Special Segregated Account ID. Also referred to as SPSA ID. The Special Segregated Account identifier issued by Hong Kong Exchanges and Clearing.
U	MasterSPSAID	Master Special Segregated Account ID. Also referred to as Master SPSA ID. The master identifier issued by Hong Kong Exchanges and Clearing for the aggregation of SPSA IDs.

Used in groups: [RootParties](#)

### 171.2.4704 RootPartyRole

PartyRole value within a root parties component. Same values as PartyRole (452)

Type: [int](#)

Allowed values in PartyRoleCodeSet:

Code	Name	Description
1	ExecutingFirm	Executing Firm (formerly FIX 4.2 ExecBroker)
2	BrokerOfCredit	Broker of Credit (formerly FIX 4.2 BrokerOfCredit)
3	ClientID	Client ID (formerly FIX 4.2 ClientID)
4	ClearingFirm	Clearing Firm (formerly FIX 4.2 ClearingFirm)
5	InvestorID	Investor ID
6	IntroducingFirm	Introducing Firm
7	EnteringFirm	Entering Firm
8	Locate	Locate / Lending Firm (for short-sales)
9	FundManagerClientID	Fund Manager Client ID (for CIV)

<b>Code</b>	<b>Name</b>	<b>Description</b>
10	SettlementLocation	Settlement Location (formerly FIX 4.2 SettlLocation)
11	OrderOriginationTrader	Order Origination Trader (associated with Order Origination Firm - i.e. trader who initiates/submits the order)
12	ExecutingTrader	Executing Trader (associated with Executing Firm - actually executes)
13	OrderOriginationFirm	Order Origination Firm (e.g. buy-side firm)
14	GiveupClearingFirmDepr	Giveup Clearing Firm (firm to which trade is given up)
15	CorrespondantClearingFirm	Correspondant Clearing Firm
16	ExecutingSystem	Executing System
17	ContraFirm	Contra Firm
18	ContraClearingFirm	Contra Clearing Firm
19	SponsoringFirm	Sponsoring Firm
20	UnderlyingContraFirm	Underlying Contra Firm
21	ClearingOrganization	Clearing Organization
22	Exchange	Exchange. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
24	CustomerAccount	Customer Account
25	CorrespondentClearingOrganization	Correspondent Clearing Organization
26	CorrespondentBroker	Correspondent Broker
27	Buyer	Buyer/Seller (Receiver/Deliverer)
28	Custodian	Custodian
29	Intermediary	Intermediary
30	Agent	Agent
31	SubCustodian	Sub-custodian
32	Beneficiary	Beneficiary
33	InterestedParty	Interested party
34	RegulatoryBody	Regulatory body. In the context of regulatory reporting, this identifies the regulator the trade is being reported to.
35	LiquidityProvider	Liquidity provider
36	EnteringTrader	Entering trader
37	ContraTrader	Contra trader
38	PositionAccount	Position account. The account which positions are maintained. Typically represents the aggregation of one or more customer accounts.
39	ContraInvestorID	Contra Investor ID
40	TransferToFirm	Transfer to Firm

<b>Code</b>	<b>Name</b>	<b>Description</b>
41	ContraPositionAccount	Contra Position Account
42	ContraExchange	Contra Exchange
43	InternalCarryAccount	Internal Carry Account
44	OrderEntryOperatorID	Order Entry Operator ID
45	SecondaryAccountNumber	Secondary Account Number
46	ForeignFirm	Foreign Firm
47	ThirdPartyAllocationFirm	Third Party Allocation Firm
48	ClaimingAccount	Claiming Account
49	AssetManager	Asset Manager
50	PledgorAccount	Pledgor Account
51	PledgeeAccount	Pledgee Account
52	LargeTraderReportableAccount	Large Trader Reportable Account
53	TraderMnemonic	Trader mnemonic
54	SenderLocation	Sender Location
55	SessionID	Session ID
56	AcceptableCounterparty	Acceptable Counterparty
57	UnacceptableCounterparty	Unacceptable Counterparty
58	EnteringUnit	Entering Unit
59	ExecutingUnit	Executing Unit
60	IntroducingBroker	Introducing Broker
61	QuoteOriginator	Quote originator
62	ReportOriginator	Report originator
63	SystematicInternaliser	Systematic internaliser (SI)
64	MultilateralTradingFacility	Multilateral Trading Facility (MTF). Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
65	RegulatedMarket	Regulated Market (RM). Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
66	MarketMaker	Market Maker
67	InvestmentFirm	Investment Firm
68	HostCompetentAuthority	Host Competent Authority (Host CA)
69	HomeCompetentAuthority	Home Competent Authority (Home CA)
70	CompetentAuthorityLiquidity	Competent Authority of the most relevant market in terms of liquidity (CAL)

Code	Name	Description
71	CompetentAuthorityTransactionVenue	Competent Authority of the Transaction (Execution) Venue (CATV)
72	ReportingIntermediary	Reporting intermediary. The medium or vendor used to report to a regulator, non-regulatory agency or data repository.
73	ExecutionVenue	Execution Venue. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
74	MarketDataEntryOriginator	Market data entry originator
75	LocationID	Location ID
76	DeskID	Desk ID
77	MarketDataMarket	Market data market
78	AllocationEntity	Allocation Entity
79	PrimeBroker	Prime Broker providing General Trade Services
80	StepOutFirm	Step-Out Firm (Prime Broker)
81	BrokerClearingID	Broker clearing identifier
82	CentralRegistrationDepository	Central Registration Depository (CRD)
83	ClearingAccount	Clearing Account
84	AcceptableSettlingCounterparty	Acceptable Settling Counterparty
85	UnacceptableSettlingCounterparty	Unacceptable Settling Counterparty
86	CLSMemberBank	CLS Member Bank
87	InConcertGroup	In Concert Group
88	InConcertControllingEntity	In Concert Controlling Entity
89	LargePositionsReportingAccount	Large Positions Reporting Account
90	SettlementFirm	Settlement Firm
91	SettlementAccount	Settlement account. The account to which individual payment obligations are aggregated for netting and funds movement. Typically represents the aggregation of many margin (performance bond) accounts.
92	ReportingMarketCenter	Reporting Market Center
93	RelatedReportingMarketCenter	Related Reporting Market Center
94	AwayMarket	Away Market. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
95	GiveupTradingFirm	Give-up (trading) firm
96	TakeupTradingFirm	Take-up (trading) firm
97	GiveupClearingFirm	Give-up clearing firm
98	TakeupClearingFirm	Take-up clearing firm

<b>Code</b>	<b>Name</b>	<b>Description</b>
99	OriginatingMarket	Originating Market. Identifies the Market using PartyIDSource(tag 447) = G (Market Identifier Code) where an order originated in the event that the order is sent to an alternative market for execution. Serves as an inverse of an away market.
100	MarginAccount	Margin account. Also referred to as "performance bond account". The margin account is the calculated margin requirements. Typically represents the aggregation of one or more position accounts.
101	CollateralAssetAccount	Collateral asset account. The account at which individual collateral assets are maintained. Typically, although not always, one-for-one with the settlement account.
102	DataRepository	Data repository. Multiple instances of this PartyRole may appear for reporting purposes.
103	CalculationAgent	Calculation agent
104	ExerciseNoticeSender	Sender of exercise notice
105	ExerciseNoticeReceiver	Receiver of exercise notice
106	RateReferenceBank	Rate reference bank. The bank providing the reference rate. Multiple instance of this PartyRole may appear.
107	Correspondent	Correspondent
109	BeneficiaryBank	Beneficiary's bank or depository institution. The institution in which the beneficiary, a person or an entity, has their account with. The institution may be a bank or non-bank institution.
110	Borrower	Borrower
111	PrimaryObligator	Primary obligator
112	Guarantor	Guarantor
113	ExcludedReferenceEntity	Excluded reference entity
114	DeterminingParty	Determining party
115	HedgingParty	Hedging party
116	ReportingEntity	Reporting entity. The entity that is reporting the information.
117	SalesPerson	Sales person. The person who is involved in the sales activities for their firm.
118	Operator	Operator. The person who has the capabilities and authorization to take certain actions; for example, setting entitlements, etc.
119	CSD	Central Securities Depository (CSD)
120	ICSD	International Central Securities Depository (ICSD)

Code	Name	Description
121	TradingSubAccount	Trading sub-account. Example of sub-accounts include a clearing account that has multiple trading sub-accounts, a trading account that has multiple trading sub-accounts belonging to different trading firms.
122	InvestmentDecisionMaker	Investment decision maker. In the context of ESMA RTS reporting, this is used to specify party responsible for the investment decision. See RTS 24, Annex, Table 2, Field 4.
123	PublishingIntermediary	Publishing intermediary. The medium or vendor used to publish to the market.
124	CSDParticipant	Central Securities Depository (CSD) Participant. In the context of EU SFTR reporting the identifier of the CSD participant or indirect participant of the reporting counterparty. Where both the CSD participant and indirect participant are involved in the transaction this should identify the indirect participant.
125	Issuer	Issuer. The issuer of the security.
126	ContraCustomerAccount	Contra Customer Account. Same as PartyRole(452) = 24 (Customer Account) but for the counterparty. Can be used whenever the parties component is not nested in a repeating group representing both sides.
127	ContraInvestmentDecisionMaker	Contra Investment Decision Maker. Same as PartyRole(452) = 122 (Investment Decision Maker) but for the counterparty. Can be used whenever the parties component is not nested in a repeating group representing both sides.

Used in groups: [RootParties](#)

### 171.2.4705 RootPartyRoleQualifier

Used to further qualify the value of RootPartyRole(1119).

Type: [int](#)

Allowed values in PartyDetailRoleQualifierCodeSet:

Code	Name	Description
0	Agency	Agency
1	Principal	Principal
2	RisklessPrincipal	Riskless principal
3	GeneralClearingMember	General clearing member

Code	Name	Description
30	ExchangeOrderSubmitter	Exchange order submitter. Used to identify original or initial exchange order submitting broker when party role "1" (Executing Firm) appears more than once.
4	IndividualClearingMember	Individual clearing member
5	PreferredMarketMaker	Preferred market maker. Market maker getting a part of the matched quantity before primary or default market maker.
6	DirectedMarketMaker	Directed market maker. Single market maker to handle the order provided.
7	Bank	Bank
8	Hub	Hub. Indicates that the Intermediary party is a hub system or service provider.
9	PrimaryTrdRepository	Primary trade repository. Used to differentiate the principal trade repository from the Original or Additional trade repositories when there are multiple trade repositories being reported.
10	OrigTrdRepository	Original trade repository. Used to identify the trade repository to which the trade was originally reported if different from the current repository to which the trade is being reported.
11	AddnlIntlTrdRepository	Additional international trade repository. Used with InternationalSwapIndicator(2526) to identify the trade repository that is in addition to the local swaps data repository as required by U.S. law.
12	AddnlDomesticTrdRepository	Additional domestic trade repository. Used with MixedSwapIndicator(1929) to identify the trade repository that is in addition to the current trade repository when the assets in the swap are subject to two different domestic regulators.
13	RelatedExchange	Related exchange
14	OptionsExchange	Options exchange
15	SpecifiedExchange	Specified exchange
16	ConstituentExchange	Constituent exchange.
17	ExemptFromTradeReporting	Exempt from trade reporting. In the context of FINRA TRACE reporting requirements, this is used to indicate the ATS has been granted a regulatory exemption from reporting.
18	Current	Current. Can be used to convey an existing party identifier for the same party role in a single message.
19	New	New. Can be used to convey a future party identifier for the same party role in a single message.
20	DesignatedSponsor	Designated sponsor. Market maker jointly providing liquidity for the same security with other market makers.

Code	Name	Description
21	Specialist	Specialist. Market maker being the only one providing liquidity for a security.
22	Algorithm	Algorithm
23	FirmOrLegalEntity	Firm or legal entity
24	NaturalPerson	Natural person
25	RegularTrader	Regular trader. Standard trader profile.
26	HeadTrader	Head trader. Senior trader leading a group of regular traders.
27	Supervisor	Supervisor. Administrative user that has only limited rights for normal trading but possibly special rights for emergency actions.
28	TriParty	Tri-party. In the context of EU SFTR reporting, identifies the third party, not necessarily the custodian, to which the reporting counterparty has outsourced the post-trade processing of an SFT (if applicable).
29	Lender	Lender. In the context of EU SFTR reporting, identifies the agent lender involved in the securities lending transaction.

Used in groups: [RootParties](#)

#### 171.2.4706 RootPartySubID

PartySubID value within a root parties component. Same values as PartySubID (523)

Type: [String](#)

Used in groups: [RootSubParties](#)

#### 171.2.4707 RootPartySubIDType

Type of RootPartySubID (1121) value. Same values as PartySubIDType (803)

Type: [int](#)

Allowed values in PartySubIDTypeCodeSet:

Code	Name	Description
1	Firm	Firm
2	Person	Person

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
3	System	System
4	Application	Application
5	FullLegalNameOfFirm	Full legal name of firm
6	PostalAddress	Postal address
7	PhoneNumber	Phone number
8	EmailAddress	Email address
9	ContactName	Contact name
10	SecuritiesAccountNumber	Securities account number (for settlement instructions)
11	RegistrationNumber	Registration number (for settlement instructions and confirmations)
12	RegisteredAddressForConfirmation	Registered address (for confirmation purposes)
13	RegulatoryStatus	Regulatory status (for confirmation purposes)
14	RegistrationName	Registration name (for settlement instructions)
15	CashAccountNumber	Cash account number (for settlement instructions)
16	BIC	BIC
17	CSDParticipantMemberCode	CSD participant member code
18	RegisteredAddress	Registered address
19	FundAccountName	Fund account name
20	TelexNumber	Telex number
21	FaxNumber	Fax number
22	SecuritiesAccountName	Securities account name
23	CashAccountName	Cash account name
24	Department	Department
25	LocationDesk	Location desk
26	PositionAccountType	Position account type
27	SecurityLocateID	Security locate ID
28	MarketMaker	Market maker
29	EligibleCounterparty	Eligible counterparty
30	ProfessionalClient	Professional client
31	Location	Location
32	ExecutionVenue	Execution venue
33	CurrencyDeliveryIdentifier	Currency delivery identifier
34	AddressCity	Address City
35	AddressStateOrProvince	Address State/Province

---

Code	Name	Description
36	AddressPostalCode	Address Postal Code
37	AddressStreet	Address Street
38	AddressISOCountryCode	Address Country (ISO country code)
39	ISOCountryCode	ISO country code
40	MarketSegment	Market segment
41	CustomerAccountType	Customer account type
42	OmnibusAccount	Omnibus account
43	FundsSegregationType	Funds segregation type
44	GuaranteeFund	Guarantee fund. Identifies a guarantee fund related to an account. Used when one account has multiple funds of collateral, each guaranteeing different positions. Can be used for PartyRole(452) = Customer Account(24).
45	SwapDealer	Swap dealer. The US regulator's defined term for identifying the trade counterparty as "any person who holds itself out as a dealer in swaps, makes a market in swaps, regularly enters into swaps with counterparties as an ordinary course of business for its own account, or engages in activity causing itself to be commonly known in the trade as a dealer or market maker in swaps".
46	MajorParticipant	Major participant. When PartySubID(523)=Y the counterparty is not the swap dealer but is a major swap participant as defined in the regulations.
47	FinancialEntity	Financial entity. When PartySubID(523)=Y the counterparty is neither a swap dealer nor a major swap participant but is a financial entity as defined in the regulations.
48	USPerson	U.S. person. A legal term referring to any U.S. person or legal entity anywhere in the world that should be taxed under U.S. law.
49	ReportingEntityIndicator	Reporting entity indicator. Indicates the entity obligated or delegated to report to their regulator, a non-regulatory agency or data repository. Set PartySubID(523)=Y if true.
50	ElectedClearingRequirementException	Elected clearing requirement exception
51	BusinessCenter	Business center.
52	ReferenceText	Reference text
53	ShortMarkingExemptAccount	Short-marking exempt account
54	ParentFirmIdentifier	Parent firm identifier. Implementation-specific identifier of this party's parent entity.
55	ParentFirmName	Parent firm name. Full name of this party's parent entity.

Code	Name	Description
56	DealIdentifier	Deal identifier. The internal identifier assigned to the trade by this party, particularly by a Clearing Organization.
57	SystemTradeID	System trade identifier
58	SystemTradeSubID	System trade sub-identifier
59	FCMCode	Futures Commission Merchant (FCM) code. The FCM's code or identifier in relation to the PartyRole(452). For example, if PartyRole(452) is the exchange or clearinghouse, the FCM code/ID specified in PartySubID(523) is the FCM's identifier at the exchange or clearinghouse.
60	DlvryTrmlCode	Delivery terminal customer account/code. Usually used for gas delivery to identify whose account the gas is allocated to at the delivery terminal. Often referred to as "HUB" code.
61	VolntyRptEntity	Voluntary reporting entity. The entity voluntarily reporting the trade to the regulator. Set PartySubID(523)=Y if true.
62	RptObligJurisdiction	Reporting obligation jurisdiction. For a trade that falls under multiple jurisdictions this may be used to identify, through PartySubID(523), the reporting jurisdiction to which the party is obligated to report.
63	VolntyRptJurisdiction	Voluntary reporting jurisdiction. For a trade that falls under multiple jurisdictions this may be used to identify, through PartySubID(523), the regulatory jurisdiction to which the party is submitting a voluntary report.
64	CompanyActivities	Company activities. For regulatory reporting. ID values include: A = Assurance undertaking authorized in accordance with Directive 2002/83/EC C = Credit institution authorized in accordance with Directive 2006/48/EC F = Investment firm in accordance with Directive 2004/39/EC I = Insurance undertaking authorized in accordance with Directive 73/239/EC L = Alternative investment fund managed by AIFMs authorized or registered in accordance with Directive 2011/61/EC O = Institution for occupational retirement provision within the meaning of Article 6(a) of Directive 2003/41/EC R = Reinsurance undertaking authorized in accordance with Directive 2005/68/EC U = UCITS and its management company, authorized in accordance with Directive 2009/65/EC or blank in case of coverage by LEI or in case of non-financial counterparties. In the context of EU SFTR reporting use the appropriate 4- or 1-character code noted in the regulations. See SFTR ITS "Commission Implementing Regulation (EU) 2019/363" Annexes 1 and 2 for values.
65	EEAreaDomiciled	European Economic Area domiciled. ID values: Y or N

<b>Code</b>	<b>Name</b>	<b>Description</b>
66	ContractLinked	Contract linked to commercial or treasury financing for this counterparty. ID values: Y or N
67	ContractAbove	Contract above clearing threshold for this counterparty. ID values: Y or N
68	VolntyRptPty	Voluntary reporting party. When PartySubID(523)=Y, identifies that the trading party is reporting voluntarily when VoluntaryRegulatoryReport(1935)=Y.
69	EndUser	End user. When PartySubID(523)=Y, the counterparty is neither the swap dealer, major swap participant nor financial entity as defined in the regulations.
70	LocationOrJurisdiction	Location or jurisdiction. One or more instances may be used in combination with PartySubIDType(803) = 49 (Reporting entity indicator) or 102 (Data repository) to identify the jurisdiction, countries, regions or provinces for which the party is a reporting entity or data repository when that characteristic is ambiguous or where there are multiple locations. The party sub-ID value is either a jurisdiction acronym, a 2-character ISO 3166 country code, or a hyphenated combination of the country code and the standard post-office abbreviation for province, state or region if necessary. E.g. "US" for United States or "CA-QC" for Quebec Canada.
71	DerivativesDealer	Derivatives dealer. Indicates whether the party is a derivatives dealer or not (Y/N). The Canadian regulator's defined term for identifying the trade counterparty as "a person or company engaging in or holding himself, herself or itself out as engaging in the business of trading in derivatives in Ontario as principal or agent".
72	Domicile	Domicile. Country and optionally province, state or region of domicile. The party sub-ID value is either a 2-character ISO 3166 country code or a hyphenated combination of the country code and the standard post-office abbreviation of province, state or region if necessary. E.g. "US" for United States or "CA-QC" for Quebec Canada.
73	ExemptFromRecognition	Exempt from recognition. Used with party role 21 "Clearing Organization" to indicate exemption (Y/N). Identifies a clearing agency as exempt from oversight in Ontario, i.e. one that 1) only provides limited services and does not present significant risks or 2) is foreign-based, intends to operate in Ontario but is subject to regulatory oversight in another jurisdiction.

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
74	Payer	Payer. Identifies the party as the payer of a particular payment stream or bullet payment by quoting the stream's StreamDesc(40051) (or LegStreamDesc(40243) or UnderlyingStreamDesc(40542)) or payment's PaymentDesc(43087) in the associated party sub-identifier field.
75	Receiver	Receiver. Identifies the party as the receiver of a particular payment stream or bullet payment by quoting the stream's StreamDesc(40051) (or LegStreamDesc(40243) or UnderlyingStreamDesc(40542)) or payment's PaymentDesc(43087) in the associated party sub-identifier field.
76	SystematicInternaliser	Systematic Internaliser (SI). In the context of ESMA reporting, this is used to indicate whether the specified party is a Systematic Internaliser or not for the security defined in the Instrument component (Y/N).
77	PublishingEntityIndicator	Publishing entity indicator. Indicates the entity obligated or delegated to publish to the market. Set PartySubID(523)=Y if true.
78	FirstName	First name. The first name(s) of a natural person. If multiple names, separate entries by a comma.
79	Surname	Surname. The surname(s) or lastname(s) of a natural person. If multiple names, separate entries by a comma.
80	DateOfBirth	Date of birth. The date of birth of a natural person in the format YYYYMMDD.
81	OrderTransmittingFirm	Order transmitting firm. Identifies whether the party specified in PartyID(448) is the firm that transmitted the order. In the context of RTS 22 Article 4, when "true" the PartySubID(523)=Y shall be set "by the transmitting firm within the transmitting firm's report where conditions for transmission specified in Article 4 were not satisfied."
82	OrderTransmittingFirmBuyer	Order transmitting firm for buyer. Identifies the firm that transmitted the order for the buyer. In the context of ESMA RTS 22, PartySubID(523)=Y is used to indicate the firm identified in PartyID(448) is the firm that transmitted the order for the buyer. "This shall be populated by the receiving firm within the receiving firm's report with the identification code provided by the transmitting firm."

---

Code	Name	Description
83	OrderTransmitterSeller	Order transmitter for seller. Identifies the order transmitting firm for the seller. In the context of ESMA RTS 22, PartySubID(523)=Y is used to indicate the firm identified in PartyID(448) is the firm that transmitted the order for the seller. "This shall be populated by the receiving firm within the receiving firm's report with the identification code provided by the transmitting firm."
84	LegalEntityIdentifier	Legal Entity Identifier (ISO 17442) LEI
85	SubSectorClassification	Sub-sector classification. Supplemental to party sub-ID type "64" (Company activities) for regulatory reporting. For EU SFTR reporting use the appropriate 4-character code noted in the regulations applying the conditional association rules. See SFTR ITS "Commission Implementing Regulation (EU) 2019/363" Annexes 1 and 2 for values.
86	PartySide	Party side. May be used, when appropriate, to explicitly indicate the transaction side of the party, e.g. Buyer, Seller, Lender, Borrower, Maker, Taker, etc. in the ID. In the context of EU SFTR reporting, use values as required by SFTR, "GIVE" and "TAKE" in the ID, to identify collateral giver and taker.
87	LegalRegistrationCountry	Legal registration country. ISO Country Code where the registered office of the party is located as specified in the LEI reference data.

Used in groups: [RootSubParties](#)

### 171.2.4708 RootSubParties

Name	Mult.	Type	Description
<a href="#">NoRootPartySubIDs</a>	[1..1]	NumInGroup	Repeating group of RootParty sub-identifiers.
<a href="#">RootPartySubID</a>	[0..1]	String	Sub-identifier (e.g. Clearing Acct for PartyID=Clearing Firm) if applicable. Required if NoRootPartySubIDs > 0.
<a href="#">RootPartySubIDType</a>	[0..1]	CodeSet	Type of Sub-identifier. Required if NoRootPartySubIDs > 0.

Used in groups: [RootParties](#)

**171.2.4709 RoundingDirection**

Specifies which direction to round For CIV - indicates whether or not the quantity of shares/units is to be rounded and in which direction where CashOrdQty (152) or (for CIV only) OrderPercent (516) are specified on an order.

The default is for rounding to be at the discretion of the executing broker or fund manager.

e.g. for an order specifying CashOrdQty or OrderPercent if the calculated number of shares/units was 325.76 and RoundingModulus (469) was 0 - "round down" would give 320 units, 1 - "round up" would give 330 units and "round to nearest" would give 320 units.

Type: **char**

Allowed values in RoundingDirectionCodeSet:

---

Code	Name	Description
0	RoundToNearest	Round to nearest
1	RoundDown	Round down
2	RoundUp	Round up

---

Used in components: **OrderQtyData**

**171.2.4710 RoundingModulus**

For CIV - a float value indicating the value to which rounding is required.

i.e. 0 means round to a multiple of 0 units/shares; 0.5 means round to a multiple of 0.5 units/shares.

The default, if RoundingDirection (468) is specified without RoundingModulus, is to round to a whole unit/share.

Type: **float**

Used in components: **OrderQtyData**

**171.2.4711 RoundLot**

The trading lot size of a security

Type: **Qty**

Used in components: **BaseTradingRules**

**171.2.4712 RoutingArrangementIndicator**

Indicates whether a routing arrangement is in place, e.g. between two brokers. May be used together with OrderOrigination(1724) to further describe the origin of an order.

Type: **int**

Allowed values in RoutingArrangementIndicatorCodeSet:

Code	Name	Description
0	NoRoutingArrangementInPlace	No routing arrangement in place
1	RoutingArrangementInPlace	Routing arrangement in place

Used in groups: **SideCrossOrdModGrp**

Used in messages: **ExecutionReport**, **NewOrderSingle**, **OrderCancelReplaceRequest**

**171.2.4713 RoutingGrp**

The RoutingGrp is used to allow the application message sender to instruct the intermediary distributing the message who to further send the application message to. The original sender may also instruct who is not allowed to receive the message. When provided, the routing instructions provided in this component are effective on a message by message basis.

Name	Mult.	Type	Description
<b>NoRoutingIDs</b>	[1..1]	NumInGroup	
<b>RoutingType</b>	[0..1]	CodeSet	Indicates type of RoutingID. Required if NoRoutingIDs is > 0.
<b>RoutingID</b>	[0..1]	String	Identifies routing destination. Required if NoRoutingIDs is > 0.

Used in messages: **Advertisement**, **Email**, **IOI**, **MarketDataIncrementalRefresh**, **MarketDataSnapshot-FullRefresh**, **News**, **Quote**

**171.2.4714 RoutingID**

Assigned value used to identify a specific routing destination.

Type: **String**

Used in groups: **RoutingGrp**

**171.2.4715 RoutingType**

Indicates the type of RoutingID (217) specified.

Type: **int**

Allowed values in RoutingTypeCodeSet:

Code	Name	Description
1	TargetFirm	Target Firm
2	TargetList	Target List
3	BlockFirm	Block Firm
4	BlockList	Block List
5	TargetPerson	Target Person
6	BlockPerson	Block Person

Used in groups: **RoutingGrp**

**171.2.4716 RptSeq**

Sequence number of message within report series. Used to carry reporting sequence number of the fill as represented on the Trade Report Side.

Type: **int**

Used in groups: **MDFullGrp**, **MDIncGrp**, **TrdCapRptAckSideGrp**, **TrdCapRptSideGrp**

Used in messages: **ListStatus**

**171.2.4717 RptSys**

Indicates the system or medium on which the report has been published

Type: **String**

Used in messages: **TradeCaptureReportAck**

**171.2.4718 Scope**

Specifies the market scope of the market data.

Type: **MultipleCharValue**

Allowed values in ScopeCodeSet:

---

Code	Name	Description
1	LocalMarket	Local Market (Exchange, ECN, ATS)
2	National	National
3	Global	Global

---

Used in groups: **MDFullGrp**, **MDIncGrp**

Used in messages: **MarketDataRequest**

---

Used in messages: [SecurityMassStatus](#)

#### **171.2.4724 SecondaryAllocID**

Secondary allocation identifier. Unlike the AllocID (70), this can be shared across a number of allocation instruction or allocation report messages, thereby making it possible to pass an identifier for an original allocation message on multiple messages (e.g. from one party to a second to a third, across cancel and replace messages etc.).

Type: [String](#)

Used in components: [SettlTradeDetails](#)

Used in messages: [AllocationInstruction](#), [AllocationInstructionAck](#), [AllocationInstructionAlert](#), [AllocationReport](#), [AllocationReportAck](#), [Confirmation](#), [ConfirmationRequest](#)

#### **171.2.4725 SecondaryAssetClass**

The broad asset category for assessing risk exposure for a multi-asset trade.

Type: [int](#)

Allowed values in AssetClassCodeSet:

Code	Name	Description
1	InterestRate	Interest rate
2	Currency	Currency
3	Credit	Credit
4	Equity	Equity
5	Commodity	Commodity
6	Other	Other
7	Cash	Cash
8	Debt	Debt
9	Fund	Fund. Such as mutual fund, collective investment vehicle, investment program, specialized account program.
10	LoanFacility	Loan facility
11	Index	Index. A main index identified as a security type, for example under EU SFTR reporting.

Used in groups: [SecondaryAssetGrp](#)

### 171.2.4726 SecondaryAssetGrp

SecondaryAssetGrp is a repeating subcomponent of the Instrument component used to specify secondary assets of a multi-asset swap.

Name	Mult.	Type	Description
<a href="#">NoSecondaryAssetClasses</a>	[1..1]	NumInGroup	
<a href="#">SecondaryAssetClass</a>	[0..1]	CodeSet	Required if NoSecondaryAssetClasses(1976) > 0.
<a href="#">SecondaryAssetSubClass</a>	[0..1]	CodeSet	Required if SecondaryAssetType(1979) is specified.
<a href="#">SecondaryAssetType</a>	[0..1]	String	Required if SecondaryAssetSubType(2741) is specified.
<a href="#">SecondaryAssetSubType</a>	[0..1]	String	

Used in components: [Instrument](#)

### 171.2.4727 SecondaryAssetSubClass

An indication of the general description of the asset class.

Type: **int**

Allowed values in AssetSubClassCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	SingleCurrency	Single currency
2	CrossCurrency	Cross currency
3	Basket	Basket [for multi-currency]
4	SingleName	Single name
5	CreditIndex	Credit index
6	IndexTranche	Index tranche
7	CreditBasket	Credit basket
8	Exotic	Exotic
9	Common	Common
10	Preferred	Preferred
11	EquityIndex	Equity index
12	EquityBasket	Equity basket
13	Metals	Metals
14	Bullion	Bullion
15	Energy	Energy
16	CommodityIndex	Commodity index
17	Agricultural	Agricultural
18	Environmental	Environmental
19	Freight	Freight
20	Government	Government
21	Agency	Agency
22	Corporate	Corporate
23	Financing	Financing
24	MoneyMarket	Money market
25	Mortgage	Mortgage
26	Municipal	Municipal
27	MutualFund	Mutual fund
28	CollectiveInvestmentVehicle	Collective investment vehicle
29	InvestmentProgram	Investment program. A generalized fund for major investors.
30	SpecializedAccountProgram	Specialized account program. A specialized fund setup for a particular account or group of accounts.
31	TermLoan	Term loan

Code	Name	Description
32	BridgeLoan	Bridge loan
33	LetterOfCredit	Letter of credit
34	DividendIndex	Dividend index
35	StockDividend	Stock dividend
36	ExchangeTradedFund	Exchange traded fund
37	VolatilityIndex	Volatility index
38	FXCrossRates	FX cross rates
39	FXEmergingMarkets	FX emerging markets
40	FXMajors	FX Majors
41	Fertilizer	Fertilizer
42	IndustrialProduct	Industrial product
43	Inflation	Inflation
44	Paper	Paper
45	Polypropylene	Polypropylene
46	OfficialEconomicStatistics	Official economic statistics
47	OtherC10	Other C10. Defined under MiFID II (Directive 2014/65/EU) Section C(10) of Annex I and paraphrased in ESMA RTS 2 Annex III Section 10, "Other C10" is a financial instrument "which is not a 'Freight derivative', any of the following interest rate derivatives sub-asset classes: 'Inflation multi-currency swap or cross-currency swap', a 'Future/forward on inflation multi-currency swaps or cross-currency swaps', an 'Inflation single currency swap', a 'Future/forward on inflation single currency swap' and any of the following equity derivatives sub-asset classes: a 'Volatility index option', a 'Volatility index future/forward', a swap with parameter return variance, a swap with parameter return volatility, a portfolio swap with parameter return variance, a portfolio swap with parameter return volatility".
48	Other	Other. May be used with any AssetClass(1938) values.

Used in groups: [SecondaryAssetGrp](#)

### 171.2.4728 SecondaryAssetSubType

Used to provide a more specific description of the asset specified in SecondaryAssetType(1979).

See <https://www.fixtrading.org/codelists/AssetSubType> for code list of applicable values.

Type: **String**

Used in groups: **SecondaryAssetGrp**

#### **171.2.4729 SecondaryAssetType**

Used to provide more specific description of the asset specified in **SecondaryAssetSubClass(1978)**.

See <https://www.fixtrading.org/codelists/AssetType> for code list of applicable values. ISO 4721 Currency Code values are to be used when specific currency as an asset type is to be expressed.

Other values may be used by mutual agreement of the counterparties.

Type: **String**

Used in groups: **SecondaryAssetGrp**

#### **171.2.4730 SecondaryCLOrdID**

Assigned by the party which originates the order. Can be used to provide the CLOrdID (11) used by an exchange or executing system.

Type: **String**

Used in components: **TradeReportOrderDetail**

Used in groups: **InstrmtStrkPxGrp**, **ListOrdGrp**, **OrdAllocGrp**, **OrdListStatGrp**, **SideCrossOrdCxlGrp**, **SideCrossOrdModGrp**

Used in messages: **CollateralAssignment**, **CollateralInquiry**, **CollateralInquiryAck**, **CollateralReport**, **CollateralRequest**, **CollateralResponse**, **ExecutionReport**, **MultilegOrderCancelReplace**, **NewOrder-Multileg**, **NewOrderSingle**, **OrderCancelReject**, **OrderCancelReplaceRequest**, **OrderCancelRequest**, **OrderMassActionReport**, **OrderMassActionRequest**, **OrderMassCancelReport**, **OrderMassCancelRequest**, **OrderStatusRequest**

#### **171.2.4731 SecondaryDisplayQty**

Used for reserve orders when **DisplayQty** applies to the primary execution market (e.g. an ECN) and another quantity is to be shown at other markets (e.g. the exchange). On orders specifies the qty to be displayed, on execution reports the currently displayed quantity.

Type: **Qty**

Used in components: **DisplayInstruction**

#### **171.2.4732 SecondaryExecID**

Assigned by the party which accepts the order. Can be used to provide the ExecID (17) used by an exchange or executing system.

Type: **String**

Used in groups: **ExecAllocGrp**

Used in messages: **ExecutionReport, TradeCaptureReport, TradeCaptureReportAck, TradeCaptureReportRequest**

#### **171.2.4733 SecondaryFirmTradeID**

Used to carry an internal firm assigned ID which may or may not be reported to the exchange or central counterparty

Type: **String**

Used in messages: **TradeCaptureReport, TradeCaptureReportAck, TradeCaptureReportRequest, TradeCaptureReportRequestAck**

#### **171.2.4734 SecondaryHighLimitPrice**

Refer to definition of HighLimitPrice(1149)

Type: **Price**

Used in components: **SecondaryPriceLimits**

#### **171.2.4735 SecondaryIndividualAllocID**

Will allow the intermediary to specify an allocation ID generated by their system.

Type: **String**

Used in groups: **AllocAckGrp, AllocGrp, TrdAllocGrp**

#### **171.2.4736 SecondaryLockedQty**

Locked order quantity in addition to LockedQty (1808), e.g. to distinguish total locked quantity from currently locked quantity.

Type: [Qty](#)

Used in messages: [ExecutionReport](#)

### **171.2.4737 SecondaryLowLimitPrice**

Refer to definition of [LowLimitPrice\(1148\)](#)

Type: [Price](#)

Used in components: [SecondaryPriceLimits](#)

### **171.2.4738 SecondaryOrderID**

Assigned by the party which accepts the order. Can be used to provide the OrderID (37) used by an exchange or executing system.

Type: [String](#)

Used in components: [TradeReportOrderDetail](#)

Used in groups: [MDFullGrp](#), [MDIncGrp](#), [OrdAllocGrp](#)

Used in messages: [CollateralAssignment](#), [CollateralInquiry](#), [CollateralInquiryAck](#), [CollateralReport](#), [CollateralRequest](#), [CollateralResponse](#), [DontKnowTrade](#), [ExecutionAck](#), [ExecutionReport](#), [OrderCancelReject](#), [OrderMassCancelReport](#)

<a href="#">SecondaryTradingReferencePrice</a>	[0..1]	Price	

---

Used in groups: [RelSymDerivSecGrp](#), [RelSymDerivSecUpdGrp](#)

**171.2.4740 SecondaryPriceLimitType**

Describes the how the price limits are expressed

Type: **int**

Allowed values in PriceLimitTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Price	Price (default)
1	Ticks	Ticks
2	Percentage	Percentage

---

Used in components: **SecondaryPriceLimits**

**171.2.4741 SecondaryQuoteID**

Assigned by the party which accepts the quote. Can be used to provide the quote identifier assigned by an exchange, marketplace or executing system.

Type: **String**

Used in groups: **QuotReqGrp**

Used in messages: **Quote, QuoteAck, QuoteCancel, QuoteStatusReport**

**171.2.4742 SecondaryServiceLocationID**

Secondary or alternate service location identifier.

Type: **String**

Used in groups: **MarketDataFeedTypes**

**171.2.4743 SecondaryTradeID**

Used to carry an internal trade entity ID which may or may not be reported to the firm

Type: **String**

Used in messages: **TradeCaptureReport, TradeCaptureReportAck, TradeCaptureReportRequest, Trade-CaptureReportRequestAck**

**171.2.4744 SecondaryTradeReportID**

Secondary trade report identifier - can be used to associate an additional identifier with a trade.

Type: **String**

Used in groups: **TrdCollGrp**

Used in messages: **TradeCaptureReport, TradeCaptureReportAck, TradeCaptureReportRequest**

**171.2.4745 SecondaryTradeReportRefID**

Used to refer to a previous SecondaryTradeReportRefID when amending the transaction (cancel, replace, release, or reversal).

Type: **String**

Used in messages: **TradeCaptureReport, TradeCaptureReportAck**

**171.2.4746 SecondaryTradingReferencePrice**

Refer to definition for TradingReferencePrice(1150)

Type: **Price**

Used in components: **SecondaryPriceLimits**

**171.2.4747 SecondaryTrdType**

Type of trade assigned to a trade. Used in addition to TrdType(828). Must not be used when only one trade type needs to be assigned.

Type: **int**

Allowed values in TrdTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	RegularTrade	Regular trade
1	BlockTrade	Block trade
2	EFP	Exchange for physical (EFP)
3	Transfer	Transfer
4	LateTrade	Late trade

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
5	TTrade	T trade
6	WeightedAveragePriceTrade	Weighted average price trade
7	BunchedTrade	Bunched trade
8	LateBunchedTrade	Late bunched trade
9	PriorReferencePriceTrade	Prior reference price trade
10	AfterHoursTrade	After hours trade
11	ExchangeForRisk	Exchange for risk (EFR)
12	ExchangeForSwap	Exchange for swap (EFS)
13	ExchangeOfFuturesFor	Exchange of futures for in market futures (EFM). For example full sized for mini.
14	ExchangeOfOptionsForOptions	Exchange of options for options (EOO)
15	TradingAtSettlement	Trading at settlement
16	AllOrNone	All or none
17	FuturesLargeOrderExecution	Futures large order execution
18	ExchangeOfFuturesForFutures	Exchange of futures for external market futures (EFF)
19	OptionInterimTrade	Option interim trade
20	OptionCabinetTrade	Option cabinet trade
22	PrivatelyNegotiatedTrades	Privately negotiated trade
23	SubstitutionOfFuturesForForwards	Substitution of futures for forwards
24	ErrorTrade	Error trade
25	SpecialCumDividend	Special cum dividend (CD)
26	SpecialExDividend	Special ex dividend (XD)
27	SpecialCumCoupon	Special cum coupon (CC)
28	SpecialExCoupon	Special ex coupon (XC)
29	CashSettlement	Cash settlement (CS)
30	SpecialPrice	Special price (SP). Usually net or all-in price.
31	GuaranteedDelivery	Guaranteed delivery (GD)
32	SpecialCumRights	Special cum rights (CR)
33	SpecialExRights	Special ex rights (XR)
34	SpecialCumCapitalRepayments	Special cum capital repayments (CP)
35	SpecialExCapitalRepayments	Special ex capital repayments (XP)
36	SpecialCumBonus	Special cum bonus (CB)
37	SpecialExBonus	Special ex bonus (XB)
38	LargeTrade	Block trade. The same as large trade.

Code	Name	Description
39	WorkedPrincipalTrade	Worked principal trade
40	BlockTrades	Block trades
41	NameChange	Name change
42	PortfolioTransfer	Portfolio transfer
43	ProrogationBuy	Prorogation buy. Used by Euronext Paris only. Is used to defer settlement under French SRD (deferred settlement system). Trades must be reported as crosses at zero price.
44	ProrogationSell	Prorogation sell. See prorogation buy.
45	OptionExercise	Option exercise
46	DeltaNeutralTransaction	Delta neutral transaction
47	FinancingTransaction	Financing transaction
48	NonStandardSettlement	Non-standard settlement
49	DerivativeRelatedTransaction	Derivative related transaction
50	PortfolioTrade	Portfolio trade. Identifies a collection/basket of trades. In the context of bonds (e.g. corporate bonds) these are transacted as a single trade at an aggregate price for the entire portfolio and may be traded all-or-none or most-or-none depending on bilateral agreement. In the context of ESMA RTS 1 Article 2(b), may be used to refer to portfolio trades to distinguish between addressable and non-addressable volume. In the context of Market Model Typology (MMT), use of this value applies to SecondaryTrdType(855) or TertiaryTrdType(2896), and when used for MMT market data publication requires MDEntryType(269) = 2 (Trade).
51	VolumeWeightedAverageTrade	Volume weighted average trade
52	ExchangeGrantedTrade	Exchange granted trade
53	RepurchaseAgreement	Repurchase agreement
54	OTC	OTC. Trade executed off-market. In the context of CFTC regulatory reporting for swaps, it is a large notional off-facility swap. In the context of MiFID transparency reporting rules this is used to report, into an exchange, deals made outside exchange rules.
55	ExchangeBasisFacility	Exchange basis facility (EBF)
56	OpeningTrade	Opening trade. Identifies a trade that resulted from the opening of a market. In the context of IIROC, this indicates a trade that occurred at the opening or the first trade of the day for a security.
57	NettedTrade	Netted trade

Code	Name	Description
58	BlockSwapTrade	Block swap trade. Block trade executed off-market or on a registered market. In the context of CFTC regulatory reporting for swaps, it is a swap executed according to SEF or DCM rules.
59	CreditEventTrade	Credit event trade
60	SuccessionEventTrade	Succession event trade
61	GiveUpGiveInTrade	Give-up Give-in trade
62	DarkTrade	Dark trade. In the context of Market Model Typology (MMT), a dark trade might also come from a lit/hybrid book (e.g. when an aggressive lit order hits a resting dark order). The use of this value applies to TrdType(828), and when used for MMT market data publication requires MDEntryType(269) = 2 (Trade).
63	TechnicalTrade	Technical trade
64	Benchmark	Benchmark. In the context of ESMA RTS 1 Article 2(a), may be used to refer to benchmark trades. In the context of Market Model Typology (MMT), the "benchmark" price depends on a benchmark which has no current price but was derived from a time series such as a VWAP. The use of this value applies to SecondaryTrdType(855) or TertiaryTrdType(2896), and when used for MMT market data publication requires MDEntryType(269) = 2 (Trade).
65	PackageTrade	Package trade. May be used to identify the pseudo-trade of a stream or collection of trades to be transacted, cleared and be reported as an atomic unit. In the context of MiFIR RTS 1, this is the "CONT" flag. In the context of MiFIR RTS 2 Article 1(1)(b), may be used to refer to package transactions (excluding exchange for physicals). In the context of Market Model Typology (MMT), use of this value applies to SecondaryTrdType(855) or TertiaryTrdType(2896), and when used for MMT market data publication requires MDEntryType(269) = 2 (Trade).
66	RollTrade	Roll trade. Trade is a roll from one contract that is about to expire to a new contract.
67	ClosingPriceTrade	Closing price trade. Identifies a trade that uses the closing price of a market without resulting from the closing of this market. In the context of FCA policy statement PS23/4, this indicates a benchmark transaction executed using the market closing price and is the "CLSE" flag.
68	InterFundTransferTrade	Inter-fund transfer trade. Administrative trade (non price-forming) related to the transfer of ownership between funds.

Code	Name	Description
69	NetAssetValueCalculatedTrade	Net asset value calculated trade. Trade of a fund priced at the net asset value of its constituents. In the context of MiFIR RTS 1, this may be used for ETFs when the NAV price becomes available.

### 171.2.4748 SecSizesGrp

Name	Mult.	Type	Description
<a href="#">NoOfSecSizes</a>	[1..1]	NumInGroup	Number of entries following. Conditionally required when MDUpdateAction = New(0) and MDEntryType = Bid(0) or Offer(1).
<a href="#">MDSecSizeType</a>	[0..1]	CodeSet	Defines the type of secondary size specified in MDSecSize(1179). Must be first field in this repeating group
<a href="#">MDSecSize</a>	[0..1]	Qty	

Used in groups: [MDFullGrp](#), [MDIncGrp](#)

### 171.2.4749 SecTypesGrp

Name	Mult.	Type	Description
<a href="#">NoSecurityTypes</a>	[1..1]	NumInGroup	
<a href="#">SecurityType</a>	[0..1]	CodeSet	Required if NoSecurityTypes > 0
<a href="#">SecuritySubType</a>	[0..1]	String	
<a href="#">Product</a>	[0..1]	CodeSet	
<a href="#">CFICode</a>	[0..1]	String	
<a href="#">UPICode</a>	[0..1]	String	
<a href="#">TransactTime</a>	[0..1]	UTCTimestamp	

Used in messages: [SecurityTypes](#)

**171.2.4750 SecureData**

Actual encrypted data stream

Type: **data**

Used in components: **StandardHeader**

**171.2.4751 SecureDataLen**

Length of encrypted message

Type: **Length**

Used in components: **StandardHeader**

**171.2.4752 SecurityAltID**

Alternate Security identifier value for this security of SecurityAltIDSource (456) type (e.g. CUSIP, SEDOL, ISIN, etc). Requires SecurityAltIDSource.

Type: **String**

Used in groups: **SecAltIDGrp**

**171.2.4753 SecurityAltIDSource**

Identifies class or source of the SecurityAltID(455) value.

Type: **String**

Allowed values in SecurityIDSourceCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	CUSIP	CUSIP
2	SEDOL	SEDOL
3	QUIK	QUIK
4	ISINNumber	ISIN
5	RICCode	RIC
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
7	ISOCountryCode	ISO Country Code

---

Code	Name	Description
8	ExchangeSymbol	Exchange symbol
9	ConsolidatedTapeAssociation	Consolidated Tape Association (CTA) Symbol (SIAC CTS/CQS line format)
A	BloombergSymbol	Bloomberg Symbol
B	Wertpapier	Wertpapier
C	Dutch	Dutch
D	Valoren	Valoren
E	Sicovam	Sicovam
F	Belgian	Belgian
G	Common	"Common" (Clearstream and Euroclear)
H	ClearingHouse	Clearing house / Clearing organization
I	ISDAFpMLSpecification	ISDA/FpML product specification (XML in SecurityXML(1185))
J	OptionPriceReportingAuthority	Option Price Reporting Authority
K	ISDAFpMLURL	ISDA/FpML product URL (URL in SecurityID(48))
L	LetterOfCredit	Letter of credit
M	MarketplaceAssignedIdentifier	Marketplace-assigned Identifier
N	MarkitREDEntityCLIP	Markit RED entity CLIP
P	MarkitREDPairCLIP	Markit RED pair CLIP
Q	CFTCCommodityCode	CFTC commodity code
R	ISDACommodityReferencePrice	ISDA Commodity Reference Price
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
T	LegalEntityIdentifier	Legal entity identifier
U	Synthetic	Synthetic. Used to specify that the security identifier is synthetic for linking nested underliers when there is no market identifier for the collection.
V	FidessaInstrumentMnemonic	Fidessa Instrument Mnemonic (FIM)
W	IndexName	Index name. Standard name of the index or rate index, e.g. "LIBOR" or "iTraxx Australia".
X	UniformSymbol	Uniform Symbol (UMTF Symbol)
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in groups: [SecAltIDGrp](#)

**171.2.4754 SecurityClassificationGrp**

Name	Mult.	Type	Description
NoSecurityClassifications	[1..1]	NumInGroup	
SecurityClassificationReason	[0..1]	CodeSet	Conditionally required if NoSecurityClassifications > 0.
SecurityClassificationValue	[0..1]	String	

Used in components: [DerivativeSecurityDefinition](#)

Used in groups: [SecListGrp](#)

Used in messages: [SecurityDefinition](#)

**171.2.4755 SecurityClassificationReason**

Allows classification of instruments according to a set of high level reasons. Classification reasons describe the classes in which the instrument participates.

Type: [int](#)

Allowed values in SecurityClassificationReasonCodeSet:

Code	Name	Description
0	Fee	Fee
1	CreditControls	Credit Controls
2	Margin	Margin
3	EntitlementOrEligibility	Entitlement / Eligibility
4	MarketData	Market Data
5	AccountSelection	Account Selection
6	DeliveryProcess	Delivery Process
7	Sector	Sector

Used in groups: [SecurityClassificationGrp](#)

**171.2.4756 SecurityClassificationValue**

Specifies the product classification value which further details the manner in which the instrument participates in the class.

Type: **String**

Used in groups: **SecurityClassificationGrp**

#### **171.2.4757 SecurityDesc**

Can be used by the venue or one of the trading parties to provide a non-normative textual description for the financial instrument.

Type: **String**

Used in components: **Instrument**

#### **171.2.4758 SecurityExchange**

Market used to help identify a security.

Valid values:

See "Appendix 6-C"

Type: **Exchange**

Used in components: **Instrument**

Used in groups: **TrdSessLstGrp**

Used in messages: **TradingSessionListRequest, TradingSessionStatusRequest**

#### **171.2.4759 SecurityGroup**

An exchange specific name assigned to a group of related securities which may be concurrently affected by market events and actions.

Type: **String**

Used in components: **Instrument**

#### **171.2.4760 SecurityID**

Security identifier value of SecurityIDSource (22) type (e.g. CUSIP, SEDOL, ISIN, etc). Requires SecurityIDSource.

Type: **String**

Used in components: **Instrument**

**171.2.4761 SecurityIDSource**

Identifies class or source of the SecurityID(48) value.

Type: **String**

Allowed values in SecurityIDSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
3	QUIK	QUIK
4	ISINNumber	ISIN
5	RICCode	RIC
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
7	ISOCountryCode	ISO Country Code
8	ExchangeSymbol	Exchange symbol
9	ConsolidatedTapeAssociation	Consolidated Tape Association (CTA) Symbol (SIAC CTS/CQS line format)
A	BloombergSymbol	Bloomberg Symbol
B	Wertpapier	Wertpapier
C	Dutch	Dutch
D	Valoren	Valoren
E	Sicovam	Sicovam
F	Belgian	Belgian
G	Common	"Common" (Clearstream and Euroclear)
H	ClearingHouse	Clearing house / Clearing organization
I	ISDAFpMLSpecification	ISDA/FpML product specification (XML in SecurityXML(1185))
J	OptionPriceReportingAuthority	Option Price Reporting Authority
K	ISDAFpMLURL	ISDA/FpML product URL (URL in SecurityID(48))
L	LetterOfCredit	Letter of credit
M	MarketplaceAssignedIdentifier	Marketplace-assigned Identifier
N	MarkitREDEntityCLIP	Markit RED entity CLIP
P	MarkitREDPairCLIP	Markit RED pair CLIP
Q	CFTCCommodityCode	CFTC commodity code
R	ISDACommodityReferencePrice	ISDA Commodity Reference Price

Code	Name	Description
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
T	LegalEntityIdentifier	Legal entity identifier
U	Synthetic	Synthetic. Used to specify that the security identifier is synthetic for linking nested underliers when there is no market identifier for the collection.
V	FidessaInstrumentMnemonic	Fidessa Instrument Mnemonic (FIM)
W	IndexName	Index name. Standard name of the index or rate index, e.g. "LIBOR" or "iTraxx Australia".
X	UniformSymbol	Uniform Symbol (UMTF Symbol)
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in components: [Instrument](#)

#### **171.2.4762 SecurityListDesc**

Specifies a description or name of a Security List.

Type: [String](#)

Used in messages: [SecurityList](#), [SecurityListUpdateReport](#)

#### **171.2.4763 SecurityListID**

Specifies an identifier for a Security List

Type: [String](#)

Used in messages: [MarketDataStatisticsReport](#), [MarketDataStatisticsRequest](#), [SecurityList](#), [SecurityListRequest](#), [SecurityListUpdateReport](#), [SecurityMassStatus](#), [SecurityMassStatusRequest](#)

#### **171.2.4764 SecurityListRefID**

Specifies a reference from one Security List to another. Used to support a hierarchy of Security Lists.

Type: [String](#)

Used in messages: [SecurityList](#), [SecurityListUpdateReport](#)

**171.2.4765 SecurityListRequestType**

Identifies the type/criteria of Security List Request

Type: **int**

Allowed values in SecurityListRequestTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Symbol	Symbol
1	SecurityTypeAnd	SecurityType and/or CFICode
2	Product	Product
3	TradingSessionID	TradingSessionID
4	AllSecurities	All Securities
5	MarketIDOrMarketID	MarketID or MarketID + MarketSegmentID

---

Used in messages: [DerivativeSecurityListRequest](#), [SecurityListRequest](#)

**171.2.4766 SecurityListType**

Specifies a type of Security List.

Type: **int**

Allowed values in SecurityListTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	IndustryClassification	Industry Classification
2	TradingList	Trading List
3	Market	Market / Market Segment List
4	NewspaperList	Newspaper List

---

Used in messages: [SecurityList](#), [SecurityListRequest](#), [SecurityListUpdateReport](#)

**171.2.4767 SecurityListTypeSource**

Specifies a specific source for a SecurityListType. Relevant when a certain type can be provided from various sources.

Type: **int**

Allowed values in SecurityListTypeSourceCodeSet:

---

Code	Name	Description
1	ICB	ICB (Industry Classification Benchmark) published by Dow Jones and FTSE - <a href="http://www.icbenchmark.com">www.icbenchmark.com</a>
2	NAICS	NAICS (North American Industry Classification System). Replaced SIC (Standard Industry Classification) <a href="http://www.census.gov/naics">www.census.gov/naics</a> or <a href="http://www.naics.com">www.naics.com</a> .
3	GICS	GICS (Global Industry Classification Standard) published by Standards & Poor

---

Used in messages: [SecurityList](#), [SecurityListRequest](#), [SecurityListUpdateReport](#)

#### **171.2.4768 SecurityMassTradingEvent**

Identifies an event related to the mass trading status.

Type: **int**

Allowed values in SecurityTradingEventCodeSet:

---

Code	Name	Description
1	OrderImbalance	Order imbalance, auction is extended
2	TradingResumes	Trading resumes (after Halt)
3	PriceVolatilityInterruption	Price Volatility Interruption
4	ChangeOfTradingSession	Change of Trading Session
5	ChangeOfTradingSubsession	Change of Trading Subsession
6	ChangeOfSecurityTradingStatus	Change of Security Trading Status
7	ChangeOfBookType	Change of Book Type
8	ChangeOfMarketDepth	Change of Market Depth
9	CorporateAction	Corporate action

---

Used in messages: [SecurityMassStatus](#)

**171.2.4769 SecurityMassTradingStatus**

Identifies the trading status applicable to a group of instruments.

Type: **int**

Allowed values in SecurityTradingStatusCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	OpeningDelay	Opening delay
2	TradingHalt	Trading halt
3	Resume	Resume
4	NoOpen	No Open / No Resume
5	PriceIndication	Price indication
6	TradingRangeIndication	Trading Range Indication
7	MarketImbalanceBuy	Market Imbalance Buy
8	MarketImbalanceSell	Market Imbalance Sell
9	MarketOnCloseImbalanceBuy	Market on Close Imbalance Buy
10	MarketOnCloseImbalanceSell	Market on Close Imbalance Sell
12	NoMarketImbalance	No Market Imbalance
13	NoMarketOnCloseImbalance	No Market on Close Imbalance
14	ITSPreOpening	ITS Pre-opening
15	NewPriceIndication	New Price Indication
16	TradeDisseminationTime	Trade Dissemination Time
17	ReadyToTrade	Ready to trade (start of session)
18	NotAvailableForTrading	Not available for trading (end of session)
19	NotTradedOnThisMarket	Not traded on this market
20	UnknownOrInvalid	Unknown or Invalid
21	PreOpen	Pre-open
22	OpeningRotation	Opening Rotation
23	FastMarket	Fast Market
24	PreCross	Pre-Cross - system is in a pre-cross state allowing market to respond to either side of cross
25	Cross	Cross - system has crossed a percentage of the orders and allows market to respond prior to crossing remaining portion
26	PostClose	Post-close
27	NoCancel	No-cancel

---

Used in messages: [SecurityMassStatus](#)

### **171.2.4770 SecurityReferenceDataSupplement**

May be used to generically assist in disambiguating an instrument where the security identifier and core reference data attributes are not sufficient to uniquely identify the instrument. The values used are bilaterally agreed.

Type: [String](#)

Used in components: [Instrument](#)

### **171.2.4771 SecurityRejectReason**

Identifies the reason a security definition request is being rejected.

Type: [int](#)

Allowed values in SecurityRejectReasonCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	InvalidInstrumentRequested	Invalid instrument requested
2	InstrumentAlreadyExists	Instrument already exists
3	RequestTypeNotSupported	Request type not supported
4	SystemUnavailableForInstrumentCreation	System unavailable for instrument creation
5	IneligibleInstrumentGroup	Ineligible instrument group
6	InstrumentIDUnavailable	Instrument ID unavailable
7	InvalidOrMissingDataOnOptionLeg	Invalid or missing data on option leg
8	InvalidOrMissingDataOnFutureLeg	Invalid or missing data on future leg
10	InvalidOrMissingDataOnFXLeg	Invalid or missing data on FX leg
11	InvalidLegPriceSpecified	Invalid leg price specified
12	InvalidInstrumentStructureSpecified	Invalid instrument structure specified

Used in messages: [DerivativeSecurityList](#), [SecurityDefinition](#), [SecurityList](#)

### **171.2.4772 SecurityReportID**

Identifies a Security List message.

Type: **int**

Used in messages: [DerivativeSecurityList](#), [SecurityDefinition](#), [SecurityDefinitionUpdateReport](#), [SecurityList](#), [SecurityListUpdateReport](#)

### **171.2.4773 SecurityReqID**

Unique ID of a Security Definition Request.

Type: **String**

Used in messages: [DerivativeSecurityList](#), [DerivativeSecurityListRequest](#), [DerivativeSecurityListUpdateReport](#), [SecurityDefinition](#), [SecurityDefinitionRequest](#), [SecurityDefinitionUpdateReport](#), [SecurityList](#), [SecurityListRequest](#), [SecurityListUpdateReport](#), [SecurityTypeRequest](#), [SecurityTypes](#)

### **171.2.4774 SecurityRequestResult**

The results returned to a Security Request message

Type: **int**

Allowed values in SecurityRequestResultCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	ValidRequest	Valid request
1	InvalidOrUnsupportedRequest	Invalid or unsupported request
2	NoInstrumentsFound	No instruments found that match selection criteria
3	NotAuthorizedToRetrieveInstrumentData	Not authorized to retrieve instrument data
4	InstrumentDataTemporarilyUnavailable	Instrument data temporarily unavailable
5	RequestForInstrumentDataNotSupported	Request for instrument data not supported

---

Used in messages: [DerivativeSecurityList](#), [DerivativeSecurityListUpdateReport](#), [SecurityDefinition](#), [SecurityList](#), [SecurityListUpdateReport](#)

### **171.2.4775 SecurityRequestType**

Type of Security Definition Request.

Type: **int**

Allowed values in SecurityRequestTypeCodeSet:

Code	Name	Description
0	RequestSecurityIdentityAndSpecifications	Request Security identity and specifications
1	RequestSecurityIdentityForSpecifications	Request Security identity for the specifications provided (name of the security is not supplied)
2	RequestListSecurityTypes	Request List Security Types
3	RequestListSecurities	Request List Securities (can be qualified with Symbol, SecurityType, TradingSessionID, SecurityExchange. If provided then only list Securities for the specific type.)
4	Symbol	Symbol
5	SecurityTypeAndOrCFICode	SecurityType and or CFICode
6	Product	Product
7	TradingSessionID	TradingSessionID
8	AllSecurities	All Securities
9	MarketIDOrMarketID	MarketID or MarketID + MarketSegmentID

Used in messages: **SecurityDefinitionRequest**

#### **171.2.4776 SecurityResponseID**

Unique ID of a Security Definition message.

Type: **String**

Used in messages: **DerivativeSecurityList**, **DerivativeSecurityListUpdateReport**, **SecurityDefinition**, **SecurityDefinitionUpdateReport**, **SecurityList**, **SecurityListUpdateReport**, **SecurityTypes**

#### **171.2.4777 SecurityResponseType**

Type of Security Definition message response.

Type: **int**

Allowed values in SecurityResponseTypeCodeSet:

Code	Name	Description
1	AcceptAsIs	Accept security proposal as-is
2	AcceptWithRevisions	Accept security proposal with revisions as indicated in the message
3	ListOfSecurityTypesReturnedPerRequest	List of security types returned per request
4	ListOfSecuritiesReturnedPerRequest	List of securities returned per request
5	RejectSecurityProposal	Reject security proposal
6	CannotMatchSelectionCriteria	Cannot match selection criteria

Used in messages: [SecurityDefinition](#), [SecurityDefinitionUpdateReport](#), [SecurityTypes](#)

### 171.2.4778 SecurityRiskMetricGrp

List of option securities on an underlying with related calculations (e.g. theoretical valuations, implied volatilities, and other hedge statistics).

Name	Mult.	Type	Description
<a href="#">NoSecurityRiskMetrics</a>	[1..1]	NumInGroup	
<a href="#">Instrument</a>	[0..1]	Component	Required when <a href="#">NoSecurityRiskMetrics</a> (2995) > 0.
<a href="#">PriceDelta</a>	[0..1]	float	
<a href="#">Gamma</a>	[0..1]	float	
<a href="#">Rho</a>	[0..1]	float	
<a href="#">Theta</a>	[0..1]	float	
<a href="#">Vega</a>	[0..1]	float	
<a href="#">Price</a>	[0..1]	Price	May be used for the theoretical (e.g. option) price of the security.
<a href="#">BidPx</a>	[0..1]	Price	May be used to specify the security's top of book bid price, if available, used in the metric calculation.
<a href="#">OfferPx</a>	[0..1]	Price	May be used to specify the security's top of book offer price, if available, used in the metric calculation.
<a href="#">VolatilityTime</a>	[0..1]	UTCTimestamp	
<a href="#">Volatility</a>	[0..1]	float	
<a href="#">BidVolatility</a>	[0..1]	float	

Name	Mult.	Type	Description
OfferVolatility	[0..1]	float	
MidVolatility	[0..1]	float	
RelativeValueGrp	[0..*]	Group	May be used for other types of valuation metrics or analytics.

Used in messages: [SecurityRiskMetricsReport](#)

### 171.2.4779 SecurityRiskMetricsReportID

Unique identifier for the SecurityRiskMetricsReport(35=EG) message.

Type: [String](#)

Used in messages: [SecurityRiskMetricsReport](#)

### 171.2.4780 SecurityStatus

Indicates the current state of the instrument.

Type: [String](#)

Allowed values in SecurityStatusCodeSet:

Code	Name	Description
1	Active	Active. Instrument is active, i.e. trading is possible.
2	Inactive	Inactive. Instrument has previously been active and is now no longer traded but has not expired yet. The instrument may become active again.
3	ActiveClosingOrdersOnly	Active, closing orders only. Instrument is active but only orders closing positions (reducing risk) are allowed.
4	Expired	Expired. Instrument has expired. E.g. An instrument may expire due to reaching maturity or expired based on contract definitions or exchange rules.

Code	Name	Description
5	Delisted	Delisted. Instrument has been removed from securities reference data. Delisting rules varies from exchange to exchange, which may include non-compliance of capitalization, revenue, consecutive minimum closing price. The instrument may become listed again once the instrument is back in compliance. A delisted instrument would not trade on the exchange but it may still be traded over-the-counter (e.g. OTCBB) or on Pink Sheets, or other similar trading service.
6	KnockedOut	Knocked-out. Instrument has breached a pre-defined price threshold.
7	KnockOutRevoked	Knock-out revoked. Instrument reinstated, i.e. threshold has not been breached.
8	PendingExpiry	Pending Expiry. Instrument is currently still active but will expire after the current business day. For example, a contract that expires intra-day (e.g. at noon time) and is no longer tradeable but will still show up in the current day's order book with related statistics.
9	Suspended	Suspended. Instrument has been temporarily disabled for trading (i.e. halted).
10	Published	Published. Instrument information is provided prior to its first activation.
11	PendingDeletion	Pending Deletion. Instrument is awaiting deletion from security reference data.

---

Used in components: [Instrument](#)

#### **171.2.4781 SecurityStatusReqID**

Unique ID of a Security Status Request or a Security Mass Status Request message.

Type: [String](#)

Used in messages: [SecurityMassStatus](#), [SecurityMassStatusRequest](#), [SecurityStatus](#), [SecurityStatusRequest](#)

#### **171.2.4782 SecuritySubType**

Sub-type qualification/identification of the SecurityType. As an example for SecurityType(167)="REPO", the SecuritySubType="General Collateral" can be used to further specify the type of REPO.

If SecuritySubType is used, then SecurityType is required.

For SecurityType="MLEG" a name of the option or futures strategy name can be specified, such as "Calendar", "Vertical", "Butterfly".

For SecurityType(167)="OPT" the subclassification can be specified, such as "Asian".

For SecurityType(167)="SWAPTION" a value of "Straddle" is used to identify a straddle swaption.

In the context of EU SFTR reporting use the appropriate 4-character code noted in the regulations - "GENE" for general collateral or "SPEC" for specific collateral (without quote marks).

Type: **String**

Used in components: **Instrument**

Used in groups: **SecTypesGrp**

Used in messages: **DerivativeSecurityListRequest, SecurityTypeRequest**

### **171.2.4783 SecurityTradingEvent**

Identifies an event related to a SecurityTradingStatus(326). An event occurs and is gone, it is not a state that applies for a period of time.

Type: **int**

Allowed values in SecurityTradingEventCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	OrderImbalance	Order imbalance, auction is extended
2	TradingResumes	Trading resumes (after Halt)
3	PriceVolatilityInterruption	Price Volatility Interruption
4	ChangeOfTradingSession	Change of Trading Session
5	ChangeOfTradingSubsession	Change of Trading Subsession
6	ChangeOfSecurityTradingStatus	Change of Security Trading Status
7	ChangeOfBookType	Change of Book Type
8	ChangeOfMarketDepth	Change of Market Depth
9	CorporateAction	Corporate action

---

Used in groups: **SecMassStatGrp**

Used in messages: **SecurityStatus**

**171.2.4784 SecurityTradingRules**

This SecurityTradingRules component block is used as part of security definition to specify the specific security's standard trading parameters such as trading session eligibility and other attributes of the security.

Name	Mult.	Type	Description
BaseTradingRules	[0..1]	Component	This block contains the base trading rules
TradingSessionRulesGrp	[0..*]	Group	This block contains the trading rules specific to a trading session
NestedInstrumentAttribute	[0..*]	Group	

Used in groups: [MarketSegmentGrp](#), [SecListGrp](#), [SecLstUpdRelSymGrp](#)

**171.2.4785 SecurityTradingStatus**

Identifies the trading status applicable to the transaction.

Type: [int](#)

Allowed values in SecurityTradingStatusCodeSet:

Code	Name	Description
1	OpeningDelay	Opening delay
2	TradingHalt	Trading halt
3	Resume	Resume
4	NoOpen	No Open / No Resume
5	PriceIndication	Price indication
6	TradingRangeIndication	Trading Range Indication
7	MarketImbalanceBuy	Market Imbalance Buy
8	MarketImbalanceSell	Market Imbalance Sell
9	MarketOnCloseImbalanceBuy	Market on Close Imbalance Buy
10	MarketOnCloseImbalanceSell	Market on Close Imbalance Sell
12	NoMarketImbalance	No Market Imbalance
13	NoMarketOnCloseImbalance	No Market on Close Imbalance
14	ITSPreOpening	ITS Pre-opening
15	NewPriceIndication	New Price Indication

Code	Name	Description
16	TradeDisseminationTime	Trade Dissemination Time
17	ReadyToTrade	Ready to trade (start of session)
18	NotAvailableForTrading	Not available for trading (end of session)
19	NotTradedOnThisMarket	Not traded on this market
20	UnknownOrInvalid	Unknown or Invalid
21	PreOpen	Pre-open
22	OpeningRotation	Opening Rotation
23	FastMarket	Fast Market
24	PreCross	Pre-Cross - system is in a pre-cross state allowing market to respond to either side of cross
25	Cross	Cross - system has crossed a percentage of the orders and allows market to respond prior to crossing remaining portion
26	PostClose	Post-close
27	NoCancel	No-cancel

Used in groups: [MDFullGrp](#), [MDIncGrp](#), [SecMassStatGrp](#)

Used in messages: [SecurityStatus](#)

### 171.2.4786 SecurityType

Indicates type of security. Security type enumerations are grouped by Product(460) field value. NOTE: Additional values may be used by mutual agreement of the counterparties.

Type: [String](#)

Allowed values in SecurityTypeCodeSet:

Code	Name	Description
ABS	AssetBackedSecurities	Asset-backed Securities
AN	OtherAnticipationNotes	Other Anticipation Notes (BAN, GAN, etc.)
BA	BankersAcceptance	Bankers Acceptance
BRADY	BradyBond	Brady Bond
CORP	CorporateBond	Corporate Bond
CS	CommonStock	Common Stock

<b>Code</b>	<b>Name</b>	<b>Description</b>
EUSUPRA	EuroSupranationalCoupons	Euro Supranational Coupons. Identify the issuer name in Issuer(106).
FOR	ForeignExchangeContract	Foreign Exchange Contract
MF	MutualFund	Mutual Fund
REPO	Repurchase	Repurchase
TERM	TermLoan	Term Loan
BDN	BankDepositoryNote	Bank Depository Note
CAN	CanadianTreasuryNotes	Canadian Treasury Notes
CAP	Cap	Cap. In an interest rate cap, the buyer receives payments at the end of each period in which the rate indec exceeds the agreed strike rate.
CMB	CanadianMortgageBonds	Canadian Mortgage Bonds
COFO	CertificateOfObligation	Certificate Of Obligation
CPP	CorporatePrivatePlacement	Corporate Private Placement
FAC	FederalAgencyCoupon	Federal Agency Coupon
FORWARD	Forward	Forward
FXNDF	NonDeliverableForward	Non-deliverable forward
MLEG	MultilegInstrument	Multileg Instrument
PS	PreferredStock	Preferred Stock
RVLV	RevolverLoan	Revolver Loan
BN	BankNotes	Bank Notes
BUYSELL	BuySellback	Buy Sellback
CB	ConvertibleBond	Convertible Bond
CDS	CreditDefaultSwap	Credit Default Swap
CMBS	Corp	Corp. Mortgage-backed Securities
COFP	CertificateOfParticipation	Certificate Of Participation
CTB	CanadianTreasuryBills	Canadian Treasury Bills
DR	DepositoryReceipts	Depository Receipts
FADN	FederalAgencyDiscountNote	Federal Agency Discount Note
FXSPOT	FXSpot	FX Spot
NONE	NoSecurityType	No Security Type
RVLVTRM	Revolver	Revolver/Term Loan
BOX	BillOfExchanges	Bill Of Exchanges
BRIDGE	BridgeLoan	Bridge Loan

<b>Code</b>	<b>Name</b>	<b>Description</b>
CLLR	Collar	Collar. In an interest rate collar, this is a combination of a cap and a floor.
CMO	CollateralizedMortgageObligation	Collateralized Mortgage Obligation
DUAL	DualCurrency	Dual Currency
EUSOV	EuroSovereigns	Euro Sovereigns. Identify the issuer name in Issuer(106).
FXFWD	FXForward	FX Forward
GO	GeneralObligationBonds	General Obligation Bonds
PEF	PrivateExportFunding	Private Export Funding. Identify the issuer name in Issuer(106).
SECLOAN	SecuritiesLoan	Securities Loan
UST	USTreasuryNoteOld	US Treasury Note (Deprecated Value Use TNOTE)
CAMM	CanadianMoneyMarkets	Canadian Money Markets
CMDTYSWAP	CommoditySwap	Commodity swap
EUCORP	EuroCorporateBond	Euro Corporate Bond
FXSWAP	FXSwap	FX Swap
IET	IOETTEMortgage	IOETTE Mortgage
LOFC	LetterOfCredit	Letter Of Credit
MT	MandatoryTender	Mandatory Tender
PROV	CanadianProvincialBonds	Canadian Provincial Bonds
SECPLEDGE	SecuritiesPledge	Securities Pledge
SUPRA	USDSupranationalCoupons	USD Supranational Coupons. Identify the issuer name in Issuer(106).
USTB	USTreasuryBillOld	US Treasury Bill (Deprecated Value Use TBILL)
?	Wildcard	Wildcard entry for use on Security Definition Request
CD	CertificateOfDeposit	Certificate Of Deposit
DVPLDG	DeliveryVersusPledge	Delivery versus pledge
EUFRN	EuroCorporateFloatingRateNotes	Euro Corporate Floating Rate Notes
EXOTIC	Exotic	Exotic
FXNDS	NonDeliverableSwap	Non-deliverable Swap
MBS	MortgageBackedSecurities	Mortgage-backed Securities
RAN	RevenueAnticipationNote	Revenue Anticipation Note
SWING	SwingLineFacility	Swing Line Facility
TB	TreasuryBill	Treasury Bill - non US
CASH	Cash	Cash
CL	CallLoans	Call Loans

<b>Code</b>	<b>Name</b>	<b>Description</b>
COLLBSKT	CollateralBasket	Collateral basket. A collection of securities held as collateral in the customer's collateral fund. The collateral fund is usually managed by a custodian.
DINP	DebtorInPossession	Debtor In Possession
FLR	Floor	Floor. In an interest rate floor, the buyer receives payments at the end of each period in which the rate index is below the agreed strike rate.
FRN	USCorporateFloatingRateNotes	US Corporate Floating Rate Notes
FXBN	FXBankNote	FX Bank Note
MIO	MortgageInterestOnly	Mortgage Interest Only
OOB	OptionsOnCombo	Options on Combo
REV	RevenueBonds	Revenue Bonds
TBOND	USTreasuryBond	US Treasury Bond
CP	CommercialPaper	Commercial Paper
DEFLTED	Defaulted	Defaulted
FRA	FRA	Forward Rate Agreement
FXDN	ForeignCurrencyDiscountNote	Foreign Currency Discount Note. Discount notes issued in foreign currency by Fannie Mae.
MPO	MortgagePrincipalOnly	Mortgage Principal Only
Other	Other	Other
SFP	StructuredFinanceProduct	Structured finance product
SPCLA	SpecialAssessment	Special Assessment
TINT	InterestStripFromAnyBondOrNote	Interest Strip From Any Bond Or Note
XLINKD	IndexedLinked	Indexed Linked
DN	DepositNotes	Deposit Notes
ETN	ExchangeTradedNote	Exchange traded note
FUT	Future	Future
MPP	MortgagePrivatePlacement	Mortgage Private Placement
SPCLO	SpecialObligation	Special Obligation
STRUCT	StructuredNotes	Structured Notes
TBILL	USTreasuryBill	US Treasury Bill
TIPS	TreasuryInflationProtectedSecurities	Treasury Inflation Protected Securities
WITHDRN	Withdrawn	Withdrawn
EUCD	EuroCertificateOfDeposit	Euro Certificate Of Deposit
FWD	DerivativeForward	Derivative forward

<b>Code</b>	<b>Name</b>	<b>Description</b>
MPT	MiscellaneousPassThrough	Miscellaneous Pass-through
MRGNLOAN	MarginLoan	Margin loan
REPLACD	Replaced	Replaced
SPCLT	SpecialTax	Special Tax
TCAL	PrincipalStripOfACallableBon- dOrNote	Principal Strip Of A Callable Bond Or Note
YANK	YankeeCorporateBond	Yankee Corporate Bond
DIMSUMCORP	OffshoreIssuedChineseYuanCorpo- rateBond	Offshore issued Chinese Yuan (CNY) denominated corporate bond
EUCP	EuroCommercialPaper	Euro Commercial Paper
IRS	InterestRateSwap	Interest Rate Swap
MATURED	Matured	Matured
PFAND	Pfandbrief	Pfandbrief. Identify the issuer name in Issuer(106).
SECDERIV	SecuritizedDerivative	Securitized derivative
TAN	TaxAnticipationNote	Tax Anticipation Note
TPRN	PrincipalStripFromANonCallable- BondOrNote	Principal Strip From A Non-Callable Bond Or Note
TRS	TotalReturnSwap	Total return swap
AMENDED	Amended	Amended and restated
ETF	ExchangeTradedFund	Exchange Traded Fund
LOANLEASE	LoanLease	Loan/lease
LQN	LiquidityNote	Liquidity Note
PRCORP	PreferredCorporateBond	Preferred Corporate Bond
TAXA	TaxAllocation	Tax Allocation
TBA	ToBeAnnounced	To Be Announced
TNOTE	USTreasuryNote	US Treasury Note
DIGITAL	DigitalAsset	Digital Asset. Asset that exists only in digital form or which is the digital representation of another asset (Source: ISO 24165 - Terms and Definitions).
DIMSUMSOV	OffshoreIssuedChine- seYuanSovereignBond	Offshore issued Chinese Yuan (CNY) denominated sovereign bond
MTN	MediumTermNotes	Medium Term Notes
RETIRED	Retired	Retired
TECP	TaxExemptCommercialPaper	Tax Exempt Commercial Paper
ONITE	Overnight	Overnight
OOF	OptionsOnFutures	Options on Futures

<b>Code</b>	<b>Name</b>	<b>Description</b>
SOV	SovereignBond	Sovereign Bond. Sovereign or government bond other than Euro and US issuer. Specify sovereign issuer in Issuer(106).
TMCP	TaxableMunicipalCP	Taxable Municipal CP
OOP	OptionsOnPhysical	Options on Physical - use not recommended
PN	PromissoryNote	Promissory Note
STN	ShortTermLoanNote	Short Term Loan Note
TFRN	USTreasuryFloatingRateNote	US Treasury Floating Rate Note
TRAN	TaxRevenueAnticipationNote	Tax Revenue Anticipation Note
OPT	Option	Option
PZFJ	PlazosFijos	Plazos Fijos
VRDN	VariableRateDemandNote	Variable Rate Demand Note
SLQN	SecuredLiquidityNote	Secured Liquidity Note
SPOTFWD	SpotForward	Spot forward
WAR	Warrant	Warrant
MCPIB	MunicipalInterestBearingCommercialPaper	Municipal Interest Bearing Commercial Paper
SWAPTION	SwapOption	Swap option
TD	TimeDeposit	Time Deposit
TMB	TaxableMunicipalBond	Taxable Municipal Bond
XMISSION	Transmission	Transmission
INDEX	Index	General type for a contract based on an established index
TLQN	TermLiquidityNote	Term Liquidity Note
VRDO	VariableRateDemandObligation	Variable Rate Demand Obligation
BDBSKT	BondBasket	Bond basket
XCN	ExtendedCommNote	Extended Comm Note
CFD	ContractForDifference	Contract for difference
YCD	YankeeCertificateOfDeposit	Yankee Certificate Of Deposit
BAB	BankAcceptedBill	Bank Accepted Bill. Also known as Bank Bill.
CRLNSWAP	CorrelationSwap	Correlation swap
BNST	ShortTermBankNote	Short Term Bank Note
DVDNSWAP	DividendSwap	Dividend swap
CLCP	CallableCommercialPaper	Callable Commercial Paper
EQBSKT	EquityBasket	Equity basket
CN	CommercialNote	Commercial Note
EQFWD	EquityForward	Equity forward

Code	Name	Description
CPIB	InterestBearingCommercialPaper	Interest Bearing Commercial Paper
RTRNSWAP	ReturnSwap	Return swap
EUMTN	EuroMediumTermNote	Euro Medium Term Note
VARSWAP	VarianceSwap	Variance swap
EUNCP	EuroNegotiableCommercialPaper	Euro Negotiable Commercial Paper
PRTFLIOSWAP	PortfolioSwaps	Portfolio swap
EUSTLQN	EuroStructuredLiquidityNote	Euro Structured Liquidity Note
FUTSWAP	FuturesOnASwap	Futures on a Swap
EUTD	EuroTimeDeposit	Euro Time Deposit
FWDSWAP	ForwardsOnASwap	Forwards on a Swap
FWDFRTAGMT	ForwardFreightAgreement	Forward Freight Agreement
JCD	JumboCertificateOfDeposit	Jumbo Certificate of Deposit
MMF	MoneyMarketFund	Money Market Fund
SPREADBET	SpreadBetting	Spread Betting
ETC	ExchangeTradedCommodity	Exchange traded commodity
MN	MasterNote	Master Note. Short term notes issued by Federal Farm Credit Banks Funding Corporation to provide loans and funding under Federal Farm Credit System (FFCS).
NCD	NegotiableCertificateOfDeposit	Negotiable Certificate of Deposit
NCP	NegotiableCommercialPaper	Negotiable Commercial Paper
RCD	RetailCertificateOfDeposit	Retail Certificate of Deposit
TDR	TermDepositReceipt	Term Deposit Receipt

Used in components: [Instrument](#)

Used in groups: [SecTypesGrp](#), [SettlInstGrp](#)

Used in messages: [SecurityTypeRequest](#), [SettlementInstructionRequest](#)

### 171.2.4787 SecurityUpdateAction

Specifies the action taken or to be taken for the specified instrument or list of instruments.

Type: [char](#)

Allowed values in SecurityUpdateActionCodeSet:

---

Code	Name	Description
A	Add	Add
D	Delete	Delete
M	Modify	Modify

---

Used in messages: [DerivativeSecurityListUpdateReport](#), [SecurityDefinitionUpdateReport](#), [SecurityListUpdateReport](#)

### 171.2.4788 SecurityXML

XML definition for the security.

Type: [XMLData](#)

Used in components: [SecurityXML](#)

### 171.2.4789 SecurityXML

The SecurityXML component is used to provide a definition in an XML format for the instrument.

---

Name	Mult.	Type	Description
<a href="#">SecurityXMLLen</a>	[0..1]	Length	Must be provided if SecurityXML(1185) field is specified and must immediately precede it.
<a href="#">SecurityXML</a>	[0..1]	XMLData	
<a href="#">SecurityXMLSchema</a>	[0..1]	String	

---

Used in components: [Instrument](#)

### 171.2.4790 SecurityXMLLen

The length of the SecurityXML(1185) data block.

Type: [Length](#)

Used in components: [SecurityXML](#)

**171.2.4791 SecurityXMLSchema**

The schema used to validate the contents of SecurityXML(1185).

Type: **String**

Used in components: **SecurityXML**

**171.2.4792 SelfMatchPreventionID**

Identifies an order or trade that should not be matched to an opposite order or trade if both buy and sell orders for the same asset contain the same SelfMatchPreventionID(2362) and submitted by the same firm.

Type: **String**

Used in components: **TradeReportOrderDetail**

Used in messages: **ExecutionReport, MassQuote, MultilegOrderCancelReplace, NewOrderMultileg, NewOrderSingle, OrderCancelReplaceRequest, Quote**

**171.2.4793 SelfMatchPreventionInstruction**

Indicate the instruction for self-match prevention when the incoming (aggressive) order has the same SelfMatchPreventionID(2362) as a resting (passive) order.

Type: **int**

Allowed values in SelfMatchPreventionInstructionCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	CancelAggressive	Cancel aggressive. Cancel incoming order.
2	CancelPassive	Cancel passive. Cancel resting order with the same SelfMatchPreventionID(2362).
3	CancelAggressivePassive	Cancel aggressive and passive. Cancel both incoming and resting order with the same SelfMatchPreventionID(2362).

---

Used in components: **TradeReportOrderDetail**

Used in messages: **ExecutionReport, MassQuote, MultilegOrderCancelReplace, NewOrderMultileg, NewOrderSingle, OrderCancelReplaceRequest, Quote**

### **171.2.4794 SellerDays**

Specifies the number of days that may elapse before delivery of the security

Type: **int**

Used in groups: **MDFullGrp**, **MDIncGrp**

### **171.2.4795 SellVolume**

Quantity sold.

Type: **Qty**

Used in messages: **SecurityStatus**

### **171.2.4796 SenderCompID**

Assigned value used to identify firm sending message.

Type: **String**

Used in components: **StandardHeader**

### **171.2.4797 SenderLocationID**

Assigned value used to identify specific message originator's location (i.e. geographic location and/or desk, trader)

Type: **String**

Used in components: **StandardHeader**

### **171.2.4798 SenderSubID**

Assigned value used to identify specific message originator (desk, trader, etc.)

Type: **String**

Used in components: **StandardHeader**

**171.2.4799 SendingTime**

Time of message transmission (always expressed in UTC (Universal Time Coordinated, also known as "GMT"))

Type: **UTCTimestamp**

Used in components: **StandardHeader**

**171.2.4800 Seniority**

Specifies which issue (underlying bond) will receive payment priority in the event of a default.

Used to define a CDS instrument.

Type: **String**

Allowed values in SeniorityCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
SD	SeniorSecured	Senior Secured
SR	Senior	Senior
SB	Subordinated	Subordinated
JR	Junior	Junior. In the context of MiFID II this value is used as identified in RTS 23 Annex I Table 3 Field 23 "Seniority of the bond".
MZ	Mezzanine	Mezzanine. In the context of MiFID II this value is used as identified in RTS 23 Annex I Table 3 Field 23 "Seniority of the bond".
SN	SeniorNonPreferred	Senior Non-Preferred. For CDS reference obligations of non-preferred senior debt issued by European Financials that constitute a layer of debt ranking between the bank's normal senior debt but above the bank's normal tier 2 subordinated debt (reference: ISDA Credit Market Infrastructure Group).

---

Used in components: **Instrument**

**171.2.4801 SessionRejectReason**

Code to identify reason for a session-level Reject message.

Type: **int**

Allowed values in SessionRejectReasonCodeSet:

Code	Name	Description
0	InvalidTagNumber	Invalid Tag Number
1	RequiredTagMissing	Required Tag Missing
2	TagNotDefinedForThisMessageType	Tag not defined for this message type
3	UndefinedTag	Undefined tag
4	TagSpecifiedWithoutAValue	Tag specified without a value
5	ValueIsIncorrect	Value is incorrect (out of range) for this tag
6	IncorrectDataFormatForValue	Incorrect data format for value
7	DecryptionProblem	Decryption problem
8	SignatureProblem	Signature problem
9	CompIDProblem	CompID problem
10	SendingTimeAccuracyProblem	SendingTime Accuracy Problem
11	InvalidMsgType	Invalid MsgType
12	XMLValidationError	XML Validation Error
13	TagAppearsMoreThanOnce	Tag appears more than once
14	TagSpecifiedOutOfRequiredOrder	Tag specified out of required order
15	RepeatingGroupFieldsOutOfOrder	Repeating group fields out of order
16	IncorrectNumInGroupCountForRepeatingGroup	Incorrect NumInGroup count for repeating group
17	NonDataValueIncludesFieldDelimiter	Non "Data" value includes field delimiter (<SOH> character)
18	InvalidUnsupportedAppVer	Invalid/Unsupported Application Version
99	Other	Other

Used in messages: **Reject**

### **171.2.4802 SessionStatus**

Status of a FIX session

Type: **int**

Allowed values in SessionStatusCodeSet:

---

Code	Name	Description
0	SessionActive	Session active
1	SessionPasswordChanged	Session password changed
2	SessionPasswordDueToExpire	Session password due to expire
3	NewSessionPasswordDoesNotComplyWithPolicy	New session password does not comply with policy
4	SessionLogoutComplete	Session logout complete
5	InvalidUsernameOrPassword	Invalid username or password
6	AccountLocked	Account locked
7	LogonsAreNotAllowedAtThisTime	Logons are not allowed at this time
8	PasswordExpired	Password expired
9	ReceivedMsgSeqNumTooLow	Received MsgSeqNum(34) is too low.
10	ReceivedNextExpectedMsgSeqNumTooHigh	Received NextExpectedMsgSeqNum(789) is too high.

---

Used in messages: [Logon](#), [Logout](#)

#### **171.2.4803 SettlCurrAmt**

Total amount due expressed in settlement currency (includes the effect of the forex transaction)

Type: [Amt](#)

Used in components: [SettlTradeDetails](#)

Used in groups: [AllocGrp](#), [SettlObligationInstructions](#), [TrdCapRptAckSideGrp](#), [TrdCapRptSideGrp](#)

Used in messages: [Confirmation](#), [ExecutionReport](#)

#### **171.2.4804 SettlCurrBidFxRate**

Foreign exchange rate used to compute the bid "SettlCurrAmt" (119) from Currency (15) to SettlCurrency (120)

Type: [float](#)

Used in messages: [Quote](#), [QuoteResponse](#), [QuoteStatusReport](#)

**171.2.4805 SettlCurrency**

Currency code of settlement denomination.

Type: **Currency**

Used in components: **SettlTradeDetails**

Used in groups: **AllocGrp, InstrmtMatchSideGrp, ListOrdGrp, MDFullGrp, MDIncGrp, QuotReqGrp, SettlInstGrp, SettlObligationInstructions, SideCrossOrdModGrp**

Used in messages: **Confirmation, ExecutionReport, MultilegOrderCancelReplace, NewOrder-Multileg, NewOrderSingle, OrderCancelReplaceRequest, PositionMaintenanceReport, Position-MaintenanceRequest, PositionReport, Quote, RequestForPositions, RequestForPositionsAck, SettlementInstructionRequest, TradeCaptureReport, TradeCaptureReportAck**

**171.2.4806 SettlCurrencyCodeSource**

Identifies class or source of the SettlCurrency(120) value.

Type: **String**

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in components: **SettlTradeDetails**

Used in groups: **InstrmtMatchSideGrp, ListOrdGrp, MDFullGrp, MDIncGrp, QuotReqGrp, SettlInstGrp, SettlObligationInstructions, SideCrossOrdModGrp**

Used in messages: **Confirmation, ExecutionReport, MultilegOrderCancelReplace, NewOrder-Multileg, NewOrderSingle, OrderCancelReplaceRequest, PositionMaintenanceReport, Position-MaintenanceRequest, PositionReport, Quote, RequestForPositions, RequestForPositionsAck, SettlementInstructionRequest, TradeCaptureReport, TradeCaptureReportAck**

**171.2.4807 SettlCurrFxRate**

Foreign exchange rate used to compute SettlCurrAmt(119) from Currency(15) to SettlCurrency(120).

Type: **float**

Used in groups: **AllocGrp, SettlObligationInstructions, TrdCapRptAckSideGrp, TrdCapRptSideGrp**

Used in messages: **Confirmation, ExecutionReport**

**171.2.4808 SettlCurrFxRateCalc**

Specifies whether or not SettlCurrFxRate (155) should be multiplied or divided.

Type: **char**

Allowed values in SettlCurrFxRateCalcCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
M	Multiply	Multiply
D	Divide	Divide

Used in groups: **AllocGrp, TrdCapRptAckSideGrp, TrdCapRptSideGrp**

Used in messages: **Confirmation, ExecutionReport, Quote, QuoteResponse, QuoteStatusReport**

**171.2.4809 SettlCurrOfferFxRate**

Foreign exchange rate used to compute the offer "SettlCurrAmt" (119) from Currency (15) to SettlCurrency (120)

Type: **float**

Used in messages: **Quote, QuoteResponse, QuoteStatusReport**

**171.2.4810 SettlDate**

Specific date of trade settlement (SettlementDate) in YYYYMMDD format.

If present, this field overrides SettlType (63). This field is required if the value of SettlType (63) is 6 (Future) or 8 (Sellers Option). This field must be omitted if the value of SettlType (63) is 7 (When and If Issued)

(expressed in local time at place of settlement)

Type: [LocalMktDate](#)

Used in components: [SettlTradeDetails](#)

Used in groups: [BidCompReqGrp](#), [BidCompRspGrp](#), [InstrmtMDReqGrp](#), [ListOrdGrp](#), [MDFullGrp](#), [MDIncGrp](#), [QuotEntryAckGrp](#), [QuotEntryGrp](#), [QuotReqGrp](#), [QuotReqRjctGrp](#), [SettlObligationInstructions](#)

Used in messages: [AllocationInstruction](#), [AllocationInstructionAlert](#), [AllocationReport](#), [CollateralAssignment](#), [CollateralInquiry](#), [CollateralInquiryAck](#), [CollateralReport](#), [CollateralRequest](#), [CollateralResponse](#), [Confirmation](#), [CrossOrderCancelReplaceRequest](#), [ExecutionReport](#), [MultilegOrderCancelReplace](#), [NewOrderCross](#), [NewOrderMultileg](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#), [PositionMaintenanceReport](#), [PositionMaintenanceRequest](#), [PositionReport](#), [Quote](#), [QuoteResponse](#), [QuoteStatusReport](#), [RequestForPositions](#), [TradeAggregationReport](#), [TradeCaptureReport](#), [TradeCaptureReportAck](#)

#### **171.2.4811 SettlDate2**

SettlDate (64) of the future part of a F/X swap order.

Type: [LocalMktDate](#)

Used in groups: [ListOrdGrp](#), [QuotEntryAckGrp](#), [QuotEntryGrp](#), [QuotReqGrp](#), [QuotReqRjctGrp](#)

Used in messages: [ExecutionReport](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#), [Quote](#), [QuoteResponse](#), [QuoteStatusReport](#)

#### **171.2.4812 SettlDeliveryType**

Identifies type of settlement

Type: [int](#)

Allowed values in [SettlDeliveryTypeCodeSet](#):

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Versus	"Versus. Payment": Deliver (if Sell) or Receive (if Buy) vs. (Against) Payment
1	Free	"Free": Deliver (if Sell) or Receive (if Buy) Free
2	TriParty	Tri-Party
3	HoldInCustody	Hold In Custody

---

Used in components: [SettlInstructionsData](#)

### 171.2.4813 SettlDetails

Name	Mult.	Type	Description
<a href="#">NoSettlDetails</a>	[1..1]	NumInGroup	Number of settlement parties
<a href="#">SettlObligSource</a>	[0..1]	CodeSet	Indicates the Source of the Settlement Instructions
<a href="#">StandInstDbType</a>	[0..1]	CodeSet	
<a href="#">StandInstDbName</a>	[0..1]	String	
<a href="#">StandInstDbID</a>	[0..1]	String	
<a href="#">SettlParties</a>	[0..*]	Group	Carries settlement account information

Used in groups: [SettlObligationInstructions](#), [TrdCapRptAckSideGrp](#), [TrdCapRptSideGrp](#)

Used in messages: [PayManagementReport](#), [PayManagementRequest](#)

### 171.2.4814 SettlDisruptionProvision

Specifies the consequences of bullion settlement disruption events.

Type: [int](#)

Allowed values in [SettlDisruptionProvisionCodeSet](#):

Code	Name	Description
1	Negotiation	Negotiation
2	Cancellation	Cancellation and payment

Used in components: [Instrument](#)

### 171.2.4815 SettledEntityMatrixPublicationDate

The publication date of the applicable version of the matrix. If not specified, the Standard Terms Supplement defines rules for which version of the matrix is applicable.

Type: [LocalMktDate](#)

Used in components: [Instrument](#)

**171.2.4816 SettledEntityMatrixSource**

Relevant settled entity matrix source.

Type: **String**

Used in components: **Instrument**

**171.2.4817 SettlementAmount**

The amount of settlement.

Type: **Amt**

Used in groups: **SettlementAmountGrp**

**171.2.4818 SettlementAmountCurrency**

The currency of the reported settlement amount.

Type: **Currency**

Used in groups: **SettlementAmountGrp**

**171.2.4819 SettlementAmountCurrencyCodeSource**

Identifies class or source of the SettlementAmountCurrency(1702) value.

Type: **String**

Allowed values in CurrencyCodeSourceCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

---

Used in groups: **SettlementAmountGrp**

**171.2.4820 SettlementAmountGrp**

The Settlement Amount Group component block is a repeating group of settlement amounts for an account

Name	Mult.	Type	Description
NoSettlementAmounts	[1..1]	NumInGroup	
SettlementAmount	[0..1]	Amt	Required if NoSettlementAmounts > 0.
SettlementAmountCurrency	[0..1]	Currency	
SettlementAmountCurrencyCodeSource	[0..1]	CodeSet	

Used in messages: [AccountSummaryReport](#)

**171.2.4821 SettlementCycleNo**

Settlement cycle in which the settlement obligation was generated

Type: [int](#)

Used in messages: [SettlementObligationReport](#)

**171.2.4822 SettleOnOpenFlag**

Indicator to determine if instrument is settle on open

Type: [String](#)

Used in components: [Instrument](#)

**171.2.4823 SettlForwardPoints**

FX forward points added to [SettlPrice\(730\)](#). The value is expressed in decimal form and may be a negative.

Type: [PriceOffset](#)

Used in messages: [PositionReport](#)

**171.2.4824 SettlInstGrp**

<b>Name</b>	<b>Mult.</b>	<b>Type</b>	<b>Description</b>
NoSettlInst	[1..1]	NumInGroup	Required except where SettlInstMode is 5=Reject SSI request
SettlInstID	[0..1]	String	Unique ID for this settlement instruction. Required except where SettlInstMode is 5=Reject SSI request
SettlInstTransType	[0..1]	CodeSet	New, Replace, Cancel or Restate. Required except where SettlInstMode is 5=Reject SSI request
SettlInstRefID	[0..1]	String	Required where SettlInstTransType is Cancel or Replace
Parties	[0..*]	Group	Insert here the set of "Parties" (firm identification) fields defined in "Common Components of Application Messages". Used here for settlement location. Also used for executing broker for CIV settlement instructions
Side	[0..1]	CodeSet	Can be used for SettleInstMode 1 if SSIs are being provided for a particular side.
Product	[0..1]	CodeSet	Can be used for SettleInstMode 1 if SSIs are being provided for a particular product.
SecurityType	[0..1]	CodeSet	Can be used for SettleInstMode 1 if SSIs are being provided for a particular security type (as alternative to CFICode).
CFICode	[0..1]	String	Can be used for SettleInstMode 1 if SSIs are being provided for a particular CFI (as identified by CFI code).
UPICode	[0..1]	String	Can be used for SettleInstMode 1 if SSIs are being provided for a particular UPI (as identified by UPI code).
SettlCurrency	[0..1]	Currency	Can be used for SettleInstMode 1 if SSIs are being provided for a particular settlement currency
SettlCurrencyCodeSource	[0..1]	CodeSet	
EffectiveTime	[0..1]	UTCTimestamp	Effective (start) date/time for this settlement instruction. Required except where SettlInstMode is 5=Reject SSI request
ExpireTime	[0..1]	UTCTimestamp	Termination date/time for this settlement instruction.
LastUpdateTime	[0..1]	UTCTimestamp	Date/time this settlement instruction was last updated (or created if not updated since creation). Required except where SettlInstMode is 5=Reject SSI request

Name	Mult.	Type	Description
SettlInstructionsData	[0..1]	Component	Insert here the set of "SettlInstructionsData" fields defined in "Common Components of Application Messages"
PaymentMethod	[0..1]	CodeSet	For use with CIV settlement instructions
PaymentRef	[0..1]	String	For use with CIV settlement instructions
CardHolderName	[0..1]	String	For use with CIV settlement instructions
CardNumber	[0..1]	String	For use with CIV settlement instructions
CardStartDate	[0..1]	LocalMktDate	For use with CIV settlement instructions
CardExpDate	[0..1]	LocalMktDate	For use with CIV settlement instructions
CardIssNum	[0..1]	String	For use with CIV settlement instructions
PaymentDate	[0..1]	LocalMktDate	For use with CIV settlement instructions
PaymentRemitterID	[0..1]	String	For use with CIV settlement instructions

Used in messages: [SettlementInstructions](#)

#### 171.2.4825 SettlInstID

Unique identifier for Settlement Instruction.

Type: [String](#)

Used in groups: [SettlInstGrp](#)

#### 171.2.4826 SettlInstMode

Indicates mode used for Settlement Instructions message. \*\*\* SOME VALUES HAVE BEEN REPLACED - See "Replaced Features and Supported Approach" \*\*\*

Type: [char](#)

Allowed values in SettlInstModeCodeSet:

Code	Name	Description
0	Default	Default (Replaced)
1	StandingInstructionsProvided	Standing Instructions Provided
2	SpecificAllocationAccountOverriding	Specific Allocation Account Overriding (Replaced)
3	SpecificAllocationAccountStanding	Specific Allocation Account Standing (Replaced)

Code	Name	Description
4	SpecificOrderForASingleAccount	Specific Order for a single account (for CIV)
5	RequestReject	Request reject

Used in groups: [ListOrdGrp](#)

Used in messages: [SettlementInstructions](#)

#### **171.2.4827 SettlInstMsgID**

Unique identifier for Settlement Instruction message.

Type: [String](#)

Used in messages: [SettlementInstructions](#)

#### **171.2.4828 SettlInstRefID**

Reference identifier for the SettlInstID (162) with Cancel and Replace SettlInstTransType (163) transaction types.

Type: [String](#)

Used in groups: [SettlInstGrp](#)

#### **171.2.4829 SettlInstReqID**

Unique ID of settlement instruction request message

Type: [String](#)

Used in messages: [SettlementInstructionRequest](#), [SettlementInstructions](#)

#### **171.2.4830 SettlInstReqRejCode**

Identifies reason for rejection (of a settlement instruction request message).

Type: [int](#)

Allowed values in SettlInstReqRejCodeCodeSet:

Code	Name	Description
0	UnableToProcessRequest	Unable to process request
1	UnknownAccount	Unknown account
2	NoMatchingSettlementInstructions-Found	No matching settlement instructions found
99	Other	Other

Used in messages: [SettlementInstructions](#)

### 171.2.4831 SettlInstructionsData

The SettlInstructionsData component block is used to convey key information regarding standing settlement and delivery instructions. It also provides a reference to standing settlement details regarding the source, delivery instructions, and settlement parties

Name	Mult.	Type	Description
<a href="#">SettlDeliveryType</a>	[0..1]	CodeSet	Required if AllocSettlInstType = 1 or 2
<a href="#">StandInstDbType</a>	[0..1]	CodeSet	Required if AllocSettlInstType = 3 (should not be populated otherwise)
<a href="#">StandInstDbName</a>	[0..1]	String	Required if AllocSettlInstType = 3 (should not be populated otherwise)
<a href="#">StandInstDbID</a>	[0..1]	String	Identifier used within the StandInstDbType. Required if AllocSettlInstType = 3 (should not be populated otherwise)
<a href="#">DlvlyInstGrp</a>	[0..*]	Group	Required (and must be > 0) if AllocSettlInstType = 2 (should not be populated otherwise)

Used in components: [SettlTradeDetails](#)

Used in groups: [AllocGrp](#), [SettlInstGrp](#)

Used in messages: [CollateralAssignment](#), [CollateralInquiry](#), [CollateralReport](#), [Confirmation](#)

### 171.2.4832 SettlInstSource

Indicates source of Settlement Instructions

Type: [char](#)

Allowed values in SettlInstSourceCodeSet:

---

Code	Name	Description
1	BrokerCredit	Broker's Instructions
2	Institution	Institution's Instructions
3	Investor	Investor (e.g. CIV use)

---

Used in groups: [DlvyInstGrp](#)

### 171.2.4833 SettlInstTransType

Settlement Instructions message transaction type

Type: [char](#)

Allowed values in SettlInstTransTypeCodeSet:

---

Code	Name	Description
N	New	New
C	Cancel	Cancel
R	Replace	Replace
T	Restate	Restate

---

Used in groups: [SettlInstGrp](#)

### 171.2.4834 SettlMethod

Settlement method for a contract or instrument. Additional values may be used with bilateral agreement.

Type: [String](#)

Allowed values in SettlMethodCodeSet:

---

Code	Name	Description
C	CashSettlementRequired	Cash settlement required
P	PhysicalSettlementRequired	Physical settlement required

---

---

Code	Name	Description
E	Election	Election at exercise. The settlement method will be elected at the time of contract exercise.

---

Used in components: [Instrument](#)

### 171.2.4835 **SettlMethodElectingPartySide**

Side value of the party electing the settlement method.

Type: [int](#)

Allowed values in PaymentPaySideCodeSet:

---

Code	Name	Description
1	Buy	Buy
2	Sell	Sell

---

Used in components: [OptionExercise](#)

### 171.2.4836 **SettlMethodElectionDateAdjusted**

The adjusted settlement method election date.

Type: [LocalMktDate](#)

Used in components: [SettlMethodElectionDate](#)

### 171.2.4837 **SettlMethodElectionDateBusinessCenter**

The business center calendar used for date adjustment of the settlement method election unadjusted or relative date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in groups: [SettlMethodElectionDateBusinessCenterGrp](#)

**171.2.4838 SettlMethodElectionDateBusinessCenterGrp**

SettlMethodElectionDateBusinessCenterGrp is a repeating subcomponent within the SettlMethodElectionDate component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the DateAdjustment component in Instrument.

Name	Mult.	Type	Description
NoSettlMethodElectionDateBusinessCenters	[1..1]	NumInGroup	
SettlMethodElectionDateBusinessCenter	[0..1]	String	Required if NoSettlMethodElectionDateBusinessCenters(42775) > 0.

Used in components: [SettlMethodElectionDate](#)

**171.2.4839 SettlMethodElectionDateBusinessDayConvention**

The settlement method election date adjustment business day convention.

Type: [int](#)

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [SettlMethodElectionDate](#)

**171.2.4840 SettlMethodElectionDate**

The SettlMethodElectionDate component is a subcomponent within the OptionExercise component used to report the settlement method election date.

Name	Mult.	Type	Description
SettlMethodElectionDateUnadjusted	[0..1]	LocalMktDate	
SettlMethodElectionDateBusinessDay-Convention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the DateAdjustment component in Instrument. The specified value would be specific to OptionExercise.
SettlMethodElectionDateBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the DateAdjustment component in Instrument. The specified values would be specific to OptionExercise.
SettlMethodElectionDateRelativeTo	[0..1]	int	
SettlMethodElectionDateOffsetPeriod	[0..1]	int	Conditionally required when SettlMethodElectionDateOffsetUnit(42781) is specified.
SettlMethodElectionDateOffsetUnit	[0..1]	CodeSet	Conditionally required when SettlMethodElectionDateOffsetPeriod(42780) is specified.
SettlMethodElectionDateOffsetDay-Type	[0..1]	CodeSet	
SettlMethodElectionDateAdjusted	[0..1]	LocalMktDate	

Used in components: [OptionExercise](#)

**171.2.4841 SettlMethodElectionDateOffsetDayType**

Specifies the day type of the relative settlement method election date offset.

Type: [int](#)

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar

---

Code	Name	Description
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in components: [SettlMethodElectionDate](#)

#### **171.2.4842 SettlMethodElectionDateOffsetPeriod**

Time unit multiplier for the relative settlement method election date offset.

Type: [int](#)

Used in components: [SettlMethodElectionDate](#)

#### **171.2.4843 SettlMethodElectionDateOffsetUnit**

Time unit associated with the relative settlement method election date offset.

Type: [String](#)

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: [SettlMethodElectionDate](#)

#### **171.2.4844 SettlMethodElectionDateRelativeTo**

Specifies the anchor date when the settlement method election date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: [int](#)

Used in components: [SettlMethodElectionDate](#)

**171.2.4845 SettlMethodElectionDateUnadjusted**

The unadjusted settlement method election date.

Type: [LocalMktDate](#)

Used in components: [SettlMethodElectionDate](#)

**171.2.4846 SettlObligationInstructions**

Name	Mult.	Type	Description
<a href="#">NoSettlOblig</a>	[1..1]	NumInGroup	Number of Settlement Obligations
<a href="#">NetGrossInd</a>	[0..1]	CodeSet	
<a href="#">SettlObligID</a>	[0..1]	String	Unique ID for this settlement instruction
<a href="#">SettlObligTransType</a>	[0..1]	CodeSet	New, Replace, Cancel, or Restate
<a href="#">SettlObligRefID</a>	[0..1]	String	Required where SettlObligTransType(1162) is Cancel or Replace. The SettlObligID(1161) of the settlement obligation being canceled or replaced.
<a href="#">CcyAmt</a>	[0..1]	Amt	Net flow of currency 1
<a href="#">SettlCurrAmt</a>	[0..1]	Amt	Net flow of currency 2
<a href="#">Currency</a>	[0..1]	Currency	Currency 1 in the stated currency pair, the dealt currency
<a href="#">CurrencyCodeSource</a>	[0..1]	CodeSet	
<a href="#">SettlCurrency</a>	[0..1]	Currency	Currency 2 in the stated currency pair, the contra currency
<a href="#">SettlCurrencyCodeSource</a>	[0..1]	CodeSet	
<a href="#">SettlCurrFxRate</a>	[0..1]	float	Derived rate of Ccy2 per Ccy1 based on netting
<a href="#">SettlDate</a>	[0..1]	LocalMktDate	Value Date
<a href="#">Instrument</a>	[0..1]	Component	Used to express the instrument in which settlement is taking place
<a href="#">Parties</a>	[0..*]	Group	
<a href="#">EffectiveTime</a>	[0..1]	UTCTimestamp	Effective (start) date/time for this settlement instruction
<a href="#">ExpireTime</a>	[0..1]	UTCTimestamp	Termination date/time for this settlement instruction.
<a href="#">LastUpdateTime</a>	[0..1]	UTCTimestamp	Date/time this settlement instruction was last updated (or created if not updated since creation).
<a href="#">SettlDetails</a>	[0..*]	Group	Conveys settlement account details reported as part of obligation

Used in messages: [SettlementObligationReport](#)

### **171.2.4847 SettlObligID**

Unique ID for this settlement instruction.

Type: [String](#)

Used in groups: [SettlObligationInstructions](#)

### **171.2.4848 SettlObligMode**

Used to identify the reporting mode of the settlement obligation which is either preliminary or final

Type: [int](#)

Allowed values in SettlObligModeCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	Preliminary	Preliminary
2	Final	Final

Used in messages: [SettlementObligationReport](#)

### **171.2.4849 SettlObligMsgID**

Message identifier for Settlement Obligation Report

Type: [String](#)

Used in messages: [SettlementObligationReport](#)

### **171.2.4850 SettlObligRefID**

Required where SettlInstTransType is Cancel or Replace

Type: [String](#)

Used in groups: [SettlObligationInstructions](#)

**171.2.4851 SettlObligSource**

Used to identify whether these delivery instructions are for the buyside or the sellside.

Type: **char**

Allowed values in SettlObligSourceCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	InstructionsOfBroker	Instructions of Broker
2	InstructionsForInstitution	Instructions for Institution
3	Investor	Investor
4	BuyersSettlementInstructions	Buyer's settlement instructions
5	SellersSettlementInstructions	Seller's settlement instructions

---

Used in groups: **SettlDetails**

**171.2.4852 SettlObligTransType**

Transaction Type - required except where SettlInstMode is 5=Reject SSI request

Type: **char**

Allowed values in SettlObligTransTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
C	Cancel	Cancel
N	New	New
R	Replace	Replace
T	Restate	Restate

---

Used in groups: **SettlObligationInstructions**

**171.2.4853 SettlParties**

The SettlParties component block is used in a similar manner as Parties Block within the context of settlement instruction messages to distinguish between parties involved in the settlement and parties who are expected to execute the settlement process.

Name	Mult.	Type	Description
NoSettlPartyIDs	[1..1]	NumInGroup	Repeating group below should contain unique combinations of SettlPartyID, SettlPartyIDSource, and SettlPartyRole
SettlPartyID	[0..1]	String	Used to identify source of SettlPartyID. Required if SettlPartyIDSource is specified. Required if NoSettlPartyIDs > 0.
SettlPartyIDSource	[0..1]	CodeSet	Used to identify class source of SettlPartyID value (e.g. BIC). Required if SettlPartyID is specified. Required if NoSettlPartyIDs > 0.
SettlPartyRole	[0..1]	CodeSet	Identifies the type of SettlPartyID (e.g. Executing Broker). Required if NoSettlPartyIDs > 0.
SettlPartyRoleQualifier	[0..1]	CodeSet	
SettlPtysSubGrp	[0..*]	Group	Repeating group of SettlParty sub-identifiers.

Used in groups: [DlvyInstGrp](#), [SettlDetails](#)

#### 171.2.4854 SettlPartyID

PartyID value within a settlement parties component. Nested repeating group.

Same values as PartyID (448)

Type: [String](#)

Used in groups: [SettlParties](#)

#### 171.2.4855 SettlPartyIDSource

PartyIDSource value within a settlement parties component.

Same values as PartyIDSource (447)

Type: [char](#)

Allowed values in PartyIDSourceCodeSet:

Code	Name	Description
1	KoreanInvestorID	Korean Investor ID

Code	Name	Description
6	UKNationalInsuranceOrPension-Number	UK National Insurance or Pension Number
B	BIC	BIC (Bank Identification Code - SWIFT managed) code (ISO9362 - See "Appendix 6-B")
I	ISITCAcronym	Directed broker three character acronym as defined in ISITC "ETC Best Practice" guidelines document
2	TaiwaneseForeignInvestorID	Taiwanese Qualified Foreign Investor ID QFII/FID
7	USSocialSecurityNumber	US Social Security Number
C	GeneralIdentifier	Generally accepted market participant identifier (e.g. NASD mnemonic)
3	TaiwaneseTradingAcct	Taiwanese Trading Acct
8	USEmployerOrTaxIDNumber	US Employer or Tax ID Number
D	Proprietary	Proprietary / Custom code. Custom ID schema used between counterparties, trading platforms and repositories.
4	MalaysianCentralDepository	Malaysian Central Depository (MCD) number
9	AustralianBusinessNumber	Australian Business Number
E	ISOCountryCode	ISO Country Code
5	ChineseInvestorID	Chinese Investor ID
A	AustralianTaxFileNumber	Australian Tax File Number
F	SettlementEntityLocation	Settlement Entity Location (note if Local Market Settlement use "E=ISO Country Code") (see "Appendix 6-G" for valid values)
G	MIC	Market Identifier Code (ISO 10383) MIC
J	TaxID	Tax ID
H	CSDParticipant	CSD participant/member code (e.g. Euroclear, DTC, CREST or Kassenverein number)
K	AustralianCompanyNumber	Australian Company Number
L	AustralianRegisteredBodyNumber	Australian Registered Body Number
M	CFTCReportingFirmIdentifier	CFTC reporting firm identifier
N	LegalEntityIdentifier	Legal Entity Identifier (ISO 17442) LEI
O	InterimIdentifier	Interim identifier. An interim entity identifier assigned by a regulatory agency prior to an LEI (ISO 17442) being assigned.
P	ShortCodeIdentifier	Short code identifier. A generic means for trading venues, brokers, investment managers to convey a bilaterally agreed upon "short hand" code for an identifier that is a reference to a mapping between the parties.

Code	Name	Description
Q	NationalIDNaturalPerson	National ID of natural person. An identification number generally assigned by a government authority or agency to a natural person which is unique to the person it is assigned to. Examples include, but not limited to, "social security number", "pension number".
R	IndiaPermanentAccountNumber	India Permanent Account Number. Also referred to as PAN ID. An identifier issued by the Income Tax Department of India.
S	FDID	Firm designated identifier. Also referred to as FDID. A unique identifier required by the SEC for each trading account designated by Industry Members for purposes of reporting to CAT (Consolidated Audit Trail).
T	SPSAID	Special Segregated Account ID. Also referred to as SPSA ID. The Special Segregated Account identifier issued by Hong Kong Exchanges and Clearing.
U	MasterSPSAID	Master Special Segregated Account ID. Also referred to as Master SPSA ID. The master identifier issued by Hong Kong Exchanges and Clearing for the aggregation of SPSA IDs.

Used in groups: [SettlParties](#)

### 171.2.4856 SettlPartyRole

PartyRole value within a settlement parties component.

Same values as PartyRole (452)

Type: [int](#)

Allowed values in PartyRoleCodeSet:

Code	Name	Description
1	ExecutingFirm	Executing Firm (formerly FIX 4.2 ExecBroker)
2	BrokerOfCredit	Broker of Credit (formerly FIX 4.2 BrokerOfCredit)
3	ClientID	Client ID (formerly FIX 4.2 ClientID)
4	ClearingFirm	Clearing Firm (formerly FIX 4.2 ClearingFirm)
5	InvestorID	Investor ID
6	IntroducingFirm	Introducing Firm
7	EnteringFirm	Entering Firm

<b>Code</b>	<b>Name</b>	<b>Description</b>
8	Locate	Locate / Lending Firm (for short-sales)
9	FundManagerClientID	Fund Manager Client ID (for CIV)
10	SettlementLocation	Settlement Location (formerly FIX 4.2 SettlLocation)
11	OrderOriginationTrader	Order Origination Trader (associated with Order Origination Firm - i.e. trader who initiates/submits the order)
12	ExecutingTrader	Executing Trader (associated with Executing Firm - actually executes)
13	OrderOriginationFirm	Order Origination Firm (e.g. buy-side firm)
14	GiveupClearingFirmDepr	Giveup Clearing Firm (firm to which trade is given up)
15	CorrespondantClearingFirm	Correspondant Clearing Firm
16	ExecutingSystem	Executing System
17	ContraFirm	Contra Firm
18	ContraClearingFirm	Contra Clearing Firm
19	SponsoringFirm	Sponsoring Firm
20	UnderlyingContraFirm	Underlying Contra Firm
21	ClearingOrganization	Clearing Organization
22	Exchange	Exchange. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
24	CustomerAccount	Customer Account
25	CorrespondentClearingOrganization	Correspondent Clearing Organization
26	CorrespondentBroker	Correspondent Broker
27	Buyer	Buyer/Seller (Receiver/Deliverer)
28	Custodian	Custodian
29	Intermediary	Intermediary
30	Agent	Agent
31	SubCustodian	Sub-custodian
32	Beneficiary	Beneficiary
33	InterestedParty	Interested party
34	RegulatoryBody	Regulatory body. In the context of regulatory reporting, this identifies the regulator the trade is being reported to.
35	LiquidityProvider	Liquidity provider
36	EnteringTrader	Entering trader
37	ContraTrader	Contra trader
38	PositionAccount	Position account. The account which positions are maintained. Typically represents the aggregation of one or more customer accounts.

<b>Code</b>	<b>Name</b>	<b>Description</b>
39	ContraInvestorID	Contra Investor ID
40	TransferToFirm	Transfer to Firm
41	ContraPositionAccount	Contra Position Account
42	ContraExchange	Contra Exchange
43	InternalCarryAccount	Internal Carry Account
44	OrderEntryOperatorID	Order Entry Operator ID
45	SecondaryAccountNumber	Secondary Account Number
46	ForeignFirm	Foreign Firm
47	ThirdPartyAllocationFirm	Third Party Allocation Firm
48	ClaimingAccount	Claiming Account
49	AssetManager	Asset Manager
50	PledgorAccount	Pledgor Account
51	PledgeeAccount	Pledgee Account
52	LargeTraderReportableAccount	Large Trader Reportable Account
53	TraderMnemonic	Trader mnemonic
54	SenderLocation	Sender Location
55	SessionID	Session ID
56	AcceptableCounterparty	Acceptable Counterparty
57	UnacceptableCounterparty	Unacceptable Counterparty
58	EnteringUnit	Entering Unit
59	ExecutingUnit	Executing Unit
60	IntroducingBroker	Introducing Broker
61	QuoteOriginator	Quote originator
62	ReportOriginator	Report originator
63	SystematicInternaliser	Systematic internaliser (SI)
64	MultilateralTradingFacility	Multilateral Trading Facility (MTF). Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
65	RegulatedMarket	Regulated Market (RM). Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
66	MarketMaker	Market Maker
67	InvestmentFirm	Investment Firm
68	HostCompetentAuthority	Host Competent Authority (Host CA)
69	HomeCompetentAuthority	Home Competent Authority (Home CA)

<b>Code</b>	<b>Name</b>	<b>Description</b>
70	CompetentAuthorityLiquidity	Competent Authority of the most relevant market in terms of liquidity (CAL)
71	CompetentAuthorityTransactionVenue	Competent Authority of the Transaction (Execution) Venue (CATV)
72	ReportingIntermediary	Reporting intermediary. The medium or vendor used to report to a regulator, non-regulatory agency or data repository.
73	ExecutionVenue	Execution Venue. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
74	MarketDataEntryOriginator	Market data entry originator
75	LocationID	Location ID
76	DeskID	Desk ID
77	MarketDataMarket	Market data market
78	AllocationEntity	Allocation Entity
79	PrimeBroker	Prime Broker providing General Trade Services
80	StepOutFirm	Step-Out Firm (Prime Broker)
81	BrokerClearingID	Broker clearing identifier
82	CentralRegistrationDepository	Central Registration Depository (CRD)
83	ClearingAccount	Clearing Account
84	AcceptableSettlingCounterparty	Acceptable Settling Counterparty
85	UnacceptableSettlingCounterparty	Unacceptable Settling Counterparty
86	CLSMemberBank	CLS Member Bank
87	InConcertGroup	In Concert Group
88	InConcertControllingEntity	In Concert Controlling Entity
89	LargePositionsReportingAccount	Large Positions Reporting Account
90	SettlementFirm	Settlement Firm
91	SettlementAccount	Settlement account. The account to which individual payment obligations are aggregated for netting and funds movement. Typically represents the aggregation of many margin (performance bond) accounts.
92	ReportingMarketCenter	Reporting Market Center
93	RelatedReportingMarketCenter	Related Reporting Market Center
94	AwayMarket	Away Market. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
95	GiveupTradingFirm	Give-up (trading) firm
96	TakeupTradingFirm	Take-up (trading) firm
97	GiveupClearingFirm	Give-up clearing firm

<b>Code</b>	<b>Name</b>	<b>Description</b>
98	TakeupClearingFirm	Take-up clearing firm
99	OriginatingMarket	Originating Market. Identifies the Market using PartyIDSource(tag 447) = G (Market Identifier Code) where an order originated in the event that the order is sent to an alternative market for execution. Serves as an inverse of an away market.
100	MarginAccount	Margin account. Also referred to as "performance bond account". The margin account is the calculated margin requirements. Typically represents the aggregation of one or more position accounts.
101	CollateralAssetAccount	Collateral asset account. The account at which individual collateral assets are maintained. Typically, although not always, one-for-one with the settlement account.
102	DataRepository	Data repository. Multiple instances of this PartyRole may appear for reporting purposes.
103	CalculationAgent	Calculation agent
104	ExerciseNoticeSender	Sender of exercise notice
105	ExerciseNoticeReceiver	Receiver of exercise notice
106	RateReferenceBank	Rate reference bank. The bank providing the reference rate. Multiple instance of this PartyRole may appear.
107	Correspondent	Correspondent
109	BeneficiaryBank	Beneficiary's bank or depository institution. The institution in which the beneficiary, a person or an entity, has their account with. The institution may be a bank or non-bank institution.
110	Borrower	Borrower
111	PrimaryObligator	Primary obligator
112	Guarantor	Guarantor
113	ExcludedReferenceEntity	Excluded reference entity
114	DeterminingParty	Determining party
115	HedgingParty	Hedging party
116	ReportingEntity	Reporting entity. The entity that is reporting the information.
117	SalesPerson	Sales person. The person who is involved in the sales activities for their firm.
118	Operator	Operator. The person who has the capabilities and authorization to take certain actions; for example, setting entitlements, etc.
119	CSD	Central Securities Depository (CSD)
120	ICSD	International Central Securities Depository (ICSD)

Code	Name	Description
121	TradingSubAccount	Trading sub-account. Example of sub-accounts include a clearing account that has multiple trading sub-accounts, a trading account that has multiple trading sub-accounts belonging to different trading firms.
122	InvestmentDecisionMaker	Investment decision maker. In the context of ESMA RTS reporting, this is used to specify party responsible for the investment decision. See RTS 24, Annex, Table 2, Field 4.
123	PublishingIntermediary	Publishing intermediary. The medium or vendor used to publish to the market.
124	CSDParticipant	Central Securities Depository (CSD) Participant. In the context of EU SFTR reporting the identifier of the CSD participant or indirect participant of the reporting counterparty. Where both the CSD participant and indirect participant are involved in the transaction this should identify the indirect participant.
125	Issuer	Issuer. The issuer of the security.
126	ContraCustomerAccount	Contra Customer Account. Same as PartyRole(452) = 24 (Customer Account) but for the counterparty. Can be used whenever the parties component is not nested in a repeating group representing both sides.
127	ContraInvestmentDecisionMaker	Contra Investment Decision Maker. Same as PartyRole(452) = 122 (Investment Decision Maker) but for the counterparty. Can be used whenever the parties component is not nested in a repeating group representing both sides.

Used in groups: [SettlParties](#)

### 171.2.4857 SettlPartyRoleQualifier

Used to further qualify the value of SettlPartyRole(784).

Type: [int](#)

Allowed values in PartyDetailRoleQualifierCodeSet:

Code	Name	Description
0	Agency	Agency
1	Principal	Principal
2	RisklessPrincipal	Riskless principal
3	GeneralClearingMember	General clearing member

Code	Name	Description
30	ExchangeOrderSubmitter	Exchange order submitter. Used to identify original or initial exchange order submitting broker when party role "1" (Executing Firm) appears more than once.
4	IndividualClearingMember	Individual clearing member
5	PreferredMarketMaker	Preferred market maker. Market maker getting a part of the matched quantity before primary or default market maker.
6	DirectedMarketMaker	Directed market maker. Single market maker to handle the order provided.
7	Bank	Bank
8	Hub	Hub. Indicates that the Intermediary party is a hub system or service provider.
9	PrimaryTrdRepository	Primary trade repository. Used to differentiate the principal trade repository from the Original or Additional trade repositories when there are multiple trade repositories being reported.
10	OrigTrdRepository	Original trade repository. Used to identify the trade repository to which the trade was originally reported if different from the current repository to which the trade is being reported.
11	AddnlIntlTrdRepository	Additional international trade repository. Used with InternationalSwapIndicator(2526) to identify the trade repository that is in addition to the local swaps data repository as required by U.S. law.
12	AddnlDomesticTrdRepository	Additional domestic trade repository. Used with MixedSwapIndicator(1929) to identify the trade repository that is in addition to the current trade repository when the assets in the swap are subject to two different domestic regulators.
13	RelatedExchange	Related exchange
14	OptionsExchange	Options exchange
15	SpecifiedExchange	Specified exchange
16	ConstituentExchange	Constituent exchange.
17	ExemptFromTradeReporting	Exempt from trade reporting. In the context of FINRA TRACE reporting requirements, this is used to indicate the ATS has been granted a regulatory exemption from reporting.
18	Current	Current. Can be used to convey an existing party identifier for the same party role in a single message.
19	New	New. Can be used to convey a future party identifier for the same party role in a single message.
20	DesignatedSponsor	Designated sponsor. Market maker jointly providing liquidity for the same security with other market makers.

Code	Name	Description
21	Specialist	Specialist. Market maker being the only one providing liquidity for a security.
22	Algorithm	Algorithm
23	FirmOrLegalEntity	Firm or legal entity
24	NaturalPerson	Natural person
25	RegularTrader	Regular trader. Standard trader profile.
26	HeadTrader	Head trader. Senior trader leading a group of regular traders.
27	Supervisor	Supervisor. Administrative user that has only limited rights for normal trading but possibly special rights for emergency actions.
28	TriParty	Tri-party. In the context of EU SFTR reporting, identifies the third party, not necessarily the custodian, to which the reporting counterparty has outsourced the post-trade processing of an SFT (if applicable).
29	Lender	Lender. In the context of EU SFTR reporting, identifies the agent lender involved in the securities lending transaction.

#### **171.2.4858 SettlPartySubID**

PartySubID value within a settlement parties component.

Same values as PartySubID (523)

Type: [String](#)

Used in groups: [SettlPtysSubGrp](#)

#### **171.2.4859 SettlPartySubIDType**

Type of SettlPartySubID (785) value.

Same values as PartySubIDType (803)

Type: [int](#)

Allowed values in PartySubIDTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	Firm	Firm
2	Person	Person
3	System	System
4	Application	Application
5	FullLegalNameOfFirm	Full legal name of firm
6	PostalAddress	Postal address
7	PhoneNumber	Phone number
8	EmailAddress	Email address
9	ContactName	Contact name
10	SecuritiesAccountNumber	Securities account number (for settlement instructions)
11	RegistrationNumber	Registration number (for settlement instructions and confirmations)
12	RegisteredAddressForConfirmation	Registered address (for confirmation purposes)
13	RegulatoryStatus	Regulatory status (for confirmation purposes)
14	RegistrationName	Registration name (for settlement instructions)
15	CashAccountNumber	Cash account number (for settlement instructions)
16	BIC	BIC
17	CSDParticipantMemberCode	CSD participant member code
18	RegisteredAddress	Registered address
19	FundAccountName	Fund account name
20	TelexNumber	Telex number
21	FaxNumber	Fax number
22	SecuritiesAccountName	Securities account name
23	CashAccountName	Cash account name
24	Department	Department
25	LocationDesk	Location desk
26	PositionAccountType	Position account type
27	SecurityLocateID	Security locate ID
28	MarketMaker	Market maker
29	EligibleCounterparty	Eligible counterparty
30	ProfessionalClient	Professional client
31	Location	Location
32	ExecutionVenue	Execution venue
33	CurrencyDeliveryIdentifier	Currency delivery identifier

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
34	AddressCity	Address City
35	AddressStateOrProvince	Address State/Province
36	AddressPostalCode	Address Postal Code
37	AddressStreet	Address Street
38	AddressISOCountryCode	Address Country (ISO country code)
39	ISOCountryCode	ISO country code
40	MarketSegment	Market segment
41	CustomerAccountType	Customer account type
42	OmnibusAccount	Omnibus account
43	FundsSegregationType	Funds segregation type
44	GuaranteeFund	Guarantee fund. Identifies a guarantee fund related to an account. Used when one account has multiple funds of collateral, each guaranteeing different positions. Can be used for PartyRole(452) = Customer Account(24).
45	SwapDealer	Swap dealer. The US regulator's defined term for identifying the trade counterparty as "any person who holds itself out as a dealer in swaps, makes a market in swaps, regularly enters into swaps with counterparties as an ordinary course of business for its own account, or engages in activity causing itself to be commonly known in the trade as a dealer or market maker in swaps".
46	MajorParticipant	Major participant. When PartySubID(523)=Y the counterparty is not the swap dealer but is a major swap participant as defined in the regulations.
47	FinancialEntity	Financial entity. When PartySubID(523)=Y the counterparty is neither a swap dealer nor a major swap participant but is a financial entity as defined in the regulations.
48	USPerson	U.S. person. A legal term referring to any U.S. person or legal entity anywhere in the world that should be taxed under U.S. law.
49	ReportingEntityIndicator	Reporting entity indicator. Indicates the entity obligated or delegated to report to their regulator, a non-regulatory agency or data repository. Set PartySubID(523)=Y if true.
50	ElectedClearingRequirementException	Elected clearing requirement exception
51	BusinessCenter	Business center.
52	ReferenceText	Reference text
53	ShortMarkingExemptAccount	Short-marking exempt account

<b>Code</b>	<b>Name</b>	<b>Description</b>
54	ParentFirmIdentifier	Parent firm identifier. Implementation-specific identifier of this party's parent entity.
55	ParentFirmName	Parent firm name. Full name of this party's parent entity.
56	DealIdentifier	Deal identifier. The internal identifier assigned to the trade by this party, particularly by a Clearing Organization.
57	SystemTradeID	System trade identifier
58	SystemTradeSubID	System trade sub-identifier
59	FCMCode	Futures Commission Merchant (FCM) code. The FCM's code or identifier in relation to the PartyRole(452). For example, if PartyRole(452) is the exchange or clearinghouse, the FCM code/ID specified in PartySubID(523) is the FCM's identifier at the exchange or clearinghouse.
60	DlvryTrmlCode	Delivery terminal customer account/code. Usually used for gas delivery to identify whose account the gas is allocated to at the delivery terminal. Often referred to as "HUB" code.
61	VolntyRptEntity	Voluntary reporting entity. The entity voluntarily reporting the trade to the regulator. Set PartySubID(523)=Y if true.
62	RptObligJurisdiction	Reporting obligation jurisdiction. For a trade that falls under multiple jurisdictions this may be used to identify, through PartySubID(523), the reporting jurisdiction to which the party is obligated to report.
63	VolntyRptJurisdiction	Voluntary reporting jurisdiction. For a trade that falls under multiple jurisdictions this may be used to identify, through PartySubID(523), the regulatory jurisdiction to which the party is submitting a voluntary report.

Code	Name	Description
64	CompanyActivities	Company activities. For regulatory reporting. ID values include: A = Assurance undertaking authorized in accordance with Directive 2002/83/EC C=Credit institution authorized in accordance with Directive 2006/48/EC F=Investment firm in accordance with Directive 2004/39/EC I=Insurance undertaking authorized in accordance with Directive 73/239/EC L=Alternative investment fund managed by AIFMs authorized or registered in accordance with Directive 2011/61/EC O=Institution for occupational retirement provision within the meaning of Article 6(a) of Directive 2003/41/EC R=Reinsurance undertaking authorized in accordance with Directive 2005/68/EC U=UCITS and its management company, authorized in accordance with Directive 2009/65/EC or blank in case of coverage by LEI or in case of non-financial counterparties. In the context of EU SFTR reporting use the appropriate 4- or 1-character code noted in the regulations. See SFTR ITS "Commission Implementing Regulation (EU) 2019/363" Annexes 1 and 2 for values.
65	EEAreaDomiciled	European Economic Area domiciled. ID values: Y or N
66	ContractLinked	Contract linked to commercial or treasury financing for this counterparty. ID values: Y or N
67	ContractAbove	Contract above clearing threshold for this counterparty. ID values: Y or N
68	VolntyRptPty	Voluntary reporting party. When PartySubID(523)=Y, identifies that the trading party is reporting voluntarily when VoluntaryRegulatoryReport(1935)=Y.
69	EndUser	End user. When PartySubID(523)=Y, the counterparty is neither the swap dealer, major swap participant nor financial entity as defined in the regulations.
70	LocationOrJurisdiction	Location or jurisdiction. One or more instances may be used in combination with PartySubIDType(803) = 49 (Reporting entity indicator) or 102 (Data repository) to identify the jurisdiction, countries, regions or provinces for which the party is a reporting entity or data repository when that characteristic is ambiguous or where there are multiple locations. The party sub-ID value is either a jurisdiction acronym, a 2-character ISO 3166 country code, or a hyphenated combination of the country code and the standard post-office abbreviation for province, state or region if necessary. E.g. "US" for United States or "CA-QC" for Quebec Canada.

<b>Code</b>	<b>Name</b>	<b>Description</b>
71	DerivativesDealer	Derivatives dealer. Indicates whether the party is a derivatives dealer or not (Y/N). The Canadian regulator's defined term for identifying the trade counterparty as "a person or company engaging in or holding himself, herself or itself out as engaging in the business of trading in derivatives in Ontario as principal or agent".
72	Domicile	Domicile. Country and optionally province, state or region of domicile. The party sub-ID value is either a 2-character ISO 3166 country code or a hyphenated combination of the country code and the standard post-office abbreviation of province, state or region if necessary. E.g. "US" for United States or "CA-QC" for Quebec Canada.
73	ExemptFromRecognition	Exempt from recognition. Used with party role 21 "Clearing Organization" to indicate exemption (Y/N). Identifies a clearing agency as exempt from oversight in Ontario, i.e. one that 1) only provides limited services and does not present significant risks or 2) is foreign-based, intends to operate in Ontario but is subject to regulatory oversight in another jurisdiction.
74	Payer	Payer. Identifies the party as the payer of a particular payment stream or bullet payment by quoting the stream's StreamDesc(40051) (or LegStreamDesc(40243) or UnderlyingStreamDesc(40542)) or payment's PaymentDesc(43087) in the associated party sub-identifier field.
75	Receiver	Receiver. Identifies the party as the receiver of a particular payment stream or bullet payment by quoting the stream's StreamDesc(40051) (or LegStreamDesc(40243) or UnderlyingStreamDesc(40542)) or payment's PaymentDesc(43087) in the associated party sub-identifier field.
76	SystematicInternaliser	Systematic Internaliser (SI). In the context of ESMA reporting, this is used to indicate whether the specified party is a Systematic Internaliser or not for the security defined in the Instrument component (Y/N).
77	PublishingEntityIndicator	Publishing entity indicator. Indicates the entity obligated or delegated to publish to the market. Set PartySubID(523)=Y if true.
78	FirstName	First name. The first name(s) of a natural person. If multiple names, separate entries by a comma.
79	Surname	Surname. The surname(s) or lastname(s) of a natural person. If multiple names, separate entries by a comma.

Code	Name	Description
80	DateOfBirth	Date of birth. The date of birth of a natural person in the format YYYYMMDD.
81	OrderTransmittingFirm	Order transmitting firm. Identifies whether the party specified in PartyID(448) is the firm that transmitted the order. In the context of RTS 22 Article 4, when "true" the PartySubID(523)=Y shall be set "by the transmitting firm within the transmitting firm's report where conditions for transmission specified in Article 4 were not satisfied."
82	OrderTransmittingFirmBuyer	Order transmitting firm for buyer. Identifies the firm that transmitted the order for the buyer. In the context of ESMA RTS 22, PartySubID(523)=Y is used to indicate the firm identified in PartyID(448) is the firm that transmitted the order for the buyer. "This shall be populated by the receiving firm within the receiving firm's report with the identification code provided by the transmitting firm."
83	OrderTransmitterSeller	Order transmitter for seller. Identifies the order transmitting firm for the seller. In the context of ESMA RTS 22, PartySubID(523)=Y is used to indicate the firm identified in PartyID(448) is the firm that transmitted the order for the seller. "This shall be populated by the receiving firm within the receiving firm's report with the identification code provided by the transmitting firm."
84	LegalEntityIdentifier	Legal Entity Identifier (ISO 17442) LEI
85	SubSectorClassification	Sub-sector classification. Supplemental to party sub-ID type "64" (Company activities) for regulatory reporting. For EU SFTR reporting use the appropriate 4-character code noted in the regulations applying the conditional association rules. See SFTR ITS "Commission Implementing Regulation (EU) 2019/363" Annexes 1 and 2 for values.
86	PartySide	Party side. May be used, when appropriate, to explicitly indicate the transaction side of the party, e.g. Buyer, Seller, Lender, Borrower, Maker, Taker, etc. in the ID. In the context of EU SFTR reporting, use values as required by SFTR, "GIVE" and "TAKE" in the ID, to identify collateral giver and taker.
87	LegalRegistrationCountry	Legal registration country. ISO Country Code where the registered office of the party is located as specified in the LEI reference data.

Used in groups: [SettlPtysSubGrp](#)

**171.2.4860 SettlPrice**

Settlement price

Type: **Price**

Used in messages: **AdjustedPositionReport, AssignmentReport, PositionReport, SecurityStatus**

**171.2.4861 SettlPriceDeterminationMethod**

Calculation method used to determine settlement price.

Type: **int**

Allowed values in SettlPriceDeterminationMethodCodeSet:

Code	Name	Description
0	Unknown	Unknown
1	LastTradePrice	Last trade price
2	LastBidPrice	Last bid price
3	LastOfferPrice	Last offer price
4	MidPrice	Mid price. The price at the mid-point between last bid and last offer price.
5	AverageLastTradePrice	Average last trade price. The average price across a bi-laterally agreed number of trades, e.g. last five trades.
6	AverageLastTradePeriod	Average last trade period. Average price across bi-laterally agreed time period, e.g. last minute of trading.
7	UnderlyingPrice	Underlying price. Based on price of underlying instrument.
8	CalculatedPrice	Calculated price. Other calculation method, e.g. theoretical price.
9	ManualPrice	Manual price. Manually entered price.

Used in groups: **MDFullGrp, MDIncGrp**

Used in messages: **SecurityStatus**

**171.2.4862 SettlPriceFxRateCalc**

Specifies whether LastPx(31) **TradeCaptureReport** or SettlPrice(730) **PositionReport** should be multiplied or divided.

Type: **char**

Allowed values in SettlCurrFxRateCalcCodeSet:

---

Code	Name	Description
M	Multiply	Multiply
D	Divide	Divide

---

Used in messages: **PositionReport**, **TradeCaptureReport**

### **171.2.4863 SettlPriceIncrement**

Settlement price increment for stated price range.

Type: **Price**

Used in groups: **TickRules**

### **171.2.4864 SettlPriceSecondaryIncrement**

Secondary settlement price increment for stated price range. The meaning of secondary is left to bilateral agreement, e.g. it may refer to final settlement for a contract.

Type: **Price**

Used in groups: **TickRules**

### **171.2.4865 SettlPriceType**

Type of settlement price

Type: **int**

Allowed values in SettlPriceTypeCodeSet:

SettlPartySubIDType	[0..1]	CodeSet	

Used in groups: **SettlParties**

**171.2.4870 SettlRateDisruptionFallbackGrp**

The SettlRateDisruptionsFallbackGrp is a repeating subcomponent of the PaymentStreamNonDeliverableSettlTermGrp component used to specify the method, prioritized by the order it is listed, to get a replacement rate for a disrupted settlement rate option for a non-deliverable settlement currency.

Name	Mult.	Type	Description
NoSettlRateFallbacks	[1..1]	NumInGroup	
SettlRatePostponementMaximumDays	[0..1]	int	Required if NoSettlRateFallbacks(40085) > 0.
SettlRateFallbackRateSource	[0..1]	Component	
SettlRatePostponementSurvey	[0..1]	Boolean	
SettlRatePostponementCalculationAgent	[0..1]	CodeSet	

Used in components: [PaymentStreamNonDeliverableSettlTerms](#)

### 171.2.4871 SettlRateFallbackRateSource

Identifies the source of rate information.

Type: [int](#)

Allowed values in RateSourceCodeSet:

Code	Name	Description
0	Bloomberg	Bloomberg
1	Reuters	Reuters
2	Telerate	Telerate
3	ISDARateOption	ISDA Settlement Rate Option. The source of the currency conversion as specified by the ISDA terms in Annex A to the 1998 FX and Currency Option Definitions. See <a href="http://www.fpml.org/coding-scheme/settlement-rate-option">http://www.fpml.org/coding-scheme/settlement-rate-option</a>
99	Other	Other

Used in components: [SettlRateFallbackRateSource](#)

### 171.2.4872 SettlRateFallbackRateSource

SettlRateFallbackRateSource is a subcomponent of the SettlRateDisruptionFallbackGrp component used to specify the rate source in the event of rate disruption fallback.

Name	Mult.	Type	Description
<a href="#">SettlRateFallbackRateSource</a>	[0..1]	CodeSet	
<a href="#">SettlRateFallbackReferencePage</a>	[0..1]	String	Conditionally required when SettlRateFallbackRateSource(40373) = 3 (ISDA Settlement Rate Option) or 99 (Other).

Used in groups: [SettlRateDisruptionFallbackGrp](#)

#### **171.2.4873 SettlRateFallbackReferencePage**

Identifies the reference "page" from the rate source.

When SettlRateFallbackRateSource(40373) = 3 (ISDA Settlement Rate Option) this contains the value from the scheme that reflects the terms of the Annex A to the ISDA 1998 FX and Currency Option Definitions. See: <http://www.fpml.org/coding-scheme/settlement-rate-option>

Type: [String](#)

Used in components: [SettlRateFallbackRateSource](#)

#### **171.2.4874 SettlRateIndex**

In an outright or forward commodity trade that is cash settled this is the index used to determine the cash payment.

Type: [String](#)

Used in components: [Instrument](#)

#### **171.2.4875 SettlRateIndexLocation**

This is an optional qualifying attribute of SettlRateIndex(1577) such as the delivery zone for an electricity contract.

Type: [String](#)

Used in components: [Instrument](#)

**171.2.4876 SettlRatePostponementCalculationAgent**

Used to identify the settlement rate postponement calculation agent.

Type: **int**

Allowed values in ProvisionCalculationAgentCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	ExercisingParty	Exercising party
1	NonExercisingParty	Non-exercising party
2	MasterAgreement	As specified in the master agreement
3	Supplement	As specified in the standard terms supplement

---

Used in groups: **SettlRateDisruptionFallbackGrp**

**171.2.4877 SettlRatePostponementMaximumDays**

The maximum number of days to wait for a quote from the disrupted settlement rate option before proceeding to this method.

Type: **int**

Used in groups: **SettlRateDisruptionFallbackGrp**

**171.2.4878 SettlRatePostponementSurvey**

Indicates whether to request a settlement rate quote from the market.

Type: **Boolean**

Used in groups: **SettlRateDisruptionFallbackGrp**

**171.2.4879 SettlSessID**

Identifies a specific settlement session

Type: **String**

Allowed values in SettlSessIDCodeSet:

---

Code	Name	Description
ITD	Intraday	Intraday
RTH	RegularTradingHours	Regular Trading Hours
ETH	ElectronicTradingHours	Electronic Trading Hours
EOD	EndOfDay	End Of Day

---

Used in messages: [AccountSummaryReport](#), [AdjustedPositionReport](#), [AssignmentReport](#), [CollateralAssignment](#), [CollateralInquiry](#), [CollateralInquiryAck](#), [CollateralReport](#), [CollateralRequest](#), [MarginRequirementInquiry](#), [MarginRequirementInquiryAck](#), [MarginRequirementReport](#), [PositionMaintenanceReport](#), [PositionMaintenanceRequest](#), [PositionReport](#), [RequestForPositions](#), [RequestForPositionsAck](#), [TradeCaptureReport](#), [TradeCaptureReportAck](#)

#### **171.2.4880 SettlSessSubID**

SubID value associated with SettlSessID(716)

Type: [String](#)

Used in messages: [AccountSummaryReport](#), [AssignmentReport](#), [CollateralAssignment](#), [CollateralInquiry](#), [CollateralInquiryAck](#), [CollateralReport](#), [CollateralRequest](#), [MarginRequirementInquiry](#), [MarginRequirementInquiryAck](#), [MarginRequirementReport](#), [PositionMaintenanceReport](#), [PositionMaintenanceRequest](#), [PositionReport](#), [RequestForPositions](#), [RequestForPositionsAck](#), [TradeCaptureReport](#), [TradeCaptureReportAck](#)

#### **171.2.4881 SettlStatus**

The settlement status of the identified trade.

Type: [String](#)

Used in messages: [SettlementStatusReport](#)

#### **171.2.4882 SettlStatusReason**

Used to provide additional reason or qualify the reason for the settlement status specified in SettlStatus(2968).

Type: [String](#)

Used in messages: [SettlementStatusReport](#)

**171.2.4883 SettlStatusReasonText**

Text description associated with SettlStatusReason(2969).

Type: **String**

Used in messages: **SettlementStatusReport**

**171.2.4884 SettlStatusReportID**

Unique identifier of the SettlementStatusReport(35=EE).

Type: **String**

Used in messages: **SettlementStatusReport, SettlementStatusReportAck**

**171.2.4885 SettlStatusReportStatus**

Status of the report being responded to.

Type: **int**

Allowed values in SettlStatusReportStatusCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Received	Received, not yet processed
1	Accepted	Accepted
2	Rejected	Rejected. Rejection reason provided in RejectText(1328).

---

Used in messages: **SettlementStatusReportAck**

**171.2.4886 SettlStatusRequestID**

Unique identifier of the SettlementStatusRequest(35=EC).

Type: **String**

Used in messages: **SettlementStatusReport, SettlementStatusRequest, SettlementStatusRequestAck**

**171.2.4887 SettlStatusRequestStatus**

Status of the SettlementStatusRequest(35=EC) message being responded to.

Type: **int**

Allowed values in SettlStatusRequestStatusCodeSet:

---

Code	Name	Description
0	Received	Received, not yet processed
1	Accepted	Accepted
2	Rejected	Rejected. Rejection reason provided in RejectText(1328).

---

Used in messages: **SettlementStatusRequestAck**

**171.2.4888 SettlSubMethod**

Specifies a suitable settlement sub-method for a given settlement method.

Type: **int**

Allowed values in SettlSubMethodCodeSet:

---

Code	Name	Description
1	Shares	Shares.
2	Derivatives	Derivatives.
3	PaymentVsPayment	Payment vs payment.
4	Notional	Notional.
5	Cascade	Cascade.
6	Repurchase	Repurchase.
99	Other	Other.

---

Used in components: **Instrument**

**171.2.4889 SettlTradeDetails**

SettlTradeDetails component is used to provide the details which can be used to look up a single trade.

Name	Mult.	Type	Description
ConfirmID	[0..1]	String	May be used to identify the trade via the known Confirmation(35=AK) message.
AllocID	[0..1]	String	May be used to identify the trade via the known AllocationInstruction(35=J) message.
IndividualAllocID	[0..1]	String	May be used to identify the trade via a specific allocated account instance of an AllocationInstruction(35=J) this IndividualAllocID(467) is part of. If specified AllocID(70) should be specified.
SecondaryAllocID	[0..1]	String	May be used to identify the trade via a specific allocated account instance of an AllocationInstruction(35=J) this SecondaryAllocID(793) is part of. If specified AllocID(70) should be specified.
AllocAccount	[0..1]	String	
TradeDate	[0..1]	LocalMktDate	
Instrument	[0..1]	Component	
AllocQty	[0..1]	Qty	
Side	[0..1]	CodeSet	
AvgPx	[0..1]	Price	
PriceType	[0..1]	CodeSet	
AvgParPx	[0..1]	Price	
GrossTradeAmt	[0..1]	Amt	
NetMoney	[0..1]	Amt	
Currency	[0..1]	Currency	
CurrencyCodeSource	[0..1]	CodeSet	
QtyType	[0..1]	CodeSet	
NestedParties	[0..*]	Group	
SettlDate	[0..1]	LocalMktDate	
SettlCurrAmt	[0..1]	Amt	
SettlCurrency	[0..1]	Currency	
SettlCurrencyCodeSource	[0..1]	CodeSet	
SettlInstructionsData	[0..1]	Component	

Used in messages: [SettlementStatusReport](#), [SettlementStatusRequest](#)

**171.2.4890 SettlType**

Indicates order settlement period. If present, SettlDate (64) overrides this field. If both SettlType (63) and SettlDate (64) are omitted, the default for SettlType (63) is 0 (Regular)

Regular is defined as the default settlement period for the particular security on the exchange of execution.

In Fixed Income the contents of this field may influence the instrument definition if the SecurityID (48) is ambiguous. In the US an active Treasury offering may be re-opened, and for a time one CUSIP will apply to both the current and "when-issued" securities. Supplying a value of "7" clarifies the instrument description; any other value or the absence of this field should cause the respondent to default to the active issue.

Additionally the following patterns may be used as well as enum values

Dx = FX tenor expression for "days", e.g. "D5", where "x" is any integer > 0

Mx = FX tenor expression for "months", e.g. "M3", where "x" is any integer > 0

Wx = FX tenor expression for "weeks", e.g. "W13", where "x" is any integer > 0

Yx = FX tenor expression for "years", e.g. "Y1", where "x" is any integer > 0

Noted that for FX the tenors expressed using Dx, Mx, Wx, and Yx values do not denote business days, but calendar days.

Type: **String**

Allowed values in SettlTypeCodeSet:

Code	Name	Description
0	Regular	Regular / FX Spot settlement (T+1 or T+2 depending on currency)
1	Cash	Cash (TOD / T+0)
2	NextDay	Next Day (TOM / T+1)
3	TPlus2	T+2
4	TPlus3	T+3
5	TPlus4	T+4
6	Future	Future
7	WhenAndIfIssued	When And If Issued
8	SellersOption	Sellers Option
9	TPlus5	T+5

Code	Name	Description
B	BrokenDate	Broken date. Use within FX to specify a non-standard tenor. The use of SettlDate(64) is required to specify the actual settlement date when SettlType(63) = B (Broken date).
C	FXSpotNextSettlement	FX Spot Next settlement (Spot+1, aka next day)

Used in groups: [BidCompReqGrp](#), [BidCompRspGrp](#), [InstrmtMDReqGrp](#), [ListOrdGrp](#), [MDFullGrp](#), [MDIncGrp](#), [QuotReqGrp](#), [QuotReqRjctGrp](#), [StrmAsgnReqInstrmtGrp](#), [StrmAsgnRptInstrmtGrp](#)

Used in messages: [AllocationInstruction](#), [AllocationInstructionAlert](#), [AllocationReport](#), [Confirmation](#), [CrossOrderCancelReplaceRequest](#), [ExecutionReport](#), [MultilegOrderCancelReplace](#), [NewOrderCross](#), [NewOrderMultileg](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#), [Quote](#), [QuoteResponse](#), [QuoteStatusReport](#), [TradeCaptureReport](#), [TradeCaptureReportAck](#)

#### **171.2.4891 SharedCommission**

Commission to be shared with a third party, e.g. as part of a directed brokerage commission sharing arrangement.

Type: [Amt](#)

Used in messages: [Confirmation](#)

#### **171.2.4892 ShortMarkingExemptIndicator**

Indicates whether the originating account is exempt (Y) from marking orders as short or not (N). This designation may be used on both buy and sell orders.

Type: [Boolean](#)

Used in groups: [ListOrdGrp](#), [SideCrossOrdModGrp](#), [TrdCapRptSideGrp](#)

Used in messages: [ExecutionReport](#), [MultilegOrderCancelReplace](#), [NewOrderMultileg](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#)

#### **171.2.4893 ShortQty**

Short quantity.

Type: [Qty](#)

Used in groups: [PositionQty](#), [TradePositionQty](#)

**171.2.4894 ShortSaleExemptionReason**

Indicates the reason a short sale order is exempted from applicable regulation (e.g. Reg SHO addendum (b)(1) in the U.S.).

Type: **int**

Allowed values in ShortSaleExemptionReasonCodeSet:

Code	Name	Description
0	ExemptionReasonUnknown	Exemption reason unknown. An exemption reason not provided or received.
1	IncomingSSE	Income sell short exempt. Agency broker has the customer's exemption reason, which is not explicitly provided to executing broker.
2	AboveNationalBestBid	Above national best bid (broker/dealer provision). Broker / dealer responsible for enforcing exemption rule has determined that the order is priced one or more ticks above the nation best bid of the security to be traded.
3	DelayedDelivery	Delayed delivery. The broker-dealer has a reasonable basis to believe the seller owns the covered security (pursuant to Rule 200 in the U.S.), but is subject to restrictions on delivery, provided that the seller intends to deliver the security as soon as all restrictions on delivery have been removed.
4	OddLot	Odd lot. The broker-dealer has a reasonable basis to believe the sale is by a market maker to offset customer odd-lot orders or to liquidate an odd-lot position that changes such broker's or dealer's position by no more than a unit of trading.
5	DomesticArbitrage	Domestic arbitrage. The sale is connected to a bona-fide domestic arbitrage transaction.
6	InternationalArbitrage	International arbitrage. The sale is connected to an international arbitrage transaction.
7	UnderwriterOrSyndicateDistribution	Underwriter or syndicate distribution. The short sale is (i) by an underwriter or member of a syndicate or group participating in the distribution of a security in connection with an over-allotment of securities; or (ii) is for purposes of a lay-off sale by an underwriter or member of a syndicate or group in connection with a distribution of securities through a rights or standby underwriting commitment.
8	RisklessPrincipal	Riskless principal. The short sale is by a broker or dealer effecting the execution of a customer purchase or the execution of a customer "long" sale on a riskless principal basis.

---

Code	Name	Description
9	VWAP	VWAP. The short sale order is for the sale of a covered security at the volume weighted average price (VWAP) meeting certain criteria.

---

Used in groups: [ListOrdGrp](#)

Used in messages: [ExecutionReport](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#)

### 171.2.4895 ShortSaleReason

Reason for short sale.

Type: [int](#)

Allowed values in ShortSaleReasonCodeSet:

---

Code	Name	Description
0	DealerSoldShort	Dealer Sold Short
1	DealerSoldShortExempt	Dealer Sold Short Exempt
2	SellingCustomerSoldShort	Selling Customer Sold Short
3	SellingCustomerSoldShortExempt	Selling Customer Sold Short Exempt
4	QualifiedServiceRepresentative	Qualified Service Representative (QSR) or Automatic Give-up (AGU) Contra Side Sold Short
5	QSROrAGUContraSideSoldShortExempt	QSR or AGU Contra Side Sold Short Exempt

---

Used in messages: [TradeCaptureReport](#), [TradeCaptureReportAck](#)

### 171.2.4896 ShortSaleRestriction

Indicates whether a restriction applies to short selling a security.

Type: [int](#)

Allowed values in ShortSaleRestrictionCodeSet:

Code	Name	Description
0	NoRestrictions	No restrictions
1	SecurityNotShortable	Security is not shortable
2	SecurityNotShortableAtOrBelowBestBid	Security not shortable at or below the best bid
3	SecurityNotShortableWithoutPre-Borrow	Security is not shortable without pre-borrow

Used in components: [Instrument](#)

### 171.2.4897 Side

Side of order (see Volume : "Glossary" for value definitions)

Type: [char](#)

Allowed values in SideCodeSet:

Code	Name	Description
1	Buy	Buy. For Securities Financing indicates the receipt of securities or collateral.
2	Sell	Sell. For Securities Financing indicates the delivery of securities or collateral.
3	BuyMinus	Buy minus
4	SellPlus	Sell plus
5	SellShort	Sell short
6	SellShortExempt	Sell short exempt
7	Undisclosed	Undisclosed
8	Cross	Cross (orders where counterparty is an exchange, valid for all messages except IOIs)
9	CrossShort	Cross short
A	CrossShortExempt	Cross short exempt
B	AsDefined	"As Defined" (for use with multileg instruments)
C	Opposite	"Opposite" (for use with multileg instruments)
D	Subscribe	Subscribe (e.g. CIV)
E	Redeem	Redeem (e.g. CIV)
F	Lend	Lend (FINANCING - identifies direction of collateral)

Code	Name	Description
G	Borrow	Borrow (FINANCING - identifies direction of collateral)
H	SellUndisclosed	Sell undisclosed. In the context of ESMA RTS 22, this allows for reporting of transactions where the investment firm (broker) is not able to determine whether the sell is a short sale transaction. Corresponds to RTS 22 "short selling indicator" value of 'UNDI'.

---

Used in components: [MDStatisticParameters](#), [SettlTradeDetails](#)

Used in groups: [BidCompReqGrp](#), [BidCompRspGrp](#), [InstrmtStrkPxGrp](#), [ListOrdGrp](#), [OrderEntryAckGrp](#), [OrderEntryGrp](#), [QuotReqGrp](#), [QuotReqRjctGrp](#), [SettlInstGrp](#), [SideCrossOrdCxlGrp](#), [SideCrossOrdModGrp](#), [TrdCapRptAckSideGrp](#), [TrdCapRptSideGrp](#), [TrdMatchSideGrp](#)

Used in messages: [AllocationInstruction](#), [AllocationInstructionAlert](#), [AllocationReport](#), [CollateralAssignment](#), [CollateralInquiry](#), [CollateralReport](#), [CollateralRequest](#), [CollateralResponse](#), [Confirmation](#), [DontKnowTrade](#), [ExecutionAck](#), [ExecutionReport](#), [IOI](#), [MultilegOrderCancelReplace](#), [NewOrderMultileg](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#), [OrderCancelRequest](#), [OrderMassActionReport](#), [OrderMassActionRequest](#), [OrderMassCancelReport](#), [OrderMassCancelRequest](#), [OrderMassStatusRequest](#), [OrderStatusRequest](#), [PartyRiskLimitCheckRequest](#), [PartyRiskLimitCheckRequestAck](#), [Quote](#), [QuoteResponse](#), [QuoteStatusReport](#), [SettlementInstructionRequest](#), [TradeAggregationReport](#), [TradeAggregationRequest](#), [TradeCaptureReportRequest](#)

### **171.2.4898 SideAvgPx**

Calculated average price for this side of the trade.

Type: [Price](#)

Used in groups: [TrdCapRptAckSideGrp](#), [TrdCapRptSideGrp](#)

### **171.2.4899 SideAvgPxGroupID**

The identifier for the average price group for the trade side. See also [AvgPxGroupID\(1731\)](#).

Type: [String](#)

Used in groups: [TrdCapRptAckSideGrp](#), [TrdCapRptSideGrp](#)

**171.2.4900 SideAvgPxIndicator**

Used to indicate whether a trade or a sub-allocation should be allocated at the trade price (e.g. no average pricing), or whether it should be grouped with other trades/sub-allocations and allocated at the average price of the group.

Type: **int**

Allowed values in AvgPxIndicatorCodeSet:

Code	Name	Description
0	NoAveragePricing	No average pricing
1	Trade	Trade is part of an average price group identified by the AvgPxGroupID(1731)
2	LastTrade	Last trade of the average price group identified by the AvgPxGroupID(1731)
3	NotionalValueAveragePxGroupTrade	Trade is part of a notional value average price group. A notional value average price (NVAP) group is effectively closed and available for allocation as long as the NVAP of the group is non-zero.
4	AveragePricedTrade	Trade is average priced

Used in groups: **TrdCapRptAckSideGrp**, **TrdCapRptSideGrp**

**171.2.4901 SideClearingTradePrice**

Alternate clearing price for the side being reported.

Type: **Price**

Used in groups: **TrdCapRptSideGrp**, **TrdMatchSideGrp**

**171.2.4902 SideClearingTradePriceType**

Indicates to recipient whether trade is clearing at execution prices LastPx(tag 31) or alternate clearing prices SideClearingTradePrice(tag 1597).

Type: **int**

Allowed values in SideClearingTradePriceTypeCodeSet:

Code	Name	Description
0	TradeClearingAtExecutionPrice	Trade Clearing at Execution Price
1	TradeClearingAtAlternateClearing-Price	Trade Clearing at Alternate Clearing Price

Used in groups: [TrdCapRptSideGrp](#), [TrdMatchSideGrp](#)

### 171.2.4903 SideCollateralAmountGrp

The SideCollateralAmountGrp component block is a repeating group that provides the current value of the collateral type on deposit for a side of the trade report. The currency of the collateral value may be optionally included.

Name	Mult.	Type	Description
<a href="#">NoSideCollateralAmounts</a>	[1..1]	NumInGroup	
<a href="#">SideCurrentCollateralAmount</a>	[0..1]	Amt	Required if NoSideCollateralAmounts(2691) > 0.
<a href="#">SideCollateralCurrency</a>	[0..1]	Currency	Can be used to specify the currency of SideCollateralAmount(2702) if Currency(15) is not specified or is not the same.
<a href="#">SideCollateralCurrencyCodeSource</a>	[0..1]	CodeSet	
<a href="#">SideCollateralAmountType</a>	[0..1]	CodeSet	
<a href="#">SideCollateralFXRate</a>	[0..1]	float	
<a href="#">SideCollateralFXRateCalc</a>	[0..1]	CodeSet	
<a href="#">SideCollateralType</a>	[0..1]	String	
<a href="#">SideCollateralAmountMarketSegmentID</a>	[0..1]	String	
<a href="#">SideCollateralAmountMarketID</a>	[0..1]	String	
<a href="#">SideHaircutIndicator</a>	[0..1]	Boolean	
<a href="#">SideCollateralPortfolioID</a>	[0..1]	String	
<a href="#">SideCollateralPercentOverage</a>	[0..1]	Percentage	
<a href="#">SideCollateralMarketPrice</a>	[0..1]	Price	
<a href="#">SideCollateralReinvestmentRate</a>	[0..1]	Percentage	When multiple instances of the SideCollateralReinvestmentGrp component are present this field specifies the average reinvestment rate.
<a href="#">SideCollateralReinvestmentGrp</a>	[0..*]	Group	

---

Name	Mult.	Type	Description
SideUnderlyingRefID	[0..1]	String	May be used to indicate that this entry applies to the underlying collateral instrument being referenced by the value in UnderlyingID(2874).

---

Used in groups: [TrdCapRptSideGrp](#)

#### **171.2.4904 SideCollateralAmountMarketID**

Market associated with the collateral amount.

Type: [String](#)

Used in groups: [SideCollateralAmountGrp](#)

#### **171.2.4905 SideCollateralAmountMarketSegmentID**

Market segment associated with the collateral amount.

Type: [String](#)

Used in groups: [SideCollateralAmountGrp](#)

#### **171.2.4906 SideCollateralAmountType**

The type of value in CurrentCollateralAmount(1704).

Type: [int](#)

Allowed values in CollateralAmountTypeCodeSet:

---

Code	Name	Description
0	MarketValuation	Market valuation (the default)
1	PortfolioValue	Portfolio value before processing pledge request
2	ValueConfirmed	Value confirmed as "locked-up" for processing a pledge request
3	CollateralCreditValue	Credit value of collateral at CCP processing a pledge request
4	AdditionalCollateralValue	Additional collateral value. Additional collateral deposited by the collateral provider at trade or post-trade. CollateralPercentOverage(2690) gives the overage percent

---

Code	Name	Description
5	EstimatedMarketValuation	Estimated market valuation. Estimated market valuation of collateral. In the context of EU SFTR this may be used for value of re-use of collateral.

Used in groups: [SideCollateralAmountGrp](#)

### 171.2.4907 SideCollateralCurrency

Specifies the currency of the collateral; optional, defaults to settlement currency if not specified.

SideCollateralCurrencyCodeSource(2930) may be used to disambiguate the code source scheme used, and ISO 4217 is the default scheme if absent.

Type: [Currency](#)

Used in groups: [SideCollateralAmountGrp](#)

### 171.2.4908 SideCollateralCurrencyCodeSource

Identifies class or source of the SideCollateralCurrency(2695) value.

Type: [String](#)

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in groups: [SideCollateralAmountGrp](#)

**171.2.4909 SideCollateralFXRate**

Foreign exchange rate used to compute the SideCurrentCollateralAmount(2702) from the SideCollateralCurrency(2695) and the Currency(15).

Type: **float**

Used in groups: **SideCollateralAmountGrp**

**171.2.4910 SideCollateralFXRateCalc**

Specifies whether or not SideCollateralFXRate(2696) should be multiplied or divided.

Type: **char**

Allowed values in UnderlyingFXRateCalcCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Divide	Divide
M	Multiply	Multiply

---

Used in groups: **SideCollateralAmountGrp**

**171.2.4911 SideCollateralMarketPrice**

Market price of the collateral, either from market sources or pre-agreed by the counterparties.

Type: **Price**

Used in groups: **SideCollateralAmountGrp**

**171.2.4912 SideCollateralPercentOverage**

Percentage of over-collateralization particularly when SideCollateralAmountType(2694) = 4 (Additional collateral value).

Type: **Percentage**

Used in groups: **SideCollateralAmountGrp**

**171.2.4913 SideCollateralPortfolioID**

Identifier of the collateral portfolio when reporting on a portfolio basis.

Type: **String**

Used in groups: **SideCollateralAmountGrp**

**171.2.4914 SideCollateralReinvestmentAmount**

The cash amount of the specified re-investment type.

Type: **Amt**

Used in groups: **SideCollateralReinvestmentGrp**

**171.2.4915 SideCollateralReinvestmentCurrency**

The currency denomination of the re-invested cash amount.

SideCollateralReinvestmentCurrencyCodeSource(2932) may be used to disambiguate the code source scheme used, and ISO 4217 is the default scheme if absent.

Type: **Currency**

Used in groups: **SideCollateralReinvestmentGrp**

**171.2.4916 SideCollateralReinvestmentCurrencyCodeSource**

Identifies class or source of the SideCollateralReinvestmentCurrency(2866) value.

Type: **String**

Allowed values in CurrencyCodeSourceCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
5	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".

---

Code	Name	Description
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in groups: [SideCollateralReinvestmentGrp](#)

### 171.2.4917 SideCollateralReinvestmentGrp

The SideCollateralReinvestmentGrp component block is a repeating group that may be used to provide a breakdown of the cash collateral's reinvestment types and amounts (e.g. SideCollateralType(2701)="CASH").

Name	Mult.	Type	Description
<a href="#">NoSideCollateralReinvestments</a>	[1..1]	NumInGroup	
<a href="#">SideCollateralReinvestmentType</a>	[0..1]	CodeSet	Required if NoSideCollateralReinvestments(2864) > 0.
<a href="#">SideCollateralReinvestmentAmount</a>	[0..1]	Amt	
<a href="#">SideCollateralReinvestmentCurrency</a>	[0..1]	Currency	
<a href="#">SideCollateralReinvestmentCurrency-CodeSource</a>	[0..1]	CodeSet	

Used in groups: [SideCollateralAmountGrp](#)

### 171.2.4918 SideCollateralReinvestmentRate

Interest rate received for collateral reinvestment.

Type: [Percentage](#)

Used in groups: [SideCollateralAmountGrp](#)

### 171.2.4919 SideCollateralReinvestmentType

Indicates the type of investment the cash collateral is re-invested in.

Type: [int](#)

Allowed values in CollateralReinvestmentTypeCodeSet:

Code	Name	Description
0	MoneyMarketFund	Money market fund. Registered money market fund. In the context of EU SFTR reporting this corresponds to code "MMFT".
1	OtherComingledPool	Other comingled pool. Any commingled pool other than money market fund. In the context of EU SFTR reporting this corresponds to code "OCMP".
2	RepoMarket	Repo market. The repurchase agreement market. In the context of EU SFTR reporting this corresponds to code "REPM".
3	DirectPurchaseOfSecurities	Direct purchase of securities. In the context of EU SFTR reporting this corresponds to code "SDPU".
4	OtherInvestments	Other investments. In the context of EU SFTR reporting this corresponds to code "OTHR".

---

Used in groups: [SideCollateralReinvestmentGrp](#)

#### **171.2.4920 SideCollateralType**

Type of collateral on deposit being reported.

Type: [String](#)

Used in groups: [SideCollateralAmountGrp](#)

#### **171.2.4921 SideComplianceID**

ID within repeating group of sides which is used to represent this transaction for compliance purposes (e.g. OATS reporting).

Type: [String](#)

Used in groups: [SideCrossOrdModGrp](#)

#### **171.2.4922 SideCrossLegGrp**

Repeating group that is similar to LegOrdGrp component in order to support leg level information per side of cross orders and is part of SideCrossOrdModGrp component. LegOrdGrp component cannot be re-used for this purpose as it contains the component blocks InstrumentLeg component and NestedParties component which are already part of the cross messages. The difference to LegOrdGrp component is that SideCrossLegGrp component does not have an InstrumentLeg component to

describe the legs, it only has a single reference field to identify the leg which can be defined by the InstrumentLeg component which is present on a higher level of the message and outside of the side group.

Name	Mult.	Type	Description
NoCrossLegs	[1..1]	NumInGroup	
LegRefID	[0..1]	String	Required if NoCrossLegs(1829) > 0.
LegOrderQty	[0..1]	Qty	Quantity ordered for this leg as provided during order entry.
LegSwapType	[0..1]	CodeSet	
LegStipulations	[0..*]	Group

SideTimeInForce	[0..1]	UTCTimestamp	Specifies how long the order as specified in the side stays in effect. Absence of this field indicates Day order.

Used in messages: [CrossOrderCancelReplaceRequest](#), [NewOrderCross](#)

**171.2.4925 SideCurrency**

Used to identify the trading currency on the Trade Capture Report Side

Type: **Currency**

Used in groups: **TrdCapRptAckSideGrp**, **TrdCapRptSideGrp**, **TrdMatchSideGrp**

**171.2.4926 SideCurrencyCodeSource**

Identifies class or source of the SideCurrency(1154) value.

Type: **String**

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in groups: **TrdCapRptAckSideGrp**, **TrdCapRptSideGrp**, **TrdMatchSideGrp**

**171.2.4927 SideCurrentCollateralAmount**

Currency value currently attributed to the collateral.

Type: **Amt**

Used in groups: **SideCollateralAmountGrp**

**171.2.4928 SideExecID**

When reporting trades, used to reference the identifier of the execution (ExecID) being reported if different ExecIDs were assigned to each side of the trade.

Type: **String**

Used in groups: **TrdCapRptAckSideGrp**, **TrdCapRptSideGrp**, **TrdMatchSideGrp**

#### **171.2.4929 SideExecRefID**

Used to reference the value from SideExecID(1427).

Type: **String**

Used in groups: **TrdMatchSideGrp**

#### **171.2.4930 SideFillStationCd**

Used on a multi-sided trade to convey order routing information

Type: **String**

Used in groups: **TrdCapRptAckSideGrp**, **TrdCapRptSideGrp**, **TrdMatchSideGrp**

#### **171.2.4931 SideGrossTradeAmt**

The gross trade amount for this side of the trade. See also GrossTradeAmt (381) for additional definition.

Type: **Amt**

Used in groups: **TrdCapRptAckSideGrp**, **TrdCapRptSideGrp**, **TrdMatchSideGrp**

#### **171.2.4932 SideHaircutIndicator**

Indicates, if "Y", that a stated valuation includes a haircut, e.g. that the stated value reflects the subtraction of the haircut. Note that a value of "N" does not imply a haircut is not applicable, only that the haircut (if any) is not reflected in the stated valuation.

Type: **Boolean**

Used in groups: **SideCollateralAmountGrp**

**171.2.4933 SideLastQty**

Used to indicate the quantity on one side of a multi-sided trade.

Type: Qty

Used in groups: TrdCapRptAckSideGrp, TrdCapRptSideGrp, TrdMatchSideGrp

**171.2.4934 SideLiquidityInd**

Indicator to identify whether this fill was a result of a liquidity provider providing or liquidity taker taking the liquidity. Applicable only for OrdStatus of Partial or Filled.

Type: int

Allowed values in LastLiquidityIndCodeSet:

---

Code	Name	Description
0	NeitherAddedNorRemovedLiquidity	Neither added nor removed liquidity. May be used by venues where market rules do not define "add" or "remove" liquidity. In the context of the SEC amendment of Regulation NMS Rule 606(b), may be used to identify executions that are only reported as part of total shares executed and not as part of shares providing or removing liquidity (see <a href="https://www.sec.gov/rules/final/2018/34-84528.pdf">https://www.sec.gov/rules/final/2018/34-84528.pdf</a> for details).
1	AddedLiquidity	Added Liquidity
2	RemovedLiquidity	Removed Liquidity
3	LiquidityRoutedOut	Liquidity Routed Out
4	Auction	Auction execution
5	TriggeredStopOrder	Triggered stop order. Fill was the result of a stop order being triggered and immediately executed.
6	TriggeredContingencyOrder	Triggered contingency order. Fill was the result of a contingency order (OCO, OTO, OUO) becoming active (after cancelling or updating another order) and being immediately executed.
7	TriggeredMarketOrder	Triggered market order. Fill was the result of a market order being triggered due to an executable orderbook situation.
8	RemovedLiquidityAfterFirmOrder-Commitment	Removed liquidity after firm order commitment. An order that was submitted for continuous trading that required a firm order commit prior to execution. "Conditional order" is an alternate term used for such orders.

---

Code	Name	Description
9	AuctionExecutionAfterFirmOrder-Commitment	Auction execution after firm order commitment. An order that was submitted for auction trading that required a firm order commit prior to execution. "Conditional order" is an alternate term used for such orders.
10	Unknown	Unknown. The liquidity indicator of the execution cannot be determined or was not provided upon execution.
11	Other	Other. None of the existing liquidity indicators are applicable for the execution (e.g. due to a venue's new order type that does not fit existing values).

Used in groups: [TrdCapRptSideGrp](#)

### 171.2.4935 SideMarketSegmentID

Identifies the market segment of the side.

Type: [String](#)

Used in groups: [TrdMatchSideGrp](#)

### 171.2.4936 SideMultiLegReportingType

Used to indicate if the side being reported on Trade Capture Report represents a leg of a multileg instrument or a single security.

Type: [int](#)

Allowed values in SideMultiLegReportingTypeCodeSet:

Code	Name	Description
1	SingleSecurity	Single Security (default if not specified)
2	IndividualLegOfAMultilegSecurity	Individual leg of a multileg security
3	MultilegSecurity	Multileg Security

Used in groups: [TrdCapRptAckSideGrp](#), [TrdCapRptSideGrp](#)

#### **171.2.4937 SideOrigTradeID**

Used to capture the original trade id for each side of a trade undergoing novation to a standardized model.

Type: **String**

Used in groups: **TrdCapRptAckSideGrp, TrdCapRptSideGrp**

#### **171.2.4938 SidePriceDifferential**

Price Differential between the front and back leg of a spread or complex instrument.

Type: **Price**

Used in groups: **TrdCapRptSideGrp, TrdMatchSideGrp**

#### **171.2.4939 SideReasonCd**

Used on a multi-sided trade to convey reason for execution

Type: **String**

Used in groups: **TrdCapRptAckSideGrp, TrdCapRptSideGrp, TrdMatchSideGrp**

#### **171.2.4940 SideRegulatoryLegRefID**

Identifies the leg of the trade the entry applies to by referencing the leg's LegID(1788).

Type: **String**

Used in groups: **SideRegulatoryTradeIDGrp**

#### **171.2.4941 SideRegulatoryTradeID**

Trade identifier required by government regulators or other regulatory organizations for regulatory reporting purposes. For example, unique swap identifier (USI) as required by the U.S. Commodity Futures Trading Commission.

Type: **String**

Used in groups: **SideRegulatoryTradeIDGrp**

**171.2.4942 SideRegulatoryTradeIDEvent**

Identifies the event which caused origination of the identifier in SideRegulatoryTradeID(1972). When more than one event is the cause, use the higher enumeration value. For example, if the identifier is originated due to an allocated trade which was cleared and reported, use the enumeration value 2 (Clearing).

Type: **int**

Allowed values in RegulatoryTradeIDEventCodeSet:

Code	Name	Description
0	InitialBlockTrade	Initial block trade.
1	Allocation	Allocation. Determination that the block trade will not be further allocated.
2	Clearing	Clearing
3	Compression	Compression
4	Novation	Novation
5	Termination	Termination
6	PostTrdVal	Post-trade valuation

Used in groups: **SideRegulatoryTradeIDGrp**

**171.2.4943 SideRegulatoryTradeIDGrp**

The SideRegulatoryTradeIDGrp is a repeating component within the TrdCapRptSideGrp component used to report the source, value and relationship of multiple trade identifiers for the same trade side.

This component can be used to meet regulatory trade reporting requirements where identifiers such as the Unique Swaps Identifier (USI) are required to be reported, showing the chaining of these identifiers as needed.

Name	Mult.	Type	Description
NoSideRegulatoryTradeIDs	[1..1]	NumInGroup	
SideRegulatoryTradeID	[0..1]	String	Required if NoSideRegulatoryTradeIDs(1971) > 0.
SideRegulatoryTradeIDSource	[0..1]	CodeSet	
SideRegulatoryTradeIDEvent	[0..1]	CodeSet	
SideRegulatoryTradeIDType	[0..1]	CodeSet	

Name	Mult.	Type	Description
SideRegulatoryLegRefID	[0..1]	String	This field may be is used for multi-leg trades sent as a single message to indicate that the entry applies only to a specific leg.
SideRegulatoryTradeIDScope	[0..1]	CodeSet	

Used in groups: [TrdCapRptSideGrp](#)

#### 171.2.4944 SideRegulatoryTradeIDScope

Specifies the scope to which the SideRegulatoryTradeID(1972) applies. Used when a trade must be assigned more than one identifier, e.g. one for the clearing member and another for the client on a cleared trade as with the principal model in Europe.

Type: [int](#)

Allowed values in RegulatoryTradeIDScopeCodeSet:

Code	Name	Description
1	ClearingMember	Clearing member
2	Client	Client

Used in groups: [SideRegulatoryTradeIDGrp](#)

#### 171.2.4945 SideRegulatoryTradeIDSource

Identifies the reporting entity that originated the value in RegulatoryTradeID(1903). The reporting entity identifier may be assigned by a regulator or from a supported standard identifier source scheme.

Type: [String](#)

Allowed values in RegulatoryTradeIDSourceCodeSet:

Code	Name	Description
1	UniqueTransactionIdentifier	Unique Transaction Identifier (ISO 23897)

Used in groups: [SideRegulatoryTradeIDGrp](#)

**171.2.4946 SideRegulatoryTradeIDType**

Specifies the type of trade identifier provided in SideRegulatoryTradeID(1972), within the context of the hierarchy of trade events.

Type: **int**

Allowed values in RegulatoryTradeIDTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Current	Current. The default if not specified.
1	Previous	Previous. The previous trade's identifier when reporting a cleared trade or novation of a previous trade.
2	Block	Block. The block trade's identifier when reporting an allocated subtrade.
3	Related	Related. The related trade identifier when reporting a mixed swap.
4	ClearedBlockTrade	Cleared block trade. Assigned by the CCP to a bunched order/trade when it needs to be cleared with the standby clearing firm prior to post-trade allocation.
5	TradingVenueTransactionIdentifier	Trading venue transaction identifier. Assigned by the trading venue to a transaction. In the context of ESMA RTS 22 and RTS 24, this is a unique transaction identification "number generated by trading venues and disseminated to both the buying and selling parties in accordance with Article 12 of [RTS 24 on the maintenance of relevant data relating to orders in financial instruments under Article 25 of Regulation 600/2014 EU]." (quoted text from RTS 22). "Uniqueness" may be defined per relevant regulations.
6	ReportTrackingNumber	Report tracking number. In the context of EMIR Refit this is a "unique code assigned to the execution of an order and common for a group of reports related to the same execution" (see Q28 in <a href="https://www.esma.europa.eu/sites/default/files/library/esma74-362-2281_final_report_guidelines_emir_refit.pdf">https://www.esma.europa.eu/sites/default/files/library/esma74-362-2281_final_report_guidelines_emir_refit.pdf</a> ). Also referred to as the RTN.

---

Used in groups: **SideRegulatoryTradeIDGrp**

**171.2.4947 SideRiskLimitCheckStatus**

Indicates the status of the risk limit check performed on the side of a trade.

Type: **int**

Allowed values in RiskLimitCheckStatusCodeSet:

Code	Name	Description
0	Accepted	Accepted. For use when none of the more specific status enumerations apply.
1	Rejected	Rejected. For use when none of the more specific status enumerations apply.
2	ClaimRequired	Claim required. Indicates that the clearing firm is required to accept or decline the trade.
3	PreDefinedLimitCheckSucceeded	Pre-defined limit check succeeded. Indicates a check enforced automatically by the clearing house.
4	PreDefinedLimitCheckFailed	Pre-defined limit check failed. Indicates a check enforced automatically by the clearing house.
5	PreDefinedAutoAcceptRuleInvoked	Pre-defined auto-accept rule invoked. Indicates that the clearing firm is required to accept or decline the trade because no limit or rule applies.
6	PreDefinedAutoRejectRuleInvoked	Pre-defined auto-reject rule invoked. Indicates a check enforced automatically by the clearing house. Note that clearing house rules of engagement may still require a clearing firm accept or reject the trade.
7	AcceptedByClearingFirm	Accepted by clearing firm. Indicates that explicit action by the clearing firm, and not an automatic check by the clearing house, was the basis for accepting the trade.
8	RejectedByClearingFirm	Rejected by clearing firm. Indicates that explicit action by the clearing firm, and not an automatic check by the clearing house, was the basis for rejecting the trade.
9	Pending	Pending. Indicates that one or more side level risk checks are in progress.
10	AcceptedByCreditHub	Accepted by credit hub. Indicates that a credit hub accepted the trade. An identifier assigned by the credit hub may appear in the appropriate RefRiskLimitCheckID(2334) field.
11	RejectedByCreditHub	Rejected by credit hub. Indicates that a credit hub rejected the trade.
12	PendingCreditHubCheck	Pending credit hub check. Indicates that a check is pending at a credit hub.
13	AcceptedByExecVenue	Accepted by execution venue. Indicates acceptance by an execution venue, such as a SEF.
14	RejectedByExecVenue	Rejected by execution venue. Indicates that the trade was rejected by an execution venue, such as a SEF.

Used in groups: [TrdCapRptAckSideGrp](#), [TrdCapRptSideGrp](#)

### **171.2.4948 SideSettlCurrency**

Used to identify the settlement currency on the Trade Capture Report Side

Type: [Currency](#)

Used in groups: [TrdCapRptAckSideGrp](#), [TrdCapRptSideGrp](#), [TrdMatchSideGrp](#)

### **171.2.4949 SideSettlCurrencyCodeSource**

Identifies class or source of the SideSettlCurrency(1155) value.

Type: [String](#)

Allowed values in CurrencyCodeSourceCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

---

Used in groups: [TrdCapRptAckSideGrp](#), [TrdCapRptSideGrp](#), [TrdMatchSideGrp](#)

### **171.2.4950 SideShortSaleExemptionReason**

Indicates the reason a short sale is exempted from applicable regulation (e.g. Reg SHO addendum (b)(1) in the U.S.)

Type: [int](#)

Allowed values in ShortSaleExemptionReasonCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	ExemptionReasonUnknown	Exemption reason unknown. An exemption reason not provided or received.
1	IncomingSSE	Income sell short exempt. Agency broker has the customer's exemption reason, which is not explicitly provided to executing broker.
2	AboveNationalBestBid	Above national best bid (broker/dealer provision). Broker / dealer responsible for enforcing exemption rule has determined that the order is priced one or more ticks above the nation best bid of the security to be traded.
3	DelayedDelivery	Delayed delivery. The broker-dealer has a reasonable basis to believe the seller owns the covered security (pursuant to Rule 200 in the U.S.), but is subject to restrictions on delivery, provided that the seller intends to deliver the security as soon as all restrictions on delivery have been removed.
4	OddLot	Odd lot. The broker-dealer has a reasonable basis to believe the sale is by a market maker to offset customer odd-lot orders or to liquidate an odd-lot position that changes such broker's or dealer's position by no more than a unit of trading.
5	DomesticArbitrage	Domestic arbitrage. The sale is connected to a bona-fide domestic arbitrage transaction.
6	InternationalArbitrage	International arbitrage. The sale is connected to an international arbitrage transaction.
7	UnderwriterOrSyndicateDistribution	Underwriter or syndicate distribution. The short sale is (i) by an underwriter or member of a syndicate or group participating in the distribution of a security in connection with an over-allotment of securities; or (ii) is for purposes of a lay-off sale by an underwriter or member of a syndicate or group in connection with a distribution of securities through a rights or standby underwriting commitment.
8	RisklessPrincipal	Riskless principal. The short sale is by a broker or dealer effecting the execution of a customer purchase or the execution of a customer "long" sale on a riskless principal basis.
9	VWAP	VWAP. The short sale order is for the sale of a covered security at the volume weighted average price (VWAP) meeting certain criteria.

Used in groups: [SideCrossOrdModGrp](#), [TrdCapRptSideGrp](#), [TrdMatchSideGrp](#)

**171.2.4951 SideTimeInForce**

Indicates how long the order as specified in the side stays in effect. SideTimeInForce allows a two-sided cross order to specify order behavior separately for each side. Absence of this field indicates that TimeInForce should be referenced. SideTimeInForce will override TimeInForce if both are provided.

Type: **UTCTimestamp**

Used in groups: **SideCrossOrdModGrp**

**171.2.4952 SideTradeID**

Used to represent the trade ID for each side of the trade assigned by an intermediary.

Type: **String**

Used in groups: **TrdCapRptAckSideGrp, TrdCapRptSideGrp, TrdMatchSideGrp**

**171.2.4953 SideTradeReportID**

Used on a multi-sided trade to designate the ReportID

Type: **String**

Used in groups: **TrdCapRptAckSideGrp, TrdCapRptSideGrp, TrdMatchSideGrp**

**171.2.4954 SideTradeReportingIndicator**

Used between parties to convey trade reporting status.

Type: **int**

Allowed values in TradeReportingIndicatorCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	NotReported	Trade has not (yet) been reported. Depending on the regulatory regime the trade is reportable and the recipient may be responsible for reporting.
1	OnBook	Trade has been or will be reported by a trading venue as an "on-book" trade
2	SISeller	Trade has or will be reported as a seller trade by the authorised reporter

---

Code	Name	Description
3	SIBuyer	Trade has or will be reported as a buyer trade by the authorised reporter
4	NonSISeller	Trade has or will be reported as a seller trade by an entity other than the authorised reporter
5	SubDelegationByFirm	Trade has been or will be reported under a sub-delegation arrangement by an investment firm to a reporting facility (e.g. APA) on behalf of another investment firm
6	Reportable	Trade has been or will be reported. Depending on the regulatory regime the recipient is not responsible for reporting.
7	NonSIBuyer	Trade has been or will be reported as a buyer trade by an entity other than the authorised reporter
8	OffBook	Trade has been or will be reported by a trading venue as an "off-book" trade
9	NotReportable	Trade is not reportable. The (non-equity) instrument does not need to be reported by any party, e.g. because it is not deemed to have been traded on a trading venue.

Used in groups: [TrdCapRptAckSideGrp](#), [TrdCapRptSideGrp](#)

### **171.2.4955 SideTrdRegTimestamp**

Will be used in a multi-sided message.

Traded Regulatory timestamp value Use to store time information required by government regulators or self regulatory organizations such as an exchange or clearing house

Type: [UTCTimestamp](#)

Used in groups: [SideTrdRegTS](#)

### **171.2.4956 SideTrdRegTimestampSrc**

Same as TrdRegTimestampOrigin

Text which identifies the origin i.e. system which was used to generate the time stamp for the Traded Regulatory timestamp value

Type: [String](#)

Used in groups: [SideTrdRegTS](#)

**171.2.4957 SideTrdRegTimestampType**

Same as TrdRegTimeStampType

Type: **int**

Allowed values in TrdRegTimestampTypeCodeSet:

Code	Name	Description
1	ExecutionTime	Execution time. Timestamp for the order execution. In the context of US futures markets (CFTC regulated) this is the non-qualified reporting time of order execution.
2	TimeIn	Time in. Timestamp for receiving an order, quote or trade. In the context of US futures markets (CFTC) this is the timestamp of when the order was received on the trading floor (booth).
3	TimeOut	Time out. Timestamp for sending an order, quote or trade. In the context of US futures markets (CFTC) this is the timestamp when the trade was received from the pit.
4	BrokerReceipt	Broker receipt. Timestamp for a broker receiving an order, quote or trade. In the context of US futures markets (CFTC) this is the time at which the broker received the order.
5	BrokerExecution	Broker execution. Timestamp for the broker executing an order. In the context of US futures markets (CFTC regulated) this is the time at which a broker executed the order for another broker.
6	DeskReceipt	Desk receipt. Timestamp for the transmission of an order to an internal desk or department on the same day the firm received the order.
7	SubmissionToClearing	Submission to clearing. The timestamp when the trade was officially acknowledged by the Clearing House.
8	TimePriority	Time priority. A timestamp (manually or electronically) assigned by a market to specify time priority for an order or quote.
9	OrderbookEntryTime	Orderbook entry time. Timestamp for an order representing the time it was entered in the orderbook of the execution venue. The orderbook entry time cannot change during the lifetime of the order.
10	OrderSubmissionTime	Order submission time. Time the order was sent by the submitter.
11	PubliclyReported	Publicly reported. In the context of MiFID II, this is used to identify the time at which the transaction was first published to the market.

Code	Name	Description
12	PublicReportUpdated	Public report updated. In the context of MiFID II, this is used to identify the time at which the transaction's publication to the market was last updated
13	NonPubliclyReported	Non-publicly reported
14	NonPublicReportUpdated	Non-public report updated
15	SubmittedForConfirmation	Submitted for confirmation
16	UpdatedForConfirmation	Updated for confirmation
17	Confirmed	Confirmed
18	UpdatedForClearing	Updated for clearing
19	Cleared	Cleared
20	AllocationsSubmitted	Allocations submitted
21	AllocationsUpdated	Allocations updated
22	AllocationsCompleted	Allocations completed
23	SubmittedToRepository	Submitted to repository
24	PostTrdContntnEvt	Post-trade continuation event
25	PostTradeValuation	Post-trade valuation
26	PreviousTimePriority	Previous time priority. Can be used in conjunction with TrdRegTimestampType(770) = 8 (Time priority) to provide the current and last priority timestamp in a single message.
27	IdentifierAssigned	Identifier assigned. Timestamp for the assignment of a (unique) identifier to an entity (e.g. order, quote, trade).
28	PreviousIdentifierAssigned	Previous identifier assigned. Timestamp of previous assignment of a (unique) identifier to an entity (e.g. order, quote, trade).
29	OrderCancellationTime	Order cancellation time. Timestamp for the cancellation of an order or quote.
30	OrderModificationTime	Order modification time. Timestamp for the modification of an order or quote.
31	OrderRoutingTime	Order routing time. Timestamp for the routing of an order to another broker or electronic execution venue.
32	TradeCancellationTime	Trade cancellation time. Timestamp for the cancellation of an execution (ExecType(150) = H (Trade Cancel)) or trade (TradeReportType(856) = 6 (Trade Report Cancel)).
33	TradeModificationTime	Trade modification time. Timestamp for the modification of an execution (ExecType(150) = G (Trade Correct)) or trade (TradeReportType(856) = 5 (No/Was)).

34	ReferenceTimeForNBBO	Reference time for NBBO. Timestamp for an NBBO reference price.
----	----------------------	---

Used in groups: [SideTrdRegTS](#)

### 171.2.4958 SideTrdRegTS

The SideTrdRegTS component block is used to convey trading or regulatory timestamps associated with one side of a multi-sided trade event.

Name	Mult.	Type	Description
<a href="#">NoSideTrdRegTS</a>	[1..1]	NumInGroup	
<a href="#">SideTrdRegTimestamp</a>	[0..1]	UTCTimestamp	
<a href="#">SideTrdRegTimestampType</a>	[0..1]	CodeSet	
<a href="#">SideTrdRegTimestampSrc</a>	[0..1]	String	

Used in groups: [TrdCapRptAckSideGrp](#), [TrdCapRptSideGrp](#)

### 171.2.4959 SideTrdSubType

Used on a multi-sided trade to specify the type of trade for a given side. Same values as TrdSubType (829).

Type: [int](#)

Allowed values in TrdSubTypeCodeSet:

Code	Name	Description
0	CMTA	CMTA
1	InternalTransferOrAdjustment	Internal transfer or adjustment
2	ExternalTransferOrTransferOfAccount	External transfer or transfer of account
3	RejectForSubmittingSide	Reject for submitting side
4	AdvisoryForContraSide	Advisory for contra side
5	OffsetDueToAnAllocation	Offset due to an allocation
6	OnsetDueToAnAllocation	Onset due to an allocation

<b>Code</b>	<b>Name</b>	<b>Description</b>
7	DifferentialSpread	Differential spread
8	ImpliedSpreadLegExecutedAgainstAnOutright	Implied spread leg executed against an outright
9	TransactionFromExercise	Transaction from exercise
10	TransactionFromAssignment	Transaction from assignment
11	ACATS	ACATS
14	AI	AI (Automated input facility disabled in response to an exchange request.)
15	B	B (Transaction between two member firms where neither member firm is registered as a market maker in the security in question and neither is a designated fund manager. Also used by broker dealers when dealing with another broker which is not a member firm. Non-order book securities only.)
16	K	K (Transaction using block trade facility.)
17	LC	LC (Correction submitted more than three days after publication of the original trade report.)
18	M	M (Transaction, other than a transaction resulting from a stock swap or stock switch, between two market makers registered in that security including IDB or a public display system trades. Non-order book securities only.)
19	N	N (Non-protected portfolio transaction or a fully disclosed portfolio transaction)
20	NM	NM ( i) transaction where Exchange has granted permission for non-publication. ii) IDB is reporting as seller. iii) submitting a transaction report to the Exchange, where the transaction report is not also a trade report.)
21	NR	NR (Non-risk transaction in a SEATS security other than an AIM security)
22	P	P (Protected portfolio transaction or a worked principal agreement to effect a portfolio transaction which includes order book securities)
23	PA	PA (Protected transaction notification)
24	PC	PC (Contra trade for transaction which took place on a previous day and which was automatically executed on the Exchange trading system)
25	PN	PN (Worked principal notification for a portfolio transaction which includes order book securities)

<b>Code</b>	<b>Name</b>	<b>Description</b>
26	R	R ( (i) riskless principal transaction between non-members where the buying and selling transactions are executed at different prices or on different terms (requires a trade report with trade type indicator R for each transaction). (ii) market maker is reporting all the legs of a riskless principal transaction where the buying and selling transactions are executed at different prices (requires a trade report with trade type indicator R for each transaction)or. (iii) market maker is reporting the onward leg of a riskless principal transaction where the legs are executed at different prices, and another market maker has submitted a trade report using trade type indicator M for the first leg (this requires a single trade report with trade type indicator R).)
27	RO	RO (Transaction which resulted from the exercise of a traditional option or a stock-settled covered warrant)
28	RT	RT (Risk transaction in a SEATS security, (excluding AIM security) reported by a market maker registered in that security)
29	SW	SW (Transactions resulting from stock swap or a stock switch (one report is required for each line of stock))
30	T	T (If reporting a single protected transaction)
31	WN	WN (Worked principal notification for a single order book security)
32	WT	WT (Worked principal transaction (other than a portfolio transaction))
33	OffHoursTrade	Off Hours Trade
34	OnHoursTrade	On Hours Trade
35	OTCQuote	OTC Quote
36	ConvertedSWAP	Converted SWAP
37	CrossedTrade	Crossed Trade (X)
38	InterimProtectedTrade	Interim Protected Trade (I)
39	LargeInScale	Large in Scale (L)
40	WashTrade	Wash Trade
41	TradeAtSettlement	Trade at Settlement (TAS). Identifies a trade that will be priced using the settlement price.
42	AuctionTrade	Auction Trade. Mutually exclusive with TrdSubType(829) = 50 (Balancing).

Code	Name	Description
43	TradeAtMarker	Trade at Marker (TAM). Posted at a specific time each day and used to price the consummated trade for the product/month/strip executed (+/- and differentials). Closely related to TAS trades in function and trade practice.
44	CreditDefault	Default (Credit Event)
45	CreditRestructuring	Restructuring (credit event)
46	Merger	Merger (succession event)
47	SpinOff	Spin-off (succession event)
48	MultilateralCompression	Multilateral compression. Used to identify a special case of compression between multiple parties, e.g. for netted or portfolio trades.
50	Balancing	Balancing. Identifies an additional trade distributed to auction participants meant to resolve an imbalance between bids and offers. Mutually exclusive with TrdSubType(829) = 42 =(Auction).
51	BasisTradeIndexClose	Basis Trade index Close (BTIC). The marketplace name given to Trade at Marker (TAM) transactions in equity index futures.
52	TradeAtCashOpen	Trade At Cash Open (TACO). The marketplace name given to trading futures based on an opening quote of the underlying cash market.
53	TrdSubmitVenueClrSettl	Trade submitted to venue for clearing and settlement. Identifies trades brought on a trading venue purely for clearing and settlement purposes.
54	BilateralCompression	Bilateral compression. Used to identify a special case of compression between two parties, e.g. for netted or portfolio trades.

Used in groups: [TrdCapRptAckSideGrp](#), [TrdCapRptSideGrp](#), [TrdMatchSideGrp](#)

### 171.2.4960 SideUnderlyingRefID

Identifies the underlying instrument the entity applies to by referencing the underlying instrument's UnderlyingID(2874).

Type: [String](#)

Used in groups: [SideCollateralAmountGrp](#)

**171.2.4961 SideValue1**

Amounts in currency

Type: **Amt**

Used in messages: **BidRequest**

**171.2.4962 SideValue2**

Amounts in currency

Type: **Amt**

Used in messages: **BidRequest**

**171.2.4963 SideValueInd**

Code to identify which "SideValue" the value refers to. SideValue1 and SideValue2 are used as opposed to Buy or Sell so that the basket can be quoted either way as Buy or Sell.

Type: **int**

Allowed values in SideValueIndCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	SideValue1	Side Value 1
2	SideValue2	Side Value 2

---

Used in groups: **BidDescReqGrp**, **ListOrdGrp**

**171.2.4964 SideVenueType**

Identifies the type of venue where the trade was executed for the side.

Type: **char**

Allowed values in VenueTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
E	Electronic	Electronic exchange

---

Code	Name	Description
P	Pit	Pit
X	ExPit	Ex-pit
C	ClearingHouse	Clearinghouse
R	RegisteredMarket	Registered market. Markets registered with regulators such as exchange, multilateral trading facility (MTF), swap execution facility (SEF). In the context of regulatory reporting (e.g. CFTC reporting), this is used for regulated markets, e.g. swap markets.
O	OffMarket	Off-market. Off-book, off-facility. In the context of regulatory reporting (e.g. CFTC reporting) this identifies trades conducted away from a regulated market.
B	CentralLimitOrderBook	Central limit order book
Q	QuoteDrivenMarket	Quote driven market
D	DarkOrderBook	Dark order book
A	AuctionDrivenMarket	Auction driven market. Markets where matching occurs only in scheduled auctions.
N	QuoteNegotiation	Quote negotiation. Discretionary quoting on request or "request for quote" market.
V	VoiceNegotiation	Voice negotiation. A trading system where transactions between members are arranged through voice negotiation.
H	HybridMarket	Hybrid market. A hybrid system falling into two or more types of trading systems. In the context of ESMA reporting, this is for "Hybrid system." In the context of FCA reporting, this is for "Any other, including hybrid."
z	OtherMarket	Other market (lowercase "z"). A market that does not fall under any of the market types defined for VenueType(1430). In the context of ESMA reporting, this is for "Any other, excluding hybrid."

Used in groups: [TrdMatchSideGrp](#)

### 171.2.4965 Signature

Electronic signature

Type: [data](#)

Used in components: [StandardTrailer](#)

**171.2.4966 SignatureLength**

Number of bytes in signature field

Type: **Length**

Used in components: **StandardTrailer**

**171.2.4967 SingleQuoteIndicator**

Used to indicate whether the quoting system allows only one quote to be active at a time for the quote issuer or market maker.

Type: **Boolean**

Allowed values in SingleQuoteIndicatorCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
N	MultipleQuotesAllowed	Multiple quotes allowed
Y	OnlyOneQuoteAllowed	Only one quote allowed

---

Used in messages: **Quote**

**171.2.4968 SolicitedFlag**

Indicates whether or not the order was solicited.

Type: **Boolean**

Allowed values in SolicitedFlagCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
N	WasNotSolicited	Was not solicited
Y	WasSolicited	Was solicited

---

Used in groups: **ListOrdGrp, SideCrossOrdModGrp, TrdCapRptAckSideGrp, TrdCapRptSideGrp, Trd-MatchSideGrp**

Used in messages: **ExecutionReport, MultilegOrderCancelReplace, NewOrderMultileg, NewOrderSingle, OrderCancelReplaceRequest, Quote**

**171.2.4969 SpecialDividendsIndicator**

Indicates whether special dividends are applicable.

Type: **Boolean**

Used in components: **DividendConditions**

**171.2.4970 Spread**

For Fixed Income. Either Swap Spread or Spread to Benchmark depending upon the order type.

Spread to Benchmark: Basis points relative to a benchmark. To be expressed as count of basis points (vs. an absolute value). E.g. High Grade Corporate Bonds may express price as basis points relative to benchmark (the BenchmarkCurveName(221) field). Note: Basis points can be negative.

Swap Spread: Target spread for a swap.

Type: **PriceOffset**

Used in components: **SpreadOrBenchmarkCurveData**

**171.2.4971 SpreadOrBenchmarkCurveData**

The SpreadOrBenchmarkCurveData component block is primarily used for Fixed Income to convey spread to a benchmark security or curve.

Name	Mult.	Type	Description
<b>Spread</b>	[0..1]	PriceOffset	For Fixed Income
<b>BenchmarkCurveCurrency</b>	[0..1]	Currency	
<b>BenchmarkCurveCurrencyCodeSource</b>	[0..1]	CodeSet	
<b>BenchmarkCurveName</b>	[0..1]	CodeSet	
<b>BenchmarkCurvePoint</b>	[0..1]	String	
<b>BenchmarkPrice</b>	[0..1]	Price	
<b>BenchmarkPriceType</b>	[0..1]	CodeSet	Must be present if BenchmarkPrice is used.
<b>BenchmarkSecurityID</b>	[0..1]	String	The identifier of the benchmark security, e.g. Treasury against Corporate bond.
<b>BenchmarkSecurityIDSource</b>	[0..1]	CodeSet	Source of BenchmarkSecurityID. If not specified, then ID Source is understood to be the same as that in the Instrument block.

Used in groups: [InstrmtMDReqGrp](#), [ListOrdGrp](#), [MDFullGrp](#), [MDIncGrp](#), [QuotReqGrp](#), [QuotReqRjctGrp](#), [SecListGrp](#), [SecLstUpdRelSymGrp](#)

Used in messages: [AllocationInstruction](#), [AllocationInstructionAlert](#), [AllocationReport](#), [CollateralAssignment](#), [CollateralInquiry](#), [CollateralReport](#), [CollateralRequest](#), [CollateralResponse](#), [Confirmation](#), [CrossOrderCancelReplaceRequest](#), [ExecutionReport](#), [IOI](#), [NewOrderCross](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#), [Quote](#), [QuoteResponse](#), [QuoteStatusReport](#), [SecurityDefinition](#), [SecurityDefinitionRequest](#), [SecurityDefinitionUpdateReport](#), [TradeCaptureReport](#)

### 171.2.4972 StandardHeader

The standard FIX message header

Name	Mult.	Type	Description
<a href="#">BeginString</a>	[1..1]	CodeSet	FIXT.1.1 (Always unencrypted, must be first field in message)
<a href="#">BodyLength</a>	[1..1]	Length	(Always unencrypted, must be second field in message)
<a href="#">MsgType</a>	[1..1]	CodeSet	(Always unencrypted, must be third field in message)
<a href="#">ApplVerID</a>	[0..1]	CodeSet	Indicates application version using a service pack identifier. The ApplVerID applies to a specific message occurrence.
<a href="#">ApplExtID</a>	[0..1]	int	
<a href="#">CstmApplVerID</a>	[0..1]	String	Used to support bilaterally agreed custom functionality
<a href="#">SenderCompID</a>	[1..1]	String	(Always unencrypted)
<a href="#">TargetCompID</a>	[1..1]	String	(Always unencrypted)
<a href="#">OnBehalfOfCompID</a>	[0..1]	String	Trading partner company ID used when sending messages via a third party (Can be embedded within encrypted data section.)
<a href="#">DeliverToCompID</a>	[0..1]	String	Trading partner company ID used when sending messages via a third party (Can be embedded within encrypted data section.)
<a href="#">SecureDataLen</a>	[0..1]	Length	Required to identify length of encrypted section of message. (Always unencrypted)
<a href="#">SecureData</a>	[0..1]	data	Required when message body is encrypted. Always immediately follows SecureDataLen field.
<a href="#">MsgSeqNum</a>	[1..1]	SeqNum	(Can be embedded within encrypted data section.)

<b>Name</b>	<b>Mult.</b>	<b>Type</b>	<b>Description</b>
SenderSubID	[0..1]	String	(Can be embedded within encrypted data section.)
SenderLocationID	[0..1]	String	Sender's LocationID (i.e. geographic location and/or desk) (Can be embedded within encrypted data section.)
TargetSubID	[0..1]	String	"ADMIN" reserved for administrative messages not intended for a specific user. (Can be embedded within encrypted data section.)
TargetLocationID	[0..1]	String	Trading partner LocationID (i.e. geographic location and/or desk) (Can be embedded within encrypted data section.)
OnBehalfOfSubID	[0..1]	String	Trading partner SubID used when delivering messages via a third party. (Can be embedded within encrypted data section.)
OnBehalfOfLocationID	[0..1]	String	Trading partner LocationID (i.e. geographic location and/or desk) used when delivering messages via a third party. (Can be embedded within encrypted data section.)
DeliverToSubID	[0..1]	String	Trading partner SubID used when delivering messages via a third party. (Can be embedded within encrypted data section.)
DeliverToLocationID	[0..1]	String	Trading partner LocationID (i.e. geographic location and/or desk) used when delivering messages via a third party. (Can be embedded within encrypted data section.)
PossDupFlag	[0..1]	CodeSet	Always required for retransmitted messages, whether prompted by the sending system or as the result of a resend request. (Can be embedded within encrypted data section.)
PossResend	[0..1]	CodeSet	Required when message may be duplicate of another message sent under a different sequence number. (Can be embedded within encrypted data section.)
SendingTime	[1..1]	UTCTimestamp	(Can be embedded within encrypted data section.)
OrigSendingTime	[0..1]	UTCTimestamp	Required for message resent as a result of a ResendRequest. If data is not available set to same value as SendingTime (Can be embedded within encrypted data section.)
XmlDataLen	[0..1]	Length	Required when specifying XmlData to identify the length of a XmlData message block. (Can be embedded within encrypted data section.)

Name	Mult.	Type	Description
<a href="#">XmlData</a>	[0..1]	XMLData	Can contain a XML formatted message block (e.g. FIXML). Always immediately follows XmlDataLen field. (Can be embedded within encrypted data section.). See Volume 1: FIXML Support
<a href="#">MessageEncoding</a>	[0..1]	String	Type of message encoding (non-ASCII characters) used in a message's "Encoded" fields. Required if any "Encoding" fields are used.
<a href="#">LastMsgSeqNumProcessed</a>	[0..1]	SeqNum	The last MsgSeqNum value received by the FIX engine and processed by downstream application, such as trading system or order routing system. Can be specified on every message sent. Useful for detecting a backlog with a counterparty.
<a href="#">HopGrp</a>	[0..*]	Group	Number of repeating groups of historical "hop" information. Only applicable if OnBehalfOfCompID is used, however, its use is optional. Note that some market regulations or counterparties may require tracking of message hops.

Used in messages: [AccountSummaryReport](#), [AdjustedPositionReport](#), [Advertisement](#), [AllocationInstruction](#), [AllocationInstructionAck](#), [AllocationInstructionAlert](#), [AllocationInstructionAlertRequest](#), [AllocationInstructionAlertRequestAck](#), [AllocationReport](#), [AllocationReportAck](#), [ApplicationMessageReport](#), [ApplicationMessageRequest](#), [ApplicationMessageRequestAck](#), [AssignmentReport](#), [BidRequest](#), [BidResponse](#), [BusinessMessageReject](#), [CollateralAssignment](#), [CollateralInquiry](#), [CollateralInquiryAck](#), [CollateralReport](#), [CollateralReportAck](#), [CollateralRequest](#), [CollateralResponse](#), [Confirmation](#), [ConfirmationAck](#), [ConfirmationRequest](#), [ContraryIntentionReport](#), [CrossOrderCancelReplaceRequest](#), [CrossOrderCancelRequest](#), [CrossRequest](#), [CrossRequestAck](#), [DerivativeSecurityList](#), [DerivativeSecurityListRequest](#), [DerivativeSecurityListUpdateReport](#), [DontKnowTrade](#), [Email](#), [ExecutionAck](#), [ExecutionReport](#), [Heartbeat](#), [IOI](#), [ListCancelRequest](#), [ListExecute](#), [ListStatus](#), [ListStatusRequest](#), [ListStrikePrice](#), [Logon](#), [Logout](#), [MarginRequirementInquiry](#), [MarginRequirementInquiryAck](#), [MarginRequirementReport](#), [MarketDataIncrementalRefresh](#), [MarketDataReport](#), [MarketDataRequest](#), [MarketDataRequestReject](#), [MarketDataSnapshotFullRefresh](#), [MarketDataStatisticsReport](#), [MarketDataStatisticsRequest](#), [MarketDefinition](#), [MarketDefinitionRequest](#), [MarketDefinitionUpdateReport](#), [MassOrder](#), [MassOrderAck](#), [MassQuote](#), [MassQuoteAck](#), [MultilegOrderCancelReplace](#), [NetworkCounterpartySystemStatusRequest](#), [NetworkCounterpartySystemStatusResponse](#), [NewOrderCross](#), [NewOrderList](#), [NewOrderMultileg](#), [NewOrderSingle](#), [News](#), [OrderCancelReject](#), [OrderCancelReplaceRequest](#), [OrderCancelRequest](#), [OrderMassActionReport](#), [OrderMassActionRequest](#), [OrderMassCancelReport](#), [OrderMassCancelRequest](#), [OrderMassSta-](#)

tusRequest, OrderStatusRequest, PartyActionReport, PartyActionRequest, PartyDetailsDefinitionRequest, PartyDetailsDefinitionRequestAck, PartyDetailsListReport, PartyDetailsListRequest, PartyDetailsListUpdateReport, PartyEntitlementsDefinitionRequest, PartyEntitlementsDefinitionRequestAck, PartyEntitlementsReport, PartyEntitlementsRequest, PartyEntitlementsUpdateReport, PartyRiskLimitCheckRequest, PartyRiskLimitCheckRequestAck, PartyRiskLimitsDefinitionRequest, PartyRiskLimitsDefinitionRequestAck, PartyRiskLimitsReport, PartyRiskLimitsReportAck, PartyRiskLimitsRequest, PartyRiskLimitsUpdateReport, PayManagementReport, PayManagementReportAck, PayManagementRequest, PayManagementRequestAck, PositionMaintenanceReport, PositionMaintenanceRequest, PositionReport, PositionTransferInstruction, PositionTransferInstructionAck, PositionTransferReport, Quote, QuoteAck, QuoteCancel, QuoteRequest, QuoteRequestReject, QuoteResponse, QuoteStatusReport, QuoteStatusRequest, RFQRequest, RegistrationInstructions, RegistrationInstructionsResponse, Reject, RequestForPositions, RequestForPositionsAck, ResendRequest, SecurityDefinition, SecurityDefinitionRequest, SecurityDefinitionUpdateReport, SecurityList, SecurityListRequest, SecurityListUpdateReport, SecurityMassStatus, SecurityMassStatusRequest, SecurityRiskMetricsReport, SecurityStatus, SecurityStatusRequest, SecurityTypeRequest, SecurityTypes, SequenceReset, SettlementInstructionRequest, SettlementInstructions, SettlementObligationReport, SettlementStatusReport, SettlementStatusReportAck, SettlementStatusRequest, SettlementStatusRequestAck, StreamAssignmentReport, StreamAssignmentReportACK, StreamAssignmentRequest, TestRequest, TradeAggregationReport, TradeAggregationRequest, TradeCaptureReport, TradeCaptureReportAck, TradeCaptureReportRequest, TradeCaptureReportRequestAck, TradeMatchReport, TradeMatchReportAck, TradingSessionList, TradingSessionListRequest, TradingSessionListUpdateReport, TradingSessionStatus, TradingSessionStatusRequest, UserNotification, UserRequest, UserResponse, XMLnonFIX

### 171.2.4973 StandardTrailer

The standard FIX message trailer

Name	Mult.	Type	Description
SignatureLength	[0..1]	Length	Required when trailer contains signature. Note: Not to be included within SecureData field
Signature	[0..1]	data	Note: Not to be included within SecureData field
Checksum	[1..1]	String	(Always unencrypted, always last field in message)

Used in messages: AccountSummaryReport, AdjustedPositionReport, Advertisement, AllocationInstruction, AllocationInstructionAck, AllocationInstructionAlert, AllocationInstructionAlertRequest, AllocationInstructionAlertRequestAck, AllocationReport, AllocationReportAck, ApplicationMessageReport, ApplicationMessageRequest, ApplicationMessageRequestAck, AssignmentReport, BidRequest,

BidResponse, BusinessMessageReject, CollateralAssignment, CollateralInquiry, CollateralInquiryAck, CollateralReport, CollateralReportAck, CollateralRequest, CollateralResponse, Confirmation, ConfirmationAck, ConfirmationRequest, ContraryIntentionReport, CrossOrderCancelReplaceRequest, CrossOrderCancelRequest, CrossRequest, CrossRequestAck, DerivativeSecurityList, DerivativeSecurityListRequest, DerivativeSecurityListUpdateReport, DontKnowTrade, Email, ExecutionAck, ExecutionReport, Heartbeat, IOI, ListCancelRequest, ListExecute, ListStatus, ListStatusRequest, ListStrikePrice, Logon, Logout, MarginRequirementInquiry, MarginRequirementInquiryAck, MarginRequirementReport, MarketDataIncrementalRefresh, MarketDataReport, MarketDataRequest, MarketDataRequestReject, MarketDataSnapshotFullRefresh, MarketDataStatisticsReport, MarketDataStatisticsRequest, MarketDefinition, MarketDefinitionRequest, MarketDefinitionUpdateReport, MassOrder, MassOrderAck, MassQuote, MassQuoteAck, MultilegOrderCancelReplace, NetworkCounterpartySystemStatusRequest, NetworkCounterpartySystemStatusResponse, NewOrderCross, NewOrderList, NewOrderMultileg, NewOrderSingle, News, OrderCancelReject, OrderCancelReplaceRequest, OrderCancelRequest, OrderMassActionReport, OrderMassActionRequest, OrderMassCancelReport, OrderMassCancelRequest, OrderMassStatusRequest, OrderStatusRequest, PartyActionReport, PartyActionRequest, PartyDetailsDefinitionRequest, PartyDetailsDefinitionRequestAck, PartyDetailsListReport, PartyDetailsListRequest, PartyDetailsListUpdateReport, PartyEntitlementsDefinitionRequest, PartyEntitlementsDefinitionRequestAck, PartyEntitlementsReport, PartyEntitlementsRequest, PartyEntitlementsUpdateReport, PartyRiskLimitCheckRequest, PartyRiskLimitCheckRequestAck, PartyRiskLimitsDefinitionRequest, PartyRiskLimitsDefinitionRequestAck, PartyRiskLimitsReport, PartyRiskLimitsReportAck, PartyRiskLimitsRequest, PartyRiskLimitsUpdateReport, PayManagementReport, PayManagementReportAck, PayManagementRequest, PayManagementRequestAck, PositionMaintenanceReport, PositionMaintenanceRequest, PositionReport, PositionTransferInstruction, PositionTransferInstructionAck, PositionTransferReport, Quote, QuoteAck, QuoteCancel, QuoteRequest, QuoteRequestReject, QuoteResponse, QuoteStatusReport, QuoteStatusRequest, RFQRequest, RegistrationInstructions, RegistrationInstructionsResponse, Reject, RequestForPositions, RequestForPositionsAck, ResendRequest, SecurityDefinition, SecurityDefinitionRequest, SecurityDefinitionUpdateReport, SecurityList, SecurityListRequest, SecurityListUpdateReport, SecurityMassStatus, SecurityMassStatusRequest, SecurityRiskMetricsReport, SecurityStatus, SecurityStatusRequest, SecurityTypeRequest, SecurityTypes, SequenceReset, SettlementInstructionRequest, SettlementInstructions, SettlementObligationReport, SettlementStatusReport, SettlementStatusReportAck, SettlementStatusRequest, SettlementStatusRequestAck, StreamAssignmentReport, StreamAssignmentReportACK, StreamAssignmentRequest, TestRequest, TradeAggregationReport, TradeAggregationRequest, TradeCaptureReport, TradeCaptureReportAck, TradeCaptureReportRequest, TradeCaptureReportRequestAck, TradeMatchReport, TradeMatchReportAck, TradingSessionList, TradingSessionListRequest, TradingSessionListUpdateReport, TradingSessionStatus, TradingSessionStatusRequest, UserNotification, UserRequest, UserResponse, XMLnonFIX

#### **171.2.4974 StandardVariance**

Standard variance (over the lifetime of an instrument) or initial variance used to calculate settlement prices, e.g. for variance futures.

Type: **float**

Used in groups: **ClearingPriceParametersGrp**

#### **171.2.4975 StandInstDbID**

Unique identifier used on the Standing Instructions database for the Standing Instructions to be referenced.

Type: **String**

Used in components: **SettlInstructionsData**

Used in groups: **SettlDetails**

Used in messages: **SettlementInstructionRequest**

#### **171.2.4976 StandInstDbName**

Name of the Standing Instruction database represented with StandInstDbType (169) (i.e. the Global Custodian's name).

Type: **String**

Used in components: **SettlInstructionsData**

Used in groups: **SettlDetails**

Used in messages: **SettlementInstructionRequest**

#### **171.2.4977 StandInstDbType**

Identifies the Standing Instruction database used

Type: **int**

Allowed values in StandInstDbTypeCodeSet:

---

Code	Name	Description
0	Other	Other
1	DTCSID	DTC SID
2	ThomsonALERT	Thomson ALERT
3	AGlobalCustodian	A Global Custodian (StandInstDBName (70) must be provided)
4	AccountNet	AccountNet

---

Used in components: [SettlInstructionsData](#)

Used in groups: [SettlDetails](#)

Used in messages: [SettlementInstructionRequest](#)

#### **171.2.4978 StartCash**

Starting dirty cash consideration of a financing deal, i.e. paid to the seller on the Start Date.

Type: [Amt](#)

Used in groups: [TrdCapRptAckSideGrp](#), [TrdCapRptSideGrp](#)

Used in messages: [AllocationInstruction](#), [AllocationInstructionAlert](#), [AllocationReport](#), [CollateralAssignment](#), [CollateralInquiry](#), [CollateralReport](#), [CollateralRequest](#), [CollateralResponse](#), [Confirmation](#), [ExecutionReport](#)

#### **171.2.4979 StartDate**

Start date of a financing deal, i.e. the date the buyer pays the seller cash and takes control of the collateral

Type: [LocalMktDate](#)

Used in components: [FinancingDetails](#)

#### **171.2.4980 StartMaturityMonthYear**

Starting maturity month year for an option class

Type: [MonthYear](#)

Used in groups: [MaturityRules](#)

**171.2.4981 StartPriceRange**

Lower boundary for price range.

Type: [Price](#)

Used in groups: [PriceRangeRuleGrp](#)

**171.2.4982 StartStrikePxRange**

Starting price for the range to which the StrIKEIncrement applies. Price refers to the price of the underlying

Type: [Price](#)

Used in groups: [StrikeRules](#)

**171.2.4983 StartTickPriceRange**

Starting price range for specified tick increment

Type: [Price](#)

Used in groups: [TickRules](#)

**171.2.4984 StateOrProvinceOfIssue**

A two-character state or province abbreviation.

Type: [String](#)

Used in components: [Instrument](#)

**171.2.4985 StatsIndGrp**

---

Name	Mult.	Type	Description
<a href="#">NoStatsIndicators</a>	[1..1]	NumInGroup	Number of statistics indicators
<a href="#">StatsType</a>	[0..1]	CodeSet	Indicates that the MD Entry is eligible for inclusion in the type of statistic specified by the StatsType. Must be provided if NoStatsIndicators greater than 0.

---

Used in groups: [MDIncGrp](#)

**171.2.4986 StatsType**

Type of statistics

Type: **int**

Allowed values in StatsTypeCodeSet:

---

Code	Name	Description
1	ExchangeLast	Exchange Last
2	High	High / Low Price
3	AveragePrice	Average Price (VWAP, TWAP .. )
4	Turnover	Turnover (Price * Qty)

---

Used in groups: **StatsIndGrp**

**171.2.4987 StatusText**

A text description associated with a network status.

Type: **String**

Used in groups: **CompIDStatGrp**

**171.2.4988 StatusValue**

Indicates the status of a network connection

Type: **int**

Allowed values in StatusValueCodeSet:

---

Code	Name	Description
1	Connected	Connected
2	NotConnectedUnexpected	Not Connected - down expected up
3	NotConnectedExpected	Not Connected - down expected down
4	InProcess	In Process

---

Used in groups: **CompIDStatGrp**

## 171.2.4989 Stipulations

The Stipulations component block is used in Fixed Income to provide additional information on a given security. These additional information are usually not considered static data information.

Name	Mult.	Type	Description
NoStipulations	[1..1]	NumInGroup	
StipulationType	[0..1]	CodeSet	Required if NoStipulations >0
StipulationValue	[0..1]	String	

Used in groups: ListOrdGrp, QuotReqGrp, QuotReqRjctGrp, SecListGrp, SecLstUpdRelSymGrp, TrdCapRptAckSideGrp, TrdCapRptSideGrp

Used in messages: AllocationInstruction, AllocationInstructionAlert, AllocationReport, CollateralAssignment, CollateralInquiry, CollateralReport, CollateralRequest, CollateralResponse, Confirmation, CrossOrderCancelReplaceRequest, ExecutionReport, IOI, NewOrderCross, NewOrderSingle, OrderCancelReplaceRequest, Quote, QuoteResponse, QuoteStatusReport, SecurityDefinition, SecurityDefinitionRequest, SecurityDefinitionUpdateReport

## 171.2.4990 StipulationType

For Fixed Income.

Type of Stipulation.

Other types may be used by mutual agreement of the counterparties.

(Note tag # was reserved in FIX 4.1, added in FIX 4.3)

Type: **String**

Allowed values in StipulationTypeCodeSet:

Code	Name	Description
ABS	AbsolutePrepaymentSpeed	Absolute Prepayment Speed
AMT	AlternativeMinimumTax	Alternative Minimum Tax (Y/N)

<b>Code</b>	<b>Name</b>	<b>Description</b>
INCURRCVY	IncurredRecovery	Incurred recovery (Y/N). Specifies whether incurred recovery is applicable (Y) or not (N). Outstanding Swap Notional Amount is defined at any time on any day, as the greater of: (a) Zero; If Incurred Recovery Amount Applicable: (b) The Original Swap Notional Amount minus the sum of all Incurred Loss Amounts and all Incurred Recovery Amounts (if any) determined under this Confirmation at or prior to such time. Incurred Recovery Amount not populated: (b) The Original Swap Notional Amount minus the sum of all Incurred Loss Amounts determined under this Confirmation at or prior to such time. 2009 CDX Tranche Terms.
ADDTRM	AdditionalTerm	Additional term. Used for representing information contained in the Additional Terms field of the 2003 Master Credit Derivatives confirm.
AUTOREINV	AutoReinvestment	Auto Reinvestment at <rate> or better
CPP	ConstantPrepaymentPenalty	Constant Prepayment Penalty
BANKQUAL	BankQualified	Bank qualified (Y/N)
CPR	ConstantPrepaymentRate	Constant Prepayment Rate
MODEQTYDLVY	ModifiedEquityDelivery	Modified equity delivery. Indicates whether delivery of selected obligations having an amount greater than the reference entity notional amount is allowed (Y) or (N). 2005 iTraxx tranching Transactions Standard Terms Supplement.
BGNCON	BargainConditions	Bargain conditions (see StipulationValue (234) for values)
CPY	ConstantPrepaymentYield	Constant Prepayment Yield
NOREFOBLIG	NoReferenceObligation	No reference obligation (Y/N). When specified as "Y" this indicates that there is no Reference Obligation associated with this Credit Default Swap and that there will never be one. 2003 ISDA Credit Derivatives Definitions.
COUPON	CouponRange	Coupon range
HEP	FinalCPRofHomeEquityPrepaymentCurve	final CPR of Home Equity Prepayment Curve
UNKREFOBLIG	UnknownReferenceObligation	Unknown reference obligation (Y/N). When specified as "Y" this indicates that the Reference obligation associated with the Credit Default Swap is currently not known. This is not valid for Legal Confirmation purposes, but is valid for earlier stages in the trade life cycle (e.g. Broker Confirmation). 2003 FpML-CD-4.0.

<b>Code</b>	<b>Name</b>	<b>Description</b>
ALLGUARANTEES	AllGuarantees	All guarantees (Y/N). Indicates whether an obligation of the Reference Entity, guaranteed by the Reference Entity on behalf of a non-Affiliate, is to be considered an Obligation for the purpose of the transaction (Y) or (N). ISDA 2003 Term: All Guarantees.
CURRENCY	ISOCurrencyCode	ISO Currency Code
MHP	PercentOfManufacturedHousingPrepaymentCurve	Percent of Manufactured Housing Prepayment Curve
CUSTOMDATE	CustomStart	Custom start/end date
MPR	MonthlyPrepaymentRate	Monthly Prepayment Rate
REFPX	ReferencePrice	Reference price (Y/N). Specifies the reference price expressed as a percentage between 0 and 1 (e.g. 0.05 is 5%). The reference price is used to determine (a) for physically settled trades, the Physical Settlement Amount, which equals the Floating Rate Payer Calculation Amount times the Reference Price and (b) for cash settled trades, the Cash Settlement Amount, which equals the greater of (i) the difference between the Reference Price and the Final Price and (ii) zero. ISDA 2003 Term: Reference Price.
GEOG	Geographics	Geographics and % range (ex. 234=CA 0-80 [minimum of 80% California assets])
PPC	PercentOfProspectusPrepaymentCurve	Percent of Prospectus Prepayment Curve
REFPOLICY	ReferencePolicy	Reference policy (Y/N). Indicates whether the reference obligation is guaranteed (Y), or not (N), under a reference policy. If the Reference Obligation is guaranteed under a Reference Policy, and such Reference Policy by its terms excludes any component of the Expected Principal Amount for purposes of determining the liability of the relevant Insurer, or the Insurer is otherwise not required to pay any such amounts under the terms of the Reference Policy, the relevant component or amount shall also be excluded for purposes of determining the Expected Principal Amount with respect to any determination of Principal Shortfall hereunder. 2006 ISDA CDS on MBS Terms.
HAIRCUT	ValuationDiscount	Valuation Discount
PSA	PercentOfBMAPrepaymentCurve	Percent of BMA Prepayment Curve

<b>Code</b>	<b>Name</b>	<b>Description</b>
SECRDLIST	SecuredList	Secured list (Y/N). Specifies whether a list of Syndicated Secured Obligations (also known as the Relevant Secured List) exists (Y), or not (N), for the Reference Entity. With respect to any day, the list of Syndicated Secured Obligations of the Designated Priority of the Reference Entity published by Markit Group Limited or any successor thereto appointed by the Specified Dealers (the "Secured List Publisher") on or most recently before such day, which list is currently available at [ <a href="http://www.markit.com">http://www.markit.com</a> ]. ISDA 2003 Term: Relevant Secured List.
INSURED	Insured	Insured (Y/N)
SMM	SingleMonthlyMortality	Single Monthly Mortality
ISSUE	IssueDate	Year Or Year/Month of Issue (ex. 234=2002/09)
ISSUER	Issuer	Issuer's ticker
ISSUESIZE	IssueSizeRange	issue size range
LOOKBACK	LookbackDays	Lookback Days
LOT	ExplicitLotIdentifier	Explicit lot identifier
LOTVAR	LotVariance	Lot Variance (value in percent maximum over- or under-allocation allowed)
MAT	MaturityYearAndMonth	Maturity Year And Month
MATURITY	MaturityRange	Maturity range
MAXSUBS	MaximumSubstitutions	Maximum substitutions (Repo)
MINDNOM	MinimumDenomination	Minimum denomination
MININCR	MinimumIncrement	Minimum increment
MINQTY	MinimumQuantity	Minimum quantity
PAYFREQ	PaymentFrequency	Payment frequency, calendar
PIECES	NumberOfPieces	Number Of Pieces
PMAX	PoolsMaximum	Pools Maximum
PPL	PoolsPerLot	Pools per Lot
PPM	PoolsPerMillion	Pools per Million
PPT	PoolsPerTrade	Pools per Trade
PRICE	PriceRange	Price Range
PRICEFREQ	PricingFrequency	Pricing frequency
PROD	ProductionYear	Production Year
PROTECT	CallProtection	Call protection
PURPOSE	Purpose	Purpose

<b>Code</b>	<b>Name</b>	<b>Description</b>
PXSOURCE	BenchmarkPriceSource	Benchmark price source
RATING	RatingSourceAndRange	Rating source and range
REDEMPTION	TypeOfRedemption	Type Of Redemption - values are: NonCallable, Prefunded, EscrowedToMaturity, Puttable, Convertible
RESTRICTED	Restricted	Restricted (Y/N)
SECTOR	MarketSector	Market Sector
SECTYPE	SecurityTypeIncludedOrExcluded	Security Type included or excluded
STRUCT	Structure	Structure
SUBSFREQ	SubstitutionsFrequency	Substitutions frequency (Repo)
SUBSLEFT	SubstitutionsLeft	Substitutions left (Repo)
TEXT	FreeformText	Freeform Text
TRDVAR	TradeVariance	Trade Variance (value in percent maximum over- or under-allocation allowed)
WAC	WeightedAverageCoupon	Weighted Average Coupon - value in percent (exact or range) plus "Gross" or "Net" of servicing spread (the default) (ex. 234=6.5-Net [minimum of 6.5% net of servicing fee])
WAL	WeightedAverageLifeCoupon	Weighted Average Life Coupon - value in percent (exact or range)
WALA	WeightedAverageLoanAge	Weighted Average Loan Age - value in months (exact or range)
WAM	WeightedAverageMaturity	Weighted Average Maturity - value in months (exact or range)
WHOLE	WholePool	Whole Pool (Y/N)
YIELD	YieldRange	Yield Range
AVFICO	AverageFICOScore	Average FICO Score
ORIGAMT	OriginalAmount	Original amount. The original issued amount of a mortgage backed security or other loan/asset backed security.
AVSIZE	AverageLoanSize	Average Loan Size
POOLEFFDT	PoolEffectiveDate	Pool effective date
MAXBAL	MaximumLoanBalance	Maximum Loan Balance

<b>Code</b>	<b>Name</b>	<b>Description</b>
POOLINITFCTR	PoolInitialFactor	Pool initial factor. For mortgage backed securities, the part of the mortgage that is outstanding on trade inception, i.e. has not been repaid yet as principal. It is expressed as a multiplier factor to the mortgage: where 1 means that the whole mortgage amount is outstanding, 0.8 means that 80% remains to be repaid and 20% has been repaid.
POOL	PoolIdentifier	Pool Identifier
TRANCHE	Tranche	Tranche identifier. Identifies the tranche of a mortgage backed security, loan, collateralized mortgage obligation or similar securities that can be split into different risk or maturity (for example) classes.
ROLLTYPE	TypeOfRollTrade	Type of Roll trade
SUBSTITUTION	Substitution	Substitution (Y/N). Indicates whether substitution is applicable (Y) or (N).
MULTEXCHFLLBCK	MULTEXCHFLLBCK	Multiple exchange fallback (Y/N). For an index option transaction, indicates whether a relevant "Multiple Exchange Index Annex" is applicable (Y) to the transaction or not (N). This annex defines additional provisions which are applicable where an index is comprised of component securities that are traded on multiple exchanges.
REFTRADE	ReferenceToRollingOrClosing-Trade	Reference to rolling or closing trade
COMPSECFLBCK	COMPSECFLBCK	Component security fallback (Y/N). For an index option transaction, indicates whether a relevant "Component Security Index Annex" is applicable (Y) to the transaction or not (N).
REFPRIN	PrincipalOfRollingOrClosing-Trade	Principal to rolling or closing trade
LOCLJRSCTN	LOCLJRSCTN	Local jurisdiction (Y/N). "Local Jurisdiction" is used in the AEJ Master Confirmation to determine applicability (Y), or not (N), of local taxes (including taxes, duties, and similar charges) imposed by the taxing authority of the local jurisdiction.
REFINT	InterestOfRollingOrClosingTrade	Interest of rolling or closing trade
AVAILQTY	AvailableOfferQuantity-ToBeShownToTheStreet	Available offer quantity to be shown to the street

Code	Name	Description
RELVJRS DCTN	RELVJRS DCTN	Relevant jurisdiction (Y/N). "Relevant Jurisdiction" is used in the AEJ Master Confirmation to determine applicability (Y), or not (N), of local taxes (including taxes, duties and similar charges) that would be imposed by the taxing authority of the "country of underlier" on a "hypothetical broker dealer" assuming that the applicable hedge positions are held by its office in the Relevant Jurisdiction.
BROKERCREDIT	BrokerCredit	Broker's sales credit
INTERNALPX	OfferPriceToBeShownToInternalBrokers	Offer price to be shown to internal brokers
INTERNALQTY	OfferQuantityToBeShownToInternalBrokers	Offer quantity to be shown to internal brokers
LEAVEQTY	TheMinimumResidualOfferQuantity	The minimum residual offer quantity
MAXORDQTY	MaximumOrderSize	Maximum order size
ORDRINCR	OrderQuantityIncrement	Order quantity increment
PRIMARY	PrimaryOrSecondaryMarketIndicator	Primary or Secondary market indicator
SALESCREDITOVR	BrokerSalesCreditOverride	Broker sales credit override
TRADERCREDIT	TraderCredit	Trader's credit
DISCOUNT	DiscountRate	Discount Rate (when price is denominated in percent of par)
YTM	YieldToMaturity	Yield to Maturity (when YieldType(235) and Yield(236) show a different yield)
PAYOFF	InterestPayoffOfRollingOrAmendingTrade	Interest payoff of rolling or amending trade

Used in groups: [Stipulations](#)

### 171.2.4991 StipulationValue

For Fixed Income. Value of stipulation.

The expression can be an absolute single value or a combination of values and logical operators:

< value

> value

<= value

>= value

value

value - value2

value OR value2

value AND value2

YES

NO

Bargain conditions recognized by the London Stock Exchange - to be used when StipulationType is "BGNCON".

CD = Special cum Dividend

XD = Special ex Dividend

CC = Special cum Coupon

XC = Special ex Coupon

CB = Special cum Bonus

XB = Special ex Bonus

CR = Special cum Rights

XR = Special ex Rights

CP = Special cum Capital Repayments

XP = Special ex Capital Repayments

CS = Cash Settlement

SP = Special Price

TR = Report for European Equity Market Securities in accordance with Chapter 8 of the Rules.

GD = Guaranteed Delivery

Values for StipulationType = "PXSOURCE":

BB GENERIC

BB FAIRVALUE

BROKERTEC

ESPEED

GOVPX

HILLIARD FARBER

ICAP

TRADEWEB

TULLETT LIBERTY

If a particular side of the market is wanted append /BID /OFFER or /MID.

plus appropriate combinations of the above and other expressions by mutual agreement of the counterparties.

Examples: ">=60", ".25", "ORANGE OR CONTRACOSTA", etc.

(Note tag # was reserved in FIX 4.1, added in FIX 4.3)

Type: **String**

Used in groups: **Stipulations**

#### **171.2.4992 StopPx**

Price per unit of quantity (e.g. per share)

Type: **Price**

Used in components: **TradeReportOrderDetail**

Used in groups: **ListOrdGrp**

Used in messages: **CrossOrderCancelReplaceRequest, ExecutionReport, MultilegOrderCancelReplace, NewOrderCross, NewOrderMultileg, NewOrderSingle, OrderCancelReplaceRequest**

#### **171.2.4993 StrategyLinkID**

Identifies the multileg strategy (e.g. spread) to which the trade belongs. This links together trade legs executed as part of a strategy during a single match event.

Type: **String**

Used in groups: **MDFullGrp, MDIncGrp, TrdCapRptAckSideGrp, TrdCapRptSideGrp**

**171.2.4994 StrategyParameterName**

Name of parameter

Type: **String**

Used in groups: **StrategyParametersGrp**

**171.2.4995 StrategyParametersGrp**

---

<b>Name</b>	<b>Mult.</b>	<b>Type</b>	<b>Description</b>
<b>NoStrategyParameters</b>	[1..1]	NumInGroup	Indicates number of strategy parameters
<b>StrategyParameterName</b>	[0..1]	String	Name of parameter
<b>StrategyParameterType</b>	[0..1]	CodeSet	Datatype of the parameter.
<b>StrategyParameterValue</b>	[0..1]	String	Value of the parameter

---

Used in groups: **ListOrdGrp**

Used in messages: **CrossOrderCancelReplaceRequest**, **ExecutionReport**, **MultilegOrderCancelReplace**, **NewOrderCross**, **NewOrderMultileg**, **NewOrderSingle**, **OrderCancelReplaceRequest**

**171.2.4996 StrategyParameterType**

Datatype of the parameter

Type: **int**

Allowed values in StrategyParameterTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	Int	Int
2	Length	Length
3	NumInGroup	NumInGroup
4	SeqNum	SeqNum
5	TagNum	TagNum
6	Float	float
7	Qty	Qty
8	Price	Price

---

Code	Name	Description
9	PriceOffset	PriceOffset
10	Amt	Amt
11	Percentage	Percentage
12	Char	Char
13	Boolean	Boolean
14	String	String
15	MultipleCharValue	MultipleCharValue
16	Currency	Currency
17	Exchange	Exchange
18	MonthYear	MonthYear
19	UTCTimestamp	UTCTimestamp
20	UTCTimeOnly	UTCTimeOnly
21	LocalMktDate	LocalMktDate
22	UTCDateOnly	UTCDateOnly
23	Data	data
24	MultipleStringValue	MultipleStringValue
25	Country	Country
26	Language	Language
27	TZTimeOnly	TZTimeOnly
28	TZTimestamp	TZTimestamp
29	Tenor	Tenor

---

Used in groups: [StrategyParametersGrp](#)

#### **171.2.4997 StrategyParameterValue**

Value of the parameter

Type: [String](#)

Used in groups: [StrategyParametersGrp](#)

#### **171.2.4998 StrategyType**

Specifies the type of trade strategy.

Type: **String**

Allowed values in StrategyTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
STD	Straddle	Straddle
STG	Strangle	Strangle
BF	Butterfly	Butterfly
CNDR	Condor	Condor
CISN	CallableInversibleSnowball	Callable inversible snowball
OTHER	Other	Other

---

Used in components: **Instrument**

#### **171.2.4999 StreamAsgnAckType**

Type of acknowledgement.

Type: **int**

Allowed values in StreamAsgnAckTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	AssignmentAccepted	Assignment Accepted
1	AssignmentRejected	Assignment Rejected

---

Used in messages: **StreamAssignmentReportACK**

#### **171.2.5000 StreamAsgnRejReason**

Reason code for stream assignment request reject.

Type: **int**

Allowed values in StreamAsgnRejReasonCodeSet:

---

Code	Name	Description
0	UnknownClient	Unknown client
1	ExceedsMaximumSize	Exceeds maximum size
2	UnknownOrInvalidCurrencyPair	Unknown or Invalid currency pair
3	NoAvailableStream	No available stream
99	Other	Other

---

Used in groups: [StrmAsgnRptInstrmtGrp](#)

Used in messages: [StreamAssignmentReportACK](#)

#### **171.2.5001 StreamAsgnReqID**

Unique identifier for the stream assignment request provided by the requester.

Type: [String](#)

Used in messages: [StreamAssignmentReport](#), [StreamAssignmentRequest](#)

#### **171.2.5002 StreamAsgnReqType**

Type of stream assignment request.

Type: [int](#)

Allowed values in StreamAsgnReqTypeCodeSet:

---

Code	Name	Description
1	StreamAssignmentForNewCustomer	Stream assignment for new customer(s)
2	StreamAssignmentForExistingCustomer	Stream assignment for existing customer(s)

---

Used in messages: [StreamAssignmentReport](#), [StreamAssignmentRequest](#)

#### **171.2.5003 StreamAsgnRptID**

Unique identifier of the stream assignment report provided by the respondent.

Type: [String](#)

Used in messages: [StreamAssignmentReport](#), [StreamAssignmentReportACK](#)

**171.2.5004 StreamAsgnType**

The type of assignment being affected in the Stream Assignment Report.

Type: **int**

Allowed values in StreamAsgnTypeCodeSet:

---

Code	Name	Description
1	Assignment	Assignment
2	Rejected	Rejected
3	Terminate	Terminate/Unassign

---

Used in groups: **StrmAsgnRptInstrmtGrp**

**171.2.5005 StreamAssetAttributeGrp**

The StreamAssetAttributeGrp is a repeating subcomponent of the StreamCommodity component used to detail commodity attributes, quality standards and reject limits.

---

Name	Mult.	Type	Description
<b>NoStreamAssetAttributes</b>	[1..1]	NumInGroup	
<b>StreamAssetAttributeType</b>	[0..1]	String	Required if NoStreamAssetAttributes(41237) > 0.
<b>StreamAssetAttributeValue</b>	[0..1]	String	
<b>StreamAssetAttributeLimit</b>	[0..1]	String	

---

Used in components: **StreamCommodity**

**171.2.5006 StreamAssetAttributeLimit**

Limit or lower acceptable value of the attribute.

Type: **String**

Used in groups: **StreamAssetAttributeGrp**

#### **171.2.5007 StreamAssetAttributeType**

Specifies the name of the attribute.

See [http://www.fixtradingcommunity.org/codelists#Asset\\_Attribute\\_Types](http://www.fixtradingcommunity.org/codelists#Asset_Attribute_Types) for code list of applicable asset attribute types.

Type: **String**

Used in groups: **StreamAssetAttributeGrp**

#### **171.2.5008 StreamAssetAttributeValue**

Specifies the value of the attribute.

Type: **String**

Used in groups: **StreamAssetAttributeGrp**

#### **171.2.5009 StreamCalculationBalanceOfFirstPeriod**

When specified and set to 'Y', it indicates that the first calculation period should run from the effective date to the end of the calendar period in which the effective date falls (e.g. Jan 15 - Jan 31 if the calculation periods are one month long and effective date is Jan 15.). If 'N' or not specified, it indicates that the first calculation period should run from the effective date for one whole period (e.g. Jan 15 to Feb 14 if the calculation periods are one month long and the effective date is Jan 15.).

Type: **Boolean**

Used in components: **StreamCalculationPeriodDates**

#### **171.2.5010 StreamCalculationCorrectionPeriod**

Time unit multiplier for the length of time after the publication of the data when corrections can be made.

Type: **int**

Used in components: **StreamCalculationPeriodDates**

**171.2.5011 StreamCalculationCorrectionUnit**

Time unit associated with the length of time after the publication of the data when corrections can be made.

Type: **String**

Allowed values in ProtectionTermEventUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: **StreamCalculationPeriodDates**

**171.2.5012 StreamCalculationFrequencyPeriod**

Time unit multiplier for the frequency at which calculation period end dates occur.

Type: **int**

Used in components: **StreamCalculationPeriodDates**

**171.2.5013 StreamCalculationFrequencyUnit**

Time unit associated with the frequency at which calculation period end dates occur.

Type: **String**

Allowed values in CouponFrequencyUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year
H	Hour	Hour
Min	Minute	Minute

---

Code	Name	Description
S	Second	Second
T	Term	Term

Used in components: [StreamCalculationPeriodDates](#)

#### 171.2.5014 StreamCalculationPeriodBusinessCenter

The business center calendar used to adjust calculation periods, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in groups: [StreamCalculationPeriodBusinessCenterGrp](#)

#### 171.2.5015 StreamCalculationPeriodBusinessCenterGrp

StreamCalculationPeriodBusinessCenterGrp is a repeating subcomponent within the StreamCalculationPeriodDates component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the DateAdjustment component in Instrument.

Name	Mult.	Type	Description
<a href="#">NoStreamCalculationPeriodBusinessCenters</a>	[1..1]	NumInGroup	
<a href="#">StreamCalculationPeriodBusinessCenter</a>	[0..1]	String	Required if <a href="#">NoStreamCalculationPeriodBusinessCenters(40958)</a> > 0.

Used in components: [StreamCalculationPeriodDates](#)

#### 171.2.5016 StreamCalculationPeriodBusinessDayConvention

The business day convention used to adjust calculation periods. Used only to override the business day convention specified in the DateAdjustment component within the Instrument component.

Type: [int](#)

Allowed values in [BusinessDayConventionCodeSet](#):

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [StreamCalculationPeriodDates](#)

#### 171.2.5017 StreamCalculationPeriodDate

The adjusted or unadjusted fixed calculation period date.

Type: [LocalMktDate](#)

Used in groups: [StreamCalculationPeriodDateGrp](#)

#### 171.2.5018 StreamCalculationPeriodDateGrp

The StreamCalculationPeriodDateGrp is a repeating subcomponent of the StreamCalculationPeriodDates component used to detail fixed dates for the swap stream.

Name	Mult.	Type	Description
<a href="#">NoStreamCalculationPeriodDates</a>	[1..1]	NumInGroup	
<a href="#">StreamCalculationPeriodDate</a>	[0..1]	LocalMktDate	Required if <a href="#">NoStreamCalculationPeriodDates(41241)</a> > 0.
<a href="#">StreamCalculationPeriodDateType</a>	[0..1]	CodeSet	When specified it applies not only to the current date but to all subsequent dates in the group until overridden with a new type.

Used in components: [StreamCalculationPeriodDates](#)

**171.2.5019 StreamCalculationPeriodDates**

StreamCalculationPeriodDates is a subcomponent of the StreamGrp component used to specify the calculation period dates of the stream.

Name	Mult.	Type	Description
StreamCalculationPeriodDatesXID	[0..1]	XID	
StreamCalculationPeriodDatesXIDRef	[0..1]	XIDREF	
StreamCalculationPeriodBusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the DateAdjustment component in Instrument. The specified value would be specific to this instance of the calculation period dates of the stream.
StreamCalculationPeriodBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the DateAdjustment component in Instrument. The specified values would be specific to this instance of the calculation period dates of the stream.
StreamCalculationPeriodDateGrp	[0..*]	Group	
StreamFirstPeriodStartDateUnadjusted	[0..1]	LocalMktDate	
StreamFirstPeriodStartDateBusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the DateAdjustment component in Instrument. The specified value would be specific to this instance of the calculation period dates of the stream.
StreamFirstPeriodStartDateBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the DateAdjustment component in Instrument. The specified values would be specific to this instance of the calculation period dates of the stream.
StreamFirstPeriodStartDateAdjusted	[0..1]	LocalMktDate	
StreamFirstRegularPeriodStartDateUnadjusted	[0..1]	LocalMktDate	
StreamFirstCompoundingPeriodEndDateUnadjusted	[0..1]	LocalMktDate	
StreamLastRegularPeriodEndDateUnadjusted	[0..1]	LocalMktDate	
StreamCalculationFrequencyPeriod	[0..1]	int	Conditionally required when StreamCalculationFrequencyUnit(40083) is specified.

Name	Mult.	Type	Description
<a href="#">StreamCalculationFrequencyUnit</a>	[0..1]	CodeSet	Conditionally required when <a href="#">StreamCalculationFrequencyPeriod(40082)</a> is specified.
<a href="#">StreamCalculationRollConvention</a>	[0..1]	CodeSet	When specified, this overrides the date roll convention defined in the DateAdjustment component in Instrument. The specified values would be specific to this instance of the stream calculation dates.
<a href="#">StreamCalculationBalanceOfFirstPeriod</a>	[0..1]	Boolean	
<a href="#">StreamCalculationCorrectionPeriod</a>	[0..1]	int	Conditionally required when <a href="#">StreamCalculationCorrectionUnit(41248)</a> is specified.
<a href="#">StreamCalculationCorrectionUnit</a>	[0..1]	CodeSet	Conditionally required when <a href="#">StreamCalculationCorrectionPeriod(41247)</a> is specified.

---

Used in groups: [StreamGrp](#)

#### **171.2.5020 StreamCalculationPeriodDatesXID**

Identifier of this calculation period for cross referencing elsewhere in the message.

Type: [XID](#)

Used in components: [StreamCalculationPeriodDates](#)

#### **171.2.5021 StreamCalculationPeriodDatesXIDRef**

Cross reference to another calculation period for duplicating its properties.

Type: [XIDREF](#)

Used in components: [StreamCalculationPeriodDates](#)

#### **171.2.5022 StreamCalculationPeriodDateType**

Specifies the type of fixed calculation period date. When specified it applies not only to the current date but to all subsequent dates in the group until overridden with a new type.

Type: **int**

Allowed values in OptionExerciseDateTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Unadjusted	Unadjusted
1	Adjusted	Adjusted

---

Used in groups: **StreamCalculationPeriodDateGrp**

### **171.2.5023 StreamCalculationRollConvention**

The convention for determining the sequence of end dates. It is used in conjunction with a specified frequency. Used only to override the roll convention specified in the DateAdjustment component within the Instrument component.

Type: **String**

Allowed values in DateRollConventionCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	FirstDay	1st day of the month
2	SecondDay	2nd day of the month
3	ThirdDay	3rd day of the month
4	FourthDay	4th day of the month
5	FifthDay	5th day of the month
6	SixthDay	6th day of the month
7	SeventhDay	7th day of the month
8	EighthDay	8th day of the month
9	NinthDay	9th day of the month
10	TenthDay	10th day of the month
11	EleventhDay	11th day of the month
12	TwelvthDay	12th day of the month
13	ThirteenthDay	13th day of the month
14	ForteenthDay	14th day of the month
15	FifteenthDay	15th day of the month
16	SixteenthDay	16th day of the month

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
17	SeventeenthDay	17th day of the month
18	EighteenthDay	18th day of the month
19	NineteenthDay	19th day of the month
20	TwentiethDay	20th day of the month
21	TwentyFirstDay	21st day of the month
22	TwentySecondDay	22nd day of the month
23	TwentyThirdDay	23rd day of the month
24	TwentyFourthDay	24th day of the month
25	TwentyFifthDay	25th day of the month
26	TwentySixthDay	26th day of the month
27	TwentySeventhDay	27th day of the month
28	TwentyEighthDay	28th day of the month
29	TwentyNinthDay	29th day of the month
30	ThirtiethDay	30th day of the month
EOM	EOM	The end of the month. Use EOM for 31st day of the month.
FRN	FRN	The floating rate note convention or Eurodollar convention.
IMM	IMM	The International Money Market settlement date, i.e. the 3rd Wednesday of the month.
IMMCAD	IMMCAD	The last trading day/expiration day of the Canadian Derivatives Exchange.
IMMAUD	IMMAUD	The last trading day of the Sydney Futures Exchange Australian 90-day bank accepted bill futures contract.
IMMNZD	IMMNZD	The last trading day of the Sydney Futures Exchange New Zealand 90-day bank bill futures contract.
SFE	SFE	The Sydney Futures Exchange 90-day bank accepted bill futures settlement dates.
NONE	NONE	No adjustment
TBILL	TBILL	The 13-week and 26-week U.S. Treasury Bill auction dates.
MON	MON	Monday
TUE	TUE	Tuesday
WED	WED	Wednesday
THU	THU	Thursday
FRI	FRI	Friday
SAT	SAT	Saturday
SUN	SUN	Sunday

Used in components: [StreamCalculationPeriodDates](#)

#### **171.2.5024 StreamCommodityAltID**

Alternate security identifier value for the commodity.

Type: [String](#)

Used in groups: [StreamCommodityAltIDGrp](#)

#### **171.2.5025 StreamCommodityAltIDGrp**

StreamCommodityAltIDGrp is a subcomponent of the StreamCommodity component used to specify alternate identifiers.

<b>Name</b>	<b>Mult.</b>	<b>Type</b>	<b>Description</b>
<a href="#">NoStreamCommodityAltIDs</a>	[1..1]	NumInGroup	
<a href="#">StreamCommodityAltID</a>	[0..1]	String	Required if NoStreamCommodityAltIDs(41277) > 0.
<a href="#">StreamCommodityAltIDSource</a>	[0..1]	String	Required if NoStreamCommodityAltIDs(41277) > 0.

Used in components: [StreamCommodity](#)

#### **171.2.5026 StreamCommodityAltIDSource**

Identifies the class or source of the alternate commodity security identifier.

Type: [String](#)

Used in groups: [StreamCommodityAltIDGrp](#)

#### **171.2.5027 StreamCommodityBase**

Specifies the general base type of the commodity traded. Where possible, this should follow the naming convention used in the 2005 ISDA Commodity Definitions.

Type: [String](#)

Used in components: [StreamCommodity](#)

**171.2.5028 StreamCommodity**

StreamCommodity is a subcomponent of the Stream component used to identify and describe the underlying commodity.

Name	Mult.	Type	Description
StreamCommodityBase	[0..1]	String	
StreamCommodityType	[0..1]	String	
StreamCommoditySecurityID	[0..1]	String	Conditionally required when StreamCommoditySecurityIDSource(41254) is specified.
StreamCommoditySecurityIDSource	[0..1]	CodeSet	Conditionally required when StreamCommoditySecurityID(41253) is specified.
StreamCommodityAltIDGrp	[0..*]	Group	
StreamCommodityDesc	[0..1]	String	
EncodedStreamCommodityDescLen	[0..1]	Length	Must be set if EncodedCommodityDesc(41257) field is specified and must immediately precede it.
EncodedStreamCommodityDesc	[0..1]	data	Encoded (non-ASCII characters) representation of the StreamCommodityDesc(41255) field in the encoded format specified via the MessageEncoding(347) field.
StreamCommodityDeliveryPricingRegion	[0..1]	String	May be used to specify the delivery or pricing region of a non-standard commodity swap contract (e.g. when InstrAttribType(871)=38 (US standard contract indicator) and InstrAttribValue(872)=N).
StreamAssetAttributeGrp	[0..*]	Group	
StreamCommodityUnitOfMeasure	[0..1]	CodeSet	
StreamCommodityCurrency	[0..1]	Currency	
StreamCommodityExchange	[0..1]	Exchange	
StreamCommodityRateSource	[0..1]	int	
StreamCommodityRateReferencePage	[0..1]	String	
StreamCommodityRateReferencePageHeading	[0..1]	String	
StreamDataProvider	[0..1]	String	
StreamCommodityDataSourceGrp	[0..*]	Group	
StreamCommodityPricingType	[0..1]	String	

Name	Mult.	Type	Description
<a href="#">StreamCommodityNearbySettlDayPeriod</a>	[0..1]	int	Conditionally required when <a href="#">StreamCommodityNearbySettlDayUnit(41267)</a> is specified.
<a href="#">StreamCommodityNearbySettlDayUnit</a>	[0..1]	CodeSet	Conditionally required when <a href="#">StreamCommodityNearbySettlDayPeriod(41266)</a> is specified.
<a href="#">StreamCommoditySettlDateUnadjusted</a>	[0..1]	LocalMktDate	
<a href="#">StreamCommoditySettlDateBusinessDayConvention</a>	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the DateAdjustment component in Instrument. The specified value would be specific to this instance of settlement dates.
<a href="#">StreamCommoditySettlBusinessCenterGrp</a>	[0..*]	Group	When specified, this overrides the business centers defined in the DateAdjustment component in Instrument. The specified values would be specific to this instance of settlement dates.
<a href="#">StreamCommoditySettlDateAdjusted</a>	[0..1]	LocalMktDate	
<a href="#">StreamCommoditySettlMonth</a>	[0..1]	int	
<a href="#">StreamCommoditySettlDateRollPeriod</a>	[0..1]	int	Conditionally required when <a href="#">StreamCommoditySettlDateRollUnit(41273)</a> is specified.
<a href="#">StreamCommoditySettlDateRollUnit</a>	[0..1]	CodeSet	Conditionally required when <a href="#">StreamCommoditySettlDateRollPeriod(41272)</a> is specified.
<a href="#">StreamCommoditySettlDayType</a>	[0..1]	CodeSet	
<a href="#">StreamCommoditySettlPeriodGrp</a>	[0..*]	Group	
<a href="#">StreamCommodityXID</a>	[0..1]	XID	
<a href="#">StreamCommodityXIDRef</a>	[0..1]	XIDREF	

Used in groups: [StreamGrp](#)

### 171.2.5029 [StreamCommodityCurrency](#)

Identifies the currency of the commodity asset. Uses ISO 4217 currency codes.

Type: [Currency](#)

Used in components: [StreamCommodity](#)

**171.2.5030 StreamCommodityDataSourceGrp**

StreamCommodityDataSourceGrp is a subcomponent of the StreamCommodity component used to specify sources of data, e.g. weather stations. The order of entry determines priority – first is the main source, second is fallback, third is second fallback.

Name	Mult.	Type	Description
NoStreamCommodityDataSources	[1..1]	NumInGroup	
StreamCommodityDataSourceID	[0..1]	String	Required if NoStreamCommodityDataSources(41280) > 0.
StreamCommodityDataSourceIDType	[0..1]	CodeSet	Required if NoStreamCommodityDataSources(41280) > 0.

Used in components: [StreamCommodity](#)

**171.2.5031 StreamCommodityDataSourceID**

Data source identifier.

Type: [String](#)

Used in groups: [StreamCommodityDataSourceGrp](#)

**171.2.5032 StreamCommodityDataSourceIDType**

Type of data source identifier.

Type: [int](#)

Allowed values in StreamCommodityDataSourceIDTypeCodeSet:

Code	Name	Description
0	City	City (4 character business center code)
1	Airport	Airport (IATA standard)
2	WeatherStation	Weather station WBAN (Weather Bureau Army Navy)
3	WeatherIndex	Weather index WMO (World Meteorological Organization)

Used in groups: [StreamCommodityDataSourceGrp](#)

### **171.2.5033 StreamCommodityDeliveryPricingRegion**

The delivery or pricing region associated with the commodity swap. See [http://www.ecfr.gov/cgi-bin/text-idx?SID=660d6a40f836aa6ddf213cba080c5b22&node=ap17.2.43\\_17.e&rgn=div9](http://www.ecfr.gov/cgi-bin/text-idx?SID=660d6a40f836aa6ddf213cba080c5b22&node=ap17.2.43_17.e&rgn=div9) for the external code list.

Type: **String**

Used in components: **StreamCommodity**

### **171.2.5034 StreamCommodityDesc**

Description of the commodity asset.

Type: **String**

Used in components: **StreamCommodity**

### **171.2.5035 StreamCommodityExchange**

Identifies the exchange where the commodity is traded.

Type: **Exchange**

Used in components: **StreamCommodity**

### **171.2.5036 StreamCommodityNearbySettlDayPeriod**

Time unit multiplier for the nearby settlement day.

Type: **int**

Used in components: **StreamCommodity**

### **171.2.5037 StreamCommodityNearbySettlDayUnit**

Time unit associated with the nearby settlement day.

Type: **String**

Allowed values in StreamCommodityNearbySettlDayUnitCodeSet:

---

Code	Name	Description
Wk	Week	Week
Mo	Month	Month

---

Used in components: [StreamCommodity](#)

#### **171.2.5038 StreamCommodityPricingType**

Specifies how the pricing or rate setting of the trade is to be determined or based upon.

See [http://www.fixtradingcommunity.org/codelists#Commodity\\_Rate\\_Pricing\\_Type](http://www.fixtradingcommunity.org/codelists#Commodity_Rate_Pricing_Type) for code list of applicable commodity pricing types.

Type: [String](#)

Used in components: [StreamCommodity](#)

#### **171.2.5039 StreamCommodityRateReferencePage**

Identifies the reference "page" from the rate source.

Type: [String](#)

Used in components: [StreamCommodity](#)

#### **171.2.5040 StreamCommodityRateReferencePageHeading**

Identifies the page heading from the rate source.

Type: [String](#)

Used in components: [StreamCommodity](#)

#### **171.2.5041 StreamCommodityRateSource**

Identifies the source of rate information used for commodities.

See [http://www.fixtradingcommunity.org/codelists#Commodity\\_Rate\\_Source](http://www.fixtradingcommunity.org/codelists#Commodity_Rate_Source) for code list of applicable sources.

Type: [int](#)

Used in components: [StreamCommodity](#)

**171.2.5042 StreamCommoditySecurityID**

Specifies the market identifier for the commodity.

Type: **String**

Used in components: **StreamCommodity**

**171.2.5043 StreamCommoditySecurityIDSource**

Identifies the class or source of the StreamCommoditySecurityIDSource(41253) value.

Type: **String**

Allowed values in SecurityIDSourceCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	CUSIP	CUSIP
2	SEDOL	SEDOL
3	QUIK	QUIK
4	ISINNumber	ISIN
5	RICCode	RIC
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
7	ISOCountryCode	ISO Country Code
8	ExchangeSymbol	Exchange symbol
9	ConsolidatedTapeAssociation	Consolidated Tape Association (CTA) Symbol (SIAC CTS/CQS line format)
A	BloombergSymbol	Bloomberg Symbol
B	Wertpapier	Wertpapier
C	Dutch	Dutch
D	Valoren	Valoren
E	Sicovam	Sicovam
F	Belgian	Belgian
G	Common	"Common" (Clearstream and Euroclear)
H	ClearingHouse	Clearing house / Clearing organization
I	ISDAFpMLSpecification	ISDA/FpML product specification (XML in SecurityXML(1185))
J	OptionPriceReportingAuthority	Option Price Reporting Authority
K	ISDAFpMLURL	ISDA/FpML product URL (URL in SecurityID(48))
L	LetterOfCredit	Letter of credit

---

Code	Name	Description
M	MarketplaceAssignedIdentifier	Marketplace-assigned Identifier
N	MarkitREDEntityCLIP	Markit RED entity CLIP
P	MarkitREDPairCLIP	Markit RED pair CLIP
Q	CFTCCommodityCode	CFTC commodity code
R	ISDACommodityReferencePrice	ISDA Commodity Reference Price
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
T	LegalEntityIdentifier	Legal entity identifier
U	Synthetic	Synthetic. Used to specify that the security identifier is synthetic for linking nested underliers when there is no market identifier for the collection.
V	FidessaInstrumentMnemonic	Fidessa Instrument Mnemonic (FIM)
W	IndexName	Index name. Standard name of the index or rate index, e.g. "LIBOR" or "iTraxx Australia".
X	UniformSymbol	Uniform Symbol (UMTF Symbol)
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

---

Used in components: [StreamCommodity](#)

#### **171.2.5044 StreamCommoditySettlBusinessCenter**

The business center calendar used to adjust the commodity delivery date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in groups: [StreamCommoditySettlBusinessCenterGrp](#)

#### **171.2.5045 StreamCommoditySettlBusinessCenterGrp**

[StreamCommoditySettlBusinessCenterGrp](#) is a repeating subcomponent of the [StreamCommodity](#) component used to specify the set of business centers whose calendars drive date adjustment. Used only to override the business centers defined in the [DateAdjustment](#) component in [Instrument](#).

Name	Mult.	Type	Description
NoStreamCommoditySettlBusinessCenters	[1..1]	NumInGroup	
StreamCommoditySettlBusinessCenter	[0..1]	String	Required if NoStreamCommoditySettlBusinessCenters(41249) > 0.

Used in components: [StreamCommodity](#)

### 171.2.5046 StreamCommoditySettlCountry

Specifies the country where delivery takes place. Uses ISO 3166 2-character country code.

Type: [Country](#)

Used in groups: [StreamCommoditySettlPeriodGrp](#)

### 171.2.5047 StreamCommoditySettlDateAdjusted

The adjusted commodity delivery date.

Type: [LocalMktDate](#)

Used in components: [StreamCommodity](#)

### 171.2.5048 StreamCommoditySettlDateBusinessDayConvention

The business day convention used to adjust the commodity delivery date. Used only to override the business day convention specified in the DateAdjustment component within the Instrument component.

Type: [int](#)

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.

---

Code	Name	Description
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

---

Used in components: [StreamCommodity](#)

#### **171.2.5049 StreamCommoditySettlDateRollPeriod**

Time unit multiplier for the commodity delivery date roll.

Type: [int](#)

Used in components: [StreamCommodity](#)

#### **171.2.5050 StreamCommoditySettlDateRollUnit**

Time unit associated with the commodity delivery date roll.

Type: [String](#)

Allowed values in StreamCommoditySettlDateRollUnitCodeSet:

---

Code	Name	Description
D	Day	Day

---

Used in components: [StreamCommodity](#)

#### **171.2.5051 StreamCommoditySettlDateUnadjusted**

The unadjusted commodity delivery date.

Type: [LocalMktDate](#)

Used in components: [StreamCommodity](#)

**171.2.5052 StreamCommoditySettlDay**

Specifies the day or group of days for delivery.

Type: [int](#)

Allowed values in DeliveryScheduleSettlDayCodeSet:

Code	Name	Description
1	Monday	Monday
2	Tuesday	Tuesday
3	Wednesday	Wednesday
4	Thursday	Thursday
5	Friday	Friday
6	Saturday	Saturday
7	Sunday	Sunday
8	AllWeekdays	All weekdays
9	AllDays	All days
10	AllWeekends	All weekends

Used in groups: [StreamCommoditySettlDayGrp](#)

**171.2.5053 StreamCommoditySettlDayGrp**

The StreamCommoditySettlDayGrp is a repeating subcomponent of the StreamCommoditySettlPeriodGrp component used to define the settlement days associated with the commodity contract.

Name	Mult.	Type	Description
<a href="#">NoStreamCommoditySettlDays</a>	[1..1]	NumInGroup	
<a href="#">StreamCommoditySettlDay</a>	[0..1]	CodeSet	Required if NoStreamCommoditySettlDays(41283) > 0.
<a href="#">StreamCommoditySettlTotalHours</a>	[0..1]	int	
<a href="#">StreamCommoditySettlTimeGrp</a>	[0..*]	Group	

Used in groups: [StreamCommoditySettlPeriodGrp](#)

**171.2.5054 StreamCommoditySettlDayType**

Specifies the commodity delivery roll day type.

Type: **int**

Allowed values in ComplexEventDateOffsetDayTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in components: **StreamCommodity**

**171.2.5055 StreamCommoditySettlEnd**

The end time for commodities settlement where delivery occurs over time. The time format is specified by the settlement time type.

Type: **String**

Used in groups: **StreamCommoditySettlTimeGrp**

**171.2.5056 StreamCommoditySettlFlowType**

Specifies the commodity delivery flow type.

Type: **int**

Allowed values in DeliveryScheduleSettlFlowTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	AllTimes	All times
1	OnPeak	On peak
2	OffPeak	Off peak

---

---

Code	Name	Description
3	Base	Base
4	BlockHours	Block hours
5	Other	Other

---

Used in groups: [StreamCommoditySettlPeriodGrp](#)

### **171.2.5057 StreamCommoditySettlHolidaysProcessingInstruction**

Indicates whether holidays are included in the settlement periods. Required for electricity contracts.

Type: [int](#)

Allowed values in DeliveryScheduleSettlHolidaysProcessingInstructionCodeSet:

---

Code	Name	Description
0	DoNotIncludeHolidays	Do not include holidays
1	IncludeHolidays	Include holidays

---

Used in groups: [StreamCommoditySettlPeriodGrp](#)

### **171.2.5058 StreamCommoditySettlMonth**

Specifies a fixed single month for commodity delivery.

Type: [int](#)

Used in components: [StreamCommodity](#)

### **171.2.5059 StreamCommoditySettlPeriodFrequencyPeriod**

Time unit multiplier for the settlement period frequency.

Type: [int](#)

Used in groups: [StreamCommoditySettlPeriodGrp](#)

**171.2.5060 StreamCommoditySettlPeriodFrequencyUnit**

Time unit associated with the settlement period frequency.

Type: **String**

Allowed values in ProtectionTermEventUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in groups: **StreamCommoditySettlPeriodGrp**

**171.2.5061 StreamCommoditySettlPeriodGrp**

The StreamCommoditySettlPeriodGrp is a repeating subcomponent of the StreamCommodity component used to define the settlement period details associated with the commodity contract.

Name	Mult.	Type	Description
NoStreamCommoditySettlPeriods	[1..1]	NumInGroup	
StreamCommoditySettlCountry	[0..1]	Country	Required if NoStreamCommoditySettlPeriods(41289) > 0.
StreamCommoditySettlTimeZone	[0..1]	String	
StreamCommoditySettlFlowType	[0..1]	CodeSet	
StreamCommoditySettlPeriodNotional	[0..1]	Qty	
StreamCommoditySettlPeriodNotionalUnitOfMeasure	[0..1]	CodeSet	
StreamCommoditySettlPeriodFrequencyPeriod	[0..1]	int	Conditionally required when StreamCommoditySettlFrequencyUnit(41296) is specified.
StreamCommoditySettlPeriodFrequencyUnit	[0..1]	CodeSet	Conditionally required when StreamCommoditySettlFrequencyPeriod(41295) is specified.
StreamCommoditySettlPeriodPrice	[0..1]	Price	

Name	Mult.	Type	Description
StreamCommoditySettlPeriodPriceUnitOfMeasure	[0..1]	CodeSet	
StreamCommoditySettlPeriodPriceCurrency	[0..1]	Currency	
StreamCommoditySettlHolidaysProcessingInstruction	[0..1]	CodeSet	
StreamCommoditySettlDayGrp	[0..*]	Group	
StreamCommoditySettlPeriodXID	[0..1]	XID	
StreamCommoditySettlPeriodXIDRef	[0..1]	XIDREF	

Used in components: [StreamCommodity](#)

#### 171.2.5062 StreamCommoditySettlPeriodNotional

Specifies the delivery quantity associated with this settlement period.

Type: [Qty](#)

Used in groups: [StreamCommoditySettlPeriodGrp](#)

#### 171.2.5063 StreamCommoditySettlPeriodNotionalUnitOfMeasure

Specifies the unit of measure (UOM) of the delivery quantity associated with this settlement period.

Type: [String](#)

Allowed values in UnitOfMeasureCodeSet:

Code	Name	Description
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet
Bbl	Barrels	Barrels. Equal to 42 US gallons
CBM	CubicMeters	Cubic Meters
BDFT	BoardFeet	Board feet. Equal to 144 cubic inches
GJ	Gigajoules	gigajoules
Bu	Bushels	Bushels

<b>Code</b>	<b>Name</b>	<b>Description</b>
kHR	HeatRate	Heat rate. The number of BTUs required to produce one kilowatt hour of electricity, typically 3,412.14 BTUs per 1 kWh.
Ccy	Currency	Amount of currency
kWh	KilowattHours	Kilowatt hours
CDD	CoolingDegreeDay	Cooling degree day
MHR	MegaHeatRate	Mega heat rate. The number of million BTUs required to produce one megawatt hour of electricity, typically 3.41214 million BTUs per 1 MWh.
CER	CertifiedEmissionsReduction	Certified emissions reduction
MMBtu	OneMillionBTU	One Million BTU
CPD	CriticalPrecipDay	Critical precipitation day
MWh	MegawattHours	Megawatt hours
CRT	ClimateReserveTonnes	Climate reserve tonnes
thm	Therms	therms. Equal to 100,000 BTU
cwt	Hundredweight	Hundredweight(US). Equal to 100 lbs
tnCO2	TonsOfCarbonDioxide	Tons of carbon dioxide
day	Day	Days
dt	DryMetricTons	Dry metric tons
EnvAllwnc	EnvAllwncCert	Environmental allowance certificates
EnvCrd	EnvironmentalCredit	Environmental credit
EnvOfst	EnvironmentalOffset	Environmental Offset
g	Grams	Grams
Gal	Gallons	Gallons
GT	GrossTons	Gross tons. Also known as long tons or imperial tons, equal to 2240 lbs
HDD	HeatingDegreeDay	Heating degree day
IPNT	IndexPoint	Index point
kg	Kilograms	Kilograms
kL	Kiloliters	kiloliters
kW-a	KilowattYear	Kilowatt year (electrical capacity)
kW-d	KilowattDay	Kilowatt day (electrical capacity)
kW-h	KilowattHour	Kilowatt hour (electrical capacity)
kW-M	KilowattMonth	Kilowatt month (electrical capacity)
kW-min	KilowattMinute	Kilowatt-Minute (electrical capacity)

SqkM	SquareKilometer	Square kilometer
SqM	SquareMeter	Square meter
Sqmi	SquareMile	Square mile
SqmM	SquareMillimeter	Square millimeter
Sqyd	SquareYard	Square yard
yd	Yard	Yard
MMbbl	MillionBarrels	Million Barrels
USD	USDollars	US Dollars

Used in groups: [StreamCommoditySettlPeriodGrp](#)

#### **171.2.5067 StreamCommoditySettlPeriodXID**

Identifier of this settlement period for cross referencing elsewhere in the message.

Type: [XID](#)

Used in groups: [StreamCommoditySettlPeriodGrp](#)

#### **171.2.5068 StreamCommoditySettlPeriodXIDRef**

Cross reference to another settlement period for duplicating its properties.

Type: [XIDREF](#)

Used in groups: [StreamCommoditySettlPeriodGrp](#)

**171.2.5069 StreamCommoditySettlStart**

The start time for commodities settlement where delivery occurs over time. The time format is specified by the settlement time type.

Type: **String**

Used in groups: **StreamCommoditySettlTimeGrp**

**171.2.5070 StreamCommoditySettlTimeGrp**

The StreamCommoditySettlTimeGrp is a repeating subcomponent of the StreamCommoditySettlDayGrp component used to define the settlement time periods associated with the commodity contract.

Name	Mult.	Type	Description
NoStreamCommoditySettlTimes	[1..1]	NumInGroup	
StreamCommoditySettlStart	[0..1]	String	Required if NoStreamCommoditySettlTimes(41286) > 0.
StreamCommoditySettlEnd	[0..1]	String	Required if NoStreamCommoditySettlTimes(41286) > 0.
StreamCommoditySettlTimeType	[0..1]	CodeSet	May be defaulted to market convention or bilaterally agreed if not specified.

Used in groups: **StreamCommoditySettlDayGrp**

**171.2.5071 StreamCommoditySettlTimeType**

Specifies the format of the commodities settlement start and end times.

Type: **int**

Allowed values in DeliveryScheduleSettlTimeTypeCodeSet:

Code	Name	Description
0	Hour	Hour of the day. Applicable for electricity contracts. Time value is expressed as an integer hour of the day (1-24). The delivery start/end hour is specified as the end of the included hour. For example, a start hour of "4" begins at 3 a.m.; an end hour of "20" ends at 8 p.m.; a start hour of "1" and end hour of "24" indicates midnight to midnight delivery.

Code	Name	Description
1	Timestamp	HH:MM time format. Applicable for gas contracts. Time value is expressed using a 24-hour time format. For example, a time value of "13:30" is 1:30 p.m.

Used in groups: [StreamCommoditySettlTimeGrp](#)

#### **171.2.5072 StreamCommoditySettlTimeZone**

Commodity delivery timezone specified as "prevailing" rather than "standard" or "daylight".

See [http://www.fixtradingcommunity.org/codelists#Prevailing\\_Timezones](http://www.fixtradingcommunity.org/codelists#Prevailing_Timezones) for code list of applicable prevailing timezones.

Type: [String](#)

Used in groups: [StreamCommoditySettlPeriodGrp](#)

#### **171.2.5073 StreamCommoditySettlTotalHours**

Sum of the hours specified in [StreamCommoditySettlTimeGrp](#).

Type: [int](#)

Used in groups: [StreamCommoditySettlDayGrp](#)

#### **171.2.5074 StreamCommodityType**

Specifies the type of commodity product.

For coal see <http://www.fpml.org/coding-scheme/commodity-coal-product-type> for values.

For metals see <http://www.fpml.org/coding-scheme/commodity-metal-product-type> for values.

For bullion see [http://www.fixtradingcommunity.org/codelists#Bullion\\_Types](http://www.fixtradingcommunity.org/codelists#Bullion_Types) for the external code list of bullion types.

Type: [String](#)

Used in components: [StreamCommodity](#)

**171.2.5075 StreamCommodityUnitOfMeasure**

The unit of measure (UOM) of the commodity asset.

Type: **String**

Allowed values in UnitOfMeasureCodeSet:

Code	Name	Description
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet
Bbl	Barrels	Barrels. Equal to 42 US gallons
CBM	CubicMeters	Cubic Meters
BDFT	BoardFeet	Board feet. Equal to 144 cubic inches
GJ	Gigajoules	gigajoules
Bu	Bushels	Bushels
kHR	HeatRate	Heat rate. The number of BTUs required to produce one kilowatt hour of electricity, typically 3,412.14 BTUs per 1 kWh.
Ccy	Currency	Amount of currency
kWh	KilowattHours	Kilowatt hours
CDD	CoolingDegreeDay	Cooling degree day

Used in components: [StreamCommodity](#)

#### **171.2.5076 StreamCommodityXID**

Identifier of this stream commodity for cross referencing elsewhere in the message.

Type: [XID](#)

Used in components: [StreamCommodity](#)

#### **171.2.5077 StreamCommodityXIDRef**

Reference to a stream commodity elsewhere in the message.

Type: **XIDREF**

Used in components: **StreamCommodity**

#### **171.2.5078 StreamCurrency**

Specifies the currency the StreamNotional(40054) is denominated in. Uses ISO 4217 currency codes.

Type: **Currency**

Used in groups: **StreamGrp**

#### **171.2.5079 StreamDataProvider**

Specifies the commodity data or information provider.

See <http://www.fpml.org/coding-scheme/commodity-information-provider> for values.

Type: **String**

Used in components: **StreamCommodity**

#### **171.2.5080 StreamDesc**

A short descriptive name given to the payment stream. Eg. CDS, Fixed, Float, Float2, GBP. The description has no intrinsic meaning but should be arbitrarily chosen by the remitter as reference.

Type: **String**

Used in groups: **StreamGrp**

#### **171.2.5081 StreamEffectiveDateAdjusted**

The adjusted effective date.

Type: **LocalMktDate**

Used in components: **StreamEffectiveDate**

**171.2.5082 StreamEffectiveDateBusinessCenter**

The business center calendar used to adjust the instrument's stream's effective, or relative effective, date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **StreamEffectiveDateBusinessCenterGrp**

**171.2.5083 StreamEffectiveDateBusinessCenterGrp**

StreamEffectiveDateBusinessCenterGrp is a repeating subcomponent of the StreamEffectiveDate component used to specify the set of business centers whose calendars drive date adjustment. Used only to override the business centers defined in the DateAdjustment component in Instrument.

Name	Mult.	Type	Description
NoStreamEffectiveDateBusinessCenters	[1..1]	NumInGroup	
StreamEffectiveDateBusinessCenter	[0..1]	String	Required if NoStreamEffectiveDateBusinessCenters(40960) > 0.

Used in components: **StreamEffectiveDate**

**171.2.5084 StreamEffectiveDateBusinessDayConvention**

The business day convention used to adjust the instrument's stream's effective, or relative effective, date. Used only to override the business day convention specified in the DateAdjustment component within the Instrument component.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.

Code	Name	Description
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [StreamEffectiveDate](#)

### 171.2.5085 StreamEffectiveDate

StreamEffectiveDate is a subcomponent of the StreamGrp component used to specify the effective date of the stream.

Name	Mult.	Type	Description
<a href="#">StreamEffectiveDateUnadjusted</a>	[0..1]	LocalMktDate	
<a href="#">StreamEffectiveDateBusinessDayConvention</a>	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the DateAdjustment component in Instrument. The specified value would be specific to this instance of the effective date of the stream.
<a href="#">StreamEffectiveDateBusinessCenterGrp</a>	[0..*]	Group	When specified, this overrides the business centers defined in the DateAdjustment component in Instrument. The specified values would be specific to this instance of the effective date of the stream.
<a href="#">StreamEffectiveDateRelativeTo</a>	[0..1]	int	
<a href="#">StreamEffectiveDateOffsetPeriod</a>	[0..1]	int	Conditionally required when <a href="#">StreamEffectiveDateOffsetUnit(40912)</a> is specified.
<a href="#">StreamEffectiveDateOffsetUnit</a>	[0..1]	CodeSet	Conditionally required when <a href="#">StreamEffectiveDateOffsetPeriod(40911)</a> is specified.
<a href="#">StreamEffectiveDateOffsetDayType</a>	[0..1]	CodeSet	
<a href="#">StreamEffectiveDateAdjusted</a>	[0..1]	LocalMktDate	

Used in groups: [StreamGrp](#)

**171.2.5086 StreamEffectiveDateOffsetDayType**

Specifies the day type of the relative effective date offset.

Type: **int**

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in components: **StreamEffectiveDate**

**171.2.5087 StreamEffectiveDateOffsetPeriod**

Time unit multiplier for the relative effective date offset.

Type: **int**

Used in components: **StreamEffectiveDate**

**171.2.5088 StreamEffectiveDateOffsetUnit**

Time unit associated with the relative effective date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: **StreamEffectiveDate**

#### **171.2.5089 StreamEffectiveDateRelativeTo**

Specifies the anchor date when the effective date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: **int**

Used in components: **StreamEffectiveDate**

#### **171.2.5090 StreamEffectiveDateUnadjusted**

The unadjusted effective date.

Type: **LocalMktDate**

Used in components: **StreamEffectiveDate**

#### **171.2.5091 StreamFirstCompoundingPeriodEndDateUnadjusted**

The unadjusted end date of the initial compounding period.

Type: **LocalMktDate**

Used in components: **StreamCalculationPeriodDates**

#### **171.2.5092 StreamFirstPeriodStartDateAdjusted**

The adjusted first calculation period start date, if it is before the effective date.

Type: **LocalMktDate**

Used in components: **StreamCalculationPeriodDates**

#### **171.2.5093 StreamFirstPeriodStartDateBusinessCenter**

The business center calendar used to adjust the instrument's stream's first calculation period start date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **StreamFirstPeriodStartDateBusinessCenterGrp**

**171.2.5094 StreamFirstPeriodStartDateBusinessCenterGrp**

StreamFirstPeriodStartDateBusinessCenterGrp is a repeating subcomponent within the StreamCalculationPeriodDates component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the DateAdjustment component in Instrument.

Name	Mult.	Type	Description
NoStreamFirstPeriodStartDateBusinessCenters	[1..1]	NumInGroup	
StreamFirstPeriodStartDateBusinessCenter	[0..1]	String	Required if NoStreamFirstPeriodStartDateBusinessCenters(40959) > 0.

Used in components: [StreamCalculationPeriodDates](#)

**171.2.5095 StreamFirstPeriodStartDateBusinessDayConvention**

The business day convention used to adjust the instrument's stream's first calculation period start date. Used only to override the business day convention specified in the DateAdjustment component within the Instrument component.

Type: [int](#)

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [StreamCalculationPeriodDates](#)

**171.2.5096 StreamFirstPeriodStartDateUnadjusted**

The unadjusted first calculation period start date if before the effective date.

Type: [LocalMktDate](#)

Used in components: [StreamCalculationPeriodDates](#)

**171.2.5097 StreamFirstRegularPeriodStartDateUnadjusted**

The unadjusted first start date of the regular calculation period, if there is an initial stub period.

Type: [LocalMktDate](#)

Used in components: [StreamCalculationPeriodDates](#)

**171.2.5098 StreamGrp**

The StreamGrp is a repeating subcomponent of the Instrument component used to detail the swap streams associated with the instrument.

Name	Mult.	Type	Description
<a href="#">NoStreams</a>	[1..1]	NumInGroup	
<a href="#">StreamType</a>	[0..1]	CodeSet	Required if NoStreams(40049) > 0.
<a href="#">StreamXID</a>	[0..1]	XID	
<a href="#">StreamDesc</a>	[0..1]	String	
<a href="#">StreamVersion</a>	[0..1]	String	
<a href="#">StreamVersionEffectiveDate</a>	[0..1]	LocalMktDate	
<a href="#">StreamPaySide</a>	[0..1]	CodeSet	
<a href="#">StreamReceiveSide</a>	[0..1]	CodeSet	
<a href="#">StreamNotionalXIDRef</a>	[0..1]	XIDREF	
<a href="#">StreamNotional</a>	[0..1]	Amt	
<a href="#">StreamCurrency</a>	[0..1]	Currency	
<a href="#">StreamNotionalDeterminationMethod</a>	[0..1]	String	
<a href="#">StreamNotionalAdjustments</a>	[0..1]	CodeSet	
<a href="#">StreamNotionalFrequencyPeriod</a>	[0..1]	int	Conditionally required when StreamNotionalFrequencyUnit(41307) is specified.
<a href="#">StreamNotionalFrequencyUnit</a>	[0..1]	CodeSet	Conditionally required when StreamNotionalFrequencyPeriod(41306) is specified.

Name	Mult.	Type	Description
StreamNotionalCommodityFrequency	[0..1]	CodeSet	
StreamNotionalUnitOfMeasure	[0..1]	CodeSet	
StreamTotalNotional	[0..1]	Qty	
StreamTotalNotionalUnitOfMeasure	[0..1]	CodeSet	
StreamCommodity	[0..1]	Component	
StreamEffectiveDate	[0..1]	Component	
StreamTerminationDate	[0..1]	Component	
StreamCalculationPeriodDates	[0..1]	Component	
PaymentStream	[0..1]	Component	
PaymentScheduleGrp	[0..*]	Group	
PaymentStubGrp	[0..*]	Group	
DeliveryStream	[0..1]	Component	
DeliveryScheduleGrp	[0..*]	Group	
StreamText	[0..1]	String	
EncodedStreamTextLen	[0..1]	Length	Must be set if EncodedStreamText(40983) field is specified and must immediately precede it.
EncodedStreamText	[0..1]	data	Encoded (non-ASCII characters) representation of the StreamText(40056) field in the encoded format specified via the MessageEncoding(347) field.

Used in components: [Instrument](#)

### 171.2.5099 StreamLastRegularPeriodEndDateUnadjusted

The unadjusted last regular period end date if there is a final stub period.

Type: [LocalMktDate](#)

Used in components: [StreamCalculationPeriodDates](#)

### 171.2.5100 StreamNotional

Notional, or initial notional value for the payment stream. Use the PaymentScheduleGrp component to specify the rate steps.

Type: [Amt](#)

Used in groups: [StreamGrp](#)

**171.2.5101 StreamNotionalAdjustments**

For equity swaps this specifies the conditions that govern the adjustment to the number of units of the swap.

Type: **int**

Allowed values in StreamNotionalAdjustmentsCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Execution	Execution. The adjustments to the number of units are governed by an execution clause.
1	PortfolioRebalancing	Portfolio rebalancing. The adjustments to the number of units are governed by a portfolio rebalancing clause.
2	Standard	Standard. The adjustments to the number of units are not governed by any specific clause.

---

Used in groups: **StreamGrp**

**171.2.5102 StreamNotionalCommodityFrequency**

The commodity's notional or quantity delivery frequency.

Type: **int**

Allowed values in StreamNotionalCommodityFrequencyCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Term	Term
1	PerBusinessDay	Per business day
2	PerCalculationPeriod	Per calculation period
3	PerSettlPeriod	Per settlement period
4	PerCalendarDay	Per calendar day
5	PerHour	Per hour
6	PerMonth	Per month

---

Used in groups: **StreamGrp**

**171.2.5103 StreamNotionalDeterminationMethod**

Specifies the method for determining the floating notional value for equity swaps.

See <http://www.fpml.org/coding-scheme/determination-method> for values.

Type: **String**

Used in groups: **StreamGrp**

**171.2.5104 StreamNotionalFrequencyPeriod**

Time unit multiplier for the swap stream's notional frequency.

Type: **int**

Used in groups: **StreamGrp**

**171.2.5105 StreamNotionalFrequencyUnit**

Time unit associated with the swap stream's notional frequency.

Type: **String**

Allowed values in TimeUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
H	Hour	Hour
Min	Minute	Minute
S	Second	Second
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year
Q	Quarter	Quarter
EOM	EndOfMonth	End of Month. End of Month identifies a relative time unit, e.g. until the third Friday of each month.
F	Flexible	Flexible. A flexible time unit indicates that a specific time unit for the contract is currently undetermined.

---

Used in groups: **StreamGrp**

**171.2.5106 StreamNotionalUnitOfMeasure**

Specifies the delivery stream quantity unit of measure (UOM).

Type: **String**

Allowed values in UnitOfMeasureCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet
Bbl	Barrels	Barrels. Equal to 42 US gallons
CBM	CubicMeters	Cubic Meters
BDFT	BoardFeet	Board feet. Equal to 144 cubic inches
GJ	Gigajoules	gigajoules
Bu	Bushels	Bushels
kHR	HeatRate	Heat rate. The number of BTUs required to produce one kilowatt hour of electricity, typically 3,412.14 BTUs per 1 kWh.
Ccy	Currency	Amount of currency
kWh	KilowattHours	Kilowatt hours
CDD	CoolingDegreeDay	Cooling degree day
MHR	MegaHeatRate	Mega heat rate. The number of million BTUs required to produce one megawatt hour of electricity, typically 3.41214 million BTUs per 1 MWh.
CER	CertifiedEmissionsReduction	Certified emissions reduction
MMBtu	OneMillionBTU	One Million BTU
CPD	CriticalPrecipDay	Critical precipitation day
MWh	MegawattHours	Megawatt hours
CRT	ClimateReserveTonnes	Climate reserve tonnes
thm	Therms	therms. Equal to 100,000 BTU
cwt	Hundredweight	Hundredweight(US). Equal to 100 lbs
tnCO2	TonsOfCarbonDioxide	Tons of carbon dioxide
day	Day	Days
dt	DryMetricTons	Dry metric tons
EnvAllwnc	EnvAllwncCert	Environmental allowance certificates
EnvCrd	EnvironmentalCredit	Environmental credit
EnvOfst	EnvironmentalOffset	Environmental Offset
g	Grams	Grams

<b>Code</b>	<b>Name</b>	<b>Description</b>

USD	USDollars	US Dollars

---

Used in groups: [StreamGrp](#)

#### **171.2.5107 StreamNotionalXIDRef**

Cross reference to another Stream notional for duplicating its properties.

Type: [XIDREF](#)

Used in groups: [StreamGrp](#)

#### **171.2.5108 StreamPaySide**

The side of the party paying the stream.

Type: **int**

Allowed values in PaymentPaySideCodeSet:

Code	Name	Description
1	Buy	Buy
2	Sell	Sell

Used in groups: **StreamGrp**

### **171.2.5109 StreamReceiveSide**

The side of the party receiving the stream.

Type: **int**

Allowed values in PaymentPaySideCodeSet:

Code	Name	Description
1	Buy	Buy
2	Sell	Sell

Used in groups: **StreamGrp**

### **171.2.5110 StreamTerminationDateAdjusted**

The adjusted termination date.

Type: **LocalMktDate**

Used in components: **StreamTerminationDate**

### **171.2.5111 StreamTerminationDateBusinessCenter**

The business center calendar used to adjust the instrument's stream's termination, or relative termination, date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **StreamTerminationDateBusinessCenterGrp**

**171.2.5112 StreamTerminationDateBusinessCenterGrp**

StreamTerminationDateBusinessCenterGrp is a repeating subcomponent within the StreamTerminationDate component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the DateAdjustment component in the Instrument component.

Name	Mult.	Type	Description
NoStreamTerminationDateBusinessCenters	[1..1]	NumInGroup	
StreamTerminationDateBusinessCenter	[0..1]	String	Required if NoStreamTerminationDateBusinessCenters(40961) > 0.

Used in components: [StreamTerminationDate](#)

**171.2.5113 StreamTerminationDateBusinessDayConvention**

The business day convention used to adjust the instrument's stream's termination, or relative termination, date. Used only to override the business day convention specified in the DateAdjustment component within the Instrument component.

Type: [int](#)

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [StreamTerminationDate](#)

**171.2.5114 StreamTerminationDate**

StreamTerminationDate is a subcomponent of the StreamGrp component used to specify the termination date of the stream.

Name	Mult.	Type	Description
StreamTerminationDateUnadjusted	[0..1]	LocalMktDate	
StreamTerminationDateBusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the DateAdjustment component in Instrument. The specified value would be specific to this instance of the termination date of the stream.
StreamTerminationDateBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the DateAdjustment component in Instrument. The specified values would be specific to this instance of the termination date of the stream.
StreamTerminationDateRelativeTo	[0..1]	int	
StreamTerminationDateOffsetPeriod	[0..1]	int	Conditionally required when StreamTerminationDateOffsetUnit(40070) is specified.
StreamTerminationDateOffsetUnit	[0..1]	CodeSet	Conditionally required when StreamTerminationDateOffsetPeriod(40069) is specified.
StreamTerminationDateOffsetDayType	[0..1]	CodeSet	
StreamTerminationDateAdjusted	[0..1]	LocalMktDate	

Used in groups: [StreamGrp](#)

**171.2.5115 StreamTerminationDateOffsetDayType**

Specifies the day type of the relative termination date offset.

Type: [int](#)

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar

---

Code	Name	Description
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in components: [StreamTerminationDate](#)

#### **171.2.5116 StreamTerminationDateOffsetPeriod**

Time unit multiplier for the relative termination date offset.

Type: [int](#)

Used in components: [StreamTerminationDate](#)

#### **171.2.5117 StreamTerminationDateOffsetUnit**

Time unit associated with the relative termination date offset.

Type: [String](#)

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: [StreamTerminationDate](#)

#### **171.2.5118 StreamTerminationDateRelativeTo**

Specifies the anchor date when the termination date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: [int](#)

Used in components: [StreamTerminationDate](#)

**171.2.5119 StreamTerminationDateUnadjusted**

The unadjusted termination date.

Type: [LocalMktDate](#)

Used in components: [StreamTerminationDate](#)

**171.2.5120 StreamText**

Free form text to specify additional information or enumeration description when a standard value does not apply.

Type: [String](#)

Used in groups: [StreamGrp](#)

**171.2.5121 StreamTotalNotional**

Total notional or delivery quantity over the term of the contract.

Type: [Qty](#)

Used in groups: [StreamGrp](#)

**171.2.5122 StreamTotalNotionalUnitOfMeasure**

Specifies the unit of measure (UOM) for the total notional or delivery quantity over the term of the contract.

Type: [String](#)

Allowed values in UnitOfMeasureCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet
Bbl	Barrels	Barrels. Equal to 42 US gallons
CBM	CubicMeters	Cubic Meters
BDFT	BoardFeet	Board feet. Equal to 144 cubic inches
GJ	Gigajoules	gigajoules
Bu	Bushels	Bushels

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
kHR	HeatRate	Heat rate. The number of BTUs required to produce one kilowatt hour of electricity, typically 3,412.14 BTUs per 1 kWh.
Ccy	Currency	Amount of currency
kWh	KilowattHours	Kilowatt hours
CDD	CoolingDegreeDay	Cooling degree day
MHR	MegaHeatRate	Mega heat rate. The number of million BTUs required to produce one megawatt hour of electricity, typically 3.41214 million BTUs per 1 MWh.
CER	CertifiedEmissionsReduction	Certified emissions reduction
MMBtu	OneMillionBTU	One Million BTU
CPD	CriticalPrecipDay	Critical precipitation day
MWh	MegawattHours	Megawatt hours
CRT	ClimateReserveTonnes	Climate reserve tonnes
thm	Therms	therms. Equal to 100,000 BTU
cwt	Hundredweight	Hundredweight(US). Equal to 100 lbs
tnCO2	TonsOfCarbonDioxide	Tons of carbon dioxide
day	Day	Days
dt	DryMetricTons	Dry metric tons
EnvAllwnc	EnvAllwncCert	Environmental allowance certificates
EnvCrd	EnvironmentalCredit	Environmental credit
EnvOfst	EnvironmentalOffset	Environmental Offset
g	Grams	Grams
Gal	Gallons	Gallons
GT	GrossTons	Gross tons. Also known as long tons or imperial tons, equal to 2240 lbs
HDD	HeatingDegreeDay	Heating degree day
IPNT	IndexPoint	Index point
kg	Kilograms	Kilograms
kL	Kiloliters	kiloliters
kW-a	KilowattYear	Kilowatt year (electrical capacity)
kW-d	KilowattDay	Kilowatt day (electrical capacity)
kW-h	KilowattHour	Kilowatt hour (electrical capacity)
kW-M	KilowattMonth	Kilowatt month (electrical capacity)
kW-min	KilowattMinute	Kilowatt-Minute (electrical capacity)
L	Liters	liters

<b>Code</b>	<b>Name</b>	<b>Description</b>
lbs	Pounds	pounds
MW-a	MegawattYear	Megawatt year (electrical capacity)
MW-d	MegawattDay	Megawatt day (electrical capacity)
MW-h	MegawattHour	Megawatt hour (electrical capacity)
MW-M	MegawattMonth	Megawatt month (electrical capacity)
MW-min	MegawattMinute	Megawatt minute (electrical capacity)
oz_tr	TroyOunces	Troy ounces
PRINC	PrincipalWithRelationToDebtInstrument	Principal with relation to debt instrument
t	MetricTons	Metric tons. Also known as Tonnes, equal to 1000 kg
tn	Tons	Tons (US). Equal to 2000 lbs
a	Are	Are
ac	Acre	Acre
cL	Centiliter	Centiliter
cM	Centimeter	Centimeter
DGE	DieselGallonEquivalent	Diesel gallon equivalent
ft	Foot	Foot
Gal_gb	GBGallon	GB Gallon
GGE	GasolineGallonEquivalent	Gasonline gallon equivalent
ha	Hectare	Hectare
in	Inch	Inch
kM	Kilometer	Kilometer
M	Meter	Meter
mi	Mile	Mile
mL	Milliliter	Milliliter
mM	Millimeter	Millimeter
oz	USOunce	US ounce
pc	Piece	Piece
pt	USPint	US Pint
pt_gb	GBPint	GB pint
qt	USQuart	US Quart
qt_gb	GBQuart	GB Quart
SqcM	SquareCentimeter	Square centimeter
Sqft	SquareFoot	Square foot

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
Sqin	SquareInch	Square inch
SqkM	SquareKilometer	Square kilometer
SqM	SquareMeter	Square meter
Sqmi	SquareMile	Square mile
SqmM	SquareMillimeter	Square millimeter
Sqyd	SquareYard	Square yard
yd	Yard	Yard
MMbbl	MillionBarrels	Million Barrels
USD	USDollars	US Dollars

---

Used in groups: [StreamGrp](#)

### **171.2.5123 StreamType**

Type of swap stream.

Type: [int](#)

Allowed values in StreamTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	PaymentCashSettlement	Payment / cash settlement
1	PhysicalDelivery	Physical delivery

---

Used in groups: [StreamGrp](#)

### **171.2.5124 StreamVersion**

The stream version identifier when there have been modifications to the contract over time. Helps signal when there are embedded changes.

Type: [String](#)

Used in groups: [StreamGrp](#)

**171.2.5125 StreamVersionEffectiveDate**

The effective date of the StreamVersion(42784).

Type: [LocalMktDate](#)

Used in groups: [StreamGrp](#)

**171.2.5126 StreamXID**

Identifier of this Stream for cross referencing elsewhere in the message.

Type: [XID](#)

Used in groups: [StreamGrp](#)

**171.2.5127 StrikeCurrency**

Currency in which the StrikePrice is denominated.

Type: [Currency](#)

Used in components: [Instrument](#)

**171.2.5128 StrikeCurrencyCodeSource**

Identifies class or source of the StrikeCurrency(947) value.

Type: [String](#)

Allowed values in CurrencyCodeSourceCodeSet:

---

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

---

Used in components: [Instrument](#)

**171.2.5129 StrikeExerciseStyle**

Expiration Style for an option class:

Type: **int**

Allowed values in ExerciseStyleCodeSet:

Code	Name	Description
0	European	European
1	American	American
2	Bermuda	Bermuda
99	Other	Other

Used in groups: **StrikeRules**

**171.2.5130 StrikeIncrement**

Value by which strike price should be incremented within the specified price range.

Type: **float**

Used in groups: **StrikeRules**

**171.2.5131 StrikeIndex**

Specifies the index used to calculate the strike price.

Type: **String**

Used in components: **Instrument**

**171.2.5132 StrikeIndexCurvePoint**

The point on the floating rate index curve. Sample values:

M = combination of a number between 1-12 and an "M" for month, e.g. 3M

Y = combination of number between 1-100 and a "Y" for year, e.g. 10Y

10Y-OLD = see above, then add "-OLD" when appropriate

INTERPOLATED = the point is mathematically derived

2/2031 5 3/8 = the point is stated via a combination of maturity month / year and coupon.

Type: **String**

Used in components: **Instrument**

### **171.2.5133 StrikeIndexQuote**

The quote side from which the index price is to be determined.

Type: **int**

Allowed values in StrikeIndexQuoteCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Bid	Bid.
1	Mid	Mid
2	Offer	Offer

---

Used in components: **Instrument**

### **171.2.5134 StrikeIndexSpread**

Specifies the strike price offset from the named index.

Type: **PriceOffset**

Used in components: **Instrument**

### **171.2.5135 StrikeMultiplier**

Used for derivatives. Multiplier applied to the strike price for the purpose of calculating the settlement value.

Type: **float**

Used in components: **Instrument**

**171.2.5136 StrikePrice**

Strike Price for an Option.

Type: **Price**

Used in components: **Instrument**

**171.2.5137 StrikePriceBoundaryMethod**

Specifies the boundary condition to be used for the strike price relative to the underlying price at the point of option exercise.

Type: **int**

Allowed values in StrikePriceBoundaryMethodCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	LessThan	Less than underlying price is in-the-money (ITM)
2	LessThanOrEqualTo	Less than or equal to the underlying price is in-the-money(ITM)
3	Equal	Equal to the underlying price is in-the-money(ITM)
4	GreaterThanOrEqualTo	Greater than or equal to underlying price is in-the-money(ITM)
5	GreaterThan	Greater than underlying is in-the-money(ITM)

---

Used in components: **Instrument**

**171.2.5138 StrikePriceBoundaryPrecision**

Used in combination with StrikePriceBoundaryMethod to specify the percentage of the strike price in relation to the underlying price. The percentage is generally 100 or greater for puts and 100 or less for calls.

Type: **Percentage**

Used in components: **Instrument**

**171.2.5139 StrikePriceDeterminationMethod**

Specifies how the strike price is determined at the point of option exercise. The strike may be fixed throughout the life of the option, set at expiration to the value of the underlying, set to the average value of the underlying , or set to the optimal value of the underlying.

Type: **int**

Allowed values in StrikePriceDeterminationMethodCodeSet:

---

Code	Name	Description
1	FixedStrike	Fixed strike (default if not specified)
2	StrikeSetAtExpiration	Strike set at expiration to underlying or other value (lookback floating)
3	StrikeSetToAverageAcrossLife	Strike set to average of underlying settlement price across the life of the option
4	StrikeSetToOptimalValue	Strike set to optimal value

---

Used in components: **Instrument**

#### **171.2.5140 StrikePricePrecision**

Specifies the number of decimal places for exercise price.

Type: **int**

Used in components: **Instrument**

#### **171.2.5141 StrikeRuleID**

Allows strike rule to be referenced via an identifier so that rules do not need to be explicitly enumerated

Type: **String**

Used in groups: **StrikeRules**

#### **171.2.5142 StrikeRules**

---

Name	Mult.	Type	Description
<b>NoStrikeRules</b>	[1..1]	NumInGroup	Number of strike rule entries. This block specifies the rules for determining how new strikes should be listed within the stated price range of the underlying instrument

---

Name	Mult.	Type	Description
StrikeRuleID	[0..1]	String	Allows strike rule to be referenced via an identifier so that rules do not need to be explicitly enumerated
StartStrikePxRange	[0..1]	Price	Starting price for the range to which the StrikeIncrement applies. Price refers to the price of the underlying
EndStrikePxRange	[0..1]	Price	Ending price of the range to which the StrikeIncrement applies. Price refers to the price of the underlying
StrikeIncrement	[0..1]	float	Value by which strike price should be incremented within the specified price
StrikeExerciseStyle	[0..1]	CodeSet	Enumeration that represents the exercise style for a class of options. Same values as ExerciseStyle
MaturityRules	[0..*]	Group	Describes the maturity rules for a given set of strikes as defined by StrikeRules

Used in groups: [MarketSegmentGrp](#), [SecListGrp](#), [SecLstUpdRelSymGrp](#)

### 171.2.5143 StrikeTime

The time at which current market prices are used to determine the value of a basket.

In negotiation workflows where a spread-to-benchmark price is negotiated, this is the pre-determined time at which the benchmark is to be spotted.

Type: [UTCTimestamp](#)

Used in groups: [QuotReqGrp](#), [QuotReqRjctGrp](#)

Used in messages: [BidRequest](#), [Quote](#), [QuoteResponse](#), [QuoteStatusReport](#)

### 171.2.5144 StrikeUnitOfMeasure

Used to express the unit of measure (UOM) of the price if different from the contract.

Type: [String](#)

Allowed values in UnitOfMeasureCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet
Bbl	Barrels	Barrels. Equal to 42 US gallons
CBM	CubicMeters	Cubic Meters
BDFT	BoardFeet	Board feet. Equal to 144 cubic inches
GJ	Gigajoules	gigajoules
Bu	Bushels	Bushels
kHR	HeatRate	Heat rate. The number of BTUs required to produce one kilowatt hour of electricity, typically 3,412.14 BTUs per 1 kWh.
Ccy	Currency	Amount of currency
kWh	KilowattHours	Kilowatt hours
CDD	CoolingDegreeDay	Cooling degree day
MHR	MegaHeatRate	Mega heat rate. The number of million BTUs required to produce one megawatt hour of electricity, typically 3.41214 million BTUs per 1 MWh.
CER	CertifiedEmissionsReduction	Certified emissions reduction
MMBtu	OneMillionBTU	One Million BTU
CPD	CriticalPrecipDay	Critical precipitation day
MWh	MegawattHours	Megawatt hours
CRT	ClimateReserveTonnes	Climate reserve tonnes
thm	Therms	therms. Equal to 100,000 BTU
cwt	Hundredweight	Hundredweight(US). Equal to 100 lbs
tnCO2	TonsOfCarbonDioxide	Tons of carbon dioxide
day	Day	Days
dt	DryMetricTons	Dry metric tons
EnvAllwnc	EnvAllwncCert	Environmental allowance certificates
EnvCrd	EnvironmentalCredit	Environmental credit
EnvOfst	EnvironmentalOffset	Environmental Offset
g	Grams	Grams
Gal	Gallons	Gallons
GT	GrossTons	Gross tons. Also known as long tons or imperial tons, equal to 2240 lbs
HDD	HeatingDegreeDay	Heating degree day
IPNT	IndexPoint	Index point
kg	Kilograms	Kilograms

<b>Code</b>	<b>Name</b>	<b>Description</b>
kL	Kiloliters	kiloliters
kW-a	KilowattYear	Kilowatt year (electrical capacity)
kW-d	KilowattDay	Kilowatt day (electrical capacity)
kW-h	KilowattHour	Kilowatt hour (electrical capacity)
kW-M	KilowattMonth	Kilowatt month (electrical capacity)
kW-min	KilowattMinute	Kilowatt-Minute (electrical capacity)
L	Liters	liters
lbs	Pounds	pounds
MW-a	MegawattYear	Megawatt year (electrical capacity)
MW-d	MegawattDay	Megawatt day (electrical capacity)
MW-h	MegawattHour	Megawatt hour (electrical capacity)
MW-M	MegawattMonth	Megawatt month (electrical capacity)
MW-min	MegawattMinute	Megawatt minute (electrical capacity)
oz_tr	TroyOunces	Troy ounces
PRINC	PrincipalWithRelationToDebtInstrument	Principal with relation to debt instrument
t	MetricTons	Metric tons. Also known as Tonnes, equal to 1000 kg
tn	Tons	Tons (US). Equal to 2000 lbs
a	Are	Are
ac	Acre	Acre
cL	Centiliter	Centiliter
cM	Centimeter	Centimeter
DGE	DieselGallonEquivalent	Diesel gallon equivalent
ft	Foot	Foot
Gal_gb	GBGallon	GB Gallon
GGE	GasolineGallonEquivalent	Gasonline gallon equivalent
ha	Hectare	Hectare
in	Inch	Inch
kM	Kilometer	Kilometer
M	Meter	Meter
mi	Mile	Mile
mL	Milliliter	Milliliter
mM	Millimeter	Millimeter
oz	USOunce	US ounce

Code	Name	Description
pc	Piece	Piece
pt	USPint	US Pint
pt_gb	GBPint	GB pint
qt	USQuart	US Quart
qt_gb	GBQuart	GB Quart
SqcM	SquareCentimeter	Square centimeter
Sqft	SquareFoot	Square foot
Sqin	SquareInch	Square inch
SqkM	SquareKilometer	Square kilometer
SqM	SquareMeter	Square meter
Sqmi	SquareMile	Square mile
SqmM	SquareMillimeter	Square millimeter
Sqyd	SquareYard	Square yard
yd	Yard	Yard
MMbbl	MillionBarrels	Million Barrels
USD	USDollars	US Dollars

Used in components: [Instrument](#)

### 171.2.5145 StrikeValue

Used for derivatives. The number of shares/units for the financial instrument involved in the option trade.

Type: [float](#)

Used in components: [Instrument](#)

### 171.2.5146 StrmAsgnReqGrp

Name	Mult.	Type	Description
<a href="#">NoAsgnReqs</a>	[1..1]	NumInGroup	Stream Assignment Requests.
<a href="#">Parties</a>	[0..*]	Group	
<a href="#">StrmAsgnReqInstrmtGrp</a>	[0..*]	Group	

Used in messages: [StreamAssignmentRequest](#)

#### 171.2.5147 StrmAsgnReqInstrmtGrp

Name	Mult.	Type	Description
NoRelatedSym	[1..1]	NumInGroup	
Instrument	[0..1]	Component	
SettlType	[0..1]	CodeSet	
MDEntrySize	[0..1]	Qty	
MDStreamID	[0..1]	String	

Used in groups: [StrmAsgnReqGrp](#)

#### 171.2.5148 StrmAsgnRptGrp

Name	Mult.	Type	Description
NoAsgnReqs	[1..1]	NumInGroup	Stream Assignment Reports.
Parties	[0..*]	Group	
StrmAsgnRptInstrmtGrp	[0..*]	Group	

Used in messages: [StreamAssignmentReport](#)

#### 171.2.5149 StrmAsgnRptInstrmtGrp

Name	Mult.	Type	Description
NoRelatedSym	[1..1]	NumInGroup	
Instrument	[0..1]	Component	
SettlType	[0..1]	CodeSet	
StreamAsgnType	[0..1]	CodeSet	
MDStreamID	[0..1]	String	
StreamAsgnRejReason	[0..1]	CodeSet	
Text	[0..1]	String	

---

Name	Mult.	Type	Description
EncodedTextLen	[0..1]	Length	
EncodedText	[0..1]	data	

---

Used in groups: [StrmAsgnRptGrp](#)

### 171.2.5150 Subject

The subject of an Email message

Type: [String](#)

Used in messages: [Email](#)

### 171.2.5151 SubscriptionRequestType

Subscription Request Type

Type: [char](#)

Allowed values in SubscriptionRequestTypeCodeSet:

---

Code	Name	Description
0	Snapshot	Snapshot
1	SnapshotAndUpdates	Snapshot + Updates (Subscribe)
2	DisablePreviousSnapshot	Disable previous Snapshot + Update Request (Unsubscribe)

---

Used in messages: [CollateralInquiry](#), [DerivativeSecurityListRequest](#), [MarginRequirementInquiry](#), [MarginRequirementInquiryAck](#), [MarketDataRequest](#), [MarketDataStatisticsRequest](#), [MarketDefinitionRequest](#), [PartyDetailsListRequest](#), [PartyEntitlementsRequest](#), [PartyRiskLimitsRequest](#), [PositionReport](#), [QuoteStatusRequest](#), [RFQRequest](#), [RequestForPositions](#), [RequestForPositionsAck](#), [SecurityDefinitionRequest](#), [SecurityListRequest](#), [SecurityMassStatusRequest](#), [SecurityStatusRequest](#), [SecurityTypes](#), [SettlementStatusRequest](#), [TradeCaptureReport](#), [TradeCaptureReportAck](#), [TradeCaptureReportRequest](#), [TradeCaptureReportRequestAck](#), [TradingSessionListRequest](#), [TradingSessionStatusRequest](#)

**171.2.5152 SwapClass**

The classification or type of swap. Additional values may be used by mutual agreement of the counterparties.

Type: **String**

Allowed values in SwapClassCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
BS	BasisSwap	Basis swap
IX	IndexSwap	Index swap
BB	BroadBasedSecuritySwap	Broad-based security swap
SK	BasketSwap	Basket swap

---

Used in components: **Instrument**

**171.2.5153 SwapPoints**

For FX Swap, this is used to express the differential between the far leg's bid/offer and the near leg's bid/offer. Value can be negative. Expressed in decimal form. For example, 61.99 points is expressed and sent as 0.006199

Type: **PriceOffset**

Used in messages: **MultilegOrderCancelReplace, NewOrderMultileg**

**171.2.5154 SwapSubClass**

The sub-classification or notional schedule type of the swap.

Type: **String**

Allowed values in SwapSubClassCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
AMTZ	Amortizing	Amortizing notional schedule
COMP	Compounding	Compounding
CNST	ConstantNotionalSchedule	Constant notional schedule
ACRT	AccretingNotionalSchedule	Accreting notional schedule

---

---

Code	Name	Description
CUST	CustomNotionalSchedule	Custom notional schedule

---

Used in components: [Instrument](#)

### 171.2.5155 Symbol

Ticker symbol. Common, "human understood" representation of the security. SecurityID (48) value can be specified if no symbol exists (e.g. non-exchange traded Collective Investment Vehicles)

Use "[N/A]" for products which do not have a symbol.

Type: [String](#)

Used in components: [Instrument](#)

### 171.2.5156 SymbolPositionNumber

Reference to the first or second currency or digital asset in Symbol(55) for FX-style trading.

Conditionally required when one or both symbols in Symbol(55) represent a digital asset.

Type: [int](#)

Used in groups: [SecAltIDGrp](#)

### 171.2.5157 SymbolSfx

Additional information about the security (e.g. preferred, warrants, etc.). Note also see SecurityType (167).

As defined in the NYSE Stock and bond Symbol Directory and in the AMEX Fitch Directory.

Type: [String](#)

Allowed values in SymbolSfxCodeSet:

---

Code	Name	Description
CD	EUCPWithLumpSumInterest	EUCP with lump-sum interest rather than discount price
WI	WhenIssued	"When Issued" for a security to be reissued under an old CUSIP or ISIN

---

Used in components: [Instrument](#)

### **171.2.5158 TargetCompID**

Assigned value used to identify receiving firm.

Type: [String](#)

Used in components: [StandardHeader](#)

### **171.2.5159 TargetLocationID**

Assigned value used to identify specific message destination's location (i.e. geographic location and/or desk, trader)

Type: [String](#)

Used in components: [StandardHeader](#)

### **171.2.5160 TargetMarketSegmentGrp**

Convey a list of market segments upon which an action is to be taken.

---

<b>Name</b>	<b>Mult.</b>	<b>Type</b>	<b>Description</b>
<a href="#">NoTargetMarketSegments</a>	[1..1]	NumInGroup	
<a href="#">TargetMarketSegmentID</a>	[0..1]	String	Required when NoTargetMarketSegments(1789) > 0.

---

Used in messages: [OrderMassActionReport](#), [OrderMassActionRequest](#)

### **171.2.5161 TargetMarketSegmentID**

Market segment within a target market segment repeating group.

Type: [String](#)

Used in groups: [TargetMarketSegmentGrp](#)

**171.2.5162 TargetParties**

Name	Mult.	Type	Description
NoTargetPartyIDs	[1..1]	NumInGroup	Repeating group below should contain unique combinations of TargetPartyID, TargetPartyIDSource, and TargetPartyRole.
TargetPartyID	[0..1]	String	Required if NoTargetPartyIDs(1461) > 0. Used to identify the party targeted for the action specified in the message.
TargetPartyIDSource	[0..1]	CodeSet	Used to identify source of target party identifier.
TargetPartyRole	[0..1]	CodeSet	Used to identify the role of source party identifier.
TargetPartyRoleQualifier	[0..1]	CodeSet	Used to further qualify the role of the target party role.
TargetPtysSubGrp	[0..*]	Group	Repeating group of target party sub-identifiers.

Used in messages: ExecutionReport, MassQuoteAck, MultilegOrderCancelReplace, NewOrderMultileg, NewOrderSingle, OrderCancelReplaceRequest, OrderMassActionReport, OrderMassActionRequest, OrderMassCancelReport, OrderMassCancelRequest, OrderMassStatusRequest, PositionTransferInstruction, PositionTransferInstructionAck, PositionTransferReport, QuoteCancel, QuoteStatusReport, QuoteStatusRequest

**171.2.5163 TargetPartyID**

PartyID value within an target party repeating group.

Type: String

Used in groups: TargetParties

**171.2.5164 TargetPartyIDSource**

PartyIDSource value within an target party repeating group.

Same values as PartyIDSource (447)

Type: char

Allowed values in PartyIDSourceCodeSet:

Code	Name	Description
1	KoreanInvestorID	Korean Investor ID
6	UKNationalInsuranceOrPension-Number	UK National Insurance or Pension Number
B	BIC	BIC (Bank Identification Code - SWIFT managed) code (ISO9362 - See "Appendix 6-B")
I	ISITCAcronym	Directed broker three character acronym as defined in ISITC "ETC Best Practice" guidelines document
2	TaiwaneseForeignInvestorID	Taiwanese Qualified Foreign Investor ID QFII/FID
7	USSocialSecurityNumber	US Social Security Number
C	GeneralIdentifier	Generally accepted market participant identifier (e.g. NASD mnemonic)
3	TaiwaneseTradingAcct	Taiwanese Trading Acct
8	USEmployerOrTaxIDNumber	US Employer or Tax ID Number
D	Proprietary	Proprietary / Custom code. Custom ID schema used between counterparties, trading platforms and repositories.
4	MalaysianCentralDepository	Malaysian Central Depository (MCD) number
9	AustralianBusinessNumber	Australian Business Number
E	ISOCountryCode	ISO Country Code
5	ChineseInvestorID	Chinese Investor ID
A	AustralianTaxFileNumber	Australian Tax File Number
F	SettlementEntityLocation	Settlement Entity Location (note if Local Market Settlement use "E=ISO Country Code") (see "Appendix 6-G" for valid values)
G	MIC	Market Identifier Code (ISO 10383) MIC
J	TaxID	Tax ID
H	CSDParticipant	CSD participant/member code (e.g. Euroclear, DTC, CREST or Kassenverein number)
K	AustralianCompanyNumber	Australian Company Number
L	AustralianRegisteredBodyNumber	Australian Registered Body Number
M	CFTCReportingFirmIdentifier	CFTC reporting firm identifier
N	LegalEntityIdentifier	Legal Entity Identifier (ISO 17442) LEI
O	InterimIdentifier	Interim identifier. An interim entity identifier assigned by a regulatory agency prior to an LEI (ISO 17442) being assigned.
P	ShortCodeIdentifier	Short code identifier. A generic means for trading venues, brokers, investment managers to convey a bilaterally agreed upon "short hand" code for an identifier that is a reference to a mapping between the parties.

Code	Name	Description
Q	NationalIDNaturalPerson	National ID of natural person. An identification number generally assigned by a government authority or agency to a natural person which is unique to the person it is assigned to. Examples include, but not limited to, "social security number", "pension number".
R	IndiaPermanentAccountNumber	India Permanent Account Number. Also referred to as PAN ID. An identifier issued by the Income Tax Department of India.
S	FDID	Firm designated identifier. Also referred to as FDID. A unique identifier required by the SEC for each trading account designated by Industry Members for purposes of reporting to CAT (Consolidated Audit Trail).
T	SPSAID	Special Segregated Account ID. Also referred to as SPSA ID. The Special Segregated Account identifier issued by Hong Kong Exchanges and Clearing.
U	MasterSPSAID	Master Special Segregated Account ID. Also referred to as Master SPSA ID. The master identifier issued by Hong Kong Exchanges and Clearing for the aggregation of SPSA IDs.

### 171.2.5165 TargetPartyRole

PartyRole value within an target party repeating group.

Same values as PartyRole (452)

Type: [int](#)

Allowed values in PartyRoleCodeSet:

Code	Name	Description
1	ExecutingFirm	Executing Firm (formerly FIX 4.2 ExecBroker)
2	BrokerOfCredit	Broker of Credit (formerly FIX 4.2 BrokerOfCredit)
3	ClientID	Client ID (formerly FIX 4.2 ClientID)
4	ClearingFirm	Clearing Firm (formerly FIX 4.2 ClearingFirm)
5	InvestorID	Investor ID
6	IntroducingFirm	Introducing Firm
7	EnteringFirm	Entering Firm

<b>Code</b>	<b>Name</b>	<b>Description</b>
8	Locate	Locate / Lending Firm (for short-sales)
9	FundManagerClientID	Fund Manager Client ID (for CIV)
10	SettlementLocation	Settlement Location (formerly FIX 4.2 SettlLocation)
11	OrderOriginationTrader	Order Origination Trader (associated with Order Origination Firm - i.e. trader who initiates/submits the order)
12	ExecutingTrader	Executing Trader (associated with Executing Firm - actually executes)
13	OrderOriginationFirm	Order Origination Firm (e.g. buy-side firm)
14	GiveupClearingFirmDepr	Giveup Clearing Firm (firm to which trade is given up)
15	CorrespondantClearingFirm	Correspondant Clearing Firm
16	ExecutingSystem	Executing System
17	ContraFirm	Contra Firm
18	ContraClearingFirm	Contra Clearing Firm
19	SponsoringFirm	Sponsoring Firm
20	UnderlyingContraFirm	Underlying Contra Firm
21	ClearingOrganization	Clearing Organization
22	Exchange	Exchange. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
24	CustomerAccount	Customer Account
25	CorrespondentClearingOrganization	Correspondent Clearing Organization
26	CorrespondentBroker	Correspondent Broker
27	Buyer	Buyer/Seller (Receiver/Deliverer)
28	Custodian	Custodian
29	Intermediary	Intermediary
30	Agent	Agent
31	SubCustodian	Sub-custodian
32	Beneficiary	Beneficiary
33	InterestedParty	Interested party
34	RegulatoryBody	Regulatory body. In the context of regulatory reporting, this identifies the regulator the trade is being reported to.
35	LiquidityProvider	Liquidity provider
36	EnteringTrader	Entering trader
37	ContraTrader	Contra trader
38	PositionAccount	Position account. The account which positions are maintained. Typically represents the aggregation of one or more customer accounts.

<b>Code</b>	<b>Name</b>	<b>Description</b>
39	ContraInvestorID	Contra Investor ID
40	TransferToFirm	Transfer to Firm
41	ContraPositionAccount	Contra Position Account
42	ContraExchange	Contra Exchange
43	InternalCarryAccount	Internal Carry Account
44	OrderEntryOperatorID	Order Entry Operator ID
45	SecondaryAccountNumber	Secondary Account Number
46	ForeignFirm	Foreign Firm
47	ThirdPartyAllocationFirm	Third Party Allocation Firm
48	ClaimingAccount	Claiming Account
49	AssetManager	Asset Manager
50	PledgorAccount	Pledgor Account
51	PledgeeAccount	Pledgee Account
52	LargeTraderReportableAccount	Large Trader Reportable Account
53	TraderMnemonic	Trader mnemonic
54	SenderLocation	Sender Location
55	SessionID	Session ID
56	AcceptableCounterparty	Acceptable Counterparty
57	UnacceptableCounterparty	Unacceptable Counterparty
58	EnteringUnit	Entering Unit
59	ExecutingUnit	Executing Unit
60	IntroducingBroker	Introducing Broker
61	QuoteOriginator	Quote originator
62	ReportOriginator	Report originator
63	SystematicInternaliser	Systematic internaliser (SI)
64	MultilateralTradingFacility	Multilateral Trading Facility (MTF). Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
65	RegulatedMarket	Regulated Market (RM). Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
66	MarketMaker	Market Maker
67	InvestmentFirm	Investment Firm
68	HostCompetentAuthority	Host Competent Authority (Host CA)
69	HomeCompetentAuthority	Home Competent Authority (Home CA)

<b>Code</b>	<b>Name</b>	<b>Description</b>
70	CompetentAuthorityLiquidity	Competent Authority of the most relevant market in terms of liquidity (CAL)
71	CompetentAuthorityTransactionVenue	Competent Authority of the Transaction (Execution) Venue (CATV)
72	ReportingIntermediary	Reporting intermediary. The medium or vendor used to report to a regulator, non-regulatory agency or data repository.
73	ExecutionVenue	Execution Venue. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
74	MarketDataEntryOriginator	Market data entry originator
75	LocationID	Location ID
76	DeskID	Desk ID
77	MarketDataMarket	Market data market
78	AllocationEntity	Allocation Entity
79	PrimeBroker	Prime Broker providing General Trade Services
80	StepOutFirm	Step-Out Firm (Prime Broker)
81	BrokerClearingID	Broker clearing identifier
82	CentralRegistrationDepository	Central Registration Depository (CRD)
83	ClearingAccount	Clearing Account
84	AcceptableSettlingCounterparty	Acceptable Settling Counterparty
85	UnacceptableSettlingCounterparty	Unacceptable Settling Counterparty
86	CLSMemberBank	CLS Member Bank
87	InConcertGroup	In Concert Group
88	InConcertControllingEntity	In Concert Controlling Entity
89	LargePositionsReportingAccount	Large Positions Reporting Account
90	SettlementFirm	Settlement Firm
91	SettlementAccount	Settlement account. The account to which individual payment obligations are aggregated for netting and funds movement. Typically represents the aggregation of many margin (performance bond) accounts.
92	ReportingMarketCenter	Reporting Market Center
93	RelatedReportingMarketCenter	Related Reporting Market Center
94	AwayMarket	Away Market. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
95	GiveupTradingFirm	Give-up (trading) firm
96	TakeupTradingFirm	Take-up (trading) firm
97	GiveupClearingFirm	Give-up clearing firm

<b>Code</b>	<b>Name</b>	<b>Description</b>
98	TakeupClearingFirm	Take-up clearing firm
99	OriginatingMarket	Originating Market. Identifies the Market using PartyIDSource(tag 447) = G (Market Identifier Code) where an order originated in the event that the order is sent to an alternative market for execution. Serves as an inverse of an away market.
100	MarginAccount	Margin account. Also referred to as "performance bond account". The margin account is the calculated margin requirements. Typically represents the aggregation of one or more position accounts.
101	CollateralAssetAccount	Collateral asset account. The account at which individual collateral assets are maintained. Typically, although not always, one-for-one with the settlement account.
102	DataRepository	Data repository. Multiple instances of this PartyRole may appear for reporting purposes.
103	CalculationAgent	Calculation agent
104	ExerciseNoticeSender	Sender of exercise notice
105	ExerciseNoticeReceiver	Receiver of exercise notice
106	RateReferenceBank	Rate reference bank. The bank providing the reference rate. Multiple instance of this PartyRole may appear.
107	Correspondent	Correspondent
109	BeneficiaryBank	Beneficiary's bank or depository institution. The institution in which the beneficiary, a person or an entity, has their account with. The institution may be a bank or non-bank institution.
110	Borrower	Borrower
111	PrimaryObligator	Primary obligator
112	Guarantor	Guarantor
113	ExcludedReferenceEntity	Excluded reference entity
114	DeterminingParty	Determining party
115	HedgingParty	Hedging party
116	ReportingEntity	Reporting entity. The entity that is reporting the information.
117	SalesPerson	Sales person. The person who is involved in the sales activities for their firm.
118	Operator	Operator. The person who has the capabilities and authorization to take certain actions; for example, setting entitlements, etc.
119	CSD	Central Securities Depository (CSD)
120	ICSD	International Central Securities Depository (ICSD)

Code	Name	Description
121	TradingSubAccount	Trading sub-account. Example of sub-accounts include a clearing account that has multiple trading sub-accounts, a trading account that has multiple trading sub-accounts belonging to different trading firms.
122	InvestmentDecisionMaker	Investment decision maker. In the context of ESMA RTS reporting, this is used to specify party responsible for the investment decision. See RTS 24, Annex, Table 2, Field 4.
123	PublishingIntermediary	Publishing intermediary. The medium or vendor used to publish to the market.
124	CSDParticipant	Central Securities Depository (CSD) Participant. In the context of EU SFTR reporting the identifier of the CSD participant or indirect participant of the reporting counterparty. Where both the CSD participant and indirect participant are involved in the transaction this should identify the indirect participant.
125	Issuer	Issuer. The issuer of the security.
126	ContraCustomerAccount	Contra Customer Account. Same as PartyRole(452) = 24 (Customer Account) but for the counterparty. Can be used whenever the parties component is not nested in a repeating group representing both sides.
127	ContraInvestmentDecisionMaker	Contra Investment Decision Maker. Same as PartyRole(452) = 122 (Investment Decision Maker) but for the counterparty. Can be used whenever the parties component is not nested in a repeating group representing both sides.

Used in groups: [TargetParties](#)

### 171.2.5166 TargetPartyRoleQualifier

Qualifies the value of TargetPartyRole (1464).

Type: [int](#)

Allowed values in PartyDetailRoleQualifierCodeSet:

Code	Name	Description
0	Agency	Agency
1	Principal	Principal
2	RisklessPrincipal	Riskless principal
3	GeneralClearingMember	General clearing member

<b>Code</b>	<b>Name</b>	<b>Description</b>
30	ExchangeOrderSubmitter	Exchange order submitter. Used to identify original or initial exchange order submitting broker when party role "1" (Executing Firm) appears more than once.
4	IndividualClearingMember	Individual clearing member
5	PreferredMarketMaker	Preferred market maker. Market maker getting a part of the matched quantity before primary or default market maker.
6	DirectedMarketMaker	Directed market maker. Single market maker to handle the order provided.
7	Bank	Bank
8	Hub	Hub. Indicates that the Intermediary party is a hub system or service provider.
9	PrimaryTrdRepository	Primary trade repository. Used to differentiate the principal trade repository from the Original or Additional trade repositories when there are multiple trade repositories being reported.
10	OrigTrdRepository	Original trade repository. Used to identify the trade repository to which the trade was originally reported if different from the current repository to which the trade is being reported.
11	AddnlIntlTrdRepository	Additional international trade repository. Used with InternationalSwapIndicator(2526) to identify the trade repository that is in addition to the local swaps data repository as required by U.S. law.
12	AddnlDomesticTrdRepository	Additional domestic trade repository. Used with MixedSwapIndicator(1929) to identify the trade repository that is in addition to the current trade repository when the assets in the swap are subject to two different domestic regulators.
13	RelatedExchange	Related exchange
14	OptionsExchange	Options exchange
15	SpecifiedExchange	Specified exchange
16	ConstituentExchange	Constituent exchange.
17	ExemptFromTradeReporting	Exempt from trade reporting. In the context of FINRA TRACE reporting requirements, this is used to indicate the ATS has been granted a regulatory exemption from reporting.
18	Current	Current. Can be used to convey an existing party identifier for the same party role in a single message.
19	New	New. Can be used to convey a future party identifier for the same party role in a single message.
20	DesignatedSponsor	Designated sponsor. Market maker jointly providing liquidity for the same security with other market makers.

Code	Name	Description
21	Specialist	Specialist. Market maker being the only one providing liquidity for a security.
22	Algorithm	Algorithm
23	FirmOrLegalEntity	Firm or legal entity
24	NaturalPerson	Natural person
25	RegularTrader	Regular trader. Standard trader profile.
26	HeadTrader	Head trader. Senior trader leading a group of regular traders.
27	Supervisor	Supervisor. Administrative user that has only limited rights for normal trading but possibly special rights for emergency actions.
28	TriParty	Tri-party. In the context of EU SFTR reporting, identifies the third party, not necessarily the custodian, to which the reporting counterparty has outsourced the post-trade processing of an SFT (if applicable).
29	Lender	Lender. In the context of EU SFTR reporting, identifies the agent lender involved in the securities lending transaction.

Used in groups: [TargetParties](#)

#### 171.2.5167 TargetPartySubID

Party sub-identifier value within a target party repeating group.

Type: [String](#)

Used in groups: [TargetPtysSubGrp](#)

#### 171.2.5168 TargetPartySubIDType

Type of TargetPartySubID(2434) value.

Type: [int](#)

Allowed values in PartySubIDTypeCodeSet:

Code	Name	Description
1	Firm	Firm
2	Person	Person

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
3	System	System
4	Application	Application
5	FullLegalNameOfFirm	Full legal name of firm
6	PostalAddress	Postal address
7	PhoneNumber	Phone number
8	EmailAddress	Email address
9	ContactName	Contact name
10	SecuritiesAccountNumber	Securities account number (for settlement instructions)
11	RegistrationNumber	Registration number (for settlement instructions and confirmations)
12	RegisteredAddressForConfirmation	Registered address (for confirmation purposes)
13	RegulatoryStatus	Regulatory status (for confirmation purposes)
14	RegistrationName	Registration name (for settlement instructions)
15	CashAccountNumber	Cash account number (for settlement instructions)
16	BIC	BIC
17	CSDParticipantMemberCode	CSD participant member code
18	RegisteredAddress	Registered address
19	FundAccountName	Fund account name
20	TelexNumber	Telex number
21	FaxNumber	Fax number
22	SecuritiesAccountName	Securities account name
23	CashAccountName	Cash account name
24	Department	Department
25	LocationDesk	Location desk
26	PositionAccountType	Position account type
27	SecurityLocateID	Security locate ID
28	MarketMaker	Market maker
29	EligibleCounterparty	Eligible counterparty
30	ProfessionalClient	Professional client
31	Location	Location
32	ExecutionVenue	Execution venue
33	CurrencyDeliveryIdentifier	Currency delivery identifier
34	AddressCity	Address City
35	AddressStateOrProvince	Address State/Province

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
36	AddressPostalCode	Address Postal Code
37	AddressStreet	Address Street
38	AddressISOCountryCode	Address Country (ISO country code)
39	ISOCountryCode	ISO country code
40	MarketSegment	Market segment
41	CustomerAccountType	Customer account type
42	OmnibusAccount	Omnibus account
43	FundsSegregationType	Funds segregation type
44	GuaranteeFund	Guarantee fund. Identifies a guarantee fund related to an account. Used when one account has multiple funds of collateral, each guaranteeing different positions. Can be used for PartyRole(452) = Customer Account(24).
45	SwapDealer	Swap dealer. The US regulator's defined term for identifying the trade counterparty as "any person who holds itself out as a dealer in swaps, makes a market in swaps, regularly enters into swaps with counterparties as an ordinary course of business for its own account, or engages in activity causing itself to be commonly known in the trade as a dealer or market maker in swaps".
46	MajorParticipant	Major participant. When PartySubID(523)=Y the counterparty is not the swap dealer but is a major swap participant as defined in the regulations.
47	FinancialEntity	Financial entity. When PartySubID(523)=Y the counterparty is neither a swap dealer nor a major swap participant but is a financial entity as defined in the regulations.
48	USPerson	U.S. person. A legal term referring to any U.S. person or legal entity anywhere in the world that should be taxed under U.S. law.
49	ReportingEntityIndicator	Reporting entity indicator. Indicates the entity obligated or delegated to report to their regulator, a non-regulatory agency or data repository. Set PartySubID(523)=Y if true.
50	ElectedClearingRequirementException	Elected clearing requirement exception
51	BusinessCenter	Business center.
52	ReferenceText	Reference text
53	ShortMarkingExemptAccount	Short-marking exempt account
54	ParentFirmIdentifier	Parent firm identifier. Implementation-specific identifier of this party's parent entity.
55	ParentFirmName	Parent firm name. Full name of this party's parent entity.

Code	Name	Description
56	DealIdentifier	Deal identifier. The internal identifier assigned to the trade by this party, particularly by a Clearing Organization.
57	SystemTradeID	System trade identifier
58	SystemTradeSubID	System trade sub-identifier
59	FCMCode	Futures Commission Merchant (FCM) code. The FCM's code or identifier in relation to the PartyRole(452). For example, if PartyRole(452) is the exchange or clearinghouse, the FCM code/ID specified in PartySubID(523) is the FCM's identifier at the exchange or clearinghouse.
60	DlvryTrmlCode	Delivery terminal customer account/code. Usually used for gas delivery to identify whose account the gas is allocated to at the delivery terminal. Often referred to as "HUB" code.
61	VolntyRptEntity	Voluntary reporting entity. The entity voluntarily reporting the trade to the regulator. Set PartySubID(523)=Y if true.
62	RptObligJurisdiction	Reporting obligation jurisdiction. For a trade that falls under multiple jurisdictions this may be used to identify, through PartySubID(523), the reporting jurisdiction to which the party is obligated to report.
63	VolntyRptJurisdiction	Voluntary reporting jurisdiction. For a trade that falls under multiple jurisdictions this may be used to identify, through PartySubID(523), the regulatory jurisdiction to which the party is submitting a voluntary report.
64	CompanyActivities	Company activities. For regulatory reporting. ID values include: A = Assurance undertaking authorized in accordance with Directive 2002/83/EC C = Credit institution authorized in accordance with Directive 2006/48/EC F = Investment firm in accordance with Directive 2004/39/EC I = Insurance undertaking authorized in accordance with Directive 73/239/EC L = Alternative investment fund managed by AIFMs authorized or registered in accordance with Directive 2011/61/EC O = Institution for occupational retirement provision within the meaning of Article 6(a) of Directive 2003/41/EC R = Reinsurance undertaking authorized in accordance with Directive 2005/68/EC U = UCITS and its management company, authorized in accordance with Directive 2009/65/EC or blank in case of coverage by LEI or in case of non-financial counterparties. In the context of EU SFTR reporting use the appropriate 4- or 1-character code noted in the regulations. See SFTR ITS "Commission Implementing Regulation (EU) 2019/363" Annexes 1 and 2 for values.
65	EEAreaDomiciled	European Economic Area domiciled. ID values: Y or N

<b>Code</b>	<b>Name</b>	<b>Description</b>
66	ContractLinked	Contract linked to commercial or treasury financing for this counterparty. ID values: Y or N
67	ContractAbove	Contract above clearing threshold for this counterparty. ID values: Y or N
68	VolntyRptPty	Voluntary reporting party. When PartySubID(523)=Y, identifies that the trading party is reporting voluntarily when VoluntaryRegulatoryReport(1935)=Y.
69	EndUser	End user. When PartySubID(523)=Y, the counterparty is neither the swap dealer, major swap participant nor financial entity as defined in the regulations.
70	LocationOrJurisdiction	Location or jurisdiction. One or more instances may be used in combination with PartySubIDType(803) = 49 (Reporting entity indicator) or 102 (Data repository) to identify the jurisdiction, countries, regions or provinces for which the party is a reporting entity or data repository when that characteristic is ambiguous or where there are multiple locations. The party sub-ID value is either a jurisdiction acronym, a 2-character ISO 3166 country code, or a hyphenated combination of the country code and the standard post-office abbreviation for province, state or region if necessary. E.g. "US" for United States or "CA-QC" for Quebec Canada.
71	DerivativesDealer	Derivatives dealer. Indicates whether the party is a derivatives dealer or not (Y/N). The Canadian regulator's defined term for identifying the trade counterparty as "a person or company engaging in or holding himself, herself or itself out as engaging in the business of trading in derivatives in Ontario as principal or agent".
72	Domicile	Domicile. Country and optionally province, state or region of domicile. The party sub-ID value is either a 2-character ISO 3166 country code or a hyphenated combination of the country code and the standard post-office abbreviation of province, state or region if necessary. E.g. "US" for United States or "CA-QC" for Quebec Canada.
73	ExemptFromRecognition	Exempt from recognition. Used with party role 21 "Clearing Organization" to indicate exemption (Y/N). Identifies a clearing agency as exempt from oversight in Ontario, i.e. one that 1) only provides limited services and does not present significant risks or 2) is foreign-based, intends to operate in Ontario but is subject to regulatory oversight in another jurisdiction.

Code	Name	Description
74	Payer	Payer. Identifies the party as the payer of a particular payment stream or bullet payment by quoting the stream's StreamDesc(40051) (or LegStreamDesc(40243) or UnderlyingStreamDesc(40542)) or payment's PaymentDesc(43087) in the associated party sub-identifier field.
75	Receiver	Receiver. Identifies the party as the receiver of a particular payment stream or bullet payment by quoting the stream's StreamDesc(40051) (or LegStreamDesc(40243) or UnderlyingStreamDesc(40542)) or payment's PaymentDesc(43087) in the associated party sub-identifier field.
76	SystematicInternaliser	Systematic Internaliser (SI). In the context of ESMA reporting, this is used to indicate whether the specified party is a Systematic Internaliser or not for the security defined in the Instrument component (Y/N).
77	PublishingEntityIndicator	Publishing entity indicator. Indicates the entity obligated or delegated to publish to the market. Set PartySubID(523)=Y if true.
78	FirstName	First name. The first name(s) of a natural person. If multiple names, separate entries by a comma.
79	Surname	Surname. The surname(s) or lastname(s) of a natural person. If multiple names, separate entries by a comma.
80	DateOfBirth	Date of birth. The date of birth of a natural person in the format YYYYMMDD.
81	OrderTransmittingFirm	Order transmitting firm. Identifies whether the party specified in PartyID(448) is the firm that transmitted the order. In the context of RTS 22 Article 4, when "true" the PartySubID(523)=Y shall be set "by the transmitting firm within the transmitting firm's report where conditions for transmission specified in Article 4 were not satisfied."
82	OrderTransmittingFirmBuyer	Order transmitting firm for buyer. Identifies the firm that transmitted the order for the buyer. In the context of ESMA RTS 22, PartySubID(523)=Y is used to indicate the firm identified in PartyID(448) is the firm that transmitted the order for the buyer. "This shall be populated by the receiving firm within the receiving firm's report with the identification code provided by the transmitting firm."

Code	Name	Description
83	OrderTransmitterSeller	Order transmitter for seller. Identifies the order transmitting firm for the seller. In the context of ESMA RTS 22, PartySubID(523)=Y is used to indicate the firm identified in PartyID(448) is the firm that transmitted the order for the seller. "This shall be populated by the receiving firm within the receiving firm's report with the identification code provided by the transmitting firm."
84	LegalEntityIdentifier	Legal Entity Identifier (ISO 17442) LEI
85	SubSectorClassification	Sub-sector classification. Supplemental to party sub-ID type "64" (Company activities) for regulatory reporting. For EU SFTR reporting use the appropriate 4-character code noted in the regulations applying the conditional association rules. See SFTR ITS "Commission Implementing Regulation (EU) 2019/363" Annexes 1 and 2 for values.
86	PartySide	Party side. May be used, when appropriate, to explicitly indicate the transaction side of the party, e.g. Buyer, Seller, Lender, Borrower, Maker, Taker, etc. in the ID. In the context of EU SFTR reporting, use values as required by SFTR, "GIVE" and "TAKE" in the ID, to identify collateral giver and taker.
87	LegalRegistrationCountry	Legal registration country. ISO Country Code where the registered office of the party is located as specified in the LEI reference data.

Used in groups: [TargetPtysSubGrp](#)

### 171.2.5169 TargetPtysSubGrp

Repeating group of target party sub-identifiers.

Name	Mult.	Type	Description
<a href="#">NoTargetPartySubIDs</a>	[1..1]	NumInGroup	
<a href="#">TargetPartySubID</a>	[0..1]	String	Required when NoTargetPartySubIDs(2433) > 0.
<a href="#">TargetPartySubIDType</a>	[0..1]	CodeSet	Required when NoTargetPartySubIDs(2433) > 0.

Used in groups: [TargetParties](#)

**171.2.5170 TargetStrategy**

The target strategy of the order

1000+ = Reserved and available for bi-laterally agreed upon user defined values

Type: **int**

Allowed values in TargetStrategyCodeSet:

---

Code	Name	Description
1	VWAP	VWAP
2	Participate	Participate (i.e. aim to be x percent of the market volume)
3	MinimizeMarketImpact	Minimize market impact

---

Used in groups: **ListOrdGrp**

Used in messages: **CrossOrderCancelReplaceRequest**, **ExecutionReport**, **MultilegOrderCancelReplace**, **NewOrderCross**, **NewOrderMultileg**, **NewOrderSingle**, **OrderCancelReplaceRequest**

**171.2.5171 TargetStrategyParameters**

Field to allow further specification of the TargetStrategy - usage to be agreed between counterparties

Type: **String**

Used in groups: **ListOrdGrp**

Used in messages: **CrossOrderCancelReplaceRequest**, **ExecutionReport**, **MultilegOrderCancelReplace**, **NewOrderCross**, **NewOrderMultileg**, **NewOrderSingle**, **OrderCancelReplaceRequest**

**171.2.5172 TargetStrategyPerformance**

For communication of the performance of the order versus the target strategy

Type: **float**

Used in messages: **ExecutionReport**

**171.2.5173 TargetSubID**

Assigned value used to identify specific individual or unit intended to receive message. "ADMIN" reserved for administrative messages not intended for a specific user.

Type: **String**

Used in components: **StandardHeader**

**171.2.5174 TaxAdvantageType**

Identifies the type of tax exempt account in which purchases shares/units are to be held. Used for CIV.

Type: **int**

Allowed values in TaxAdvantageTypeCodeSet:

---

Used in messages: [RegistrationInstructions](#)

### 171.2.5175 TaxonomyType

The type of identification taxonomy used to identify the security.

Type: **char**

Allowed values in TaxonomyTypeCodeSet:

Code	Name	Description
I	ISINOrAltInstrmtID	ISIN or Alternate instrument identifier plus CFI. Identified through use of SecurityID(48) and SecurityIDSource(22) of ISIN or another standard source plus CFICode(461).
E	InterimTaxonomy	Interim Taxonomy. Identified through use of AssetClass(1938) plus either Symbol(55) or SecurityID(48) and SecurityIDSource(22), and/or other additional instrument attributes.

Used in messages: [PositionReport](#), [TradeCaptureReport](#)

### 171.2.5176 TerminatedIndicator

Indicates if the position has been terminated.

Type: **Boolean**

Used in messages: **PositionMaintenanceReport**, **PositionReport**

### **171.2.5177 TerminationDate**

The date of a contract's early termination or other post-trade event when the event is prior to the contract natural end or maturity not defined as part of the security's reference data or contractual terms/agreement.

Type: **LocalMktDate**

Used in messages: **PositionReport**, **QuoteResponse**, **QuoteStatusReport**, **TradeCaptureReport**

### **171.2.5178 TerminationType**

Type of financing termination.

Type: **int**

Allowed values in TerminationTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	Overnight	Overnight
2	Term	Term
3	Flexible	Flexible
4	Open	Open

---

Used in components: **FinancingDetails**

### **171.2.5179 TertiaryTrdType**

Type of trade assigned to a trade. Used in addition to TrdType(828) and SecondaryTrdType(855). Must not be used when only one additional trade type needs to be assigned.

Type: **int**

Allowed values in TrdTypeCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	RegularTrade	Regular trade
1	BlockTrade	Block trade
2	EFP	Exchange for physical (EFP)
3	Transfer	Transfer
4	LateTrade	Late trade
5	TTrade	T trade
6	WeightedAveragePriceTrade	Weighted average price trade
7	BunchedTrade	Bunched trade
8	LateBunchedTrade	Late bunched trade
9	PriorReferencePriceTrade	Prior reference price trade
10	AfterHoursTrade	After hours trade
11	ExchangeForRisk	Exchange for risk (EFR)
12	ExchangeForSwap	Exchange for swap (EFS)
13	ExchangeOfFuturesFor	Exchange of futures for in market futures (EFM). For example full sized for mini.
14	ExchangeOfOptionsForOptions	Exchange of options for options (EOO)
15	TradingAtSettlement	Trading at settlement
16	AllOrNone	All or none
17	FuturesLargeOrderExecution	Futures large order execution
18	ExchangeOfFuturesForFutures	Exchange of futures for external market futures (EFF)
19	OptionInterimTrade	Option interim trade
20	OptionCabinetTrade	Option cabinet trade
22	PrivatelyNegotiatedTrades	Privately negotiated trade
23	SubstitutionOfFuturesForForwards	Substitution of futures for forwards
24	ErrorTrade	Error trade
25	SpecialCumDividend	Special cum dividend (CD)
26	SpecialExDividend	Special ex dividend (XD)
27	SpecialCumCoupon	Special cum coupon (CC)
28	SpecialExCoupon	Special ex coupon (XC)
29	CashSettlement	Cash settlement (CS)
30	SpecialPrice	Special price (SP). Usually net or all-in price.
31	GuaranteedDelivery	Guaranteed delivery (GD)
32	SpecialCumRights	Special cum rights (CR)
33	SpecialExRights	Special ex rights (XR)

Code	Name	Description
34	SpecialCumCapitalRepayments	Special cum capital repayments (CP)
35	SpecialExCapitalRepayments	Special ex capital repayments (XP)
36	SpecialCumBonus	Special cum bonus (CB)
37	SpecialExBonus	Special ex bonus (XB)
38	LargeTrade	Block trade. The same as large trade.
39	WorkedPrincipalTrade	Worked principal trade
40	BlockTrades	Block trades
41	NameChange	Name change
42	PortfolioTransfer	Portfolio transfer
43	ProrogationBuy	Prorogation buy. Used by Euronext Paris only. Is used to defer settlement under French SRD (deferred settlement system). Trades must be reported as crosses at zero price.
44	ProrogationSell	Prorogation sell. See prorogation buy.
45	OptionExercise	Option exercise
46	DeltaNeutralTransaction	Delta neutral transaction
47	FinancingTransaction	Financing transaction
48	NonStandardSettlement	Non-standard settlement
49	DerivativeRelatedTransaction	Derivative related transaction
50	PortfolioTrade	Portfolio trade. Identifies a collection/basket of trades. In the context of bonds (e.g. corporate bonds) these are transacted as a single trade at an aggregate price for the entire portfolio and may be traded all-or-none or most-or-none depending on bilateral agreement. In the context of ESMA RTS 1 Article 2(b), may be used to refer to portfolio trades to distinguish between addressable and non-addressable volume. In the context of Market Model Typology (MMT), use of this value applies to SecondaryTrdType(855) or TertiaryTrdType(2896), and when used for MMT market data publication requires MDEntryType(269) = 2 (Trade).
51	VolumeWeightedAverageTrade	Volume weighted average trade
52	ExchangeGrantedTrade	Exchange granted trade
53	RepurchaseAgreement	Repurchase agreement
54	OTC	OTC. Trade executed off-market. In the context of CFTC regulatory reporting for swaps, it is a large notional off-facility swap. In the context of MiFID transparency reporting rules this is used to report, into an exchange, deals made outside exchange rules.
55	ExchangeBasisFacility	Exchange basis facility (EBF)

Code	Name	Description
56	OpeningTrade	Opening trade. Identifies a trade that resulted from the opening of a market. In the context of IIROC, this indicates a trade that occurred at the opening or the first trade of the day for a security.
57	NettedTrade	Netted trade
58	BlockSwapTrade	Block swap trade. Block trade executed off-market or on a registered market. In the context of CFTC regulatory reporting for swaps, it is a swap executed according to SEF or DCM rules.
59	CreditEventTrade	Credit event trade
60	SuccessionEventTrade	Succession event trade
61	GiveUpGiveInTrade	Give-up Give-in trade
62	DarkTrade	Dark trade. In the context of Market Model Typology (MMT), a dark trade might also come from a lit/hybrid book (e.g. when an aggressive lit order hits a resting dark order). The use of this value applies to TrdType(828), and when used for MMT market data publication requires MDEntryType(269) = 2 (Trade).
63	TechnicalTrade	Technical trade
64	Benchmark	Benchmark. In the context of ESMA RTS 1 Article 2(a), may be used to refer to benchmark trades. In the context of Market Model Typology (MMT), the "benchmark" price depends on a benchmark which has no current price but was derived from a time series such as a VWAP. The use of this value applies to SecondaryTrdType(855) or TertiaryTrdType(2896), and when used for MMT market data publication requires MDEntryType(269) = 2 (Trade).
65	PackageTrade	Package trade. May be used to identify the pseudo-trade of a stream or collection of trades to be transacted, cleared and be reported as an atomic unit. In the context of MiFIR RTS 1, this is the "CONT" flag. In the context of MiFIR RTS 2 Article 1(1)(b), may be used to refer to package transactions (excluding exchange for physicals). In the context of Market Model Typology (MMT), use of this value applies to SecondaryTrdType(855) or TertiaryTrdType(2896), and when used for MMT market data publication requires MDEntryType(269) = 2 (Trade).
66	RollTrade	Roll trade. Trade is a roll from one contract that is about to expire to a new contract.

Code	Name	Description
67	ClosingPriceTrade	Closing price trade. Identifies a trade that uses the closing price of a market without resulting from the closing of this market. In the context of FCA policy statement PS23/4, this indicates a benchmark transaction executed using the market closing price and is the "CLSE" flag.
68	InterFundTransferTrade	Inter-fund transfer trade. Administrative trade (non price-forming) related to the transfer of ownership between funds.
69	NetAssetValueCalculatedTrade	Net asset value calculated trade. Trade of a fund priced at the net asset value of its constituents. In the context of MiFIR RTS 1, this may be used for ETFs when the NAV price becomes available.

### 171.2.5180 TestMessageIndicator

Indicates whether or not this FIX Session is a "test" vs. "production" connection. Useful for preventing "accidents".

Type: [Boolean](#)

Allowed values in TestMessageIndicatorCodeSet:

Code	Name	Description
N	False	False (production)
Y	True	True (test)

---

Used in messages: [Logon](#)

### 171.2.5181 TestReqID

Identifier included in Test Request message to be returned in resulting Heartbeat

Type: [String](#)

Used in messages: [Heartbeat](#), [TestRequest](#)

**171.2.5182 Text**

Free format text string

(Note: this field does not have a specified maximum length)

Type: **String**

Used in groups: BidCompRspGrp, InstrmtStrkPxGrp, LinesOfTextGrp, ListOrdGrp, MDFullGrp, MDIncGrp, OrdListStatGrp, RelSymDerivSecGrp, RelSymDerivSecUpdGrp, SecListGrp, SecLstUpdRelSymGrp, SecMassStatGrp, SideCrossOrdCxlGrp, SideCrossOrdModGrp, StrmAsgnRptInstrmtGrp, TrdCapRptSideGrp, TrdMatchSideGrp, TrdSessLstGrp

**171.2.5183 Theta**

The security's price rate of change in relation to passage of time. Also known as "time decay".

Type: **float**

Used in groups: **SecurityRiskMetricGrp**

**171.2.5184 ThresholdAmount**

Amount that a position has to be in the money before it is exercised.

Type: **PriceOffset**

Used in messages: **AssignmentReport, PositionMaintenanceReport, PositionMaintenanceRequest**

**171.2.5185 ThrottleAction**

Action to take should throttle limit be exceeded.

Type: **int**

Allowed values in ThrottleActionCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	QueueInbound	Queue inbound
1	QueueOutbound	Queue outbound
2	Reject	Reject
3	Disconnect	Disconnect
4	Warning	Warning

---

Used in groups: **ThrottleParamsGrp**

**171.2.5186 ThrottleCountIndicator**

Indicates whether a message decrements the number of outstanding requests, e.g. one where ThrottleType = Outstanding Requests.

Type: **int**

Allowed values in ThrottleCountIndicatorCodeSet:

---

Code	Name	Description
0	OutstandingRequestsUnchanged	Outstanding requests unchanged
1	OutstandingRequestsDecreased	Outstanding requests decreased

---

Used in components: [ThrottleResponse](#)

### 171.2.5187 ThrottleInst

Describes action recipient should take if a throttle limit were exceeded.

Type: [int](#)

Allowed values in ThrottleInstCodeSet:

---

Code	Name	Description
0	RejectIfThrottleLimitExceeded	Reject if throttle limit exceeded
1	QueueIfThrottleLimitExceeded	Queue if throttle limit exceeded

---

Used in components: [ThrottleResponse](#)

Used in messages: [CrossOrderCancelReplaceRequest](#), [MassOrder](#), [MassQuote](#), [MultilegOrderCancelReplace](#), [NewOrderCross](#), [NewOrderList](#), [NewOrderMultileg](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#), [Quote](#)

### 171.2.5188 ThrottleMsgType

The MsgType (35) of the FIX message being referenced.

Type: [String](#)

Allowed values in MsgTypeCodeSet:

---

Code	Name	Description
0	Heartbeat	Heartbeat. The Heartbeat monitors the status of the communication link and identifies when the last of a string of messages was not received.

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	TestRequest	TestRequest. The test request message forces a heartbeat from the opposing application. The test request message checks sequence numbers or verifies communication line status. The opposite application responds to the Test Request with a Heartbeat containing the TestReqID.
2	ResendRequest	ResendRequest. The resend request is sent by the receiving application to initiate the retransmission of messages. This function is utilized if a sequence number gap is detected, if the receiving application lost a message, or as a function of the initialization process.
3	Reject	Reject. The reject message should be issued when a message is received but cannot be properly processed due to a session-level rule violation. An example of when a reject may be appropriate would be the receipt of a message with invalid basic data which successfully passes de-encryption, CheckSum and BodyLength checks.
4	SequenceReset	SequenceReset. The sequence reset message is used by the sending application to reset the incoming sequence number on the opposing side.
5	Logout	Logout. The logout message initiates or confirms the termination of a FIX session. Disconnection without the exchange of logout messages should be interpreted as an abnormal condition.
6	IOI	IOI. Indication of interest messages are used to market merchandise which the broker is buying or selling in either a proprietary or agency capacity. The indications can be time bound with a specific expiration value. Indications are distributed with the understanding that other firms may react to the message first and that the merchandise may no longer be available due to prior trade. Indication messages can be transmitted in various transaction types; NEW, CANCEL, and REPLACE. All message types other than NEW modify the state of the message identified in IOIRefID.
7	Advertisement	Advertisement. Advertisement messages are used to announce completed transactions. The advertisement message can be transmitted in various transaction types; NEW, CANCEL and REPLACE. All message types other than NEW modify the state of a previously transmitted advertisement identified in AdvRefID.

<b>Code</b>	<b>Name</b>	<b>Description</b>
8	ExecutionReport	ExecutionReport. The execution report message is used to: 1. confirm the receipt of an order. 2. confirm changes to an existing order (i.e. accept cancel and replace requests). 3. relay order status information. 4. relay fill information on working orders. 5. relay fill information on tradeable or restricted tradeable quotes. 6. reject orders. 7. report post-trade fees calculations associated with a trade
9	OrderCancelReject	OrderCancelReject. The order cancel reject message is issued by the broker upon receipt of a cancel request or cancel/replace request message which cannot be honored.
A	Logon	Logon. The logon message authenticates a user establishing a connection to a remote system. The logon message must be the first message sent by the application requesting to initiate a FIX session.
B	News	News. The news message is a general free format message between the broker and institution. The message contains flags to identify the news item's urgency and to allow sorting by subject company (symbol). The News message can be originated at either the broker or institution side, or exchanges and other marketplace venues.
C	Email	Email. The email message is similar to the format and purpose of the News message, however, it is intended for private use between two parties.
D	NewOrderSingle	NewOrderSingle. The new order message type is used by institutions wishing to electronically submit securities and forex orders to a broker for execution. The New Order message type may also be used by institutions or retail intermediaries wishing to electronically submit Collective Investment Vehicle (CIV) orders to a broker or fund manager for execution.
E	NewOrderList	NewOrderList. The NewOrderList Message can be used in one of two ways depending on which market conventions are being followed.
F	OrderCancelRequest	OrderCancelRequest. The order cancel request message requests the cancellation of all of the remaining quantity of an existing order. Note that the Order Cancel/Replace Request should be used to partially cancel (reduce) an order).
G	OrderCancelReplaceRequest	OrderCancelReplaceRequest. The order cancel/replace request is used to change the parameters of an existing order. Do not use this message to cancel the remaining quantity of an outstanding order, use the Order Cancel Request message for this purpose.

<b>Code</b>	<b>Name</b>	<b>Description</b>
H	OrderStatusRequest	OrderStatusRequest. The order status request message is used by the institution to generate an order status message back from the broker.
J	AllocationInstruction	AllocationInstruction. The Allocation Instruction message provides the ability to specify how an order or set of orders should be subdivided amongst one or more accounts. In versions of FIX prior to version 4.4, this same message was known as the Allocation message. Note in versions of FIX prior to version 4.4, the allocation message was also used to communicate fee and expense details from the Sellside to the Buyside. This role has now been removed from the Allocation Instruction and is now performed by the new (to version 4.4) Allocation Report and Confirmation messages.,The Allocation Report message should be used for the Sell-side Initiated Allocation role as defined in previous versions of the protocol.
K	ListCancelRequest	ListCancelRequest. The List Cancel Request message type is used by institutions wishing to cancel previously submitted lists either before or during execution.
L	ListExecute	ListExecute. The List Execute message type is used by institutions to instruct the broker to begin execution of a previously submitted list. This message may or may not be used, as it may be mirroring a phone conversation.
M	ListStatusRequest	ListStatusRequest. The list status request message type is used by institutions to instruct the broker to generate status messages for a list.
N	ListStatus	ListStatus. The list status message is issued as the response to a List Status Request message sent in an unsolicited fashion by the sell-side. It indicates the current state of the orders within the list as they exist at the broker's site. This message may also be used to respond to the List Cancel Request.
P	AllocationInstructionAck	AllocationInstructionAck. In versions of FIX prior to version 4.4, this message was known as the Allocation ACK message. The Allocation Instruction Ack message is used to acknowledge the receipt of and provide status for an Allocation Instruction message.
Q	DontKnowTrade	DontKnowTrade. The Don't Know Trade (DK) message notifies a trading partner that an electronically received execution has been rejected. This message can be thought of as an execution reject message.

<b>Code</b>	<b>Name</b>	<b>Description</b>
R	QuoteRequest	QuoteRequest. In some markets it is the practice to request quotes from brokers prior to placement of an order. The quote request message is used for this purpose. This message is commonly referred to as an Request For Quote (RFQ)
S	Quote	Quote. The Quote message is used as the response to a Quote Request or a Quote Response message in both indicative, tradeable, and restricted tradeable quoting markets.
T	SettlementInstructions	SettlementInstructions. The Settlement Instructions message provides the broker's, the institution's, or the intermediary's instructions for trade settlement. This message has been designed so that it can be sent from the broker to the institution, from the institution to the broker, or from either to an independent "standing instructions" database or matching system or, for CIV, from an intermediary to a fund manager.
V	MarketDataRequest	MarketDataRequest. Some systems allow the transmission of real-time quote, order, trade, trade volume, open interest, and/or other price information on a subscription basis. A MarketDataRequest(35=V) is a general request for market data on specific securities or forex quotes. The values in the fields provided within the request will serve as further filter criteria for the result set.
W	MarketDataSnapshotFullRefresh	MarketDataSnapshotFullRefresh. The Market Data messages are used as the response to a Market Data Request message. In all cases, one Market Data message refers only to one Market Data Request. It can be used to transmit a 2-sided book of orders or list of quotes, a list of trades, index values, opening, closing, settlement, high, low, or VWAP prices, the trade volume or open interest for a security, or any combination of these.
X	MarketDataIncrementalRefresh	MarketDataIncrementalRefresh. The Market Data message for incremental updates may contain any combination of new, changed, or deleted Market Data Entries, for any combination of instruments, with any combination of trades, imbalances, quotes, index values, open, close, settlement, high, low, and VWAP prices, trade volume and open interest so long as the maximum FIX message size is not exceeded. All of these types of Market Data Entries can be changed and deleted.
Y	MarketDataRequestReject	MarketDataRequestReject. The Market Data Request Reject is used when the broker cannot honor the Market Data Request, due to business or technical reasons. Brokers may choose to limit various parameters, such as the size of requests, whether just the top of book or the entire book may be displayed, and whether Full or Incremental updates must be used.

Code	Name	Description
Z	QuoteCancel	QuoteCancel. The Quote Cancel message is used by an originator of quotes to cancel quotes. The Quote Cancel message supports cancellation of: <ul style="list-style-type: none"> <li>• All quotes.</li> <li>• Quotes for a specific symbol or security ID.</li> <li>• All quotes for a security type.</li> <li>• All quotes for an underlying</li> </ul>
a	QuoteStatusRequest	QuoteStatusRequest. The quote status request message is used for the following purposes in markets that employ tradeable or restricted tradeable quotes: <ul style="list-style-type: none"> <li>• For the issuer of a quote in a market to query the status of that quote (using the QuoteID to specify the target quote).</li> <li>• To subscribe and unsubscribe for Quote Status Report messages for one or more securities.</li> </ul>
b	MassQuoteAck	MassQuoteAck. Mass Quote Acknowledgement is used as the application level response to a Mass Quote message.
c	SecurityDefinitionRequest	SecurityDefinitionRequest. The SecurityDefinitionRequest(35=c) message is used for the following: <ol style="list-style-type: none"> <li>1. Request a specific security to be traded with the second party. The requested security can be defined as a multileg security made up of one or more instrument legs.</li> <li>2. Request a set of individual securities for a single market segment.</li> <li>3. Request all securities, independent of market segment.</li> </ol>
d	SecurityDefinition	SecurityDefinition. The SecurityDefinition(35=d) message is used for the following: <ol style="list-style-type: none"> <li>1. Accept the security defined in a SecurityDefinition(35=d) message.</li> <li>2. Accept the security defined in a SecurityDefinition(35=d) message with changes to the definition and/or identity of the security.</li> <li>3. Reject the security requested in a SecurityDefinition(35=d) message.</li> <li>4. Respond to a request for securities within a specified market segment.</li> <li>5. Convey comprehensive security definition for all market segments that the security participates in.</li> <li>6. Convey the security's trading rules that differ from default rules for the market segment.</li> </ol>
e	SecurityStatusRequest	SecurityStatusRequest. The Security Status Request message provides for the ability to request the status of a security. One or more Security Status messages are returned as a result of a Security Status Request message.
f	SecurityStatus	SecurityStatus. The Security Status message provides for the ability to report changes in status to a security. The Security Status message contains fields to indicate trading status, corporate actions, financial status of the company. The Security Status message is used by one trading entity (for instance an exchange) to report changes in the state of a security.

<b>Code</b>	<b>Name</b>	<b>Description</b>
g	TradingSessionStatusRequest	TradingSessionStatusRequest. The Trading Session Status Request is used to request information on the status of a market. With the move to multiple sessions occurring for a given trading party (morning and evening sessions for instance) there is a need to be able to provide information on what product is trading on what market.
h	TradingSessionStatus	TradingSessionStatus. The Trading Session Status provides information on the status of a market. For markets multiple trading sessions on multiple-markets occurring (morning and evening sessions for instance), this message is able to provide information on what products are trading on what market during what trading session.
i	MassQuote	MassQuote. The Mass Quote message can contain quotes for multiple securities to support applications that allow for the mass quoting of an option series. Two levels of repeating groups have been provided to minimize the amount of data required to submit a set of quotes for a class of options (e.g. all option series for IBM).
j	BusinessMessageReject	BusinessMessageReject. The Business Message Reject message can reject an application-level message which fulfills session-level rules and cannot be rejected via any other means. Note if the message fails a session-level rule (e.g. body length is incorrect), a session-level Reject message should be issued.
k	BidRequest	BidRequest. The BidRequest Message can be used in one of two ways depending on which market conventions are being followed. In the "Non disclosed" convention (e.g. US/European model) the BidRequest message can be used to request a bid based on the sector, country, index and liquidity information contained within the message itself. In the "Non disclosed" convention the entry repeating group is used to define liquidity of the program. See " Program/Basket/List Trading" for an example. In the "Disclosed" convention (e.g. Japanese model) the BidRequest message can be used to request bids based on the ListOrderDetail messages sent in advance of BidRequest message. In the "Disclosed" convention the list repeating group is used to define which ListOrderDetail messages a bid is being sort for and the directions of the required bids.

Code	Name	Description
l	BidResponse	BidResponse. The Bid Response message can be used in one of two ways depending on which market conventions are being followed. In the "Non disclosed" convention the Bid Response message can be used to supply a bid based on the sector, country, index and liquidity information contained within the corresponding bid request message. See "Program/Basket/List Trading" for an example. In the "Disclosed" convention the Bid Response message can be used to supply bids based on the List Order Detail messages sent in advance of the corresponding Bid Request message.
m	ListStrikePrice	ListStrikePrice. The strike price message is used to exchange strike price information for principal trades. It can also be used to exchange reference prices for agency trades.
n	XMLnonFIX	XMLnonFIX.
o	RegistrationInstructions	RegistrationInstructions. The Registration Instructions message type may be used by institutions or retail intermediaries wishing to electronically submit registration information to a broker or fund manager (for CIV) for an order or for an allocation.
p	RegistrationInstructionsResponse	RegistrationInstructionsResponse. The Registration Instructions Response message type may be used by broker or fund manager (for CIV) in response to a Registration Instructions message submitted by an institution or retail intermediary for an order or for an allocation.
q	OrderMassCancelRequest	OrderMassCancelRequest. The order mass cancel request message requests the cancellation of all of the remaining quantity of a group of orders matching criteria specified within the request. NOTE: This message can only be used to cancel order messages (reduce the full quantity).
r	OrderMassCancelReport	OrderMassCancelReport. The Order Mass Cancel Report is used to acknowledge an Order Mass Cancel Request. Note that each affected order that is canceled is acknowledged with a separate Execution Report or Order Cancel Reject message.
s	NewOrderCross	NewOrderCross. Used to submit a cross order into a market. The cross order contains two order sides (a buy and a sell). The cross order is identified by its CrossID.
t	CrossOrderCancelReplaceRequest	CrossOrderCancelReplaceRequest. Used to modify a cross order previously submitted using the New Order - Cross message. See Order Cancel Replace Request for details concerning message usage.
u	CrossOrderCancelRequest	CrossOrderCancelRequest. Used to fully cancel the remaining open quantity of a cross order.

<b>Code</b>	<b>Name</b>	<b>Description</b>
v	SecurityTypeRequest	SecurityTypeRequest. The Security Type Request message is used to return a list of security types available from a counterparty or market.
w	SecurityTypes	SecurityTypes. The Security Type Request message is used to return a list of security types available from a counterparty or market.
x	SecurityListRequest	SecurityListRequest. The Security List Request message is used to return a list of securities from the counterparty that match criteria provided on the request
y	SecurityList	SecurityList. The Security List message is used to return a list of securities that matches the criteria specified in a Security List Request.
z	DerivativeSecurityListRequest	DerivativeSecurityListRequest. The Derivative Security List Request message is used to return a list of securities from the counterparty that match criteria provided on the request
AA	DerivativeSecurityList	DerivativeSecurityList. The Derivative Security List message is used to return a list of securities that matches the criteria specified in a Derivative Security List Request.
AB	NewOrderMultileg	NewOrderMultileg. The New Order - Multileg is provided to submit orders for securities that are made up of multiple securities, known as legs.
AC	MultilegOrderCancelReplace	MultilegOrderCancelReplace. Used to modify a multileg order previously submitted using the New Order - Multileg message. See Order Cancel Replace Request for details concerning message usage.
AD	TradeCaptureReportRequest	TradeCaptureReportRequest. The Trade Capture Report Request can be used to: <ul style="list-style-type: none"> <li>• Request one or more trade capture reports based upon selection criteria provided on the trade capture report request.</li> <li>• Subscribe for trade capture reports based upon selection criteria provided on the trade capture report request.</li> </ul>
AE	TradeCaptureReport	TradeCaptureReport. The Trade Capture Report message can be: <ul style="list-style-type: none"> <li>- Used to report trades between counterparties.</li> <li>- Used to report trades to a trade matching system.</li> <li>- Sent unsolicited between counterparties.</li> <li>- Sent as a reply to a Trade Capture Report Request.</li> <li>- Used to report unmatched and matched trades.</li> </ul>
AF	OrderMassStatusRequest	OrderMassStatusRequest. The order mass status request message requests the status for orders matching criteria specified within the request.

Code	Name	Description
AG	QuoteRequestReject	QuoteRequestReject. The Quote Request Reject message is used to reject Quote Request messages for all quoting models.
AH	RFQRequest	RFQRequest. In tradeable and restricted tradeable quoting markets – Quote Requests are issued by counterparties interested in ascertaining the market for an instrument. Quote Requests are then distributed by the market to liquidity providers who make markets in the instrument. The RFQ Request is used by liquidity providers to indicate to the market for which instruments they are interested in receiving Quote Requests. It can be used to register interest in receiving quote requests for a single instrument or for multiple instruments
AI	QuoteStatusReport	QuoteStatusReport. The quote status report message is used: <ul style="list-style-type: none"> <li>• as the response to a Quote Status Request message.</li> <li>• as a response to a Quote Cancel message.</li> <li>• as a response to a Quote Response message in a negotiation dialog (see Volume 7 – PRODUCT: FIXED INCOME and USER GROUP: EXCHANGES AND MARKETS)</li> </ul>
AJ	QuoteResponse	QuoteResponse. The QuoteResponse(35=AJ) message is used for the following purposes: <ol style="list-style-type: none"> <li>1. Respond to an IOI(35=6) message.</li> <li>2. Respond to a Quote(35=S) message.</li> <li>3. Counter a Quote.</li> <li>4. End a negotiation dialog.</li> <li>5. Follow-up or end a QuoteRequest(35=R) dialog that did not receive a response.</li> </ol>
AK	Confirmation	Confirmation. The Confirmation messages are used to provide individual trade level confirmations from the sell side to the buy side. In versions of FIX prior to version 4.4, this role was performed by the allocation message. Unlike the allocation message, the confirmation message operates at an allocation account (trade) level rather than block level, allowing for the affirmation or rejection of individual confirmations.
AL	PositionMaintenanceRequest	PositionMaintenanceRequest. The Position Maintenance Request message allows the position owner to submit requests to the holder of a position which will result in a specific action being taken which will affect the position. Generally, the holder of the position is a central counter party or clearing organization but can also be a party providing investment services.
AM	PositionMaintenanceReport	PositionMaintenanceReport. The Position Maintenance Report message is sent by the holder of a position in response to a Position Maintenance Request and is used to confirm that a request has been successfully processed or rejected.

<b>Code</b>	<b>Name</b>	<b>Description</b>
AN	RequestForPositions	RequestForPositions. The Request For Positions message is used by the owner of a position to request a Position Report from the holder of the position, usually the central counter party or clearing organization. The request can be made at several levels of granularity.
AO	RequestForPositionsAck	RequestForPositionsAck. The Request for Positions Ack message is returned by the holder of the position in response to a Request for Positions message. The purpose of the message is to acknowledge that a request has been received and is being processed.
AP	PositionReport	PositionReport. The Position Report message is returned by the holder of a position in response to a Request for Position message. The purpose of the message is to report all aspects of a position and may be provided on a standing basis to report end of day positions to an owner.
AQ	TradeCaptureReportRequestAck	TradeCaptureReportRequestAck. The Trade Capture Request Ack message is used to: - Provide an acknowledgement to a Trade Capture Report Request in the case where the Trade Capture Report Request is used to specify a subscription or delivery of reports via an out-of-band ResponseTransmissionMethod. - Provide an acknowledgement to a Trade Capture Report Request in the case when the return of the Trade Capture Reports matching that request will be delayed or delivered asynchronously. This is useful in distributed trading system environments. - Indicate that no trades were found that matched the selection criteria specified on the Trade Capture Report Request or the Trade Capture Request was invalid for some business reason, such as request is not authorized, invalid or unknown instrument, party, trading session, etc.
AR	TradeCaptureReportAck	TradeCaptureReportAck. The Trade Capture Report Ack message can be: - Used to acknowledge trade capture reports received from a counterparty. - Used to reject a trade capture report received from a counterparty.

<b>Code</b>	<b>Name</b>	<b>Description</b>
AS	AllocationReport	AllocationReport. Sent from sell-side to buy-side, sell-side to 3rd-party or 3rd-party to buy-side, the Allocation Report (Claim) provides account breakdown of an order or set of orders plus any additional follow-up front-office information developed post-trade during the trade allocation, matching and calculation phase. In versions of FIX prior to version 4.4, this functionality was provided through the Allocation message. Depending on the needs of the market and the timing of "confirmed" status, the role of Allocation Report can be taken over in whole or in part by the Confirmation message.
AT	AllocationReportAck	AllocationReportAck. The Allocation Report Ack message is used to acknowledge the receipt of and provide status for an Allocation Report message.
AU	ConfirmationAck	ConfirmationAck. The Confirmation Ack (aka Affirmation) message is used to respond to a Confirmation message.
AV	SettlementInstructionRequest	SettlementInstructionRequest. The Settlement Instruction Request message is used to request standing settlement instructions from another party.
AW	AssignmentReport	AssignmentReport. Assignment Reports are sent from a clearing house to counterparties, such as a clearing firm as a result of the assignment process.
AX	CollateralRequest	CollateralRequest. An initiator that requires collateral from a respondent sends a Collateral Request. The initiator can be either counterparty to a trade in a two party model or an intermediary such as an ATS or clearinghouse in a three party model. A Collateral Assignment is expected as a response to a request for collateral.
AY	CollateralAssignment	CollateralAssignment. Used to assign collateral to cover a trading position. This message can be sent unsolicited or in reply to a Collateral Request message.
AZ	CollateralResponse	CollateralResponse. Used to respond to a Collateral Assignment message.
BA	CollateralReport	CollateralReport. Used to report collateral status when responding to a Collateral Inquiry message.
BB	CollateralInquiry	CollateralInquiry. Used to inquire for collateral status.

Code	Name	Description
BC	NetworkCounterpartySystemStatus-Request	NetworkCounterpartySystemStatusRequest. This message is send either immediately after logging on to inform a network (counterparty system) of the type of updates required or to at any other time in the FIX conversation to change the nature of the types of status updates required. It can also be used with a NetworkRequestType of Snapshot to request a one-off report of the status of a network (or counterparty) system. Finally this message can also be used to cancel a request to receive updates into the status of the counterparties on a network by sending a NetworkRequestStatusMessage with a NetworkRequestType of StopSubscribing.
BD	NetworkCounterpartySystemStatus-Response	NetworkCounterpartySystemStatusResponse. This message is sent in response to a Network (Counterparty System) Status Request Message.
BE	UserRequest	UserRequest. This message is used to initiate a user action, logon, logout or password change. It can also be used to request a report on a user's status.
BF	UserResponse	UserResponse. This message is used to respond to a user request message, it reports the status of the user after the completion of any action requested in the user request message.
BG	CollateralInquiryAck	CollateralInquiryAck. Used to respond to a Collateral Inquiry in the following situations: <ul style="list-style-type: none"> <li>• When the CollateralInquiry will result in an out of band response (such as a file transfer).</li> <li>• When the inquiry is otherwise valid but no collateral is found to match the criteria specified on the Collateral Inquiry message.</li> <li>• When the Collateral Inquiry is invalid based upon the business rules of the counterparty.</li> </ul>
BH	ConfirmationRequest	ConfirmationRequest. The Confirmation Request message is used to request a Confirmation message.
BO	ContraryIntentionReport	ContraryIntentionReport. The Contrary Intention Report is used for reporting of contrary expiration quantities for Saturday expiring options. This information is required by options exchanges for regulatory purposes.
BP	SecurityDefinitionUpdateReport	SecurityDefinitionUpdateReport. This message is used for reporting updates to a product security master file. Updates could be the result of corporate actions or other business events. Updates may include additions, modifications or deletions.

<b>Code</b>	<b>Name</b>	<b>Description</b>
BK	SecurityListUpdateReport	SecurityListUpdateReport. The Security List Update Report is used for reporting updates to a Contract Security Masterfile. Updates could be due to Corporate Actions or other business events. Update may include additions, modifications and deletions.
BL	AdjustedPositionReport	AdjustedPositionReport. Used to report changes in position, primarily in equity options, due to modifications to the underlying due to corporate actions
BM	AllocationInstructionAlert	AllocationInstructionAlert. This message is used in a 3-party allocation model (buy-side and sell-side using a central clearing entity) where notification of group creation and group updates to counterparties is needed. The message will also carry trade information that comprised the group to the counterparties.
BN	ExecutionAck	ExecutionAck. The Execution Report Acknowledgement message is an optional message that provides dual functionality to notify a trading partner that an electronically received execution has either been accepted or rejected (DK'd).
BJ	TradingSessionList	TradingSessionList. The Trading Session List message is sent as a response to a Trading Session List Request. The Trading Session List should contain the characteristics of the trading session and the current state of the trading session.
BI	TradingSessionListRequest	TradingSessionListRequest. The Trading Session List Request is used to request a list of trading sessions available in a market place and the state of those trading sessions. A successful request will result in a response from the counterparty of a Trading Session List (MsgType=BJ) message that contains a list of zero or more trading sessions.
BQ	SettlementObligationReport	SettlementObligationReport. The Settlement Obligation Report message provides a central counterparty, institution, or individual counterparty with a capacity for reporting the final details of a currency settlement obligation.
BR	DerivativeSecurityListUpdateReport	DerivativeSecurityListUpdateReport. The Derivative Security List Update Report message is used to send updates to an option family or the strikes that comprise an option family.
BS	TradingSessionListUpdateReport	TradingSessionListUpdateReport. The Trading Session List Update Report is used by marketplaces to provide intra-day updates of trading sessions when there are changes to one or more trading sessions.
BT	MarketDefinitionRequest	MarketDefinitionRequest. The Market Definition Request message is used to request for market structure information from the Respondent that receives this request.

<b>Code</b>	<b>Name</b>	<b>Description</b>
BU	MarketDefinition	MarketDefinition. The MarketDefinition(35=BU) message is used to respond to MarketDefinitionRequest(35=BT). In a subscription, it will be used to provide the initial snapshot of the information requested. Subsequent updates are provided by the MarketDefinitionUpdateReport(35=BV).
BV	MarketDefinitionUpdateReport	MarketDefinitionUpdateReport. In a subscription for market structure information, this message is used once the initial snapshot of the information has been sent using the MarketDefinition(35=BU) message.
BW	ApplicationMessageRequest	ApplicationMessageRequest. This message is used to request a retransmission of a set of one or more messages generated by the application specified in RefApplID (1355).
BX	ApplicationMessageRequestAck	ApplicationMessageRequestAck. This message is used to acknowledge an Application Message Request providing a status on the request (i.e. whether successful or not). This message does not provide the actual content of the messages to be resent.
BY	ApplicationMessageReport	ApplicationMessageReport. This message is used for three difference purposes: to reset the ApplSeqNum (1181) of a specified ApplID (1180). to indicate that the last message has been sent for a particular ApplID, or as a keep-alive mechanism for ApplIDs with infrequent message traffic.
BZ	OrderMassActionReport	OrderMassActionReport. The Order Mass Action Report is used to acknowledge an Order Mass Action Request. Note that each affected order that is suspended or released or canceled is acknowledged with a separate Execution Report for each order.
CA	OrderMassActionRequest	OrderMassActionRequest. The Order Mass Action Request message can be used to request the suspension or release of a group of orders that match the criteria specified within the request. This is equivalent to individual Order Cancel Replace Requests for each order with or without adding "S" to the ExecInst values. It can also be used for mass order cancellation.
CB	UserNotification	UserNotification. The User Notification message is used to notify one or more users of an event or information from the sender of the message. This message is usually sent unsolicited from a marketplace (e.g. Exchange, ECN) to a market participant.

<b>Code</b>	<b>Name</b>	<b>Description</b>
CC	StreamAssignmentRequest	StreamAssignmentRequest. In certain markets where market data aggregators fan out to end clients the pricing streams provided by the price makers, the price maker may assign the clients to certain pricing streams that the price maker publishes via the aggregator. An example of this use is in the FX markets where clients may be assigned to different pricing streams based on volume bands and currency pairs.
CD	StreamAssignmentReport	StreamAssignmentReport. The StreamAssignmentReport message is in response to the StreamAssignmentRequest message. It provides information back to the aggregator as to which clients to assign to receive which price stream based on requested CCY pair. This message can be sent unsolicited to the Aggregator from the Price Maker.
CE	StreamAssignmentReportACK	StreamAssignmentReportACK. This message is used to respond to the Stream Assignment Report, to either accept or reject an unsolicited assignment.
CF	PartyDetailsListRequest	PartyDetailsListRequest. The PartyDetailsListRequest is used to request party detail information.
CG	PartyDetailsListReport	PartyDetailsListReport. The PartyDetailsListReport message is used to disseminate party details between counterparties. PartyDetailsListReport messages may be sent in response to a PartyDetailsListRequest message or sent unsolicited.
CH	MarginRequirementInquiry	MarginRequirementInquiry. The purpose of this message is to initiate a margin requirement inquiry for a margin account. The inquiry may be submitted at the detail level or the summary level. It can also be used to inquire margin excess/deficit or net position information. Margin excess/deficit will provide information about the surplus or shortfall compared to the previous trading day or a more recent margin calculation. An inquiry for net position information will trigger one or more PositionReport messages instead of one or more MarginRequirementReport messages. If the inquiry is made at the detail level, an Instrument block must be provided with the desired level of detail. If the inquiry is made at the summary level, the Instrument block is not provided, implying a summary request is being made. For example, if the inquiring firm specifies the Security Type of "FUT" in the Instrument block, then a detail report will be generated containing the margin requirements for all futures positions for the inquiring account. Similarly, if the inquiry is made at the summary level, the report will contain the total margin requirement aggregated to the margin account level.

<b>Code</b>	<b>Name</b>	<b>Description</b>
CI	MarginRequirementInquiryAck	MarginRequirementInquiryAck. Used to respond to a Margin Requirement Inquiry.
CJ	MarginRequirementReport	MarginRequirementReport. The Margin Requirement Report returns information about margin requirement either as an overview across all margin accounts or on a detailed level due to the inquiry making use of the optional Instrument component block. Application sequencing can be used to re-request a range of reports.
CK	PartyDetailsListUpdateReport	PartyDetailsListUpdateReport. The PartyDetailsListUpdateReport(35=CK) is used to disseminate updates to party detail information.
CL	PartyRiskLimitsRequest	PartyRiskLimitsRequest. The PartyRiskLimitsRequest message is used to request for risk information for specific parties, specific party roles or specific instruments.
CM	PartyRiskLimitsReport	PartyRiskLimitsReport. The PartyRiskLimitsReport message is used to communicate party risk limits. The message can either be sent as a response to the PartyRiskLimitsRequest message or can be published unsolicited.
CN	SecurityMassStatusRequest	SecurityMassStatusRequest.
CO	SecurityMassStatus	SecurityMassStatus.
CQ	AccountSummaryReport	AccountSummaryReport. The AccountSummaryReport is provided by the clearinghouse to its clearing members on a daily basis. It contains margin, settlement, collateral and pay/collect data for each clearing member level account type. Clearing member account types will be described through use of the Parties component and PtysSubGrp sub-component. In certain usages, the clearing members can send the AccountSummaryReport message to the clearinghouse as needed. For example, clearing members can send this message to the clearinghouse to identify the value of collateral for each customer (to satisfy CFTC Legally Segregated Operationally Commingled (LSOC) regulatory reporting obligations). Clearing organizations can also send the AccountSummaryReport message to regulators to meet regulatory reporting obligations. For example, clearing organizations can use this message to submit daily reports for each clearing member ("CM") by house origin and by each customer origin for all futures, options, and swaps positions, and all securities positions held in a segregated account or pursuant to a cross margining agreement, to a regulator (e.g. to the CFTC to meet Part 39, Section 39.19 reporting obligations).

Code	Name	Description
CR	PartyRiskLimitsUpdateReport	PartyRiskLimitsUpdateReport. The PartyRiskLimitsUpdateReport(35=CR) is used to convey incremental changes to risk limits. It is similar to the regular report but uses the PartyRiskLimitsUpdateGrp component instead of the PartyRiskLimitsGrp component to include an update action.
CS	PartyRiskLimitsDefinitionRequest	PartyRiskLimitsDefinitionRequest. PartyRiskLimitDefinitionRequest is used for defining new risk limits.
CT	PartyRiskLimitsDefinitionRequestAck	PartyRiskLimitsDefinitionRequestAck. PartyRiskLimitDefinitionRequestAck is used for accepting (with or without changes) or rejecting the definition of risk limits.
CU	PartyEntitlementsRequest	PartyEntitlementsRequest. The PartyEntitlementsRequest message is used to request for entitlement information for one or more party(-ies), specific party role(s), or specific instruments(s).
CV	PartyEntitlementsReport	PartyEntitlementsReport. The PartyEntitlementsReport is used to report entitlements for one or more parties, party role(s), or specific instrument(s).
CW	QuoteAck	QuoteAck. The QuoteAck(35=CW) message is used to acknowledge a Quote(35=S) submittal or request to cancel an individual quote using the QuoteCancel(35=Z) message during a Quote/Negotiation dialog.
CX	PartyDetailsDefinitionRequest	PartyDetailsDefinitionRequest. The PartyDetailsDefinitionRequest(35=CX) is used for defining new parties and modifying or deleting existing parties information, including the relationships between parties. The recipient of the message responds with a PartyDetailsDefinitionRequestAck(35=CY) to indicate whether the request was accepted or rejected.
CY	PartyDetailsDefinitionRequestAck	PartyDetailsDefinitionRequestAck. The PartyDetailsDefinitionRequestAck(35=CY) is used as a response to the PartyDetailsDefinitionRequest(35=CX) message. The request can be accepted (with or without changes) or rejected.
CZ	PartyEntitlementsUpdateReport	PartyEntitlementsUpdateReport. The PartyEntitlementsUpdateReport(35=CZ) is used to convey incremental changes to party entitlements. It is similar to the PartyEntitlementsReport(35=CV). This message uses the PartyEntitlementsUpdateGrp component which includes the ability to specify an update action using ListUpdateAction(1324).

Code	Name	Description
DA	PartyEntitlementsDefinitionRequest	PartyEntitlementsDefinitionRequest. The PartyEntitlementsDefinitionRequest(35=DA) is used for defining new entitlements, and modifying or deleting existing entitlements for the specified party(-ies).
DB	PartyEntitlementsDefinitionRequestAck	PartyEntitlementsDefinitionRequestAck. The PartyEntitlementsDefinitionRequestAck(35=DB) is used as a response to the PartyEntitlementsDefinitionRequest(35=DA) to accept (with or without changes) or reject the definition of party entitlements.
DC	TradeMatchReport	TradeMatchReport. The TradeMatchReport(35=DC) message is used by exchanges and ECN's to report matched trades to central counterparties (CCPs) as an atomic event. The message is used to express the one-to-one, one-to-many and many-to-many matches as well as implied matches in which more complex instruments can match with simpler instruments.
DD	TradeMatchReportAck	TradeMatchReportAck. The TradeMatchReportAck(35=DD) is used to respond to the TradeMatchReport(35=DC) message. It may be used to report on the status of the request (e.g. accepting the request or rejecting the request).
DE	PartyRiskLimitsReportAck	PartyRiskLimitsReportAck. PartyRiskLimitsReportAck is an optional message used as a response to the PartyRiskLimitReport(35=CM) or PartyRiskLimitUpdateReport(35=CR) messages to acknowledge or reject those messages.
DF	PartyRiskLimitCheckRequest	PartyRiskLimitCheckRequest. PartyRiskLimitCheckRequest is used to request for approval of credit or risk limit amount intended to be used by a party in a transaction from another party that holds the information.
DG	PartyRiskLimitCheckRequestAck	PartyRiskLimitCheckRequestAck. PartyRiskLimitCheckRequestAck is used to acknowledge a PartyRiskLimitCheckRequest(35=DF) message and to respond whether the limit check request was approved or not. When used to accept the PartyRiskLimitCheckRequest(35=DF) message the Respondent may also include the limit amount that was approved.
DH	PartyActionRequest	PartyActionRequest. The PartyActionRequest message is used suspend or halt the specified party from further trading activities at the Respondent. The Respondent must respond with a PartyActionReport(35=DI) message.

<b>Code</b>	<b>Name</b>	<b>Description</b>
DI	PartyActionReport	PartyActionReport. Used to respond to the PartyActionRequest(35=DH) message, indicating whether the request has been received, accepted or rejected. Can also be used in an unsolicited manner to report party actions, e.g. reinstatements after a manual intervention out of band.
DJ	MassOrder	MassOrder. The MassOrder(35=DJ) message can be used to add, modify or delete multiple unrelated orders with a single message. Apart from clearing related attributes, only the key order attributes for high performance trading are available.
DK	MassOrderAck	MassOrderAck. The mass order acknowledgement message is used to acknowledge the receipt of and the status for a MassOrder(35=DJ) message.
DL	PositionTransferInstruction	PositionTransferInstruction. The PositionTransferInstruction(35=DL) is sent by clearing firms to CCPs to initiate position transfers, or to accept or decline position transfers.
DM	PositionTransferInstructionAck	PositionTransferInstructionAck. The PositionTransferInstructionAck(35=DM) is sent by CCPs to clearing firms to acknowledge position transfer instructions, and to report errors processing position transfer instructions.
DN	PositionTransferReport	PositionTransferReport. The PositionTransferReport(35=DN) is sent by CCPs to clearing firms indicating of positions that are to be transferred to the clearing firm, or to report on status of the transfer to the clearing firms involved in the transfer process.
DO	MarketDataStatisticsRequest	MarketDataStatisticsRequest. The MarketDataStatisticsRequest(35=DO) is used to request for statistical data. The simple form is to use an identifier (MDStatisticID(2475)) assigned by the market place which would denote a pre-defined statistical report. Alternatively, or also in addition, the request can define a number of parameters for the desired statistical information.
DP	MarketDataStatisticsReport	MarketDataStatisticsReport. The MarketDataStatisticsReport(35=DP) is used to provide unsolicited statistical information or in response to a specific request. Each report contains a set of statistics for a single entity which could be a market, a market segment, a security list or an instrument.

<b>Code</b>	<b>Name</b>	<b>Description</b>
DQ	CollateralReportAck	CollateralReportAck. CollateralReportAck(35=DQ) is used as a response to the CollateralReport(35=BA). It can be used to reject a CollateralReport(35=BA) when the content of the report is invalid based on the business rules of the receiver. The message may also be used to acknowledge receipt of a valid CollateralReport(35=BA).
DR	MarketDataReport	MarketDataReport. The MarketDataReport(35=DR) message is used to provide delimiting references (e.g. start and end markers in a continuous broadcast) and details about the number of market data messages sent in a given distribution cycle.
DS	CrossRequest	CrossRequest. The CrossRequest(35=DS) message is used to indicate the submission of orders or quotes that may result in a crossed trade.
DT	CrossRequestAck	CrossRequestAck. The CrossRequestAck(35=DT) message is used to confirm the receipt of a CrossRequest(35=DS) message.
DU	AllocationInstructionAlertRequest	AllocationInstructionAlertRequest. This message is used in a clearinghouse 3-party allocation model to request for AllocationInstructionAlert(35=BM) from the clearinghouse. The request may be used to obtain a one-time notification of the status of an allocation group.
DV	AllocationInstructionAlertRequestAck	AllocationInstructionAlertRequestAck. This message is used in a clearinghouse 3-party allocation model to acknowledge a AllocationInstructionAlertRequest(35=DU) message for an AllocationInstructionAlert(35=BM) message from the clearinghouse.
DW	TradeAggregationRequest	TradeAggregationRequest. TradeAggregationRequest(35=DW) is used to request that the identified trades between the initiator and respondent be aggregated together for further processing.
DX	TradeAggregationReport	TradeAggregationReport. TradeAggregationReport(35=DX) is used to respond to the TradeAggregationRequest(35=DW) message. It provides the status of the request (e.g. accepted or rejected) and may also provide additional information supplied by the respondent.

Code	Name	Description
EA	PayManagementReport	PayManagementReport. PayManagementReport(35=EA) may be used to respond to the PayManagementRequest(35=DY) message. It provides the status of the request (e.g. accepted, disputed) and may provide additional information related to the request. PayManagementReport(35=EA) may also be sent unsolicited by the broker to a client. In which case the client may acknowledge and resolve disputes out-of-band or with a simple PayManagementReportAck(35=EB). PayManagementReport(35=EA) may also be sent unsolicited to report the progress status of the payment itself with PayReportTransType(2804)=2 (Status).
EB	PayManagementReportAck	PayManagementReportAck. PayManagementReportAck(35=EB) is used as a response to the PayManagementReport(35=EA) message. It may be used to accept, reject or dispute the details of the PayManagementReport(35=EA) depending on the business rules of the receiver. This message may also be used to acknowledge the receipt of a PayManagementReport(35=EA) message.
DY	PayManagementRequest	PayManagementRequest. PayManagementRequest(35=DY) message is used to communicate a future or expected payment to be made or received related to a trade or contract after its settlement.
DZ	PayManagementRequestAck	PayManagementRequestAck. PayManagementRequestAck(35=DZ) is used to acknowledge the receipt of the PayManagementRequest(35=DY) message (i.e. a technical acknowledgement of receipt). Acceptance or rejection of the request is reported in the corresponding PayManagementReport(35=EA).
EC	SettlementStatusRequest	SettlementStatusRequest. SettlementStatusRequest(35=EC) is used to request for the settlement status of a trade.
ED	SettlementStatusRequestAck	SettlementStatusRequestAck. SettlementStatusRequestAck(35=ED) is used to respond to the SettlementStatusRequest(35=EC) to acknowledge the request and provide status for the request message.
EE	SettlementStatusReport	SettlementStatusReport. SettlementStatusReport(35=EE) is a response to the SettlementStatusRequest(35=EC) to provide settlement status for the requested trade. It may also be sent unsolicited without an explicit request message by the party able to provide the settlement status for the trade identified in the report message.

Code	Name	Description
EF	SettlementStatusReportAck	SettlementStatusReportAck. SettlementStatusReportAck(35=EF) is used to respond to the SettlementStatusReport(35=EE) to acknowledge or reject the report.
EG	SecurityRiskMetricsReport	SecurityRiskMetricsReport. SecurityRiskMetricsReport(35=EG) is used for publishing the risk metrics, valuation metrics or analytics of one or more securities, or for an option series.

Used in groups: [ThrottleMsgTypeGrp](#)

### 171.2.5189 ThrottleMsgTypeGrp

Name	Mult.	Type	Description
<a href="#">NoThrottleMsgType</a>	[1..1]	NumInGroup	
<a href="#">ThrottleMsgType</a>	[0..1]	CodeSet	Required when NoThrottleMsgType > 0.

Used in groups: [ThrottleParamsGrp](#)

### 171.2.5190 ThrottleNoMsgs

Maximum number of messages allowed by the throttle. May be a rate limit or a limit on the number of outstanding requests.

Type: [int](#)

Used in groups: [ThrottleParamsGrp](#)

### 171.2.5191 ThrottleParamsGrp

Name	Mult.	Type	Description
<a href="#">NoThrottles</a>	[1..1]	NumInGroup	Indicates number of throttles to follow.
<a href="#">ThrottleAction</a>	[0..1]	CodeSet	Required when NoThrottles > 0.
<a href="#">ThrottleType</a>	[0..1]	CodeSet	Required when NoThrottles > 0.

Name	Mult.	Type	Description
ThrottleNoMsgs	[0..1]	int	Number of messages per time interval, or number of outstanding requests. Required when NoThrottles > 0.
ThrottleTimeInterval	[0..1]	int	Can be used only when ThrottleType = Inbound Rate. Indicates, along with ThrottleTimeUnit, the interval of time in which ThrottleNoMsgs may be sent. Default is 1.
ThrottleTimeUnit	[0..1]	CodeSet	Can be used only when ThrottleType = Inbound Rate. Indicates, along with ThrottleTimeUnit, the interval of time in which ThrottleNoMsgs may be sent. Default is Seconds.
ThrottleMsgTypeGrp	[0..*]	Group	Indicates MsgType values that this throttle counts. If not specified, the definition is implicit based upon bilateral agreement.

Used in messages: [UserNotification](#), [UserResponse](#)

### 171.2.5192 ThrottleResponse

Name	Mult.	Type	Description
ThrottleInst	[0..1]	CodeSet	
ThrottleStatus	[0..1]	CodeSet	
ThrottleCountIndicator	[0..1]	CodeSet	

Used in messages: [ExecutionReport](#), [MassOrderAck](#), [MassQuoteAck](#), [QuoteStatusReport](#)

### 171.2.5193 ThrottleStatus

Indicates whether a message was queued as a result of throttling.

Type: [int](#)

Allowed values in ThrottleStatusCodeSet:

Code	Name	Description
0	ThrottleLimitNotExceeded-NotQueued	Throttle limit not exceeded, not queued
1	QueuedDueToThrottleLimitExceeded	Queued due to throttle limit exceeded

Used in components: [ThrottleResponse](#)

### 171.2.5194 ThrottleTimeInterval

Value of the time interval in which the rate throttle is applied.

Type: [int](#)

Used in groups: [ThrottleParamsGrp](#)

### 171.2.5195 ThrottleTimeUnit

Units in which ThrottleTimeInterval is expressed. Uses same enumerations as OrderDelayUnit(1429).

Type: [int](#)

Allowed values in OrderDelayUnitCodeSet:

Code	Name	Description
0	Seconds	Seconds (default if not specified)
1	TenthsOfASecond	Tenths of a second
2	HundredthsOfASecond	Hundredths of a second
3	Milliseconds	milliseconds
4	Microseconds	microseconds
5	Nanoseconds	nanoseconds
10	Minutes	minutes
11	Hours	hours
12	Days	days
13	Weeks	weeks
14	Months	months
15	Years	years

Used in groups: [ThrottleParamsGrp](#)

**171.2.5196 ThrottleType**

Type of throttle.

Type: **int**

Allowed values in ThrottleTypeCodeSet:

---

Code	Name	Description
0	InboundRate	Inbound Rate
1	OutstandingRequests	Outstanding Requests

---

Used in groups: **ThrottleParamsGrp**

**171.2.5197 TickDirection**

Direction of the "tick".

Type: **char**

Allowed values in TickDirectionCodeSet:

---

Code	Name	Description
0	PlusTick	Plus Tick
1	ZeroPlusTick	Zero-Plus Tick
2	MinusTick	Minus Tick
3	ZeroMinusTick	Zero-Minus Tick

---

Used in groups: **MDFullGrp, MDIncGrp**

**171.2.5198 TickIncrement**

Tick increment for stated price range. Specifies the valid price increments at which a security can be quoted and traded

Type: **Price**

Used in groups: **TickRules**

**171.2.5199 TickRuleProductComplex**

Identifies an entire suite of products for which the price tick rule applies.

Type: **String**

Used in groups: **TickRules**

**171.2.5200 TickRules**

The TickRules component specifies the rules for determining how a security ticks, i.e. the price increments which it can be quoted, traded, and for certain cases settled, depending on the current price of the security.

---

<b>Name</b>	<b>Mult.</b>	<b>Type</b>	<b>Description</b>
NoTickRules	[1..1]	NumInGroup	
StartTickPriceRange	[0..1]	Price	Required if NoTickRules(1205) > 0.
EndTickPriceRange	[0..1]	Price	
TickIncrement	[0..1]	Price	
TickRuleType	[0..1]	CodeSet	
TickRuleProductComplex	[0..1]	String	Can be used to limit tick rule to specific product suite.
SettlPriceIncrement	[0..1]	Price	
SettlPriceSecondaryIncrement	[0..1]	Price	

---

Used in components: **BaseTradingRules**

**171.2.5201 TickRuleType**

Specifies the type of tick rule which is being described

Allowed values in TickRuleTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	RegularTrading	Regular trading
1	VariableCabinet	Variable cabinet

---

---

Code	Name	Description
2	FixedCabinet	Fixed cabinet
3	TradedAsASpreadLeg	Traded as a spread leg
4	SettledAsASpreadLeg	Settled as a spread leg
5	TradedAsSpread	Traded as spread. Basis points spread

---

Used in groups: [TickRules](#)

### 171.2.5202 TierCode

The Tier the trade was matched by the clearing system.

Type: [String](#)

Used in messages: [TradeCaptureReport](#), [TradeCaptureReportAck](#)

### 171.2.5203 TimeBracket

A code that represents a time interval in which a fill or trade occurred.

Required for US futures markets.

Type: [String](#)

Used in groups: [TrdCapRptAckSideGrp](#), [TrdCapRptSideGrp](#), [TrdMatchSideGrp](#)

Used in messages: [ExecutionReport](#), [TradeCaptureReportRequest](#)

### 171.2.5204 TimeInForce

Specifies how long the order remains in effect. Absence of this field is interpreted as DAY. NOTE not applicable to CIV Orders.

Type: [char](#)

Allowed values in TimeInForceCodeSet:

---

Code	Name	Description
0	Day	Day (or session). A buy or sell order that, if not executed expires at the end of the trading day on which it was entered.

---

Code	Name	Description
1	GoodTillCancel	Good Till Cancel (GTC). An order to buy or sell that remains in effect until it is either executed or canceled; sometimes called an "open order".
2	AtTheOpening	At the Opening (OPG). A market or limit-price order to be executed at the opening of the stock or not at all; all or part of any order not executed at the opening is treated as canceled.
3	ImmediateOrCancel	Immediate Or Cancel (IOC). A market or limit-price order that is to be executed in whole or in part as soon as it is available in the market; any portion not so executed is to be canceled.
4	FillOrKill	Fill Or Kill (FOK). A market or limit-price order that is to be executed in its entirety as soon as it is available in the market; if not so executed, the order is to be canceled.
5	GoodTillCrossing	Good Till Crossing (GTX). An order to buy or sell that is canceled prior to the market entering into an auction or crossing phase.
6	GoodTillDate	Good Till Date (GTD). An order to buy or sell that remains in effect until it expires, defined by ExpireDate(432) or ExpireTime(126).
7	AtTheClose	At the Close. Indicated price is to be around the closing price, however, not held to the closing price.
8	GoodThroughCrossing	Good Through Crossing. An order that is valid up till and including a crossing phase.]
9	AtCrossing	At Crossing. An order that is valid only during crossing (auction) phases. The order is valid during the day or up to and including a specified trading (sub) session.
A	GoodForTime	Good for Time (GFT). An order that is valid for a pre-defined time period expressed with ExposureDuration(1629) and (optionally) ExposureDurationUnit(1916).
B	GoodForAuction	Good for Auction (GFA). An order that is valid for an auction initiated by a trading firm (see AuctionType(1803) for examples.
C	GoodForMonth	Good for this Month (GFM). An order that is valid until the end of the current month, i.e. from the time of order submission until the end of the last trading day of the current month.

Used in components: [MDStatisticParameters](#), [TradeReportOrderDetail](#)

Used in groups: [ListOrdGrp](#), [MDFullGrp](#), [MDIncGrp](#), [OrderEntryAckGrp](#), [OrderEntryGrp](#), [TimeInForceRules](#)

Used in messages: [CrossOrderCancelReplaceRequest](#), [ExecutionReport](#), [MultilegOrderCancelReplace](#), [NewOrderCross](#), [NewOrderMultileg](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#)

**171.2.5205 TimeInForceRules**

Name	Mult.	Type	Description
NoTimeInForceRules	[1..1]	NumInGroup	Number of time in force techniques
TimeInForce	[0..1]	CodeSet	Indicates time in force techniques that are valid for the specified market segment

Used in components: [TradingSessionRules](#)

Used in messages: [MarketDefinition](#), [MarketDefinitionUpdateReport](#)

**171.2.5206 TimeToExpiration**

Time to expiration in years calculated as the number of days remaining to expiration divided by 365 days per year.

Type: [float](#)

Used in messages: [ExecutionReport](#), [TradeCaptureReport](#)

**171.2.5207 TimeUnit**

Unit of time associated with the contract.

NOTE: Additional values may be used by mutual agreement of the counterparties.

Type: [String](#)

Allowed values in TimeUnitCodeSet:

Code	Name	Description
H	Hour	Hour
Min	Minute	Minute
S	Second	Second
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year
Q	Quarter	Quarter

Code	Name	Description
EOM	EndOfMonth	End of Month. End of Month identifies a relative time unit, e.g. until the third Friday of each month.
F	Flexible	Flexible. A flexible time unit indicates that a specific time unit for the contract is currently undetermined.

Used in components: [Instrument](#)

#### **171.2.5208 TotalAccruedInterestAmt**

Total Amount of Accrued Interest for convertible bonds and fixed income

Type: [Amt](#)

Used in messages: [AllocationInstruction](#), [AllocationInstructionAlert](#), [AllocationReport](#)

#### **171.2.5209 TotalAffectedOrders**

Total number of orders affected by either the [OrderMassActionRequest\(MsgType=CA\)](#) or [OrderMassCancelRequest\(MsgType=Q\)](#).

Type: [int](#)

Used in messages: [OrderMassActionReport](#), [OrderMassCancelReport](#)

#### **171.2.5210 TotalBidSize**

Specifies the total bid size.

Type: [Qty](#)

Used in groups: [QuotEntryGrp](#)

Used in messages: [Quote](#), [QuoteStatusReport](#)

#### **171.2.5211 TotalGrossTradeAmt**

Expresses the full total monetary value of the traded contract. The value is the product of [LastPx\(31\)](#) and [TotalTradeQty\(2367\)](#) or [TotalTradeMultipliedQty\(2370\)](#), if priced in units instead of contracts.

Type: [Amt](#)

Used in messages: [TradeCaptureReport](#)

### **171.2.5212 TotalIssuedAmount**

Specifies the total amount of the issue. Corresponds to the par value multiplied by the number of issued securities.

Type: **Amt**

Used in components: **Instrument**

### **171.2.5213 TotalNetValue**

TotalNetValue is determined as follows:

At the initial collateral assignment TotalNetValue is the sum of  $(\text{UnderlyingStartValue} * (1 - \text{haircut}))$ .

In a collateral substitution TotalNetValue is the sum of  $(\text{UnderlyingCurrentValue} * (1 - \text{haircut}))$ .

For listed derivatives clearing margin management, this is the collateral value which equals  $(\text{Market value} * \text{haircut})$

Type: **Amt**

Used in messages: **AccountSummaryReport, CollateralAssignment, CollateralInquiry, CollateralReport, CollateralRequest, CollateralResponse**

### **171.2.5214 TotalNotAffectedOrders**

Total number of orders unaffected by either the OrderMassActionRequest(35=CA) or OrderMassCancel-Request(35=Q).

Type: **int**

Used in messages: **OrderMassActionReport**

### **171.2.5215 TotalNumPosReports**

Total number of Position Reports being returned.

Type: **int**

Used in messages: **PositionReport, RequestForPositionsAck**

### **171.2.5216 TotalOfferSize**

Specifies the total offer size.

Type: Qty

Used in groups: QuotEntryGrp

Used in messages: Quote, QuoteStatusReport

### **171.2.5217 TotalTakedown**

The price at which the securities are distributed to the different members of an underwriting group for the primary market in Municipals, total gross underwriter's spread.

(Note tag # was reserved in FIX 4.1, added in FIX 4.3)

Type: Amt

Used in groups: TrdCapRptAckSideGrp, TrdCapRptSideGrp

Used in messages: AllocationInstruction, AllocationInstructionAlert, AllocationReport, Confirmation, ExecutionReport

### **171.2.5218 TotalTradeMultipliedQty**

Expresses the total trade quantity in units where ContractMultiplier(231) is not 1. The value is the product of TotalTradeQty(2367) and ContractMultiplier(231).

Type: Qty

Used in messages: TradeCaptureReport

### **171.2.5219 TotalTradeQty**

Expresses the total quantity traded over the life of the contract when LastQty(32) is repeated periodically over the term of the contract. The value is the product of LastQty(32) and TradingUnitPeriodMultiplier(2353).

Type: Qty

Used in messages: TradeCaptureReport

### **171.2.5220 TotalTradingBusinessDays**

Number of trading business days over the lifetime of an instrument.

Type: **int**

Used in groups: **ClearingPriceParametersGrp**

### **171.2.5221 TotalVolumeTraded**

Total volume (quantity) traded.

Type: **Qty**

Used in groups: **TrdSessLstGrp**

Used in messages: **TradingSessionStatus**

### **171.2.5222 TotNoAccQuotes**

Specifies the number of accepted quotes

Type: **int**

Used in groups: **QuotSetAckGrp**

### **171.2.5223 TotNoAllocs**

Total number of NoAlloc entries across all messages. Should be the sum of all NoAllocs in each message that has repeating NoAlloc entries related to the same AllocID or AllocReportID. Used to support fragmentation.

Type: **int**

Used in messages: **AllocationInstruction, AllocationInstructionAlert, AllocationReport**

### **171.2.5224 TotNoCxlQuotes**

Specifies the number of canceled quotes

Type: **int**

Used in groups: **QuotSetAckGrp**

#### **171.2.5225 TotNoEntitlementReports**

Total number of reports related to party entitlement information.

Type: **int**

Used in messages: **MarketDataReport**

#### **171.2.5226 TotNoFills**

Total number of fill entries across all messages. Should be the sum of all NoFills(1362) in each message that has repeating list of fill entries related to the same ExecID(17). Used to support fragmentation.

Type: **int**

Used in messages: **ExecutionReport**

#### **171.2.5227 TotNoInstrumentReports**

Total number of reports related to instruments.

Type: **int**

Used in messages: **MarketDataReport**

#### **171.2.5228 TotNoMarketSegmentReports**

Total number of reports related to market segments.

Type: **int**

Used in messages: **MarketDataReport**

#### **171.2.5229 TotNoOrderEntries**

Totals number of orders for a mass order or its acknowledgment being fragmented across multiple messages.

Type: **int**

Used in messages: **MassOrder, MassOrderAck**

### **171.2.5230 TotNoOrders**

Total number of list order entries across all messages. Should be the sum of all NoOrders (73) in each message that has repeating list order entries related to the same ListID (66). Used to support fragmentation.

(Prior to FIX 4.2 this field was named "ListNoOrds")

Type: **int**

Used in messages: **ListStatus**, **NewOrderList**

### **171.2.5231 TotNoParties**

Total number of PartyListGrp returned.

Type: **int**

Used in messages: **PartyDetailsListReport**, **PartyDetailsListUpdateReport**, **PartyEntitlementsReport**, **PartyEntitlementsUpdateReport**, **PartyRiskLimitsReport**, **PartyRiskLimitsUpdateReport**

### **171.2.5232 TotNoPartyDetailReports**

Total number of reports related to party detail information.

Type: **int**

Used in messages: **MarketDataReport**

### **171.2.5233 TotNoQuoteEntries**

Total number of quotes for the quote set.

Type: **int**

Used in groups: **QuotSetAckGrp**, **QuotSetGrp**

### **171.2.5234 TotNoRejQuotes**

Specifies the number of rejected quotes

Type: **int**

Used in groups: **QuotSetAckGrp**

### **171.2.5235 TotNoRelatedSym**

Total number of securities.

(Prior to FIX 4.4 this field was named TotalNumSecurities)

Type: **int**

Used in messages: **BidRequest**, **DerivativeSecurityList**, **DerivativeSecurityListUpdateReport**, **SecurityList**, **SecurityListUpdateReport**

### **171.2.5236 TotNoRiskLimitReports**

Total number of reports related to party risk limit information.

Type: **int**

Used in messages: **MarketDataReport**

### **171.2.5237 TotNoSecurityTypes**

Used to support fragmentation. Indicates total number of security types when multiple Security Type messages are used to return results.

Type: **int**

Used in messages: **SecurityTypes**

### **171.2.5238 TotNoStrikes**

Total number of strike price entries across all messages. Should be the sum of all NoStrikes (428) in each message that has repeating strike price entries related to the same ListID (66). Used to support fragmentation.

Type: **int**

Used in messages: **ListStrikePrice**

### **171.2.5239 TotNumAssignmentReports**

Total Number of Assignment Reports being returned to a firm

Type: **int**

Used in messages: **AssignmentReport**

**171.2.5240 TotNumCollateralRequests**

Total number of request messages within a set or group of requests.

Type: **int**

Used in messages: **CollateralAssignment, CollateralResponse**

**171.2.5241 TotNumReports**

Total number of reports returned in response to a request.

Type: **int**

Used in messages: **CollateralInquiryAck, CollateralReport, ExecutionReport, MarginRequirementInquiryAck, MarginRequirementReport, MarketDataReport, MarketDataSnapshotFullRefresh, PositionReport, RequestForPositionsAck**

**171.2.5242 TotNumTradeReports**

Total number of trade reports returned.

Type: **int**

Used in messages: **TradeCaptureReport, TradeCaptureReportRequestAck**

**171.2.5243 TradeAggregationRejectReason**

Reason for trade aggregation request being rejected.

Type: **int**

Allowed values in TradeAggregationRejectReasonCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	UnknownOrders	Unknown order(s)
1	UnknownExecutionFills	Unknown execution/fill(s)
99	Other	Other

---

Used in messages: **TradeAggregationReport**

**171.2.5244 TradeAggregationReportID**

Unique identifier for the TradeAggregationReport(35=DX).

Type: **String**

Used in messages: **TradeAggregationReport**

**171.2.5245 TradeAggregationRequestID**

The message identifier for the trade aggregation request.

Type: **String**

Used in messages: **TradeAggregationReport, TradeAggregationRequest**

**171.2.5246 TradeAggregationRequestRefID**

Reference identifier to a previously sent trade aggregation message being cancelled or replaced.

Type: **String**

Used in messages: **TradeAggregationRequest**

**171.2.5247 TradeAggregationRequestStatus**

Status of the trade aggregation request.

Type: **int**

Allowed values in TradeAggregationRequestStatusCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Accepted	Accepted
1	Rejected	Rejected

---

Used in messages: **TradeAggregationReport**

**171.2.5248 TradeAggregationTransType**

Identifies the trade aggregation transaction type.

Type: **int**

Allowed values in TradeAggregationTransTypeCodeSet:

---

Code	Name	Description
0	New	New
1	Cancel	Cancel
2	Replace	Replace

---

Used in messages: **TradeAggregationRequest**

**171.2.5249 TradeAllocAmt**

The amount associated with a trade allocation.

Type: **Amt**

Used in groups: **TradeAllocAmtGrp**

**171.2.5250 TradeAllocAmtGrp**

The TradeAllocAmtGrp component is used to communicate the monetary amounts associated with allocated positions. This is the per-allocation portion of the per-trade amount specified in Position-AmountData component.

---

Name	Mult.	Type	Description
<b>NoTradeAllocAmts</b>	[1..1]	NumInGroup	
<b>TradeAllocAmtType</b>	[0..1]	CodeSet	Required if NoTradeAllocAmts(1844) > 0.
<b>TradeAllocAmt</b>	[0..1]	Amt	Required if NoTradeAllocAmts(1844) > 0.
<b>TradeAllocCurrency</b>	[0..1]	Currency	
<b>TradeAllocCurrencyCodeSource</b>	[0..1]	CodeSet	
<b>TradeAllocAmtReason</b>	[0..1]	CodeSet	

---

Used in groups: **AllocGrp**, **TrdAllocGrp**

**171.2.5251 TradeAllocAmtReason**

Specifies the reason for an amount type when reported on an allocation. Useful when multiple instances of the same amount type are reported.

Type: **int**

Allowed values in PosAmtReasonCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	OptionsSettlement	Options settlement
1	PendingErosionAdjustment	Pending erosion adjustment
2	FinalErosionAdjustment	Final erosion adjustment
3	TearUpCouponAmount	Tear-up coupon amount
4	PriceAlignmentInterest	Price alignment interest. To minimize the impact of daily cash variation margin payments on the pricing of interest rate swaps, the Clearing House will charge interest on cumulative variation margin received and pay interest on cumulative variation margin paid in respect of these instruments. This interest element is known as price alignment interest.
5	DeliveryInvoiceCharges	Delivery invoice charges
6	DeliveryStorageCharges	Delivery storage charges

---

Used in groups: **TradeAllocAmtGrp**

**171.2.5252 TradeAllocAmtType**

Type of the amount associated with a trade allocation.

Type: **String**

Allowed values in PosAmtTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
CASH	CashAmount	Cash amount (corporate event)
CRES	CashResidualAmount	Cash residual amount
FMTM	FinalMarkToMarketAmount	Final mark-to-market amount
IMTM	IncrementalMarkToMarketAmount	Incremental mark-to-market
PREM	PremiumAmount	Premium amount

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
SMTM	StartOfDayMarkToMarketAmount	Start of day mark-to-market
TVAR	TradeVariationAmount	Trade variation amount
VADJ	ValueAdjustedAmount	Value adjusted amount
SETL	SettlementValue	Settlement value
ICPN	InitialTradeCouponAmount	Initial trade coupon amount
ACPN	AccruedCouponAmount	Accrued coupon amount
CPN	CouponAmount	Coupon amount
IACPN	IncrementalAccruedCoupon	Incremental accrued coupon
CMTM	CollateralizedMarkToMarket	Collateralized mark-to-market
ICMTM	IncrementalCollateralizedMark-ToMarket	Incremental collateralized mark-to-market
DLV	CompensationAmount	Compensation amount
BANK	TotalBankedAmount	Total banked amount
COLAT	TotalCollateralizedAmount	Total collateralized amount
LSNV	LongPairedSwapNotionalValue	Long paired swap or swaption notional value
SSNV	ShortPairedSwapNotionalValue	Short paired swap or swaption notional value
SACPN	StartOfDayAccruedCoupon	Start-of-day accrued coupon
NPV	NetPresentValue	Net present value
SNPV	StartOfDayNetPresentValue	Start-of-day net present value
NCF	NetCashFlow	Net cash flow
PVFEES	PresentValueOfFees	Present value of all fees
PV01	PresentValueOneBasisPoints	Present value of one basis points. Change in value if yield curve shifts 0.01%.
5YREN	FiveYearEquivalentNotional	The five year equivalent notional amount
UMTM	UndiscountedMarkToMarket	Undiscounted mark-to-market
MTD	MarkToModel	Mark-to-model
VMTM	MarkToMarketVariance	Mark-to-market variance
VMTD	MarkToModelVariance	Mark-to-model variance
UPFRNT	UpfrontPayment	Upfront payment
ENDV	EndVale	End value. Principal amount of a securities financing transaction on maturity date.
MGNLN	OutstandingMarginLoan	Outstanding margin loan. The amount of the outstanding margin loan. In the event that the loan has a short market value, PosAmt(708) would be a negative value.
LNVL	LoanValue	Loan value. The amount of the loan.

Used in groups: [TradeAllocAmtGrp](#)

### **171.2.5253 TradeAllocCurrency**

Currency denomination of the trade allocation amount.

Type: [Currency](#)

Used in groups: [TradeAllocAmtGrp](#)

### **171.2.5254 TradeAllocCurrencyCodeSource**

Identifies class or source of the TradeAllocCurrency(1847) value.

Type: [String](#)

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in groups: [TradeAllocAmtGrp](#)

### **171.2.5255 TradeAllocGroupInstruction**

Instruction on how to add a trade to an allocation group when it is being given-up.

Type: [int](#)

Allowed values in TradeAllocGroupInstructionCodeSet:

---

Code	Name	Description
0	Add	Add to an existing allocation group if one exists.
1	DoNotAdd	Do not add the trade to an allocation group.

---

Used in groups: [TrdCapRptSideGrp](#)

### 171.2.5256 TradeAllocIndicator

Identifies if, and how, the trade is to be allocated or split.

Type: [int](#)

Allowed values in TradeAllocIndicatorCodeSet:

---

Code	Name	Description
0	AllocationNotRequired	Allocation not required
1	AllocationRequired	Allocation required (give-up trade) allocation information not provided (incomplete)
2	UseAllocationProvidedWithTheTrade	Use allocation provided with the trade
3	AllocationGiveUpExecutor	Allocation give-up executor
4	AllocationFromExecutor	Allocation from executor
5	AllocationToClaimAccount	Allocation to claim account
6	TradeSplit	Trade split

---

Used in groups: [TrdCapRptAckSideGrp](#), [TrdCapRptSideGrp](#), [TrdMatchSideGrp](#)

### 171.2.5257 TradeAllocStatus

Identifies the status of an allocation when using a pre-clear workflow.

Type: [int](#)

Allowed values in TradeAllocStatusCodeSet:

---

Code	Name	Description
0	PendingClear	Pending clear
1	Claimed	Claimed

---

Code	Name	Description
2	Cleared	Cleared
3	Rejected	Rejected

Used in groups: [TrdAllocGrp](#)

### 171.2.5258 TradeCapLegUnderlyingsGrp

Name	Mult.	Type	Description
<a href="#">NoOfLegUnderlyings</a>	[1..1]	NumInGroup	Number of legs for the underlying instrument
<a href="#">UnderlyingLegInstrument</a>	[0..1]	Component	

Used in groups: [TrdInstrmtLegGrp](#)

### 171.2.5259 TradeClearingInstruction

Specifies the eligibility of this trade for clearing and central counterparty processing.

Type: [int](#)

Allowed values in ClearingInstructionCodeSet:

Code	Name	Description
0	ProcessNormally	Process normally
1	ExcludeFromAllNetting	Exclude from all netting
2	BilateralNettingOnly	Bilateral netting only
3	ExClearing	Ex clearing
4	SpecialTrade	Special trade
5	MultilateralNetting	Multilateral netting
6	ClearAgainstCentralCounterparty	Clear against central counterparty
7	ExcludeFromCentralCounterparty	Exclude from central counterparty
8	ManualMode	Manual mode (pre-posting and/or pre-giveup)
9	AutomaticPostingMode	Automatic posting mode (trade posting to the position account number specified)

---

Code	Name	Description
10	AutomaticGiveUpMode	Automatic give-up mode (trade give-up to the give-up destination number specified)
11	QualifiedServiceRepresentativeQSR	Qualified Service Representative QSR
12	CustomerTrade	Customer trade
13	SelfClearing	Self clearing
14	BuyIn	Buy-in

---

Used in messages: [TradeCaptureReport](#)

### 171.2.5260 TradeCollateralization

Specifies how the trade is collateralized.

Type: [int](#)

Allowed values in TradeCollateralizationCodeSet:

---

Code	Name	Description
0	Uncollateralized	Uncollateralized
1	PartiallyCollateralized	Partially collateralized
2	OneWayCollateralization	One-way collateralization
3	FullyCollateralized	Fully collateralized
4	NetExposure	Net exposure. Indication of whether the collateral has been provided for a net exposure, rather than for a single transaction.

---

Used in messages: [CollateralReport](#), [PositionReport](#), [TradeCaptureReport](#)

### 171.2.5261 TradeCondition

Type of market data entry.

Type: [MultipleStringValue](#)

Allowed values in TradeConditionCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
A	Cash	Cash (only) Market
B	AveragePriceTrade	Average Price Trade
C	CashTrade	Cash Trade (same day clearing)
D	NextDay	Next Day (only)Market
E	Opening	Opening/Reopening Trade Detail
F	IntradayTradeDetail	Intraday Trade Detail
G	Rule127Trade	Rule 127 Trade (NYSE)
H	Rule155Trade	Rule 155 Trade (AMEX)
I	SoldLast	Sold Last (late reporting)
J	NextDayTrade	Next Day Trade (next day clearing)
K	Opened	Opened (late report of opened trade)
L	Seller	Seller
M	Sold	Sold (out of sequence)
N	StoppedStock	Stopped Stock (guarantee of price but does not execute the order)
P	ImbalanceMoreBuyers	Imbalance More Buyers (cannot be used in combination with Q)
Q	ImbalanceMoreSellers	Imbalance More Sellers (cannot be used in combination with P)
R	OpeningPrice	Opening Price
S	BargainCondition	Bargain Condition (LSE)
T	ConvertedPriceIndicator	Converted Price Indicator
U	ExchangeLast	Exchange Last
V	FinalPriceOfSession	Final Price of Session
W	ExPit	Ex-pit
X	Crossed	Crossed
Y	TradesResultingFromManual	Trades resulting from manual/slow quote
Z	TradesResultingFromIntermarketSweep	Trades resulting from intermarket sweep
a	VolumeOnly	Volume Only
b	DirectPlus	Direct Plus
c	Acquisition	Acquisition
d	Bunched	Bunched
e	Distribution	Distribution
f	BunchedSale	Bunched Sale
g	SplitTrade	Split Trade
h	CancelStopped	Cancel Stopped

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
i	CancelETH	Cancel ETH
j	CancelStoppedETH	Cancel Stopped ETH
k	OutOfSequenceETH	Out of Sequence ETH
l	CancelLastETH	Cancel Last ETH
m	SoldLastSaleETH	Sold Last Sale ETH
n	CancelLast	Cancel Last
o	SoldLastSale	Sold Last Sale
p	CancelOpen	Cancel Open
q	CancelOpenETH	Cancel Open ETH
r	OpenedSaleETH	Opened Sale ETH
s	CancelOnly	Cancel Only
t	CancelOnlyETH	Cancel Only ETH
u	LateOpenETH	Late Open ETH
v	AutoExecutionETH	Auto Execution ETH
w	Reopen	Reopen
x	ReopenETH	Reopen ETH
y	Adjusted	Adjusted
z	AdjustedETH	Adjusted ETH
AA	Spread	Spread
AB	SpreadETH	Spread ETH
AC	Straddle	Straddle
AD	StraddleETH	Straddle ETH
AE	Stopped	Stopped
AF	StoppedETH	Stopped ETH
AG	RegularETH	Regular ETH
AH	Combo	Combo
AI	ComboETH	Combo ETH
AJ	OfficialClosingPrice	Official Closing Price
AK	PriorReferencePrice	Prior Reference Price
AL	StoppedSoldLast	Stopped Sold Last
AM	StoppedOutOfSequence	Stopped Out of Sequence
AN	OfficialClosingPriceDup	Official Closing Price (duplicate enumeration - use 'AJ' instead)
AO	CrossedOld	Crossed (duplicate enumeration - use 'X' instead)
AP	FastMarket	Fast Market

---

Code	Name	Description
AQ	AutomaticExecution	Automatic Execution
AR	FormT	Form T
AS	BasketIndex	Basket Index
AT	BurstBasket	Burst Basket
AU	TradeThroughExempt	Trade through exempt. Trade ignored prices on away markets.
AV	QuoteSpread	Quote spread
AW	LastAuctionPrice	Last auction price. Trade represents outcome of last auction
AX	HighPrice	High price. Trade establishes new high price for the session
AY	LowPrice	Low price. Trade establishes new low price for the session
AZ	SystematicInternaliser	Systematic Internaliser (SI). Trade conducted by Systematic Internaliser (SI).
BA	AwayMarket	Away market. Trade conducted on away market
BB	MidpointPrice	Mid-point price. Trade represents current midpoint price
BC	TradedBeforeIssueDate	Traded before issue date. Trade conducted during subscription phase of new issue
BD	PreviousClosingPrice	Previous closing price. Trade represents closing price of previous business day
BE	NationalBestBidOffer	National Best Bid and Offer. Trade price within National Best Bid and Offer (NBBO)
0	Cancel	Cancel
1	ImpliedTrade	Implied Trade
2	MarketplaceEnteredTrade	Marketplace entered trade
3	MultiAssetClassMultilegTrade	Multi-asset class multileg trade
4	MultilegToMultilegTrade	Multileg-to-Multileg Trade
5	ShortSaleMinPrice	Short Sale Minimum Price
6	Benchmark	Benchmark. Market Model Typology (MMT) terminology: The "benchmark" price depends on a benchmark which has no current price but derived from a time series such as a VWAP.

Used in components: [MDStatisticParameters](#)

Used in groups: [MDFullGrp](#), [MDIncGrp](#)

### 171.2.5262 TradeConfirmationReferenceID

A reference or control identifier or number used as a trade confirmation key.

Type: **String**

Used in messages: **Confirmation**, **ConfirmationAck**

### 171.2.5263 TradeContingency

Indicates the contingency attribute for a trade in an asset class that may be contingent on the clearing of a corresponding paired trade (for example Exchange for Physical (EFP), Exchange for Swap (EFS), Exchange for Related (EFR) or Exchange for Option (EFO), collectively called EFRPs). Once the paired trade clears or fails to clear, the related trade (the trade which carries this attribute) ceases to exist.

Type: **int**

Allowed values in TradeContingencyCodeSet:

---

Code	Name	Description
0	DoesNotApply	Does not apply (default if not specified). The trade is for an asset class that is not traded with contingency.
1	ContingentTrade	Contingent trade. The trade is terminated as soon as its paired trade is cleared or denied clearing.
2	NonContingentTrade	Non-contingent trade. Identifies a trade that is not contingent but is for an asset class that may be contingent.

---

Used in messages: **TradeCaptureReport**

### 171.2.5264 TradeContinuation

Specifies the post-execution trade continuation or lifecycle event. Additional values may be used by mutual agreement of the counterparties.

Type: **int**

Allowed values in TradeContinuationCodeSet:

---

Code	Name	Description
0	Novation	Novation
1	PartialNovation	Partial novation
2	TradeUnwind	Trade unwind. "Trade" includes "Swaps".
3	PartialTradeUnwind	Partial trade unwind. "Trade" includes "Swaps".

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
4	Exercise	Exercise
5	Netting	Compression/Netting. Compression (used for OTC derivative trades) and Netting (used for Futures trades) are essentially the same business process, i.e. rolling up closely related contracts into a single trade or position.
6	FullNetting	Full netting
7	PartialNetting	Partial netting
8	Amendment	Amendment. Based on mutual agreement between the counterparties, used to change the original or previously amended contract terms reported to a trade repository.
9	Increase	Increase
10	CreditEvent	Credit event
11	StrategicRestructuring	Strategic restructuring
12	SuccessionEventReorganization	Succession event reorganization
13	SuccessionEventRenaming	Succession event renaming
14	Porting	Porting
15	Withdrawl	Withdrawal. One party withdrew from the trade prior to confirmation or clearing. Can be used with TradeReportTransType(487)=1 (Cancel).
16	Void	Void. Trade is to be ended after clearing. Can be used with TradeReportTransType(487)=1 (Cancel).
17	AccountTransfer	Account transfer
18	GiveUp	Give up
19	TakeUp	TakeUp
20	AveragePricing	Average pricing
21	Reversal	Reversal
22	AllocTrdPosting	Allocation/Trade posting
23	Cascade	Cascade. The breakdown of a contract position to a more granular level, e.g. from a yearly position to monthly positions.
24	Delivery	Delivery
25	OptionAsgn	Option assignment
26	Expiration	Expiration
27	Maturity	Maturity
28	EqualPosAdj	Equal position adjustment
29	UnequalPosAdj	Unequal position adjustment. An adjustment to either the long or short position quantity but not both.

Code	Name	Description
30	Correction	Correction. Used to correct an error in the contract terms of a previously submitted report to a trade repository.
31	EarlyTermination	Early termination. The transaction/contract has closed before its natural end (maturity date or end date).
32	Rerate	Rerate. Change in the repo rate of an open repo contract due to shift in the market conditions.
99	Other	Other price-forming continuation data. Other price-forming continuation data or lifecycle event. Include description of type in TradeContinuationText(2374).

Used in groups: [QuotReqGrp](#)

Used in messages: [AllocationInstruction](#), [AllocationReport](#), [Confirmation](#), [ExecutionReport](#), [Position-Report](#), [Quote](#), [QuoteResponse](#), [QuoteStatusReport](#), [TradeCaptureReport](#)

#### **171.2.5265 TradeContinuationText**

Free form text to specify additional trade continuation information or data.

Type: [String](#)

Used in groups: [QuotReqGrp](#)

Used in messages: [AllocationInstruction](#), [AllocationReport](#), [Confirmation](#), [ExecutionReport](#), [Position-Report](#), [Quote](#), [QuoteResponse](#), [QuoteStatusReport](#), [TradeCaptureReport](#)

#### **171.2.5266 TradeDate**

Indicates date of trading day. Absence of this field indicates current day (expressed in local time at place of trade).

Type: [LocalMktDate](#)

Used in components: [SettlTradeDetails](#)

Used in groups: [ListOrdGrp](#), [SideCrossOrdCxlGrp](#), [SideCrossOrdModGrp](#), [TrdCapDtGrp](#)

Used in messages: [Advertisement](#), [AllocationInstruction](#), [AllocationInstructionAck](#), [AllocationInstructionAlert](#), [AllocationInstructionAlertRequest](#), [AllocationReport](#), [AllocationReportAck](#), [BidRequest](#), [CollateralAssignment](#), [CollateralReport](#), [CollateralResponse](#), [Confirmation](#), [ConfirmationAck](#), [ExecutionReport](#), [ListCancelRequest](#), [MarketDataIncrementalRefresh](#), [MarketDataSnapshotFullRefresh](#), [MarketDataStatisticsReport](#), [MarketDataStatisticsRequest](#), [MultilegOrderCancelReplace](#), [NewOrderMultileg](#),

NewOrderSingle, OrderCancelReject, OrderCancelReplaceRequest, PositionTransferInstruction, PositionTransferReport, SecurityMassStatus, SecurityStatus, TradeCaptureReport, TradeCaptureReportAck, TradeMatchReport, TradingSessionStatus

### 171.2.5267 TradedFlatSwitch

Driver and part of trade in the event that the Security Master file was wrong at the point of entry (Note tag # was reserved in FIX 4.1, added in FIX 4.3)

Type: **Boolean**

Allowed values in TradedFlatSwitchCodeSet:

Code	Name	Description
N	NotTradedFlat	Not Traded Flat
Y	TradedFlat	Traded Flat

Used in messages: **ExecutionReport**

### 171.2.5268 TradeHandlingInstr

Specified how the TradeCaptureReport(35=AE) should be handled by the respondent.

Type: **char**

Allowed values in TradeHandlingInstrCodeSet:

Code	Name	Description
0	TradeConfirmation	Trade confirmation
1	TwoPartyReport	Two-party report
2	OnePartyReportForMatching	One-party report for matching
3	OnePartyReportForPassThrough	One-party report for pass through. Can be used when one of the parties to the trade submits a report which then has to be approved or confirmed by the other (counter)party.
4	AutomatedFloorOrderRouting	Automated floor order routing
5	TwoPartyReportForClaim	Two-party report for claim
6	OnePartyReport	One-party report

Code	Name	Description
7	ThirdPtyRptForPassThrough	Third-party report for pass through. Can be used when RootParties component contains a service provider role who submits the trade report and is not necessarily also on one side of the trade.
8	OnePartyReportAutoMatch	One-party report for auto-match. Indicates that the submission is a transfer trade to a firm or account that is part of the same corporate entity and that once validated the transfer should be automatically accepted without confirmation.

---

Used in messages: [TradeCaptureReport](#), [TradeCaptureReportAck](#), [TradeCaptureReportRequest](#)

### 171.2.5269 TradeID

The unique ID assigned to the trade entity once it is received or matched by the exchange or central counterparty.

Type: [String](#)

Used in groups: [ExecAllocGrp](#), [ExecutionAggregationGrp](#), [MDFullGrp](#), [MDIncGrp](#)

Used in messages: [TradeAggregationReport](#), [TradeCaptureReport](#), [TradeCaptureReportAck](#), [TradeCaptureReportRequest](#), [TradeCaptureReportRequestAck](#)

### 171.2.5270 TradeInputDevice

Specific device number, terminal number or station where trade was entered

Type: [String](#)

Used in groups: [TrdCapRptAckSideGrp](#), [TrdCapRptSideGrp](#), [TrdMatchSideGrp](#)

Used in messages: [AllocationReport](#), [TradeCaptureReportRequest](#)

### 171.2.5271 TradeInputSource

Type of input device or system from which the trade was entered.

Type: [String](#)

Used in components: [MDStatisticParameters](#)

Used in groups: [TrdCapRptAckSideGrp](#), [TrdCapRptSideGrp](#), [TrdMatchSideGrp](#)

Used in messages: [AllocationInstruction](#), [AllocationInstructionAlert](#), [AllocationReport](#), [TradeCaptureReportRequest](#)

#### **171.2.5272 TradeLegRefID**

Reference to the leg of a multileg instrument to which this trade refers

Type: [String](#)

Used in messages: [TradeCaptureReport](#), [TradeCaptureReportAck](#)

#### **171.2.5273 TradeLinkID**

Used to link a group of trades together.

Type: [String](#)

Used in messages: [TradeCaptureReport](#), [TradeCaptureReportAck](#), [TradeCaptureReportRequest](#)

#### **171.2.5274 TradeMatchAckStatus**

Used to indicate the status of the trade match report submission.

Type: [int](#)

Allowed values in TradeMatchAckStatusCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	ReceivedNotProcessed	Received, not yet processed
1	Accepted	Accepted
2	Rejected	Rejected

---

Used in messages: [TradeMatchReportAck](#)

#### **171.2.5275 TradeMatchRejectReason**

Reason the trade match report submission was rejected.

Type: [int](#)

Allowed values in TradeMatchRejectReasonCodeSet:

Code	Name	Description
0	Successful	Successful
1	InvalidPartyInformation	Invalid party information
2	UnknownInstrument	Unknown instrument
3	Unauthorized	Not authorized to report trades
4	InvalidTradeType	Invalid trade type
99	Other	Other

Used in messages: [TradeMatchReportAck](#)

### **171.2.5276 TradeMatchTimestamp**

Timestamp of the match event. For off-exchange trades the time at which the deal was matched by the exchange.

This timestamp will be the same on all the trades and will not change when a trade is modified.

Type: [UTCTimestamp](#)

Used in messages: [TradeMatchReport](#)

### **171.2.5277 TradeNumber**

Ordinal number of the trade within a series of related trades.

Type: [int](#)

Used in messages: [TradeCaptureReport](#)

### **171.2.5278 TradeOriginationDate**

Used with Fixed Income for Municipal New Issue Market. Agreement in principal between counter-parties prior to actual trade date.

(Note tag # was reserved in FIX 4.1, added in FIX 4.3)

(prior to FIX 4.4 field was of type UTCDate)

Type: [LocalMktDate](#)

Used in groups: [ListOrdGrp](#), [QuotReqGrp](#), [QuotReqRjctGrp](#), [SideCrossOrdCxlGrp](#), [SideCrossOrdModGrp](#)

Used in messages: [AllocationInstruction](#), [AllocationInstructionAlert](#), [AllocationReport](#), [ExecutionReport](#), [ListCancelRequest](#), [MultilegOrderCancelReplace](#), [NewOrderMultileg](#), [NewOrderSingle](#), [OrderCancelReject](#), [OrderCancelReplaceRequest](#)

### 171.2.5279 TradePositionQty

The TradePositionQty component block specifies, for a single trade side, the various types of position quantity in the position life-cycle including start-of-day, intraday, trade, adjustments, and end-of-day position quantities.

Name	Mult.	Type	Description
NoPositions	[1..1]	NumInGroup	
PosType	[0..1]	CodeSet	Required if NoPositions > 0.
LongQty	[0..1]	Qty	
ShortQty	[0..1]	Qty	
CoveredQty	[0..1]	Qty	
PosQtyStatus	[0..1]	CodeSet	
QuantityDate	[0..1]	LocalMktDate	

Used in groups: [TrdCapRptSideGrp](#)

### 171.2.5280 TradePriceCondition

Price conditions in effect at the time of the trade. Multiple price conditions can be in effect at the same time. Price conditions are usually required to be reported in markets that have regulations on price execution at a market or national best bid or offer, and the trade price differs from the best bid or offer.

Type: [int](#)

Allowed values in TradePriceConditionCodeSet:

Code	Name	Description
0	SpecialCumDividend	Special cum dividend (CD)
1	SpecialCumRights	Special cum rights (CR)
2	SpecialExDividend	Special ex dividend (XD)
3	SpecialExRights	Special ex rights (XR)

Code	Name	Description
4	SpecialCumCoupon	Special cum coupon (CC)
5	SpecialCumCapitalRepayments	Special cum capital repayments (CP)
6	SpecialExCoupon	Special ex coupon (XC)
7	SpecialExCapitalRepayments	Special ex capital repayments (XP)
8	CashSettlement	Cash settlement (CS)
9	SpecialCumBonus	Special cum bonus (CB)
10	SpecialPrice	Special price (SP). Usually net or all-in price.
11	SpecialExBonus	Special ex bonus (XB)
12	GuaranteedDelivery	Guaranteed delivery (GD)
13	SpecialDividend	Special dividend. Deviation from regular ex/cum treatment (without further specification) leading to price modification. To be used only if it is not clear whether it is a special cum or special ex dividend. For ESMA RTS 1, this is the "SDIV" flag.
14	PriceImprovement	Price improvement. The price is better than a reference price. For example, this may be due to an offer by a systematic internaliser to always quote better prices than a public reference price. For ESMA RTS 1, this is the "RPRI" flag.
15	NonPriceFormingTrade	Non-price forming trade. In the context of MiFID II, these are transactions which are exempted from the trading obligation (i.e. permitted to be transacted as an OTC transaction) and are deemed not to be contributing to the price discovery process. However, these transactions are not exempted from post trade transparency reporting and are required to be published by MiFID venues and "approved publication arrangement" (APAs) for market transparency purposes. The price from exempted transactions should be disregarded for the purposes of price discovery. For ESMA RTS 1 and RTS 2, this is the "NPFT" flag.
16	TradeExemptedFromTradingObligation	Trade exempted from trading obligation. Per MiFIR Article 23, these types of trades are not exempted from post-trade transparency if reported to a trading venue under MiFID II and deemed on exchange, however, they are ignored for price formation despite published by venue. For the UK implementation of MiFIR RTS 1, this is the "TNCP" flag.
17	PricePending	Price or strike price is pending. In the context of MiFIR RTS 1, RTS 2, and RTS 22, this is the "PNDG" flag.
18	PriceNotApplicable	Price is not applicable. In the context of MiFIR RTS 1, RTS 2, and RTS 22, this is the "NOAP" flag.

Used in groups: [TradePriceConditionGrp](#)

**171.2.5281 TradePriceConditionGrp**

Price conditions associated with a trade that impact trade price.

Name	Mult.	Type	Description
NoTradePriceConditions	[1..1]	NumInGroup	
TradePriceCondition	[0..1]	CodeSet	Required if NoTradePriceConditions(1838) > 0.

Used in groups: [ExecAllocGrp](#), [MDFullGrp](#), [MDIncGrp](#)

Used in messages: [ExecutionReport](#), [TradeCaptureReport](#)

**171.2.5282 TradePriceNegotiationMethod**

Method used for negotiation of contract price.

Type: [int](#)

Allowed values in TradePriceNegotiationMethodCodeSet:

Code	Name	Description
0	PercentPar	Percent of par
1	DealSpread	Deal spread
2	UpfrontPnts	Upfront points
3	UpfrontAmt	Upfront amount
4	ParUpfrontAmt	Percent of par and upfront amount
5	SpreadUpfrontAmt	Deal spread and upfront amount
6	UpfrontPntsAmt	Upfront points and upfront amount

Used in messages: [ExecutionReport](#), [NewOrderMultileg](#), [NewOrderSingle](#), [TradeCaptureReport](#)

**171.2.5283 TradePublishIndicator**

Indicates if a trade should be or has been published via a market publication service. The indicator governs all publication services of the recipient. Replaces PublishTrdIndicator(852).

Type: [int](#)

Allowed values in TradePublishIndicatorCodeSet:

---

Code	Name	Description
0	DoNotPublishTrade	Do Not Publish Trade
1	PublishTrade	Publish Trade
2	DeferredPublication	Deferred Publication
3	Published	Published. Indicates that the transaction has been published to the market.

---

Used in groups: [MDFullGrp](#), [MDIncGrp](#)

Used in messages: [AllocationInstruction](#), [ExecutionReport](#), [MultilegOrderCancelReplace](#), [NewOrderMultileg](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#), [TradeCaptureReport](#), [TradeCaptureReportAck](#)

### 171.2.5284 TradeQty

Trade quantity.

Type: [Qty](#)

Used in groups: [TradeQtyGrp](#)

### 171.2.5285 TradeQtyGrp

Quantities of the trade that have been processed and the type of processing that has occurred for that trade quantity.

---

Name	Mult.	Type	Description
<a href="#">NoTradeQtys</a>	[1..1]	NumInGroup	
<a href="#">TradeQtyType</a>	[0..1]	CodeSet	Required if NoTradeQty(1841) > 0.
<a href="#">TradeQty</a>	[0..1]	Qty	Required if NoTradeQty(1841) > 0.

---

Used in messages: [TradeCaptureReport](#), [TradeCaptureReportAck](#)

### 171.2.5286 TradeQtyType

Indicates the type of trade quantity in TradeQty(1843).

Type: [int](#)

Allowed values in TradeQtyTypeCodeSet:

---

Code	Name	Description
0	ClearedQuantity	Cleared quantity
1	LongSideClaimedQuantity	Long side claimed quantity
2	ShortSideClaimedQuantity	Short side claimed quantity
3	LongSideRejectedQuantity	Long side rejected quantity
4	ShortSideRejectedQuantity	Short side rejected quantity
5	PendingQuantity	Pending quantity
6	TransactionQuantity	Transaction quantity
7	RemainingQuantity	Remaining trade quantity. Used to indicate the remaining quantity of a trade after a give-up or posting action.
8	PreviousRemainingQuantity	Previous remaining trade quantity. Used to indicate the remaining quantity of a trade prior to a give-up or posting action.

---

Used in groups: [TradeQtyGrp](#)

#### **171.2.5287 TradeReportID**

Unique identifier of trade capture report

Type: [String](#)

Used in groups: [TrdCollGrp](#)

Used in messages: [TradeCaptureReport](#), [TradeCaptureReportAck](#), [TradeCaptureReportRequest](#)

#### **171.2.5288 TradeReportingIndicator**

Used between parties to convey trade reporting status.

Type: [int](#)

Allowed values in TradeReportingIndicatorCodeSet:

Code	Name	Description
0	NotReported	Trade has not (yet) been reported. Depending on the regulatory regime the trade is reportable and the recipient may be responsible for reporting.
1	OnBook	Trade has been or will be reported by a trading venue as an "on-book" trade
2	SISeller	Trade has or will be reported as a seller trade by the authorised reporter
3	SIBuyer	Trade has or will be reported as a buyer trade by the authorised reporter
4	NonSISeller	Trade has or will be reported as a seller trade by an entity other than the authorised reporter
5	SubDelegationByFirm	Trade has been or will be reported under a sub-delegation arrangement by an investment firm to a reporting facility (e.g. APA) on behalf of another investment firm
6	Reportable	Trade has been or will be reported. Depending on the regulatory regime the recipient is not responsible for reporting.
7	NonSIBuyer	Trade has been or will be reported as a buyer trade by an entity other than the authorised reporter
8	OffBook	Trade has been or will be reported by a trading venue as an "off-book" trade
9	NotReportable	Trade is not reportable. The (non-equity) instrument does not need to be reported by any party, e.g. because it is not deemed to have been traded on a trading venue.

Used in groups: [ExecAllocGrp](#)

Used in messages: [ExecutionReport](#), [NewOrderSingle](#), [TradeCaptureReport](#)

### 171.2.5289 TradeReportOrderDetail

Name	Mult.	Type	Description
<a href="#">OrderID</a>	[0..1]	String	
<a href="#">SecondaryOrderID</a>	[0..1]	String	
<a href="#">CLOrdID</a>	[0..1]	String	In the case of quotes can be mapped to QuoteMsgID(1166) of a single Quote(MsgType=S) or QuoteID(117) of a MassQuote(MsgType=i).

Name	Mult.	Type	Description
SecondaryClOrdID	[0..1]	String	In the case of quotes can be mapped to QuotID(117) of a single Quote(MsgType=S) or QuoteEntryID(299) of a MassQuote(MsgType=i).
ListID	[0..1]	String	
RefOrderID	[0..1]	String	Some hosts assign an order a new order id under special circumstances. The RefOrdID field will connect the same underlying order across changing OrderIDs.
RefOrderIDSource	[0..1]	CodeSet	
RefOrdIDReason	[0..1]	CodeSet	The reason for updating the RefOrdID
RelatedOrderGrp	[0..*]	Group	
PreTradeAnonymity	[0..1]	Boolean	
OrdType	[0..1]	CodeSet	Order type from the order associated with the trade
Price	[0..1]	Price	Order price at time of trade
StopPx	[0..1]	Price	Stop/Limit order price
ExecInst	[0..1]	CodeSet	Execution Instruction from the order associated with the trade
OrdStatus	[0..1]	CodeSet	Status of order as of this trade report
OrderQtyData	[0..1]	Component	Order quantity at time of trade
LeavesQty	[0..1]	Qty	
CumQty	[0..1]	Qty	
TimeInForce	[0..1]	CodeSet	
ExpireTime	[0..1]	UTCTimestamp	The order expiration date/time in UTC
MatchingInstructions	[0..*]	Group	
SelfMatchPreventionID	[0..1]	String	May be used as an alternative to MatchingInstructions when the identifier does not appear in another field.
SelfMatchPreventionInstruction	[0..1]	CodeSet	
ExposureDuration	[0..1]	int	The (minimum or suggested) period of time a quoted price is to be tradable before it becomes indicative. (i.e. quoted price becomes off-the-wire).
ExposureDurationUnit	[0..1]	CodeSet	
DisplayInstruction	[0..1]	Component	
OrderCapacity	[0..1]	CodeSet	
OrderRestrictions	[0..1]	CodeSet	

Name	Mult.	Type	Description
BookingType	[0..1]	CodeSet	
OrigCustOrderCapacity	[0..1]	CodeSet	
OrderOrigination	[0..1]	CodeSet	
OrderAttributeGrp	[0..*]	Group	
ExDestinationType	[0..1]	CodeSet	
OrderInputDevice	[0..1]	String	
LotType	[0..1]	CodeSet	
TransBkdTime	[0..1]	UTCTimestamp	
OrigOrdModTime	[0..1]	UTCTimestamp

Used in groups: [TrdCapRptAckSideGrp](#), [TrdCapRptSideGrp](#), [TrdMatchSideGrp](#)

### 171.2.5290 TradeReportRefID

Reference identifier used with CANCEL and REPLACE transaction types.

Type: [String](#)

Used in messages: [TradeCaptureReport](#), [TradeCaptureReportAck](#)

### 171.2.5291 TradeReportRejectReason

Reason Trade Capture Request was rejected.

100+ Reserved and available for bi-laterally agreed upon user-defined values.

Type: [int](#)

Allowed values in TradeReportRejectReasonCodeSet:

Code	Name	Description
0	Successful	Successful (default)
1	InvalidPartyInformation	Invalid party information
2	UnknownInstrument	Unknown instrument
3	UnauthorizedToReportTrades	Unauthorized to report trades
4	InvalidTradeType	Invalid trade type

---

Code	Name	Description
5	PriceExceedsCurrentPriceBand	Price exceeds current price band
6	ReferencePriceNotAvailable	Reference price not available
7	NotionalValueExceedsThreshold	Notional value exceeds threshold
99	Other	Other

---

Used in messages: [TradeCaptureReport](#), [TradeCaptureReportAck](#)

### 171.2.5292 TradeReportTransType

Identifies Trade Report message transaction type

(Prior to FIX 4.4 this field was of type char)

Type: [int](#)

Allowed values in TradeReportTransTypeCodeSet:

---

Code	Name	Description
0	New	New
1	Cancel	Cancel
2	Replace	Replace
3	Release	Release
4	Reverse	Reverse
5	CancelDueToBackOutOfTrade	Cancel Due To Back Out of Trade

---

Used in messages: [TradeCaptureReport](#), [TradeCaptureReportAck](#)

### 171.2.5293 TradeReportType

Type of Trade Report

Type: [int](#)

Allowed values in TradeReportTypeCodeSet:

Code	Name	Description
0	Submit	Submit
1	Alleged	Alleged
2	Accept	Accept
3	Decline	Decline
4	Addendum	Addendum. Used to provide material supplemental data to a previously submitted trade.
5	No	No/Was. Used to report a full replacement of a previously submitted trade.
6	TradeReportCancel	Trade Report Cancel
7	LockedIn	(Locked-In) Trade Break
8	Defaulted	Defaulted
9	InvalidCMTA	Invalid CMTA
10	Pended	Pended
11	AllegedNew	Alleged New
12	AllegedAddendum	Alleged Addendum
13	AllegedNo	Alleged No/Was
14	AllegedTradeReportCancel	Alleged Trade Report Cancel
15	AllegedTradeBreak	Alleged (Locked-In) Trade Break
16	Verify	Verify. Used in reports from a trading party to the SDR to confirm trade details. Omit RegulatoryReportType(1934).
17	Dispute	Dispute. Used in reports from a trading party to the SDR to dispute trade details. Omit RegulatoryReportType(1934).
18	NonMaterialUpdate	Non-material Update. Used to provide non-material supplemental data to a previously submitted trade.

---

Used in messages: [TradeCaptureReport](#), [TradeCaptureReportAck](#), [TradeMatchReport](#)

### **171.2.5294 TradeRequestID**

Trade Capture Report Request ID

Type: [String](#)

Used in messages: [TradeCaptureReport](#), [TradeCaptureReportRequest](#), [TradeCaptureReportRequestAck](#)

**171.2.5295 TradeRequestResult**

Result of Trade Request

Type: **int**

Allowed values in TradeRequestResultCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Successful	Successful (default)
1	InvalidOrUnknownInstrument	Invalid or unknown instrument
2	InvalidTypeOfTradeRequested	Invalid type of trade requested
3	InvalidParties	Invalid parties
4	InvalidTransportTypeRequested	Invalid transport type requested
5	InvalidDestinationRequested	Invalid destination requested
8	TradeRequestTypeNotSupported	TradeRequestType not supported
9	NotAuthorized	Not authorized
99	Other	Other

---

Used in messages: **TradeCaptureReportRequestAck**

**171.2.5296 TradeRequestStatus**

Status of Trade Request.

Type: **int**

Allowed values in TradeRequestStatusCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Accepted	Accepted
1	Completed	Completed
2	Rejected	Rejected

---

Used in messages: **TradeCaptureReportRequestAck**

**171.2.5297 TradeRequestType**

Type of Trade Capture Report.

Type: **int**

Allowed values in TradeRequestTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	AllTrades	All Trades
1	MatchedTradesMatchingCriteria	Matched trades matching criteria provided on request (Parties, ExecID, TradeID, OrderID, Instrument, InputSource, etc.)
2	UnmatchedTradesThatMatchCriteria	Unmatched trades that match criteria
3	UnreportedTradesThatMatchCriteria	Unreported trades that match criteria
4	AdvisoriesThatMatchCriteria	Advisories that match criteria

---

Used in messages: **TradeCaptureReportRequest**, **TradeCaptureReportRequestAck**

**171.2.5298 TradeSubType**

Further qualification to the trade type defined in TradeType(3006).

Type: **int**

Allowed values in TrdSubTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	CMTA	CMTA
1	InternalTransferOrAdjustment	Internal transfer or adjustment
2	ExternalTransferOrTransferOfAccount	External transfer or transfer of account
3	RejectForSubmittingSide	Reject for submitting side
4	AdvisoryForContraSide	Advisory for contra side
5	OffsetDueToAnAllocation	Offset due to an allocation
6	OnsetDueToAnAllocation	Onset due to an allocation
7	DifferentialSpread	Differential spread
8	ImpliedSpreadLegExecutedAgainstAnOutright	Implied spread leg executed against an outright
9	TransactionFromExercise	Transaction from exercise

---

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
10	TransactionFromAssignment	Transaction from assignment
11	ACATS	ACATS
14	AI	AI (Automated input facility disabled in response to an exchange request.)
15	B	B (Transaction between two member firms where neither member firm is registered as a market maker in the security in question and neither is a designated fund manager. Also used by broker dealers when dealing with another broker which is not a member firm. Non-order book securities only.)
16	K	K (Transaction using block trade facility.)
17	LC	LC (Correction submitted more than three days after publication of the original trade report.)
18	M	M (Transaction, other than a transaction resulting from a stock swap or stock switch, between two market makers registered in that security including IDB or a public display system trades. Non-order book securities only.)
19	N	N (Non-protected portfolio transaction or a fully disclosed portfolio transaction)
20	NM	NM ( i) transaction where Exchange has granted permission for non-publication. ii)IDB is reporting as seller. iii) submitting a transaction report to the Exchange, where the transaction report is not also a trade report.)
21	NR	NR (Non-risk transaction in a SEATS security other than an AIM security)
22	P	P (Protected portfolio transaction or a worked principal agreement to effect a portfolio transaction which includes order book securities)
23	PA	PA (Protected transaction notification)
24	PC	PC (Contra trade for transaction which took place on a previous day and which was automatically executed on the Exchange trading system)
25	PN	PN (Worked principal notification for a portfolio transaction which includes order book securities)

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
26	R	R ( (i) riskless principal transaction between non-members where the buying and selling transactions are executed at different prices or on different terms (requires a trade report with trade type indicator R for each transaction). (ii) market maker is reporting all the legs of a riskless principal transaction where the buying and selling transactions are executed at different prices (requires a trade report with trade type indicator R for each transaction)or. (iii) market maker is reporting the onward leg of a riskless principal transaction where the legs are executed at different prices, and another market maker has submitted a trade report using trade type indicator M for the first leg (this requires a single trade report with trade type indicator R).)
27	RO	RO (Transaction which resulted from the exercise of a traditional option or a stock-settled covered warrant)
28	RT	RT (Risk transaction in a SEATS security, (excluding AIM security) reported by a market maker registered in that security)
29	SW	SW (Transactions resulting from stock swap or a stock switch (one report is required for each line of stock))
30	T	T (If reporting a single protected transaction)
31	WN	WN (Worked principal notification for a single order book security)
32	WT	WT (Worked principal transaction (other than a portfolio transaction))
33	OffHoursTrade	Off Hours Trade
34	OnHoursTrade	On Hours Trade
35	OTCQuote	OTC Quote
36	ConvertedSWAP	Converted SWAP
37	CrossedTrade	Crossed Trade (X)
38	InterimProtectedTrade	Interim Protected Trade (I)
39	LargeInScale	Large in Scale (L)
40	WashTrade	Wash Trade
41	TradeAtSettlement	Trade at Settlement (TAS). Identifies a trade that will be priced using the settlement price.
42	AuctionTrade	Auction Trade. Mutually exclusive with TrdSubType(829) = 50 (Balancing).

Code	Name	Description
43	TradeAtMarker	Trade at Marker (TAM). Posted at a specific time each day and used to price the consummated trade for the product/month/strip executed (+/- and differentials). Closely related to TAS trades in function and trade practice.
44	CreditDefault	Default (Credit Event)
45	CreditRestructuring	Restructuring (credit event)
46	Merger	Merger (succession event)
47	SpinOff	Spin-off (succession event)
48	MultilateralCompression	Multilateral compression. Used to identify a special case of compression between multiple parties, e.g. for netted or portfolio trades.
50	Balancing	Balancing. Identifies an additional trade distributed to auction participants meant to resolve an imbalance between bids and offers. Mutually exclusive with TrdSubType(829) = 42 =(Auction).
51	BasisTradeIndexClose	Basis Trade index Close (BTIC). The marketplace name given to Trade at Marker (TAM) transactions in equity index futures.
52	TradeAtCashOpen	Trade At Cash Open (TACO). The marketplace name given to trading futures based on an opening quote of the underlying cash market.
53	TrdSubmitVenueClrSettl	Trade submitted to venue for clearing and settlement. Identifies trades brought on a trading venue purely for clearing and settlement purposes.
54	BilateralCompression	Bilateral compression. Used to identify a special case of compression between two parties, e.g. for netted or portfolio trades.

Used in groups: [TradeTypeGrp](#)

### 171.2.5299 TradeType

Type of trade assigned to a trade.

Type: [int](#)

Allowed values in TrdTypeCodeSet:

Code	Name	Description
0	RegularTrade	Regular trade

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	BlockTrade	Block trade
2	EFP	Exchange for physical (EFP)
3	Transfer	Transfer
4	LateTrade	Late trade
5	TTrade	T trade
6	WeightedAveragePriceTrade	Weighted average price trade
7	BunchedTrade	Bunched trade
8	LateBunchedTrade	Late bunched trade
9	PriorReferencePriceTrade	Prior reference price trade
10	AfterHoursTrade	After hours trade
11	ExchangeForRisk	Exchange for risk (EFR)
12	ExchangeForSwap	Exchange for swap (EFS)
13	ExchangeOfFuturesFor	Exchange of futures for in market futures (EFM). For example full sized for mini.
14	ExchangeOfOptionsForOptions	Exchange of options for options (EOO)
15	TradingAtSettlement	Trading at settlement
16	AllOrNone	All or none
17	FuturesLargeOrderExecution	Futures large order execution
18	ExchangeOfFuturesForFutures	Exchange of futures for external market futures (EFF)
19	OptionInterimTrade	Option interim trade
20	OptionCabinetTrade	Option cabinet trade
22	PrivatelyNegotiatedTrades	Privately negotiated trade
23	SubstitutionOfFuturesForForwards	Substitution of futures for forwards
24	ErrorTrade	Error trade
25	SpecialCumDividend	Special cum dividend (CD)
26	SpecialExDividend	Special ex dividend (XD)
27	SpecialCumCoupon	Special cum coupon (CC)
28	SpecialExCoupon	Special ex coupon (XC)
29	CashSettlement	Cash settlement (CS)
30	SpecialPrice	Special price (SP). Usually net or all-in price.
31	GuaranteedDelivery	Guaranteed delivery (GD)
32	SpecialCumRights	Special cum rights (CR)
33	SpecialExRights	Special ex rights (XR)
34	SpecialCumCapitalRepayments	Special cum capital repayments (CP)

Code	Name	Description
35	SpecialExCapitalRepayments	Special ex capital repayments (XP)
36	SpecialCumBonus	Special cum bonus (CB)
37	SpecialExBonus	Special ex bonus (XB)
38	LargeTrade	Block trade. The same as large trade.
39	WorkedPrincipalTrade	Worked principal trade
40	BlockTrades	Block trades
41	NameChange	Name change
42	PortfolioTransfer	Portfolio transfer
43	ProrogationBuy	Prorogation buy. Used by Euronext Paris only. Is used to defer settlement under French SRD (deferred settlement system). Trades must be reported as crosses at zero price.
44	ProrogationSell	Prorogation sell. See prorogation buy.
45	OptionExercise	Option exercise
46	DeltaNeutralTransaction	Delta neutral transaction
47	FinancingTransaction	Financing transaction
48	NonStandardSettlement	Non-standard settlement
49	DerivativeRelatedTransaction	Derivative related transaction
50	PortfolioTrade	Portfolio trade. Identifies a collection/basket of trades. In the context of bonds (e.g. corporate bonds) these are transacted as a single trade at an aggregate price for the entire portfolio and may be traded all-or-none or most-or-none depending on bilateral agreement. In the context of ESMA RTS 1 Article 2(b), may be used to refer to portfolio trades to distinguish between addressable and non-addressable volume. In the context of Market Model Typology (MMT), use of this value applies to SecondaryTrdType(855) or TertiaryTrdType(2896), and when used for MMT market data publication requires MDEntryType(269) = 2 (Trade).
51	VolumeWeightedAverageTrade	Volume weighted average trade
52	ExchangeGrantedTrade	Exchange granted trade
53	RepurchaseAgreement	Repurchase agreement
54	OTC	OTC. Trade executed off-market. In the context of CFTC regulatory reporting for swaps, it is a large notional off-facility swap. In the context of MiFID transparency reporting rules this is used to report, into an exchange, deals made outside exchange rules.
55	ExchangeBasisFacility	Exchange basis facility (EBF)

Code	Name	Description
56	OpeningTrade	Opening trade. Identifies a trade that resulted from the opening of a market. In the context of IIROC, this indicates a trade that occurred at the opening or the first trade of the day for a security.
57	NettedTrade	Netted trade
58	BlockSwapTrade	Block swap trade. Block trade executed off-market or on a registered market. In the context of CFTC regulatory reporting for swaps, it is a swap executed according to SEF or DCM rules.
59	CreditEventTrade	Credit event trade
60	SuccessionEventTrade	Succession event trade
61	GiveUpGiveInTrade	Give-up Give-in trade
62	DarkTrade	Dark trade. In the context of Market Model Typology (MMT), a dark trade might also come from a lit/hybrid book (e.g. when an aggressive lit order hits a resting dark order). The use of this value applies to TrdType(828), and when used for MMT market data publication requires MDEntryType(269) = 2 (Trade).
63	TechnicalTrade	Technical trade
64	Benchmark	Benchmark. In the context of ESMA RTS 1 Article 2(a), may be used to refer to benchmark trades. In the context of Market Model Typology (MMT), the "benchmark" price depends on a benchmark which has no current price but was derived from a time series such as a VWAP. The use of this value applies to SecondaryTrdType(855) or TertiaryTrdType(2896), and when used for MMT market data publication requires MDEntryType(269) = 2 (Trade).
65	PackageTrade	Package trade. May be used to identify the pseudo-trade of a stream or collection of trades to be transacted, cleared and be reported as an atomic unit. In the context of MiFIR RTS 1, this is the "CONT" flag. In the context of MiFIR RTS 2 Article 1(1)(b), may be used to refer to package transactions (excluding exchange for physicals). In the context of Market Model Typology (MMT), use of this value applies to SecondaryTrdType(855) or TertiaryTrdType(2896), and when used for MMT market data publication requires MDEntryType(269) = 2 (Trade).
66	RollTrade	Roll trade. Trade is a roll from one contract that is about to expire to a new contract.

Code	Name	Description
67	ClosingPriceTrade	Closing price trade. Identifies a trade that uses the closing price of a market without resulting from the closing of this market. In the context of FCA policy statement PS23/4, this indicates a benchmark transaction executed using the market closing price and is the "CLSE" flag.
68	InterFundTransferTrade	Inter-fund transfer trade. Administrative trade (non price-forming) related to the transfer of ownership between funds.
69	NetAssetValueCalculatedTrade	Net asset value calculated trade. Trade of a fund priced at the net asset value of its constituents. In the context of MiFIR RTS 1, this may be used for ETFs when the NAV price becomes available.

Used in groups: [TradeTypeGrp](#)

### 171.2.5300 TradeTypeGrp

The TradeTypeGrp component is used to express multiple trade types on the same message and can be used as an alternative to the fields TrdType(828), SecondaryTrdType(855), and TertiaryTrdType(2896) when three or fewer trade types are needed.

Name	Mult.	Type	Description
<a href="#">NoTradeTypes</a>	[1..1]	NumInGroup	
<a href="#">TradeType</a>	[0..1]	CodeSet	Required if NoTradeTypes(3005) > 0.
<a href="#">TradeSubType</a>	[0..1]	CodeSet	

Used in groups: [MDFullGrp](#), [MDIncGrp](#)

Used in messages: [ExecutionReport](#), [TradeCaptureReport](#)

### 171.2.5301 TradeVersion

Specifies the version of a trade or contract. This is used by systems or trading platforms in conjunction with TradeID(1003) to uniquely identify the version of a trade or contract. If used the conditions for a change of version are subject to bilateral agreement. It is recommended to change the version only for significant updates to the business entity rather than for minor changes to trade details or systematic

distribution of reports. Examples where the version would change are trade quantity modification, customer account assignment or trade novation.

Type: **String**

Used in messages: **TradeCaptureReport**

### **171.2.5302 TradeVolType**

Define the type of trade volume applicable for the MinTradeVol(562) and MaxTradeVol(1140)

Type: **int**

Allowed values in TradeVolTypeCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	NumberOfUnits	Number of units (e.g. share, par, currency, contracts) (default)
1	NumberOfRoundLots	Number of round lots

Used in components: **BaseTradingRules**

### **171.2.5303 TradeVolume**

Used to report volume with a trade

Type: **Qty**

Used in groups: **MDFullGrp**, **MDIncGrp**

### **171.2.5304 TradingBusinessDays**

Number of actual trading business days of an instrument.

Type: **int**

Used in groups: **ClearingPriceParametersGrp**

### **171.2.5305 TradingCapacity**

Designates the capacity in which the order is submitted for trading by the market participant.

Type: **int**

Allowed values in TradingCapacityCodeSet:

Code	Name	Description
1	Customer	Customer
2	CustomerProfessional	Customer professional
3	BrokerDealer	Broker-dealer
4	CustomerBrokerDealer	Customer broker-dealer
5	Principal	Principal
6	MarketMaker	Market maker
7	AwayMarketMaker	Away market maker
8	SystematicInternaliser	Systematic internaliser

Used in components: [MDStatisticParameters](#)

Used in messages: [CrossOrderCancelReplaceRequest](#), [ExecutionReport](#), [MassOrder](#), [MassOrderAck](#), [MultilegOrderCancelReplace](#), [NewOrderCross](#), [NewOrderMultileg](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#)

### 171.2.5306 TradingCurrency

Used when the trading currency can differ from the price currency

Type: [Currency](#)

Used in components: [BaseTradingRules](#)

### 171.2.5307 TradingCurrencyCodeSource

Identifies class or source of the TradingCurrency(1245) value.

Type: [String](#)

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)

Code	Name	Description
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in components: [BaseTradingRules](#)

### **171.2.5308 TradingReferencePrice**

Reference price for the current trading price range usually representing the mid price between the HighLimitPrice and LowLimitPrice. The value may be the settlement price or closing price of the prior trading day.

Type: [Price](#)

Used in components: [PriceLimits](#)

### **171.2.5309 TradingSessionDesc**

Trading Session description

Type: [String](#)

Used in groups: [TrdSessLstGrp](#)

### **171.2.5310 TradingSessionID**

Identifier for a trading session.

A trading session spans an extended period of time that can also be expressed informally in terms of the trading day. Usage is determined by market or counterparties.

To specify good for session where session spans more than one calendar day, use TimeInForce = 0 (Day) in conjunction with TradingSessionID(336).

Bilaterally agreed values of data type "String" that start with a character can be used for backward compatibility.

Type: [String](#)

Allowed values in TradingSessionIDCodeSet:

Code	Name	Description
1	Day	Day
2	HalfDay	HalfDay
3	Morning	Morning
4	Afternoon	Afternoon
5	Evening	Evening
6	AfterHours	After-hours
7	Holiday	Holiday

Used in components: [MDStatisticParameters](#)

Used in groups: [BidCompReqGrp](#), [BidCompRspGrp](#), [MDFullGrp](#), [MDIncGrp](#), [QuotEntryAckGrp](#), [QuotEntryGrp](#), [QuotReqGrp](#), [QuotReqRjctGrp](#), [RFQReqGrp](#), [TradingSessionRulesGrp](#), [TrdCapRptAckSideGrp](#), [TrdCapRptSideGrp](#), [TrdSessLstGrp](#), [TrdgSesGrp](#)

Used in messages: [Advertisement](#), [AllocationInstruction](#), [AllocationInstructionAlert](#), [AllocationReport](#), [CollateralAssignment](#), [CollateralInquiry](#), [CollateralInquiryAck](#), [CollateralReport](#), [CollateralRequest](#), [DerivativeSecurityListRequest](#), [ExecutionReport](#), [OrderMassActionReport](#), [OrderMassActionRequest](#), [OrderMassCancelReport](#), [OrderMassCancelRequest](#), [OrderMassStatusRequest](#), [Quote](#), [QuoteCancel](#), [QuoteResponse](#), [QuoteStatusReport](#), [QuoteStatusRequest](#), [SecurityDefinitionRequest](#), [SecurityListRequest](#), [SecurityMassStatus](#), [SecurityMassStatusRequest](#), [SecurityStatus](#), [SecurityStatusRequest](#), [SecurityTypeRequest](#), [SecurityTypes](#), [TradeCaptureReportRequest](#), [TradeMatchReport](#), [TradingSessionListRequest](#), [TradingSessionStatus](#), [TradingSessionStatusRequest](#)

### 171.2.5311 TradingSessionRules

Name	Mult.	Type	Description
<a href="#">OrdTypeRules</a>	[0..*]	Group	Specifies the order types that are valid for trading. The scope of the rule is determined by the context in which the component is used. In this case, the scope is trading session.
<a href="#">TimeInForceRules</a>	[0..*]	Group	Specifies the time in force rules that are valid for trading. The scope of the rule is determined by the context in which the component is used. In this case, the scope is trading session.

Name	Mult.	Type	Description
<a href="#">ExecInstRules</a>	[0..*]	Group	Specifies the execution instructions that are valid for trading. The scope of the rule is determined by the context in which the component is used. In this case, the scope is trading session.
<a href="#">AuctionTypeRuleGrp</a>	[0..*]	Group	Specifies the auction order types that are valid for trading on the identified. The scope of the rule is determined by the context in which the component is used. In this case, the scope is trading session.
<a href="#">MatchRules</a>	[0..*]	Group	Specifies the matching rules that are valid for trading. The scope of the rule is determined by the context in which the component is used. In this case, the scope is trading session.
<a href="#">MarketDataFeedTypes</a>	[0..*]	Group	Specifies the market data feed types that are valid for trading. The scope of the rule is determined by the context in which the component is used. In this case, the scope is trading session.

Used in groups: [TradingSessionRulesGrp](#), [TrdSessLstGrp](#)

### 171.2.5312 TradingSessionRulesGrp

Name	Mult.	Type	Description
<a href="#">NoTradingSessionRules</a>	[1..1]	NumInGroup	Allows trading rules to be expressed by trading session
<a href="#">TradingSessionID</a>	[0..1]	CodeSet	Identifier for the trading session. Must be provided if NoTradingSessions > 0. Set to [N/A] if values are not specific to trading session
<a href="#">TradingSessionSubID</a>	[0..1]	CodeSet	Identifier for the trading session. Set to [N/A] if values are not specific to trading session sub id
<a href="#">TradingSessionRules</a>	[0..1]	Component	Contains trading rules specified at the trading session level

Used in components: [SecurityTradingRules](#)

**171.2.5313 TradingSessionSubID**

Optional market assigned sub identifier for a trading phase within a trading session. Usage is determined by market or counterparties. Used by US based futures markets to identify exchange specific execution time bracket codes as required by US market regulations. Bilaterally agreed values of data type "String" that start with a character can be used for backward compatibility

Type: **String**

Allowed values in TradingSessionSubIDCodeSet:

Code	Name	Description
1	PreTrading	Pre-Trading
2	OpeningOrOpeningAuction	Opening or opening auction
3	Continuous	(Continuous) Trading
4	ClosingOrClosingAuction	Closing or closing auction
5	PostTrading	Post-Trading
6	ScheduledIntradayAuction	Scheduled intraday auction
7	Quiescent	Quiescent
8	AnyAuction	Any auction
9	UnscheduledIntradayAuction	Unscheduled intraday auction. An unscheduled intraday auction might be triggered by a circuit breaker.
10	OutOfMainSessionTrading	Out of main session trading. In the context of Market Model Typology "Out of main session trading" refers to both before and after session, neither auction nor continuous trading.
11	PrivateAuction	Private auction. An auction phase where only two parties participate.
12	PublicAuction	Public auction. An auction phase where all trading parties participate.
13	GroupAuction	Group auction. An auction phase limited to specific parties (e.g. parties that have resting orders in the order book).
14	OrderInitiatedAuction	Order initiated auction. Auction automatically triggered by an order, e.g. an incoming order or a resting order that can be matched based on an incoming order. Use 9="Unscheduled intraday auction" for any other auctions that are not scheduled. In the context of Market Model Topology, this can be used for an on demand auction (a.k.a. frequent batched auction).

Used in components: **MDStatisticParameters**

Used in groups: BidCompReqGrp, BidCompRspGrp, MDFullGrp, MDIncGrp, QuotEntryAckGrp, QuotEntryGrp, QuotReqGrp, QuotReqRjctGrp, RFQReqGrp, TradingSessionRulesGrp, TrdCapRptAckSideGrp, TrdCapRptSideGrp, TrdSessLstGrp, TrdgSesGrp

Used in messages: Advertisement, AllocationInstruction, AllocationInstructionAlert, AllocationReport, CollateralAssignment, CollateralInquiry, CollateralInquiryAck, CollateralReport, CollateralRequest, DerivativeSecurityListRequest, ExecutionReport, OrderMassActionReport, OrderMassActionRequest, OrderMassCancelReport, OrderMassCancelRequest, OrderMassStatusRequest, Quote, QuoteCancel, QuoteResponse, QuoteStatusReport, QuoteStatusRequest, SecurityDefinitionRequest, SecurityListRequest, SecurityMassStatus, SecurityMassStatusRequest, SecurityStatus, SecurityStatusRequest, SecurityTypeRequest, SecurityTypes, TradeCaptureReportRequest, TradeMatchReport, TradingSessionListRequest, TradingSessionStatus, TradingSessionStatusRequest

#### **171.2.5314 TradingUnitPeriodMultiplier**

Indicates the number of contract periods associated with the minimum trading unit for a given contract duration resulting in the number of total traded contracts.

Type: **int**

Used in components: **Instrument**

#### **171.2.5315 TradSesCloseTime**

Closing time of the trading session

Type: **UTCTimestamp**

Used in groups: **TrdSessLstGrp**

Used in messages: **TradingSessionStatus**

#### **171.2.5316 TradSesControl**

Indicates how control of trading session and subsession transitions are performed.

Type: **int**

Allowed values in TradSesControlCodeSet:

---

Code	Name	Description
0	Automatic	Automatic (Default)
1	Manual	Manual

---

Used in messages: [TradingSessionStatus](#)

### **171.2.5317 TradSesEndTime**

End time of the trading session

Type: [UTCTimestamp](#)

Used in groups: [TrdSessLstGrp](#)

Used in messages: [TradingSessionStatus](#)

### **171.2.5318 TradSesEvent**

Identifies an event related to a TradSesStatus(340). An event occurs and is gone, it is not a state that applies for a period of time.

Type: [int](#)

Allowed values in TradSesEventCodeSet:

---

Code	Name	Description
0	TradingResumes	Trading resumes (after Halt)
1	ChangeOfTradingSession	Change of Trading Session
2	ChangeOfTradingSubsession	Change of Trading Subsession
3	ChangeOfTradingStatus	Change of Trading Status

---

Used in messages: [TradingSessionStatus](#)

### **171.2.5319 TradSesMethod**

Method of trading

Type: [int](#)

Allowed values in TradSesMethodCodeSet:

---

Code	Name	Description
1	Electronic	Electronic
2	OpenOutcry	Open Outcry
3	TwoParty	Two Party
4	Voice	Voice

---

Used in components: [MDStatisticParameters](#)

Used in groups: [TrdSessLstGrp](#)

Used in messages: [TradingSessionListRequest](#), [TradingSessionStatus](#), [TradingSessionStatusRequest](#)

### 171.2.5320 TradSesMode

Trading Session Mode

Type: [int](#)

Allowed values in TradSesModeCodeSet:

---

Code	Name	Description
1	Testing	Testing
2	Simulated	Simulated
3	Production	Production

---

Used in groups: [TrdSessLstGrp](#)

Used in messages: [TradingSessionListRequest](#), [TradingSessionStatus](#), [TradingSessionStatusRequest](#)

### 171.2.5321 TradSesOpenTime

Time of the opening of the trading session

Type: [UTCTimestamp](#)

Used in groups: [TrdSessLstGrp](#)

Used in messages: [TradingSessionStatus](#)

**171.2.5322 TradSesPreCloseTime**

Time of the pre-closed of the trading session

Type: **UTCTimestamp**

Used in groups: **TrdSessLstGrp**

Used in messages: **TradingSessionStatus**

**171.2.5323 TradSesReqID**

Unique ID of a Trading Session Status message.

Type: **String**

Used in messages: **TradingSessionList, TradingSessionListRequest, TradingSessionListUpdateReport, TradingSessionStatus, TradingSessionStatusRequest**

**171.2.5324 TradSesStartTime**

Starting time of the trading session

Type: **UTCTimestamp**

Used in groups: **TrdSessLstGrp**

Used in messages: **TradingSessionStatus**

**171.2.5325 TradSesStatus**

State of the trading session.

Type: **int**

Allowed values in TradSesStatusCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Unknown	Unknown
1	Halted	Halted
2	Open	Open
3	Closed	Closed
4	PreOpen	Pre-Open

---

---

Code	Name	Description
5	PreClose	Pre-Close
6	RequestRejected	Request Rejected

---

Used in groups: [TrdSessLstGrp](#)

Used in messages: [TradingSessionStatus](#)

### 171.2.5326 TradSesStatusRejReason

Indicates the reason a Trading Session Status Request was rejected.

Type: [int](#)

Allowed values in TradSesStatusRejReasonCodeSet:

---

Code	Name	Description
1	UnknownOrInvalidTradingSessionID	Unknown or invalid TradingSessionID
99	Other	Other

---

Used in groups: [TrdSessLstGrp](#)

Used in messages: [TradingSessionStatus](#)

### 171.2.5327 TradSesUpdateAction

Specifies the action taken for the specified trading sessions.

Type: [char](#)

Allowed values in SecurityUpdateActionCodeSet:

---

Code	Name	Description
A	Add	Add
D	Delete	Delete
M	Modify	Modify

---

Used in groups: [TrdSessLstGrp](#)

**171.2.5328 TransactionAttributeGrp**

The TransactionAttributeGrp component block is a repeating group that may be used to provide additional transaction attributes for the trade and other post-trade events.

Name	Mult.	Type	Description
NoTransactionAttributes	[1..1]	NumInGroup	
TransactionAttributeType	[0..1]	CodeSet	Required if NoTransactionAttributes(2871) > 0.
TransactionAttributeValue	[0..1]	String	

Used in messages: [CollateralReport](#), [PositionReport](#), [TradeCaptureReport](#)

**171.2.5329 TransactionAttributeType**

Type of attribute(s) or characteristic(s) associated with the transaction.

Type: [int](#)

Allowed values in TransactionAttributeTypeCodeSet:

Code	Name	Description
0	ExclusiveArrangement	Exclusive arrangement. In the context of securities borrowing and lending transaction, an indication of whether the borrower has exclusive access to borrow from the lender's securities portfolio. Not applicable to commodities. TransactionAttributeValue(2873) takes Y or N value.
1	CollateralReuse	Collateral reuse. Indication of whether the collateral taker can reuse the securities provided as collateral for the transaction. TransactionAttributeValue(tbd2873) takes Y or N value.
2	CollateralArrangementType	Collateral arrangement type. In the context of securities financing transactions, indicates the type of collateral arrangement. For EU SFTR reporting, TransactionAttributeValue(2873) may take ESMA assigned values "TTCA" (title transfer), "SICA" (securities financial interest), or "SIUR" (securities financial interest with right of use).

Used in groups: [TransactionAttributeGrp](#)

### **171.2.5330 TransactionAttributeValue**

Value associated with the specified TransactionAttributeType(2872).

Type: **String**

Used in groups: **TransactionAttributeGrp**

### **171.2.5331 TransactionID**

The unique transaction entity identifier.

Type: **String**

Used in messages: **CollateralAssignment, CollateralReport, CollateralResponse**

### **171.2.5332 TransactTime**

Timestamp when the business transaction represented by the message occurred.

Type: **UTCTimestamp**

Used in groups: **ListOrdGrp, MDIncGrp, QuotEntryAckGrp, QuotEntryGrp, QuotReqGrp, QuotReqRjctGrp, SecTypesGrp, TrdCapDtGrp, TrdSessLstGrp**

Used in messages: **AccountSummaryReport, Advertisement, AllocationInstruction, AllocationInstructionAck, AllocationInstructionAlert, AllocationReport, AllocationReportAck, CollateralAssignment, CollateralReport, CollateralReportAck, CollateralRequest, CollateralResponse, Confirmation, ConfirmationAck, ConfirmationRequest, ContraryIntentionReport, CrossOrderCancelReplaceRequest, CrossOrderCancelRequest, DerivativeSecurityList, DerivativeSecurityListUpdateReport, ExecutionReport, IOI, ListCancelRequest, ListExecute, ListStatus, MarginRequirementInquiry, MarginRequirementInquiryAck, MarginRequirementReport, MarketDataReport, MarketDataStatisticsReport, MarketDataStatisticsRequest, MarketDefinition, MarketDefinitionUpdateReport, MassOrder, MassOrderAck, MultilegOrderCancelReplace, NewOrderCross, NewOrderMultileg, NewOrderSingle, OrderCancelReject, OrderCancelReplaceRequest, OrderCancelRequest, OrderMassActionReport, OrderMassActionRequest, OrderMassCancelReport, OrderMassCancelRequest, PartyActionReport, PartyActionRequest, PartyDetailsListReport, PartyDetailsListUpdateReport, PartyEntitlementsReport, PartyEntitlementsUpdateReport, PartyRiskLimitCheckRequest, PartyRiskLimitCheckRequestAck, PartyRiskLimitsReport, PartyRiskLimitsReportAck, PartyRiskLimitsUpdateReport, PayManagementReport, PayManagementRequest, PositionMaintenanceReport, PositionMaintenanceRequest, PositionReport, PositionTransferInstruction, PositionTransferInstructionAck, PositionTransferReport, Quote, QuoteResponse, QuoteStatusReport, RequestForPositions, SecurityDefinition, SecurityDefinitionUpdateReport, SecurityList,**

SecurityListUpdateReport, SecurityMassStatus, SecurityRiskMetricsReport, SecurityStatus, SettlementInstructionRequest, SettlementInstructions, SettlementObligationReport, SettlementStatusReport, SettlementStatusRequest, TradeCaptureReport, TradeCaptureReportAck, TradeMatchReport, TradingSessionStatus

#### **171.2.5333 TransBkdTime**

For CIV A date and time stamp to indicate the time a CIV order was booked by the fund manager.

For derivatives a date and time stamp to indicate when this order was booked with the agent prior to submission to the VMU. Indicates the time at which the order was finalized between the buyer and seller prior to submission.

Type: **UTCTimestamp**

Used in components: **TradeReportOrderDetail**

Used in groups: **MDIncGrp**

Used in messages: **CrossOrderCancelReplaceRequest, ExecutionReport, NewOrderCross**

#### **171.2.5334 TransferID**

The unique identifier assigned to the transfer entity once it is received, for example, by the CCP or the party governing the transfer process. Generally this same identifier for the transfer is used by all parties involved.

Type: **String**

Used in messages: **PositionTransferInstruction, PositionTransferInstructionAck, PositionTransferReport**

#### **171.2.5335 TransferInstructionID**

Unique identifier for the transfer instruction assigned by the submitter.

Type: **String**

Used in messages: **PositionTransferInstruction, PositionTransferInstructionAck, PositionTransferReport**

**171.2.5336 TransferReason**

Reason trade is being transferred

Type: **String**

Used in messages: **TradeCaptureReport**, **TradeCaptureReportAck**, **TradeCaptureReportRequest**

**171.2.5337 TransferRejectReason**

Reason the transfer instruction was rejected.

Type: **int**

Allowed values in TransferRejectReasonCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Success	Success
1	InvalidParty	Invalid party
2	UnknownInstrument	Unknown instrument
3	UnauthorizedToSubmitXfer	Not authorized to submit transfers
4	UnknownPosition	Unknown position
99	Other	Other

---

Used in messages: **PositionTransferInstructionAck**, **PositionTransferReport**

**171.2.5338 TransferReportID**

Unique identifier for the transfer report message.

Type: **String**

Used in messages: **PositionTransferReport**

**171.2.5339 TransferReportType**

Indicates the type of transfer report.

Type: **int**

Allowed values in TransferReportTypeCodeSet:

---

Code	Name	Description
0	Submit	Submit
1	Alleged	Alleged

---

Used in messages: [PositionTransferReport](#)

### 171.2.5340 TransferScope

Indicates the type of transfer.

Type: [int](#)

Allowed values in TransferScopeCodeSet:

---

Code	Name	Description
0	InterFirmTransfer	Inter-firm transfer
1	IntraFirmTransfer	Intra-firm transfer
2	CMTA	Clearing Member Trade Assignment

---

Used in messages: [PositionTransferInstruction](#), [PositionTransferInstructionAck](#), [PositionTransferReport](#)

### 171.2.5341 TransferStatus

Status of the transfer.

Type: [int](#)

Allowed values in TransferStatusCodeSet:

---

Code	Name	Description
0	Received	Received
1	RejectedByIntermediary	Rejected by intermediary
2	AcceptPending	Accept pending
3	Accepted	Accepted
4	Declined	Declined
5	Cancelled	Cancelled

---

Used in messages: [PositionTransferInstructionAck](#), [PositionTransferReport](#)

### 171.2.5342 TransferTransType

Indicates the type of transfer transaction.

Type: [int](#)

Allowed values in TransferTransTypeCodeSet:

Code	Name	Description
0	New	New
1	Replace	Replace
2	Cancel	Cancel

Used in messages: [PositionTransferInstruction](#), [PositionTransferInstructionAck](#), [PositionTransferReport](#)

### 171.2.5343 TransferType

Indicates the type of transfer request.

Type: [int](#)

Allowed values in TransferTypeCodeSet:

Code	Name	Description
0	RequestTransfer	Request transfer
1	AcceptTransfer	Accept transfer
2	DeclineTransfer	Decline transfer

Used in messages: [PositionTransferInstruction](#), [PositionTransferInstructionAck](#)

### 171.2.5344 TrdAckStatus

Used to indicate the status of the trade submission (not the trade report)

Type: [int](#)

Allowed values in TrdAckStatusCodeSet:

Code	Name	Description
0	Accepted	Accepted
1	Rejected	Rejected
2	Received	Received

Used in messages: [TradeCaptureReportAck](#)

### 171.2.5345 TrdAllocGrp

Used in messages: [TradeCaptureReport](#)

### 171.2.5349 TrdCollGrp

Name	Mult.	Type	Description
NoTrades	[1..1]	NumInGroup	Trades for which collateral is required
TradeReportID	[0..1]	String	Required if NoTrades > 0
SecondaryTradeReportID	[0..1]	String	

Used in messages: [CollateralAssignment](#), [CollateralInquiry](#), [CollateralInquiryAck](#), [CollateralReport](#), [CollateralRequest](#), [CollateralResponse](#)

### 171.2.5350 TrdgSesGrp

Name	Mult.	Type	Description
NoTradingSessions	[1..1]	NumInGroup	Specifies the number of repeating TradingSessionIDs
TradingSessionID	[0..1]	CodeSet	Required if NoTradingSessions is > 0.
TradingSessionSubID	[0..1]	CodeSet	

Used in groups: [ListOrdGrp](#)

Used in messages: [CrossOrderCancelReplaceRequest](#), [MarketDataRequest](#), [MultilegOrderCancelReplace](#), [NewOrderCross](#), [NewOrderMultileg](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#), [PositionMaintenanceReport](#), [PositionMaintenanceRequest](#), [RequestForPositions](#)

### 171.2.5351 TrdInstrmtLegExecGrp

The TrdInstrmtLegExecGrp component comprises individual executions for legs of the trade side of a trade match report for a specific instrument.

Name	Mult.	Type	Description
NoLegExecs	[1..1]	NumInGroup	
LegRefID	[0..1]	String	Required if NoLegExecs(1892) > 0.
LegExecID	[0..1]	String	
LegExecRefID	[0..1]	String	
LegTradeID	[0..1]	String	
LegTradeReportID	[0..1]	String	
LegOrderQty	[0..1]	Qty	
LegPositionEffect	[0..1]	CodeSet	Can be used to specify the position effect for the leg if it is different from the position effect of the overall multileg security.
LegCoveredOrUncovered	[0..1]	CodeSet	Can be used to specify whether the option is a cover, if it is different from the overall multileg security.
NestedParties3	[0..*]	Group	
LegLastPx	[0..1]	Price	
LegPriceType	[0..1]	CodeSet	
LegSettlCurrency	[0..1]	Currency	
LegSettlCurrencyCodeSource	[0..1]	CodeSet	
LegShortSaleExemptionReason	[0..1]	CodeSet	
LegLastQty	[0..1]	Qty	
LegQtyType	[0..1]	CodeSet	

Used in groups: [TrdMatchSideGrp](#)

### 171.2.5352 TrdInstrmtLegGrp

Name	Mult.	Type	Description
NoLegs	[1..1]	NumInGroup	
InstrumentLeg	[0..1]	Component	Required if NoLegs(555) > 0.
LegFinancingDetails	[0..1]	Component	
LegPositionAmountData	[0..*]	Group	
LegOrderQty	[0..1]	Qty	Quantity ordered for this leg as provided during order entry.

Name	Mult.	Type	Description
LegQty	[0..1]	Qty	The LegQty(687) field is deprecated. The use of LegOrderQty(685) is recommended instead.
LegMidPx	[0..1]	Price	
LegSwapType	[0..1]	CodeSet	Instead of LegOrderQty(685) requests that the sellside calculate LegOrderQty(685) based on opposite Leg.
LegReportID	[0..1]	String	Additional attribute to store the trade or trade report identifier of the leg.
LegNumber	[0..1]	int	Allow sequencing of legs for a strategy to be captured.
LegStipulations	[0..*]	Group	
LegAccount	[0..1]	String	
LegClearingAccountType	[0..1]	CodeSet	Provide if different from the value specified for the overall multileg security in ClearingAccountType(1816) in the Instrument component.
LegPositionEffect	[0..1]	CodeSet	Provide if different from the value specified for the overall multileg security in PositionEffect(77) in the Instrument component.
LegCoveredOrUncovered	[0..1]	CodeSet	Provide if different from the value specified for the overall multileg security in CoveredOrUncovered(203) in the Instrument component.
NestedParties	[0..*]	Group	
LegRefID	[0..1]	String	Use of LegRefID(654) in this component is deprecated. Recommend the use of LegID(1788) in the InstrumentLeg component.
LegSettlType	[0..1]	CodeSet	
LegSettlDate	[0..1]	LocalMktDate	Takes precedence over a calculated LegSettlType(587) when specified regardless of LegSettlType(587) value. Conditionally required when LegSettlType(587) = B(Broken date).
LegLastPx	[0..1]	Price	Used to report the execution price assigned to the leg of the multileg instrument.
LegPriceType	[0..1]	CodeSet	Indicates the price type provided with each leg of a multi-leg trade
LegSettlCurrency	[0..1]	Currency	
LegSettlCurrencyCodeSource	[0..1]	CodeSet	
LegLastForwardPoints	[0..1]	PriceOffset	

Name	Mult.	Type	Description
LegCalculatedCcyLastQty	[0..1]	Qty	
LegGrossTradeAmt	[0..1]	Amt	For FX Futures can be used to express the notional value of a trade when LegLastQty(1418) and other quantity fields are expressed in terms of number of contracts - LegContractMultiplier(231) is required in this case.
LegShortSaleExemptionReason	[0..1]	CodeSet	Available for optional use when LegSide(624) = 6 (Sell short exempt) in InstrumentLeg component.
LegVolatility	[0..1]	float	
LegDividendYield	[0..1]	Percentage	
LegCurrencyRatio	[0..1]	float	
LegExecInst	[0..1]	CodeSet	
LegLastQty	[0..1]	Qty	Quantity executed for this leg.
LegQtyType	[0..1]	CodeSet	Leg quantity type to be specified at the leg level. Can be different for each leg.
LegLastMultipliedQty	[0..1]	Qty	
LegTotalTradeQty	[0..1]	Qty	
LegTotalTradeMultipliedQty	[0..1]	Qty	
LegTotalGrossTradeAmt	[0..1]	Amt	
TradeCapLegUnderlyingsGrp	[0..*]	Group	
LegDifferentialPrice	[0..1]	PriceOffset	

Used in messages: [TradeCaptureReport](#), [TradeCaptureReportAck](#)

### 171.2.5353 TrdMatchID

Identifier assigned by a matching system to a match event that results in multiple executions or trades.

Type: [String](#)

Used in groups: [ExecAllocGrp](#)

Used in messages: [ExecutionReport](#), [TradeCaptureReport](#), [TradeCaptureReportAck](#), [TradeCaptureReportRequest](#), [TradeMatchReport](#), [TradeMatchReportAck](#)

**171.2.5354 TrdMatchSideGrp**

The TrdMatchSideGrp component conveys all trade sides for a single instance of the InstrmtMatchSideGrp component.

Name	Mult.	Type	Description
NoTrdMatchSides	[1..1]	NumInGroup	
Side	[0..1]	CodeSet	Required if NoTrdMatchSides(1890) > 0.
SideExecID	[0..1]	String	
SideExecRefID	[0..1]	String	
SideTradeID	[0..1]	String	
SideTradeReportID	[0..1]	String	
OrderDelay	[0..1]	int	
OrderDelayUnit	[0..1]	CodeSet	
SideLastQty	[0..1]	Qty	Required if NoTrdMatchSides(1890) > 0. Used to indicate the matched quantity for this trade side as a result of the match event.
SideClearingTradePrice	[0..1]	Price	
SidePriceDifferential	[0..1]	Price	
SideClearingTradePriceType	[0..1]	CodeSet	
SideFillStationCd	[0..1]	String

Used in messages: **ExecutionReport**, **NewOrderSingle**, **TradeCaptureReport**

**171.2.5357 TrdRegPublicationReason**

Additional reason for trade publication type specified in TrdRegPublicationType(2669).

Reasons may be specific to regulatory trade publication rules.

Type: **int**

Allowed values in TrdRegPublicationReasonCodeSet:

Code	Name	Description
0	NoBookOrderDueToAverageSpread-Price	No preceding order in book as transaction price set within average spread of a liquid instrument. Per MiFIR Article 4(1)(b)(i) the obligation to place a public order can be waived for transactions of liquid instruments on "systems that formalise negotiated transactions which are made within the current volume weighted spread reflected on the order book or the quotes of the market makers of the trading venue operating that system, subject to the conditions set out in Article 5" of MiFIR on volume caps. "Liquid markets" as per MiFIR Article 2(17)(b) are assessed by the regulator for the purposes of MiFIR Articles 4, 5 and 14. For ESMA RTS 1, RTS 6 and RTS 22 this is the waiver "NLIQ" flag.
1	NoBookOrderDueToRefPrice	No preceding order in book as transaction price depends on system-set reference price for an illiquid instrument. Per MiFIR Article 4(1)(b)(ii) the obligation to place a public order can be waived for "negotiated transactions which are in an illiquid share, depositary receipt, ETF, certificate or other similar financial instrument that does not fall within the meaning of a liquid market, and are dealt within a percentage of a suitable reference price, being a percentage and a reference price set in advance by the system operator." For ESMA RTS 1, this is the "OILQ" flag.
2	NoBookOrderDueToOtherConditions	No preceding order in book as transaction price is for transaction subject to conditions other than current market price. Per MiFIR Article 4(1)(b)(iii), the obligation to place a public order can be waived in "systems that formalise negotiated transactions which are subject to conditions other than the current market price of that financial instrument." For ESMA RTS1, RTS 6 and RTS 22 this is the waiver flag "PRIC".
3	NoPublicPriceDueToRefPrice	No public price for preceding order as public reference price was used for matching orders. Per MiFIR Article 4(1)(a) the obligation to place a public order can be waived for "systems matching orders based on a trading methodology by which the price of the financial instrument is derived from the trading venue where that financial instrument was first admitted to trading or the most relevant market in terms of liquidity, where that reference price is widely published and is regarded by market participants as a reliable reference price." For ESMA RTS 1, RTS 6 and RTS 22 this is the waiver flag "RFPT".

Code	Name	Description
4	NoPublicPriceDueToIlliquid	No public price quoted as instrument is illiquid. According to MiFIR Article 4(1)(b)(ii) and Article 14(1) the obligation to publish the quote prior to closing the trade may be waived if it was made in an illiquid instrument. However, according to MiFIR Article 14(1) and Article 18(2), systematic internalisers shall still disclose quotes to their clients upon request. This obligation may also be waived in case of bonds, structured finance products, emission allowances and derivatives. For ESMA RTS 1, RTS 2, RTS 6 and RTS 22 this is the waiver flag "ILQD".
5	NoPublicPriceDueToOrderSize	No public price quoted due to "Size". In the context of ESMA, as per MiFIR Article 4(1)(c) and Article 14(2), the systematic internaliser was not obliged to quote prior to closing the trade as the trade was above the standard market size. In accordance to MiFIR Article 9(1)(b) and Article 18(10), market operators, investment firms and systematic internalisers may be waived, in accordance to guidance from the Competent Authorities, from making public prices for derivative instruments which are above a size specific to the instrument. For ESMA RTS 1, RTS 2, RTS 6 and RTS 22 this is the waiver flag "SIZE".
6	DeferralDueToLargeInScale	Deferral due to "Large in Scale". Per MiFID Article 14, publication deferral is permitted if the transaction is large in scale compared to a standard market size, as set in RTS 1/Annex II (thresholds for "large in scale") and RTS 2/Annex III ("LIS and SSTI thresholds"). For ESMA RTS 1 and RTS 2, this is the "LRGS" flag.
7	DeferralDueToIlliquid	Deferral due to "Illiquid Instrument". Publication deferral is permitted if the transaction's instrument is illiquid, as defined by regulator's stipulation. For ESMA RTS 2, this is the "ILQD" flag.
8	DeferralDueToSizeSpecific	Deferral due to "Size Specific". Per MiFIR Article 11, publication deferral is permitted if the transaction is greater than the stipulated 'Size Specific to the financial instrument' threshold. For ESMA RTS 2, this is the "SIZE" flag.
9	NoPublicPriceDueToLargeInScale	No public price and/or size quoted as transaction is "large in scale". In the context of ESMA, as per MiFIR Article 4(1)(c) and Article 9(1)(a), the trading venue was not obliged to quote prior to closing the trade as the order size was above normal market size.

<b>Code</b>	<b>Name</b>	<b>Description</b>
10	NoPublicPriceSizeDueToOrderHidden	No public price and/or size quoted due to order being hidden. In the context of ESMA, as per MiFIR Article 4(1)(d) and Article 9(1)(a), a transaction arising from an order that was not fully pre-trade transparent due to all or part of it being held in a trading venue order management facility, such as a reserve order.
11	ExemptedDueToSecuritiesFinancing-Transaction	Exempted due to securities financing transaction. Per ESMA RTS 22, Annex I, Table 2, Field 65: a transaction which "falls within the scope of activity but is exempted from reporting under Securities Financing Transaction Regulation".
12	ExemptedDueToESCBPolicyTransaction	Exempted due to European System of Central Banks (ESCB) policy transaction. Per ESMA RTS2, Article 14(1), and Article 15(1): "A transaction shall be considered to be entered into by a member of the European System of Central Banks (ESCB) in performance of monetary, foreign exchange and financial stability policy [is exempted from publication] ... [The regulation] shall not apply to the following types of transaction entered into by a member of the ESCB for the performance of one of the tasks referred to in Article 14: transaction entered into for the management of its own funds; transaction entered into for administrative purposes or for the staff of the member of the ESCB which include transactions conducted in the capacity as administrator of a pension scheme for its staff; transactions entered into for its investment portfolio pursuant to obligations under national law."
13	ExceptionDueToReportByPaper	Exception due to report by paper. Incomplete report due to submission by paper (form). In the context of US CAT this is Form T pursuant to FINRA Trade Reporting Rules.
14	ExceptionDueToTradeExecutedWith-NonReportingParty	Exception due to trade with non-reporting party. Incomplete report due to counterparty of the reporting party being absent. In the context of US CAT this is when a trade was executed by a non-FINRA member and reported to the TRF by the FINRA member counterparty.
15	ExceptionDueToIntraFirmOrder	Exception due to intra-firm order. Incomplete report due to intra-firm order filled from firm's proprietary account.

Code	Name	Description
16	ReportedOutsideReportingHours	Reported outside of reporting hours. In the context of ESMA, trades published after the trade reporting facility being used (e.g. APA for trades brought onto a trading venue) closes, will be reported the following business day and not flagged as deferred (as the MiFID deferral regime is not applicable). This value distinguishes these types of trades from trades executed (and published) on the same business day. It is recommended that this value be set by the trade reporting facility, e.g. APAs, (as opposed to publishing investment firms) to ensure the most accurate use of this value.
17	NoPublicPxDueToPreTradeWaiver	No public price quoted due to usage of a pre-trade transparency waiver. Per FCA policy statement PS23/4, this is the "NETW" flag for negotiated trades in accordance to MiFIR Article 4(1)(b).

Used in groups: [TrdRegPublicationGrp](#)

### 171.2.5358 TrdRegPublicationType

Specifies the type of regulatory trade publication.

Additional reasons for the publication type may be specified in [TrdRegPublicationReason\(2670\)](#).

Type: [int](#)

Allowed values in [TrdRegPublicationTypeCodeSet](#):

Code	Name	Description
0	PreTradeTransparencyWaiver	Pre-trade transparency waiver. There are allowable waivers from the obligation to make public current bid/offer prices and trading depth. In the context of MiFIR, see Article 3 and Article 4.
1	PostTradeDeferral	Post-trade deferral. There are allowable deferrals for the post-trade publication of trade transactions. In the context of MiFIR, see Article 7(1).
2	ExemptFromPublication	Exempt from publication. There are allowable exemptions for the post-trade publication of trade transactions. In the context of ESMA exemptions are specified in RTS 22 Annex I, Table 2, Field 65 and RTS 2 Article 14(1) and Article 15(1).

Code	Name	Description
3	OrderLevelPublicationToSubscribers	Order level publication to subscribers. Individual orders are displayed outside of the execution venue but only to subscribers. In the context of US CAT this can be used by Alternative Trading Systems (ATs) to provide additional information related to price distribution.
4	PriceLevelPublicationToSubscribers	Price level publication to subscribers. Aggregated orders are displayed outside of the execution venue but only to subscribers. In the context of US CAT this can be used by Alternative Trading Systems (ATs) to provide additional information related to price distribution.
5	OrderLevelPublicationToThePublic	Order level publication to the public. Individual orders are displayed outside of the execution venue via public quotation. In the context of US CAT this can be used by Alternative Trading Systems (ATs) to provide additional information related to price distribution.
6	PublicationInternalToExecutionVenue	Publication internal to execution venue. Orders are not displayed outside of the execution venue. In the context of US CAT this can be used by Alternative Trading Systems (ATs) to provide additional information related to price distribution.

Used in groups: [TrdRegPublicationGrp](#)

### **171.2.5359 TrdRegTimestamp**

Traded / Regulatory timestamp value. Use to store time information required by government regulators or self regulatory organizations (such as an exchange or clearing house).

Type: [UTCTimestamp](#)

Used in groups: [TrdRegTimestamps](#)

### **171.2.5360 TrdRegTimestampManualIndicator**

Indicates whether a given timestamp was manually captured.

Type: [Boolean](#)

Allowed values in [TrdRegTimestampManualIndicatorCodeSet](#):

Code	Name	Description
N	NotManuallyCaptured	Not manually captured
Y	ManuallyCaptured	Manually captured

Used in groups: [TrdRegTimestamps](#)

### 171.2.5361 TrdRegTimestampOrigin

Text which identifies the "origin" (i.e. system which was used to generate the time stamp) for the Traded / Regulatory timestamp value.

Type: [String](#)

Used in groups: [TrdRegTimestamps](#)

### 171.2.5362 TrdRegTimestamps

The TrdRegTimestamps component block is used to express timestamps for an order or trade that are required by regulatory agencies. These timestamps are used to identify the timeframes for when an order or trade is received on the floor, received and executed by the broker, etc.

Name	Mult.	Type	Description
<a href="#">NoTrdRegTimestamps</a>	[1..1]	NumInGroup	
<a href="#">TrdRegTimestamp</a>	[0..1]	UTCTimestamp	Required if NoTrdRegTimestamps(768) > 0.
<a href="#">TrdRegTimestampType</a>	[0..1]	CodeSet	Required if NoTrdRegTimestamps(768) > 0.
<a href="#">TrdRegTimestampOrigin</a>	[0..1]	String	
<a href="#">TrdRegTimestampManualIndicator</a>	[0..1]	CodeSet	
<a href="#">DeskType</a>	[0..1]	CodeSet	
<a href="#">DeskTypeSource</a>	[0..1]	CodeSet	
<a href="#">DeskOrderHandlingInst</a>	[0..1]	CodeSet	
<a href="#">InformationBarrierID</a>	[0..1]	String	
<a href="#">NBBOEntryType</a>	[0..1]	CodeSet	May be used with TrdRegTimestampType(770)=34 (Reference time for NBBO).
<a href="#">NBBOPrice</a>	[0..1]	Price	May be used with TrdRegTimestampType(770)=34 (Reference time for NBBO).
<a href="#">NBBOQty</a>	[0..1]	Qty	May be used with TrdRegTimestampType(770)=34 (Reference time for NBBO).

Name	Mult.	Type	Description
NBBOSource	[0..1]	CodeSet	May be used with TrdRegTimestampType(770)=34 (Reference time for NBBO).

Used in messages: CollateralAssignment, CollateralInquiry, CollateralReport, CollateralRequest, CollateralResponse, Confirmation, ExecutionReport, MarginRequirementReport, NewOrderSingle, OrderCancelReplaceRequest, PositionReport, Quote, QuoteStatusReport, TradeCaptureReport, TradeCaptureReportAck

### 171.2.5363 TrdRegTimestampType

Trading / Regulatory timestamp type.

Note of applicability: Values are required in various regulatory environments: required for US futures markets to support computerized trade reconstruction, required by MiFID II / MiFIR for transaction reporting and publication, and required by FINRA for reporting to the Consolidated Audit Trail (CAT).

Type: **int**

Allowed values in TrdRegTimestampTypeCodeSet:

Code	Name	Description
1	ExecutionTime	Execution time. Timestamp for the order execution. In the context of US futures markets (CFTC regulated) this is the non-qualified reporting time of order execution.
2	TimeIn	Time in. Timestamp for receiving an order, quote or trade. In the context of US futures markets (CFTC) this is the timestamp of when the order was received on the trading floor (booth).
3	TimeOut	Time out. Timestamp for sending an order, quote or trade. In the context of US futures markets (CFTC) this is the timestamp when the trade was received from the pit.
4	BrokerReceipt	Broker receipt. Timestamp for a broker receiving an order, quote or trade. In the context of US futures markets (CFTC) this is the time at which the broker received the order.
5	BrokerExecution	Broker execution. Timestamp for the broker executing an order. In the context of US futures markets (CFTC regulated) this is the time at which a broker executed the order for another broker.
6	DeskReceipt	Desk receipt. Timestamp for the transmission of an order to an internal desk or department on the same day the firm received the order.

<b>Code</b>	<b>Name</b>	<b>Description</b>
7	SubmissionToClearing	Submission to clearing. The timestamp when the trade was officially acknowledged by the Clearing House.
8	TimePriority	Time priority. A timestamp (manually or electronically) assigned by a market to specify time priority for an order or quote.
9	OrderbookEntryTime	Orderbook entry time. Timestamp for an order representing the time it was entered in the orderbook of the execution venue. The orderbook entry time cannot change during the lifetime of the order.
10	OrderSubmissionTime	Order submission time. Time the order was sent by the submitter.
11	PubliclyReported	Publicly reported. In the context of MiFID II, this is used to identify the time at which the transaction was first published to the market.
12	PublicReportUpdated	Public report updated. In the context of MiFID II, this is used to identify the time at which the transaction's publication to the market was last updated
13	NonPubliclyReported	Non-publicly reported
14	NonPublicReportUpdated	Non-public report updated
15	SubmittedForConfirmation	Submitted for confirmation
16	UpdatedForConfirmation	Updated for confirmation
17	Confirmed	Confirmed
18	UpdatedForClearing	Updated for clearing
19	Cleared	Cleared
20	AllocationsSubmitted	Allocations submitted
21	AllocationsUpdated	Allocations updated
22	AllocationsCompleted	Allocations completed
23	SubmittedToRepository	Submitted to repository
24	PostTrdContntnEvt	Post-trade continuation event
25	PostTradeValuation	Post-trade valuation
26	PreviousTimePriority	Previous time priority. Can be used in conjunction with TrdRegTimestampType(770) = 8 (Time priority) to provide the current and last priority timestamp in a single message.
27	IdentifierAssigned	Identifier assigned. Timestamp for the assignment of a (unique) identifier to an entity (e.g. order, quote, trade).
28	PreviousIdentifierAssigned	Previous identifier assigned. Timestamp of previous assignment of a (unique) identifier to an entity (e.g. order, quote, trade).

Code	Name	Description
29	OrderCancellationTime	Order cancellation time. Timestamp for the cancellation of an order or quote.
30	OrderModificationTime	Order modification time. Timestamp for the modification of an order or quote.
31	OrderRoutingTime	Order routing time. Timestamp for the routing of an order to another broker or electronic execution venue.
32	TradeCancellationTime	Trade cancellation time. Timestamp for the cancellation of an execution (ExecType(150) = H (Trade Cancel)) or trade (TradeReportType(856) = 6 (Trade Report Cancel)).
33	TradeModificationTime	Trade modification time. Timestamp for the modification of an execution (ExecType(150) = G (Trade Correct)) or trade (TradeReportType(856) = 5 (No/Was)).
34	ReferenceTimeForNBBO	Reference time for NBBO. Timestamp for an NBBO reference price.

Used in groups: [TrdRegTimestamps](#)

### 171.2.5364 TrdRepIndicator

Specifies whether the trade should be reported (or not) to parties of the provided TrdRepPartyRole(1388). Used to override standard reporting behavior by the receiver of the trade report and thereby complements the PublTrdIndicator( tag1390).

Type: [Boolean](#)

Used in groups: [TrdRepIndicatorsGrp](#)

### 171.2.5365 TrdRepIndicatorsGrp

Name	Mult.	Type	Description
<a href="#">NoTrdRepIndicators</a>	[1..1]	NumInGroup	Number of trade publication indicators following
<a href="#">TrdRepPartyRole</a>	[0..1]	CodeSet	
<a href="#">TrdRepIndicator</a>	[0..1]	Boolean	

Used in messages: [TradeCaptureReport](#), [TradeCaptureReportAck](#)

**171.2.5366 TrdRepPartyRole**

Identifies the type of party for trade reporting. Same values as PartyRole(452).

Type: **int**

Allowed values in PartyRoleCodeSet:

Code	Name	Description
1	ExecutingFirm	Executing Firm (formerly FIX 4.2 ExecBroker)
2	BrokerOfCredit	Broker of Credit (formerly FIX 4.2 BrokerOfCredit)
3	ClientID	Client ID (formerly FIX 4.2 ClientID)
4	ClearingFirm	Clearing Firm (formerly FIX 4.2 ClearingFirm)
5	InvestorID	Investor ID
6	IntroducingFirm	Introducing Firm
7	EnteringFirm	Entering Firm
8	Locate	Locate / Lending Firm (for short-sales)
9	FundManagerClientID	Fund Manager Client ID (for CIV)
10	SettlementLocation	Settlement Location (formerly FIX 4.2 SettlLocation)
11	OrderOriginationTrader	Order Origination Trader (associated with Order Origination Firm - i.e. trader who initiates/submits the order)
12	ExecutingTrader	Executing Trader (associated with Executing Firm - actually executes)
13	OrderOriginationFirm	Order Origination Firm (e.g. buy-side firm)
14	GiveupClearingFirmDepr	Giveup Clearing Firm (firm to which trade is given up)
15	CorrespondantClearingFirm	Correspondant Clearing Firm
16	ExecutingSystem	Executing System
17	ContraFirm	Contra Firm
18	ContraClearingFirm	Contra Clearing Firm
19	SponsoringFirm	Sponsoring Firm
20	UnderlyingContraFirm	Underlying Contra Firm
21	ClearingOrganization	Clearing Organization
22	Exchange	Exchange. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
24	CustomerAccount	Customer Account
25	CorrespondentClearingOrganization	Correspondent Clearing Organization
26	CorrespondentBroker	Correspondent Broker
27	Buyer	Buyer/Seller (Receiver/Deliverer)

<b>Code</b>	<b>Name</b>	<b>Description</b>
28	Custodian	Custodian
29	Intermediary	Intermediary
30	Agent	Agent
31	SubCustodian	Sub-custodian
32	Beneficiary	Beneficiary
33	InterestedParty	Interested party
34	RegulatoryBody	Regulatory body. In the context of regulatory reporting, this identifies the regulator the trade is being reported to.
35	LiquidityProvider	Liquidity provider
36	EnteringTrader	Entering trader
37	ContraTrader	Contra trader
38	PositionAccount	Position account. The account which positions are maintained. Typically represents the aggregation of one or more customer accounts.
39	ContraInvestorID	Contra Investor ID
40	TransferToFirm	Transfer to Firm
41	ContraPositionAccount	Contra Position Account
42	ContraExchange	Contra Exchange
43	InternalCarryAccount	Internal Carry Account
44	OrderEntryOperatorID	Order Entry Operator ID
45	SecondaryAccountNumber	Secondary Account Number
46	ForeignFirm	Foreign Firm
47	ThirdPartyAllocationFirm	Third Party Allocation Firm
48	ClaimingAccount	Claiming Account
49	AssetManager	Asset Manager
50	PledgorAccount	Pledgor Account
51	PledgeeAccount	Pledgee Account
52	LargeTraderReportableAccount	Large Trader Reportable Account
53	TraderMnemonic	Trader mnemonic
54	SenderLocation	Sender Location
55	SessionID	Session ID
56	AcceptableCounterparty	Acceptable Counterparty
57	UnacceptableCounterparty	Unacceptable Counterparty
58	EnteringUnit	Entering Unit
59	ExecutingUnit	Executing Unit

<b>Code</b>	<b>Name</b>	<b>Description</b>
60	IntroducingBroker	Introducing Broker
61	QuoteOriginator	Quote originator
62	ReportOriginator	Report originator
63	SystematicInternaliser	Systematic internaliser (SI)
64	MultilateralTradingFacility	Multilateral Trading Facility (MTF). Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
65	RegulatedMarket	Regulated Market (RM). Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
66	MarketMaker	Market Maker
67	InvestmentFirm	Investment Firm
68	HostCompetentAuthority	Host Competent Authority (Host CA)
69	HomeCompetentAuthority	Home Competent Authority (Home CA)
70	CompetentAuthorityLiquidity	Competent Authority of the most relevant market in terms of liquidity (CAL)
71	CompetentAuthorityTransactionVenue	Competent Authority of the Transaction (Execution) Venue (CATV)
72	ReportingIntermediary	Reporting intermediary. The medium or vendor used to report to a regulator, non-regulatory agency or data repository.
73	ExecutionVenue	Execution Venue. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
74	MarketDataEntryOriginator	Market data entry originator
75	LocationID	Location ID
76	DeskID	Desk ID
77	MarketDataMarket	Market data market
78	AllocationEntity	Allocation Entity
79	PrimeBroker	Prime Broker providing General Trade Services
80	StepOutFirm	Step-Out Firm (Prime Broker)
81	BrokerClearingID	Broker clearing identifier
82	CentralRegistrationDepository	Central Registration Depository (CRD)
83	ClearingAccount	Clearing Account
84	AcceptableSettlingCounterparty	Acceptable Settling Counterparty
85	UnacceptableSettlingCounterparty	Unacceptable Settling Counterparty
86	CLSMemberBank	CLS Member Bank
87	InConcertGroup	In Concert Group
88	InConcertControllingEntity	In Concert Controlling Entity

<b>Code</b>	<b>Name</b>	<b>Description</b>
89	LargePositionsReportingAccount	Large Positions Reporting Account
90	SettlementFirm	Settlement Firm
91	SettlementAccount	Settlement account. The account to which individual payment obligations are aggregated for netting and funds movement. Typically represents the aggregation of many margin (performance bond) accounts.
92	ReportingMarketCenter	Reporting Market Center
93	RelatedReportingMarketCenter	Related Reporting Market Center
94	AwayMarket	Away Market. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
95	GiveupTradingFirm	Give-up (trading) firm
96	TakeupTradingFirm	Take-up (trading) firm
97	GiveupClearingFirm	Give-up clearing firm
98	TakeupClearingFirm	Take-up clearing firm
99	OriginatingMarket	Originating Market. Identifies the Market using PartyIDSource(tag 447) = G (Market Identifier Code) where an order originated in the event that the order is sent to an alternative market for execution. Serves as an inverse of an away market.
100	MarginAccount	Margin account. Also referred to as "performance bond account". The margin account is the calculated margin requirements. Typically represents the aggregation of one or more position accounts.
101	CollateralAssetAccount	Collateral asset account. The account at which individual collateral assets are maintained. Typically, although not always, one-for-one with the settlement account.
102	DataRepository	Data repository. Multiple instances of this PartyRole may appear for reporting purposes.
103	CalculationAgent	Calculation agent
104	ExerciseNoticeSender	Sender of exercise notice
105	ExerciseNoticeReceiver	Receiver of exercise notice
106	RateReferenceBank	Rate reference bank. The bank providing the reference rate. Multiple instance of this PartyRole may appear.
107	Correspondent	Correspondent
109	BeneficiaryBank	Beneficiary's bank or depository institution. The institution in which the beneficiary, a person or an entity, has their account with. The institution may be a bank or non-bank institution.
110	Borrower	Borrower

Code	Name	Description
111	PrimaryObligator	Primary obligator
112	Guarantor	Guarantor
113	ExcludedReferenceEntity	Excluded reference entity
114	DeterminingParty	Determining party
115	HedgingParty	Hedging party
116	ReportingEntity	Reporting entity. The entity that is reporting the information.
117	SalesPerson	Sales person. The person who is involved in the sales activities for their firm.
118	Operator	Operator. The person who has the capabilities and authorization to take certain actions; for example, setting entitlements, etc.
119	CSD	Central Securities Depository (CSD)
120	ICSD	International Central Securities Depository (ICSD)
121	TradingSubAccount	Trading sub-account. Example of sub-accounts include a clearing account that has multiple trading sub-accounts, a trading account that has multiple trading sub-accounts belonging to different trading firms.
122	InvestmentDecisionMaker	Investment decision maker. In the context of ESMA RTS reporting, this is used to specify party responsible for the investment decision. See RTS 24, Annex, Table 2, Field 4.
123	PublishingIntermediary	Publishing intermediary. The medium or vendor used to publish to the market.
124	CSDParticipant	Central Securities Depository (CSD) Participant. In the context of EU SFTR reporting the identifier of the CSD participant or indirect participant of the reporting counterparty. Where both the CSD participant and indirect participant are involved in the transaction this should identify the indirect participant.
125	Issuer	Issuer. The issuer of the security.
126	ContraCustomerAccount	Contra Customer Account. Same as PartyRole(452) = 24 (Customer Account) but for the counterparty. Can be used whenever the parties component is not nested in a repeating group representing both sides.
127	ContraInvestmentDecisionMaker	Contra Investment Decision Maker. Same as PartyRole(452) = 122 (Investment Decision Maker) but for the counterparty. Can be used whenever the parties component is not nested in a repeating group representing both sides.

Used in groups: [TrdRepIndicatorsGrp](#)

**171.2.5367 TrdRptStatus**

Trade Report Status

Type: **int**

Allowed values in TrdRptStatusCodeSet:

Code	Name	Description
0	Accepted	Accepted
1	Rejected	Rejected
2	Cancelled	Cancelled
3	AcceptedWithErrors	Accepted with errors
4	PendingNew	Pending New
5	PendingCancel	Pending Cancel
6	PendingReplace	Pending Replace
7	Terminated	Terminated
8	PendingVerification	Pending verification. Used in reports from the SDR to the regulator and to trading parties to indicate that the trade details have not been verified by one or both parties.
9	DeemedVerified	Deemed verified. Used in reports from the SDR to the regulator and to trading parties to indicate that the trade details are deemed verified by the SDR but have not been confirmed by the trading parties.
10	Verified	Verified. Used in reports from the SDR to the regulator and to trading parties to indicate that the trade details have been confirmed by the trading parties.
11	Disputed	Disputed. Used in reports from the SDR to the regulator and to trading parties to indicate that the trade details have been disputed by a trading party.

Used in messages: **TradeCaptureReport**, **TradeCaptureReportAck****171.2.5368 TrdSessLstGrp**

Name	Mult.	Type	Description

Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.

Used in messages: [TradingSessionList](#), [TradingSessionListUpdateReport](#)

### 171.2.5369 TrdSubType

Further qualification to the trade type defined in TrdType(828).

Type: **int**

## Allowed values in TrdSubTypeCodeSet:

Code	Name	Description
0	CMTA	CMTA
1	InternalTransferOrAdjustment	Internal transfer or adjustment
2	ExternalTransferOrTransferOfAccount	External transfer or transfer of account
3	RejectForSubmittingSide	Reject for submitting side
4	AdvisoryForContraSide	Advisory for contra side
5	OffsetDueToAnAllocation	Offset due to an allocation
6	OnsetDueToAnAllocation	Onset due to an allocation
7	DifferentialSpread	Differential spread
8	ImpliedSpreadLegExecutedAgainstAnOutright	Implied spread leg executed against an outright
9	TransactionFromExercise	Transaction from exercise
10	TransactionFromAssignment	Transaction from assignment
11	ACATS	ACATS
14	AI	AI (Automated input facility disabled in response to an exchange request.)
15	B	B (Transaction between two member firms where neither member firm is registered as a market maker in the security in question and neither is a designated fund manager. Also used by broker dealers when dealing with another broker which is not a member firm. Non-order book securities only.)
16	K	K (Transaction using block trade facility.)
17	LC	LC (Correction submitted more than three days after publication of the original trade report.)
18	M	M (Transaction, other than a transaction resulting from a stock swap or stock switch, between two market makers registered in that security including IDB or a public display system trades. Non-order book securities only.)
19	N	N (Non-protected portfolio transaction or a fully disclosed portfolio transaction)
20	NM	NM (i) transaction where Exchange has granted permission for non-publication. ii) IDB is reporting as seller. iii) submitting a transaction report to the Exchange, where the transaction report is not also a trade report.)
21	NR	NR (Non-risk transaction in a SEATS security other than an AIM security)

<b>Code</b>	<b>Name</b>	<b>Description</b>
22	P	P (Protected portfolio transaction or a worked principal agreement to effect a portfolio transaction which includes order book securities)
23	PA	PA (Protected transaction notification)
24	PC	PC (Contra trade for transaction which took place on a previous day and which was automatically executed on the Exchange trading system)
25	PN	PN (Worked principal notification for a portfolio transaction which includes order book securities)
26	R	R ( (i) riskless principal transaction between non-members where the buying and selling transactions are executed at different prices or on different terms (requires a trade report with trade type indicator R for each transaction). (ii) market maker is reporting all the legs of a riskless principal transaction where the buying and selling transactions are executed at different prices (requires a trade report with trade type indicator R for each transaction)or. (iii) market maker is reporting the onward leg of a riskless principal transaction where the legs are executed at different prices, and another market maker has submitted a trade report using trade type indicator M for the first leg (this requires a single trade report with trade type indicator R).)
27	RO	RO (Transaction which resulted from the exercise of a traditional option or a stock-settled covered warrant)
28	RT	RT (Risk transaction in a SEATS security, (excluding AIM security) reported by a market maker registered in that security)
29	SW	SW (Transactions resulting from stock swap or a stock switch (one report is required for each line of stock))
30	T	T (If reporting a single protected transaction)
31	WN	WN (Worked principal notification for a single order book security)
32	WT	WT (Worked principal transaction (other than a portfolio transaction))
33	OffHoursTrade	Off Hours Trade
34	OnHoursTrade	On Hours Trade
35	OTCQuote	OTC Quote
36	ConvertedSWAP	Converted SWAP
37	CrossedTrade	Crossed Trade (X)
38	InterimProtectedTrade	Interim Protected Trade (I)

Code	Name	Description
39	LargeInScale	Large in Scale (L)
40	WashTrade	Wash Trade
41	TradeAtSettlement	Trade at Settlement (TAS). Identifies a trade that will be priced using the settlement price.
42	AuctionTrade	Auction Trade. Mutually exclusive with TrdSubType(829) = 50 (Balancing).
43	TradeAtMarker	Trade at Marker (TAM). Posted at a specific time each day and used to price the consummated trade for the product/month/strip executed (+/- and differentials). Closely related to TAS trades in function and trade practice.
44	CreditDefault	Default (Credit Event)
45	CreditRestructuring	Restructuring (credit event)
46	Merger	Merger (succession event)
47	SpinOff	Spin-off (succession event)
48	MultilateralCompression	Multilateral compression. Used to identify a special case of compression between multiple parties, e.g. for netted or portfolio trades.
50	Balancing	Balancing. Identifies an additional trade distributed to auction participants meant to resolve an imbalance between bids and offers. Mutually exclusive with TrdSubType(829) = 42 =(Auction).
51	BasisTradeIndexClose	Basis Trade index Close (BTIC). The marketplace name given to Trade at Marker (TAM) transactions in equity index futures.
52	TradeAtCashOpen	Trade At Cash Open (TACO). The marketplace name given to trading futures based on an opening quote of the underlying cash market.
53	TrdSubmitVenueClrSettl	Trade submitted to venue for clearing and settlement. Identifies trades brought on a trading venue purely for clearing and settlement purposes.
54	BilateralCompression	Bilateral compression. Used to identify a special case of compression between two parties, e.g. for netted or portfolio trades.

Used in groups: **MDFullGrp**, **MDIncGrp**

Used in messages: **AllocationInstruction**, **AllocationInstructionAlert**, **AllocationReport**, **Confirmation**, **ExecutionReport**, **TradeCaptureReport**, **TradeCaptureReportAck**, **TradeCaptureReportRequest**, **TradeMatchReport**

**171.2.5370 TrdType**

Type of trade assigned to a trade. SecondaryTrdType(855) and TertiaryTrdType(2896) may be used in addition to TrdType(828) to assign up to three different trade types to a single trade.

Type: **int**

Allowed values in TrdTypeCodeSet:

Code	Name	Description
0	RegularTrade	Regular trade
1	BlockTrade	Block trade
2	EFP	Exchange for physical (EFP)
3	Transfer	Transfer
4	LateTrade	Late trade
5	TTrade	T trade
6	WeightedAveragePriceTrade	Weighted average price trade
7	BunchedTrade	Bunched trade
8	LateBunchedTrade	Late bunched trade
9	PriorReferencePriceTrade	Prior reference price trade
10	AfterHoursTrade	After hours trade
11	ExchangeForRisk	Exchange for risk (EFR)
12	ExchangeForSwap	Exchange for swap (EFS)
13	ExchangeOfFuturesFor	Exchange of futures for in market futures (EFM). For example full sized for mini.
14	ExchangeOfOptionsForOptions	Exchange of options for options (EOO)
15	TradingAtSettlement	Trading at settlement
16	AllOrNone	All or none
17	FuturesLargeOrderExecution	Futures large order execution
18	ExchangeOfFuturesForFutures	Exchange of futures for external market futures (EFF)
19	OptionInterimTrade	Option interim trade
20	OptionCabinetTrade	Option cabinet trade
22	PrivatelyNegotiatedTrades	Privately negotiated trade
23	SubstitutionOfFuturesForForwards	Substitution of futures for forwards
24	ErrorTrade	Error trade
25	SpecialCumDividend	Special cum dividend (CD)
26	SpecialExDividend	Special ex dividend (XD)
27	SpecialCumCoupon	Special cum coupon (CC)

<b>Code</b>	<b>Name</b>	<b>Description</b>
28	SpecialExCoupon	Special ex coupon (XC)
29	CashSettlement	Cash settlement (CS)
30	SpecialPrice	Special price (SP). Usually net or all-in price.
31	GuaranteedDelivery	Guaranteed delivery (GD)
32	SpecialCumRights	Special cum rights (CR)
33	SpecialExRights	Special ex rights (XR)
34	SpecialCumCapitalRepayments	Special cum capital repayments (CP)
35	SpecialExCapitalRepayments	Special ex capital repayments (XP)
36	SpecialCumBonus	Special cum bonus (CB)
37	SpecialExBonus	Special ex bonus (XB)
38	LargeTrade	Block trade. The same as large trade.
39	WorkedPrincipalTrade	Worked principal trade
40	BlockTrades	Block trades
41	NameChange	Name change
42	PortfolioTransfer	Portfolio transfer
43	ProrogationBuy	Prorogation buy. Used by Euronext Paris only. Is used to defer settlement under French SRD (deferred settlement system). Trades must be reported as crosses at zero price.
44	ProrogationSell	Prorogation sell. See prorogation buy.
45	OptionExercise	Option exercise
46	DeltaNeutralTransaction	Delta neutral transaction
47	FinancingTransaction	Financing transaction
48	NonStandardSettlement	Non-standard settlement
49	DerivativeRelatedTransaction	Derivative related transaction
50	PortfolioTrade	Portfolio trade. Identifies a collection/basket of trades. In the context of bonds (e.g. corporate bonds) these are transacted as a single trade at an aggregate price for the entire portfolio and may be traded all-or-none or most-or-none depending on bilateral agreement. In the context of ESMA RTS 1 Article 2(b), may be used to refer to portfolio trades to distinguish between addressable and non-addressable volume. In the context of Market Model Typology (MMT), use of this value applies to SecondaryTrdType(855) or TertiaryTrdType(2896), and when used for MMT market data publication requires MDEntryType(269) = 2 (Trade).
51	VolumeWeightedAverageTrade	Volume weighted average trade
52	ExchangeGrantedTrade	Exchange granted trade

<b>Code</b>	<b>Name</b>	<b>Description</b>
53	RepurchaseAgreement	Repurchase agreement
54	OTC	OTC. Trade executed off-market. In the context of CFTC regulatory reporting for swaps, it is a large notional off-facility swap. In the context of MiFID transparency reporting rules this is used to report, into an exchange, deals made outside exchange rules.
55	ExchangeBasisFacility	Exchange basis facility (EBF)
56	OpeningTrade	Opening trade. Identifies a trade that resulted from the opening of a market. In the context of IIROC, this indicates a trade that occurred at the opening or the first trade of the day for a security.
57	NettedTrade	Netted trade
58	BlockSwapTrade	Block swap trade. Block trade executed off-market or on a registered market. In the context of CFTC regulatory reporting for swaps, it is a swap executed according to SEF or DCM rules.
59	CreditEventTrade	Credit event trade
60	SuccessionEventTrade	Succession event trade
61	GiveUpGiveInTrade	Give-up Give-in trade
62	DarkTrade	Dark trade. In the context of Market Model Typology (MMT), a dark trade might also come from a lit/hybrid book (e.g. when an aggressive lit order hits a resting dark order). The use of this value applies to TrdType(828), and when used for MMT market data publication requires MDEntryType(269) = 2 (Trade).
63	TechnicalTrade	Technical trade
64	Benchmark	Benchmark. In the context of ESMA RTS 1 Article 2(a), may be used to refer to benchmark trades. In the context of Market Model Typology (MMT), the "benchmark" price depends on a benchmark which has no current price but was derived from a time series such as a VWAP. The use of this value applies to SecondaryTrdType(855) or TertiaryTrdType(2896), and when used for MMT market data publication requires MDEntryType(269) = 2 (Trade).

Code	Name	Description
65	PackageTrade	Package trade. May be used to identify the pseudo-trade of a stream or collection of trades to be transacted, cleared and be reported as an atomic unit. In the context of MiFIR RTS 1, this is the "CONT" flag. In the context of MiFIR RTS 2 Article 1(1)(b), may be used to refer to package transactions (excluding exchange for physicals). In the context of Market Model Typology (MMT), use of this value applies to SecondaryTrdType(855) or TertiaryTrdType(2896), and when used for MMT market data publication requires MDEntryType(269) = 2 (Trade).
66	RollTrade	Roll trade. Trade is a roll from one contract that is about to expire to a new contract.
67	ClosingPriceTrade	Closing price trade. Identifies a trade that uses the closing price of a market without resulting from the closing of this market. In the context of FCA policy statement PS23/4, this indicates a benchmark transaction executed using the market closing price and is the "CLSE" flag.
68	InterFundTransferTrade	Inter-fund transfer trade. Administrative trade (non price-forming) related to the transfer of ownership between funds.
69	NetAssetValueCalculatedTrade	Net asset value calculated trade. Trade of a fund priced at the net asset value of its constituents. In the context of MiFIR RTS 1, this may be used for ETFs when the NAV price becomes available.

### 171.2.5371 TriggerAction

Defines the type of action to take when the trigger hits.

Type: [char](#)

Allowed values in TriggerActionCodeSet:

Code	Name	Description
1	Activate	Activate
2	Modify	Modify
3	Cancel	Cancel

Used in components: [TriggeringInstruction](#)

### 171.2.5372 Triggered

Indicates whether order has been triggered during its lifetime. Applies to cases where original information, e.g. OrdType(40), is modified when the order is triggered.

Type: [int](#)

Allowed values in TriggeredCodeSet:

Code	Name	Description
0	NotTriggered	Not triggered (default)
1	Triggered	Triggered
2	StopOrderTriggered	Stop order triggered
3	OCOOrderTriggered	One Cancels the Other (OCO) order triggered
4	OTOOrderTriggered	One Triggers the Other (OTO) order triggered
5	OOUOrderTriggered	One Updates the Other (OUO) order triggered

Used in messages: [ExecutionReport](#)

### 171.2.5373 TriggeringInstruction

The TriggeringInstruction component block specifies the conditions under which an order will be triggered by related market events as well as the behavior of the order in the market once it is triggered.

Name	Mult.	Type	Description
<a href="#">TriggerType</a>	[0..1]	CodeSet	Required if any other Triggering tags are specified.
<a href="#">TriggerAction</a>	[0..1]	CodeSet	
<a href="#">TriggerScope</a>	[0..1]	CodeSet	Conditionally required when TriggerAction(1101)=3 (Cancel).

Name	Mult.	Type	Description
TriggerPrice	[0..1]	Price	Only relevant and required for TriggerAction = 1
TriggerSymbol	[0..1]	String	Only relevant and required for TriggerAction = 1
TriggerSecurityID	[0..1]	String	Requires TriggerSecurityIDSource if specified. Only relevant and required for TriggerAction = 1
TriggerSecurityIDSource	[0..1]	CodeSet	Requires TriggerSecurityIDSource if specified. Only relevant and required for TriggerAction = 1
TriggerSecurityDesc	[0..1]	String	
TriggerPriceType	[0..1]	CodeSet	Only relevant for TriggerAction = 1
TriggerPriceTypeScope	[0..1]	CodeSet	Only relevant for TriggerAction = 1
TriggerPriceDirection	[0..1]	CodeSet	Only relevant for TriggerAction = 1
TriggerNewPrice	[0..1]	Price	Should be specified if the order changes Price.
TriggerOrderType	[0..1]	CodeSet	Should be specified if the order changes type.
TriggerNewQty	[0..1]	Qty	Required if the order should change quantity
TriggerTradingSessionID	[0..1]	CodeSet	Only relevant and required for TriggerType = 2.
TriggerTradingSessionSubID	[0..1]	CodeSet	Requires TriggerTradingSessionID if specified. Relevant for TriggerType = 2 only.

Used in groups: [ListOrdGrp](#)

Used in messages: [CrossOrderCancelReplaceRequest](#), [ExecutionReport](#), [MultilegOrderCancelReplace](#), [NewOrderCross](#), [NewOrderMultileg](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#)

#### 171.2.5374 TriggerNewPrice

The Price that the order should have after the trigger has hit. Could be applicable for any trigger type, but must be specified for Trigger Type 1.

Type: [Price](#)

Used in components: [TriggeringInstruction](#)

#### 171.2.5375 TriggerNewQty

The Quantity the order should have after the trigger has hit.

Type: [Qty](#)

Used in components: [TriggeringInstruction](#)

**171.2.5376 TriggerOrderType**

The OrdType the order should have after the trigger has hit. Required to express orders that change from Limit to Market. Other values from OrdType (40) may be used if appropriate and bilaterally agreed upon.

Type: **char**

Allowed values in TriggerOrderTypeCodeSet:

---

Code	Name	Description
1	Market	Market
2	Limit	Limit

---

Used in components: **TriggeringInstruction**

**171.2.5377 TriggerPrice**

The price at which the trigger should hit.

Type: **Price**

Used in components: **TriggeringInstruction**

**171.2.5378 TriggerPriceDirection**

The side from which the trigger price is reached.

Type: **char**

Allowed values in TriggerPriceDirectionCodeSet:

---

Code	Name	Description
U	Up	Trigger if the price of the specified type goes UP to or through the specified Trigger Price.
D	Down	Trigger if the price of the specified type goes DOWN to or through the specified Trigger Price.

---

Used in components: **TriggeringInstruction**

**171.2.5379 TriggerPriceType**

The type of price that the trigger is compared to.

Type: **char**

Allowed values in TriggerPriceTypeCodeSet:

---

Code	Name	Description
1	BestOffer	Best Offer
2	LastTrade	Last Trade
3	BestBid	Best Bid
4	BestBidOrLastTrade	Best Bid or Last Trade
5	BestOfferOrLastTrade	Best Offer or Last Trade
6	BestMid	Best Mid

---

Used in components: **TriggeringInstruction**

**171.2.5380 TriggerPriceTypeScope**

Defines the type of price protection the customer requires on their order.

Type: **char**

Allowed values in TriggerPriceTypeScopeCodeSet:

---

Code	Name	Description
0	None	None
1	Local	Local (Exchange, ECN, ATS)
2	National	National (Across all national markets)
3	Global	Global (Across all markets)

---

Used in components: **TriggeringInstruction**

**171.2.5381 TriggerScope**

Defines the scope of TriggerAction(1101) when it is set to "cancel" (3).

Type: **int**

Allowed values in TriggerScopeCodeSet:

Code	Name	Description
0	ThisOrder	This order (default)
1	OtherOrder	Other order (use RefID)
2	AllOtherOrdersForGivenSecurity	All other orders for the given security
3	AllOtherOrdersForGivenSecurityAnd-Price	All other orders for the given security and price
4	AllOtherOrdersForGivenSecurityAnd-Side	All other orders for the given security and side
5	AllOtherOrdersForGivenSecurityPriceAndSide	All other orders for the given security, price and side

Used in components: [TriggeringInstruction](#)

#### **171.2.5382 TriggerSecurityDesc**

Defines the security description of the security whose prices will be tracked by the trigger logic.

Type: [String](#)

Used in components: [TriggeringInstruction](#)

#### **171.2.5383 TriggerSecurityID**

Defines the identity of the security whose prices will be tracked by the trigger logic.

Type: [String](#)

Used in components: [TriggeringInstruction](#)

#### **171.2.5384 TriggerSecurityIDSource**

Defines the identity of the security whose prices will be tracked by the trigger logic. Same values as SecurityIDSource (22).

Type: [String](#)

Allowed values in SecurityIDSourceCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	CUSIP	CUSIP
2	SEDOL	SEDOL
3	QUIK	QUIK
4	ISINNumber	ISIN
5	RICCode	RIC
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
7	ISOCountryCode	ISO Country Code
8	ExchangeSymbol	Exchange symbol
9	ConsolidatedTapeAssociation	Consolidated Tape Association (CTA) Symbol (SIAC CTS/CQS line format)
A	BloombergSymbol	Bloomberg Symbol
B	Wertpapier	Wertpapier
C	Dutch	Dutch
D	Valoren	Valoren
E	Sicovam	Sicovam
F	Belgian	Belgian
G	Common	"Common" (Clearstream and Euroclear)
H	ClearingHouse	Clearing house / Clearing organization
I	ISDAFpMLSpecification	ISDA/FpML product specification (XML in SecurityXML(1185))
J	OptionPriceReportingAuthority	Option Price Reporting Authority
K	ISDAFpMLURL	ISDA/FpML product URL (URL in SecurityID(48))
L	LetterOfCredit	Letter of credit
M	MarketplaceAssignedIdentifier	Marketplace-assigned Identifier
N	MarkitREDEntityCLIP	Markit RED entity CLIP
P	MarkitREDPairCLIP	Markit RED pair CLIP
Q	CFTCCommodityCode	CFTC commodity code
R	ISDACommodityReferencePrice	ISDA Commodity Reference Price
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
T	LegalEntityIdentifier	Legal entity identifier
U	Synthetic	Synthetic. Used to specify that the security identifier is synthetic for linking nested underliers when there is no market identifier for the collection.
V	FidessaInstrumentMnemonic	Fidessa Instrument Mnemonic (FIM)

---

Code	Name	Description
W	IndexName	Index name. Standard name of the index or rate index, e.g. "LIBOR" or "iTraxx Australia".
X	UniformSymbol	Uniform Symbol (UMTF Symbol)
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

---

Used in components: [TriggeringInstruction](#)

### 171.2.5385 TriggerSymbol

Defines the common, 'human understood' representation of the security whose prices will be tracked by the trigger logic.

Type: [String](#)

Used in components: [TriggeringInstruction](#)

### 171.2.5386 TriggerTradingSessionID

Defines the trading session at which the order will be activated.

Type: [String](#)

Allowed values in TradingSessionIDCodeSet:

---

Code	Name	Description
1	Day	Day
2	HalfDay	HalfDay
3	Morning	Morning
4	Afternoon	Afternoon
5	Evening	Evening
6	AfterHours	After-hours
7	Holiday	Holiday

---

Used in components: [TriggeringInstruction](#)

**171.2.5387 TriggerTradingSessionSubID**

Defines the subordinate trading session at which the order will be activated.

Type: **String**

Allowed values in TradingSessionSubIDCodeSet:

Code	Name	Description
1	PreTrading	Pre-Trading
2	OpeningOrOpeningAuction	Opening or opening auction
3	Continuous	(Continuous) Trading
4	ClosingOrClosingAuction	Closing or closing auction
5	PostTrading	Post-Trading
6	ScheduledIntradayAuction	Scheduled intraday auction
7	Quiescent	Quiescent
8	AnyAuction	Any auction
9	UnscheduledIntradayAuction	Unscheduled intraday auction. An unscheduled intraday auction might be triggered by a circuit breaker.
10	OutOfMainSessionTrading	Out of main session trading. In the context of Market Model Typology "Out of main session trading" refers to both before and after session, neither auction nor continuous trading.
11	PrivateAuction	Private auction. An auction phase where only two parties participate.
12	PublicAuction	Public auction. An auction phase where all trading parties participate.
13	GroupAuction	Group auction. An auction phase limited to specific parties (e.g. parties that have resting orders in the order book).
14	OrderInitiatedAuction	Order initiated auction. Auction automatically triggered by an order, e.g. an incoming order or a resting order that can be matched based on an incoming order. Use 9="Unscheduled intraday auction" for any other auctions that are not scheduled. In the context of Market Model Topology, this can be used for an on demand auction (a.k.a. frequent batched auction).

Used in components: **TriggeringInstruction**

**171.2.5388 TriggerType**

Defines when the trigger will hit, i.e. the action specified by the trigger instructions will come into effect.

Type: **char**

Allowed values in TriggerTypeCodeSet:

Code	Name	Description
1	PartialExecution	Partial Execution
2	SpecifiedTradingSession	Specified Trading Session
3	NextAuction	Next Auction
4	PriceMovement	Price Movement
5	OnOrderEntryOrModification	On Order Entry or order modification entry

Used in components: **TriggeringInstruction**

**171.2.5389 TZTransactTime**

Transact time in the local date-time stamp with a TZ offset to UTC identified

Type: **TZTimestamp**

Used in messages: **TradeCaptureReport**

**171.2.5390 UnderlyingAccruedInterestAmt**

Amount of accrued interest of underlying security.

Type: **Amt**

Used in components: **UnderlyingInstrument**

**171.2.5391 UnderlyingAdditionalDividendsIndicator**

Indicates whether additional dividends are applicable.

Type: **Boolean**

Used in components: **UnderlyingDividendConditions**

**171.2.5392 UnderlyingAdditionalTermBondCouponFrequencyPeriod**

Time unit multiplier for the frequency of the bond's coupon payment.

Type: **int**

Used in groups: **UnderlyingAdditionalTermBondRefGrp**

**171.2.5393 UnderlyingAdditionalTermBondCouponFrequencyUnit**

Time unit associated with the frequency of the bond's coupon payment.

Type: **String**

Allowed values in CouponFrequencyUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year
H	Hour	Hour
Min	Minute	Minute
S	Second	Second
T	Term	Term

---

Used in groups: **UnderlyingAdditionalTermBondRefGrp**

**171.2.5394 UnderlyingAdditionalTermBondCouponRate**

Coupon rate of the bond. See also CouponRate(223).

Type: **Percentage**

Used in groups: **UnderlyingAdditionalTermBondRefGrp**

**171.2.5395 UnderlyingAdditionalTermBondCouponType**

Coupon type of the bond.

Type: **int**

Allowed values in CouponTypeCodeSet:

Code	Name	Description
0	Zero	Zero
1	FixedRate	Fixed rate
2	FloatingRate	Floating rate
3	Structured	Structured

Used in groups: [UnderlyingAdditionalTermBondRefGrp](#)

### **171.2.5396 UnderlyingAdditionalTermBondCurrency**

Specifies the currency the bond value is denominated in. Uses ISO 4217 currency codes.

Type: [Currency](#)

Used in groups: [UnderlyingAdditionalTermBondRefGrp](#)

### **171.2.5397 UnderlyingAdditionalTermBondCurrentTotalIssuedAmount**

Total issued amount of the bond.

Type: [Amt](#)

Used in groups: [UnderlyingAdditionalTermBondRefGrp](#)

### **171.2.5398 UnderlyingAdditionalTermBondDayCount**

The day count convention used in interest calculations for a bond or an interest bearing security.

Type: [int](#)

Allowed values in CouponDayCountCodeSet:

Code	Name	Description
0	OneOne	1/1. If parties specify the Day Count Fraction to be 1/1 then in calculating the applicable amount, 1 is simply input into the calculation as the relevant Day Count Fraction. See also 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (a).

Code	Name	Description
1	ThirtyThreeSixtyUS	30/360 (30U/360 or Bond Basis). See also ISO 15022 MICO code 'A001'.
2	ThirtyThreeSixtySIA	30/360 (SIA). A variant of "30/360" - when Date1 and Date2 are both Feb. 28th or 29th convert them to 30th using the same logic in the conversion of 31st to 30th.
3	ThirtyThreeSixtyM	30/360M. Commonly used day count convention for US mortgage backed securities. Feb 28th (or 29th in a leap year) is always considered as a 30th for a start date. As a comparison, in the regular 30/360 day count as used by most US agency and corporate bonds, a start date of Feb 28th (or 29th in a leap year) is still considered as the 28th (or 29th) day of a month of 30 days.
4	ThirtyEThreeSixty	30E/360 (Eurobond Basis). See also ISO 15022 MICO code 'A007'.
5	ThirtyEThreeSixtyISDA	30E/360 (ISDA). Date adjustment rules are: (1) if Date1 is the last day of the month, then change Date1 to 30; (2) if D2 is the last day of the month (unless Date2 is the maturity date and Date2 is in February), then change Date2 to 30. See also 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (h).
6	ActThreeSixty	Act/360. See also ISO 15022 MICO code 'A004'.
7	ActThreeSixtyFiveFixed	Act/365 (FIXED). See also ISO 15022 MICO code 'A005'.
8	ActActAFB	Act/Act (AFB). See also ISO 15022 MICO code 'A010'.
9	ActActICMA	Act/Act (ICMA). See also ISO 15022 MICO code 'A006'.
10	ActActISMAUltimo	Act/Act (ICMA Ultimo). The Act/Act (ICMA Ultimo) differs from Act/Act (ICMA) method only that it assumes that regular coupons always fall on the last day of the month.
11	ActActISDA	Act/Act (ISDA). See also ISO 15022 MICO code 'A008'.
12	BusTwoFiftyTwo	BUS/252. Used for Brazilian Real swaps, which is based on business days instead of calendar days. The number of business days divided by 252.
13	ThirtyEPlusThreeSixty	30E+/360. Variation on 30E/360. Date adjustment rules: (1) If Date1 falls on the 31st, then change it to the 30th; (2) If Date2 falls on the 31st, then change it to 1 and increase Month2 by one, i.e. next month.
14	ActThreeSixtyFiveL	Act/365L. See also ISO 15022 MICO code 'A009'.
15	NLThreeSixtyFive	NL365. See also ISO 15022 MICO code 'A014'.
16	NLThreeSixty	NL360. This is the same as Act/360, with the exception of leap days (29th February) which are ignored.
17	Act364	Act/364. The actual number of days between Date1 and Date2, divided by 364.

<b>Code</b>	<b>Name</b>	<b>Description</b>
18	ThirtyThreeSixtyFive	30/365. Interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and a 365-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31 is assumed to be a 30 and the 28 February (or 29 February for a leap year) is assumed to be a 28 (or 29). See also ISO 15022 MICO code 'A002'.
19	ThirtyActual	30/Actual. Interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and the assumed number of days in a year in a way similar to the Actual/Actual (ICMA). Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31 is assumed to be a 30 and the 28 February (or 29 February for a leap year) is assumed to be a 28 (or 29). The assumed number of days in a year is computed as the actual number of days in the coupon period multiplied by the number of interest payments in the year. See also ISO 15022 MICO code 'A003'.
20	ThirtyThreeSixtyICMA	30/360 (ICMA or basis rule). Interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30 calendar day of the same month, except for February. This means that a 31 is assumed to be a 30 and the 28 February (or 29 February for a leap year) is assumed to be a 28 (or 29). It is the most commonly used 30/360 method for non-US straight and convertible bonds issued before 1 January 1999. See also ISO 15022 MICO code 'A011'.

Code	Name	Description
21	ThirtyETwoThreeSixty	30E2/360 (Eurobond basis model two). Interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for the last day of February whose day of the month value shall be adapted to the value of the first day of the interest period if the latter is higher and if the period is one of a regular schedule. This means that a 31 is assumed to be a 30 and the 28 February of a non-leap year is assumed to be equivalent to a 29 February when the first day of the interest period is a 29, or to a 30 February when the first day of the interest period is a 30 or a 31. The 29 February of a leap year is assumed to be equivalent to a 30 February when the first day of the interest period is a 30 or a 31. Similarly, if the coupon period starts on the last day of February, it is assumed to produce only one day of interest in February as if it was starting on a 30 February when the end of the period is a 30 or a 31, or two days of interest in February when the end of the period is a 29, or three days of interest in February when it is the 28 February of a non-leap year and the end of the period is before the 29. See also ISO 15022 MICO code 'A012'.
22	ThirtyEThreeThreeSixty	30E3/360 (Eurobond basis model three). Interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that a 31 is assumed to be a 30 and the 28 February (or 29 February for a leap year) is assumed to be equivalent to a 30 February. It is a variation of the 30E/360 (or Eurobond basis) method where the last day of February is always assumed to be a 30, even if it is the last day of the maturity coupon period. See also ISO 15022 MICO code 'A013'.
99	Other	Other. For other day count method. See also ISO 15022 MICO code 'OTHR'.

Used in groups: [UnderlyingAdditionalTermBondRefGrp](#)

### 171.2.5399 UnderlyingAdditionalTermBondDesc

Description of the bond.

Type: [String](#)

Used in groups: [UnderlyingAdditionalTermBondRefGrp](#)

**171.2.5400 UnderlyingAdditionalTermBondIssuer**

Issuer of the bond.

Type: **String**

Used in groups: **UnderlyingAdditionalTermBondRefGrp**

**171.2.5401 UnderlyingAdditionalTermBondMaturityDate**

The maturity date of the bond.

Type: **LocalMktDate**

Used in groups: **UnderlyingAdditionalTermBondRefGrp**

**171.2.5402 UnderlyingAdditionalTermBondParValue**

The par value of the bond.

Type: **Amt**

Used in groups: **UnderlyingAdditionalTermBondRefGrp**

**171.2.5403 UnderlyingAdditionalTermBondRefGrp**

The UnderlyingAdditionalTermBondRefGrp is a repeating group subcomponent of the UnderlyingAdditionalTermGrp component used to identify an underlying reference bond for a swap.

---

<b>Name</b>	<b>Mult.</b>	<b>Type</b>	<b>Description</b>
<b>NoUnderlyingAdditionalTermBondRefs</b>	[1..1]	NumInGroup	
<b>UnderlyingAdditionalTermBondSecurityID</b>	[0..1]	String	Required if NoUnderlyingAdditionalTermBondRefs(41340) > 0.
<b>UnderlyingAdditionalTermBondSecurityIDSource</b>	[0..1]	CodeSet	Conditionally required when UnderlyingAdditionalTermBondSecurityID(41341) is specified.
<b>UnderlyingAdditionalTermBondDesc</b>	[0..1]	String	
<b>EncodedUnderlyingAdditionalTermBondDescLen</b>	[0..1]	Length	Must be set if EncodedUnderlyingAdditionalTermBondDesc(41709) field is specified and must immediately precede it.

---

Name	Mult.	Type	Description
EncodedUnderlyingAdditionalTermBondDesc	[0..1]	data	Encoded (non-ASCII characters) representation of the UnderlyingAdditionalTermBondDesc(41709) field in the encoded format specified via the MessageEncoding(347) field.
UnderlyingAdditionalTermBondCurrency	[0..1]	Currency	
UnderlyingAdditionalTermBondIssuer	[0..1]	String	
EncodedUnderlyingAdditionalTermBondIssuerLen	[0..1]	Length	Must be set if EncodedUnderlyingAdditionalTermBondIssuer(42017) field is specified and must immediately precede it.
EncodedUnderlyingAdditionalTermBondIssuer	[0..1]	data	Encoded (non-ASCII characters) representation of the UnderlyingAdditionalTermBondIssuer(42017) field in the encoded format specified via the MessageEncoding(347) field.
UnderlyingAdditionalTermBondSeniority	[0..1]	CodeSet	
UnderlyingAdditionalTermBondCouponType	[0..1]	CodeSet	
UnderlyingAdditionalTermBondCouponRate	[0..1]	Percentage	
UnderlyingAdditionalTermBondMaturityDate	[0..1]	LocalMktDate	
UnderlyingAdditionalTermBondParValue	[0..1]	Amt	
UnderlyingAdditionalTermBondCurrentTotalIssuedAmount	[0..1]	Amt	
UnderlyingAdditionalTermBondCouponFrequencyPeriod	[0..1]	int	Conditionally required when UnderlyingAdditionalTermBondCouponFrequencyUnit(42034) is specified.
UnderlyingAdditionalTermBondCouponFrequencyUnit	[0..1]	CodeSet	Conditionally required when UnderlyingAdditionalTermBondCouponFrequencyPeriod(42033) is specified.
UnderlyingAdditionalTermBondDayCount	[0..1]	CodeSet	

Used in groups: [UnderlyingAdditionalTermGrp](#)

**171.2.5404 UnderlyingAdditionalTermBondSecurityID**

Security identifier of the bond.

Type: **String**

Used in groups: **UnderlyingAdditionalTermBondRefGrp**

**171.2.5405 UnderlyingAdditionalTermBondSecurityIDSource**

Identifies the source scheme of the UnderlyingAdditionalTermBondSecurityID(41341) value.

Type: **String**

Allowed values in SecurityIDSourceCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	CUSIP	CUSIP
2	SEDOL	SEDOL
3	QUIK	QUIK
4	ISINNumber	ISIN
5	RICCode	RIC
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
7	ISOCountryCode	ISO Country Code
8	ExchangeSymbol	Exchange symbol
9	ConsolidatedTapeAssociation	Consolidated Tape Association (CTA) Symbol (SIAC CTS/CQS line format)
A	BloombergSymbol	Bloomberg Symbol
B	Wertpapier	Wertpapier
C	Dutch	Dutch
D	Valoren	Valoren
E	Sicovam	Sicovam
F	Belgian	Belgian
G	Common	"Common" (Clearstream and Euroclear)
H	ClearingHouse	Clearing house / Clearing organization
I	ISDAFpMLSpecification	ISDA/FpML product specification (XML in SecurityXML(1185))
J	OptionPriceReportingAuthority	Option Price Reporting Authority
K	ISDAFpMLURL	ISDA/FpML product URL (URL in SecurityID(48))
L	LetterOfCredit	Letter of credit

---

Code	Name	Description
M	MarketplaceAssignedIdentifier	Marketplace-assigned Identifier
N	MarkitREDEntityCLIP	Markit RED entity CLIP
P	MarkitREDPairCLIP	Markit RED pair CLIP
Q	CFTCCommodityCode	CFTC commodity code
R	ISDACommodityReferencePrice	ISDA Commodity Reference Price
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
T	LegalEntityIdentifier	Legal entity identifier
U	Synthetic	Synthetic. Used to specify that the security identifier is synthetic for linking nested underliers when there is no market identifier for the collection.
V	FidessaInstrumentMnemonic	Fidessa Instrument Mnemonic (FIM)
W	IndexName	Index name. Standard name of the index or rate index, e.g. "LIBOR" or "iTraxx Australia".
X	UniformSymbol	Uniform Symbol (UMTF Symbol)
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in groups: [UnderlyingAdditionalTermBondRefGrp](#)

### 171.2.5406 UnderlyingAdditionalTermBondSeniority

Specifies the bond's payment priority in the event of a default.

Type: [String](#)

Allowed values in SeniorityCodeSet:

Code	Name	Description
SD	SeniorSecured	Senior Secured
SR	Senior	Senior
SB	Subordinated	Subordinated
JR	Junior	Junior. In the context of MiFID II this value is used as identified in RTS 23 Annex I Table 3 Field 23 "Seniority of the bond".
MZ	Mezzanine	Mezzanine. In the context of MiFID II this value is used as identified in RTS 23 Annex I Table 3 Field 23 "Seniority of the bond".

Code	Name	Description
SN	SeniorNonPreferred	Senior Non-Preferred. For CDS reference obligations of non-preferred senior debt issued by European Financials that constitute a layer of debt ranking between the bank's normal senior debt but above the bank's normal tier 2 subordinated debt (reference: ISDA Credit Market Infrastructure Group).

Used in groups: [UnderlyingAdditionalTermBondRefGrp](#)

### 171.2.5407 UnderlyingAdditionalTermConditionPrecedentBondIndicator

Indicates whether the condition precedent bond is applicable. The swap contract is only valid if the bond is issued and if there is any dispute over the terms of fixed stream then the bond terms would be used.

Type: [Boolean](#)

Used in groups: [UnderlyingAdditionalTermGrp](#)

### 171.2.5408 UnderlyingAdditionalTermDiscrepancyClauseIndicator

Indicates whether the discrepancy clause is applicable.

Type: [Boolean](#)

Used in groups: [UnderlyingAdditionalTermGrp](#)

### 171.2.5409 UnderlyingAdditionalTermGrp

The UnderlyingAdditionalTermGrp is a repeating subcomponent of the UnderlyingInstrument component used to report additional contract terms.

Name	Mult.	Type	Description
<a href="#">NoUnderlyingAdditionalTerms</a>	[1..1]	NumInGroup	
<a href="#">UnderlyingAdditionalTermCondition-PrecedentBondIndicator</a>	[0..1]	Boolean	Required if NoUnderlyingAdditionalTerms(42036) > 0.
<a href="#">UnderlyingAdditionalTermDiscrepancyClauseIndicator</a>	[0..1]	Boolean	
<a href="#">UnderlyingAdditionalTermBondRefGrp</a>	[0..*]	Group	

---

Name	Mult.	Type	Description
------	-------	------	-------------

---

Used in components: [UnderlyingInstrument](#)

#### **171.2.5410 UnderlyingAdjustedQuantity**

Unit amount of the underlying security (shares) adjusted for pending corporate action not yet allocated.

Type: [Qty](#)

Used in components: [UnderlyingInstrument](#)

#### **171.2.5411 UnderlyingAllDividendsIndicator**

Represents the European Master Confirmation value of 'All Dividends' which, when applicable, signifies that, for a given Ex-Date, the daily observed share price for that day is adjusted (reduced) by the cash dividend and/or the cash value of any non-cash dividend per share (including extraordinary dividends) declared by the issuer.

Type: [Boolean](#)

Used in components: [UnderlyingDividendConditions](#)

#### **171.2.5412 UnderlyingAllocationPercent**

Percent of the Strike Price that this underlying represents.

Type: [Percentage](#)

Used in components: [UnderlyingInstrument](#)

#### **171.2.5413 UnderlyingAmount**

The UnderlyingAmount component block is used to supply the underlying amounts, dates, settlement status and method for derivative positions.

Name	Mult.	Type	Description
NoUnderlyingAmounts	[1..1]	NumInGroup	
UnderlyingPayAmount	[0..1]	Amt	Amount to pay in order to receive the underlying instrument.
UnderlyingCollectAmount	[0..1]	Amt	Amount to collect in order to deliver the underlying instrument.
UnderlyingSettlementDate	[0..1]	LocalMktDate	Date the underlying instrument will settle. Used for derivatives that deliver into more than one underlying instrument. Settlement dates can vary across underlying instruments.
UnderlyingSettlementStatus	[0..1]	String	Settlement status of the underlying instrument. Used for derivatives that deliver into more than one underlying instrument. Settlement can be delayed for an underlying instrument.

Used in groups: [PosUndInstrmtGrp](#)

#### 171.2.5414 UnderlyingAssetAttributeGrp

The UnderlyingAssetAttributeGrp is a repeating subcomponent of the UnderlyingInstrument component used to detail attributes of the instrument asset.

Name	Mult.	Type	Description
NoUnderlyingAssetAttributes	[1..1]	NumInGroup	
UnderlyingAssetAttributeType	[0..1]	String	Required if NoUnderlyingAssetAttributes(2312) > 0.
UnderlyingAssetAttributeValue	[0..1]	String	
UnderlyingAssetAttributeLimit	[0..1]	String	

Used in components: [UnderlyingInstrument](#)

#### 171.2.5415 UnderlyingAssetAttributeLimit

Limit or lower acceptable value of the attribute.

Type: [String](#)

Used in groups: [UnderlyingAssetAttributeGrp](#)

**171.2.5416 UnderlyingAssetAttributeType**

Specifies the name of the attribute.

See [http://www.fixtradingcommunity.org/codelists#Asset\\_Attribute\\_Types](http://www.fixtradingcommunity.org/codelists#Asset_Attribute_Types) for code list of applicable asset attribute types.

Type: **String**

Used in groups: **UnderlyingAssetAttributeGrp**

**171.2.5417 UnderlyingAssetAttributeValue**

Specifies the value of the attribute.

Type: **String**

Used in groups: **UnderlyingAssetAttributeGrp**

**171.2.5418 UnderlyingAssetClass**

The broad asset category for assessing risk exposure.

Type: **int**

Allowed values in AssetClassCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	InterestRate	Interest rate
2	Currency	Currency
3	Credit	Credit
4	Equity	Equity
5	Commodity	Commodity
6	Other	Other
7	Cash	Cash
8	Debt	Debt
9	Fund	Fund. Such as mutual fund, collective investment vehicle, investment program, specialized account program.
10	LoanFacility	Loan facility
11	Index	Index. A main index identified as a security type, for example under EU SFTR reporting.

---

Used in components: [UnderlyingInstrument](#)

### 171.2.5419 UnderlyingAssetGroup

Indicates the broad product or asset classification. May be used to provide grouping for the product taxonomy (Product(460), SecurityType(167), etc.) and/or the risk taxonomy (AssetClass(1938), AssetSubClass(1939), AssetType(1940), etc.).

Type: [int](#)

Allowed values in AssetGroupCodeSet:

---

Code	Name	Description
1	Financials	Financials. A categorization which usually includes rates, foreign exchange, credit, bonds and equity products or assets.
2	Commodities	Commodities. A categorization which usually includes hard commodities such as agricultural, metals, freight, energy products or assets.
3	AlternativeInvestments	Alternative investments. A categorization which usually includes weather, housing, and commodity indices products or assets.

---

Used in components: [UnderlyingInstrument](#)

### 171.2.5420 UnderlyingAssetSubClass

An indication of the general description of the asset class.

Type: [int](#)

Allowed values in AssetSubClassCodeSet:

---

Code	Name	Description
1	SingleCurrency	Single currency
2	CrossCurrency	Cross currency
3	Basket	Basket [for multi-currency]
4	SingleName	Single name
5	CreditIndex	Credit index
6	IndexTranche	Index tranche

---

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
7	CreditBasket	Credit basket
8	Exotic	Exotic
9	Common	Common
10	Preferred	Preferred
11	EquityIndex	Equity index
12	EquityBasket	Equity basket
13	Metals	Metals
14	Bullion	Bullion
15	Energy	Energy
16	CommodityIndex	Commodity index
17	Agricultural	Agricultural
18	Environmental	Environmental
19	Freight	Freight
20	Government	Government
21	Agency	Agency
22	Corporate	Corporate
23	Financing	Financing
24	MoneyMarket	Money market
25	Mortgage	Mortgage
26	Municipal	Municipal
27	MutualFund	Mutual fund
28	CollectiveInvestmentVehicle	Collective investment vehicle
29	InvestmentProgram	Investment program. A generalized fund for major investors.
30	SpecializedAccountProgram	Specialized account program. A specialized fund setup for a particular account or group of accounts.
31	TermLoan	Term loan
32	BridgeLoan	Bridge loan
33	LetterOfCredit	Letter of credit
34	DividendIndex	Dividend index
35	StockDividend	Stock dividend
36	ExchangeTradedFund	Exchange traded fund
37	VolatilityIndex	Volatility index
38	FXCrossRates	FX cross rates
39	FXEmergingMarkets	FX emerging markets

---

Code	Name	Description
40	FXMajors	FX Majors
41	Fertilizer	Fertilizer
42	IndustrialProduct	Industrial product
43	Inflation	Inflation
44	Paper	Paper
45	Polypropylene	Polypropylene
46	OfficialEconomicStatistics	Official economic statistics
47	OtherC10	Other C10. Defined under MiFID II (Directive 2014/65/EU) Section C(10) of Annex I and paraphrased in ESMA RTS 2 Annex III Section 10, "Other C10" is a financial instrument "which is not a 'Freight derivative', any of the following interest rate derivatives sub-asset classes: 'Inflation multi-currency swap or cross-currency swap', a 'Future/forward on inflation multi-currency swaps or cross-currency swaps', an 'Inflation single currency swap', a 'Future/forward on inflation single currency swap' and any of the following equity derivatives sub-asset classes: a 'Volatility index option', a 'Volatility index future/forward', a swap with parameter return variance, a swap with parameter return volatility, a portfolio swap with parameter return variance, a portfolio swap with parameter return volatility".
48	Other	Other. May be used with any AssetClass(1938) values.

Used in components: [UnderlyingInstrument](#)

#### 171.2.5421 UnderlyingAssetSubType

Used to provide a more specific description of the asset specified in UnderlyingAssetType(2015).

See <https://www.fixtrading.org/codelists/AssetSubType> for code list of applicable values.

Type: [String](#)

Used in components: [UnderlyingInstrument](#)

#### 171.2.5422 UnderlyingAssetType

Used to provide more specific description of the asset specified in UnderlyingAssetSubClass(2082).

See <https://www.fixtrading.org/codelists/AssetType> for code list of applicable values. ISO 4721 Currency Code values are to be used when specific currency as an asset type is to be expressed.

Other values may be used by mutual agreement of the counterparties.

Type: **String**

Used in components: **UnderlyingInstrument**

### **171.2.5423 UnderlyingAssignmentMethod**

Method under which assignment was conducted

Type: **char**

Allowed values in InstrmtAssignmentMethodCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
P	ProRata	Pro rata
R	Random	Random

Used in components: **UnderlyingInstrument**

### **171.2.5424 UnderlyingAttachmentPoint**

See AttachmentPoint(1457).

Type: **Percentage**

Used in components: **UnderlyingInstrument**

### **171.2.5425 UnderlyingAutomaticExerciseIndicator**

Indicates (when 'Y') that exercise is automatic when the strike price is crossed or the underlying trade is in the money.

Type: **Boolean**

Used in components: **UnderlyingOptionExercise**

#### **171.2.5426 UnderlyingAutomaticExerciseThresholdRate**

The threshold rate for triggering automatic exercise.

Type: **float**

Used in components: **UnderlyingOptionExercise**

#### **171.2.5427 UnderlyingAverageVolumeLimitationPercentage**

The limit of average percentage of individual securities traded in a day or a number of days.

Type: **Amt**

Used in components: **UnderlyingInstrument**

#### **171.2.5428 UnderlyingAverageVolumeLimitationPeriodDays**

Specifies the limitation period for average daily trading volume in number of days.

Type: **int**

Used in components: **UnderlyingInstrument**

#### **171.2.5429 UnderlyingBasketDivisor**

Specifies the basket divisor amount. This value is normally used to adjust the constituent weight for pricing or to adjust for dividends, or other corporate actions.

Type: **float**

Used in components: **UnderlyingInstrument**

#### **171.2.5430 UnderlyingBidPx**

Bid price of the underlying instrument.

Type: **Price**

Used in messages: **SecurityRiskMetricsReport**

**171.2.5431 UnderlyingBusinessCenter**

A business center whose calendar is used for date adjustment, e.g. "GBLO". See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **UnderlyingBusinessCenterGrp**

**171.2.5432 UnderlyingBusinessCenterGrp**

UnderlyingBusinessCenterGrp is a repeating subcomponent within the UnderlyingDateAdjustment component. It is used to specify the set of business centers whose calendars drive the date adjustment. The business centers defined here apply to all adjustable dates in the instrument unless specifically overridden.

Name	Mult.	Type	Description
<b>NoUnderlyingBusinessCenters</b>	[1..1]	NumInGroup	
<b>UnderlyingBusinessCenter</b>	[0..1]	String	Required if NoUnderlyingBusinessCenters(40962) > 0.

Used in components: **UnderlyingDateAdjustment**

**171.2.5433 UnderlyingBusinessDayConvention**

The business day convention used for adjusting dates. The value defined here applies to all adjustable dates in the underlying instrument unless specifically overridden.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.

---

Code	Name	Description
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

---

Used in components: [UnderlyingDateAdjustment](#)

#### **171.2.5434 UnderlyingCapPrice**

Used to express the ceiling price of a capped call.

Type: [Price](#)

Used in components: [UnderlyingInstrument](#)

#### **171.2.5435 UnderlyingCapValue**

Maximum notional value for a capped financial instrument

Type: [Amt](#)

Used in components: [UnderlyingInstrument](#)

#### **171.2.5436 UnderlyingCashAmount**

Cash amount associated with the underlying component.

Type: [Amt](#)

Used in components: [UnderlyingInstrument](#)

#### **171.2.5437 UnderlyingCashSettlAccruedInterestIndicator**

Indicates whether accrued interest is included or not in the value provided in UnderlyingCashSettlAmount(42054).

For cash settlement this specifies whether quotations should be obtained inclusive or not of accrued interest.

For physical settlement this specifies whether the buyer should deliver the obligation with an outstanding principal balance that includes or excludes accrued interest.

Type: **Boolean**

Used in groups: **UnderlyingCashSettlTermGrp**

#### **171.2.5438 UnderlyingCashSettlAmount**

The amount paid between the trade parties, seller to the buyer, for cash settlement on the cash settlement date.

Type: **Amt**

Used in groups: **UnderlyingCashSettlTermGrp**

#### **171.2.5439 UnderlyingCashSettlBusinessCenter**

Identifies the business center calendar used at valuation time for cash settlement purposes e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **UnderlyingCashSettlTermGrp**

#### **171.2.5440 UnderlyingCashSettlBusinessDays**

The number of business days used in the determination of the cash settlement payment date.

Type: **int**

Used in groups: **UnderlyingCashSettlTermGrp**

#### **171.2.5441 UnderlyingCashSettlCurrency**

Specifies the currency the UnderlyingCashSettlAmount(42054) is denominated in. Uses ISO 4217 currency codes.

Type: **Currency**

Used in groups: **UnderlyingCashSettlTermGrp**

**171.2.5442 UnderlyingCashSettlDateAdjusted**

The adjusted cash settlement date.

Type: [LocalMktDate](#)

Used in components: [UnderlyingCashSettlDate](#)

**171.2.5443 UnderlyingCashSettlDateBusinessCenter**

The business center calendar used for date adjustment of the cash settlement unadjusted or relative date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in groups: [UnderlyingCashSettlDateBusinessCenterGrp](#)

**171.2.5444 UnderlyingCashSettlDateBusinessCenterGrp**

[UnderlyingCashSettlDateBusinessCenterGrp](#) is a repeating subcomponent within the [UnderlyingCashSettlDate](#) component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the [DateAdjustment](#) component in [Instrument](#).

Name	Mult.	Type	Description
<a href="#">NoUnderlyingCashSettlDateBusinessCenters</a>	[1..1]	NumInGroup	
<a href="#">UnderlyingCashSettlDateBusinessCenter</a>	[0..1]	String	Required if <a href="#">NoUnderlyingCashSettlDateBusinessCenters</a> (42788) > 0.

Used in components: [UnderlyingCashSettlDate](#)

**171.2.5445 UnderlyingCashSettlDateBusinessDayConvention**

The business day convention used to adjust the cash settlement provision's date. Used only to override the business day convention defined in the [UnderlyingInstrument](#) component.

Type: [int](#)

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [UnderlyingCashSettlDate](#)

### 171.2.5446 UnderlyingCashSettlDate

The UnderlyingCashSettlDate component is a subcomponent within the UnderlyingCashSettlTermGrp component used to report the cash settlement date defined in the settlement provision.

Name	Mult.	Type	Description
<a href="#">UnderlyingCashSettlDateUnadjusted</a>	[0..1]	LocalMktDate	
<a href="#">UnderlyingCashSettlDateBusinessDay-Convention</a>	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the DateAdjustment component in the Instrument component. The specified value would be specific to this instance of the cash settlement provision.
<a href="#">UnderlyingCashSettlDateBusinessCenterGrp</a>	[0..*]	Group	When specified, this overrides the business centers defined in the DateAdjustment component in the Instrument component. The specified values would be specific to this instance of the cash settlement provision.
<a href="#">UnderlyingCashSettlDateRelativeTo</a>	[0..1]	int	
<a href="#">UnderlyingCashSettlDateOffsetPeriod</a>	[0..1]	int	Conditionally required when UnderlyingCashSettlDateOffsetUnit(42794) is specified.
<a href="#">UnderlyingCashSettlDateOffsetUnit</a>	[0..1]	CodeSet	Conditionally required when UnderlyingCashSettlDateOffsetPeriod(42793) is specified.

---

Name	Mult.	Type	Description
<a href="#">UnderlyingCashSettlDateOffsetDay- Type</a>	[0..1]	CodeSet	
<a href="#">UnderlyingCashSettlDateAdjusted</a>	[0..1]	LocalMktDate	

---

Used in groups: [UnderlyingCashSettlTermGrp](#)

### 171.2.5447 UnderlyingCashSettlDateOffsetDayType

Specifies the day type of the relative cash settlement date offset.

Type: [int](#)

Allowed values in [PaymentStreamPaymentDateOffsetDayTypeCodeSet](#):

---

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in components: [UnderlyingCashSettlDate](#)

### 171.2.5448 UnderlyingCashSettlDateOffsetPeriod

Time unit multiplier for the relative cash settlement date offset.

Type: [int](#)

Used in components: [UnderlyingCashSettlDate](#)

### 171.2.5449 UnderlyingCashSettlDateOffsetUnit

Time unit associated with the relative cash settlement date offset.

Type: [String](#)

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: [UnderlyingCashSettlDate](#)

#### **171.2.5450 UnderlyingCashSettlDateRelativeTo**

Specifies the anchor date when the cash settlement date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: [int](#)

Used in components: [UnderlyingCashSettlDate](#)

#### **171.2.5451 UnderlyingCashSettlDateUnadjusted**

The unadjusted cash settlement date.

Type: [LocalMktDate](#)

Used in components: [UnderlyingCashSettlDate](#)

#### **171.2.5452 UnderlyingCashSettlDealer**

Identifies the dealer from whom price quotations for the reference obligation are obtained for the purpose of cash settlement valuation calculation.

Type: [String](#)

Used in groups: [UnderlyingCashSettlDealerGrp](#)

**171.2.5453 UnderlyingCashSettlDealerGrp**

UnderlyingCashSettlDealerGrp is a repeating subcomponent within the UnderlyingCashSettlTermGrp component. It is used to specify the dealers from whom price quotations for the reference obligation are obtained for the purpose of cash settlement valuation.

Name	Mult.	Type	Description
NoUnderlyingCashSettlDealers	[1..1]	NumInGroup	
UnderlyingCashSettlDealer	[0..1]	String	Required if NoUnderlyingCashSettlDealers(42039) > 0.

Used in groups: [UnderlyingCashSettlTermGrp](#)

**171.2.5454 UnderlyingCashSettlFixedTermIndicator**

Indicates whether fixed settlement is applicable or not applicable in a recovery lock.

Type: [Boolean](#)

Used in groups: [UnderlyingCashSettlTermGrp](#)

**171.2.5455 UnderlyingCashSettlMinimumQuoteAmount**

When determining the cash settlement amount, if weighted average price quotes are to be obtained for the reference obligation, this is the minimum intended threshold amount of outstanding principal balance of the reference obligation for which the quote should be obtained. If not specified, the ISDA definitions provide for a fallback amount of the lower of either USD1,000,000 (or its equivalent in the relevant obligation currency) or the (minimum) quoted amount.

Type: [Amt](#)

Used in groups: [UnderlyingCashSettlTermGrp](#)

**171.2.5456 UnderlyingCashSettlMinimumQuoteCurrency**

Specifies the currency the UnderlyingCashSettlQuoteAmount(42049) is denominated in. Uses ISO 4217 currency codes.

Type: [Currency](#)

Used in groups: [UnderlyingCashSettlTermGrp](#)

**171.2.5457 UnderlyingCashSettlNumOfValuationDates**

Where multiple valuation dates are specified as being applicable for cash settlement, this element specifies the number of applicable valuation dates.

Type: **int**

Used in groups: **UnderlyingCashSettlTermGrp**

**171.2.5458 UnderlyingCashSettlPriceDefault**

The default election for determining settlement price.

Type: **int**

Allowed values in CashSettlPriceDefaultCodeSet:

Code	Name	Description
0	Close	Close. Official closing price.
1	Hedge	Hedge. Determined by the hedging party.

Used in groups: **UnderlyingCashSettlTermGrp**

**171.2.5459 UnderlyingCashSettlPriceSource**

The source from which the settlement price is to be obtained.

See <http://www.fpml.org/coding-scheme/settlement-price-source> for values.

Type: **String**

Used in groups: **UnderlyingCashSettlTermGrp**

**171.2.5460 UnderlyingCashSettlQuoteAmount**

When determining the cash settlement amount, if weighted average price quotes are to be obtained for the reference obligation, this is the upper limit to the outstanding principal balance of the reference obligation for which the quote should be obtained. If not specified, the ISDA definitions provide for a fallback amount equal to floating rate payer calculation amount.

Type: **Amt**

Used in groups: **UnderlyingCashSettlTermGrp**

**171.2.5461 UnderlyingCashSettlQuoteCurrency**

Specifies the currency the UnderlyingCashSettlQuoteAmount(42049) is denominated in. Uses ISO 4217 currency codes.

Type: **Currency**

Used in groups: **UnderlyingCashSettlTermGrp**

**171.2.5462 UnderlyingCashSettlQuoteMethod**

The type of quote used to determine the cash settlement price.

Type: **int**

Allowed values in CashSettlQuoteMethodCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Bid	Bid
1	Mid	Mid
2	Offer	Offer

---

Used in groups: **UnderlyingCashSettlTermGrp**

**171.2.5463 UnderlyingCashSettlRecoveryFactor**

Used for fixed recovery, this specifies the recovery level as determined at contract inception, to be applied in the event of a default. The factor is used to calculate the amount paid by the seller to the buyer for cash settlement on the cash settlement date. The amount is calculated is  $(1 - \text{UnderlyingCashSettlRecoveryFactor}(42055)) \times \text{floating rate payer calculation amount}$ . The currency is derived from the floating rate payer calculation amount.

Type: **float**

Used in groups: **UnderlyingCashSettlTermGrp**

**171.2.5464 UnderlyingCashSettlTermGrp**

The UnderlyingCashSettlTermGrp is a repeating component within the UnderlyingInstrument component used to report cash settlement terms.

Name	Mult.	Type	Description
NoUnderlyingCashSettlTerms	[1..1]	NumInGroup	
UnderlyingCashSettlCurrency	[0..1]	Currency	Required if NoUnderlyingCashSettlTerms(42041) > 0.
UnderlyingCashSettlValuationFirst-BusinessDayOffset	[0..1]	int	
UnderlyingCashSettlValuationSubsequentBusinessDaysOffset	[0..1]	int	
UnderlyingCashSettlNumOfValuation-Dates	[0..1]	int	
UnderlyingCashSettlValuationTime	[0..1]	LocalMktTime	
UnderlyingCashSettlBusinessCenter	[0..1]	String	
UnderlyingCashSettlQuoteMethod	[0..1]	CodeSet	
UnderlyingCashSettlQuoteAmount	[0..1]	Amt	
UnderlyingCashSettlQuoteCurrency	[0..1]	Currency	
UnderlyingCashSettlMini-mumQuoteAmount	[0..1]	Amt	
UnderlyingCashSettlMinimumQuote-Currency	[0..1]	Currency	
UnderlyingCashSettlDealerGrp	[0..*]	Group	
UnderlyingCashSettlPriceSource	[0..1]	String	
UnderlyingCashSettlPriceDefault	[0..1]	CodeSet	
UnderlyingCashSettlBusinessDays	[0..1]	int	
UnderlyingCashSettlAmount	[0..1]	Amt	
UnderlyingCashSettlDate	[0..1]	Component	
UnderlyingCashSettlRecoveryFactor	[0..1]	float	
UnderlyingCashSettlFixedTermIndica-tor	[0..1]	Boolean	
UnderlyingCashSettlAccruedInter-estIndicator	[0..1]	Boolean	
UnderlyingCashSettlValuationMethod	[0..1]	CodeSet	
UnderlyingCashSettlTermXID	[0..1]	XID	

Used in components: [UnderlyingInstrument](#)

**171.2.5465 UnderlyingCashSettlTermXID**

Name referenced from UnderlyingSettlementTermXIDRef(41315).

Type: **XID**

Used in groups: **UnderlyingCashSettlTermGrp**

**171.2.5466 UnderlyingCashSettlValuationFirstBusinessDayOffset**

The number of business days after settlement conditions have been satisfied, when the calculation agent is to obtain a price quotation on the reference obligation for purposes of cash settlement.

Type: **int**

Used in groups: **UnderlyingCashSettlTermGrp**

**171.2.5467 UnderlyingCashSettlValuationMethod**

The ISDA defined methodology for determining the final price of the reference obligation for purposes of cash settlement.

Type: **int**

Allowed values in CashSettlValuationMethodCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Market	Market
1	Highest	Highest
2	AverageMarket	Average market
3	AverageHighest	Average highest
4	BlendedMarket	Blended market
5	BlendedHighest	Blended highest
6	AverageBlendedMarket	Average blended market
7	AverageBlendedHighest	Average blended highest

---

Used in groups: **UnderlyingCashSettlTermGrp**

**171.2.5468 UnderlyingCashSettlValuationSubsequentBusinessDaysOffset**

The number of business days between successive valuation dates when multiple valuation dates are applicable for cash settlement.

Type: **int**

Used in groups: **UnderlyingCashSettlTermGrp**

**171.2.5469 UnderlyingCashSettlValuationTime**

Time of valuation.

Type: **LocalMktTime**

Used in groups: **UnderlyingCashSettlTermGrp**

**171.2.5470 UnderlyingCashType**

Used for derivatives that deliver into cash underlying.

Type: **String**

Allowed values in UnderlyingCashTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
FIXED	FIXED	FIXED
DIFF	DIFF	DIFF

---

Used in components: **UnderlyingInstrument**

**171.2.5471 UnderlyingCFICode**

Underlying security's CFICode.

Valid values: see CFICode (461) field

Type: **String**

Used in components: **UnderlyingInstrument**

**171.2.5472 UnderlyingCollectAmount**

Amount to collect in order to deliver the underlying instrument

Type: **Amt**

Used in groups: **UnderlyingAmount**

**171.2.5473 UnderlyingCommonPricingIndicator**

When this element is specified and set to 'Y', it indicates that common pricing applies. Common pricing may be relevant for a transaction that references more than one commodity reference price.

Type: **Boolean**

Used in components: **UnderlyingInstrument**

**171.2.5474 UnderlyingComplexEventAveragingObservationGrp**

UnderlyingComplexEventAveragingObservationGrp is an optional subcomponent of UnderlyingComplexEventPeriodGrp for specifying the weight of each of the dated observations.

---

<b>Name</b>	<b>Mult.</b>	<b>Type</b>	<b>Description</b>
<b>NoUnderlyingComplexEventAveragingObservations</b>	[1..1]	NumInGroup	
<b>UnderlyingComplexEventAveragingObservationNumber</b>	[0..1]	int	Required if NoUnderlyingComplexEventAveragingObservations(41713) > 0.
<b>UnderlyingComplexEventAveragingWeight</b>	[0..1]	float	

---

Used in groups: **UnderlyingComplexEventPeriodGrp**

**171.2.5475 UnderlyingComplexEventAveragingObservationNumber**

Cross reference to the ordinal observation as specified either in the UnderlyingComplexEventScheduleGrp or UnderlyingComplexEventPeriodDateGrp components.

Type: **int**

Used in groups: **UnderlyingComplexEventAveragingObservationGrp**

**171.2.5476 UnderlyingComplexEventAveragingWeight**

The weight factor to be applied to the observation.

Type: **float**

Used in groups: **UnderlyingComplexEventAveragingObservationGrp**

**171.2.5477 UnderlyingComplexEventBusinessCenter**

The business center for adjusting dates and times in the schedule or date-time group.

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **UnderlyingComplexEventPeriodGrp**

**171.2.5478 UnderlyingComplexEventCalculationAgent**

Used to identify the calculation agent.

Type: **int**

Allowed values in ProvisionCalculationAgentCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	ExercisingParty	Exercising party
1	NonExercisingParty	Non-exercising party
2	MasterAgreement	As specified in the master agreement
3	Supplement	As specified in the standard terms supplement

---

Used in groups: **UnderlyingComplexEvents**

**171.2.5479 UnderlyingComplexEventCondition**

Specifies the condition between complex events when more than one event is specified.

Multiple barrier events would use an "or" condition since only one can be effective at a given time. A set of digital range events would use an "and" condition since both conditions must be in effect for a payout to result.

Type: **int**

Allowed values in ComplexEventConditionCodeSet:

---

Code	Name	Description
1	And	And
2	Or	Or

---

Used in groups: **UnderlyingComplexEvents**

### **171.2.5480 UnderlyingComplexEventCreditEventBusinessCenter**

Specifies the local business center for which the credit event is to be determined. The inclusion of this business center implies that Greenwich Mean Time in Section 3.3 of the 2003 ISDA Credit Derivatives Definitions is replaced by the local time of the specified business center.

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **UnderlyingComplexEvents**

### **171.2.5481 UnderlyingComplexEventCreditEventCurrency**

Specifies the applicable currency when UnderlyingComplexEventCreditEventValue(41718) is an amount. Uses ISO 4217 currency codes.

Type: **Currency**

Used in groups: **UnderlyingComplexEventCreditEventGrp**

### **171.2.5482 UnderlyingComplexEventCreditEventDayType**

Specifies the day type for the complex credit events.

Type: **int**

Allowed values in ComplexEventDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in groups: [UnderlyingComplexEventCreditEventGrp](#)

### 171.2.5483 UnderlyingComplexEventCreditEventGrp

The UnderlyingComplexEventCreditEventGrp is a repeating component within the UnderlyingComplexEventGrp component used to report applicable option credit events.

Name	Mult.	Type	Description
<a href="#">NoUnderlyingComplexEventCreditEvents</a>	[1..1]	NumInGroup	
<a href="#">UnderlyingComplexEventCreditEventType</a>	[0..1]	String	Required if <a href="#">NoUnderlyingComplexEventCreditEvents(41716)</a> > 0.
<a href="#">UnderlyingComplexEventCreditEventValue</a>	[0..1]	String	
<a href="#">UnderlyingComplexEventCreditEventCurrency</a>	[0..1]	Currency	
<a href="#">UnderlyingComplexEventCreditEventPeriod</a>	[0..1]	int	Conditionally required when <a href="#">UnderlyingComplexEventCreditEventUnit(41721)</a> is specified.
<a href="#">UnderlyingComplexEventCreditEventUnit</a>	[0..1]	CodeSet	Conditionally required when <a href="#">UnderlyingComplexEventCreditEventPeriod(41720)</a> is specified.
<a href="#">UnderlyingComplexEventCreditEventDayType</a>	[0..1]	CodeSet	
<a href="#">UnderlyingComplexEventCreditEventRateSource</a>	[0..1]	int	
<a href="#">UnderlyingComplexEventCreditEventQualifierGrp</a>	[0..*]	Group	

Used in groups: [UnderlyingComplexEvents](#)

**171.2.5484 UnderlyingComplexEventCreditEventMinimumSources**

The minimum number of the specified public information sources that must publish information that reasonably confirms that a credit event has occurred. The market convention is two.

Type: **int**

Used in groups: **UnderlyingComplexEvents**

**171.2.5485 UnderlyingComplexEventCreditEventNotifyingParty**

The notifying party is the party that notifies the other party when a credit event has occurred by means of a credit event notice. If more than one party is referenced as being the notifying party then either party may notify the other of a credit event occurring.

Type: **int**

Allowed values in ComplexEventCreditEventNotifyingPartyCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	SellerNotifies	Seller notifies
1	BuyerNotifies	Buyer notifies
2	SellerOrBuyerNotifies	Seller or buyer notifies

---

Used in groups: **UnderlyingComplexEvents**

**171.2.5486 UnderlyingComplexEventCreditEventPeriod**

Time unit multiplier for complex credit events.

Type: **int**

Used in groups: **UnderlyingComplexEventCreditEventGrp**

**171.2.5487 UnderlyingComplexEventCreditEventQualifier**

Specifies a complex event qualifier. Used to further qualify UnderlyingComplexEventCreditEvent-Type(41717).

Type: **char**

Allowed values in ProtectionTermEventQualifierCodeSet:

Code	Name	Description
H	RestructuringMultipleHoldingObligations	Restructuring - multiple holding obligations. In relation to a restructuring credit event, unless multiple holder obligation is not specified restructurings are limited to multiple holder obligations. A multiple holder obligation means an obligation that is held by more than three holders that are not affiliates of each other and where at least two thirds of the holders must agree to the event that constitutes the restructuring credit event. ISDA 2003 Term: Multiple Holder Obligation.
E	RestructuringMultipleCreditEventNotices	Restructuring - multiple credit event notices. Presence of this element and value set to 'true' indicates that Section 3.9 of the 2003 Credit Derivatives Definitions shall apply. Absence of this element indicates that Section 3.9 shall not apply. NOTE: Not allowed under ISDA Credit 1999.
C	FloatingRateInterestShortfall	Floating rate interest shortfall. Indicates compounding.

Used in groups: [UnderlyingComplexEventCreditEventQualifierGrp](#)

### 171.2.5488 UnderlyingComplexEventCreditEventQualifierGrp

The UnderlyingComplexEventCreditEventQualifierGrp is a repeating component within the UnderlyingComplexEventCreditEventGrp component used to specify qualifying attributes to an event.

Name	Mult.	Type	Description
<a href="#">NoUnderlyingComplexEventCreditEventQualifiers</a>	[1..1]	NumInGroup	
<a href="#">UnderlyingComplexEventCreditEventQualifier</a>	[0..1]	CodeSet	Required if <a href="#">NoUnderlyingComplexEventCreditEventQualifiers(41724)</a> > 0.

Used in groups: [UnderlyingComplexEventCreditEventGrp](#)

### 171.2.5489 UnderlyingComplexEventCreditEventRateSource

Identifies the source of rate information used for credit events.

See [http://www.fixtradingcommunity.org/codelists#Credit\\_Event\\_Rate\\_Source](http://www.fixtradingcommunity.org/codelists#Credit_Event_Rate_Source) for code list of applicable sources.

Type: **int**

Used in groups: [UnderlyingComplexEventCreditEventGrp](#)

#### **171.2.5490 UnderlyingComplexEventCreditEventSource**

A newspaper or electronic news service that may publish relevant information used in the determination of whether or not a credit event has occurred.

Type: **String**

Used in groups: [UnderlyingComplexEventCreditEventSourceGrp](#)

#### **171.2.5491 UnderlyingComplexEventCreditEventSourceGrp**

UnderlyingComplexEventCreditEventSourceGrp is a repeating subcomponent of the UnderlyingComplexEvents component used to specify the particular newspapers or electronic news services that may publish relevant information used in the determination of whether or not a credit event has occurred.

<b>Name</b>	<b>Mult.</b>	<b>Type</b>	<b>Description</b>
<a href="#">NoUnderlyingComplexEventCreditEventSources</a>	[1..1]	NumInGroup	
<a href="#">UnderlyingComplexEventCreditEventSource</a>	[0..1]	String	Required if <a href="#">NoUnderlyingCreditEventCreditEventSources(41748)</a> > 0.

Used in groups: [UnderlyingComplexEvents](#)

#### **171.2.5492 UnderlyingComplexEventCreditEventStandardSources**

When this element is specified and set to 'Y', indicates that ISDA defined Standard Public Sources are applicable.

Type: **Boolean**

Used in groups: [UnderlyingComplexEvents](#)

#### **171.2.5493 UnderlyingComplexEventCreditEventsXIDRef**

Reference to credit event table elsewhere in the message.

Type: **XIDREF**

Used in groups: **UnderlyingComplexEvents**

### **171.2.5494 UnderlyingComplexEventCreditEventType**

Specifies the type of credit event.

See [http://www.fixtradingcommunity.org/codelists#Credit\\_Event\\_Types](http://www.fixtradingcommunity.org/codelists#Credit_Event_Types) for code list of applicable event types.

Type: **String**

Used in groups: **UnderlyingComplexEventCreditEventGrp**

### **171.2.5495 UnderlyingComplexEventCreditEventUnit**

Time unit associated with complex credit events.

Type: **String**

Allowed values in ProtectionTermEventUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in groups: **UnderlyingComplexEventCreditEventGrp**

### **171.2.5496 UnderlyingComplexEventCreditEventValue**

The credit event value appropriate to UnderlyingComplexEventCreditEventType(41717).

See [http://www.fixtradingcommunity.org/codelists#Credit\\_Event\\_Types](http://www.fixtradingcommunity.org/codelists#Credit_Event_Types) for applicable event type values.

Type: **String**

Used in groups: **UnderlyingComplexEventCreditEventGrp**

**171.2.5497 UnderlyingComplexEventCurrencyOne**

Specifies the first or only reference currency of the trade.

UnderlyingComplexEventCurrencyOneCodeSource(2948) may be used to disambiguate the code source scheme used, and ISO 4217 is the default scheme if absent.

Type: **Currency**

Used in groups: **UnderlyingComplexEvents**

**171.2.5498 UnderlyingComplexEventCurrencyOneCodeSource**

Identifies class or source of the UnderlyingComplexEventCurrencyOne(2268) value.

Type: **String**

Allowed values in CurrencyCodeSourceCodeSet:

---

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

---

Used in groups: **UnderlyingComplexEvents**

**171.2.5499 UnderlyingComplexEventCurrencyTwo**

Specifies the second reference currency of the trade.

UnderlyingComplexEventCurrencyTwoCodeSource(2949) may be used to disambiguate the code source scheme used, and ISO 4217 is the default scheme if absent.

Type: **Currency**

Used in groups: **UnderlyingComplexEvents**

**171.2.5500 UnderlyingComplexEventCurrencyTwoCodeSource**

Identifies class or source of the UnderlyingComplexEventCurrencyTwo(2269) value.

Type: **String**

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in groups: **UnderlyingComplexEvents**

**171.2.5501 UnderlyingComplexEventDateAdjusted**

The adjusted complex event date.

Type: **LocalMktDate**

Used in components: **UnderlyingComplexEventRelativeDate**

**171.2.5502 UnderlyingComplexEventDateBusinessCenter**

The business center calendar is used to adjust the event date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **UnderlyingComplexEventDateBusinessCenterGrp**

**171.2.5503 UnderlyingComplexEventDateBusinessCenterGrp**

UnderlyingComplexEventDateBusinessCenterGrp is a repeating subcomponent of the UnderlyingComplexEventRelativeDate component used to specify the set of business centers whose calendars drive

date adjustment. Used only to override the business centers defined in the UnderlyingDateAdjustment component in UnderlyingInstrument.

Name	Mult.	Type	Description
NoUnderlyingComplexEventDateBusinessCenters	[1..1]	NumInGroup	
UnderlyingComplexEventDateBusinessCenter	[0..1]	String	Required if NoUnderlyingComplexEventDateBusinessCenters(41737) > 0.

Used in components: [UnderlyingComplexEventRelativeDate](#)

### 171.2.5504 UnderlyingComplexEventDateBusinessDayConvention

The business day convention used to adjust the event date. Used only to override the business day convention specified in the UnderlyingDateAdjustment component within the UnderlyingInstrument component.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [UnderlyingComplexEventRelativeDate](#)

### 171.2.5505 UnderlyingComplexEventDateOffsetDayType

Specifies the day type of the relative date offset.

Type: **int**

Allowed values in ComplexEventDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: [UnderlyingComplexEventRelativeDate](#)

#### **171.2.5506 UnderlyingComplexEventDateOffsetPeriod**

Time unit multiplier for the relative date offset.

Type: [int](#)

Used in components: [UnderlyingComplexEventRelativeDate](#)

#### **171.2.5507 UnderlyingComplexEventDateOffsetUnit**

Time unit associated with the relative date offset.

Type: [String](#)

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: [UnderlyingComplexEventRelativeDate](#)

**171.2.5508 UnderlyingComplexEventDateRelativeTo**

Specifies the anchor date when the complex event date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: **int**

Used in components: **UnderlyingComplexEventRelativeDate**

**171.2.5509 UnderlyingComplexEventDates**

The UnderlyingComplexEventDates and subcomponent UnderlyingComplexEventTimes components are used to constrain a complex event to a specific date range, and optional time range. If specified the event is only effective on or within the specified dates and times.

Name	Mult.	Type	Description
<b>NoUnderlyingComplexEventDates</b>	[1..1]	NumInGroup	
<b>UnderlyingComplexEventStartDate</b>	[0..1]	UTCDateOnly	Required if NoUnderlyingComplexEventDates(2054) > 0.
<b>UnderlyingComplexEventEndDate</b>	[0..1]	UTCDateOnly	Required if NoUnderlyingComplexEventDates(2054) > 0.
<b>UnderlyingComplexEventTimes</b>	[0..*]	Group	

Used in groups: **UnderlyingComplexEvents**

**171.2.5510 UnderlyingComplexEventDateUnadjusted**

The unadjusted complex event date.

Type: **LocalMktDate**

Used in components: **UnderlyingComplexEventRelativeDate**

**171.2.5511 UnderlyingComplexEventDeterminationMethod**

Specifies the method according to which an amount or a date is determined.

See <http://www.fpml.org/coding-scheme/determination-method> for values.

Type: **String**

Used in groups: **UnderlyingComplexEvents**

### **171.2.5512 UnderlyingComplexEventEndDate**

The end date of the date range on which a complex event is effective. The start date will be set equal to the end date for single day events such as Bermuda options.

UnderlyingComplexEventEndDate(2056) must always be greater than or equal to UnderlyingComplexEventStartDate(2055).

Type: **UTCDateOnly**

Used in groups: **UnderlyingComplexEventDates**

### **171.2.5513 UnderlyingComplexEventEndTime**

The end time of the time range on which a complex event date is effective.

UnderlyingComplexEventEndTime(2058) must always be greater than or equal to UnderlyingComplexEventStartTime(2057).

Type: **UTCTimeOnly**

Used in groups: **UnderlyingComplexEventTimes**

### **171.2.5514 UnderlyingComplexEventFixedFXRate**

Specifies the fixed FX rate alternative for FX Quanto options.

Type: **float**

Used in groups: **UnderlyingComplexEvents**

### **171.2.5515 UnderlyingComplexEventFixingTime**

The local market fixing time.

Type: **LocalMktTime**

Used in components: **UnderlyingComplexEventRelativeDate**

### **171.2.5516 UnderlyingComplexEventFixingTimeBusinessCenter**

The business center for determining the actual fixing times.

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in components: **UnderlyingComplexEventRelativeDate**

#### **171.2.5517 UnderlyingComplexEventForwardPoints**

FX forward points added to spot rate. May be a negative value.

Type: **PriceOffset**

Used in groups: **UnderlyingComplexEvents**

#### **171.2.5518 UnderlyingComplexEventFuturesPriceValuation**

Indicates whether the official settlement price as announced by the related exchange is applicable, in accordance with the ISDA 2002 definitions. Applicable only to futures contracts.

Type: **Boolean**

Used in groups: **UnderlyingComplexEvents**

#### **171.2.5519 UnderlyingComplexEventOptionsPriceValuation**

Indicates whether the official settlement price as announced by the related exchange is applicable, in accordance with the ISDA 2002 definitions. Applicable only to options contracts.

Type: **Boolean**

Used in groups: **UnderlyingComplexEvents**

#### **171.2.5520 UnderlyingComplexEventPeriodDate**

The averaging date for an Asian option.

The trigger date for a Barrier or Knock option.

Type: **LocalMktDate**

Used in groups: **UnderlyingComplexEventPeriodDateGrp**

**171.2.5521 UnderlyingComplexEventPeriodDateGrp**

UnderlyingComplexEventPeriodDateGrp is a subcomponent of UnderlyingComplexEventPeriodGrp for specifying fixed period dates and times for an Asian or Strike Schedule option or trigger dates for a Barrier or Knock option.

Name	Mult.	Type	Description
NoUnderlyingComplexEventPeriod-DateTimes	[1..1]	NumInGroup	
UnderlyingComplexEventPeriodDate	[0..1]	LocalMktDate	Required if NoUnderlyingComplexEventPeriod-DateTimes(41726) > 0.
UnderlyingComplexEventPeriodTime	[0..1]	LocalMktTime	

Used in groups: [UnderlyingComplexEventPeriodGrp](#)

**171.2.5522 UnderlyingComplexEventPeriodGrp**

UnderlyingComplexEventPeriodGrp is a subcomponent of UnderlyingComplexEvents for specifying the periods for an Asian, Barrier, Knock or Strike Schedule option feature.

Name	Mult.	Type	Description
NoUnderlyingComplexEventPeriods	[1..1]	NumInGroup	
UnderlyingComplexEventPeriodType	[0..1]	CodeSet	Required if NoUnderlyingComplexEventPeriods(41729) > 0.
UnderlyingComplexEventBusiness-Center	[0..1]	String	
UnderlyingComplexEventScheduleGrp	[0..*]	Group	
UnderlyingComplexEventPeriodDate-Grp	[0..*]	Group	
UnderlyingComplexEventAveragingObservationGrp	[0..*]	Group	

Used in groups: [UnderlyingComplexEvents](#)

**171.2.5523 UnderlyingComplexEventPeriodTime**

The averaging time for an Asian option.

Type: [LocalMktTime](#)

Used in groups: [UnderlyingComplexEventPeriodDateGrp](#)

### **171.2.5524 UnderlyingComplexEventPeriodType**

Specifies the period type.

Type: [int](#)

Allowed values in ComplexEventPeriodTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	AsianOut	Asian Out
1	AsianIn	Asian In
2	BarrierCap	Barrier Cap
3	BarrierFloor	Barrier Floor
4	KnockOut	Knock Out
5	KnockIn	Knock In

---

Used in groups: [UnderlyingComplexEventPeriodGrp](#)

### **171.2.5525 UnderlyingComplexEventPrice**

Specifies the price at which the complex event takes effect. Impact of the event price is determined by the [UnderlyingComplexEventType\(2046\)](#).

Type: [Price](#)

Used in groups: [UnderlyingComplexEvents](#)

### **171.2.5526 UnderlyingComplexEventPriceBoundaryMethod**

Specifies the boundary condition to be used for the event price relative to the [UnderlyingComplexEventPrice\(2048\)](#) at the point the complex event outcome takes effect as determined by the [UnderlyingComplexEventPriceTimeType\(2051\)](#).

Type: [int](#)

Allowed values in ComplexEventPriceBoundaryMethodCodeSet:

Code	Name	Description
1	LessThanComplexEventPrice	Less than ComplexEventPrice(1486)
2	LessThanOrEqualToComplexEvent-Price	Less than or equal to ComplexEventPrice(1486)
3	EqualToComplexEventPrice	Equal to ComplexEventPrice(1486)
4	GreaterThanOrEqualToComplex-EventPrice	Greater than or equal to ComplexEventPrice(1486)
5	GreaterThanComplexEventPrice	Greater than ComplexEventPrice(1486)

Used in groups: [UnderlyingComplexEvents](#)

#### **171.2.5527 UnderlyingComplexEventPriceBoundaryPrecision**

Used in combination with UnderlyingComplexEventPriceBoundaryMethod(2049) to specify the percentage of the strike price in relation to the underlying price. The percentage is generally 100 or greater for puts and 100 or less for calls.

Type: [Percentage](#)

Used in groups: [UnderlyingComplexEvents](#)

#### **171.2.5528 UnderlyingComplexEventPricePercentage**

Specifies the price percentage at which the complex event takes effect. Impact of the event price is determined by the UnderlyingComplexEventType(2046).

Type: [Percentage](#)

Used in groups: [UnderlyingComplexEvents](#)

#### **171.2.5529 UnderlyingComplexEventPriceTimeType**

Specifies when the complex event outcome takes effect. The outcome of a complex event is a payout or barrier action as specified by the UnderlyingComplexEventType(2046).

Type: [int](#)

Allowed values in ComplexEventPriceTimeTypeCodeSet:

Code	Name	Description
1	Expiration	Expiration
2	Immediate	Immediate (At Any Time)
3	SpecifiedDate	Specified Date/Time
4	Close	Close. Official closing time of the exchange on valuation date.
5	Open	Open. Official opening time of the exchange on valuation date.
6	OfficialSettlPrice	Official settlement price. Official settlement price determination time.
7	DerivativesClose	Derivatives close. Official closing time of the derivatives exchange.
8	AsSpecifiedMasterConfirmation	As specified in Master Confirmation

Used in groups: [UnderlyingComplexEvents](#)

#### 171.2.5530 UnderlyingComplexEventPVFinalPriceElectionFallback

Specifies the fallback provisions for the hedging party in the determination of the final settlement price

Type: [int](#)

Allowed values in ComplexEventPVFinalPriceElectionFallbackCodeSet:

Code	Name	Description
0	Close	Close. In respect of the "early final valuation date", the provisions for "future present value close" shall apply.
1	HedgeElection	Hedge election. In respect of the "early final valuation date", the provisions for "future present value hedge execution" shall apply.

Used in groups: [UnderlyingComplexEvents](#)

#### 171.2.5531 UnderlyingComplexEventQuoteBasis

Specifies the currency pairing for the quote.

Type: [int](#)

Allowed values in ComplexEventQuoteBasisCodeSet:

Code	Name	Description
0	Currency1PerCurrency2	Currency 1 per currency 2
1	Currency2PerCurrency1	Currency 2 per currency 1

Used in groups: [UnderlyingComplexEvents](#)

### 171.2.5532 UnderlyingComplexEventRateSource

Identifies the source of rate information.

Type: [int](#)

Allowed values in RateSourceCodeSet:

Code	Name	Description
0	Bloomberg	Bloomberg
1	Reuters	Reuters
2	Telerate	Telerate
3	ISDARateOption	ISDA Settlement Rate Option. The source of the currency conversion as specified by the ISDA terms in Annex A to the 1998 FX and Currency Option Definitions. See <a href="http://www.fpml.org/coding-scheme/settlement-rate-option">http://www.fpml.org/coding-scheme/settlement-rate-option</a>
99	Other	Other

Used in groups: [UnderlyingComplexEventRateSourceGrp](#)

### 171.2.5533 UnderlyingComplexEventRateSourceGrp

UnderlyingComplexEventRateSourceGrp is a subcomponent of UnderlyingComplexEvents for specifying primary and secondary rate sources.

Name	Mult.	Type	Description
<a href="#">NoUnderlyingComplexEventRateSources</a>	[1..1]	NumInGroup	

Name	Mult.	Type	Description
<a href="#">UnderlyingComplexEventRateSource</a>	[0..1]	CodeSet	Required if NoUnderlyingComplexEventRateSources(41732) > 0.
<a href="#">UnderlyingComplexEventRateSource-Type</a>	[0..1]	CodeSet	Required if NoUnderlyingComplexEventRateSources(41732) > 0.
<a href="#">UnderlyingComplexEventReferencePage</a>	[0..1]	String	Conditionally required when ComplexEventRateSource(41014) = 99 (Other).
<a href="#">UnderlyingComplexEventReferencePageHeading</a>	[0..1]	String	

Used in groups: [UnderlyingComplexEvents](#)

#### 171.2.5534 UnderlyingComplexEventRateSourceType

Indicates whether the rate source specified is a primary or secondary source.

Type: [int](#)

Allowed values in RateSourceTypeCodeSet:

Code	Name	Description
0	Primary	Primary
1	Secondary	Secondary

Used in groups: [UnderlyingComplexEventRateSourceGrp](#)

#### 171.2.5535 UnderlyingComplexEventReferencePage

Identifies the reference page from the rate source.

For FX, the reference page to the spot rate is to be used for the reference FX spot rate.

When UnderlyingComplexEventRateSource(41733) = 3 (ISDA Settlement Rate Option) this contains the value from the scheme that reflects the terms of the Annex A to the ISDA 1998 FX and Currency Option Definitions. See: <http://www.fpml.org/coding-scheme/settlement-rate-option>.

Type: [String](#)

Used in groups: [UnderlyingComplexEventRateSourceGrp](#)

**171.2.5536 UnderlyingComplexEventReferencePageHeading**

Identifies the reference page heading from the rate source.

Type: **String**

Used in groups: **UnderlyingComplexEventRateSourceGrp**

**171.2.5537 UnderlyingComplexEventRelativeDate**

UnderlyingComplexEventRelativeDate is a subcomponent of UnderlyingComplexEvents for specifying the event date and time for an FX or Calendar Spread option or the payout date for a Barrier or Knock option.

Name	Mult.	Type	Description
<b>UnderlyingComplexEventDateUnadjusted</b>	[0..1]	LocalMktDate	
<b>UnderlyingComplexEventDateRelativeTo</b>	[0..1]	int	
<b>UnderlyingComplexEventDateOffsetPeriod</b>	[0..1]	int	Conditionally required when UnderlyingComplexEventDateOffsetUnit(41742) is specified.
<b>UnderlyingComplexEventDateOffsetUnit</b>	[0..1]	CodeSet	Conditionally required when UnderlyingComplexEventDateOffsetPeriod(41741) is specified.
<b>UnderlyingComplexEventDateOffsetDayType</b>	[0..1]	CodeSet	
<b>UnderlyingComplexEventDateBusinessDayConvention</b>	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified value would be specific to the underlying complex event dates.
<b>UnderlyingComplexEventDateBusinessCenterGrp</b>	[0..*]	Group	When specified, this overrides the business centers defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified values would be specific to the underlying complex event dates.
<b>UnderlyingComplexEventDateAdjusted</b>	[0..1]	LocalMktDate	
<b>UnderlyingComplexEventFixingTime</b>	[0..1]	LocalMktTime	
<b>UnderlyingComplexEventFixingTimeBusinessCenter</b>	[0..1]	String	

Used in groups: [UnderlyingComplexEvents](#)

### **171.2.5538 UnderlyingComplexEventScheduleEndDate**

The end date of the schedule.

Type: [LocalMktDate](#)

Used in groups: [UnderlyingComplexEventScheduleGrp](#)

### **171.2.5539 UnderlyingComplexEventScheduleFrequencyPeriod**

Time unit multiplier for the schedule date frequency.

Type: [int](#)

Used in groups: [UnderlyingComplexEventScheduleGrp](#)

### **171.2.5540 UnderlyingComplexEventScheduleFrequencyUnit**

Time unit associated with the schedule date frequency.

Type: [String](#)

Allowed values in ProtectionTermEventUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in groups: [UnderlyingComplexEventScheduleGrp](#)

### **171.2.5541 UnderlyingComplexEventScheduleGrp**

[UnderlyingComplexEventScheduleGrp](#) is a subcomponent of [UnderlyingComplexEventPeriodGrp](#) for specifying a periodic schedule for an Asian, Barrier or Strike Schedule option feature.

Name	Mult.	Type	Description
NoUnderlyingComplexEventSchedules	[1..1]	NumInGroup	
UnderlyingComplexEventScheduleStartDate	[0..1]	LocalMktDate	Required if NoUnderlyingComplexEventSchedules(41750) > 0.
UnderlyingComplexEventScheduleEndDate	[0..1]	LocalMktDate	
UnderlyingComplexEventScheduleFrequencyPeriod	[0..1]	int	Conditionally required when UnderlyingComplexEventScheduleFrequencyUnit(41754) is specified.
UnderlyingComplexEventScheduleFrequencyUnit	[0..1]	CodeSet	Conditionally required when UnderlyingComplexEventScheduleFrequencyPeriod(41753) is specified.
UnderlyingComplexEventScheduleRollConvention	[0..1]	CodeSet	When specified, this overrides the date roll convention defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified values would be specific to this instance of the option schedule dates.

Used in groups: [UnderlyingComplexEventPeriodGrp](#)

### 171.2.5542 UnderlyingComplexEventScheduleRollConvention

The convention for determining the sequence of dates. It is used in conjunction with a specified frequency. Used only to override the roll convention defined in the UnderlyingDateAdjustment component in UnderlyingInstrument.

Type: [String](#)

Allowed values in DateRollConventionCodeSet:

Code	Name	Description
1	FirstDay	1st day of the month
2	SecondDay	2nd day of the month
3	ThirdDay	3rd day of the month
4	FourthDay	4th day of the month
5	FifthDay	5th day of the month
6	SixthDay	6th day of the month
7	SeventhDay	7th day of the month

<b>Code</b>	<b>Name</b>	<b>Description</b>
8	EighthDay	8th day of the month
9	NinthDay	9th day of the month
10	TenthDay	10th day of the month
11	EleventhDay	11th day of the month
12	TwelvthDay	12th day of the month
13	ThirteenthDay	13th day of the month
14	ForteenthDay	14th day of the month
15	FifteenthDay	15th day of the month
16	SixteenthDay	16th day of the month
17	SeventeenthDay	17th day of the month
18	EighteenthDay	18th day of the month
19	NineteenthDay	19th day of the month
20	TwentiethDay	20th day of the month
21	TwentyFirstDay	21st day of the month
22	TwentySecondDay	22nd day of the month
23	TwentyThirdDay	23rd day of the month
24	TwentyFourthDay	24th day of the month
25	TwentyFifthDay	25th day of the month
26	TwentySixthDay	26th day of the month
27	TwentySeventhDay	27th day of the month
28	TwentyEigthDa28y	28th day of the month
29	TwentyNinthDay	29th day of the month
30	ThirtiethDay	30th day of the month
EOM	EOM	The end of the month. Use EOM for 31st day of the month.
FRN	FRN	The floating rate note convention or Eurodollar convention.
IMM	IMM	The International Money Market settlement date, i.e. the 3rd Wednesday of the month.
IMMCAD	IMMCAD	The last trading day/expiration day of the Canadian Derivatives Exchange.
IMMAUD	IMMAUD	The last trading day of the Sydney Futures Exchange Australian 90-day bank accepted bill futures contract.
IMMNZD	IMMNZD	The last trading day of the Sydney Futures Exchange New Zealand 90-day bank bill futures contract.
SFE	SFE	The Sydney Futures Exchange 90-day bank accepted bill futures settlement dates.

Code	Name	Description
NONE	NONE	No adjustment
TBILL	TBILL	The 13-week and 26-week U.S. Treasury Bill auction dates.
MON	MON	Monday
TUE	TUE	Tuesday
WED	WED	Wednesday
THU	THU	Thursday
FRI	FRI	Friday
SAT	SAT	Saturday
SUN	SUN	Sunday

Used in groups: [UnderlyingComplexEventScheduleGrp](#)

### 171.2.5543 UnderlyingComplexEventScheduleStartDate

The start date of the schedule.

Type: [LocalMktDate](#)

Used in groups: [UnderlyingComplexEventScheduleGrp](#)

### 171.2.5544 UnderlyingComplexEvents

The UnderlyingComplexEvent Group is a repeating block which allows specifying an unlimited number and types of advanced events, such as observation and pricing in over the lifetime of an option, futures, commodities or equity swap contract. Use UnderlyingEvtGrp to specify more straightforward events.

Name	Mult.	Type	Description
<a href="#">NoUnderlyingComplexEvents</a>	[1..1]	NumInGroup	
<a href="#">UnderlyingComplexEventType</a>	[0..1]	CodeSet	Required if NoUnderlyingComplexEvents(2045) > 0.
<a href="#">UnderlyingComplexOptPayoutPaySide</a>	[0..1]	CodeSet	
<a href="#">UnderlyingComplexOptPayoutReceiveSide</a>	[0..1]	CodeSet	
<a href="#">UnderlyingComplexOptPayoutUnderlier</a>	[0..1]	String	

Name	Mult.	Type	Description
UnderlyingComplexOptPayoutAmount	[0..1]	Amt	
UnderlyingComplexOptPayoutPercentage	[0..1]	Percentage	
UnderlyingComplexOptPayoutTime	[0..1]	CodeSet	
UnderlyingComplexOptPayoutCurrency	[0..1]	Currency	
UnderlyingComplexOptPayoutCurrencyCodeSource	[0..1]	CodeSet	
UnderlyingComplexEventPrice	[0..1]	Price	
UnderlyingComplexEventPricePercentage	[0..1]	Percentage	
UnderlyingComplexEventPriceBoundaryMethod	[0..1]	CodeSet	
UnderlyingComplexEventPriceBoundaryPrecision	[0..1]	Percentage	
UnderlyingComplexEventPriceTimeType	[0..1]	CodeSet	
UnderlyingComplexEventCondition	[0..1]	CodeSet	Conditionally required when there are more than one UnderlyingComplexEvent occurrences. A chain of events must be linked together through use of the UnderlyingComplexEventCondition(2052) in which the relationship between any two events is described. For any two occurrences of events the first occurrence will specify the UnderlyingComplexEventCondition(2052) which links it with the second event.
UnderlyingComplexEventDates	[0..*]	Group	
UnderlyingComplexEventCurrencyOne	[0..1]	Currency	
UnderlyingComplexEventCurrencyOneCodeSource	[0..1]	CodeSet	
UnderlyingComplexEventCurrencyTwo	[0..1]	Currency	
UnderlyingComplexEventCurrencyTwoCodeSource	[0..1]	CodeSet	
UnderlyingComplexEventQuoteBasis	[0..1]	CodeSet	
UnderlyingComplexEventFixedFXRate	[0..1]	float	
UnderlyingComplexEventSpotRate	[0..1]	Price	
UnderlyingComplexEventForwardPoints	[0..1]	PriceOffset	

Name	Mult.	Type	Description
UnderlyingComplexEventDeterminationMethod	[0..1]	String	
UnderlyingComplexEventCalculationAgent	[0..1]	CodeSet	
UnderlyingComplexEventStrikePrice	[0..1]	Price	
UnderlyingComplexEventStrikeFactor	[0..1]	float	
UnderlyingComplexEventStrikeNumberOfOptions	[0..1]	int	
UnderlyingComplexEventRateSourceGrp	[0..*]	Group	
UnderlyingComplexEventRelativeDate	[0..1]	Component	
UnderlyingComplexEventPeriodGrp	[0..*]	Group	
UnderlyingComplexEventCreditEventsXIDRef	[0..1]	XIDREF	
UnderlyingComplexEventCreditEventNotifyingParty	[0..1]	CodeSet	
UnderlyingComplexEventCreditEventBusinessCenter	[0..1]	String	
UnderlyingComplexEventCreditEventStandardSources	[0..1]	Boolean	
UnderlyingComplexEventCreditEventMinimumSources	[0..1]	int	
UnderlyingComplexEventCreditEventSourceGrp	[0..*]	Group	
UnderlyingComplexEventCreditEventGrp	[0..*]	Group	
UnderlyingComplexEventFuturesPriceValuation	[0..1]	Boolean	
UnderlyingComplexEventOptionsPriceValuation	[0..1]	Boolean	
UnderlyingComplexEventPVFinalPriceElectionFallback	[0..1]	CodeSet	
UnderlyingComplexEventXID	[0..1]	XID	
UnderlyingComplexEventXIDRef	[0..1]	XIDREF	

Used in components: [UnderlyingInstrument](#)

### **171.2.5545 UnderlyingComplexEventSpotRate**

FX spot rate.

Type: **Price**

Used in groups: **UnderlyingComplexEvents**

### **171.2.5546 UnderlyingComplexEventStartDate**

The start date of the date range on which a complex event is effective. The start date will be set equal to the end date for single day events such as Bermuda options.

The start date must always be less than or equal to end date.

Type: **UTCDateOnly**

Used in groups: **UnderlyingComplexEventDates**

### **171.2.5547 UnderlyingComplexEventStartTime**

The start time of the time range on which a complex event date is effective.

UnderlyingComplexEventStartTime(2057) must always be less than or equal to UnderlyingComplexEventEndTime(2058).

Type: **UTCTimeOnly**

Used in groups: **UnderlyingComplexEventTimes**

### **171.2.5548 UnderlyingComplexEventStrikeFactor**

Strike factor for Asian option feature. Upper strike percentage for a Strike Spread.

Type: **float**

Used in groups: **UnderlyingComplexEvents**

### **171.2.5549 UnderlyingComplexEventStrikeNumberOfOptions**

Upper string number of options for a Strike Spread.

Type: **int**

Used in groups: **UnderlyingComplexEvents**

**171.2.5550 UnderlyingComplexEventStrikePrice**

Upper strike price for Asian option feature. Strike percentage for a Strike Spread.

Type: **Price**

Used in groups: **UnderlyingComplexEvents**

**171.2.5551 UnderlyingComplexEventTimes**

The UnderlyingComplexEventTimes is a repeating subcomponent of the UnderlyingComplexEvent-Dates component. It is used to further qualify any dates placed on the event and is used to specify time ranges for which a complex event is effective. It is always provided within the context of start and end dates. The time range is assumed to be in effect for the entirety of the date or date range specified.

Name	Mult.	Type	Description
<b>NoUnderlyingComplexEventTimes</b>	[1..1]	NumInGroup	
<b>UnderlyingComplexEventStartTime</b>	[0..1]	UTCTimeOnly	Required if NoUnderlyingComplexEventTimes(2056) > 0.
<b>UnderlyingComplexEventEndTime</b>	[0..1]	UTCTimeOnly	Required if NoUnderlyingComplexEventTimes(2056) > 0.

Used in groups: **UnderlyingComplexEventDates**

**171.2.5552 UnderlyingComplexEventType**

Identifies the type of complex event.

Type: **int**

Allowed values in ComplexEventTypeCodeSet:

Code	Name	Description
1	Capped	Capped
2	Trigger	Trigger
3	KnockInUp	Knock-in up
4	KnockInDown	Knock-in down
5	KnockOutUp	Knock-out up
6	KnockOutDown	Knock-out down

---

Code	Name	Description
7	Underlying	Underlying
8	ResetBarrier	Reset Barrier
9	RollingBarrier	Rolling Barrier
10	OneTouch	One-touch
11	NoTouch	No-touch
12	DbOneTouch	Double one-touch
13	DbNoTouch	Double no-touch
14	FXComposite	Foreign exchange composite
15	FXQuanto	Foreign exchange Quanto
16	FXCrssCcy	Foreign exchange cross currency
17	StrkSpread	Strike spread
18	ClndrSpread	Calendar spread
19	PxObsvtn	Price observation (Asian or Lookback)
20	PassThrough	Pass-through
21	StrkSched	Strike schedule
22	EquityValuation	Equity valuation
23	DividendValuation	Dividend valuation

---

Used in groups: [UnderlyingComplexEvents](#)

#### **171.2.5553 UnderlyingComplexEventXID**

Identifier of this complex event for cross referencing elsewhere in the message.

Type: [XID](#)

Used in groups: [UnderlyingComplexEvents](#)

#### **171.2.5554 UnderlyingComplexEventXIDRef**

Reference to a complex event elsewhere in the message.

Type: [XIDREF](#)

Used in groups: [UnderlyingComplexEvents](#)

**171.2.5555 UnderlyingComplexOptPayoutAmount**

Cash amount indicating the pay out associated with an event. For binary options this is a fixed amount.

Type: **Amt**

Used in groups: **UnderlyingComplexEvents**

**171.2.5556 UnderlyingComplexOptPayoutCurrency**

Specifies the currency of the payout amount.

UnderlyingComplexOptPayoutCurrencyCodeSource(2947) may be used to disambiguate the code source scheme used, and ISO 4217 is the default scheme if absent.

Type: **Currency**

Used in groups: **UnderlyingComplexEvents**

**171.2.5557 UnderlyingComplexOptPayoutCurrencyCodeSource**

Identifies class or source of the UnderlyingComplexOptPayoutCurrency(2266) value.

Type: **String**

Allowed values in CurrencyCodeSourceCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

---

Used in groups: **UnderlyingComplexEvents**

**171.2.5558 UnderlyingComplexOptPayoutPaySide**

Trade side of payout payer.

Type: **int**

Allowed values in PaymentPaySideCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	Buy	Buy
2	Sell	Sell

---

Used in groups: **UnderlyingComplexEvents**

**171.2.5559 UnderlyingComplexOptPayoutPercentage**

Percentage of observed price for calculating the payout associated with the event.

Type: **Percentage**

Used in groups: **UnderlyingComplexEvents**

**171.2.5560 UnderlyingComplexOptPayoutReceiveSide**

Trade side of payout receiver.

Type: **int**

Allowed values in PaymentPaySideCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	Buy	Buy
2	Sell	Sell

---

Used in groups: **UnderlyingComplexEvents**

**171.2.5561 UnderlyingComplexOptPayoutTime**

The time when the payout is to occur.

Type: **int**

Allowed values in ComplexOptPayoutTimeCodeSet:

Code	Name	Description
0	Close	Close
1	Open	Open
2	OfficialSettl	Official settlement
3	ValuationTime	Valuation time
4	ExcahgneSettlTime	Exchange settlement time
5	DerivativesClose	Derivatives close
6	AsSpecified	As specified in master confirmation

Used in groups: **UnderlyingComplexEvents**

**171.2.5562 UnderlyingComplexOptPayoutUnderlier**

Reference to the underlier whose payments are being passed through.

Type: **String**

Used in groups: **UnderlyingComplexEvents**

**171.2.5563 UnderlyingConstituentWeight**

For a basket, or pool, describes the weight of each of the constituents within the basket. If not provided, it is assumed to be equal weighted.

Type: **float**

Used in components: **UnderlyingInstrument**

**171.2.5564 UnderlyingContractMultiplier**

Underlying security's ContractMultiplier.

See ContractMultiplier (231) field for description

Type: **float**

Used in components: **UnderlyingInstrument**

### **171.2.5565 UnderlyingContractMultiplierUnit**

Indicates the type of multiplier being applied to the contract.

Type: **int**

Allowed values in ContractMultiplierUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Shares	Shares
1	Hours	Hours
2	Days	Days

---

Used in components: **UnderlyingInstrument**

### **171.2.5566 UnderlyingContractPriceRefMonth**

Reference month if there is no applicable UnderlyingMaturityMonth(313) value for the contract or security.

Type: **MonthYear**

Used in components: **UnderlyingInstrument**

### **171.2.5567 UnderlyingContractSettlMonth**

Specifies when the contract (i.e. MBS/TBA) will settle. Must be present for MBS/TBA.

Type: **MonthYear**

Used in components: **UnderlyingInstrument**

### **171.2.5568 UnderlyingContraryInstructionEligibilityIndicator**

Identifies whether the option instrument is eligible for contrary instructions at the time of exercise. The contrariness of an instruction will be determined in the context of UnderlyingInTheMoneyCondition(2683). When not specified, the eligibility is undefined or not applicable.

Type: **Boolean**

Used in components: **UnderlyingInstrument**

### **171.2.5569 UnderlyingCountryOfIssue**

Underlying security's CountryOfIssue.

See CountryOfIssue (470) field for description

Type: **Country**

Used in components: **UnderlyingInstrument**

### **171.2.5570 UnderlyingCouponDayCount**

The day count convention used in interest calculations for a bond or an interest bearing security.

Type: **int**

Allowed values in CouponDayCountCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	OneOne	1/1. If parties specify the Day Count Fraction to be 1/1 then in calculating the applicable amount, 1 is simply input into the calculation as the relevant Day Count Fraction. See also 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (a).
1	ThirtyThreeSixtyUS	30/360 (30U/360 or Bond Basis). See also ISO 15022 MICO code 'A001'.
2	ThirtyThreeSixtySIA	30/360 (SIA). A variant of "30/360" - when Date1 and Date2 are both Feb. 28th or 29th convert them to 30th using the same logic in the conversion of 31st to 30th.
3	ThirtyThreeSixtyM	30/360M. Commonly used day count convention for US mortgage backed securities. Feb 28th (or 29th in a leap year) is always considered as a 30th for a start date. As a comparison, in the regular 30/360 day count as used by most US agency and corporate bonds, a start date of Feb 28th (or 29th in a leap year) is still considered as the 28th (or 29th) day of a month of 30 days.
4	ThirtyEThreeSixty	30E/360 (Eurobond Basis). See also ISO 15022 MICO code 'A007'.

---

Code	Name	Description
5	ThirtyEThreeSixtyISDA	30E/360 (ISDA). Date adjustment rules are: (1) if Date1 is the last day of the month, then change Date1 to 30; (2) if D2 is the last day of the month (unless Date2 is the maturity date and Date2 is in February), then change Date2 to 30. See also 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (h).
6	ActThreeSixty	Act/360. See also ISO 15022 MICO code 'A004'.
7	ActThreeSixtyFiveFixed	Act/365 (FIXED). See also ISO 15022 MICO code 'A005'.
8	ActActAFB	Act/Act (AFB). See also ISO 15022 MICO code 'A010'.
9	ActActICMA	Act/Act (ICMA). See also ISO 15022 MICO code 'A006'.
10	ActActISMAUltimo	Act/Act (ICMA Ultimo). The Act/Act (ICMA Ultimo) differs from Act/Act (ICMA) method only that it assumes that regular coupons always fall on the last day of the month.
11	ActActISDA	Act/Act (ISDA). See also ISO 15022 MICO code 'A008'.
12	BusTwoFiftyTwo	BUS/252. Used for Brazilian Real swaps, which is based on business days instead of calendar days. The number of business days divided by 252.
13	ThirtyEPlusThreeSixty	30E+/360. Variation on 30E/360. Date adjustment rules: (1) If Date1 falls on the 31st, then change it to the 30th; (2) If Date2 falls on the 31st, then change it to 1 and increase Month2 by one, i.e. next month.
14	ActThreeSixtyFiveL	Act/365L. See also ISO 15022 MICO code 'A009'.
15	NLThreeSixtyFive	NL365. See also ISO 15022 MICO code 'A014'.
16	NLThreeSixty	NL360. This is the same as Act/360, with the exception of leap days (29th February) which are ignored.
17	Act364	Act/364. The actual number of days between Date1 and Date2, divided by 364.
18	ThirtyThreeSixtyFive	30/365. Interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and a 365-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31 is assumed to be a 30 and the 28 February (or 29 February for a leap year) is assumed to be a 28 (or 29). See also ISO 15022 MICO code 'A002'.

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
19	ThirtyActual	30/Actual. Interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and the assumed number of days in a year in a way similar to the Actual/Actual (ICMA). Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31 is assumed to be a 30 and the 28 February (or 29 February for a leap year) is assumed to be a 28 (or 29). The assumed number of days in a year is computed as the actual number of days in the coupon period multiplied by the number of interest payments in the year. See also ISO 15022 MICO code 'A003'.
20	ThirtyThreeSixtyICMA	30/360 (ICMA or basis rule). Interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30 calendar day of the same month, except for February. This means that a 31 is assumed to be a 30 and the 28 February (or 29 February for a leap year) is assumed to be a 28 (or 29). It is the most commonly used 30/360 method for non-US straight and convertible bonds issued before 1 January 1999. See also ISO 15022 MICO code 'A011'.
21	ThirtyETwoThreeSixty	30E2/360 (Eurobond basis model two). Interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for the last day of February whose day of the month value shall be adapted to the value of the first day of the interest period if the latter is higher and if the period is one of a regular schedule. This means that a 31 is assumed to be a 30 and the 28 February of a non-leap year is assumed to be equivalent to a 29 February when the first day of the interest period is a 29, or to a 30 February when the first day of the interest period is a 30 or a 31. The 29 February of a leap year is assumed to be equivalent to a 30 February when the first day of the interest period is a 30 or a 31. Similarly, if the coupon period starts on the last day of February, it is assumed to produce only one day of interest in February as if it was starting on a 30 February when the end of the period is a 30 or a 31, or two days of interest in February when the end of the period is a 29, or three days of interest in February when it is the 28 February of a non-leap year and the end of the period is before the 29. See also ISO 15022 MICO code 'A012'.

---

Code	Name	Description
22	ThirtyEThreeThreeSixty	30E3/360 (Eurobond basis model three). Interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that a 31 is assumed to be a 30 and the 28 February (or 29 February for a leap year) is assumed to be equivalent to a 30 February. It is a variation of the 30E/360 (or Eurobond basis) method where the last day of February is always assumed to be a 30, even if it is the last day of the maturity coupon period. See also ISO 15022 MICO code 'A013'.
99	Other	Other. For other day count method. See also ISO 15022 MICO code 'OTHR'.

Used in components: [UnderlyingInstrument](#)

### 171.2.5571 UnderlyingCouponFrequencyPeriod

Time unit multiplier for the frequency of the bond's coupon payment.

Type: [int](#)

Used in components: [UnderlyingInstrument](#)

### 171.2.5572 UnderlyingCouponFrequencyUnit

Time unit associated with the frequency of the bond's coupon payment.

Type: [String](#)

Allowed values in CouponFrequencyUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year
H	Hour	Hour
Min	Minute	Minute
S	Second	Second

Code	Name	Description
T	Term	Term

Used in components: [UnderlyingInstrument](#)

#### **171.2.5573 UnderlyingCouponOtherDayCount**

The industry name of the day count convention not listed in UnderlyingCouponDayCount(1993).

Type: [String](#)

Used in components: [UnderlyingInstrument](#)

#### **171.2.5574 UnderlyingCouponPaymentDate**

Underlying security's CouponPaymentDate.

See CouponPaymentDate (224) field for description

(Note tag # was reserved in FIX 4.1, added in FIX 4.3)

(prior to FIX 4.4 field was of type UTCTDate)

Type: [LocalMktDate](#)

Used in components: [UnderlyingInstrument](#)

#### **171.2.5575 UnderlyingCouponRate**

Underlying security's CouponRate.

See CouponRate (223) field for description

Type: [Percentage](#)

Used in components: [UnderlyingInstrument](#)

#### **171.2.5576 UnderlyingCouponType**

Specifies the coupon type of the underlying bond.

Type: [int](#)

Allowed values in CouponTypeCodeSet:

Code	Name	Description
0	Zero	Zero
1	FixedRate	Fixed rate
2	FloatingRate	Floating rate
3	Structured	Structured

Used in components: [UnderlyingInstrument](#)

### 171.2.5577 UnderlyingCPPProgram

The program under which the underlying commercial paper is issued

Type: [int](#)

Allowed values in CPPProgramCodeSet:

Code	Name	Description
1	Program3a3	3(a)(3). Arising out of a current transaction with a maturity less than 9 months.
2	Program42	4(2). Issued not involving any public offering.
3	Program3a2	3(a)(2). Issued or guaranteed by the US, state or territorial government.
4	Program3a3And3c7	3(a)(3) & 3(c)(7). Combination of 3(a)(3) and 3(c)(7).
5	Program3a4	3(a)(4). Religious, education, benevolent, fraternal, charitable or reformatory purposes.
6	Program3a5	3(a)(5). Issued by an institution supervised by state or federal authority or by an exempt farmer's cooperative.
7	Program3a7	3(a)(7). Issued by a receiver or trustee in bankruptcy.
8	Program3c7	3(c)(7). Qualified hedge-fund under the Investment Company Act of 1940.
99	Other	Other

Used in components: [UnderlyingInstrument](#)

**171.2.5578 UnderlyingCPRegType**

The registration type of the underlying commercial paper issuance

Type: **String**

Used in components: **UnderlyingInstrument**

**171.2.5579 UnderlyingCreditRating**

Underlying security's CreditRating.

See CreditRating (255) field for description

(Note tag # was reserved in FIX 4.1, added in FIX 4.3)

Type: **String**

Used in components: **UnderlyingInstrument**

**171.2.5580 UnderlyingCurrency**

Underlying security's currency.

Type: **Currency**

Used in components: **UnderlyingInstrument**

**171.2.5581 UnderlyingCurrencyCodeSource**

Identifies class or source of the UnderlyingCurrency(318) value.

Type: **String**

Allowed values in CurrencyCodeSourceCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)

Code	Name	Description
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in components: [UnderlyingInstrument](#)

### 171.2.5582 UnderlyingCurrentValue

Currency value currently attributed to this collateral

Type: [Amt](#)

Used in components: [UnderlyingInstrument](#)

### 171.2.5583 UnderlyingDateAdjustment

UnderlyingDateAdjustment is a subcomponent within the UnderlyingInstrument component. It is used to specify date adjustment parameters and rules. The date adjustments specified here applies to all adjustable dates for the underlying instrument, unless specifically overridden in the respective specified components further within the UnderlyingInstrument component.

Name	Mult.	Type	Description
<a href="#">UnderlyingBusinessDayConvention</a>	[0..1]	CodeSet	
<a href="#">UnderlyingBusinessCenterGrp</a>	[0..*]	Group	
<a href="#">UnderlyingDateRollConvention</a>	[0..1]	CodeSet	

Used in components: [UnderlyingInstrument](#)

### 171.2.5584 UnderlyingDatedDate

If different from IssueDate()

Type: [LocalMktDate](#)

Used in components: [UnderlyingInstrument](#)

**171.2.5585 UnderlyingDateRollConvention**

The convention for determining a sequence of dates. It is used in conjunction with a specified frequency. The value defined here applies to all adjustable dates in the underlying instrument unless specifically overridden.

Type: **String**

Allowed values in DateRollConventionCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	FirstDay	1st day of the month
2	SecondDay	2nd day of the month
3	ThirdDay	3rd day of the month
4	FourthDay	4th day of the month
5	FifthDay	5th day of the month
6	SixthDay	6thd day of the month
7	SeventhDay	7th day of the month
8	EighthDay	8th day of the month
9	NinthDay	9th day of the month
10	TenthDay	10th day of the month
11	EleventhDay	11th day of the month
12	TwelvthDay	12th day of the month
13	ThirteenthDay	13th day of the month
14	ForteenthDay	14th day of the month
15	FifteenthDay	15th day of the month
16	SixteenthDay	16th day of the month
17	SeventeenthDay	17th day of the month
18	EighteenthDay	18th day of the month
19	NineteenthDay	19th day of the month
20	TwentiethDay	20th day of the month
21	TwentyFirstDay	21st day of the month
22	TwentySecondDay	22nd day of the month
23	TwentyThirdDay	23rd day of the month
24	TwentyFourthDay	24th day of the month
25	TwentyFifthDay	25th day of the month
26	TwentySixthDay	26th day of the month
27	TwentySeventhDay	27th day of the month

---

Code	Name	Description
28	TwentyEighthDa28y	28th day of the month
29	TwentyNinthDay	29th day of the month
30	ThirtiethDay	30th day of the month
EOM	EOM	The end of the month. Use EOM for 31st day of the month.
FRN	FRN	The floating rate note convention or Eurodollar convention.
IMM	IMM	The International Money Market settlement date, i.e. the 3rd Wednesday of the month.
IMMCAD	IMMCAD	The last trading day/expiration day of the Canadian Derivatives Exchange.
IMMAUD	IMMAUD	The last trading day of the Sydney Futures Exchange Australian 90-day bank accepted bill futures contract.
IMMNZD	IMMNZD	The last trading day of the Sydney Futures Exchange New Zealand 90-day bank bill futures contract.
SFE	SFE	The Sydney Futures Exchange 90-day bank accepted bill futures settlement dates.
NONE	NONE	No adjustment
TBILL	TBILL	The 13-week and 26-week U.S. Treasury Bill auction dates.
MON	MON	Monday
TUE	TUE	Tuesday
WED	WED	Wednesday
THU	THU	Thursday
FRI	FRI	Friday
SAT	SAT	Saturday
SUN	SUN	Sunday

Used in components: [UnderlyingDateAdjustment](#)

### 171.2.5586 UnderlyingDeliveryAmount

Indicates the underlying position amount to be delivered

Type: [Amt](#)

Used in groups: [PosUndInstrmtGrp](#)

**171.2.5587 UnderlyingDeliveryRouteOrCharter**

Specific delivery route or time charter average. Applicable to commodity freight contracts.

Type: **String**

Used in components: **UnderlyingInstrument**

**171.2.5588 UnderlyingDeliveryScheduleGrp**

The UnderlyingDeliveryScheduleGrp is a repeating subcomponent of the UnderlyingStream component used to detail step schedules associated with a delivery stream.

<b>Name</b>	<b>Mult.</b>	<b>Type</b>	<b>Description</b>
NoUnderlyingDeliverySchedules	[1..1]	NumInGroup	
UnderlyingDeliveryScheduleType	[0..1]	CodeSet	Required if NoUnderlyingDeliverySchedules(41756) > 0.
UnderlyingDeliveryScheduleXID	[0..1]	XID	
UnderlyingDeliveryScheduleNotional	[0..1]	Qty	
UnderlyingDeliveryScheduleNotionalUnitOfMeasure	[0..1]	CodeSet	
UnderlyingDeliveryScheduleNotionalCommodityFrequency	[0..1]	CodeSet	
UnderlyingDeliveryScheduleNegativeTolerance	[0..1]	float	
UnderlyingDeliverySchedulePositiveTolerance	[0..1]	float	
UnderlyingDeliveryScheduleToleranceUnitOfMeasure	[0..1]	CodeSet	
UnderlyingDeliveryScheduleToleranceType	[0..1]	CodeSet	Conditionally required when UnderlyingDeliveryScheduleNegativeTolerance(41762) or UnderlyingDeliverySchedulePositiveTolerance(41763) is specified.
UnderlyingDeliveryScheduleSettlCountry	[0..1]	Country	
UnderlyingDeliveryScheduleSettlTimeZone	[0..1]	String	
UnderlyingDeliveryScheduleSettlFlowType	[0..1]	CodeSet	

Name	Mult.	Type	Description
<a href="#">UnderlyingDeliveryScheduleSettlHolidaysProcessingInstruction</a>	[0..1]	CodeSet	
<a href="#">UnderlyingDeliveryScheduleSettlDayGrp</a>	[0..*]	Group	

Used in groups: [UnderlyingStreamGrp](#)

### 171.2.5589 UnderlyingDeliveryScheduleNegativeTolerance

Specifies the negative tolerance value. The value may be an absolute quantity or a percentage, as specified in [UnderlyingDeliveryScheduleToleranceType\(41765\)](#). Percentage value is to be expressed relative to "1.0" representing 100% (e.g. a value of "0.0575" represents 5.75%).

Type: [float](#)

Used in groups: [UnderlyingDeliveryScheduleGrp](#)

### 171.2.5590 UnderlyingDeliveryScheduleNotional

Physical delivery quantity.

Type: [Qty](#)

Used in groups: [UnderlyingDeliveryScheduleGrp](#)

### 171.2.5591 UnderlyingDeliveryScheduleNotionalCommodityFrequency

The frequency of notional delivery.

Type: [int](#)

Allowed values in [StreamNotionalCommodityFrequencyCodeSet](#):

Code	Name	Description
0	Term	Term
1	PerBusinessDay	Per business day
2	PerCalculationPeriod	Per calculation period
3	PerSettlPeriod	Per settlement period

Code	Name	Description
4	PerCalendarDay	Per calendar day
5	PerHour	Per hour
6	PerMonth	Per month

Used in groups: [UnderlyingDeliveryScheduleGrp](#)

### 171.2.5592 UnderlyingDeliveryScheduleNotionalUnitOfMeasure

Specifies the delivery quantity unit of measure (UOM).

Type: [String](#)

Allowed values in UnitOfMeasureCodeSet:

Code	Name	Description
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet
Bbl	Barrels	Barrels. Equal to 42 US gallons
CBM	CubicMeters	Cubic Meters
BDFT	BoardFeet	Board feet. Equal to 144 cubic inches
GJ	Gigajoules	gigajoules
Bu	Bushels	Bushels
kHR	HeatRate	Heat rate. The number of BTUs required to produce one kilowatt hour of electricity, typically 3,412.14 BTUs per 1 kWh.
Ccy	Currency	Amount of currency
kWh	KilowattHours	Kilowatt hours
CDD	CoolingDegreeDay	Cooling degree day
MHR	MegaHeatRate	Mega heat rate. The number of million BTUs required to produce one megawatt hour of electricity, typically 3.41214 million BTUs per 1 MWh.
CER	CertifiedEmissionsReduction	Certified emissions reduction
MMBtu	OneMillionBTU	One Million BTU
CPD	CriticalPrecipDay	Critical precipitation day
MWh	MegawattHours	Megawatt hours
CRT	ClimateReserveTonnes	Climate reserve tonnes
thm	Therms	therms. Equal to 100,000 BTU

<b>Code</b>	<b>Name</b>	<b>Description</b>
cwt	Hundredweight	Hundredweight(US). Equal to 100 lbs
tnCO2	TonsOfCarbonDioxide	Tons of carbon dioxide
day	Day	Days
dt	DryMetricTons	Dry metric tons
EnvAllwnc	EnvAllwncCert	Environmental allowance certificates
EnvCrd	EnvironmentalCredit	Environmental credit
EnvOfst	EnvironmentalOffset	Environmental Offset
g	Grams	Grams
Gal	Gallons	Gallons
GT	GrossTons	Gross tons. Also known as long tons or imperial tons, equal to 2240 lbs
HDD	HeatingDegreeDay	Heating degree day
IPNT	IndexPoint	Index point
kg	Kilograms	Kilograms
kL	Kiloliters	kiloliters
kW-a	KilowattYear	Kilowatt year (electrical capacity)
kW-d	KilowattDay	Kilowatt day (electrical capacity)
kW-h	KilowattHour	Kilowatt hour (electrical capacity)
kW-M	KilowattMonth	Kilowatt month (electrical capacity)
kW-min	KilowattMinute	Kilowatt-Minute (electrical capacity)
L	Liters	liters
lbs	Pounds	pounds
MW-a	MegawattYear	Megawatt year (electrical capacity)
MW-d	MegawattDay	Megawatt day (electrical capacity)
MW-h	MegawattHour	Megawatt hour (electrical capacity)
MW-M	MegawattMonth	Megawatt month (electrical capacity)
MW-min	MegawattMinute	Megawatt minute (electrical capacity)
oz_tr	TroyOunces	Troy ounces
PRINC	PrincipalWithRelationToDebtInstrument	Principal with relation to debt instrument
t	MetricTons	Metric tons. Also known as Tonnes, equal to 1000 kg
tn	Tons	Tons (US). Equal to 2000 lbs
a	Are	Are
ac	Acre	Acre
cL	Centiliter	Centiliter

<b>Code</b>	<b>Name</b>	<b>Description</b>
cM	Centimeter	Centimeter
DGE	DieselGallonEquivalent	Diesel gallon equivalent
ft	Foot	Foot
Gal_gb	GBGallon	GB Gallon
GGE	GasolineGallonEquivalent	Gasonline gallon equivalent
ha	Hectare	Hectare
in	Inch	Inch
kM	Kilometer	Kilometer
M	Meter	Meter
mi	Mile	Mile
mL	Milliliter	Milliliter
mM	Millimeter	Millimeter
oz	USOunce	US ounce
pc	Piece	Piece
pt	USPint	US Pint
pt_gb	GBPint	GB pint
qt	USQuart	US Quart
qt_gb	GBQuart	GB Quart
SqcM	SquareCentimeter	Square centimeter
Sqft	SquareFoot	Square foot
Sqin	SquareInch	Square inch
SqkM	SquareKilometer	Square kilometer
SqM	SquareMeter	Square meter
Sqmi	SquareMile	Square mile
SqmM	SquareMillimeter	Square millimeter
Sqyd	SquareYard	Square yard
yd	Yard	Yard
MMbbl	MillionBarrels	Million Barrels
USD	USDollars	US Dollars

Used in groups: [UnderlyingDeliveryScheduleGrp](#)

**171.2.5593 UnderlyingDeliverySchedulePositiveTolerance**

Specifies the positive tolerance value. The value may be an absolute quantity or a percentage, as specified in UnderlyingDeliveryScheduleToleranceType(41765). Value may exceed agreed upon value. Percentage value is to be expressed relative to "1.0" representing 100% (e.g. a value of "0.0575" represents 5.75%).

Type: **float**

Used in groups: **UnderlyingDeliveryScheduleGrp**

**171.2.5594 UnderlyingDeliveryScheduleSettlCountry**

Specifies the country where delivery takes place. Uses ISO 3166 2-character country code.

Type: **Country**

Used in groups: **UnderlyingDeliveryScheduleGrp**

**171.2.5595 UnderlyingDeliveryScheduleSettlDay**

Specifies the day or group of days for delivery.

Type: **int**

Allowed values in DeliveryScheduleSettlDayCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	Monday	Monday
2	Tuesday	Tuesday
3	Wednesday	Wednesday
4	Thursday	Thursday
5	Friday	Friday
6	Saturday	Saturday
7	Sunday	Sunday
8	AllWeekdays	All weekdays
9	AllDays	All days
10	AllWeekends	All weekends

---

Used in groups: **UnderlyingDeliveryScheduleSettlDayGrp**

**171.2.5596 UnderlyingDeliveryScheduleSettlDayGrp**

The UnderlyingDeliveryScheduleSettlDayGrp is a repeating subcomponent of the UnderlyingDeliveryScheduleGrp component used to detail commodity delivery days.

Name	Mult.	Type	Description
NoUnderlyingDeliveryScheduleSettlDays	[1..1]	NumInGroup	
UnderlyingDeliveryScheduleSettlDay	[0..1]	CodeSet	Required if NoUnderlyingDeliveryScheduleSettlDays(41770) > 0.
UnderlyingDeliveryScheduleSettlTotalHours	[0..1]	int	
UnderlyingDeliveryScheduleSettlTimeGrp	[0..*]	Group	

Used in groups: [UnderlyingDeliveryScheduleGrp](#)

**171.2.5597 UnderlyingDeliveryScheduleSettlEnd**

The scheduled end time for the delivery of the commodity where delivery occurs over specified times. The format of the time value is specified in UnderlyingDeliveryScheduleSettlTimeType(41776).

Type: [String](#)

Used in groups: [UnderlyingDeliveryScheduleSettlTimeGrp](#)

**171.2.5598 UnderlyingDeliveryScheduleSettlFlowType**

Specifies the delivery flow type.

Type: [int](#)

Allowed values in DeliveryScheduleSettlFlowTypeCodeSet:

Code	Name	Description
0	AllTimes	All times
1	OnPeak	On peak
2	OffPeak	Off peak

---

Code	Name	Description
3	Base	Base
4	BlockHours	Block hours
5	Other	Other

---

Used in groups: [UnderlyingDeliveryScheduleGrp](#)

### 171.2.5599 UnderlyingDeliveryScheduleSettlHolidaysProcessingInstruction

Indicates whether holidays are included in the settlement periods. Required for electricity contracts.

Type: [int](#)

Allowed values in DeliveryScheduleSettlHolidaysProcessingInstructionCodeSet:

---

Code	Name	Description
0	DoNotIncludeHolidays	Do not include holidays
1	IncludeHolidays	Include holidays

---

Used in groups: [UnderlyingDeliveryScheduleGrp](#)

### 171.2.5600 UnderlyingDeliveryScheduleSettlStart

The scheduled start time for the delivery of the commodity where delivery occurs over specified times. The format of the time value is specified in UnderlyingDeliveryScheduleSettlTimeType(41776).

Type: [String](#)

Used in groups: [UnderlyingDeliveryScheduleSettlTimeGrp](#)

### 171.2.5601 UnderlyingDeliveryScheduleSettlTimeGrp

The UnderlyingDeliveryScheduleSettlTimeGrp is a repeating subcomponent of the UnderlyingDeliveryScheduleSettlDayGrp component used to detail commodity delivery time periods.

Name	Mult.	Type	Description
NoUnderlyingDeliveryScheduleSettlTimes	[1..1]	NumInGroup	
UnderlyingDeliveryScheduleSettlStart	[0..1]	String	Required if NoUnderlyingDeliveryScheduleSettlTimes(41773) > 0.
UnderlyingDeliveryScheduleSettlEnd	[0..1]	String	Required if NoUnderlyingDeliveryScheduleSettlTimes(41773) > 0.
UnderlyingDeliveryScheduleSettlTimeType	[0..1]	CodeSet	May be defaulted to market convention or bilaterally agreed if not specified.

Used in groups: [UnderlyingDeliveryScheduleSettlDayGrp](#)

### 171.2.5602 UnderlyingDeliveryScheduleSettlTimeType

Specifies the format of the delivery start and end time values.

Type: [int](#)

Allowed values in DeliveryScheduleSettlTimeTypeCodeSet:

Code	Name	Description
0	Hour	Hour of the day. Applicable for electricity contracts. Time value is expressed as an integer hour of the day (1-24). The delivery start/end hour is specified as the end of the included hour. For example, a start hour of "4" begins at 3 a.m.; an end hour of "20" ends at 8 p.m.; a start hour of "1" and end hour of "24" indicates midnight to midnight delivery.
1	Timestamp	HH:MM time format. Applicable for gas contracts. Time value is expressed using a 24-hour time format. For example, a time value of "13:30" is 1:30 p.m.

Used in groups: [UnderlyingDeliveryScheduleSettlTimeGrp](#)

### 171.2.5603 UnderlyingDeliveryScheduleSettlTimeZone

Delivery timezone specified as "prevailing" rather than "standard" or "daylight".

See [http://www.fixtradingcommunity.org/codelists#Prevailing\\_Timezones](http://www.fixtradingcommunity.org/codelists#Prevailing_Timezones) for code list of applicable prevailing timezones.

Type: **String**

Used in groups: **UnderlyingDeliveryScheduleGrp**

#### **171.2.5604 UnderlyingDeliveryScheduleSettlTotalHours**

The sum of the total hours specified in the UnderlyingDeliveryScheduleSettlTimeGrp component.

Type: **int**

Used in groups: **UnderlyingDeliveryScheduleSettlDayGrp**

#### **171.2.5605 UnderlyingDeliveryScheduleToleranceType**

Specifies the tolerance value type.

Type: **int**

Allowed values in DeliveryScheduleToleranceTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Absolute	Absolute
1	Percentage	Percentage

---

Used in groups: **UnderlyingDeliveryScheduleGrp**

#### **171.2.5606 UnderlyingDeliveryScheduleToleranceUnitOfMeasure**

Specifies the tolerance value's unit of measure (UOM).

Type: **String**

Allowed values in UnitOfMeasureCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet
Bbl	Barrels	Barrels. Equal to 42 US gallons
CBM	CubicMeters	Cubic Meters
BDFT	BoardFeet	Board feet. Equal to 144 cubic inches

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
GJ	Gigajoules	gigajoules
Bu	Bushels	Bushels
kHR	HeatRate	Heat rate. The number of BTUs required to produce one kilowatt hour of electricity, typically 3,412.14 BTUs per 1 kWh.
Ccy	Currency	Amount of currency
kWh	KilowattHours	Kilowatt hours
CDD	CoolingDegreeDay	Cooling degree day
MHR	MegaHeatRate	Mega heat rate. The number of million BTUs required to produce one megawatt hour of electricity, typically 3.41214 million BTUs per 1 MWh.
CER	CertifiedEmissionsReduction	Certified emissions reduction
MMBtu	OneMillionBTU	One Million BTU
CPD	CriticalPrecipDay	Critical precipitation day
MWh	MegawattHours	Megawatt hours
CRT	ClimateReserveTonnes	Climate reserve tonnes
thm	Therms	therms. Equal to 100,000 BTU
cwt	Hundredweight	Hundredweight(US). Equal to 100 lbs
tnCO2	TonsOfCarbonDioxide	Tons of carbon dioxide
day	Day	Days
dt	DryMetricTons	Dry metric tons
EnvAllwnc	EnvAllwncCert	Environmental allowance certificates
EnvCrd	EnvironmentalCredit	Environmental credit
EnvOfst	EnvironmentalOffset	Environmental Offset
g	Grams	Grams
Gal	Gallons	Gallons
GT	GrossTons	Gross tons. Also known as long tons or imperial tons, equal to 2240 lbs
HDD	HeatingDegreeDay	Heating degree day
IPNT	IndexPoint	Index point
kg	Kilograms	Kilograms
kL	Kiloliters	kiloliters
kW-a	KilowattYear	Kilowatt year (electrical capacity)
kW-d	KilowattDay	Kilowatt day (electrical capacity)
kW-h	KilowattHour	Kilowatt hour (electrical capacity)
kW-M	KilowattMonth	Kilowatt month (electrical capacity)

<b>Code</b>	<b>Name</b>	<b>Description</b>

Sqyd	SquareYard	Square yard
yd	Yard	Yard
MMbbl	MillionBarrels	Million Barrels
USD	USDollars	US Dollars

---

Used in groups: [UnderlyingDeliveryScheduleGrp](#)

### 171.2.5607 UnderlyingDeliveryScheduleType

Specifies the type of delivery schedule.

Type: [int](#)

Allowed values in DeliveryScheduleTypeCodeSet:

---

Code	Name	Description
0	Notional	Notional
1	Delivery	Delivery
2	PhysicalSettlPeriods	Physical settlement period

---

Used in groups: [UnderlyingDeliveryScheduleGrp](#)

### 171.2.5608 UnderlyingDeliveryScheduleXID

Identifier for this instance of delivery schedule for cross referencing elsewhere in the message.

Type: [XID](#)

Used in groups: [UnderlyingDeliveryScheduleGrp](#)

**171.2.5609 UnderlyingDeliveryStreamCommoditySource**

The SCoTA coal cargo origin, mining region, mine(s), mining complex(es), loadout(s) or river dock(s) or other point(s) of origin that seller and buyer agree are acceptable origins for the coal product. For international coal transactions, this is the origin of the coal product.

See <http://www.fpml.org/coding-scheme/commodity-coal-product-source> for values.

Type: **String**

Used in groups: **UnderlyingDeliveryStreamCommoditySourceGrp**

**171.2.5610 UnderlyingDeliveryStreamCommoditySourceGrp**

The UnderlyingDeliveryStreamCommoditySourceGrp is a repeating subcomponent of the UnderlyingDeliveryStream component used to detail the origins or sources of the commodity.

Name	Mult.	Type	Description
<b>NoUnderlyingDeliveryStreamCommoditySources</b>	[1..1]	NumInGroup	
<b>UnderlyingDeliveryStreamCommoditySource</b>	[0..1]	String	Required if NoUnderlyingDeliveryStreamCommoditySources(41808) > 0.

Used in components: **UnderlyingDeliveryStream**

**171.2.5611 UnderlyingDeliveryStream**

The UnderlyingDeliveryStream component is a subcomponent of the UnderlyingStream used to detail the attributes of a physical delivery stream in a swap.

Name	Mult.	Type	Description
<b>UnderlyingDeliveryStreamType</b>	[0..1]	CodeSet	
<b>UnderlyingDeliveryStreamCommoditySourceGrp</b>	[0..*]	Group	
<b>UnderlyingDeliveryStreamPipeline</b>	[0..1]	String	
<b>UnderlyingDeliveryStreamEntryPoint</b>	[0..1]	String	
<b>UnderlyingDeliveryStreamWithdrawalPoint</b>	[0..1]	String	

Name	Mult.	Type	Description
UnderlyingDeliveryStreamDelivery-Point	[0..1]	String	
UnderlyingDeliveryStreamDelivery-PointSource	[0..1]	CodeSet	
UnderlyingDeliveryStreamDelivery-PointDesc	[0..1]	String	
UnderlyingDeliveryStreamDeliveryRe- striction	[0..1]	CodeSet	
UnderlyingDeliveryStreamDeliv- eryContingency	[0..1]	String	
UnderlyingDeliveryStreamDeliv- eryContingentPartySide	[0..1]	CodeSet	
UnderlyingDeliveryStreamDeliverAt- SourceIndicator	[0..1]	Boolean	
UnderlyingDeliveryStreamRiskAppor- tionment	[0..1]	String	
UnderlyingDeliveryStreamRiskAppor- tionmentSource	[0..1]	String	
UnderlyingDeliveryStreamCycleGrp	[0..*]	Group	
UnderlyingDeliveryStreamTitleTrans- ferLocation	[0..1]	String	
UnderlyingDeliveryStreamTitleTrans- ferCondition	[0..1]	CodeSet	
UnderlyingDeliveryStreamIm- porterOfRecord	[0..1]	String	
UnderlyingDeliveryStreamNegativeTol- erance	[0..1]	float	
UnderlyingDeliveryStreamPositiveTol- erance	[0..1]	float	
UnderlyingDeliveryStreamToleranceU- nitOfMeasure	[0..1]	CodeSet	
UnderlyingDeliveryStreamTolerance- Type	[0..1]	CodeSet	
UnderlyingDeliveryStreamToler- anceOptionSide	[0..1]	CodeSet	
UnderlyingDeliveryStreamTotalPosi- tiveTolerance	[0..1]	Percentage	
UnderlyingDeliveryStreamTotalNega- tiveTolerance	[0..1]	Percentage

UnderlyingDeliveryStreamNotional-ConversionFactor	[0..1]	float	
UnderlyingDeliveryStreamTransportEquipment	[0..1]	String	
UnderlyingDeliveryStreamElectingPartySide	[0..1]	CodeSet	
UnderlyingDeliveryStreamRouteOrCharter	[0..1]	String	

Used in groups: [UnderlyingStreamGrp](#)

### 171.2.5612 UnderlyingDeliveryStreamCycleDesc

The delivery cycles during which the oil product will be transported in the pipeline.

Type: [String](#)

Used in groups: [UnderlyingDeliveryStreamCycleGrp](#)

### 171.2.5613 UnderlyingDeliveryStreamCycleGrp

The UnderlyingDeliveryStreamCycleGrp is a repeating subcomponent of the UnderlyingDeliveryStream component used to detail delivery cycles during which the oil product will be transported in the pipeline.

Name	Mult.	Type	Description
NoUnderlyingDeliveryStreamCycles	[1..1]	NumInGroup	
UnderlyingDeliveryStreamCycleDesc	[0..1]	String	Required if NoUnderlyingDeliveryStreamCycles(41804) > 0.
EncodedUnderlyingDeliveryStreamCycleDescLen	[0..1]	Length	Must be set if EncodedUnderlyingDeliveryStreamCycleDesc(41807) field is specified and must immediately precede it.
EncodedUnderlyingDeliveryStreamCycleDesc	[0..1]	data	Encoded (non-ASCII characters) representation of the UnderlyingDeliveryStreamCycleDesc(41805) field in the encoded format specified via the MessageEncoding(347) field.

Used in components: [UnderlyingDeliveryStream](#)

**171.2.5614 UnderlyingDeliveryStreamDeliverAtSourceIndicator**

When this element is specified and set to 'Y', delivery of the coal product is to be at its source.

Type: **Boolean**

Used in components: **UnderlyingDeliveryStream**

**171.2.5615 UnderlyingDeliveryStreamDeliveryContingency**

Specifies the electricity delivery contingency.

See <http://www.fpml.org/coding-scheme/electricity-transmission-contingency> for values.

Type: **String**

Used in components: **UnderlyingDeliveryStream**

**171.2.5616 UnderlyingDeliveryStreamDeliveryContingentPartySide**

The trade side value of the party responsible for electricity delivery contingency.

Type: **int**

Allowed values in DeliveryStreamElectingPartySideCodeSet:

---

Code	Name	Description
0	Buyer	Buyer
1	Seller	Seller

---

Used in components: **UnderlyingDeliveryStream**

**171.2.5617 UnderlyingDeliveryStreamDeliveryPoint**

The point at which the commodity product will be delivered and received. Value specified should follow market convention appropriate for the commodity product.

For bullion see <http://www.fpml.org/coding-scheme/bullion-delivery-location> for values.

Type: **String**

Used in components: **UnderlyingDeliveryStream**

**171.2.5618 UnderlyingDeliveryStreamDeliveryPointDesc**

Description of the delivery point identified in UnderlyingDeliveryStreamDeliveryPoint(41781).

Type: **String**

Used in components: **UnderlyingDeliveryStream**

**171.2.5619 UnderlyingDeliveryStreamDeliveryPointSource**

Identifies the class or source of UnderlyingDeliveryStreamDeliveryPoint(41781).

Type: **int**

Allowed values in DeliveryStreamDeliveryPointSourceCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Proprietary	Proprietary
1	EIC	Energy Identification Code (EIC). Energy Identification Code specifies the location or connection point codes of energy delivery. See <a href="http://www.entsog.eu/eic-codes/eic-location-codes-v">http://www.entsog.eu/eic-codes/eic-location-codes-v</a> or <a href="http://www.eiccodes.eu">http://www.eiccodes.eu</a> for more information and allocated values to use in DeliveryStreamDeliveryPoint(41062).

---

Used in components: **UnderlyingDeliveryStream**

**171.2.5620 UnderlyingDeliveryStreamDeliveryRestriction**

Specifies under what conditions the buyer and seller should be excused of their delivery obligations.

Type: **int**

Allowed values in DeliveryStreamDeliveryRestrictionCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	Firm	Firm. Never excused of delivery obligations.
2	NonFirm	Interruptable or non-firm. Excused when interrupted for any reason or for no reason without liability.
3	ForceMajeure	Force majeure. Excused when prevented by force majeure.

---

Code	Name	Description
4	SystemFirm	System firm. Must be supplied from the owned or controlled generation of pre-existing purchased power assets of the system specified.
5	UnitFirm	Unit firm. Must be supplied from the generation asset specified.

Used in components: [UnderlyingDeliveryStream](#)

### 171.2.5621 UnderlyingDeliveryStreamElectingPartySide

A reference to the party able to choose whether the gas is delivered for a particular period e.g. a swing or interruptible contract.

Type: [int](#)

Allowed values in DeliveryStreamElectingPartySideCodeSet:

Code	Name	Description
0	Buyer	Buyer
1	Seller	Seller

Used in components: [UnderlyingDeliveryStream](#)

### 171.2.5622 UnderlyingDeliveryStreamEntryPoint

The point at which the commodity will enter the delivery mechanism or pipeline.

Type: [String](#)

Used in components: [UnderlyingDeliveryStream](#)

### 171.2.5623 UnderlyingDeliveryStreamImporterOfRecord

A party, not necessarily of the trade, who is the Importer of Record for the purposes of paying customs duties and applicable taxes or costs related to importation.

Type: [String](#)

Used in components: [UnderlyingDeliveryStream](#)

**171.2.5624 UnderlyingDeliveryStreamNegativeTolerance**

Specifies the negative tolerance value. The value may be an absolute quantity or a percentage, as specified in `UnderlyingDeliveryStreamToleranceType(41793)`. Percentage value is to be expressed relative to "1.0" representing 100% (e.g. a value of "0.0575" represents 5.75%).

Type: **float**

Used in components: **UnderlyingDeliveryStream**

**171.2.5625 UnderlyingDeliveryStreamNotionalConversionFactor**

If the notional quantity is specified in a unit that does not match the unit in which the commodity reference price is quoted, the scaling or conversion factor used to convert the commodity reference price unit into the notional quantity unit should be stated here. If there is no conversion, this field is not intended to be used.

Type: **float**

Used in components: **UnderlyingDeliveryStream**

**171.2.5626 UnderlyingDeliveryStreamPipeline**

The name of the oil delivery pipeline.

Type: **String**

Used in components: **UnderlyingDeliveryStream**

**171.2.5627 UnderlyingDeliveryStreamPositiveTolerance**

Specifies the positive tolerance value. The value may be an absolute quantity or a percentage, as specified in `UnderlyingDeliveryStreamToleranceType(41793)`. Value may exceed agreed upon value. Percentage value is to be expressed relative to "1.0" representing 100% (e.g. a value of "0.0575" represents 5.75%).

Type: **float**

Used in components: **UnderlyingDeliveryStream**

**171.2.5628 UnderlyingDeliveryStreamRiskApportionment**

Specifies how the parties to the trade apportion responsibility for the delivery of the commodity product.

See [http://www.fixtradingcommunity.org/codelists#Risk\\_Apportionment](http://www.fixtradingcommunity.org/codelists#Risk_Apportionment) for the details of the external code list.

Type: **String**

Used in components: **UnderlyingDeliveryStream**

**171.2.5629 UnderlyingDeliveryStreamRiskApportionmentSource**

Specifies the source or legal framework for the risk apportionment.

See [http://www.fixtradingcommunity.org/codelists#Risk\\_Apportionment\\_Source](http://www.fixtradingcommunity.org/codelists#Risk_Apportionment_Source) for the details of the external code list.

Type: **String**

Used in components: **UnderlyingDeliveryStream**

**171.2.5630 UnderlyingDeliveryStreamRouteOrCharter**

Specific delivery route or time charter average. Applicable to commodity freight swaps.

Type: **String**

Used in components: **UnderlyingDeliveryStream**

**171.2.5631 UnderlyingDeliveryStreamTitleTransferCondition**

Specifies the title transfer condition.

Type: **int**

Allowed values in DeliveryStreamTitleTransferConditionCodeSet:

---

Code	Name	Description
0	Transfers	Transfers with risk of loss
1	DoesNotTransfer	Does not transfer with risk of loss

---

Used in components: **UnderlyingDeliveryStream**

**171.2.5632 UnderlyingDeliveryStreamTitleTransferLocation**

Specifies the title transfer location.

Type: **String**

Used in components: **UnderlyingDeliveryStream**

**171.2.5633 UnderlyingDeliveryStreamToleranceOptionSide**

Indicates whether the tolerance is at the seller's or buyer's option.

Type: **int**

Allowed values in DeliveryStreamToleranceOptionSideCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	Buyer	Buyer
2	Seller	Seller

---

Used in components: **UnderlyingDeliveryStream**

**171.2.5634 UnderlyingDeliveryStreamToleranceType**

Specifies the tolerance value type.

Type: **int**

Allowed values in DeliveryScheduleToleranceTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Absolute	Absolute
1	Percentage	Percentage

---

Used in components: **UnderlyingDeliveryStream**

**171.2.5635 UnderlyingDeliveryStreamToleranceUnitOfMeasure**

Specifies the tolerance value's unit of measure (UOM).

Type: **String**

Allowed values in UnitOfMeasureCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet
Bbl	Barrels	Barrels. Equal to 42 US gallons

Used in components: [UnderlyingDeliveryStream](#)

### 171.2.5636 UnderlyingDeliveryStreamTotalNegativeTolerance

The negative percent tolerance which applies to the total quantity delivered over all shipment periods.

Percentage value is to be expressed relative to "1.0" representing 100% (e.g. a value of "0.0575" represents 5.75%).

Type: [Percentage](#)

Used in components: [UnderlyingDeliveryStream](#)

**171.2.5637 UnderlyingDeliveryStreamTotalPositiveTolerance**

The positive percent tolerance which applies to the total quantity delivered over all shipment periods.

Percentage value is to be expressed relative to "1.0" representing 100% (e.g. a value of "0.0575" represents 5.75%).

Type: **Percentage**

Used in components: **UnderlyingDeliveryStream**

**171.2.5638 UnderlyingDeliveryStreamTransportEquipment**

The transportation equipment with which the commodity product will be delivered and received.

Type: **String**

Used in components: **UnderlyingDeliveryStream**

**171.2.5639 UnderlyingDeliveryStreamType**

Specifies the type of delivery stream.

Type: **int**

Allowed values in DeliveryStreamTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Periodic	Periodic (default if not specified)
1	Initial	Initial
2	Single	Single

---

Used in components: **UnderlyingDeliveryStream**

**171.2.5640 UnderlyingDeliveryStreamWithdrawalPoint**

The point at which the commodity product will be withdrawn prior to delivery.

Type: **String**

Used in components: **UnderlyingDeliveryStream**

### **171.2.5641 UnderlyingDepositoryReceiptIndicator**

Indicates whether the underlier is a depository receipt.

Type: **Boolean**

Used in components: **UnderlyingInstrument**

### **171.2.5642 UnderlyingDetachmentPoint**

See DetachmentPoint(1458).

Type: **Percentage**

Used in components: **UnderlyingInstrument**

### **171.2.5643 UnderlyingDirtyPrice**

Price (percent-of-par or per unit) of the underlying security or basket. "Dirty" means it includes accrued interest

Type: **Price**

Used in components: **UnderlyingInstrument**

### **171.2.5644 UnderlyingDividendAccrualFixedRate**

The dividend accrual fixed rate per annum expressed as a decimal.

A value of 5% would be represented as "0.05".

Type: **Percentage**

Used in components: **UnderlyingDividendConditions**

### **171.2.5645 UnderlyingDividendAccrualFloatingRate**

The UnderlyingDividendAccrualFloatingRate component is a subcomponent of UnderlyingDividendConditions used to define the dividend accrual floating rate attributes of dividend payment conditions.

Name	Mult.	Type	Description
UnderlyingDividendFloatingRateIndex	[0..1]	String	
UnderlyingDividendFloatingRateIndex-CurvePeriod	[0..1]	int	Conditionally required when UnderlyingDividendFloatingRateIndexCurveUnit(42803) is specified.
UnderlyingDividendFloatingRateIndex-CurveUnit	[0..1]	CodeSet	Conditionally required when UnderlyingDividendFloatingRateIndexCurvePeriod(42802) is specified.
UnderlyingDividendFloatingRateMultiplier	[0..1]	float	
UnderlyingDividendFloatingRate-Spread	[0..1]	PriceOffset	
UnderlyingDividendFloatingRate-SpreadPositionType	[0..1]	CodeSet	
UnderlyingDividendFloatingRateTreatment	[0..1]	CodeSet	
UnderlyingDividendCapRate	[0..1]	Percentage	
UnderlyingDividendCapRateBuySide	[0..1]	CodeSet	
UnderlyingDividendCapRateSellSide	[0..1]	CodeSet	
UnderlyingDividendFloorRate	[0..1]	Percentage	
UnderlyingDividendFloorRateBuySide	[0..1]	CodeSet	
UnderlyingDividendFloorRateSellSide	[0..1]	CodeSet	
UnderlyingDividendInitialRate	[0..1]	Percentage	
UnderlyingDividendFinalRateRoundingDirection	[0..1]	CodeSet	
UnderlyingDividendFinalRatePrecision	[0..1]	int	
UnderlyingDividendAveragingMethod	[0..1]	CodeSet	
UnderlyingDividendNegativeRate-Treatment	[0..1]	CodeSet	

Used in components: [UnderlyingDividendConditions](#)

### 171.2.5646 UnderlyingDividendAccrualPaymentDateAdjusted

The adjusted accrual payment date.

Type: [LocalMktDate](#)

Used in components: [UnderlyingDividendAccrualPaymentDate](#)

**171.2.5647 UnderlyingDividendAccrualPaymentDateBusinessCenter**

The business center calendar used for date adjustment of the instrument's dividend accrual payment date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **UnderlyingDividendAccrualPaymentDateBusinessCenterGrp**

**171.2.5648 UnderlyingDividendAccrualPaymentDateBusinessCenterGrp**

UnderlyingDividendAccrualPaymentDateBusinessCenterGrp is a repeating subcomponent within the UnderlyingDividendAccrualPaymentDate component. It is used to specify the set of business centers whose calendars drive the date adjustment.

Name	Mult.	Type	Description
<b>NoUnderlyingDividendAccrualPaymentDateBusinessCenters</b>	[1..1]	NumInGroup	
<b>UnderlyingDividendAccrualPaymentDateBusinessCenter</b>	[0..1]	String	Required if NoUnderlyingDividendAccrualPaymentDateBusinessCenters(42799) > 0.

Used in components: **UnderlyingDividendAccrualPaymentDate**

**171.2.5649 UnderlyingDividendAccrualPaymentDateBusinessDayConvention**

Accrual payment date adjustment business day convention.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.

Code	Name	Description
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [UnderlyingDividendAccrualPaymentDate](#)

### 171.2.5650 UnderlyingDividendAccrualPaymentDate

The UnderlyingDividendAccrualPaymentDate component is a subcomponent of UnderlyingDividendConditions used to report the dividend accrual payment date.

Name	Mult.	Type	Description
<a href="#">UnderlyingDividendAccrualPaymentDateRelativeTo</a>	[0..1]	int	
<a href="#">UnderlyingDividendAccrualPaymentDateOffsetPeriod</a>	[0..1]	int	Conditionally required when UnderlyingDividendAccrualPaymentDateOffsetUnit(42821) is specified.
<a href="#">UnderlyingDividendAccrualPaymentDateOffsetUnit</a>	[0..1]	CodeSet	Conditionally required when UnderlyingDividendAccrualPaymentDateOffsetPeriod(42820) is specified.
<a href="#">UnderlyingDividendAccrualPaymentDateOffsetDayType</a>	[0..1]	CodeSet	
<a href="#">UnderlyingDividendAccrualPaymentDateUnadjusted</a>	[0..1]	LocalMktDate	
<a href="#">UnderlyingDividendAccrualPaymentDateBusinessDayConvention</a>	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The value would be specific to this instance of UnderlyingDividendAccrualPaymentDate.
<a href="#">UnderlyingDividendAccrualPaymentDateBusinessCenterGrp</a>	[0..*]	Group	When specified, this overrides the business centers defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The values would be specific to this instance of UnderlyingDividendAccrualPaymentDate.
<a href="#">UnderlyingDividendAccrualPaymentDateAdjusted</a>	[0..1]	LocalMktDate	

Used in components: [UnderlyingDividendConditions](#)

### **171.2.5651 UnderlyingDividendAccrualPaymentDateOffsetDayType**

Specifies the day type of the relative accrual payment date offset.

Type: [int](#)

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: [UnderlyingDividendAccrualPaymentDate](#)

### **171.2.5652 UnderlyingDividendAccrualPaymentDateOffsetPeriod**

Time unit multiplier for the relative accrual payment date offset.

Type: [int](#)

Used in components: [UnderlyingDividendAccrualPaymentDate](#)

### **171.2.5653 UnderlyingDividendAccrualPaymentDateOffsetUnit**

Time unit associated with the relative accrual payment date offset.

Type: [String](#)

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week

---

Code	Name	Description
Mo	Month	Month
Yr	Year	Year

---

Used in components: [UnderlyingDividendAccrualPaymentDate](#)

#### **171.2.5654 UnderlyingDividendAccrualPaymentDateRelativeTo**

Specifies the anchor date when the accrual payment date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: [int](#)

Used in components: [UnderlyingDividendAccrualPaymentDate](#)

#### **171.2.5655 UnderlyingDividendAccrualPaymentDateUnadjusted**

The unadjusted accrual payment date.

Type: [LocalMktDate](#)

Used in components: [UnderlyingDividendAccrualPaymentDate](#)

#### **171.2.5656 UnderlyingDividendAccruedInterest**

Accrued interest on the dividend or coupon payment.

Type: [Amt](#)

Used in groups: [UnderlyingDividendPaymentGrp](#)

#### **171.2.5657 UnderlyingDividendAmountType**

Indicates how the gross cash dividend amount per share is determined.

Type: [int](#)

Allowed values in DividendAmountTypeCodeSet:

Code	Name	Description
0	RecordAmount	Record amount. 100% of the gross cash dividend per share paid over record date during relevant dividend period.
1	ExAmount	Ex amount. 100% of gross cash dividend per share paid after the ex-dividend date during relevant dividend period.
2	PaidAmount	Paid amount. 100% of gross cash dividend per share paid during relevant dividend period.
3	PerMasterConfirm	As specified in master confirmation. The amount is determined as provided in the relevant master confirmation.

Used in components: [UnderlyingDividendConditions](#)

### 171.2.5658 UnderlyingDividendAveragingMethod

When averaging is applicable, used to specify whether a weighted or unweighted average method of calculation is to be used.

Type: [int](#)

Allowed values in PaymentStreamAveragingMethodCodeSet:

Code	Name	Description
0	Unweighted	Unweighted
1	Weighted	Weighted

Used in components: [UnderlyingDividendAccrualFloatingRate](#)

### 171.2.5659 UnderlyingDividendCapRate

The cap rate, if any, which applies to the floating rate. It is only required where the floating rate is capped at a certain level. The cap rate is assumed to be exclusive of any spread and is a per annum rate, expressed as a decimal. A cap rate of 5% would be represented as "0.05".

Type: [Percentage](#)

Used in components: [UnderlyingDividendAccrualFloatingRate](#)

**171.2.5660 UnderlyingDividendCapRateBuySide**

Reference to the buyer of the cap rate option through its trade side.

Type: **int**

Allowed values in PaymentStreamCapRateBuySideCodeSet:

---

Code	Name	Description
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

---

Used in components: **UnderlyingDividendAccrualFloatingRate**

**171.2.5661 UnderlyingDividendCapRateSellSide**

Reference to the seller of the cap rate option through its trade side.

Type: **int**

Allowed values in PaymentStreamCapRateBuySideCodeSet:

---

Code	Name	Description
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

---

Used in components: **UnderlyingDividendAccrualFloatingRate**

**171.2.5662 UnderlyingDividendCashEquivalentPercentage**

Declared cash-equivalent dividend percentage. A value of 5% would be represented as "0.05".

Type: **Percentage**

Used in components: **UnderlyingDividendConditions**

**171.2.5663 UnderlyingDividendCashPercentage**

Declared cash dividend percentage.

A value of 5% would be represented as "0.05".

Type: **Percentage**

Used in components: **UnderlyingDividendConditions**

**171.2.5664 UnderlyingDividendComposition**

Defines how the composition of dividends is to be determined.

Type: **int**

Allowed values in DividendCompositionCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	EquityAmountReceiver	Equity amount receiver election. The equity amount receiver determines the composition of dividends (subject to conditions).
1	CalculationAgent	Calculation agent election. The calculation agent determines the composition of dividends (subject to conditions).

---

Used in components: **UnderlyingDividendConditions**

**171.2.5665 UnderlyingDividendCompoundingMethod**

The compounding method to be used when more than one dividend period contributes to a single payment.

Type: **int**

Allowed values in PaymentStreamCompoundingMethodCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	None	None
1	Flat	Flat
2	Straight	Straight
3	SpreadExclusive	Spread exclusive

---

Used in components: [UnderlyingDividendConditions](#)

### 171.2.5666 UnderlyingDividendConditions

The UnderlyingDividendConditions component is a subcomponent of UnderlyingPaymentStream used to specify the conditions' valuations and dates governing the payment of dividends.

Name	Mult.	Type	Description
<a href="#">UnderlyingDividendReinvestmentIndicator</a>	[0..1]	Boolean	
<a href="#">UnderlyingDividendEntitlementEvent</a>	[0..1]	CodeSet	
<a href="#">UnderlyingDividendAmountType</a>	[0..1]	CodeSet	
<a href="#">UnderlyingDividendUnderlierRefID</a>	[0..1]	String	
<a href="#">UnderlyingDividendPeriodGrp</a>	[0..*]	Group	
<a href="#">UnderlyingExtraordinaryDividendPartySide</a>	[0..1]	CodeSet	
<a href="#">UnderlyingExtraordinaryDividendAmountType</a>	[0..1]	CodeSet	
<a href="#">UnderlyingExtraordinaryDividendCurrency</a>	[0..1]	Currency	
<a href="#">UnderlyingExtraordinaryDividendDeterminationMethod</a>	[0..1]	String	
<a href="#">UnderlyingDividendFXTriggerDate</a>	[0..1]	Component	
<a href="#">UnderlyingDividendAccrualFloatingRate</a>	[0..1]	Component	
<a href="#">UnderlyingDividendAccrualFixedRate</a>	[0..1]	Percentage	
<a href="#">UnderlyingDividendAccrualPaymentDate</a>	[0..1]	Component	
<a href="#">UnderlyingDividendCompoundingMethod</a>	[0..1]	CodeSet	
<a href="#">UnderlyingDividendNumOfIndexUnits</a>	[0..1]	int	
<a href="#">UnderlyingDividendCashPercentage</a>	[0..1]	Percentage	
<a href="#">UnderlyingDividendCashEquivalentPercentage</a>	[0..1]	Percentage	
<a href="#">UnderlyingNonCashDividendTreatment</a>	[0..1]	CodeSet	
<a href="#">UnderlyingDividendComposition</a>	[0..1]	CodeSet	
<a href="#">UnderlyingSpecialDividendsIndicator</a>	[0..1]	Boolean	

Name	Mult.	Type	Description
<a href="#">UnderlyingMaterialDividendsIndicator</a>	[0..1]	Boolean	
<a href="#">UnderlyingOptionsExchangeDividendsIndicator</a>	[0..1]	Boolean	
<a href="#">UnderlyingAdditionalDividendsIndicator</a>	[0..1]	Boolean	
<a href="#">UnderlyingAllDividendsIndicator</a>	[0..1]	Boolean	

Used in components: [UnderlyingPaymentStreamFloatingRate](#)

### 171.2.5667 UnderlyingDividendEntitlementEvent

Defines the contract event which the receiver of the derivative is entitled to the dividend.

Type: [int](#)

Allowed values in DividendEntitlementEventCodeSet:

Code	Name	Description
0	ExDate	Ex-date. Dividend entitlement is on the dividend ex-date.
1	RecordDate	Record date. Dividend entitlement is on the dividend record date.

Used in components: [UnderlyingDividendConditions](#)

### 171.2.5668 UnderlyingDividendFinalRatePrecision

Specifies the rounding precision of the final rate in terms of a number of decimal places. Note how a percentage rate rounding of 5 decimal places is expressed as a rounding precision of 7.

Type: [int](#)

Used in components: [UnderlyingDividendAccrualFloatingRate](#)

### 171.2.5669 UnderlyingDividendFinalRateRoundingDirection

Specifies the rounding direction of the final rate.

Type: [char](#)

Allowed values in RoundingDirectionCodeSet:

---

Code	Name	Description
0	RoundToNearest	Round to nearest
1	RoundDown	Round down
2	RoundUp	Round up

---

Used in components: [UnderlyingDividendAccrualFloatingRate](#)

### **171.2.5670 UnderlyingDividendFloatingRateIndex**

The dividend accrual floating rate index.

Type: [String](#)

Used in components: [UnderlyingDividendAccrualFloatingRate](#)

### **171.2.5671 UnderlyingDividendFloatingRateIndexCurvePeriod**

Time unit multiplier for the dividend accrual floating rate index curve.

Type: [int](#)

Used in components: [UnderlyingDividendAccrualFloatingRate](#)

### **171.2.5672 UnderlyingDividendFloatingRateIndexCurveUnit**

Time unit associated with the dividend accrual floating rate index curve period.

Type: [String](#)

Allowed values in PaymentStreamRateIndexCurveUnitCodeSet:

---

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: [UnderlyingDividendAccrualFloatingRate](#)

**171.2.5673 UnderlyingDividendFloatingRateMultiplier**

A rate multiplier to apply to the floating rate. The multiplier can be less than or greater than 1 (one). This should only be included if the multiplier is not equal to 1 (one) for the term of the contract.

Type: **float**

Used in components: **UnderlyingDividendAccrualFloatingRate**

**171.2.5674 UnderlyingDividendFloatingRateSpread**

The basis points spread from the index specified in UnderlyingDividendFloatingRateIndex(42801).

Type: **PriceOffset**

Used in components: **UnderlyingDividendAccrualFloatingRate**

**171.2.5675 UnderlyingDividendFloatingRateSpreadPositionType**

Identifies whether the rate spread is applied to a long or short position.

Type: **int**

Allowed values in PaymentStreamRateSpreadPositionTypeCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Short	Short
1	Long	Long

Used in components: **UnderlyingDividendAccrualFloatingRate**

**171.2.5676 UnderlyingDividendFloatingRateTreatment**

Specifies the yield calculation treatment for the index.

Type: **int**

Allowed values in PaymentStreamRateTreatmentCodeSet:

Code	Name	Description
0	BondEquivalentYield	Bond equivalent yield
1	MoneyMarketYield	Money market yield

Used in components: [UnderlyingDividendAccrualFloatingRate](#)

### 171.2.5677 UnderlyingDividendFloorRate

The floor rate, if any, which applies to the floating rate. The floor rate (strike) is only required where the floating rate is floored at a certain strike level. The floor rate is assumed to be exclusive of any spread and is a per annum rate. The rate is expressed as a decimal, e.g. 5% is represented as "0.05".

Type: [Percentage](#)

Used in components: [UnderlyingDividendAccrualFloatingRate](#)

### 171.2.5678 UnderlyingDividendFloorRateBuySide

Reference to the buyer of the floor rate option through its trade side.

Type: [int](#)

Allowed values in PaymentStreamFloorRateBuySideCodeSet:

Code	Name	Description
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

Used in components: [UnderlyingDividendAccrualFloatingRate](#)

### 171.2.5679 UnderlyingDividendFloorRateSellSide

Reference to the seller of the floor rate option through its trade side.

Type: [int](#)

Allowed values in PaymentStreamFloorRateBuySideCodeSet:

Code	Name	Description
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

Used in components: [UnderlyingDividendAccrualFloatingRate](#)

### 171.2.5680 UnderlyingDividendFXTriggerDateAdjusted

The adjusted FX trigger date.

Type: [LocalMktDate](#)

Used in components: [UnderlyingDividendFXTriggerDate](#)

### 171.2.5681 UnderlyingDividendFXTriggerDateBusinessCenter

The business center calendar used for date adjustment of the instrument's FX trigger date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in groups: [UnderlyingDividendFXTriggerDateBusinessCenterGrp](#)

### 171.2.5682 UnderlyingDividendFXTriggerDateBusinessCenterGrp

[UnderlyingDividendFXTriggerDateBusinessCenterGrp](#) is a repeating subcomponent within the [UnderlyingDividendFXTriggerDate](#) component. It is used to specify the set of business centers whose calendars drive the date adjustment.

Name	Mult.	Type	Description
<a href="#">NoUnderlyingDividendFXTriggerDate-BusinessCenters</a>	[1..1]	NumInGroup	
<a href="#">UnderlyingDividendFXTriggerDate-BusinessCenter</a>	[0..1]	String	Required if <a href="#">NoUnderlyingDividendFXTriggerDate-BusinessCenters(42853)</a> > 0.

Used in components: [UnderlyingDividendFXTriggerDate](#)

### 171.2.5683 UnderlyingDividendFXTriggerDateBusinessDayConvention

The business day convention used for the FX trigger date adjustment.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [UnderlyingDividendFXTriggerDate](#)

### 171.2.5684 UnderlyingDividendFXTriggerDate

The UnderlyingDividendFXTriggerDate component is a subcomponent of UnderlyingDividendConditions used to report the dividend date when a foreign exchange trade is triggered.

Name	Mult.	Type	Description
<a href="#">UnderlyingDividendFXTriggerDateRelativeTo</a>	[0..1]	int	
<a href="#">UnderlyingDividendFXTriggerDateOffsetPeriod</a>	[0..1]	int	Conditionally required when UnderlyingDividendFXTriggerDateOffsetUnit(42848) is specified.
<a href="#">UnderlyingDividendFXTriggerDateOffsetUnit</a>	[0..1]	CodeSet	Conditionally required when UnderlyingDividendFXTriggerDateOffsetPeriod(42847) is specified.
<a href="#">UnderlyingDividendFXTriggerDateOffsetDayType</a>	[0..1]	CodeSet	
<a href="#">UnderlyingDividendFXTriggerDateUnadjusted</a>	[0..1]	LocalMktDate	

Name	Mult.	Type	Description
<a href="#">UnderlyingDividendFXTriggerDate-BusinessDayConvention</a>	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The value would be specific to this instance of UnderlyingDividendFXTriggerDate.
<a href="#">UnderlyingDividendFXTriggerDate-BusinessCenterGrp</a>	[0..*]	Group	When specified, this overrides the business centers defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The values would be specific to this instance of UnderlyingDividendFXTriggerDate.
<a href="#">UnderlyingDividendFXTriggerDateAdjusted</a>	[0..1]	LocalMktDate	

Used in components: [UnderlyingDividendConditions](#)

### 171.2.5685 UnderlyingDividendFXTriggerDateOffsetDayType

Specifies the day type of the relative FX trigger date offset.

Type: [int](#)

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: [UnderlyingDividendFXTriggerDate](#)

### 171.2.5686 UnderlyingDividendFXTriggerDateOffsetPeriod

Time unit multiplier for the relative FX trigger date offset.

Type: **int**

Used in components: **UnderlyingDividendFXTriggerDate**

### **171.2.5687 UnderlyingDividendFXTriggerDateOffsetUnit**

Time unit associated with the relative FX trigger date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: **UnderlyingDividendFXTriggerDate**

### **171.2.5688 UnderlyingDividendFXTriggerDateRelativeTo**

Specifies the anchor date when the FX trigger date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: **int**

Used in components: **UnderlyingDividendFXTriggerDate**

### **171.2.5689 UnderlyingDividendFXTriggerDateUnadjusted**

The unadjusted FX trigger date.

Type: **LocalMktDate**

Used in components: **UnderlyingDividendFXTriggerDate**

**171.2.5690 UnderlyingDividendInitialRate**

The initial floating rate reset agreed between the principal parties involved in the trade. This is assumed to be the first required reset rate for the first regular calculation period. It should only be included when the rate is not equal to the rate published on the source implied by the floating rate index. The initial rate is expressed in decimal form, e.g. 5% is represented as "0.05".

Type: **Percentage**

Used in components: **UnderlyingDividendAccrualFloatingRate**

**171.2.5691 UnderlyingDividendNegativeRateTreatment**

The specification of any provisions for calculating payment obligations when a floating rate is negative (either due to a quoted negative floating rate or by operation of a spread that is subtracted from the floating rate).

Type: **int**

Allowed values in PaymentStreamNegativeRateTreatmentCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	ZeroInterestRateMethod	Zero interest rate method
1	NegativeInterestRateMethod	Negative interest rate method

---

Used in components: **UnderlyingDividendAccrualFloatingRate**

**171.2.5692 UnderlyingDividendNumOfIndexUnits**

The number of index units applicable to dividends.

Type: **int**

Used in components: **UnderlyingDividendConditions**

**171.2.5693 UnderlyingDividendPaymentAmount**

The amount of the dividend or coupon payment.

Type: **Amt**

Used in groups: **UnderlyingDividendPaymentGrp**

**171.2.5694 UnderlyingDividendPaymentCurrency**

Specifies the currency the UnderlyingDividendPaymentAmount(42857) is denominated in. Uses ISO 4217 currency codes.

Type: [Currency](#)

Used in groups: [UnderlyingDividendPaymentGrp](#)

**171.2.5695 UnderlyingDividendPaymentDate**

Specifies the date that the dividend or coupon payment is due.

Type: [LocalMktDate](#)

Used in groups: [UnderlyingDividendPaymentGrp](#)

**171.2.5696 UnderlyingDividendPaymentGrp**

UnderlyingDividendPaymentGrp is a repeating subcomponent of UnderlyingDividendPayout used to specify the anticipated dividend or coupon payment dates and amounts of an equity or bond underlier.

---

Name	Mult.	Type	Description
<a href="#">NoUnderlyingDividendPayments</a>	[1..1]	NumInGroup	
<a href="#">UnderlyingDividendPaymentDate</a>	[0..1]	LocalMktDate	Required if NoUnderlyingDividendPayments (42855) > 0.
<a href="#">UnderlyingDividendPaymentAmount</a>	[0..1]	Amt	Required if NoUnderlyingDividendPayments (42855) > 0.
<a href="#">UnderlyingDividendPaymentCurrency</a>	[0..1]	Currency	
<a href="#">UnderlyingDividendAccruedInterest</a>	[0..1]	Amt	

---

Used in components: [UnderlyingDividendPayout](#)

**171.2.5697 UnderlyingDividendPayout**

UnderlyingDividendPayout is a subcomponent of UnderlyingInstrument used to specify the dividend or coupon payout parameters of an equity or bond underlier.

---

Name	Mult.	Type	Description
<a href="#">UnderlyingDividendPayoutRatio</a>	[0..1]	float	
<a href="#">UnderlyingDividendPayoutConditions</a>	[0..1]	String	
<a href="#">UnderlyingDividendPaymentGrp</a>	[0..*]	Group	

---

Used in components: [UnderlyingInstrument](#)

### **171.2.5698 UnderlyingDividendPayoutConditions**

Specifies the dividend payout conditions that will be applied in the case where the actual ratio is not known, typically because of regulatory or legal uncertainties.

Type: [String](#)

Used in components: [UnderlyingDividendPayout](#)

### **171.2.5699 UnderlyingDividendPayoutRatio**

Specifies the actual dividend payout ratio associated with the equity or bond underlier.

Type: [float](#)

Used in components: [UnderlyingDividendPayout](#)

### **171.2.5700 UnderlyingDividendPeriodBusinessCenter**

The business center calendar used for date adjustment of the instrument's dividend period date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in groups: [UnderlyingDividendPeriodBusinessCenterGrp](#)

### **171.2.5701 UnderlyingDividendPeriodBusinessCenterGrp**

[UnderlyingDividendPeriodBusinessCenterGrp](#) is a repeating subcomponent within the [UnderlyingDividendPeriodGrp](#) component. It is used to specify the set of business centers whose calendars drive the date adjustment.

Name	Mult.	Type	Description
NoUnderlyingDividendPeriodBusinessCenters	[1..1]	NumInGroup	
UnderlyingDividendPeriodBusinessCenter	[0..1]	String	Required if NoUnderlyingDividendPeriodBusinessCenters(42882) > 0.

Used in groups: [UnderlyingDividendPeriodGrp](#)

### 171.2.5702 UnderlyingDividendPeriodBusinessDayConvention

The dividend period dates business day convention.

Type: [int](#)

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in groups: [UnderlyingDividendPeriodGrp](#)

### 171.2.5703 UnderlyingDividendPeriodEndDateUnadjusted

The unadjusted date on which the dividend period will end.

Type: [LocalMktDate](#)

Used in groups: [UnderlyingDividendPeriodGrp](#)

**171.2.5704 UnderlyingDividendPeriodGrp**

UnderlyingDividendPeriodGrp is a repeating subcomponent within the UnderlyingDividendConditions component. It is used to specify the valuation and payments dates of the dividend leg of a dividend swap.

Name	Mult.	Type	Description
NoUnderlyingDividendPeriods	[1..1]	NumInGroup	
UnderlyingDividendPeriodSequence	[0..1]	int	Required if NoUnderlyingDividendPeriods(42862) > 0.
UnderlyingDividendPeriodStartDateUnadjusted	[0..1]	LocalMktDate	
UnderlyingDividendPeriodEndDateUnadjusted	[0..1]	LocalMktDate	
UnderlyingDividendPeriodUnderlierRefID	[0..1]	String	When specified, this overrides UnderlyingDividendUnderlierRefID(42829). The specified value would be specific to this dividend period instance.
UnderlyingDividendPeriodStrikePrice	[0..1]	Price	
UnderlyingDividendPeriodBusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified value would be specific to this dividend period instance.
UnderlyingDividendPeriodBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified values would be specific to this dividend period instance.
UnderlyingDividendPeriodValuationDateUnadjusted	[0..1]	LocalMktDate	
UnderlyingDividendPeriodValuationDateRelativeTo	[0..1]	int	
UnderlyingDividendPeriodValuationDateOffsetPeriod	[0..1]	int	Conditionally required when UnderlyingDividendPeriodValuationDateOffsetUnit(42872) is specified.
UnderlyingDividendPeriodValuationDateOffsetUnit	[0..1]	CodeSet	Conditionally required when UnderlyingDividendPeriodValuationDateOffsetPeriod(42871) is specified.
UnderlyingDividendPeriodValuationDateOffsetDayType	[0..1]	CodeSet	

Name	Mult.	Type	Description
UnderlyingDividendPeriodValuation-DateAdjusted	[0..1]	LocalMktDate	
UnderlyingDividendPeriodPaymentDateUnadjusted	[0..1]	LocalMktDate	
UnderlyingDividendPeriodPaymentDateRelativeTo	[0..1]	int	
UnderlyingDividendPeriodPaymentDateOffsetPeriod	[0..1]	int	Conditionally required when UnderlyingDividend-PeriodPaymentDateOffsetUnit(42878) is specified.
UnderlyingDividendPeriodPaymentDateOffsetUnit	[0..1]	CodeSet	Conditionally required when UnderlyingDividend-PeriodPaymentDateOffsetPeriod(42877) is specified.
UnderlyingDividendPeriodPaymentDateOffsetDayType	[0..1]	CodeSet	
UnderlyingDividendPeriodPaymentDateAdjusted	[0..1]	LocalMktDate	
UnderlyingDividendPeriodXID	[0..1]	XID	

Used in components: [UnderlyingDividendConditions](#)

### 171.2.5705 UnderlyingDividendPeriodPaymentDateAdjusted

The adjusted dividend period payment date.

Type: [LocalMktDate](#)

Used in groups: [UnderlyingDividendPeriodGrp](#)

### 171.2.5706 UnderlyingDividendPeriodPaymentDateOffsetDayType

Specifies the day type of the relative dividend period payment date offset.

Type: [int](#)

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar

---

Code	Name	Description
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in groups: [UnderlyingDividendPeriodGrp](#)

### **171.2.5707 UnderlyingDividendPeriodPaymentDateOffsetPeriod**

Time unit multiplier for the relative dividend period payment date offset.

Type: [int](#)

Used in groups: [UnderlyingDividendPeriodGrp](#)

### **171.2.5708 UnderlyingDividendPeriodPaymentDateOffsetUnit**

Time unit associated with the relative dividend period payment date offset.

Type: [String](#)

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in groups: [UnderlyingDividendPeriodGrp](#)

### **171.2.5709 UnderlyingDividendPeriodPaymentDateRelativeTo**

Specifies the anchor date when the dividend period payment date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: [int](#)

Used in groups: [UnderlyingDividendPeriodGrp](#)

### **171.2.5710 UnderlyingDividendPeriodPaymentDateUnadjusted**

The unadjusted dividend period payment date.

Type: [LocalMktDate](#)

Used in groups: [UnderlyingDividendPeriodGrp](#)

### **171.2.5711 UnderlyingDividendPeriodSequence**

Defines the ordinal dividend period. E.g. 1 = First period, 2 = Second period, etc.

Type: [int](#)

Used in groups: [UnderlyingDividendPeriodGrp](#)

### **171.2.5712 UnderlyingDividendPeriodStartDateUnadjusted**

The unadjusted date on which the dividend period will begin.

Type: [LocalMktDate](#)

Used in groups: [UnderlyingDividendPeriodGrp](#)

### **171.2.5713 UnderlyingDividendPeriodStrikePrice**

Specifies the fixed strike price of the dividend period.

Type: [Price](#)

Used in groups: [UnderlyingDividendPeriodGrp](#)

### **171.2.5714 UnderlyingDividendPeriodUnderlierRefID**

References the dividend underlier through the instrument's UnderlyingSecurityID(309) which must be fully specified in an instance of the UnderlyingInstrument component.

Type: [String](#)

Used in groups: [UnderlyingDividendPeriodGrp](#)

**171.2.5715 UnderlyingDividendPeriodValuationDateAdjusted**

The adjusted dividend period valuation date.

Type: **LocalMktDate**

Used in groups: **UnderlyingDividendPeriodGrp**

**171.2.5716 UnderlyingDividendPeriodValuationDateOffsetDayType**

Specifies the day type of the relative dividend period valuation date offset.

Type: **int**

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in groups: **UnderlyingDividendPeriodGrp**

**171.2.5717 UnderlyingDividendPeriodValuationDateOffsetPeriod**

Time unit multiplier for the relative dividend period valuation date offset.

Type: **int**

Used in groups: **UnderlyingDividendPeriodGrp**

**171.2.5718 UnderlyingDividendPeriodValuationDateOffsetUnit**

Time unit associated with the relative dividend period valuation date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in groups: [UnderlyingDividendPeriodGrp](#)

#### **171.2.5719 UnderlyingDividendPeriodValuationDateRelativeTo**

Specifies the anchor date when the dividend period valuation date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: [int](#)

Used in groups: [UnderlyingDividendPeriodGrp](#)

#### **171.2.5720 UnderlyingDividendPeriodValuationDateUnadjusted**

The unadjusted dividend period valuation date.

Type: [LocalMktDate](#)

Used in groups: [UnderlyingDividendPeriodGrp](#)

#### **171.2.5721 UnderlyingDividendPeriodXID**

Identifier for linking this stream dividend period to an underlier through an instance of RelatedInstrumentGrp.

Type: [XID](#)

Used in groups: [UnderlyingDividendPeriodGrp](#)

#### **171.2.5722 UnderlyingDividendReinvestmentIndicator**

Indicates whether the dividend will be reinvested.

Type: [Boolean](#)

Used in components: [UnderlyingDividendConditions](#)

#### **171.2.5723 UnderlyingDividendUnderlierRefID**

References the dividend underlier through the instrument's UnderlyingSecurityID(309) which must be fully specified in a separate instance of the UnderlyingInstrument component.

Type: **String**

Used in components: **UnderlyingDividendConditions**

#### **171.2.5724 UnderlyingEndPrice**

Price (percent-of-par or per unit) of the underlying security or basket at the end of the agreement.

Type: **Price**

Used in components: **UnderlyingInstrument**

#### **171.2.5725 UnderlyingEndValue**

Currency value attributed to this collateral at the end of the agreement

Type: **Amt**

Used in components: **UnderlyingInstrument**

#### **171.2.5726 UnderlyingEquityID**

Specifies the equity in which a convertible bond can be converted.

Type: **String**

Used in components: **UnderlyingInstrument**

#### **171.2.5727 UnderlyingEquityIDSource**

Identifies the source of the UnderlyingEquityID(1996).

Type: **String**

Allowed values in SecurityIDSourceCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	CUSIP	CUSIP
2	SEDOL	SEDOL
3	QUIK	QUIK
4	ISINNumber	ISIN
5	RICCode	RIC
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
7	ISOCountryCode	ISO Country Code
8	ExchangeSymbol	Exchange symbol
9	ConsolidatedTapeAssociation	Consolidated Tape Association (CTA) Symbol (SIAC CTS/CQS line format)
A	BloombergSymbol	Bloomberg Symbol
B	Wertpapier	Wertpapier
C	Dutch	Dutch
D	Valoren	Valoren
E	Sicovam	Sicovam
F	Belgian	Belgian
G	Common	"Common" (Clearstream and Euroclear)
H	ClearingHouse	Clearing house / Clearing organization
I	ISDAFpMLSpecification	ISDA/FpML product specification (XML in SecurityXML(1185))
J	OptionPriceReportingAuthority	Option Price Reporting Authority
K	ISDAFpMLURL	ISDA/FpML product URL (URL in SecurityID(48))
L	LetterOfCredit	Letter of credit
M	MarketplaceAssignedIdentifier	Marketplace-assigned Identifier
N	MarkitREDEntityCLIP	Markit RED entity CLIP
P	MarkitREDPairCLIP	Markit RED pair CLIP
Q	CFTCCommodityCode	CFTC commodity code
R	ISDACommodityReferencePrice	ISDA Commodity Reference Price
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
T	LegalEntityIdentifier	Legal entity identifier
U	Synthetic	Synthetic. Used to specify that the security identifier is synthetic for linking nested underliers when there is no market identifier for the collection.
V	FidessaInstrumentMnemonic	Fidessa Instrument Mnemonic (FIM)

Code	Name	Description
W	IndexName	Index name. Standard name of the index or rate index, e.g. "LIBOR" or "iTraxx Australia".
X	UniformSymbol	Uniform Symbol (UMTF Symbol)
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in components: [UnderlyingInstrument](#)

### 171.2.5728 UnderlyingEventDate

The date of the event.

Type: [LocalMktDate](#)

Used in groups: [UnderlyingEvntGrp](#)

### 171.2.5729 UnderlyingEventMonthYear

Used with derivatives when an event is express as a month-year with optional day or month or week of month.

Format:

YYYYMM (e.g. 199903)

YYYYMMDD (e.g. 20030323)

YYYYMMwN (e.g. 200303w2) for week

A specific date can be appended to the month-year. For instance, if multiple event types exist in the same Year and Month, but actually at a different time, a value can be appended, such as "w" or "w2" to indicate week. Likewise, the day of monty (0-31) can be appended to indicate a specific event date.

Type: [MonthYear](#)

Used in groups: [UnderlyingEvntGrp](#)

### 171.2.5730 UnderlyingEventPx

Predetermined price of issue at event, if applicable.

Type: [Price](#)

Used in groups: [UnderlyingEvntGrp](#)

**171.2.5731 UnderlyingEventText**

Free form text to specify comments related to the event.

Type: **String**

Used in groups: **UnderlyingEvntGrp**

**171.2.5732 UnderlyingEventTime**

The time of the event. To be used in combination with UnderlyingEventDate(1983).

Type: **UTCTimestamp**

Used in groups: **UnderlyingEvntGrp**

**171.2.5733 UnderlyingEventTimePeriod**

Time unit multiplier for the event.

Type: **int**

Used in groups: **UnderlyingEvntGrp**

**171.2.5734 UnderlyingEventTimeUnit**

Time unit associated with the event.

Type: **String**

Used in groups: **UnderlyingEvntGrp**

**171.2.5735 UnderlyingEventType**

Code to represent the type of event.

Type: **int**

Allowed values in EventTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	Put	Put
2	Call	Call

---

Code	Name	Description
3	Tender	Tender
4	SinkingFundCall	Sinking fund call
5	Activation	Activation
6	Inactivation	Inactivation
7	LastEligibleTradeDate	Last eligible trade date
8	SwapStartDate	Swap start date
9	SwapEndDate	Swap end date
10	SwapRollDate	Swap roll date
11	SwapNextStartDate	Swap next start date
12	SwapNextRollDate	Swap next roll date
13	FirstDeliveryDate	First delivery date
14	LastDeliveryDate	Last delivery date
15	InitialInventoryDueDate	Initial inventory due date
16	FinalInventoryDueDate	Final inventory due date
17	FirstIntentDate	First intent date
18	LastIntentDate	Last intent date
19	PositionRemovalDate	Position removal date
20	MinimumNotice	Minimum notice
21	DeliveryStartTime	Delivery start time
22	DeliveryEndTime	Delivery end time
23	FirstNoticeDate	First notice date. The first day that a notice of intent to deliver a commodity can be made by a clearing house to a buyer in fulfillment of a given month's futures contract.
24	LastNoticeDate	Last notice date. The last day on which a clearing house may inform an investor that a seller intends to make delivery of a commodity that the investor previously bought in a futures contract. The date is governed by the rules of different exchanges and clearing houses, but may also be stated in the futures contract itself.
25	FirstExerciseDate	First exercise date
26	RedemptionDate	Redemption date
27	TrdCntntnEfctvDt	Trade continuation effective date
99	Other	Other

Used in groups: [UnderlyingEvntGrp](#)

### 171.2.5736 UnderlyingEvtGrp

The UnderlyingEvtGrp is a repeating subcomponent of the UnderlyingInstrument component used to specify straightforward events associated with the instrument. Examples include put and call dates for bonds and options; first exercise date for options; inventory and delivery dates for commodities; start, end and roll dates for swaps. Use UnderlyingComplexEvents for more advanced dates such as option, futures, commodities and equity swap observation and pricing events.

Name	Mult.	Type	Description
NoUnderlyingEvents	[1..1]	NumInGroup	
UnderlyingEventType	[0..1]	CodeSet	Required if NoUnderlyingEvents(1982) > 0.
UnderlyingEventDate	[0..1]	LocalMktDate	Conditionally required when UnderlyingEventTime(1984) is specified.
UnderlyingEventTime	[0..1]	UTCTimestamp	
UnderlyingEventTimeUnit	[0..1]	String	Conditionally required when UnderlyingEventTimePeriod(1986) is specified.
UnderlyingEventTimePeriod	[0..1]	int	Conditionally required when UnderlyingEventTimeUnit(1985) is specified.
UnderlyingEventMonthYear	[0..1]	MonthYear	
UnderlyingEventPx	[0..1]	Price	
UnderlyingEventText	[0..1]	String	
EncodedUnderlyingEventTextLen	[0..1]	Length	Must be set if EncodedUnderlyingEventText(2073) field is specified and must immediately precede it.
EncodedUnderlyingEventText	[0..1]	data	Encoded (non-ASCII characters) representation of the UnderlyingEventText(2071) field in the encoded format specified via the MessageEncoding(347) field.

Used in components: [UnderlyingInstrument](#)

### 171.2.5737 UnderlyingExchangeLookAlike

For a share option trade, indicates whether the instrument is to be treated as an 'exchange look-alike'.

Type: [Boolean](#)

Used in components: [UnderlyingInstrument](#)

**171.2.5738 UnderlyingExerciseConfirmationMethod**

Indicates whether follow-up confirmation of exercise (written or electronic) is required following telephonic notice by the buyer to the seller or seller's agent.

Type: **int**

Allowed values in ExerciseConfirmationMethodCodeSet:

Code	Name	Description
0	NotRequired	Not required
1	NonElectronic	Non-electronic
2	Electronic	Electronic
3	Unknown	Unknown at time of report

Used in components: **UnderlyingOptionExercise**

**171.2.5739 UnderlyingExerciseDesc**

A description of the option exercise.

Type: **String**

Used in components: **UnderlyingOptionExercise**

**171.2.5740 UnderlyingExerciseSplitTicketIndicator**

Indicates in physical settlement of bond and convertible bond options whether the party required to deliver the bonds will divide those to be delivered as notifying party desires to facilitate delivery obligations.

Type: **Boolean**

Used in components: **UnderlyingOptionExercise**

**171.2.5741 UnderlyingExerciseStyle**

Type of exercise of a derivatives security

Type: **int**

Allowed values in ExerciseStyleCodeSet:

Code	Name	Description
0	European	European
1	American	American
2	Bermuda	Bermuda
99	Other	Other

Used in components: [UnderlyingInstrument](#)

### 171.2.5742 UnderlyingExtraordinaryDividendAmountType

Indicates how the extraordinary gross cash dividend per share is determined.

Type: [int](#)

Allowed values in DividendAmountTypeCodeSet:

Code	Name	Description
0	RecordAmount	Record amount. 100% of the gross cash dividend per share paid over record date during relevant dividend period.
1	ExAmount	Ex amount. 100% of gross cash dividend per share paid after the ex-dividend date during relevant dividend period.
2	PaidAmount	Paid amount. 100% of gross cash dividend per share paid during relevant dividend period.
3	PerMasterConfirm	As specified in master confirmation. The amount is determined as provided in the relevant master confirmation.

Used in components: [UnderlyingDividendConditions](#)

### 171.2.5743 UnderlyingExtraordinaryDividendCurrency

The currency in which the excess dividend is denominated. Uses ISO 4217 currency codes.

Type: [Currency](#)

Used in components: [UnderlyingDividendConditions](#)

**171.2.5744 UnderlyingExtraordinaryDividendDeterminationMethod**

Specifies the method in which the excess amount is determined.

See <http://www.fpml.org/coding-scheme/determination-method> for values.

Type: **String**

Used in components: **UnderlyingDividendConditions**

**171.2.5745 UnderlyingExtraordinaryDividendPartySide**

Reference to the party through its side in the trade who makes the determination whether dividends are extraordinary in relation to normal levels.

Type: **int**

Allowed values in PaymentStreamCapRateBuySideCodeSet:

Code	Name	Description
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

Used in components: **UnderlyingDividendConditions**

**171.2.5746 UnderlyingExtraordinaryEventAdjustmentMethod**

Defines how adjustments will be made to the contract should one or more of the extraordinary events occur.

Type: **int**

Allowed values in ExtraordinaryEventAdjustmentMethodCodeSet:

Code	Name	Description
0	CalculationAgent	Calculation agent. The Calculation Agent has the right to adjust the terms of the trade following a corporate action.
1	OptionsExchange	Options exchange. The trade will be adjusted in accordance with any adjustment made by the exchange on which options on the underlying are listed.

Used in components: **UnderlyingInstrument**

**171.2.5747 UnderlyingExtraordinaryEventGrp**

The UnderlyingExtraordinaryEventGrp is a repeating component within the UnderlyingInstrument component. It is used to report extraordinary and disruptive events applicable to the reference entity that affects the contract.

Name	Mult.	Type	Description
NoUnderlyingExtraordinaryEvents	[1..1]	NumInGroup	
UnderlyingExtraordinaryEventType	[0..1]	String	Required if NoUnderlyingExtraordinaryEvents(42884) > 0.
UnderlyingExtraordinaryEventValue	[0..1]	String	Required if NoUnderlyingExtraordinaryEvents(42884) > 0.

Used in components: [UnderlyingInstrument](#)

**171.2.5748 UnderlyingExtraordinaryEventType**

Identifies the type of extraordinary or disruptive event applicable to UnderlyingExtraordinaryEventType(42885).

See [http://www.fixtradingcommunity.org/codelists#Extraordinary\\_Event\\_Type](http://www.fixtradingcommunity.org/codelists#Extraordinary_Event_Type) for code list of extraordinary event types and values.

Type: [String](#)

Used in groups: [UnderlyingExtraordinaryEventGrp](#)

**171.2.5749 UnderlyingExtraordinaryEventValue**

The extraordinary or disruptive event value appropriate to UnderlyingExtraordinaryEventType(42885).

See [http://www.fixtradingcommunity.org/codelists#Extraordinary\\_Event\\_Type](http://www.fixtradingcommunity.org/codelists#Extraordinary_Event_Type) for code list of extraordinary event types and values.

Type: [String](#)

Used in groups: [UnderlyingExtraordinaryEventGrp](#)

### **171.2.5750 UnderlyingFactor**

Underlying security's Factor.

See Factor (228) field for description

(Note tag # was reserved in FIX 4.1, added in FIX 4.3)

Type: **float**

Used in components: **UnderlyingInstrument**

### **171.2.5751 UnderlyingFallbackExerciseIndicator**

Indicates whether the notional amount of the underlying swap, not previously exercised under the option, will be automatically exercised at the expiration time on the expiration date if at such time the buyer is in-the-money, provided that the difference between the settlement rate and the fixed rate under the relevant underlying swap is not less than one tenth of a percentage point (0.10% or 0.001).

Type: **Boolean**

Used in components: **UnderlyingOptionExercise**

### **171.2.5752 UnderlyingFinancialInstrumentFullName**

The full normative name of the underlying financial instrument.

Type: **String**

Used in components: **UnderlyingInstrument**

### **171.2.5753 UnderlyingFinancialInstrumentShortName**

Short name of the financial instrument. Uses ISO 18774 (FINS) values.

Type: **String**

Used in components: **UnderlyingInstrument**

### **171.2.5754 UnderlyingFlexibleIndicator**

Used to indicate if a security has been defined as flexible according to "non-standard" means. Analog to CFICode Standard/Non-standard indicator.

Type: **Boolean**

Used in components: **UnderlyingInstrument**

### **171.2.5755 UnderlyingFlexProductEligibilityIndicator**

Used to indicate if a product or group of product supports the creation of flexible securities.

Type: **Boolean**

Used in components: **UnderlyingInstrument**

### **171.2.5756 UnderlyingFloorPrice**

Used to express the floor price of a capped put.

Type: **Price**

Used in components: **UnderlyingInstrument**

### **171.2.5757 UnderlyingFlowScheduleType**

The industry standard flow schedule by which electricity or natural gas is traded. Schedules exist by regions and on-peak and off-peak status, such as "Western Peak".

Type: **int**

Allowed values in FlowScheduleTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	NERCEasternOffPeak	NERC Eastern Off-Peak
1	NERCWesternOffPeak	NERC Western Off-Peak
2	NERCCalendarAllDaysInMonth	NERC Calendar-All Days in month
3	NERCEasternPeak	NERC Eastern Peak
4	NERCWesternPeak	NERC Western Peak
5	AllTimes	All times
6	OnPeak	On peak
7	OffPeak	Off peak
8	Base	Base
9	Block	Block

---

---

Code	Name	Description
99	Other	Other

---

Used in components: [UnderlyingInstrument](#)

### 171.2.5758 UnderlyingFutureID

In the case of an index underlier specifies the unique identifier for the referenced futures contract.

Type: [String](#)

Used in components: [UnderlyingInstrument](#)

### 171.2.5759 UnderlyingFutureIDSource

Identifies the source of the UnderlyingFutureID(2620).

Type: [String](#)

Allowed values in SecurityIDSourceCodeSet:

---

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
3	QUIK	QUIK
4	ISINNumber	ISIN
5	RICCode	RIC
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
7	ISOCountryCode	ISO Country Code
8	ExchangeSymbol	Exchange symbol
9	ConsolidatedTapeAssociation	Consolidated Tape Association (CTA) Symbol (SIAC CTS/CQS line format)
A	BloombergSymbol	Bloomberg Symbol
B	Wertpapier	Wertpapier
C	Dutch	Dutch
D	Valoren	Valoren
E	Sicovam	Sicovam

---

Code	Name	Description
F	Belgian	Belgian
G	Common	"Common" (Clearstream and Euroclear)
H	ClearingHouse	Clearing house / Clearing organization
I	ISDAFpMLSpecification	ISDA/FpML product specification (XML in SecurityXML(1185))
J	OptionPriceReportingAuthority	Option Price Reporting Authority
K	ISDAFpMLURL	ISDA/FpML product URL (URL in SecurityID(48))
L	LetterOfCredit	Letter of credit
M	MarketplaceAssignedIdentifier	Marketplace-assigned Identifier
N	MarkitREDEntityCLIP	Markit RED entity CLIP
P	MarkitREDPairCLIP	Markit RED pair CLIP
Q	CFTCCommodityCode	CFTC commodity code
R	ISDACommodityReferencePrice	ISDA Commodity Reference Price
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
T	LegalEntityIdentifier	Legal entity identifier
U	Synthetic	Synthetic. Used to specify that the security identifier is synthetic for linking nested underliers when there is no market identifier for the collection.
V	FidessaInstrumentMnemonic	Fidessa Instrument Mnemonic (FIM)
W	IndexName	Index name. Standard name of the index or rate index, e.g. "LIBOR" or "iTraxx Australia".
X	UniformSymbol	Uniform Symbol (UMTF Symbol)
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in components: [UnderlyingInstrument](#)

### 171.2.5760 UnderlyingFXRate

Foreign exchange rate used to compute UnderlyingCurrentValue(885) (or market value) from UnderlyingCurrency(318) to Currency(15).

Type: **float**

Used in components: [UnderlyingInstrument](#)

**171.2.5761 UnderlyingFXRateCalc**

Specifies whether the UnderlyingFxRate(1045) should be multiplied or divided.

Type: **char**

Allowed values in UnderlyingFXRateCalcCodeSet:

Code	Name	Description
D	Divide	Divide
M	Multiply	Multiply

Used in components: **UnderlyingInstrument**

**171.2.5762 UnderlyingID**

Unique identifier for the underlying instrument within the context of a message.

Type: **String**

Used in components: **UnderlyingInstrument**

**171.2.5763 UnderlyingIndexAnnexDate**

The date of a credit default swap index series annex.

Type: **LocalMktDate**

Used in components: **UnderlyingInstrument**

**171.2.5764 UnderlyingIndexAnnexSource**

The source of a credit default swap index series annex.

Type: **String**

Used in components: **UnderlyingInstrument**

**171.2.5765 UnderlyingIndexAnnexVersion**

The version identifier of a credit default swap index annex.

Type: **int**

Used in components: **UnderlyingInstrument**

**171.2.5766 UnderlyingIndexCurvePeriod**

Curve time multiplier for the underlying index.

Type: **int**

Used in components: **UnderlyingInstrument**

**171.2.5767 UnderlyingIndexCurveUnit**

Curve time unit associated with the underlying index.

Type: **String**

Allowed values in PaymentStreamRateIndexCurveUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: **UnderlyingInstrument**

**171.2.5768 UnderlyingIndexSeries**

The series identifier of a credit default swap index.

Type: **int**

Used in components: **UnderlyingInstrument**

**171.2.5769 UnderlyingInstrRegistry**

Underlying security's InstrRegistry.

See InstrRegistry (543) field for description

Type: **String**

Used in components: **UnderlyingInstrument**

**171.2.5770 UnderlyingInstrument**

The UnderlyingInstrument component block, like the Instrument component block, contains all the fields commonly used to describe a security or instrument. In the case of the UnderlyingInstrument component block it describes an instrument which underlies the primary instrument Refer to the Instrument component block comments as this component block mirrors Instrument, except for the noted fields.

<b>Name</b>	<b>Mult.</b>	<b>Type</b>	<b>Description</b>
<b>UnderlyingSymbol</b>	[0..1]	String	Common, "human understood" representation of the security. SecurityID value can be specified if no symbol exists (e.g. non-exchange traded Collective Investment Vehicles). Use "[N/A]" for products which do not have a symbol. Required if the UnderlyingInstrument component is marked as required where the component is used.
<b>UnderlyingSymbolSfx</b>	[0..1]	CodeSet	
<b>UnderlyingSecurityID</b>	[0..1]	String	
<b>UnderlyingSecurityIDSource</b>	[0..1]	CodeSet	
<b>UndSecAltIDGrp</b>	[0..*]	Group	
<b>UnderlyingID</b>	[0..1]	String	Used for unique identification of the underlying instance that can subsequently be used to serve as input value for fields such as UnderlyingRefID(2841), for example, whenever a simple underlying reference is allowed or needed.
<b>UnderlyingProduct</b>	[0..1]	CodeSet	
<b>UnderlyingSecurityXML</b>	[0..1]	Component	Embedded XML document describing the underlying instrument.
<b>UnderlyingCFICode</b>	[0..1]	String	
<b>UnderlyingUPICode</b>	[0..1]	String	
<b>UnderlyingSecurityType</b>	[0..1]	CodeSet	

Name	Mult.	Type	Description
UnderlyingSecuritySubType	[0..1]	String	
UnderlyingMaturityMonthYear	[0..1]	MonthYear	
UnderlyingMaturityDate	[0..1]	LocalMktDate	
UnderlyingMaturityTime	[0..1]	TZTimeOnly	
UnderlyingMaturityFrequencyUnit	[0..1]	CodeSet	Conditionally required when UnderlyingMaturityFrequencyPeriod(2985) is specified.
UnderlyingMaturityFrequencyPeriod	[0..1]	int	Conditionally required when UnderlyingMaturityFrequencyUnit(2984) is specified and the value is not EOM (End of Month) or F (Flexible).
UnderlyingContractPriceRefMonth	[0..1]	MonthYear	
UnderlyingCouponPaymentDate	[0..1]	LocalMktDate	
UnderlyingRestructuringType	[0..1]	CodeSet	
UnderlyingSeniority	[0..1]	CodeSet	
UnderlyingNotional	[0..1]	Amt	
UnderlyingNotionalCurrency	[0..1]	Currency	
UnderlyingNotionalCurrencyCodeSource	[0..1]	CodeSet	
UnderlyingNotionalDeterminationMethod	[0..1]	String	
UnderlyingNotionalAdjustments	[0..1]	CodeSet	
UnderlyingNotionalXIDRef	[0..1]	XIDREF	
UnderlyingNotionalPercentageOutstanding	[0..1]	Percentage	
UnderlyingOriginalNotionalPercentageOutstanding	[0..1]	Percentage	
UnderlyingAttachmentPoint	[0..1]	Percentage	
UnderlyingDetachmentPoint	[0..1]	Percentage	
UnderlyingIssueDate	[0..1]	LocalMktDate	
UnderlyingRepoCollateralSecurityType	[0..1]	String	
UnderlyingRepurchaseTerm	[0..1]	int	
UnderlyingRepurchaseRate	[0..1]	Percentage	
UnderlyingFactor	[0..1]	float	
UnderlyingCreditRating	[0..1]	String	
UnderlyingInstrRegistry	[0..1]	String	

Name	Mult.	Type	Description
UnderlyingCountryOfIssue	[0..1]	Country	
UnderlyingStateOrProvinceOfIssue	[0..1]	String	
UnderlyingLocaleOfIssue	[0..1]	String	
UnderlyingRedemptionDate	[0..1]	LocalMktDate	
UnderlyingStrikePrice	[0..1]	Price	
UnderlyingStrikeCurrency	[0..1]	Currency	
UnderlyingStrikeCurrencyCodeSource	[0..1]	CodeSet	
UnderlyingOptAttribute	[0..1]	char	
UnderlyingContractMultiplier	[0..1]	float	
UnderlyingContractMultiplierUnit	[0..1]	CodeSet	
UnderlyingTradingUnitPeriodMultiplier	[0..1]	int	
UnderlyingFlowScheduleType	[0..1]	CodeSet	
UnderlyingUnitOfMeasure	[0..1]	CodeSet	
UnderlyingUnitOfMeasureQty	[0..1]	Qty	
UnderlyingUnitOfMeasureCurrency	[0..1]	Currency	
UnderlyingUnitOfMeasureCurrencyCodeSource	[0..1]	CodeSet	
UnderlyingPriceUnitOfMeasure	[0..1]	CodeSet	
UnderlyingPriceUnitOfMeasureQty	[0..1]	Qty	
UnderlyingPriceUnitOfMeasureCurrency	[0..1]	Currency	
UnderlyingPriceUnitOfMeasureCurrencyCodeSource	[0..1]	CodeSet	
UnderlyingTimeUnit	[0..1]	CodeSet	Used to indicate a time unit for the contract (e.g., days, weeks, months, etc.)
UnderlyingExerciseStyle	[0..1]	CodeSet	
UnderlyingPriceQuoteCurrency	[0..1]	Currency	
UnderlyingPriceQuoteCurrencyCodeSource	[0..1]	CodeSet	
UnderlyingCouponRate	[0..1]	Percentage	
UnderlyingSecurityExchange	[0..1]	Exchange	
UnderlyingIssuer	[0..1]	String	
EncodedUnderlyingIssuerLen	[0..1]	Length	Must be set if UnderlyingEncodedIssuer(363) field is specified and must immediately precede it.

Name	Mult.	Type	Description
EncodedUnderlyingIssuer	[0..1]	data	Encoded (non-ASCII characters) representation of the UnderlyingIssuer(363) field in the encoded format specified via the MessageEncoding(347) field.
UnderlyingFinancialInstrumentShort-Name	[0..1]	String	
UnderlyingFinancialInstrumentFull-Name	[0..1]	String	
EncodedUnderlyingFinancialInstrumentFullNameLen	[0..1]	Length	Must be set if EncodedUnderlyingFinancialInstrumentFullName(2722) field is specified and must immediately precede it.
EncodedUnderlyingFinancialInstrumentFullName	[0..1]	data	Encoded (non-ASCII characters) representation of the UnderlyingFinancialInstrumentFullName(2720) field in the encoded format specified via the MessageEncoding(347) field.
UnderlyingIndexCurveUnit	[0..1]	CodeSet	Requires UnderlyingSecurityID(305) to identify the index. Requires UnderlyingIndexCurvePeriod(2724).
UnderlyingIndexCurvePeriod	[0..1]	int	Requires UnderlyingSecurityID(305) to identify the index. Requires UnderlyingIndexCurveUnit(2723).
UnderlyingSecurityDesc	[0..1]	String	
EncodedUnderlyingSecurityDescLen	[0..1]	Length	Must be set if UnderlyingEncodedSecurityDesc(307) field is specified and must immediately precede it.
EncodedUnderlyingSecurityDesc	[0..1]	data	Encoded (non-ASCII characters) representation of the UnderlyingSecurityDesc(307) field in the encoded format specified via the MessageEncoding(347) field.
UnderlyingCPPProgram	[0..1]	CodeSet	
UnderlyingCPRRegType	[0..1]	String	
UnderlyingAllocationPercent	[0..1]	Percentage	Specific to the < UnderlyingInstrument > Percent of the Strike Price that this underlying represents. Necessary for derivatives that deliver into more than one underlying instrument.
UnderlyingCurrency	[0..1]	Currency	Specific to the <UnderlyingInstrument> (not in <Instrument>)
UnderlyingCurrencyCodeSource	[0..1]	CodeSet	

Name	Mult.	Type	Description
UnderlyingQty	[0..1]	Qty	Specific to the <UnderlyingInstrument> (not in <Instrument>). Unit amount of the underlying security (par, shares, currency, etc.)
UnderlyingSettlementType	[0..1]	CodeSet	Specific to the < UnderlyingInstrument > Indicates order settlement period for the underlying deliverable component.
UnderlyingCashAmount	[0..1]	Amt	Specific to the < UnderlyingInstrument > Cash amount associated with the underlying component. Necessary for derivatives that deliver into more than one underlying instrument and one of the underlying's is a fixed cash value.
UnderlyingCashType	[0..1]	CodeSet	Specific to the < UnderlyingInstrument > Used for derivatives that deliver into cash underlying. Indicates that the cash is either fixed or difference value (difference between strike and current underlying price)
UnderlyingPx	[0..1]	Price	Specific to the <UnderlyingInstrument> (not in <Instrument>). In a financing deal clean price (percent-of-par or per unit) of the underlying security or basket.
UnderlyingDirtyPrice	[0..1]	Price	Specific to the <UnderlyingInstrument> (not in <Instrument>). In a financing deal price (percent-of-par or per unit) of the underlying security or basket. "Dirty" means it includes accrued interest
UnderlyingEndPrice	[0..1]	Price	Specific to the <UnderlyingInstrument> (not in <Instrument>). In a financing deal price (percent-of-par or per unit) of the underlying security or basket at the end of the agreement.
UnderlyingStartValue	[0..1]	Amt	Specific to the <UnderlyingInstrument> (not in <Instrument>). Currency value attributed to this collateral at the start of the agreement
UnderlyingCurrentValue	[0..1]	Amt	Specific to the <UnderlyingInstrument> (not in <Instrument>). Currency value currently attributed to this collateral
UnderlyingEndValue	[0..1]	Amt	Specific to the <UnderlyingInstrument> (not in <Instrument>). Currency value attributed to this collateral at the end of the agreement
UnderlyingAccruedInterestAmt	[0..1]	Amt	
UnderlyingNumDaysInterest	[0..1]	int	

Name	Mult.	Type	Description
UnderlyingStipulations	[0..*]	Group	Specific to the <UnderlyingInstrument> (not in <Instrument>). Insert here the contents of the <UnderlyingStipulations> Component Block
UnderlyingAdjustedQuantity	[0..1]	Qty	Specific to the <UnderlyingInstrument> (not in <Instrument>). For listed derivatives margin management, this is the number of shares adjusted for upcoming corporate action. Used only for securities which are optionable and are between ex-date and settlement date (4 days).
UnderlyingFXRate	[0..1]	float	Specific to the <UnderlyingInstrument> (not in <Instrument>). Foreign exchange rate used to compute UnderlyingCurrentValue (885) (or market value) from UnderlyingCurrency (318) to Currency (15).
UnderlyingFXRateCalc	[0..1]	CodeSet	Specific to the <UnderlyingInstrument> (not in <Instrument>). Specified whether UnderlyingFxRate (1045) should be multiplied or divided to derive UnderlyingCurrentValue (885).
UnderlyingCapValue	[0..1]	Amt	
UnderlyingInstrumentParties	[0..*]	Group	
UnderlyingSettlMethod	[0..1]	CodeSet	
UnderlyingPutOrCall	[0..1]	CodeSet	Used to express option right
UnderlyingInTheMoneyCondition	[0..1]	CodeSet	Used to express in-the-moneyness behavior in general terms for the option without the use of UnderlyingStrikePrice(316) and UnderlyingPutOrCall(315).
UnderlyingContraryInstructionEligibilityIndicator	[0..1]	Boolean	
UnderlyingConstituentWeight	[0..1]	float	
UnderlyingCouponType	[0..1]	CodeSet	
UnderlyingTotalIssuedAmount	[0..1]	Amt	
UnderlyingCouponFrequencyPeriod	[0..1]	int	Conditionally required when UnderlyingCouponFrequencyUnit(1992) is specified.
UnderlyingCouponFrequencyUnit	[0..1]	CodeSet	Conditionally required when UnderlyingCouponFrequencyPeriod(1991) is specified.
UnderlyingCouponDayCount	[0..1]	CodeSet	
UnderlyingCouponOtherDayCount	[0..1]	String	

Name	Mult.	Type	Description
UnderlyingObligationID	[0..1]	String	
UnderlyingObligationIDSource	[0..1]	CodeSet	Conditionally required when UnderlyingObligationID(1994) is specified.
UnderlyingEquityID	[0..1]	String	
UnderlyingEquityIDSource	[0..1]	CodeSet	Conditionally required when UnderlyingEquityID(1996) is specified.
UnderlyingFutureID	[0..1]	String	
UnderlyingFutureIDSource	[0..1]	CodeSet	Required if UnderlyingFutureID(2620) is specified.
UnderlyingEvtGrp	[0..*]	Group	
UnderlyingLienSeniority	[0..1]	CodeSet	
UnderlyingLoanFacility	[0..1]	CodeSet	
UnderlyingReferenceEntityType	[0..1]	CodeSet	
UnderlyingIndexSeries	[0..1]	int	
UnderlyingIndexAnnexVersion	[0..1]	int	
UnderlyingIndexAnnexDate	[0..1]	LocalMktDate	
UnderlyingIndexAnnexSource	[0..1]	String	
UnderlyingSettlRateIndex	[0..1]	String	
UnderlyingSettlRateIndexLocation	[0..1]	String	
UnderlyingOptionExpirationDesc	[0..1]	String	
EncodedUnderlyingOptionExpirationDescLen	[0..1]	Length	Must be set if EncodedUnderlyingOptionExpirationDesc(2288) field is specified and must immediately precede it.
EncodedUnderlyingOptionExpirationDesc	[0..1]	data	Encoded (non-ASCII characters) representation of the UnderlyingOptionExpirationDesc(2286) field in the encoded format specified via the MessageEncoding(347) field.
UnderlyingProductComplex	[0..1]	String	
UnderlyingSecurityGroup	[0..1]	String	
UnderlyingSettleOnOpenFlag	[0..1]	String	
UnderlyingAssignmentMethod	[0..1]	CodeSet	
UnderlyingSecurityStatus	[0..1]	CodeSet	
UnderlyingObligationType	[0..1]	CodeSet	
UnderlyingAssetGroup	[0..1]	CodeSet	
UnderlyingAssetClass	[0..1]	CodeSet	Required if UnderlyingAssetSubClass(2014) is specified.

Name	Mult.	Type	Description
UnderlyingAssetSubClass	[0..1]	CodeSet	Required if UnderlyingAssetType(2015) is specified.
UnderlyingAssetType	[0..1]	String	Required if UnderlyingAssetSubType(2744) is specified.
UnderlyingAssetSubType	[0..1]	String	
UnderlyingSecondaryAssetGrp	[0..*]	Group	
UnderlyingAssetAttributeGrp	[0..*]	Group	
UnderlyingSwapClass	[0..1]	CodeSet	
UnderlyingSwapSubClass	[0..1]	CodeSet	
UnderlyingNthToDefault	[0..1]	int	Conditionally required when UnderlyingMthToDefault(2018) is specified.
UnderlyingMthToDefault	[0..1]	int	
UnderlyingSettledEntityMatrixSource	[0..1]	String	
UnderlyingSettledEntityMatrixPublicationDate	[0..1]	LocalMktDate	
UnderlyingStrikeMultiplier	[0..1]	float	
UnderlyingStrikeValue	[0..1]	float	
UnderlyingStrikeUnitOfMeasure	[0..1]	CodeSet	
UnderlyingStrikeIndexCurvePoint	[0..1]	String	
UnderlyingStrikeIndex	[0..1]	String	
UnderlyingStrikeIndexQuote	[0..1]	CodeSet	
UnderlyingStrikeIndexSpread	[0..1]	PriceOffset	
UnderlyingStrikePriceDeterminationMethod	[0..1]	CodeSet	
UnderlyingStrikePriceBoundaryMethod	[0..1]	CodeSet	When specified, UnderlyingPutOrCall(315), UnderlyingStrikePrice(316), and UnderlyingStrikePriceBoundaryPrecision(2025) must also be specified.
UnderlyingStrikePriceBoundaryPrecision	[0..1]	Percentage	
UnderlyingMinPriceIncrement	[0..1]	float	
UnderlyingMinPriceIncrementAmount	[0..1]	Amt	
UnderlyingOptPayoutType	[0..1]	CodeSet	
UnderlyingOptPayoutAmount	[0..1]	Amt	Conditionally required if UnderlyingOptPayoutType(2028) = 3 (Binary).
UnderlyingReturnTrigger	[0..1]	CodeSet	
UnderlyingPriceQuoteMethod	[0..1]	CodeSet	

Name	Mult.	Type	Description
UnderlyingValuationMethod	[0..1]	CodeSet	
UnderlyingValuationSource	[0..1]	String	
UnderlyingValuationReferenceModel	[0..1]	String	
UnderlyingListMethod	[0..1]	CodeSet	
UnderlyingCapPrice	[0..1]	Price	
UnderlyingFloorPrice	[0..1]	Price	
UnderlyingFlexibleIndicator	[0..1]	Boolean	
UnderlyingFlexProductEligibilityIndicator	[0..1]	Boolean	
UnderlyingPositionLimit	[0..1]	int	
UnderlyingNTPositionLimit	[0..1]	int	
UnderlyingPool	[0..1]	String	
UnderlyingContractSettlMonth	[0..1]	MonthYear	
UnderlyingDatedDate	[0..1]	LocalMktDate	
UnderlyingInterestAccrualDate	[0..1]	LocalMktDate	
UnderlyingShortSaleRestriction	[0..1]	CodeSet	
UnderlyingRefTickTableID	[0..1]	int	
UnderlyingProtectionTermXIDRef	[0..1]	XIDREF	
UnderlyingSettlTermXIDRef	[0..1]	XIDREF	
UnderlyingComplexEvents	[0..*]	Group	
UnderlyingStrategyType	[0..1]	CodeSet	
UnderlyingCommonPricingIndicator	[0..1]	Boolean	
UnderlyingSettlDisruptionProvision	[0..1]	CodeSet	
UnderlyingDeliveryRouteOrCharter	[0..1]	String	
UnderlyingInstrumentRoundingDirection	[0..1]	CodeSet	
UnderlyingInstrumentRoundingPrecision	[0..1]	int	
UnderlyingDateAdjustment	[0..1]	Component	
UnderlyingPricingDateTime	[0..1]	Component	
UnderlyingMarketDisruption	[0..1]	Component	
UnderlyingOptionExercise	[0..1]	Component	
UnderlyingStreamGrp	[0..*]	Group	
UnderlyingProvisionGrp	[0..*]	Group	
UnderlyingAdditionalTermGrp	[0..*]	Group	

Name	Mult.	Type	Description
UnderlyingProtectionTermGrp	[0..*]	Group	
UnderlyingCashSettlTermGrp	[0..*]	Group	
UnderlyingPhysicalSettlTermGrp	[0..*]	Group	
UnderlyingRateSpreadSchedule	[0..1]	Component	
UnderlyingDividendPayout	[0..1]	Component	
UnderlyingExtraordinaryEventGrp	[0..*]	Group

UnderlyingAverageVolumeLimitation-Percentage	[0..1]	Amt	
UnderlyingAverageVolumeLimitation-PeriodDays	[0..1]	int	
UnderlyingDepositoryReceiptIndicator	[0..1]	Boolean	
UnderlyingOpenUnits	[0..1]	Qty	
UnderlyingBasketDivisor	[0..1]	float	
UnderlyingInstrumentXID	[0..1]	XID	

Used in groups: PosUndInstrmtGrp, QuotSetAckGrp, QuotSetGrp, UndInstrmtCollGrp, UndInstrmtGrp

Used in messages: DerivativeSecurityList, DerivativeSecurityListRequest, DerivativeSecurityListUpdateReport, OrderMassActionReport, OrderMassActionRequest, OrderMassCancelReport, OrderMassCancelRequest, OrderMassStatusRequest, SecurityRiskMetricsReport

### 171.2.5771 UnderlyingInstrumentPartyID

PartyID value within an underlying instrument party repeating group.

Same values as PartyID (448)

Type: String

Used in groups: UndlyInstrumentParties

### 171.2.5772 UnderlyingInstrumentPartyIDSource

PartyIDSource value within an underlying instrument partyrepeating group.

Same values as PartyIDSource (447)

Type: **char**

Allowed values in PartyIDSourceCodeSet:

Code	Name	Description
1	KoreanInvestorID	Korean Investor ID
6	UKNationalInsuranceOrPension-Number	UK National Insurance or Pension Number
B	BIC	BIC (Bank Identification Code - SWIFT managed) code (ISO9362 - See "Appendix 6-B")
I	ISITCAcronym	Directed broker three character acronym as defined in ISITC "ETC Best Practice" guidelines document
2	TaiwaneseForeignInvestorID	Taiwanese Qualified Foreign Investor ID QFII/FID
7	USSocialSecurityNumber	US Social Security Number
C	GeneralIdentifier	Generally accepted market participant identifier (e.g. NASD mnemonic)
3	TaiwaneseTradingAcct	Taiwanese Trading Acct
8	USEmployerOrTaxIDNumber	US Employer or Tax ID Number
D	Proprietary	Proprietary / Custom code. Custom ID schema used between counterparties, trading platforms and repositories.
4	MalaysianCentralDepository	Malaysian Central Depository (MCD) number
9	AustralianBusinessNumber	Australian Business Number
E	ISOCountryCode	ISO Country Code
5	ChineseInvestorID	Chinese Investor ID
A	AustralianTaxFileNumber	Australian Tax File Number
F	SettlementEntityLocation	Settlement Entity Location (note if Local Market Settlement use "E=ISO Country Code") (see "Appendix 6-G" for valid values)
G	MIC	Market Identifier Code (ISO 10383) MIC
J	TaxID	Tax ID
H	CSDParticipant	CSD participant/member code (e.g. Euroclear, DTC, CREST or Kassenverein number)
K	AustralianCompanyNumber	Australian Company Number
L	AustralianRegisteredBodyNumber	Australian Registered Body Number
M	CFTCReportingFirmIdentifier	CFTC reporting firm identifier
N	LegalEntityIdentifier	Legal Entity Identifier (ISO 17442) LEI
O	InterimIdentifier	Interim identifier. An interim entity identifier assigned by a regulatory agency prior to an LEI (ISO 17442) being assigned.

Code	Name	Description
P	ShortCodeIdentifier	Short code identifier. A generic means for trading venues, brokers, investment managers to convey a bilaterally agreed upon "short hand" code for an identifier that is a reference to a mapping between the parties.
Q	NationalIDNaturalPerson	National ID of natural person. An identification number generally assigned by a government authority or agency to a natural person which is unique to the person it is assigned to. Examples include, but not limited to, "social security number", "pension number".
R	IndiaPermanentAccountNumber	India Permanent Account Number. Also referred to as PAN ID. An identifier issued by the Income Tax Department of India.
S	FDID	Firm designated identifier. Also referred to as FDID. A unique identifier required by the SEC for each trading account designated by Industry Members for purposes of reporting to CAT (Consolidated Audit Trail).
T	SPSAID	Special Segregated Account ID. Also referred to as SPSA ID. The Special Segregated Account identifier issued by Hong Kong Exchanges and Clearing.
U	MasterSPSAID	Master Special Segregated Account ID. Also referred to as Master SPSA ID. The master identifier issued by Hong Kong Exchanges and Clearing for the aggregation of SPSA IDs.

Used in groups: [UndlyInstrumentParties](#)

### 171.2.5773 UnderlyingInstrumentPartyRole

PartyRole value within an underlying instrument party repeating group.

Same values as PartyRole (452)

Type: [int](#)

Allowed values in PartyRoleCodeSet:

Code	Name	Description
1	ExecutingFirm	Executing Firm (formerly FIX 4.2 ExecBroker)
2	BrokerOfCredit	Broker of Credit (formerly FIX 4.2 BrokerOfCredit)
3	ClientID	Client ID (formerly FIX 4.2 ClientID)
4	ClearingFirm	Clearing Firm (formerly FIX 4.2 ClearingFirm)

<b>Code</b>	<b>Name</b>	<b>Description</b>
5	InvestorID	Investor ID
6	IntroducingFirm	Introducing Firm
7	EnteringFirm	Entering Firm
8	Locate	Locate / Lending Firm (for short-sales)
9	FundManagerClientID	Fund Manager Client ID (for CIV)
10	SettlementLocation	Settlement Location (formerly FIX 4.2 SettLocation)
11	OrderOriginationTrader	Order Origination Trader (associated with Order Origination Firm - i.e. trader who initiates/submits the order)
12	ExecutingTrader	Executing Trader (associated with Executing Firm - actually executes)
13	OrderOriginationFirm	Order Origination Firm (e.g. buy-side firm)
14	GiveupClearingFirmDepr	Giveup Clearing Firm (firm to which trade is given up)
15	CorrespondantClearingFirm	Correspondant Clearing Firm
16	ExecutingSystem	Executing System
17	ContraFirm	Contra Firm
18	ContraClearingFirm	Contra Clearing Firm
19	SponsoringFirm	Sponsoring Firm
20	UnderlyingContraFirm	Underlying Contra Firm
21	ClearingOrganization	Clearing Organization
22	Exchange	Exchange. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
24	CustomerAccount	Customer Account
25	CorrespondentClearingOrganization	Correspondent Clearing Organization
26	CorrespondentBroker	Correspondent Broker
27	Buyer	Buyer/Seller (Receiver/Deliverer)
28	Custodian	Custodian
29	Intermediary	Intermediary
30	Agent	Agent
31	SubCustodian	Sub-custodian
32	Beneficiary	Beneficiary
33	InterestedParty	Interested party
34	RegulatoryBody	Regulatory body. In the context of regulatory reporting, this identifies the regulator the trade is being reported to.
35	LiquidityProvider	Liquidity provider
36	EnteringTrader	Entering trader

<b>Code</b>	<b>Name</b>	<b>Description</b>
37	ContraTrader	Contra trader
38	PositionAccount	Position account. The account which positions are maintained. Typically represents the aggregation of one or more customer accounts.
39	ContraInvestorID	Contra Investor ID
40	TransferToFirm	Transfer to Firm
41	ContraPositionAccount	Contra Position Account
42	ContraExchange	Contra Exchange
43	InternalCarryAccount	Internal Carry Account
44	OrderEntryOperatorID	Order Entry Operator ID
45	SecondaryAccountNumber	Secondary Account Number
46	ForeignFirm	Foreign Firm
47	ThirdPartyAllocationFirm	Third Party Allocation Firm
48	ClaimingAccount	Claiming Account
49	AssetManager	Asset Manager
50	PledgorAccount	Pledgor Account
51	PledgeeAccount	Pledgee Account
52	LargeTraderReportableAccount	Large Trader Reportable Account
53	TraderMnemonic	Trader mnemonic
54	SenderLocation	Sender Location
55	SessionID	Session ID
56	AcceptableCounterparty	Acceptable Counterparty
57	UnacceptableCounterparty	Unacceptable Counterparty
58	EnteringUnit	Entering Unit
59	ExecutingUnit	Executing Unit
60	IntroducingBroker	Introducing Broker
61	QuoteOriginator	Quote originator
62	ReportOriginator	Report originator
63	SystematicInternaliser	Systematic internaliser (SI)
64	MultilateralTradingFacility	Multilateral Trading Facility (MTF). Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
65	RegulatedMarket	Regulated Market (RM). Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
66	MarketMaker	Market Maker

<b>Code</b>	<b>Name</b>	<b>Description</b>
67	InvestmentFirm	Investment Firm
68	HostCompetentAuthority	Host Competent Authority (Host CA)
69	HomeCompetentAuthority	Home Competent Authority (Home CA)
70	CompetentAuthorityLiquidity	Competent Authority of the most relevant market in terms of liquidity (CAL)
71	CompetentAuthorityTransactionVenue	Competent Authority of the Transaction (Execution) Venue (CATV)
72	ReportingIntermediary	Reporting intermediary. The medium or vendor used to report to a regulator, non-regulatory agency or data repository.
73	ExecutionVenue	Execution Venue. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
74	MarketDataEntryOriginator	Market data entry originator
75	LocationID	Location ID
76	DeskID	Desk ID
77	MarketDataMarket	Market data market
78	AllocationEntity	Allocation Entity
79	PrimeBroker	Prime Broker providing General Trade Services
80	StepOutFirm	Step-Out Firm (Prime Broker)
81	BrokerClearingID	Broker clearing identifier
82	CentralRegistrationDepository	Central Registration Depository (CRD)
83	ClearingAccount	Clearing Account
84	AcceptableSettlingCounterparty	Acceptable Settling Counterparty
85	UnacceptableSettlingCounterparty	Unacceptable Settling Counterparty
86	CLSMemberBank	CLS Member Bank
87	InConcertGroup	In Concert Group
88	InConcertControllingEntity	In Concert Controlling Entity
89	LargePositionsReportingAccount	Large Positions Reporting Account
90	SettlementFirm	Settlement Firm
91	SettlementAccount	Settlement account. The account to which individual payment obligations are aggregated for netting and funds movement. Typically represents the aggregation of many margin (performance bond) accounts.
92	ReportingMarketCenter	Reporting Market Center
93	RelatedReportingMarketCenter	Related Reporting Market Center
94	AwayMarket	Away Market. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.

<b>Code</b>	<b>Name</b>	<b>Description</b>
95	GiveupTradingFirm	Give-up (trading) firm
96	TakeupTradingFirm	Take-up (trading) firm
97	GiveupClearingFirm	Give-up clearing firm
98	TakeupClearingFirm	Take-up clearing firm
99	OriginatingMarket	Originating Market. Identifies the Market using PartyIDSource(tag 447) = G (Market Identifier Code) where an order originated in the event that the order is sent to an alternative market for execution. Serves as an inverse of an away market.
100	MarginAccount	Margin account. Also referred to as "performance bond account". The margin account is the calculated margin requirements. Typically represents the aggregation of one or more position accounts.
101	CollateralAssetAccount	Collateral asset account. The account at which individual collateral assets are maintained. Typically, although not always, one-for-one with the settlement account.
102	DataRepository	Data repository. Multiple instances of this PartyRole may appear for reporting purposes.
103	CalculationAgent	Calculation agent
104	ExerciseNoticeSender	Sender of exercise notice
105	ExerciseNoticeReceiver	Receiver of exercise notice
106	RateReferenceBank	Rate reference bank. The bank providing the reference rate. Multiple instance of this PartyRole may appear.
107	Correspondent	Correspondent
109	BeneficiaryBank	Beneficiary's bank or depository institution. The institution in which the beneficiary, a person or an entity, has their account with. The institution may be a bank or non-bank institution.
110	Borrower	Borrower
111	PrimaryObligator	Primary obligator
112	Guarantor	Guarantor
113	ExcludedReferenceEntity	Excluded reference entity
114	DeterminingParty	Determining party
115	HedgingParty	Hedging party
116	ReportingEntity	Reporting entity. The entity that is reporting the information.
117	SalesPerson	Sales person. The person who is involved in the sales activities for their firm.

Code	Name	Description
118	Operator	Operator. The person who has the capabilities and authorization to take certain actions; for example, setting entitlements, etc.
119	CSD	Central Securities Depository (CSD)
120	ICSD	International Central Securities Depository (ICSD)
121	TradingSubAccount	Trading sub-account. Example of sub-accounts include a clearing account that has multiple trading sub-accounts, a trading account that has multiple trading sub-accounts belonging to different trading firms.
122	InvestmentDecisionMaker	Investment decision maker. In the context of ESMA RTS reporting, this is used to specify party responsible for the investment decision. See RTS 24, Annex, Table 2, Field 4.
123	PublishingIntermediary	Publishing intermediary. The medium or vendor used to publish to the market.
124	CSDParticipant	Central Securities Depository (CSD) Participant. In the context of EU SFTR reporting the identifier of the CSD participant or indirect participant of the reporting counterparty. Where both the CSD participant and indirect participant are involved in the transaction this should identify the indirect participant.
125	Issuer	Issuer. The issuer of the security.
126	ContraCustomerAccount	Contra Customer Account. Same as PartyRole(452) = 24 (Customer Account) but for the counterparty. Can be used whenever the parties component is not nested in a repeating group representing both sides.
127	ContraInvestmentDecisionMaker	Contra Investment Decision Maker. Same as PartyRole(452) = 122 (Investment Decision Maker) but for the counterparty. Can be used whenever the parties component is not nested in a repeating group representing both sides.

Used in groups: [UndlyInstrumentParties](#)

### 171.2.5774 UnderlyingInstrumentPartyRoleQualifier

Used to further qualify the value of UnderlyingInstrumentPartyRole(1061).

Type: **int**

Allowed values in PartyDetailRoleQualifierCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Agency	Agency
1	Principal	Principal
2	RisklessPrincipal	Riskless principal
3	GeneralClearingMember	General clearing member
30	ExchangeOrderSubmitter	Exchange order submitter. Used to identify original or initial exchange order submitting broker when party role "1" (Executing Firm) appears more than once.
4	IndividualClearingMember	Individual clearing member
5	PreferredMarketMaker	Preferred market maker. Market maker getting a part of the matched quantity before primary or default market maker.
6	DirectedMarketMaker	Directed market maker. Single market maker to handle the order provided.
7	Bank	Bank
8	Hub	Hub. Indicates that the Intermediary party is a hub system or service provider.
9	PrimaryTrdRepository	Primary trade repository. Used to differentiate the principal trade repository from the Original or Additional trade repositories when there are multiple trade repositories being reported.
10	OrigTrdRepository	Original trade repository. Used to identify the trade repository to which the trade was originally reported if different from the current repository to which the trade is being reported.
11	AddtnIntlTrdRepository	Additional international trade repository. Used with InternationalSwapIndicator(2526) to identify the trade repository that is in addition to the local swaps data repository as required by U.S. law.
12	AddtnDomesticTrdRepository	Additional domestic trade repository. Used with MixedSwapIndicator(1929) to identify the trade repository that is in addition to the current trade repository when the assets in the swap are subject to two different domestic regulators.
13	RelatedExchange	Related exchange
14	OptionsExchange	Options exchange
15	SpecifiedExchange	Specified exchange
16	ConstituentExchange	Constituent exchange.
17	ExemptFromTradeReporting	Exempt from trade reporting. In the context of FINRA TRACE reporting requirements, this is used to indicate the ATS has been granted a regulatory exemption from reporting.
18	Current	Current. Can be used to convey an existing party identifier for the same party role in a single message.

Code	Name	Description
19	New	New. Can be used to convey a future party identifier for the same party role in a single message.
20	DesignatedSponsor	Designated sponsor. Market maker jointly providing liquidity for the same security with other market makers.
21	Specialist	Specialist. Market maker being the only one providing liquidity for a security.
22	Algorithm	Algorithm
23	FirmOrLegalEntity	Firm or legal entity
24	NaturalPerson	Natural person
25	RegularTrader	Regular trader. Standard trader profile.
26	HeadTrader	Head trader. Senior trader leading a group of regular traders.
27	Supervisor	Supervisor. Administrative user that has only limited rights for normal trading but possibly special rights for emergency actions.
28	TriParty	Tri-party. In the context of EU SFTR reporting, identifies the third party, not necessarily the custodian, to which the reporting counterparty has outsourced the post-trade processing of an SFT (if applicable).
29	Lender	Lender. In the context of EU SFTR reporting, identifies the agent lender involved in the securities lending transaction.

Used in groups: [UndlyInstrumentParties](#)

#### **171.2.5775 UnderlyingInstrumentPartySubID**

PartySubID value within an underlying instrument party repeating group.

Same values as PartySubID (523)

Type: [String](#)

Used in groups: [UndlyInstrumentPtysSubGrp](#)

#### **171.2.5776 UnderlyingInstrumentPartySubIDType**

Type of underlying InstrumentPartySubID (1053) value.

Same values as PartySubIDType (803)

Type: [int](#)

## Allowed values in PartySubIDTypeCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	Firm	Firm
2	Person	Person
3	System	System
4	Application	Application
5	FullLegalNameOfFirm	Full legal name of firm
6	PostalAddress	Postal address
7	PhoneNumber	Phone number
8	EmailAddress	Email address
9	ContactName	Contact name
10	SecuritiesAccountNumber	Securities account number (for settlement instructions)
11	RegistrationNumber	Registration number (for settlement instructions and confirmations)
12	RegisteredAddressForConfirmation	Registered address (for confirmation purposes)
13	RegulatoryStatus	Regulatory status (for confirmation purposes)
14	RegistrationName	Registration name (for settlement instructions)
15	CashAccountNumber	Cash account number (for settlement instructions)
16	BIC	BIC
17	CSDParticipantMemberCode	CSD participant member code
18	RegisteredAddress	Registered address
19	FundAccountName	Fund account name
20	TelexNumber	Telex number
21	FaxNumber	Fax number
22	SecuritiesAccountName	Securities account name
23	CashAccountName	Cash account name
24	Department	Department
25	LocationDesk	Location desk
26	PositionAccountType	Position account type
27	SecurityLocateID	Security locate ID
28	MarketMaker	Market maker
29	EligibleCounterparty	Eligible counterparty
30	ProfessionalClient	Professional client
31	Location	Location
32	ExecutionVenue	Execution venue

Code	Name	Description
33	CurrencyDeliveryIdentifier	Currency delivery identifier
34	AddressCity	Address City
35	AddressStateOrProvince	Address State/Province
36	AddressPostalCode	Address Postal Code
37	AddressStreet	Address Street
38	AddressISOCountryCode	Address Country (ISO country code)
39	ISOCountryCode	ISO country code
40	MarketSegment	Market segment
41	CustomerAccountType	Customer account type
42	OmnibusAccount	Omnibus account
43	FundsSegregationType	Funds segregation type
44	GuaranteeFund	Guarantee fund. Identifies a guarantee fund related to an account. Used when one account has multiple funds of collateral, each guaranteeing different positions. Can be used for PartyRole(452) = Customer Account(24).
45	SwapDealer	Swap dealer. The US regulator's defined term for identifying the trade counterparty as "any person who holds itself out as a dealer in swaps, makes a market in swaps, regularly enters into swaps with counterparties as an ordinary course of business for its own account, or engages in activity causing itself to be commonly known in the trade as a dealer or market maker in swaps".
46	MajorParticipant	Major participant. When PartySubID(523)=Y the counterparty is not the swap dealer but is a major swap participant as defined in the regulations.
47	FinancialEntity	Financial entity. When PartySubID(523)=Y the counterparty is neither a swap dealer nor a major swap participant but is a financial entity as defined in the regulations.
48	USPerson	U.S. person. A legal term referring to any U.S. person or legal entity anywhere in the world that should be taxed under U.S. law.
49	ReportingEntityIndicator	Reporting entity indicator. Indicates the entity obligated or delegated to report to their regulator, a non-regulatory agency or data repository. Set PartySubID(523)=Y if true.
50	ElectedClearingRequirementException	Elected clearing requirement exception
51	BusinessCenter	Business center.
52	ReferenceText	Reference text

<b>Code</b>	<b>Name</b>	<b>Description</b>
53	ShortMarkingExemptAccount	Short-marking exempt account
54	ParentFirmIdentifier	Parent firm identifier. Implementation-specific identifier of this party's parent entity.
55	ParentFirmName	Parent firm name. Full name of this party's parent entity.
56	DealIdentifier	Deal identifier. The internal identifier assigned to the trade by this party, particularly by a Clearing Organization.
57	SystemTradeID	System trade identifier
58	SystemTradeSubID	System trade sub-identifier
59	FCMCode	Futures Commission Merchant (FCM) code. The FCM's code or identifier in relation to the PartyRole(452). For example, if PartyRole(452) is the exchange or clearinghouse, the FCM code/ID specified in PartySubID(523) is the FCM's identifier at the exchange or clearinghouse.
60	DlvryTrmlCode	Delivery terminal customer account/code. Usually used for gas delivery to identify whose account the gas is allocated to at the delivery terminal. Often referred to as "HUB" code.
61	VolntyRptEntity	Voluntary reporting entity. The entity voluntarily reporting the trade to the regulator. Set PartySubID(523)=Y if true.
62	RptObligJurisdiction	Reporting obligation jurisdiction. For a trade that falls under multiple jurisdictions this may be used to identify, through PartySubID(523), the reporting jurisdiction to which the party is obligated to report.
63	VolntyRptJurisdiction	Voluntary reporting jurisdiction. For a trade that falls under multiple jurisdictions this may be used to identify, through PartySubID(523), the regulatory jurisdiction to which the party is submitting a voluntary report.

Code	Name	Description
64	CompanyActivities	Company activities. For regulatory reporting. ID values include: A = Assurance undertaking authorized in accordance with Directive 2002/83/EC C=Credit institution authorized in accordance with Directive 2006/48/EC F=Investment firm in accordance with Directive 2004/39/EC I=Insurance undertaking authorized in accordance with Directive 73/239/EC L=Alternative investment fund managed by AIFMs authorized or registered in accordance with Directive 2011/61/EC O=Institution for occupational retirement provision within the meaning of Article 6(a0 of Directive 2003/41/EC R=Reinsurance undertaking authorized in accordance with Directive 2005/68/EC U=UCITS and its management company, authorized in accordance with Directive 2009/65/EC or blank in case of coverage by LEI or in case of non-financial counterparties. In the context of EU SFTR reporting use the appropriate 4- or 1-character code noted in the regulations. See SFTR ITS "Commission Implementing Regulation (EU) 2019/363" Annexes 1 and 2 for values.
65	EEAreaDomiciled	European Economic Area domiciled. ID values: Y or N
66	ContractLinked	Contract linked to commercial or treasury financing for this counterparty. ID values: Y or N
67	ContractAbove	Contract above clearing threshold for this counterparty. ID values: Y or N
68	VolntyRptPty	Voluntary reporting party. When PartySubID(523)=Y, identifies that the trading party is reporting voluntarily when VoluntaryRegulatoryReport(1935)=Y.
69	EndUser	End user. When PartySubID(523)=Y, the counterparty is neither the swap dealer, major swap participant nor financial entity as defined in the regulations.
70	LocationOrJurisdiction	Location or jurisdiction. One or more instances may be used in combination with PartySubIDType(803) = 49 (Reporting entity indicator) or 102 (Data repository) to identify the jurisdiction, countries, regions or provinces for which the party is a reporting entity or data repository when that characteristic is ambiguous or where there are multiple locations. The party sub-ID value is either a jurisdiction acronym, a 2-character ISO 3166 country code, or a hyphenated combination of the country code and the standard post-office abbreviation for province, state or region if necessary. E.g. "US" for United States or "CA-QC" for Quebec Canada.

<b>Code</b>	<b>Name</b>	<b>Description</b>
71	DerivativesDealer	Derivatives dealer. Indicates whether the party is a derivatives dealer or not (Y/N). The Canadian regulator's defined term for identifying the trade counterparty as "a person or company engaging in or holding himself, herself or itself out as engaging in the business of trading in derivatives in Ontario as principal or agent".
72	Domicile	Domicile. Country and optionally province, state or region of domicile. The party sub-ID value is either a 2-character ISO 3166 country code or a hyphenated combination of the country code and the standard post-office abbreviation of province, state or region if necessary. E.g. "US" for United States or "CA-QC" for Quebec Canada.
73	ExemptFromRecognition	Exempt from recognition. Used with party role 21 "Clearing Organization" to indicate exemption (Y/N). Identifies a clearing agency as exempt from oversight in Ontario, i.e. one that 1) only provides limited services and does not present significant risks or 2) is foreign-based, intends to operate in Ontario but is subject to regulatory oversight in another jurisdiction.
74	Payer	Payer. Identifies the party as the payer of a particular payment stream or bullet payment by quoting the stream's StreamDesc(40051) (or LegStreamDesc(40243) or UnderlyingStreamDesc(40542)) or payment's PaymentDesc(43087) in the associated party sub-identifier field.
75	Receiver	Receiver. Identifies the party as the receiver of a particular payment stream or bullet payment by quoting the stream's StreamDesc(40051) (or LegStreamDesc(40243) or UnderlyingStreamDesc(40542)) or payment's PaymentDesc(43087) in the associated party sub-identifier field.
76	SystematicInternaliser	Systematic Internaliser (SI). In the context of ESMA reporting, this is used to indicate whether the specified party is a Systematic Internaliser or not for the security defined in the Instrument component (Y/N).
77	PublishingEntityIndicator	Publishing entity indicator. Indicates the entity obligated or delegated to publish to the market. Set PartySubID(523)=Y if true.
78	FirstName	First name. The first name(s) of a natural person. If multiple names, separate entries by a comma.
79	Surname	Surname. The surname(s) or lastname(s) of a natural person. If multiple names, separate entries by a comma.

Code	Name	Description
80	DateOfBirth	Date of birth. The date of birth of a natural person in the format YYYYMMDD.
81	OrderTransmittingFirm	Order transmitting firm. Identifies whether the party specified in PartyID(448) is the firm that transmitted the order. In the context of RTS 22 Article 4, when "true" the PartySubID(523)=Y shall be set "by the transmitting firm within the transmitting firm's report where conditions for transmission specified in Article 4 were not satisfied."
82	OrderTransmittingFirmBuyer	Order transmitting firm for buyer. Identifies the firm that transmitted the order for the buyer. In the context of ESMA RTS 22, PartySubID(523)=Y is used to indicate the firm identified in PartyID(448) is the firm that transmitted the order for the buyer. "This shall be populated by the receiving firm within the receiving firm's report with the identification code provided by the transmitting firm."
83	OrderTransmitterSeller	Order transmitter for seller. Identifies the order transmitting firm for the seller. In the context of ESMA RTS 22, PartySubID(523)=Y is used to indicate the firm identified in PartyID(448) is the firm that transmitted the order for the seller. "This shall be populated by the receiving firm within the receiving firm's report with the identification code provided by the transmitting firm."
84	LegalEntityIdentifier	Legal Entity Identifier (ISO 17442) LEI
85	SubSectorClassification	Sub-sector classification. Supplemental to party sub-ID type "64" (Company activities) for regulatory reporting. For EU SFTR reporting use the appropriate 4-character code noted in the regulations applying the conditional association rules. See SFTR ITS "Commission Implementing Regulation (EU) 2019/363" Annexes 1 and 2 for values.
86	PartySide	Party side. May be used, when appropriate, to explicitly indicate the transaction side of the party, e.g. Buyer, Seller, Lender, Borrower, Maker, Taker, etc. in the ID. In the context of EU SFTR reporting, use values as required by SFTR, "GIVE" and "TAKE" in the ID, to identify collateral giver and taker.
87	LegalRegistrationCountry	Legal registration country. ISO Country Code where the registered office of the party is located as specified in the LEI reference data.

Used in groups: [UndlyInstrumentPtysSubGrp](#)

**171.2.5777 UnderlyingInstrumentRoundingDirection**

Specifies the rounding direction if not overridden elsewhere.

Type: **char**

Allowed values in RoundingDirectionCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	RoundToNearest	Round to nearest
1	RoundDown	Round down
2	RoundUp	Round up

---

Used in components: **UnderlyingInstrument**

**171.2.5778 UnderlyingInstrumentRoundingPrecision**

Specifies the rounding precision in terms of a number of decimal places. Note how a percentage rate rounding of 5 decimal places is expressed as a rounding precision of 7.

Type: **int**

Used in components: **UnderlyingInstrument**

**171.2.5779 UnderlyingInstrumentXID**

Identifier for referencing this UnderlyingInstrument from a parent instrument or a convertible instrument.

Type: **XID**

Used in components: **UnderlyingInstrument**

**171.2.5780 UnderlyingInterestAccrualDate**

If different from IssueDate and DatedDate

Type: **LocalMktDate**

Used in components: **UnderlyingInstrument**

**171.2.5781 UnderlyingInTheMoneyCondition**

Specifies an option instrument's "in the money" condition in general terms.

Type: **int**

Allowed values in InTheMoneyConditionCodeSet:

Code	Name	Description
0	StandardITM	Standard in-the-money. The option's strike price is less than the underlying settlement price for a call or greater than the underlying settlement price for a put.
1	ATMITM	At-the-money is in-the-money. The option's strike price of either the put or call is equal to the underlying settlement price in addition to standard in-the-money behavior.
2	ATMCallITM	At-the-money call is in-the-money. The call option's strike price is equal to the underlying settlement price in addition to standard in-the-money behavior.
3	ATMPutITM	At-the-money put is in-the-money. The put option's strike price is equal to the underlying settlement price in addition to standard in-the-money behavior.

Used in components: **UnderlyingInstrument**

**171.2.5782 UnderlyingIssueDate**

Underlying security's IssueDate.

See IssueDate (225) field for description

(Note tag # was reserved in FIX 4.1, added in FIX 4.3)

(prior to FIX 4.4 field was of type UTCDate)

Type: **LocalMktDate**

Used in components: **UnderlyingInstrument**

**171.2.5783 UnderlyingIssuer**

Underlying security's Issuer.

See Issuer(106) field for description.

Type: **String**

Used in components: **UnderlyingInstrument**

### **171.2.5784 UnderlyingLastPx**

The calculated or traded price for the underlying instrument that corresponds to a derivative. Used for transactions that include the cash instrument and the derivative.

Type: **Price**

Used in messages: **ExecutionReport**

### **171.2.5785 UnderlyingLastQty**

The calculated or traded quantity for the underlying instrument that corresponds to a derivative. Used for transactions that include the cash instrument and the derivative.

Type: **Qty**

Used in messages: **ExecutionReport**

### **171.2.5786 UnderlyingLegCFIcode**

Refer to definition for CFIcode(461)

Type: **String**

Used in components: **UnderlyingLegInstrument**

### **171.2.5787 UnderlyingLegInstrument**

---

<b>Name</b>	<b>Mult.</b>	<b>Type</b>	<b>Description</b>

Used in components: **UnderlyingLegInstrument**

**171.2.5801 UnderlyingLegSecurityType**

Refer to definition for SecurityType(167)

Type: **String**

Used in components: **UnderlyingLegInstrument**

**171.2.5802 UnderlyingLegStrikePrice**

Refer to definition for StrikePrice(202)

Type: **Price**

Used in components: **UnderlyingLegInstrument**

**171.2.5803 UnderlyingLegSymbol**

Refer to definition for Symbol(55)

Type: **String**

Used in components: **UnderlyingLegInstrument**

**171.2.5804 UnderlyingLegSymbolSfx**

Refer to definition for SymbolSfx(65)

Type: **String**

Used in components: **UnderlyingLegInstrument**

**171.2.5805 UnderlyingLienSeniority**

Indicates the seniority level of the lien in a loan.

Type: **int**

Allowed values in LienSeniorityCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Unknown	Unknown
1	FirstLien	First lien

---

---

Code	Name	Description
2	SecondLien	Second lien
3	ThirdLien	Third lien

---

Used in components: [UnderlyingInstrument](#)

### **171.2.5806 UnderlyingLimitedRightToConfirmIndicator**

Indicates whether the Seller may request the Buyer to confirm its intent to exercise if not done on or before the expiration time on the Expiration date. If true ("Y") specific rules will apply in relation to the settlement mode.

Type: [Boolean](#)

Used in components: [UnderlyingOptionExercise](#)

### **171.2.5807 UnderlyingListMethod**

Indicates whether the instruments are pre-listed only or can also be defined via user request.

Type: [int](#)

Allowed values in ListMethodCodeSet:

---

Code	Name	Description
0	PreListedOnly	pre-listed only
1	UserRequested	user requested

---

Used in components: [UnderlyingInstrument](#)

### **171.2.5808 UnderlyingLoanFacility**

Specifies the type of loan when the credit default swap's reference obligation is a loan.

Type: [int](#)

Allowed values in LoanFacilityCodeSet:

---

Code	Name	Description
0	BridgeLoan	Bridge loan
1	LetterOfCredit	Letter of credit
2	RevolvingLoan	Revolving loan
3	SwinglineFunding	Swingline funding
4	TermLoan	Term loan
5	TradeClaim	Trade claim

---

Used in components: [UnderlyingInstrument](#)

### **171.2.5809 UnderlyingLocaleOfIssue**

Underlying security's LocaleOfIssue.

See LocaleOfIssue (472) field for description

Type: [String](#)

Used in components: [UnderlyingInstrument](#)

### **171.2.5810 UnderlyingMakeWholeAmount**

Amount to be paid by the buyer of the option if the option is exercised prior to the UnderlyingMakeWholeDate(42888).

Type: [Amt](#)

Used in components: [UnderlyingOptionExerciseMakeWholeProvision](#)

### **171.2.5811 UnderlyingMakeWholeBenchmarkCurveName**

Identifies the benchmark floating rate index.

Type: [String](#)

Used in components: [UnderlyingOptionExerciseMakeWholeProvision](#)

**171.2.5812 UnderlyingMakeWholeBenchmarkCurvePoint**

The point on the floating rate index curve.

Sample values:

M = combination of a number between 1-12 and an "M" for month, e.g. 3M

Y = combination of number between 1-100 and a "Y" for year, e.g. 10Y

10Y-OLD = see above, then add "-OLD" when appropriate

INTERPOLATED = the point is mathematically derived

2/2031 5 3/8 = the point is stated via a combination of maturity month / year and coupon.

Type: **String**

Used in components: **UnderlyingOptionExerciseMakeWholeProvision**

**171.2.5813 UnderlyingMakeWholeBenchmarkQuote**

The quote side of the benchmark to be used for calculating the "make whole" amount.

Type: **int**

Allowed values in StrikeIndexQuoteCodeSet:

---

Code	Name	Description
0	Bid	Bid.
1	Mid	Mid
2	Offer	Offer

---

Used in components: **UnderlyingOptionExerciseMakeWholeProvision**

**171.2.5814 UnderlyingMakeWholeDate**

The date through which the option cannot be exercised without penalty.

Type: **LocalMktDate**

Used in components: **UnderlyingOptionExerciseMakeWholeProvision**

**171.2.5815 UnderlyingMakeWholeInterpolationMethod**

The method used when calculating the "make whole" amount. The most common is linear method.

Type: **int**

Allowed values in PaymentStreamInflationInterpolationMethodCodeSet:

---

Code	Name	Description
0	None	None
1	LinearZeroYield	Linear zero yield

---

Used in components: **UnderlyingOptionExerciseMakeWholeProvision**

**171.2.5816 UnderlyingMakeWholeRecallSpread**

Spread over the floating rate index.

Type: **PriceOffset**

Used in components: **UnderlyingOptionExerciseMakeWholeProvision**

**171.2.5817 UnderlyingManualNoticeBusinessCenter**

Identifies the business center used for adjusting the time for manual exercise notice.

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in components: **UnderlyingOptionExercise**

**171.2.5818 UnderlyingMarketDisruption**

The UnderlyingMarketDisruption component is a subcomponent of the UnderlyingInstrument used to specify the market disruption provisions of the swap.

---

Name	Mult.	Type	Description
<b>UnderlyingMarketDisruptionProvision</b>	[0..1]	CodeSet	
<b>UnderlyingMarketDisruptionEventGrp</b>	[0..*]	Group	

---

Name	Mult.	Type	Description
UnderlyingMarketDisruptionFallback-Provision	[0..1]	CodeSet	
UnderlyingMarketDisruptionFallback-Grp	[0..*]	Group	
UnderlyingMarketDisruptionFallback-ReferencePriceGrp	[0..*]	Group	
UnderlyingMarketDisruptionMaximumDays	[0..1]	int	
UnderlyingMarketDisruptionMaterialityPercentage	[0..1]	Percentage	If specified, the disruption event should be specified in UnderlyingMarketDisruptionEventGrp.
UnderlyingMarketDisruptionMinimum-FuturesContracts	[0..1]	int	Applicable only when UnderlyingMarketDisruptionEvent(41865)='DeMinimisTrading'.

Used in components: [UnderlyingInstrument](#)

### 171.2.5819 UnderlyingMarketDisruptionEvent

Specifies the market disruption event.

For commodities see <http://www.fpml.org/coding-scheme/commodity-market-disruption> for values.

For foreign exchange, see [http://www.fixtradingcommunity.org/codelists#Market\\_Disruption\\_Event](http://www.fixtradingcommunity.org/codelists#Market_Disruption_Event) for code list of applicable event types.

Type: [String](#)

Used in groups: [UnderlyingMarketDisruptionEventGrp](#)

### 171.2.5820 UnderlyingMarketDisruptionEventGrp

The UnderlyingMarketDisruptionEventGrp is a repeating subcomponent of the UnderlyingMarketDisruption component used to specify the market disruption events.

Name	Mult.	Type	Description
NoUnderlyingMarketDisruptionEvents	[1..1]	NumInGroup	
UnderlyingMarketDisruptionEvent	[0..1]	String	Required if NoUnderlyingMarketDisruptionEvents(41864) > 0.

Name	Mult.	Type	Description
<a href="#">UnderlyingMarketDisruptionValue</a>	[0..1]	String	

Used in components: [UnderlyingMarketDisruption](#)

### 171.2.5821 UnderlyingMarketDisruptionFallbackBasketCurrency

Specifies the currency if the underlier is a basket. Uses ISO 4217 currency codes.

Type: [Currency](#)

Used in groups: [UnderlyingMarketDisruptionFallbackReferencePriceGrp](#)

### 171.2.5822 UnderlyingMarketDisruptionFallbackBasketDivisor

Specifies the basket divisor amount. This value is normally used to adjust the constituent weight for pricing or to adjust for dividends, or other corporate actions.

Type: [float](#)

Used in groups: [UnderlyingMarketDisruptionFallbackReferencePriceGrp](#)

### 171.2.5823 UnderlyingMarketDisruptionFallbackGrp

The UnderlyingMarketDisruptionFallbackGrp is a repeating subcomponent of the UnderlyingMarketDisruption component used to specify the market disruption fallback provisions.

Name	Mult.	Type	Description
<a href="#">NoUnderlyingMarketDisruptionFallbacks</a>	[1..1]	NumInGroup	
<a href="#">UnderlyingMarketDisruptionFallbackType</a>	[0..1]	String	Required if <a href="#">NoUnderlyingMarketDisruptionFallbacks(41866)</a> > 0. The sequence of entries specifies the order in which the fallback provisions should be applied.
<a href="#">UnderlyingMarketDisruptionFallbackValue</a>	[0..1]	String	

Used in components: [UnderlyingMarketDisruption](#)

**171.2.5824 UnderlyingMarketDisruptionFallbackOpenUnits**

If there are multiple underlying assets, this specifies the number of units (index or securities) that constitute the underlier of the swap. In the case of a basket swap, this is used to reference both the number of basket units, and the number of each asset components of the basket when these are expressed in absolute terms.

Type: [Qty](#)

Used in groups: [UnderlyingMarketDisruptionFallbackReferencePriceGrp](#)

**171.2.5825 UnderlyingMarketDisruptionFallbackProvision**

Specifies the location of the fallback provision documentation.

Type: [int](#)

Allowed values in MarketDisruptionFallbackProvisionCodeSet:

Code	Name	Description
0	MasterAgreement	As specified in master agreement
1	Confirmation	As specified in confirmation

Used in components: [UnderlyingMarketDisruption](#)

**171.2.5826 UnderlyingMarketDisruptionFallbackReferencePriceGrp**

The UnderlyingMarketDisruptionFallbackReferencePriceGrp is a repeating subcomponent of the UnderlyingMarketDisruption component used to specify the fallback reference price and underlying security provisions

Name	Mult.	Type	Description
<a href="#">NoUnderlyingMarketDisruptionFallbackReferencePrices</a>	[1..1]	NumInGroup	
<a href="#">UnderlyingMarketDisruptionFallbackUnderlierType</a>	[0..1]	CodeSet	Required if <a href="#">NoUnderlyingMarketDisruptionFallbackReferencePrices</a> (41868) > 0.
<a href="#">UnderlyingMarketDisruptionFallbackUnderlierSecurityID</a>	[0..1]	String	Conditionally required when <a href="#">UnderlyingMarketDisruptionFallbackUnderlierSecurityIDSource</a> (41871) is specified.

Name	Mult.	Type	Description
UnderlyingMarketDisruptionFallback-UnderlierSecurityIDSource	[0..1]	CodeSet	Conditionally required when UnderlyingMarketDisruptionFallbackUnderlierSecurityID(41870) is specified.
UnderlyingMarketDisruptionFallback-UnderlierSecurityDesc	[0..1]	String	
EncodedUnderlyingMarketDisruptionFallbackUnderlierSecDescLen	[0..1]	Length	Must be set if EncodedUnderlyingMarketDisruptionFallbackUnderlierSecurityDesc(41874) field is specified and must immediately precede it.
EncodedUnderlyingMarketDisruptionFallbackUnderlierSecurityDesc	[0..1]	data	Encoded (non-ASCII characters) representation of the UnderlyingMarketDisruptionFallbackUnderlierSecurityDesc(41872) field in the encoded format specified via the MessageEncoding(347) field.
UnderlyingMarketDisruptionFallback-OpenUnits	[0..1]	Qty	
UnderlyingMarketDisruptionFallback-BasketCurrency	[0..1]	Currency	
UnderlyingMarketDisruptionFallback-BasketDivisor	[0..1]	float	

Used in components: [UnderlyingMarketDisruption](#)

### 171.2.5827 UnderlyingMarketDisruptionFallbackType

Specifies the type of disruption fallback.

See <http://www.fpml.org/coding-scheme/commodity-market-disruption-fallback> for values.

Type: [String](#)

Used in groups: [UnderlyingMarketDisruptionFallbackGrp](#)

### 171.2.5828 UnderlyingMarketDisruptionFallbackUnderlierSecurityDesc

Specifies the description of underlying security.

Type: [String](#)

Used in groups: [UnderlyingMarketDisruptionFallbackReferencePriceGrp](#)

**171.2.5829 UnderlyingMarketDisruptionFallbackUnderlierSecurityID**

Specifies the identifier value of the security.

Type: **String**

Used in groups: **UnderlyingMarketDisruptionFallbackReferencePriceGrp**

**171.2.5830 UnderlyingMarketDisruptionFallbackUnderlierSecurityIDSource**

Specifies the class or source scheme of the security identifier.

Type: **String**

Allowed values in SecurityIDSourceCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	CUSIP	CUSIP
2	SEDOL	SEDOL
3	QUIK	QUIK
4	ISINNumber	ISIN
5	RICCode	RIC
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
7	ISOCountryCode	ISO Country Code
8	ExchangeSymbol	Exchange symbol
9	ConsolidatedTapeAssociation	Consolidated Tape Association (CTA) Symbol (SIAC CTS/CQS line format)
A	BloombergSymbol	Bloomberg Symbol
B	Wertpapier	Wertpapier
C	Dutch	Dutch
D	Valoren	Valoren
E	Sicovam	Sicovam
F	Belgian	Belgian
G	Common	"Common" (Clearstream and Euroclear)
H	ClearingHouse	Clearing house / Clearing organization
I	ISDAFpMLSpecification	ISDA/FpML product specification (XML in SecurityXML(1185))
J	OptionPriceReportingAuthority	Option Price Reporting Authority
K	ISDAFpMLURL	ISDA/FpML product URL (URL in SecurityID(48))
L	LetterOfCredit	Letter of credit

---

Code	Name	Description
M	MarketplaceAssignedIdentifier	Marketplace-assigned Identifier
N	MarkitREDEntityCLIP	Markit RED entity CLIP
P	MarkitREDPairCLIP	Markit RED pair CLIP
Q	CFTCCommodityCode	CFTC commodity code
R	ISDACommodityReferencePrice	ISDA Commodity Reference Price
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
T	LegalEntityIdentifier	Legal entity identifier
U	Synthetic	Synthetic. Used to specify that the security identifier is synthetic for linking nested underliers when there is no market identifier for the collection.
V	FidessaInstrumentMnemonic	Fidessa Instrument Mnemonic (FIM)
W	IndexName	Index name. Standard name of the index or rate index, e.g. "LIBOR" or "iTraxx Australia".
X	UniformSymbol	Uniform Symbol (UMTF Symbol)
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in groups: [UnderlyingMarketDisruptionFallbackReferencePriceGrp](#)

### 171.2.5831 UnderlyingMarketDisruptionFallbackUnderlierType

The type of reference price underlier.

Type: [int](#)

Allowed values in MarketDisruptionFallbackUnderlierTypeCodeSet:

Code	Name	Description
0	Basket	Basket
1	Bond	Bond
2	Cash	Cash
3	Commodity	Commodity
4	ConvertibleBond	Convertible bond
5	Equity	Equity
6	ExchangeTradedFund	Exchange traded fund

---

Code	Name	Description
7	Future	Future
8	Index	Index
9	Loan	Loan
10	Mortgage	Mortgage
11	MutualFund	Mutual fund

---

Used in groups: [UnderlyingMarketDisruptionFallbackReferencePriceGrp](#)

#### **171.2.5832 UnderlyingMarketDisruptionFallbackValue**

Applicable value for UnderlyingMarketDisruptionFallbackType(41867).

Type: [String](#)

Used in groups: [UnderlyingMarketDisruptionFallbackGrp](#)

#### **171.2.5833 UnderlyingMarketDisruptionMaterialityPercentage**

Used when a price materiality percentage applies to the price source disruption event and this event has been specified.

Type: [Percentage](#)

Used in components: [UnderlyingMarketDisruption](#)

#### **171.2.5834 UnderlyingMarketDisruptionMaximumDays**

Specifies the maximum number of market disruption days (commodity or bullion business days) in a contract or confirmation. If none are specified, the maximum number of market disruption days is five (5).

Type: [int](#)

Used in components: [UnderlyingMarketDisruption](#)

#### **171.2.5835 UnderlyingMarketDisruptionMinimumFuturesContracts**

Specifies the minimum futures contracts level that dictates whether or not a 'De Minimis Trading' event has occurred.

Type: **int**

Used in components: **UnderlyingMarketDisruption**

### **171.2.5836 UnderlyingMarketDisruptionProvision**

The consequences of market disruption events.

Type: **int**

Allowed values in MarketDisruptionProvisionCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	NotApplicable	Not applicable
1	Applicable	Applicable
2	AsInMasterAgreement	As specified in master agreement
3	AsInConfirmation	As specified in confirmation

---

Used in components: **UnderlyingMarketDisruption**

### **171.2.5837 UnderlyingMarketDisruptionValue**

Applicable value for UnderlyingMarketDisruptionEvent(41865).

Type: **String**

Used in groups: **UnderlyingMarketDisruptionEventGrp**

### **171.2.5838 UnderlyingMaterialDividendsIndicator**

Indicates whether material non-cash dividends are applicable.

Type: **Boolean**

Used in components: **UnderlyingDividendConditions**

### **171.2.5839 UnderlyingMaturityDate**

Underlying security's maturity date.

See MaturityDate (541) field for description

Type: [LocalMktDate](#)

Used in components: [UnderlyingInstrument](#)

### 171.2.5840 UnderlyingMaturityFrequencyPeriod

Time unit multiplier for the minimum frequency of the instrument maturity intervals.

Type: [int](#)

Used in components: [UnderlyingInstrument](#)

### 171.2.5841 UnderlyingMaturityFrequencyUnit

Time unit associated with the minimum frequency of the instrument maturity intervals.

Type: [String](#)

Allowed values in TimeUnitCodeSet:

---

Code	Name	Description
H	Hour	Hour
Min	Minute	Minute
S	Second	Second
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year
Q	Quarter	Quarter
EOM	EndOfMonth	End of Month. End of Month identifies a relative time unit, e.g. until the third Friday of each month.
F	Flexible	Flexible. A flexible time unit indicates that a specific time unit for the contract is currently undetermined.

---

Used in components: [UnderlyingInstrument](#)

### 171.2.5842 UnderlyingMaturityMonthYear

Underlying security's MaturityMonthYear. Can be used with standardized derivatives vs. the UnderlyingMaturityDate (542) field.

See MaturityMonthYear (200) field for description

Type: **MonthYear**

Used in components: **UnderlyingInstrument**

#### **171.2.5843 UnderlyingMaturityTime**

Time of security's maturity expressed in local time with offset to UTC specified

Type: **TZTimeOnly**

Used in components: **UnderlyingInstrument**

#### **171.2.5844 UnderlyingMinPriceIncrement**

Minimum price increment for the instrument. Could also be used to represent tick value.

Type: **float**

Used in components: **UnderlyingInstrument**

#### **171.2.5845 UnderlyingMinPriceIncrementAmount**

Minimum price increment amount associated with the UnderlyingMinPriceIncrement(2026). For listed derivatives, the value can be calculated by multiplying UnderlyingMinPriceIncrement(2026) by UnderlyingContractMultiplier(436).

Type: **Amt**

Used in components: **UnderlyingInstrument**

#### **171.2.5846 UnderlyingMthToDefault**

The Mth reference obligation to default in a CDS reference basket. When UnderlyingNthToDefault(2017) and UnderlyingMthToDefault(2018) are represented then the CDS payout occurs between the Nth and Mth obligations to default.

Type: **int**

Used in components: **UnderlyingInstrument**

**171.2.5847 UnderlyingNonCashDividendTreatment**

Defines the treatment of non-cash dividends.

Type: **int**

Allowed values in NonCashDividendTreatmentCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	PotentialAdjustment	Potential adjustment event. The treatment of any non-cash dividend shall be determined in accordance with the potential adjustment event provisions.
1	CashEquivalent	Cash equivalent. Any non-cash dividend shall be treated as a declared cash equivalent dividend.

---

Used in components: **UnderlyingDividendConditions**

**171.2.5848 UnderlyingNonDeliverableFixingDate**

The non-deliverable fixing date unadjusted or adjusted depending on UnderlyingNonDeliverableFixingDateType(40658).

Type: **LocalMktDate**

Used in groups: **UnderlyingPaymentStreamNonDeliverableFixingDateGrp**

**171.2.5849 UnderlyingNonDeliverableFixingDateType**

Specifies the type of date (e.g. adjusted for holidays).

Type: **int**

Allowed values in NonDeliverableFixingDateTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Unadjusted	Unadjusted
1	Adjusted	Adjusted

---

Used in groups: **UnderlyingPaymentStreamNonDeliverableFixingDateGrp**

**171.2.5850 UnderlyingNotional**

Notional value for the equity or bond underlier.

Type: **Amt**

Used in components: **UnderlyingInstrument**

**171.2.5851 UnderlyingNotionalAdjustments**

Specifies the conditions that govern the adjustment to the number of units of the return swap.

Type: **int**

Allowed values in UnderlyingNotionalAdjustmentsCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Execution	Execution. The adjustments to the number of units are governed by an execution clause.
1	PortfolioRebalancing	Portfolio rebalancing. The adjustments to the number of units are governed by a portfolio rebalancing clause.
2	Standard	Standrd. The adjustments to the number of units are not governed by any specific clause.

---

Used in components: **UnderlyingInstrument**

**171.2.5852 UnderlyingNotionalCurrency**

Specifies the currency denomination of the notional value.

UnderlyingNotionalCurrencyCodeSource(2921) may be used to disambiguate the code source scheme used, and ISO 4217 is the default scheme if absent.

Type: **Currency**

Used in components: **UnderlyingInstrument**

**171.2.5853 UnderlyingNotionalCurrencyCodeSource**

Identifies class or source of the UnderlyingNotionalCurrency(2615) value.

Type: **String**

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in components: [UnderlyingInstrument](#)

#### **171.2.5854 UnderlyingNotionalDeterminationMethod**

Specifies the method of determining the notional amount.

See: <http://www.fpml.org/coding-scheme/determination-method> for values.

Type: [String](#)

Used in components: [UnderlyingInstrument](#)

#### **171.2.5855 UnderlyingNotionalPercentageOutstanding**

See [NotionalPercentageOutstanding\(1451\)](#)

Type: [Percentage](#)

Used in components: [UnderlyingInstrument](#)

#### **171.2.5856 UnderlyingNotionalXIDRef**

Cross reference to another notional amount for duplicating its properties.

Type: [XIDREF](#)

Used in components: [UnderlyingInstrument](#)

**171.2.5857 UnderlyingNthToDefault**

The Nth reference obligation to default in a CDS reference basket. If specified without UnderlyingMthToDefault(2018) the default will trigger a CDS payout. If UnderlyingMthToDefault(2018) is also present then payout occurs between the Nth and Mth obligations to default.

Type: **int**

Used in components: **UnderlyingInstrument**

**171.2.5858 UnderlyingNTPositionLimit**

Position Limit in the near-term contract for a given exchange-traded product.

Type: **int**

Used in components: **UnderlyingInstrument**

**171.2.5859 UnderlyingNumDaysInterest**

Number of days of interest for underlying security.

Type: **int**

Used in components: **UnderlyingInstrument**

**171.2.5860 UnderlyingObligationID**

For a CDS basket or pool identifies the reference obligation.

Type: **String**

Used in components: **UnderlyingInstrument**

**171.2.5861 UnderlyingObligationIDSource**

Identifies the source scheme of the UnderlyingObligationID(1994).

Type: **String**

Allowed values in SecurityIDSourceCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	CUSIP	CUSIP
2	SEDOL	SEDOL
3	QUIK	QUIK
4	ISINNumber	ISIN
5	RICCode	RIC
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
7	ISOCountryCode	ISO Country Code
8	ExchangeSymbol	Exchange symbol
9	ConsolidatedTapeAssociation	Consolidated Tape Association (CTA) Symbol (SIAC CTS/CQS line format)
A	BloombergSymbol	Bloomberg Symbol
B	Wertpapier	Wertpapier
C	Dutch	Dutch
D	Valoren	Valoren
E	Sicovam	Sicovam
F	Belgian	Belgian
G	Common	"Common" (Clearstream and Euroclear)
H	ClearingHouse	Clearing house / Clearing organization
I	ISDAFpMLSpecification	ISDA/FpML product specification (XML in SecurityXML(1185))
J	OptionPriceReportingAuthority	Option Price Reporting Authority
K	ISDAFpMLURL	ISDA/FpML product URL (URL in SecurityID(48))
L	LetterOfCredit	Letter of credit
M	MarketplaceAssignedIdentifier	Marketplace-assigned Identifier
N	MarkitREDEntityCLIP	Markit RED entity CLIP
P	MarkitREDPairCLIP	Markit RED pair CLIP
Q	CFTCCommodityCode	CFTC commodity code
R	ISDACommodityReferencePrice	ISDA Commodity Reference Price
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
T	LegalEntityIdentifier	Legal entity identifier
U	Synthetic	Synthetic. Used to specify that the security identifier is synthetic for linking nested underliers when there is no market identifier for the collection.
V	FidessaInstrumentMnemonic	Fidessa Instrument Mnemonic (FIM)

Code	Name	Description
W	IndexName	Index name. Standard name of the index or rate index, e.g. "LIBOR" or "iTraxx Australia".
X	UniformSymbol	Uniform Symbol (UMTF Symbol)
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in components: [UnderlyingInstrument](#)

### 171.2.5862 UnderlyingObligationType

Type of reference obligation for credit derivatives contracts.

Type: [String](#)

Allowed values in UnderlyingObligationTypeCodeSet:

Code	Name	Description
0	Bond	Bond
1	ConvertibleBond	Convertible bond
2	Mortgage	Mortgage
3	Loan	Loan

Used in components: [UnderlyingInstrument](#)

### 171.2.5863 UnderlyingOfferPx

Offer price of the underlying instrument.

Type: [Price](#)

Used in messages: [SecurityRiskMetricsReport](#)

### 171.2.5864 UnderlyingOpenUnits

The number of units (units of the index or number of securities, par amount of a bond) that constitute the underlier. In the case of a basket swap, this is used to reference both the number of basket units, and the number of each asset components of the basket when these are expressed in absolute terms.

Type: Qty

Used in components: [UnderlyingInstrument](#)

### 171.2.5865 UnderlyingOptAttribute

Underlying security's OptAttribute.

See OptAttribute (206) field for description

Type: char

Used in components: [UnderlyingInstrument](#)

### 171.2.5866 UnderlyingOptionExerciseBusinessCenter

The business center calendar used to adjust the option exercise dates, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: String

Used in groups: [UnderlyingOptionExerciseBusinessCenterGrp](#)

### 171.2.5867 UnderlyingOptionExerciseBusinessCenterGrp

UnderlyingOptionExerciseBusinessCenterGrp is a repeating subcomponent of the UnderlyingOptionExerciseDates component used to specify the set of business centers whose calendars drive date adjustment. Used only to override the business centers defined in the UnderlyingDateAdjustment component in UnderlyingInstrument.

Name	Mult.	Type	Description
<a href="#">NoUnderlyingOptionExerciseBusinessCenters</a>	[1..1]	NumInGroup	
<a href="#">UnderlyingOptionExerciseBusinessCenter</a>	[0..1]	String	Required if <a href="#">NoUnderlyingOptionExerciseBusinessCenters(41820)</a> > 0.

Used in components: [UnderlyingOptionExerciseDates](#)

### 171.2.5868 UnderlyingOptionExerciseBusinessDayConvention

The business day convention used to adjust the option exercise dates. Used only to override the business day convention specified in the UnderlyingDateAdjustment component within the UnderlyingInstrument component.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [UnderlyingOptionExerciseDates](#)

### 171.2.5869 UnderlyingOptionExercise

The UnderlyingOptionExercise component is a subcomponent of the UnderlyingInstrument component used to specify option exercise provisions. Its purpose is to identify the opportunities and conditions for exercise, e.g. the schedule of dates on which exercise is allowed. The embedded UnderlyingOptionExerciseExpiration component is used to terminate the opportunity for exercise.

Name	Mult.	Type	Description
<a href="#">UnderlyingExerciseDesc</a>	[0..1]	String	
<a href="#">EncodedUnderlyingExerciseDescLen</a>	[0..1]	Length	Must be set if <a href="#">EncodedUnderlyingExerciseDesc(41812)</a> field is specified and must immediately precede it.
<a href="#">EncodedUnderlyingExerciseDesc</a>	[0..1]	data	Encoded (non-ASCII characters) representation of the <a href="#">UnderlyingExerciseDesc(41810)</a> field in the encoded format specified via the <a href="#">MessageEncoding(347)</a> field.

Name	Mult.	Type	Description
<a href="#">UnderlyingAutomaticExerciseIndicator</a>	[0..1]	Boolean	
<a href="#">UnderlyingAutomaticExerciseThresholdRate</a>	[0..1]	float	
<a href="#">UnderlyingExerciseConfirmationMethod</a>	[0..1]	CodeSet	
<a href="#">UnderlyingManualNoticeBusinessCenter</a>	[0..1]	String	
<a href="#">UnderlyingFallbackExerciseIndicator</a>	[0..1]	Boolean	
<a href="#">UnderlyingLimitedRightToConfirmIndicator</a>	[0..1]	Boolean	
<a href="#">UnderlyingExerciseSplitTicketIndicator</a>	[0..1]	Boolean	
<a href="#">UnderlyingSettlementMethodElectingPartySide</a>	[0..1]	CodeSet	
<a href="#">UnderlyingSettlementMethodElectionDate</a>	[0..1]	Component	
<a href="#">UnderlyingOptionExerciseDates</a>	[0..1]	Component	
<a href="#">UnderlyingOptionExerciseExpiration</a>	[0..1]	Component	
<a href="#">UnderlyingOptionExerciseMakeWholeProvision</a>	[0..1]	Component	

Used in components: [UnderlyingInstrument](#)

### 171.2.5870 UnderlyingOptionExerciseDate

The adjusted or unadjusted option exercise fixed date.

Type: [LocalMktDate](#)

Used in groups: [UnderlyingOptionExerciseDateGrp](#)

### 171.2.5871 UnderlyingOptionExerciseDateGrp

The [UnderlyingOptionExerciseDateGrp](#) is a repeating subcomponent of the [UnderlyingOptionExerciseDates](#) component used to specify fixed dates for exercise.

Name	Mult.	Type	Description
<a href="#">NoUnderlyingOptionExerciseDates</a>	[1..1]	NumInGroup	

Name	Mult.	Type	Description
<a href="#">UnderlyingOptionExerciseDate</a>	[0..1]	LocalMktDate	Required if NoUnderlyingOptionExerciseDates(41841) > 0.
<a href="#">UnderlyingOptionExerciseDateType</a>	[0..1]	CodeSet	When specified it applies not only to the current date but to all subsequent dates in the group until overridden with a new type.

Used in components: [UnderlyingOptionExerciseDates](#)

### 171.2.5872 UnderlyingOptionExerciseDates

The UnderlyingOptionExerciseDate component is a subcomponent of the UnderlyingOptionExercise component used to specify option exercise dates.

Name	Mult.	Type	Description
<a href="#">UnderlyingOptionExerciseBusiness-DayConvention</a>	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified value would be specific to the underlying exercise dates.
<a href="#">UnderlyingOptionExerciseBusiness-CenterGrp</a>	[0..*]	Group	When specified, this overrides the business centers defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified values would be specific to the underlying option exercise dates.
<a href="#">UnderlyingOptionExerciseDateGrp</a>	[0..*]	Group	
<a href="#">UnderlyingOptionExerciseEarliestDate-OffsetDayType</a>	[0..1]	CodeSet	
<a href="#">UnderlyingOptionExerciseEarliestDate-OffsetPeriod</a>	[0..1]	int	Conditionally required when UnderlyingOptionExerciseEarliestDateUnit(41825) is specified.
<a href="#">UnderlyingOptionExerciseEarliestDate-OffsetUnit</a>	[0..1]	CodeSet	Conditionally required when UnderlyingOptionExerciseEarliestDatePeriod(41824) is specified.
<a href="#">UnderlyingOptionExerciseFrequencyPeriod</a>	[0..1]	int	Conditionally required when UnderlyingOptionExerciseFrequencyUnit(41827) is specified.
<a href="#">UnderlyingOptionExerciseFrequencyUnit</a>	[0..1]	CodeSet	Conditionally required when UnderlyingOptionExerciseFrequencyPeriod(41826) is specified.
<a href="#">UnderlyingOptionExerciseStartDateUnadjusted</a>	[0..1]	LocalMktDate	

Name	Mult.	Type	Description
UnderlyingOptionExerciseStartDateRelativeTo	[0..1]	int	
UnderlyingOptionExerciseStartDateOffsetPeriod	[0..1]	int	Conditionally required when UnderlyingOptionExerciseStartDateOffsetUnit(41831) is specified.
UnderlyingOptionExerciseStartDateOffsetUnit	[0..1]	CodeSet	Conditionally required when UnderlyingOptionExerciseStartDateOffsetPeriod(41830) is specified.
UnderlyingOptionExerciseStartDateOffsetDayType	[0..1]	CodeSet	
UnderlyingOptionExerciseStartDateAdjusted	[0..1]	LocalMktDate	
UnderlyingOptionExerciseSkip	[0..1]	int	
UnderlyingOptionExerciseNominationDeadline	[0..1]	LocalMktDate	
UnderlyingOptionExerciseFirstDateUnadjusted	[0..1]	LocalMktDate	
UnderlyingOptionExerciseLastDateUnadjusted	[0..1]	LocalMktDate	
UnderlyingOptionExerciseEarliestTime	[0..1]	LocalMktTime	
UnderlyingOptionExerciseLatestTime	[0..1]	LocalMktTime	
UnderlyingOptionExerciseTimeBusinessCenter	[0..1]	String	

Used in components: [UnderlyingOptionExercise](#)

### 171.2.5873 UnderlyingOptionExerciseDateType

Specifies the type of option exercise date. When specified it applies not only to the current date but to all subsequent dates in the group until overridden with a new type.

Type: [int](#)

Allowed values in OptionExerciseDateTypeCodeSet:

Code	Name	Description
0	Unadjusted	Unadjusted
1	Adjusted	Adjusted

Used in groups: [UnderlyingOptionExerciseDateGrp](#)

**171.2.5874 UnderlyingOptionExerciseEarliestDateOffsetDayType**

Specifies the day type of the relative earliest exercise date offset.

Type: **int**

Allowed values in ComplexEventDateOffsetDayTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in components: [UnderlyingOptionExerciseDates](#)

**171.2.5875 UnderlyingOptionExerciseEarliestDateOffsetPeriod**

Time unit multiplier for the relative earliest exercise date offset.

Type: **int**

Used in components: [UnderlyingOptionExerciseDates](#)

**171.2.5876 UnderlyingOptionExerciseEarliestDateOffsetUnit**

Time unit associated with the relative earliest exercise date offset.

Type: **String**

Allowed values in ProvisionOptionExerciseEarliestDateOffsetUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: [UnderlyingOptionExerciseDates](#)

### 171.2.5877 UnderlyingOptionExerciseEarliestTime

The earliest time at which notice of exercise can be given by the buyer to the seller (or seller's agent) (i) on the expiration date, in the case of a European style option, (ii) on each Bermuda option exercise date and the expiration date, in the case of a Bermuda style option, (iii) the commencement date to, and including, the expiration date, in the case of an American option.

Type: [LocalMktTime](#)

Used in components: [UnderlyingOptionExerciseDates](#)

### 171.2.5878 UnderlyingOptionExerciseExpiration

The UnderlyingOptionExerciseExpiration component is a subcomponent of the UnderlyingOptionExercise component used to specify option exercise expiration dates and times. The purpose of UnderlyingOptionExercise is to identify the scheduled opportunities for exercise. UnderlyingOptionExerciseExpiration identifies the end of the schedule.

Name	Mult.	Type	Description
<a href="#">UnderlyingOptionExerciseExpirationDateBusinessDayConvention</a>	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified value would be specific to the underlying exercise expiration dates.
<a href="#">UnderlyingOptionExerciseExpirationDateBusinessCenterGrp</a>	[0..*]	Group	When specified, this overrides the business centers defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified values would be specific to the underlying option exercise expiration dates.
<a href="#">UnderlyingOptionExerciseExpirationDateGrp</a>	[0..*]	Group	
<a href="#">UnderlyingOptionExerciseExpirationDateRelativeTo</a>	[0..1]	int	
<a href="#">UnderlyingOptionExerciseExpirationDateOffsetPeriod</a>	[0..1]	int	Conditionally required when UnderlyingOptionExerciseExpirationDateOffsetUnit(41849) is specified.
<a href="#">UnderlyingOptionExerciseExpirationDateOffsetUnit</a>	[0..1]	CodeSet	Conditionally required when UnderlyingOptionExerciseExpirationDateOffsetPeriod(41848) is specified.
<a href="#">UnderlyingOptionExerciseExpirationFrequencyPeriod</a>	[0..1]	int	Conditionally required when UnderlyingOptionExerciseExpirationFrequencyUnit(41851) is specified.

Name	Mult.	Type	Description
<a href="#">UnderlyingOptionExerciseExpirationFrequencyUnit</a>	[0..1]	CodeSet	Conditionally required when <a href="#">UnderlyingOptionExerciseExpirationFrequencyPeriod(41850)</a> is specified.
<a href="#">UnderlyingOptionExerciseExpirationRollConvention</a>	[0..1]	CodeSet	When specified, this overrides the date roll convention defined in the <a href="#">UnderlyingDateAdjustment</a> component in <a href="#">UnderlyingInstrument</a> . The specified values would be specific to this instance of the option exercise dates.
<a href="#">UnderlyingOptionExerciseExpirationDateOffsetDayType</a>	[0..1]	CodeSet	
<a href="#">UnderlyingOptionExerciseExpirationTime</a>	[0..1]	LocalMktTime	
<a href="#">UnderlyingOptionExerciseExpirationTimeBusinessCenter</a>	[0..1]	String	

Used in components: [UnderlyingOptionExercise](#)

### 171.2.5879 UnderlyingOptionExerciseExpirationDate

The adjusted or unadjusted option exercise expiration fixed date.

Type: [LocalMktDate](#)

Used in groups: [UnderlyingOptionExerciseExpirationDateGrp](#)

### 171.2.5880 UnderlyingOptionExerciseExpirationDateBusinessCenter

The business center calendar used to adjust the option exercise expiration dates, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in groups: [UnderlyingOptionExerciseExpirationDateBusinessCenterGrp](#)

### 171.2.5881 UnderlyingOptionExerciseExpirationDateBusinessCenterGrp

[UnderlyingOptionExerciseExpirationDateBusinessCenterGrp](#) is a repeating subcomponent of the [UnderlyingOptionExerciseExpiration](#) component used to specify the set of business centers whose calendars

drive date adjustment. Used only to override the business centers defined in the UnderlyingDateAdjustment component in UnderlyingInstrument.

Name	Mult.	Type	Description
NoUnderlyingOptionExerciseExpirationDateBusinessCenters	[1..1]	NumInGroup	
UnderlyingOptionExerciseExpirationDateBusinessCenter	[0..1]	String	Required if NoUnderlyingOptionExerciseExpirationDateBusinessCenters(41844) > 0.

Used in components: [UnderlyingOptionExerciseExpiration](#)

### 171.2.5882 UnderlyingOptionExerciseExpirationDateBusinessDayConvention

The business day convention used to adjust the option exercise expiration dates. Used only to override the business day convention specified in the UnderlyingDateAdjustment component within the UnderlyingInstrument component.

Type: [int](#)

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [UnderlyingOptionExerciseExpiration](#)

### 171.2.5883 UnderlyingOptionExerciseExpirationDateGrp

The UnderlyingOptionExerciseExpirationDateGrp is a repeating subcomponent of the UnderlyingOptionExerciseExpiration component used to specify fixed dates for expiration.

Name	Mult.	Type	Description
NoUnderlyingOptionExerciseExpirationDates	[1..1]	NumInGroup	
UnderlyingOptionExerciseExpirationDate	[0..1]	LocalMktDate	Required if NoUnderlyingOptionExpirationDates(41856) > 0.
UnderlyingOptionExerciseExpirationDateType	[0..1]	CodeSet	When specified it applies not only to the current date but to all subsequent dates in the group until overridden with a new type.

Used in components: [UnderlyingOptionExerciseExpiration](#)

### 171.2.5884 UnderlyingOptionExerciseExpirationDateOffsetDayType

Specifies the day type of the relative option exercise expiration date offset.

Type: [int](#)

Allowed values in ComplexEventDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: [UnderlyingOptionExerciseExpiration](#)

### 171.2.5885 UnderlyingOptionExerciseExpirationDateOffsetPeriod

Time unit multiplier for the relative exercise expiration date offset.

Type: [int](#)

Used in components: [UnderlyingOptionExerciseExpiration](#)

**171.2.5886 UnderlyingOptionExerciseExpirationDateOffsetUnit**

Time unit associated with the relative exercise expiration date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: **UnderlyingOptionExerciseExpiration**

**171.2.5887 UnderlyingOptionExerciseExpirationDateRelativeTo**

Specifies the anchor date when the option exercise expiration date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: **int**

Used in components: **UnderlyingOptionExerciseExpiration**

**171.2.5888 UnderlyingOptionExerciseExpirationDateType**

Specifies the type of option exercise expiration date. When specified it applies not only to the current date but to all subsequent dates in the group until overridden with a new type.

Type: **int**

Allowed values in OptionExerciseDateTypeCodeSet:

---

Code	Name	Description
0	Unadjusted	Unadjusted
1	Adjusted	Adjusted

---

Used in groups: **UnderlyingOptionExerciseExpirationDateGrp**

**171.2.5889 UnderlyingOptionExerciseExpirationFrequencyPeriod**

Time unit multiplier for the frequency of exercise expiration dates.

Type: **int**

Used in components: **UnderlyingOptionExerciseExpiration**

**171.2.5890 UnderlyingOptionExerciseExpirationFrequencyUnit**

Time unit associated with the frequency of exercise expiration dates.

Type: **String**

Allowed values in ProtectionTermEventUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: **UnderlyingOptionExerciseExpiration**

**171.2.5891 UnderlyingOptionExerciseExpirationRollConvention**

The convention for determining the sequence of exercise expiration dates. It is used in conjunction with a specified frequency. Used only to override the roll convention defined in the UnderlyingDateAdjustment component in UnderlyingInstrument.

Type: **String**

Allowed values in DateRollConventionCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	FirstDay	1st day of the month
2	SecondDay	2nd day of the month
3	ThirdDay	3rd day of the month
4	FourthDay	4th day of the month
5	FifthDay	5th day of the month

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
6	SixthDay	6thd day of the month
7	SeventhDay	7th day of the month
8	EighthDay	8th day of the month
9	NinthDay	9th day of the month
10	TenthDay	10th day of the month
11	EleventhDay	11th day of the month
12	TwelvthDay	12th day of the month
13	ThirteenthDay	13th day of the month
14	ForteenthDay	14th day of the month
15	FifteenthDay	15th day of the month
16	SixteenthDay	16th day of the month
17	SeventeenthDay	17th day of the month
18	EighteenthDay	18th day of the month
19	NineteenthDay	19th day of the month
20	TwentiethDay	20th day of the month
21	TwentyFirstDay	21st day of the month
22	TwentySecondDay	22nd day of the month
23	TwentyThirdDay	23rd day of the month
24	TwentyFourthDay	24th day of the month
25	TwentyFifthDay	25th day of the month
26	TwentySixthDay	26th day of the month
27	TwentySeventhDay	27th day of the month
28	TwentyEigthDa28y	28th day of the month
29	TwentyNinthDay	29th day of the month
30	ThirtiethDay	30th day of the month
EOM	EOM	The end of the month. Use EOM for 31st day of the month.
FRN	FRN	The floating rate note convention or Eurodollar convention.
IMM	IMM	The International Money Market settlement date, i.e. the 3rd Wednesday of the month.
IMMCAD	IMMCAD	The last trading day/expiration day of the Canadian Derivatives Exchange.
IMMAUD	IMMAUD	The last trading day of the Sydney Futures Exchange Australian 90-day bank accepted bill futures contract.
IMMNZD	IMMNZD	The last trading day of the Sydney Futures Exchange New Zealand 90-day bank bill futures contract.

---

Code	Name	Description
SFE	SFE	The Sydney Futures Exchange 90-day bank accepted bill futures settlement dates.
NONE	NONE	No adjustment
TBILL	TBILL	The 13-week and 26-week U.S. Treasury Bill auction dates.
MON	MON	Monday
TUE	TUE	Tuesday
WED	WED	Wednesday
THU	THU	Thursday
FRI	FRI	Friday
SAT	SAT	Saturday
SUN	SUN	Sunday

---

Used in components: [UnderlyingOptionExerciseExpiration](#)

#### **171.2.5892 UnderlyingOptionExerciseExpirationTime**

The option exercise expiration time.

Type: [LocalMktTime](#)

Used in components: [UnderlyingOptionExerciseExpiration](#)

#### **171.2.5893 UnderlyingOptionExerciseExpirationTimeBusinessCenter**

The business center used to determine the locale for option exercise expiration time, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in components: [UnderlyingOptionExerciseExpiration](#)

#### **171.2.5894 UnderlyingOptionExerciseFirstDateUnadjusted**

The unadjusted first exercise date.

Type: [LocalMktDate](#)

Used in components: [UnderlyingOptionExerciseDates](#)

**171.2.5895 UnderlyingOptionExerciseFrequencyPeriod**

Time unit multiplier for the frequency of exercise dates.

Type: **int**

Used in components: **UnderlyingOptionExerciseDates**

**171.2.5896 UnderlyingOptionExerciseFrequencyUnit**

Time unit associated with the frequency of exercise dates.

Type: **String**

Allowed values in ProtectionTermEventUnitCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: **UnderlyingOptionExerciseDates**

**171.2.5897 UnderlyingOptionExerciseLastDateUnadjusted**

The unadjusted last exercise date.

Type: **LocalMktDate**

Used in components: **UnderlyingOptionExerciseDates**

**171.2.5898 UnderlyingOptionExerciseLatestTime**

Latest exercise time. See also UnderlyingOptionExerciseEarliestTime(41838).

Type: **LocalMktTime**

Used in components: **UnderlyingOptionExerciseDates**

**171.2.5899 UnderlyingOptionExerciseMakeWholeProvision**

UnderlyingOptionExerciseMakeWholeProvision is a subcomponent of the UnderlyingOptionExercise component used to specify the set of rules of maintaining balance when an option is exercised.

---

Name	Mult.	Type	Description
UnderlyingMakeWholeDate	[0..1]	LocalMktDate	
UnderlyingMakeWholeAmount	[0..1]	Amt	
UnderlyingMakeWholeBenchmarkCurveName	[0..1]	String	
UnderlyingMakeWholeBenchmarkCurvePoint	[0..1]	String	
UnderlyingMakeWholeRecallsSpread	[0..1]	PriceOffset	
UnderlyingMakeWholeBenchmarkQuote	[0..1]	CodeSet	
UnderlyingMakeWholeInterpolationMethod	[0..1]	CodeSet	

---

Used in components: [UnderlyingOptionExercise](#)

**171.2.5900 UnderlyingOptionExerciseNominationDeadline**

The last date (adjusted) for establishing the option exercise terms.

Type: [LocalMktDate](#)

Used in components: [UnderlyingOptionExerciseDates](#)

**171.2.5901 UnderlyingOptionExerciseSkip**

The number of periods in the referenced date schedule that are between each date in the relative date schedule. Thus a skip of 2 would mean that dates are relative to every second date in the referenced schedule. If present this should have a value greater than 1.

Type: [int](#)

Used in components: [UnderlyingOptionExerciseDates](#)

**171.2.5902 UnderlyingOptionExerciseStartDateAdjusted**

The adjusted start date for calculating periodic exercise dates.

Type: [LocalMktDate](#)

Used in components: [UnderlyingOptionExerciseDates](#)

**171.2.5903 UnderlyingOptionExerciseStartDateOffsetDayType**

Specifies the day type of the relative option exercise start date offset.

Type: [int](#)

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

---

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in components: [UnderlyingOptionExerciseDates](#)

**171.2.5904 UnderlyingOptionExerciseStartDateOffsetPeriod**

Time unit multiplier for the relative exercise start date offset.

Type: [int](#)

Used in components: [UnderlyingOptionExerciseDates](#)

**171.2.5905 UnderlyingOptionExerciseStartDateOffsetUnit**

Time unit associated with the relative exercise start date offset.

Type: [String](#)

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: [UnderlyingOptionExerciseDates](#)

#### **171.2.5906 UnderlyingOptionExerciseStartDateRelativeTo**

Specifies the anchor date when the option exercise start date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: [int](#)

Used in components: [UnderlyingOptionExerciseDates](#)

#### **171.2.5907 UnderlyingOptionExerciseStartDateUnadjusted**

The unadjusted start date for calculating periodic exercise dates.

Type: [LocalMktDate](#)

Used in components: [UnderlyingOptionExerciseDates](#)

#### **171.2.5908 UnderlyingOptionExerciseTimeBusinessCenter**

The business center used to determine the locale for option exercise time, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values

Type: [String](#)

Used in components: [UnderlyingOptionExerciseDates](#)

#### **171.2.5909 UnderlyingOptionExpirationDesc**

Description of the option expiration.

Type: [String](#)

Used in components: [UnderlyingInstrument](#)

**171.2.5910 UnderlyingOptionsExchangeDividendsIndicator**

Indicates whether option exchange dividends are applicable.

Type: **Boolean**

Used in components: **UnderlyingDividendConditions**

**171.2.5911 UnderlyingOptPayoutAmount**

Cash amount indicating the pay out associated with an option. For binary options this is a fixed amount.

Type: **Amt**

Used in components: **UnderlyingInstrument**

**171.2.5912 UnderlyingOptPayoutType**

Indicates the type of valuation method or payout trigger for an in-the-money option.

Type: **int**

Allowed values in OptPayoutTypeCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	Vanilla	Vanilla
2	Capped	Capped
3	Binary	Digital (Binary)
4	Asian	Asian
5	Barrier	Barrier
6	DigitalBarrier	Digital Barrier
7	Lookback	Lookback
8	OtherPathDependent	Other path dependent
99	Other	Other

Used in components: **UnderlyingInstrument**

### **171.2.5913 UnderlyingOriginalNotionalPercentageOutstanding**

See OriginalNotionalPercentageOutstanding(1452)

Type: **Percentage**

Used in components: **UnderlyingInstrument**

### **171.2.5914 UnderlyingPayAmount**

Amount to pay in order to receive the underlying instrument

Type: **Amt**

Used in groups: **UnderlyingAmount**

### **171.2.5915 UnderlyingPaymentScheduleCurrency**

The currency for this step. Uses ISO 4217 currency codes.

Type: **Currency**

Used in groups: **UnderlyingPaymentScheduleGrp**

### **171.2.5916 UnderlyingPaymentScheduleEndDateUnadjusted**

The unadjusted end date of a cashflow payment.

Type: **LocalMktDate**

Used in groups: **UnderlyingPaymentScheduleGrp**

### **171.2.5917 UnderlyingPaymentScheduleFixedAmount**

The explicit payment amount for this step.

Type: **Amt**

Used in groups: **UnderlyingPaymentScheduleGrp**

**171.2.5918 UnderlyingPaymentScheduleFixedCurrency**

The currency of the fixed amount. Uses ISO 4217 currency codes.

Type: **Currency**

Used in groups: **UnderlyingPaymentScheduleGrp**

**171.2.5919 UnderlyingPaymentScheduleFixingDateAdjusted**

The adjusted fixing date.

Type: **LocalMktDate**

Used in groups: **UnderlyingPaymentScheduleGrp**

**171.2.5920 UnderlyingPaymentScheduleFixingDateBusinessCenter**

The business center calendar used to adjust the payment schedule's fixing date, e.g. "GBLO". See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **UnderlyingPaymentScheduleFixingDateBusinessCenterGrp**

**171.2.5921 UnderlyingPaymentScheduleFixingDateBusinessCenterGrp**

**UnderlyingPaymentScheduleFixingDateBusinessCenterGrp** is a repeating subcomponent within the **UnderlyingPaymentScheduleGrp** component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the **UnderlyingDateAdjustment** component in the **UnderlyingInstrument** component.

---

<b>Name</b>	<b>Mult.</b>	<b>Type</b>	<b>Description</b>
<b>NoUnderlyingPaymentScheduleFixing-DateBusinessCenters</b>	[1..1]	NumInGroup	
<b>UnderlyingPaymentScheduleFixing-DateBusinessCenter</b>	[0..1]	String	Required if <b>NoUnderlyingPaymentScheduleFixing-DateBusinessCenters</b> (40966) > 0.

---

Used in groups: **UnderlyingPaymentScheduleGrp**

**171.2.5922 UnderlyingPaymentScheduleFixingDateBusinessDayCnvtm**

The business day convention used to adjust the payment schedule's fixing date. Used only to override the business day convention specified in the UnderlyingDateAdjustment component within the UnderlyingInstrument component.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in groups: **UnderlyingPaymentScheduleGrp**

**171.2.5923 UnderlyingPaymentScheduleFixingDateOffsetDayType**

Specifies the day type of the relative fixing date offset.

Type: **int**

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in groups: **UnderlyingPaymentScheduleGrp**

**171.2.5924 UnderlyingPaymentScheduleFixingDateOffsetPeriod**

Time unit multiplier for the relative fixing date offset.

Type: **int**

Used in groups: **UnderlyingPaymentScheduleGrp**

**171.2.5925 UnderlyingPaymentScheduleFixingDateOffsetUnit**

Time unit associated with the relative fixing date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in groups: **UnderlyingPaymentScheduleGrp**

**171.2.5926 UnderlyingPaymentScheduleFixingDateRelativeTo**

Specifies the anchor date when the fixing date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: **int**

Used in groups: **UnderlyingPaymentScheduleGrp**

**171.2.5927 UnderlyingPaymentScheduleFixingDateUnadjusted**

The unadjusted fixing date.

Type: **LocalMktDate**

Used in groups: **UnderlyingPaymentScheduleGrp**

**171.2.5928 UnderlyingPaymentScheduleFixingDayCount**

The number of days over which fixing should take place.

Type: **int**

Used in groups: **UnderlyingPaymentScheduleGrp**

**171.2.5929 UnderlyingPaymentScheduleFixingDayDistribution**

The distribution of fixing days.

Type: **int**

Allowed values in PaymentStreamPricingDayDistributionCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	All	All
1	First	First
2	Last	Last
3	Penultimate	Penultimate

---

Used in groups: **UnderlyingPaymentScheduleGrp**

**171.2.5930 UnderlyingPaymentScheduleFixingDayGrp**

The UnderlyingPaymentScheduleFixingDayGrp is a repeating subcomponent of the UnderlyingPaymentScheduleGrp component used to detail periodic fixing days.

---

<b>Name</b>	<b>Mult.</b>	<b>Type</b>	<b>Description</b>
<b>NoUnderlyingPaymentScheduleFixing-Days</b>	[1..1]	NumInGroup	
<b>UnderlyingPaymentScheduleFixing-DayOfWeek</b>	[0..1]	CodeSet	Required if NoUnderlyingPaymentScheduleFixing-Days(41878) > 0.
<b>UnderlyingPaymentScheduleFixing-DayNumber</b>	[0..1]	int	

---

Used in groups: **UnderlyingPaymentScheduleGrp**

**171.2.5931 UnderlyingPaymentScheduleFixingDayNumber**

The occurrence of the day of week on which fixing takes place.

Type: **int**

Used in groups: **UnderlyingPaymentScheduleFixingDayGrp**

**171.2.5932 UnderlyingPaymentScheduleFixingDayOfWeek**

The day of the week on which fixing takes place.

Type: **int**

Allowed values in PaymentStreamPricingDayOfWeekCodeSet:

Code	Name	Description
0	EveryDay	Every day (the default if not specified)
1	Monday	Monday
2	Tuesday	Tuesday
3	Wednesday	Wednesday
4	Thursday	Thursday
5	Friday	Friday
6	Saturday	Saturday
7	Sunday	Sunday

Used in groups: **UnderlyingPaymentScheduleFixingDayGrp**

**171.2.5933 UnderlyingPaymentScheduleFixingFirstObservationDateOffsetPeriod**

Time unit multiplier for the relative first observation date offset.

Type: **int**

Used in groups: **UnderlyingPaymentScheduleGrp**

**171.2.5934 UnderlyingPaymentScheduleFixingFirstObservationDateOffsetUnit**

Time unit associated with the relative first observation date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in groups: [UnderlyingPaymentScheduleGrp](#)

### **171.2.5935 UnderlyingPaymentScheduleFixingLagPeriod**

Time unit multiplier for the fixing lag duration.

Type: [int](#)

Used in groups: [UnderlyingPaymentScheduleGrp](#)

### **171.2.5936 UnderlyingPaymentScheduleFixingLagUnit**

Time unit associated with the fixing lag duration.

Type: [String](#)

Allowed values in PaymentStreamInflationLagUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in groups: [UnderlyingPaymentScheduleGrp](#)

### **171.2.5937 UnderlyingPaymentScheduleFixingTime**

The fixing time.

Type: [LocalMktTime](#)

Used in groups: [UnderlyingPaymentScheduleGrp](#)

**171.2.5938 UnderlyingPaymentScheduleFixingTimeBusinessCenter**

Business center for determining fixing time. See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **UnderlyingPaymentScheduleGrp**

**171.2.5939 UnderlyingPaymentScheduleGrp**

The UnderlyingPaymentScheduleGrp is a repeating subcomponent of the UnderlyingPaymentStream component used to specify notional and rate steps in the payment stream.

Name	Mult.	Type	Description
NoUnderlyingPaymentSchedules	[1..1]	NumInGroup	
UnderlyingPaymentScheduleType	[0..1]	CodeSet	Required if NoUnderlyingPaymentSchedules(40664) > 0.
UnderlyingPaymentScheduleXID	[0..1]	XID	
UnderlyingPaymentScheduleXIDRef	[0..1]	XIDREF	
UnderlyingPaymentScheduleStubType	[0..1]	CodeSet	
UnderlyingPaymentScheduleStartDateUnadjusted	[0..1]	LocalMktDate	
UnderlyingPaymentScheduleEndDateUnadjusted	[0..1]	LocalMktDate	
UnderlyingPaymentSchedulePaySide	[0..1]	CodeSet	
UnderlyingPaymentScheduleReceiveSide	[0..1]	CodeSet	
UnderlyingPaymentScheduleNotional	[0..1]	Amt	
UnderlyingPaymentScheduleCurrency	[0..1]	Currency	
UnderlyingPaymentScheduleRate	[0..1]	Percentage	
UnderlyingPaymentScheduleRateMultiplier	[0..1]	float	
UnderlyingPaymentScheduleRateSpread	[0..1]	PriceOffset	
UnderlyingPaymentScheduleRateCurrency	[0..1]	Currency	
UnderlyingPaymentScheduleRateUnitOfMeasure	[0..1]	CodeSet	

Name	Mult.	Type	Description
UnderlyingPaymentScheduleRateConversionFactor	[0..1]	float	
UnderlyingPaymentScheduleRateSpreadType	[0..1]	CodeSet	
UnderlyingPaymentScheduleRateSpreadPositionType	[0..1]	CodeSet	
UnderlyingPaymentScheduleRateTreatment	[0..1]	CodeSet	
UnderlyingPaymentScheduleFixedAmount	[0..1]	Amt	
UnderlyingPaymentScheduleFixedCurrency	[0..1]	Currency	
UnderlyingPaymentScheduleSettlementPeriodPrice	[0..1]	Price	
UnderlyingPaymentScheduleSettlementPeriodPriceCurrency	[0..1]	Currency	
UnderlyingPaymentScheduleSettlementPeriodPriceUnitOfMeasure	[0..1]	CodeSet	
UnderlyingPaymentScheduleStepUnitOfMeasure	[0..1]	CodeSet	
UnderlyingPaymentScheduleStepFrequencyPeriod	[0..1]	int	Conditionally required when UnderlyingPaymentScheduleStepFrequencyUnit(40681) is specified.
UnderlyingPaymentScheduleStepFrequencyUnit	[0..1]	CodeSet	Conditionally required when UnderlyingPaymentScheduleStepFrequencyPeriod(40680) is specified.
UnderlyingPaymentScheduleStepOffsetValue	[0..1]	Amt	
UnderlyingPaymentScheduleStepRate	[0..1]	Percentage	
UnderlyingPaymentScheduleStepOffsetRate	[0..1]	Percentage	
UnderlyingPaymentScheduleStepRelativeTo	[0..1]	CodeSet	
UnderlyingPaymentScheduleRateSourceGrp	[0..*]	Group	
UnderlyingPaymentScheduleFixingDateUnadjusted	[0..1]	LocalMktDate	
UnderlyingPaymentScheduleWeight	[0..1]	float	

Name	Mult.	Type	Description
UnderlyingPaymentScheduleFixing-DateRelativeTo	[0..1]	int	
UnderlyingPaymentScheduleFixing-DateBusinessDayCnvtm	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified value would be specific to this instance of the underlying instrument's payment schedule.
UnderlyingPaymentScheduleFixing-DateBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified values would be specific to this instance of the underlying instrument's payment schedule.
UnderlyingPaymentScheduleFixingDateOffsetPeriod	[0..1]	int	Conditionally required when UnderlyingPaymentScheduleFixingDateOffsetUnit(40692) is specified.
UnderlyingPaymentScheduleFixingDateOffsetUnit	[0..1]	CodeSet	Conditionally required when UnderlyingPaymentScheduleFixingDateOffsetPeriod(40691) is specified.
UnderlyingPaymentScheduleFixingDateOffsetDayType	[0..1]	CodeSet	
UnderlyingPaymentScheduleFixing-DayDistribution	[0..1]	CodeSet	
UnderlyingPaymentScheduleFixing-DayCount	[0..1]	int	
UnderlyingPaymentScheduleFixing-DateAdjusted	[0..1]	LocalMktDate	
UnderlyingPaymentScheduleFixing-DayGrp	[0..*]	Group	
UnderlyingPaymentScheduleFixingLagPeriod	[0..1]	int	Conditionally required when UnderlyingPaymentScheduleFixingLagUnit(41894) is specified.
UnderlyingPaymentScheduleFixingLagUnit	[0..1]	CodeSet	Conditionally required when UnderlyingPaymentScheduleFixingLagPeriod(41893) is specified.
UnderlyingPaymentScheduleFixing-FirstObservationDateOffsetPeriod	[0..1]	int	Conditionally required when UnderlyingPaymentScheduleFixingFirstObservationDateOffsetUnit(41896) is specified.
UnderlyingPaymentScheduleFixing-FirstObservationDateOffsetUnit	[0..1]	CodeSet	Conditionally required when UnderlyingPaymentScheduleFixingFirstObservationDateOffsetPeriod(41895) is specified.

Name	Mult.	Type	Description
UnderlyingPaymentScheduleFixing-Time	[0..1]	LocalMktTime	
UnderlyingPaymentScheduleFixing-TimeBusinessCenter	[0..1]	String	
UnderlyingPaymentScheduleInterimExchangePaymentDateRelativeTo	[0..1]	int	
UnderlyingPaymentScheduleInterimExchangeDatesBizDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified value would be specific to this instance of the underlying instrument's payment schedule.
UnderlyingPaymentScheduleInterimExchangeDateBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified values would be specific to this instance of the underlying instrument's payment schedule.
UnderlyingPaymentScheduleInterimExchangeDatesOffsetPeriod	[0..1]	int	Conditionally required when UnderlyingPaymentScheduleInterimExchangeDatesOffsetUnit(40701) is specified.
UnderlyingPaymentScheduleInterimExchangeDatesOffsetUnit	[0..1]	CodeSet	Conditionally required when UnderlyingPaymentScheduleInterimExchangeDatesOffsetPeriod(40700) is specified.
UnderlyingPaymentScheduleInterimExchangeDatesOffsetDayType	[0..1]	CodeSet	
UnderlyingPaymentScheduleInterimExchangeDateAdjusted	[0..1]	LocalMktDate	

Used in groups: [UnderlyingStreamGrp](#)

### 171.2.5940 UnderlyingPaymentScheduleInterimExchangeDateAdjusted

The adjusted interim exchange date.

Type: [LocalMktDate](#)

Used in groups: [UnderlyingPaymentScheduleGrp](#)

### 171.2.5941 UnderlyingPaymentScheduleInterimExchangeDateBusinessCenterGrp

UnderlyingPaymentScheduleInterimExchangeDateBusinessCenterGrp is a repeating subcomponent within the UnderlyingPaymentScheduleGrp component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the UnderlyingDateAdjustment component in the UnderlyingInstrument component.

Name	Mult.	Type	Description
NoUnderlyingPaymentScheduleInterimExchangeDateBusinessCenters	[1..1]	NumInGroup	
UnderlyingPaymentScheduleInterimExchangeDatesBusinessCenter	[0..1]	String	Required if NoUnderlyingPaymentScheduleInterimExchangeDateBusinessCenters(40967) > 0.

Used in groups: [UnderlyingPaymentScheduleGrp](#)

### 171.2.5942 UnderlyingPaymentScheduleInterimExchangeDatesBizDayConvention

The business day convention used to adjust the payment schedule's interim exchange date. Used only to override the business day convention specified in the UnderlyingDateAdjustment component within the UnderlyingInstrument component.

Type: [int](#)

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in groups: [UnderlyingPaymentScheduleGrp](#)

**171.2.5943 UnderlyingPaymentScheduleInterimExchangeDatesBusinessCenter**

The business center calendar used to adjust the payment schedule's interim exchange date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **UnderlyingPaymentScheduleInterimExchangeDateBusinessCenterGrp**

**171.2.5944 UnderlyingPaymentScheduleInterimExchangeDatesOffsetDayType**

Specifies the day type of the relative interim exchange date offset.

Type: **int**

Allowed values in **PaymentStreamPaymentDateOffsetDayTypeCodeSet**:

---

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in groups: **UnderlyingPaymentScheduleGrp**

**171.2.5945 UnderlyingPaymentScheduleInterimExchangeDatesOffsetPeriod**

Time unit multiplier for the relative interim exchange date offset.

Type: **int**

Used in groups: **UnderlyingPaymentScheduleGrp**

**171.2.5946 UnderlyingPaymentScheduleInterimExchangeDatesOffsetUnit**

Time unit associated with the relative interim exchange date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in groups: **UnderlyingPaymentScheduleGrp**

#### **171.2.5947 UnderlyingPaymentScheduleInterimExchangePaymentDateRelativeTo**

Specifies the anchor date when the interim exchange payment date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: **int**

Used in groups: **UnderlyingPaymentScheduleGrp**

#### **171.2.5948 UnderlyingPaymentScheduleNotional**

The notional value for this step, or amount of a cashflow payment.

Type: **Amt**

Used in groups: **UnderlyingPaymentScheduleGrp**

#### **171.2.5949 UnderlyingPaymentSchedulePaySide**

The side of the party paying the step schedule.

Type: **int**

Allowed values in PaymentPaySideCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	Buy	Buy

---

Code	Name	Description
2	Sell	Sell

Used in groups: [UnderlyingPaymentScheduleGrp](#)

#### **171.2.5950 UnderlyingPaymentScheduleRate**

The rate value for this step.

Type: [Percentage](#)

Used in groups: [UnderlyingPaymentScheduleGrp](#)

#### **171.2.5951 UnderlyingPaymentScheduleRateConversionFactor**

The number to be multiplied by the derived floating rate of the underlying's payment schedule in order to arrive at the payment rate. If omitted, the schedule rate conversion factor is 1.

Type: [float](#)

Used in groups: [UnderlyingPaymentScheduleGrp](#)

#### **171.2.5952 UnderlyingPaymentScheduleRateCurrency**

Specifies the currency of the schedule rate. Uses ISO 4217 currency codes.

Type: [Currency](#)

Used in groups: [UnderlyingPaymentScheduleGrp](#)

#### **171.2.5953 UnderlyingPaymentScheduleRateMultiplier**

A rate multiplier to apply to the floating rate. The multiplier can be less than or greater than 1 (one). This element should only be included if the multiplier is not equal to 1 (one) for the term of the stream.

Type: [float](#)

Used in groups: [UnderlyingPaymentScheduleGrp](#)

**171.2.5954 UnderlyingPaymentScheduleRateSource**

Identifies the source of rate information.

Type: **int**

Allowed values in RateSourceCodeSet:

Code	Name	Description
0	Bloomberg	Bloomberg
1	Reuters	Reuters
2	Telerate	Telerate
3	ISDARateOption	ISDA Settlement Rate Option. The source of the currency conversion as specified by the ISDA terms in Annex A to the 1998 FX and Currency Option Definitions. See <a href="http://www.fpml.org/coding-scheme/settlement-rate-option">http://www.fpml.org/coding-scheme/settlement-rate-option</a>
99	Other	Other

Used in groups: **UnderlyingPaymentScheduleRateSourceGrp**

**171.2.5955 UnderlyingPaymentScheduleRateSourceGrp**

UnderlyingPaymentScheduleRateSourceGrp is a repeating component within the UnderlyingPaymentScheduleGrp component used to identify primary and secondary rate sources.

Name	Mult.	Type	Description
<b>NoUnderlyingPaymentScheduleRateSources</b>	[1..1]	NumInGroup	
<b>UnderlyingPaymentScheduleRateSource</b>	[0..1]	CodeSet	Required if NoUnderlyingPaymentScheduleRates(40704) > 0.
<b>UnderlyingPaymentScheduleRateSourceType</b>	[0..1]	CodeSet	Required if NoUnderlyingPaymentScheduleRates(40704) > 0.
<b>UnderlyingPaymentScheduleReferencePage</b>	[0..1]	String	Conditionally required when UnderlyingPaymentScheduleRateSource(40705) = 99 (Other).

Used in groups: **UnderlyingPaymentScheduleGrp**

**171.2.5956 UnderlyingPaymentScheduleRateSourceType**

Rate source type.

Type: **int**

Allowed values in RateSourceTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Primary	Primary
1	Secondary	Secondary

---

Used in groups: **UnderlyingPaymentScheduleRateSourceGrp**

**171.2.5957 UnderlyingPaymentScheduleRateSpread**

The spread value for this step.

Type: **PriceOffset**

Used in groups: **UnderlyingPaymentScheduleGrp**

**171.2.5958 UnderlyingPaymentScheduleRateSpreadPositionType**

Identifies whether the rate spread is applied to a long or short position.

Type: **int**

Allowed values in PaymentStreamRateSpreadPositionTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Short	Short
1	Long	Long

---

Used in groups: **UnderlyingPaymentScheduleGrp**

**171.2.5959 UnderlyingPaymentScheduleRateSpreadType**

Specifies whether the rate spread is an absolute value to be added to the index rate or a percentage of the index rate.

Type: **int**

Allowed values in PaymentStreamRateSpreadTypeCodeSet:

---

Code	Name	Description
0	Absolute	Absolute
1	Percentage	Percentage

---

Used in groups: **UnderlyingPaymentScheduleGrp**

**171.2.5960 UnderlyingPaymentScheduleRateTreatment**

Specifies the yield calculation treatment for the step schedule.

Type: **int**

Allowed values in PaymentStreamRateTreatmentCodeSet:

---

Code	Name	Description
0	BondEquivalentYield	Bond equivalent yield
1	MoneyMarketYield	Money market yield

---

Used in groups: **UnderlyingPaymentScheduleGrp**

**171.2.5961 UnderlyingPaymentScheduleRateUnitOfMeasure**

The schedule rate unit of measure (UOM).

Type: **String**

Allowed values in UnitOfMeasureCodeSet:

---

Code	Name	Description
Alw	Allowances	Allowances

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
Bcf	BillionCubicFeet	Billion cubic feet
Bbl	Barrels	Barrels. Equal to 42 US gallons

MMbbl	MillionBarrels	Million Barrels
USD	USDollars	US Dollars

Used in groups: [UnderlyingPaymentScheduleGrp](#)

### 171.2.5962 UnderlyingPaymentScheduleReceiveSide

The side of the party receiving the step schedule.

Type: [int](#)

Allowed values in PaymentPaySideCodeSet:

Code	Name	Description
1	Buy	Buy
2	Sell	Sell

Used in groups: [UnderlyingPaymentScheduleGrp](#)

### 171.2.5963 UnderlyingPaymentScheduleReferencePage

Identifies the reference “page” from the rate source.

For FX, the reference page to the spot rate to be used for the reference FX spot rate.

When RateSource(1446) = 3 (ISDA Settlement Rate Option) this contains the value from the scheme that reflects the terms of the Annex A to the ISDA 1998 FX and Currency Option Definitions. See: <http://www.fpml.org/coding-scheme/settlement-rate-option>

Type: **String**

Used in groups: **UnderlyingPaymentScheduleRateSourceGrp**

### **171.2.5964 UnderlyingPaymentScheduleSettlPeriodPrice**

The schedule settlement period price.

Type: **Price**

Used in groups: **UnderlyingPaymentScheduleGrp**

### **171.2.5965 UnderlyingPaymentScheduleSettlPeriodPriceCurrency**

The currency of the schedule settlement period price. Uses ISO 4217 currency codes.

Type: **Currency**

Used in groups: **UnderlyingPaymentScheduleGrp**

### **171.2.5966 UnderlyingPaymentScheduleSettlPeriodPriceUnitOfMeasure**

The settlement period price unit of measure (UOM).

Type: **String**

Allowed values in UnitOfMeasureCodeSet:

---

Used in groups: [UnderlyingPaymentScheduleGrp](#)

#### **171.2.5967 UnderlyingPaymentScheduleStartDateUnadjusted**

The unadjusted date on which the value is adjusted, or calculated if a future value notional for certain non-deliverable interest rate swaps (e.g. Brazillian Real (BRL) vs. CETIP Interbank Deposit Rate (CDI)), or the start date of a cashflow payment.

Type: [LocalMktDate](#)

Used in groups: [UnderlyingPaymentScheduleGrp](#)

#### **171.2.5968 UnderlyingPaymentScheduleStepFrequencyPeriod**

Time unit multiplier for the step frequency.

Type: [int](#)

Used in groups: [UnderlyingPaymentScheduleGrp](#)

#### **171.2.5969 UnderlyingPaymentScheduleStepFrequencyUnit**

Time unit associated with the step frequency.

Type: [String](#)

Allowed values in CouponFrequencyUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year
H	Hour	Hour
Min	Minute	Minute
S	Second	Second
T	Term	Term

Used in groups: [UnderlyingPaymentScheduleGrp](#)

#### **171.2.5970 UnderlyingPaymentScheduleStepOffsetRate**

The explicit amount that the rate changes on each step date. This can be a positive or negative value.

Type: [Percentage](#)

Used in groups: [UnderlyingPaymentScheduleGrp](#)

#### **171.2.5971 UnderlyingPaymentScheduleStepOffsetValue**

The explicit amount that the notional changes on each step date. This can be a positive or negative amount.

Type: [Amt](#)

Used in groups: [UnderlyingPaymentScheduleGrp](#)

#### **171.2.5972 UnderlyingPaymentScheduleStepRate**

The percentage by which the notional changes on each step date. The percentage is either a percentage applied to the initial notional amount or the previous outstanding notional, depending on the value specified in [UnderlyingPaymentScheduleStepRelativeTo\(40685\)](#). The percentage can be either positive or negative.

Type: [Percentage](#)

Used in groups: [UnderlyingPaymentScheduleGrp](#)

**171.2.5973 UnderlyingPaymentScheduleStepRelativeTo**

Specifies whether the UnderlyingPaymentScheduleStepRate(40683) or UnderlyingPaymentScheduleStepOffsetValue(40682) should be applied to the initial notional or the previous notional in order to calculate the notional step change amount.

Type: **int**

Allowed values in PaymentScheduleStepRelativeToCodeSet:

---

Code	Name	Description
0	Initial	Initial
1	Previous	Previous

---

Used in groups: **UnderlyingPaymentScheduleGrp**

**171.2.5974 UnderlyingPaymentScheduleStepUnitOfMeasure**

The schedule step unit of measure (UOM).

Type: **String**

Allowed values in UnitOfMeasureCodeSet:

---

Code	Name	Description

### 171.2.5975 UnderlyingPaymentScheduleStubType

Indicates to which stub this schedule applies.

Type: [int](#)

Allowed values in PaymentStubTypeCodeSet:

---

Code	Name	Description
0	Initial	Initial
1	Final	Final
2	CompoundingInitial	Compounding initial
3	CompoundingFinal	Compounding final

---

Used in groups: [UnderlyingPaymentScheduleGrp](#)

### 171.2.5976 UnderlyingPaymentScheduleType

Type of schedule.

Type: [int](#)

Allowed values in PaymentScheduleTypeCodeSet:

---

Code	Name	Description
0	Notional	Notional
1	CashFlow	Cash flow
2	FXLinkedNotional	FX linked notional
3	FixedRate	Fixed rate

---

Code	Name	Description
4	FutureValueNotional	Future value notional
5	KnownAmount	Known amount
6	FloatingRateMultiplier	Floating rate multiplier
7	Spread	Spread
8	CapRate	Cap rate
9	FloorRate	Floor rate
10	NonDeliverableSettlPaymentDates	Non-deliverable settlement payment dates
11	NonDeliverableSettlCalculation-Dates	Non-deliverable settlement calculation dates
12	NonDeliverableFXFixingDates	Non-deliverable fixing dates.
13	SettlPeriodNotnl	Settlement period notional
14	SettlPeriodPx	Settlement period price
15	CalcPeriod	Calculation period
16	DividendAccrualRateMultiplier	Dividend accrual rate multiplier
17	DividendAccrualRateSpread	Dividend accrual rate spread
18	DividendAccrualCapRate	Dividend accrual cap rate
19	DividendAccrualFloorRate	Dividend accrual floor rate
20	CompoundingRateMultiplier	Compounding rate multiplier
21	CompoundingRateSpread	Compounding rate spread
22	CompoundingCapRate	Compounding cap rate
23	CompoundingFloorRate	Compounding floor rate

Used in groups: [UnderlyingPaymentScheduleGrp](#)

### 171.2.5977 UnderlyingPaymentScheduleWeight

Floating rate observation weight for cashflow payment.

Type: [float](#)

Used in groups: [UnderlyingPaymentScheduleGrp](#)

### 171.2.5978 UnderlyingPaymentScheduleXID

Identifier of this UnderlyingPaymentSchedule for cross referencing elsewhere in the message.

Type: **XID**

Used in groups: **UnderlyingPaymentScheduleGrp**

### **171.2.5979 UnderlyingPaymentScheduleXIDRef**

Reference to payment schedule elsewhere in the message.

Type: **XIDREF**

Used in groups: **UnderlyingPaymentScheduleGrp**

### **171.2.5980 UnderlyingPaymentStreamAccrualDays**

The number of days from the adjusted calculation period start date to the adjusted value date, calculated in accordance with the applicable day count fraction.

Type: **int**

Used in components: **UnderlyingPaymentStream**

### **171.2.5981 UnderlyingPaymentStreamAveragingMethod**

When rate averaging is applicable, used to specify whether a weighted or unweighted average calculation method is to be used.

Type: **int**

Allowed values in **PaymentStreamAveragingMethodCodeSet**:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Unweighted	Unweighted
1	Weighted	Weighted

---

Used in components: **UnderlyingPaymentStreamFloatingRate**

### **171.2.5982 UnderlyingPaymentStreamBoundsFirstDateUnadjusted**

The unadjusted first date of the compounding schedule. This can be used to restrict the range of dates when they are relative.

Type: [LocalMktDate](#)

Used in components: [UnderlyingPaymentStreamCompoundingDates](#)

### **171.2.5983 UnderlyingPaymentStreamBoundsLastDateUnadjusted**

The unadjusted last date of the compounding schedule. This can be used to restrict the range of dates when they are relative.

Type: [LocalMktDate](#)

Used in components: [UnderlyingPaymentStreamCompoundingDates](#)

### **171.2.5984 UnderlyingPaymentStreamCalculationLagPeriod**

Time unit multiplier for the calculation lag duration.

Type: [int](#)

Used in components: [UnderlyingPaymentStreamFloatingRate](#)

### **171.2.5985 UnderlyingPaymentStreamCalculationLagUnit**

Time unit associated with the calculation lag duration.

Type: [String](#)

Allowed values in [PaymentStreamInflationLagUnitCodeSet](#):

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: [UnderlyingPaymentStreamFloatingRate](#)

**171.2.5986 UnderlyingPaymentStreamCapRate**

The cap rate, if any, which applies to the floating rate. The cap rate (strike) is only required where the floating rate on a swap stream is capped at a certain level. The cap rate is assumed to be exclusive of any spread and is a per annum rate, expressed as a decimal. A cap rate of 5% would be represented as 0.05.

Type: **Percentage**

Used in components: **UnderlyingPaymentStreamFloatingRate**

**171.2.5987 UnderlyingPaymentStreamCapRateBuySide**

Reference to the buyer of the cap rate option through its trade side.

Type: **int**

Allowed values in PaymentStreamCapRateBuySideCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

---

Used in components: **UnderlyingPaymentStreamFloatingRate**

**171.2.5988 UnderlyingPaymentStreamCapRateSellSide**

Reference to the seller of the cap rate option through its trade side.

Type: **int**

Allowed values in PaymentStreamCapRateBuySideCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

---

Used in components: **UnderlyingPaymentStreamFloatingRate**

**171.2.5989 UnderlyingPaymentStreamCashSettlIndicator**

Indicates whether cash settlement is applicable.

Type: **Boolean**

Used in components: **UnderlyingPaymentStream**

**171.2.5990 UnderlyingPaymentStream**

The UnderlyingPaymentStream component is a subcomponent of the UnderlyingStream used to detail the attributes of a payment stream in a swap.

Name	Mult.	Type	Description
UnderlyingPaymentStreamType	[0..1]	CodeSet	
UnderlyingPaymentStreamMarketRate	[0..1]	int	
UnderlyingPaymentStreamDelayIndicator	[0..1]	Boolean	
UnderlyingPaymentStreamCashSettlIndicator	[0..1]	Boolean	
UnderlyingPaymentStreamSettlCurrency	[0..1]	Currency	
UnderlyingPaymentStreamDayCount	[0..1]	CodeSet	
UnderlyingPaymentStreamOtherDayCount	[0..1]	String	May be used to specify a count method not listed in UnderlyingPaymentStreamDayCount(40572).
UnderlyingPaymentStreamAccrualDays	[0..1]	int	
UnderlyingPaymentStreamDiscountType	[0..1]	CodeSet	
UnderlyingPaymentStreamDiscountRate	[0..1]	Percentage	
UnderlyingPaymentStreamDiscountRateDayCount	[0..1]	CodeSet	
UnderlyingPaymentStreamCompoundingMethod	[0..1]	CodeSet	
UnderlyingPaymentStreamCompoundingXIDRef	[0..1]	XIDREF	Mutually exclusive with UnderlyingPaymentStreamCompoundingFixedRate(42900) or the UnderlyingPaymentStreamCompoundingFloatingRate component.

Name	Mult.	Type	Description
UnderlyingPaymentStreamCompoundingSpread	[0..1]	PriceOffset	
UnderlyingPaymentStreamInterpolationMethod	[0..1]	CodeSet	
UnderlyingPaymentStreamInterpolationPeriod	[0..1]	CodeSet	
UnderlyingPaymentStreamInitialPrincipalExchangeIndicator	[0..1]	Boolean	
UnderlyingPaymentStreamInterimPrincipalExchangeIndicator	[0..1]	Boolean	
UnderlyingPaymentStreamFinalPrincipalExchangeIndicator	[0..1]	Boolean	
UnderlyingPaymentStreamFlatRateIndicator	[0..1]	Boolean	
UnderlyingPaymentStreamFlatRateAmount	[0..1]	Amt	
UnderlyingPaymentStreamFlatRateCurrency	[0..1]	Currency	
UnderlyingPaymentStreamMaximumPaymentAmount	[0..1]	Amt	
UnderlyingPaymentStreamMaximumPaymentCurrency	[0..1]	Currency	
UnderlyingPaymentStreamMaximumTransactionAmount	[0..1]	Amt	
UnderlyingPaymentStreamMaximumTransactionCurrency	[0..1]	Currency	
UnderlyingPaymentStreamPaymentDates	[0..1]	Component	
UnderlyingPaymentStreamResetDates	[0..1]	Component	
UnderlyingPaymentStreamFixedRate	[0..1]	Component	
UnderlyingPaymentStreamFloatingRate	[0..1]	Component	
UnderlyingPaymentStreamCompoundingFixedRate	[0..1]	float	Mutually exclusive with UnderlyingPaymentStreamCompoundingXIDRef(42896) or the UnderlyingPaymentStreamCompoundingFloatingRate component.

Name	Mult.	Type	Description
<a href="#">UnderlyingPaymentStreamCompoundingFloatingRate</a>	[0..1]	Component	Mutually exclusive with <a href="#">UnderlyingPaymentStreamCompoundingFixedRate(42900)</a> or the <a href="#">UnderlyingPaymentStreamCompoundingXIDRef(42896)</a> .
<a href="#">UnderlyingPaymentStreamCompoundingDates</a>	[0..1]	Component	
<a href="#">UnderlyingPaymentStreamNonDeliverableSettlTerms</a>	[0..1]	Component	

Used in groups: [UnderlyingStreamGrp](#)

### 171.2.5991 UnderlyingPaymentStreamCompoundingAveragingMethod

Specifies the averaging method when compounding floating rate averaging is applicable (e.g. weighted or unweighted).

Type: [int](#)

Allowed values in [PaymentStreamAveragingMethodCodeSet](#):

Code	Name	Description
0	Unweighted	Unweighted
1	Weighted	Weighted

Used in components: [UnderlyingPaymentStreamCompoundingFloatingRate](#)

### 171.2.5992 UnderlyingPaymentStreamCompoundingCapRate

The cap rate, if any, which applies to the compounding floating rate. It is only required where the compounding floating rate on a swap stream is capped at a certain level. The cap rate is assumed to be exclusive of any spread and is a per annum rate, expressed as a decimal. A cap rate of 5% would be represented as "0.05".

Type: [Percentage](#)

Used in components: [UnderlyingPaymentStreamCompoundingFloatingRate](#)

**171.2.5993 UnderlyingPaymentStreamCompoundingCapRateBuySide**

Reference to the buyer of the compounding cap rate option through its trade side.

Type: [int](#)

Allowed values in PaymentStreamCapRateBuySideCodeSet:

---

Code	Name	Description
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

---

Used in components: [UnderlyingPaymentStreamCompoundingFloatingRate](#)

**171.2.5994 UnderlyingPaymentStreamCompoundingCapRateSellSide**

Reference to the seller of the compounding cap rate option through its trade side.

Type: [int](#)

Allowed values in PaymentStreamCapRateBuySideCodeSet:

---

Code	Name	Description
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

---

Used in components: [UnderlyingPaymentStreamCompoundingFloatingRate](#)

**171.2.5995 UnderlyingPaymentStreamCompoundingDate**

The compounding date. Type of date is specified in UnderlyingPaymentStreamCompoundingDate-Type(42903).

Type: [LocalMktDate](#)

Used in groups: [UnderlyingPaymentStreamCompoundingDateGrp](#)

**171.2.5996 UnderlyingPaymentStreamCompoundingDateGrp**

UnderlyingPaymentStreamCompoundingDateGrp is a subcomponent of the UnderlyingPaymentStreamCompoundingDates component used to specify predetermined compounding dates.

Name	Mult.	Type	Description
NoUnderlyingPaymentStreamCompoundingDates	[1..1]	NumInGroup	
UnderlyingPaymentStreamCompoundingDate	[0..1]	LocalMktDate	Required if NoUnderlyingPaymentStreamCompoundingDates(42901) > 0.
UnderlyingPaymentStreamCompoundingDateType	[0..1]	CodeSet	When specified it applies not only to the current date instance but to all subsequent date instances in the group until overridden when a new type is specified.

Used in components: [UnderlyingPaymentStreamCompoundingDates](#)

**171.2.5997 UnderlyingPaymentStreamCompoundingDatesBusinessCenter**

The business center calendar used for date adjustment of the payment stream compounding dates, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in groups: [UnderlyingPaymentStreamCompoundingDatesBusinessCenterGrp](#)

**171.2.5998 UnderlyingPaymentStreamCompoundingDatesBusinessCenterGrp**

UnderlyingPaymentStreamCompoundingDatesBusinessCenterGrp is a repeating subcomponent within the UnderlyingPaymentStreamCompoundingDates component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the UnderlyingDateAdjustment component in UnderlyingInstrument.

Name	Mult.	Type	Description
NoUnderlyingPaymentStreamCompoundingDatesBusinessCenters	[1..1]	NumInGroup	

Name	Mult.	Type	Description
<a href="#">UnderlyingPaymentStreamCompoundingDatesBusinessCenter</a>	[0..1]	String	Required if NoUnderlyingPaymentStreamCompoundingDatesBusinessCenters(42915) > 0.

Used in components: [UnderlyingPaymentStreamCompoundingDates](#)

### 171.2.5999 UnderlyingPaymentStreamCompoundingDatesBusinessDayConvention

The compounding dates business day convention.

Type: [int](#)

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [UnderlyingPaymentStreamCompoundingDates](#)

### 171.2.6000 UnderlyingPaymentStreamCompoundingDates

[UnderlyingPaymentStreamCompoundingDates](#) is a subcomponent of the [UnderlyingPaymentStream](#) component used to specify the compounding dates of the stream - either specific, relative or periodic dates.

Name	Mult.	Type	Description
UnderlyingPaymentStreamCompoundingDatesBusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified value would be specific to payment stream compounding dates.
UnderlyingPaymentStreamCompoundingDatesBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified values would be specific to payment stream compounding dates.
UnderlyingPaymentStreamCompoundingDateGrp	[0..*]	Group	
UnderlyingPaymentStreamCompoundingDatesRelativeTo	[0..1]	int	
UnderlyingPaymentStreamCompoundingDatesOffsetPeriod	[0..1]	int	Conditionally required when UnderlyingPaymentStreamCompoundingDatesOffsetUnit(42907) is specified.
UnderlyingPaymentStreamCompoundingDatesOffsetUnit	[0..1]	CodeSet	Conditionally required when UnderlyingPaymentStreamCompoundingDatesOffsetPeriod(42906) is specified.
UnderlyingPaymentStreamCompoundingDatesOffsetDayType	[0..1]	CodeSet	
UnderlyingPaymentStreamCompoundingPeriodSkip	[0..1]	int	
UnderlyingPaymentStreamCompoundingStartDate	[0..1]	Component	
UnderlyingPaymentStreamCompoundingEndDate	[0..1]	Component	
UnderlyingPaymentStreamCompoundingFrequencyPeriod	[0..1]	int	Conditionally required when UnderlyingPaymentStreamCompoundingFrequencyUnit(42911) is specified.
UnderlyingPaymentStreamCompoundingFrequencyUnit	[0..1]	CodeSet	Conditionally required when UnderlyingPaymentStreamCompoundingFrequencyPeriod(42910) is specified.
UnderlyingPaymentStreamCompoundingRollConvention	[0..1]	CodeSet	When specified, this overrides the date roll convention defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified value would be specific to this instance of the payment stream dates.

Name	Mult.	Type	Description
UnderlyingPaymentStreamBounds-FirstDateUnadjusted	[0..1]	LocalMktDate	
UnderlyingPaymentStreamBoundsLastDateUnadjusted	[0..1]	LocalMktDate	

Used in components: [UnderlyingPaymentStream](#)

### 171.2.6001 UnderlyingPaymentStreamCompoundingDatesOffsetDayType

Specifies the day type of the relative compounding date offset.

Type: [int](#)

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: [UnderlyingPaymentStreamCompoundingDates](#)

### 171.2.6002 UnderlyingPaymentStreamCompoundingDatesOffsetPeriod

Time unit multiplier for the relative compounding date offset.

Type: [int](#)

Used in components: [UnderlyingPaymentStreamCompoundingDates](#)

### 171.2.6003 UnderlyingPaymentStreamCompoundingDatesOffsetUnit

Time unit associated with the relative compounding date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: **UnderlyingPaymentStreamCompoundingDates**

#### **171.2.6004 UnderlyingPaymentStreamCompoundingDatesRelativeTo**

Specifies the anchor date when the compounding dates are relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: **int**

Used in components: **UnderlyingPaymentStreamCompoundingDates**

#### **171.2.6005 UnderlyingPaymentStreamCompoundingDateType**

Specifies the type of payment compounding date (e.g. adjusted for holidays).

Type: **int**

Allowed values in NonDeliverableFixingDateTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Unadjusted	Unadjusted
1	Adjusted	Adjusted

---

Used in groups: **UnderlyingPaymentStreamCompoundingDateGrp**

**171.2.6006 UnderlyingPaymentStreamCompoundingEndDateAdjusted**

The adjusted compounding end date.

Type: [LocalMktDate](#)

Used in components: [UnderlyingPaymentStreamCompoundingEndDate](#)

**171.2.6007 UnderlyingPaymentStreamCompoundingEndDate**

[UnderlyingPaymentStreamCompoundingEndDate](#) is a subcomponent of the [UnderlyingPaymentStreamCompoundingDates](#) component used to specify the end date for compounding.

Name	Mult.	Type	Description
<a href="#">UnderlyingPaymentStreamCompoundingEndDateUnadjusted</a>	[0..1]	LocalMktDate	
<a href="#">UnderlyingPaymentStreamCompoundingEndDateRelativeTo</a>	[0..1]	int	
<a href="#">UnderlyingPaymentStreamCompoundingEndDateOffsetPeriod</a>	[0..1]	int	Conditionally required when <a href="#">UnderlyingPaymentStreamCompoundingEndDateOffsetUnit(42920)</a> is specified.
<a href="#">UnderlyingPaymentStreamCompoundingEndDateOffsetUnit</a>	[0..1]	CodeSet	Conditionally required when <a href="#">UnderlyingPaymentStreamCompoundingEndDateOffsetPeriod(42919)</a> is specified.
<a href="#">UnderlyingPaymentStreamCompoundingEndDateOffsetDayType</a>	[0..1]	CodeSet	
<a href="#">UnderlyingPaymentStreamCompoundingEndDateAdjusted</a>	[0..1]	LocalMktDate	

Used in components: [UnderlyingPaymentStreamCompoundingDates](#)

**171.2.6008 UnderlyingPaymentStreamCompoundingEndDateOffsetDayType**

Specifies the day type of the relative compounding end date offset.

Type: [int](#)

Allowed values in [PaymentStreamPaymentDateOffsetDayTypeCodeSet](#):

---

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in components: [UnderlyingPaymentStreamCompoundingEndDate](#)

### **171.2.6009 UnderlyingPaymentStreamCompoundingEndDateOffsetPeriod**

Time unit multiplier for the relative compounding end date offset.

Type: [int](#)

Used in components: [UnderlyingPaymentStreamCompoundingEndDate](#)

### **171.2.6010 UnderlyingPaymentStreamCompoundingEndDateOffsetUnit**

Time unit associated with the relative compounding end date offset.

Type: [String](#)

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: [UnderlyingPaymentStreamCompoundingEndDate](#)

### **171.2.6011 UnderlyingPaymentStreamCompoundingEndDateRelativeTo**

Specifies the anchor date when the compounding end date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: **int**

Used in components: **UnderlyingPaymentStreamCompoundingEndDate**

### **171.2.6012 UnderlyingPaymentStreamCompoundingEndDateUnadjusted**

The unadjusted compounding end date.

Type: **LocalMktDate**

Used in components: **UnderlyingPaymentStreamCompoundingEndDate**

### **171.2.6013 UnderlyingPaymentStreamCompoundingFinalRatePrecision**

Specifies the compounding floating rate rounding precision in terms of a number of decimal places. Note how a percentage rate rounding of 5 decimal places is expressed as a rounding precision of 7.

Type: **int**

Used in components: **UnderlyingPaymentStreamCompoundingFloatingRate**

### **171.2.6014 UnderlyingPaymentStreamCompoundingFinalRateRoundingDirection**

Specifies the rounding direction for the compounding floating rate.

Type: **char**

Allowed values in RoundingDirectionCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	RoundToNearest	Round to nearest
1	RoundDown	Round down
2	RoundUp	Round up

---

Used in components: **UnderlyingPaymentStreamCompoundingFloatingRate**

**171.2.6015 UnderlyingPaymentStreamCompoundingFixedRate**

The compounding fixed rate applicable to the payment stream.

Type: **float**

Used in components: **UnderlyingPaymentStream**

**171.2.6016 UnderlyingPaymentStreamCompoundingFloatingRate**

UnderlyingPaymentStreamCompoundingFloatingRate is a subcomponent of the UnderlyingPaymentStream component used to report the parameters for determining the compounding floating rate of the stream.

<b>Name</b>	<b>Mult.</b>	<b>Type</b>	<b>Description</b>
<b>UnderlyingPaymentStreamCompoundingRateIndex</b>	[0..1]	String	
<b>UnderlyingPaymentStreamCompoundingRateIndexCurvePeriod</b>	[0..1]	int	Conditionally required if UnderlyingPaymentStreamCompoundingRateIndexCurveUnit(42925) is specified.
<b>UnderlyingPaymentStreamCompoundingRateIndexCurveUnit</b>	[0..1]	CodeSet	Conditionally required if UnderlyingPaymentStreamCompoundingRateIndexCurvePeriod(42924) is specified.
<b>UnderlyingPaymentStreamCompoundingRateMultiplier</b>	[0..1]	float	
<b>UnderlyingPaymentStreamCompoundingRateSpread</b>	[0..1]	PriceOffset	
<b>UnderlyingPaymentStreamCompoundingRateSpreadPositionType</b>	[0..1]	CodeSet	
<b>UnderlyingPaymentStreamCompoundingRateTreatment</b>	[0..1]	CodeSet	
<b>UnderlyingPaymentStreamCompoundingCapRate</b>	[0..1]	Percentage	
<b>UnderlyingPaymentStreamCompoundingCapRateBuySide</b>	[0..1]	CodeSet	
<b>UnderlyingPaymentStreamCompoundingCapRateSellSide</b>	[0..1]	CodeSet	
<b>UnderlyingPaymentStreamCompoundingFloorRate</b>	[0..1]	Percentage	
<b>UnderlyingPaymentStreamCompoundingFloorRateBuySide</b>	[0..1]	CodeSet	

Name	Mult.	Type	Description
UnderlyingPaymentStreamCompoundingFloorRateSellSide	[0..1]	CodeSet	
UnderlyingPaymentStreamCompoundingInitialRate	[0..1]	Percentage	
UnderlyingPaymentStreamCompoundingFinalRateRoundingDirection	[0..1]	CodeSet	
UnderlyingPaymentStreamCompoundingFinalRatePrecision	[0..1]	int	
UnderlyingPaymentStreamCompoundingAveragingMethod	[0..1]	CodeSet	
UnderlyingPaymentStreamCompoundingNegativeRateTreatment	[0..1]	CodeSet	

Used in components: [UnderlyingPaymentStream](#)

### 171.2.6017 UnderlyingPaymentStreamCompoundingFloorRate

The floor rate, if any, which applies to the compounding floating rate. The floor rate (strike) is only required where the compounding floating rate on a swap stream is floored at a certain strike level. The floor rate is assumed to be exclusive of any spread and is a per annum rate. The rate is expressed as a decimal, e.g. 5% is represented as "0.05".

Type: [Percentage](#)

Used in components: [UnderlyingPaymentStreamCompoundingFloatingRate](#)

### 171.2.6018 UnderlyingPaymentStreamCompoundingFloorRateBuySide

Reference to the buyer of the compounding floor rate option through its trade side.

Type: [int](#)

Allowed values in PaymentStreamFloorRateBuySideCodeSet:

Code	Name	Description
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

Used in components: [UnderlyingPaymentStreamCompoundingFloatingRate](#)

**171.2.6019 UnderlyingPaymentStreamCompoundingFloorRateSellSide**

Reference to the seller of the floor rate option through its trade side.

Type: **int**

Allowed values in PaymentStreamFloorRateBuySideCodeSet:

---

Code	Name	Description
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

---

Used in components: [UnderlyingPaymentStreamCompoundingFloatingRate](#)

**171.2.6020 UnderlyingPaymentStreamCompoundingFrequencyPeriod**

Time unit multiplier for the frequency at which compounding dates occur.

Type: **int**

Used in components: [UnderlyingPaymentStreamCompoundingDates](#)

**171.2.6021 UnderlyingPaymentStreamCompoundingFrequencyUnit**

Time unit associated with the frequency at which compounding dates occur.

Type: **String**

Allowed values in CouponFrequencyUnitCodeSet:

---

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year
H	Hour	Hour
Min	Minute	Minute
S	Second	Second
T	Term	Term

---

Used in components: [UnderlyingPaymentStreamCompoundingDates](#)

**171.2.6022 UnderlyingPaymentStreamCompoundingInitialRate**

The initial compounding floating rate reset agreed between the principal parties involved in the trade. It should only be included when the rate is not equal to the rate published on the source implied by the floating rate index. The initial rate is expressed in decimal form, e.g. 5% is represented as "0.05".

Type: **Percentage**

Used in components: **UnderlyingPaymentStreamCompoundingFloatingRate**

**171.2.6023 UnderlyingPaymentStreamCompoundingMethod**

Compounding Method.

Type: **int**

Allowed values in PaymentStreamCompoundingMethodCodeSet:

Code	Name	Description
0	None	None
1	Flat	Flat
2	Straight	Straight
3	SpreadExclusive	Spread exclusive

Used in components: **UnderlyingPaymentStream**

**171.2.6024 UnderlyingPaymentStreamCompoundingNegativeRateTreatment**

Specifies the method for calculating payment obligations when a compounding floating rate is negative (either due to a quoted negative floating rate or by operation of a spread that is subtracted from the floating rate).

Type: **int**

Allowed values in PaymentStreamNegativeRateTreatmentCodeSet:

Code	Name	Description
0	ZeroInterestRateMethod	Zero interest rate method
1	NegativeInterestRateMethod	Negative interest rate method

Used in components: **UnderlyingPaymentStreamCompoundingFloatingRate**

**171.2.6025 UnderlyingPaymentStreamCompoundingPeriodSkip**

The number of periods in the "RelativeTo" schedule that are between each date in the compounding schedule. A skip of 2 would mean that compounding dates are relative to every second date in the "RelativeTo" schedule. If present this should have a value greater than 1.

Type: **int**

Used in components: **UnderlyingPaymentStreamCompoundingDates**

**171.2.6026 UnderlyingPaymentStreamCompoundingRateIndex**

The payment stream's compounding floating rate index.

Type: **String**

Used in components: **UnderlyingPaymentStreamCompoundingFloatingRate**

**171.2.6027 UnderlyingPaymentStreamCompoundingRateIndexCurvePeriod**

Time unit multiplier for the payment stream's compounding floating rate index curve period.

Type: **int**

Used in components: **UnderlyingPaymentStreamCompoundingFloatingRate**

**171.2.6028 UnderlyingPaymentStreamCompoundingRateIndexCurveUnit**

Time unit associated with the payment stream's compounding floating rate index curve period.

Type: **String**

Allowed values in PaymentStreamRateIndexCurveUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: **UnderlyingPaymentStreamCompoundingFloatingRate**

**171.2.6029 UnderlyingPaymentStreamCompoundingRateMultiplier**

A rate multiplier to apply to the compounding floating rate. The multiplier can be less than or greater than 1 (one). This should only be included if the multiplier is not equal to 1 (one) for the term of the stream.

Type: **float**

Used in components: **UnderlyingPaymentStreamCompoundingFloatingRate**

**171.2.6030 UnderlyingPaymentStreamCompoundingRateSpread**

The basis points spread from the index specified in UnderlyingPaymentStreamCompoundingRateIndex(42923).

Type: **PriceOffset**

Used in components: **UnderlyingPaymentStreamCompoundingFloatingRate**

**171.2.6031 UnderlyingPaymentStreamCompoundingRateSpreadPositionType**

Identifies whether the rate spread is applied to a long or short position.

Type: **int**

Allowed values in PaymentStreamRateSpreadPositionTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Short	Short
1	Long	Long

---

Used in components: **UnderlyingPaymentStreamCompoundingFloatingRate**

**171.2.6032 UnderlyingPaymentStreamCompoundingRateTreatment**

Specifies the yield calculation treatment for the index.

Type: **int**

Allowed values in PaymentStreamRateTreatmentCodeSet:

Code	Name	Description
0	BondEquivalentYield	Bond equivalent yield
1	MoneyMarketYield	Money market yield

Used in components: [UnderlyingPaymentStreamCompoundingFloatingRate](#)

### 171.2.6033 UnderlyingPaymentStreamCompoundingRollConvention

The convention for determining the sequence of compounding dates. It is used in conjunction with a specified frequency.

Type: [String](#)

Allowed values in DateRollConventionCodeSet:

Code	Name	Description
1	FirstDay	1st day of the month
2	SecondDay	2nd day of the month
3	ThirdDay	3rd day of the month
4	FourthDay	4th day of the month
5	FifthDay	5th day of the month
6	SixthDay	6th day of the month
7	SeventhDay	7th day of the month
8	EighthDay	8th day of the month
9	NinthDay	9th day of the month
10	TenthDay	10th day of the month
11	EleventhDay	11th day of the month
12	TwelvthDay	12th day of the month
13	ThirteenthDay	13th day of the month
14	ForteenthDay	14th day of the month
15	FifteenthDay	15th day of the month
16	SixteenthDay	16th day of the month
17	SeventeenthDay	17th day of the month
18	EighteenthDay	18th day of the month
19	NineteenthDay	19th day of the month
20	TwentiethDay	20th day of the month

<b>Code</b>	<b>Name</b>	<b>Description</b>
21	TwentyFirstDay	21st day of the month
22	TwentySecondDay	22nd day of the month
23	TwentyThirdDay	23rd day of the month
24	TwentyFourthDay	24th day of the month
25	TwentyFifthDay	25th day of the month
26	TwentySixthDay	26th day of the month
27	TwentySeventhDay	27th day of the month
28	TwentyEighthDay	28th day of the month
29	TwentyNinthDay	29th day of the month
30	ThirtiethDay	30th day of the month
EOM	EOM	The end of the month. Use EOM for 31st day of the month.
FRN	FRN	The floating rate note convention or Eurodollar convention.
IMM	IMM	The International Money Market settlement date, i.e. the 3rd Wednesday of the month.
IMMCAD	IMMCAD	The last trading day/expiration day of the Canadian Derivatives Exchange.
IMMAUD	IMMAUD	The last trading day of the Sydney Futures Exchange Australian 90-day bank accepted bill futures contract.
IMMNZD	IMMNZD	The last trading day of the Sydney Futures Exchange New Zealand 90-day bank bill futures contract.
SFE	SFE	The Sydney Futures Exchange 90-day bank accepted bill futures settlement dates.
NONE	NONE	No adjustment
TBILL	TBILL	The 13-week and 26-week U.S. Treasury Bill auction dates.
MON	MON	Monday
TUE	TUE	Tuesday
WED	WED	Wednesday
THU	THU	Thursday
FRI	FRI	Friday
SAT	SAT	Saturday
SUN	SUN	Sunday

Used in components: [UnderlyingPaymentStreamCompoundingDates](#)

**171.2.6034 UnderlyingPaymentStreamCompoundingSpread**

The spread to be used for compounding. Used in scenarios where the interest payment is based on a compounding formula that uses a compounding spread in addition to the regular spread.

Type: [PriceOffset](#)

Used in components: [UnderlyingPaymentStream](#)

**171.2.6035 UnderlyingPaymentStreamCompoundingStartDateAdjusted**

The adjusted compounding start date.

Type: [LocalMktDate](#)

Used in components: [UnderlyingPaymentStreamCompoundingStartDate](#)

**171.2.6036 UnderlyingPaymentStreamCompoundingStartDate**

[UnderlyingPaymentStreamCompoundingStartDate](#) is a subcomponent of the [UnderlyingPaymentStreamCompoundingDates](#) component used to specify the start date for compounding.

Name	Mult.	Type	Description
<a href="#">UnderlyingPaymentStreamCompoundingStartDateUnadjusted</a>	[0..1]	LocalMktDate	
<a href="#">UnderlyingPaymentStreamCompoundingStartDateRelativeTo</a>	[0..1]	int	
<a href="#">UnderlyingPaymentStreamCompoundingStartDateOffsetPeriod</a>	[0..1]	int	Conditionally required when <a href="#">UnderlyingPaymentStreamCompoundingStartDateOffsetUnit(42944)</a> is specified.
<a href="#">UnderlyingPaymentStreamCompoundingStartDateOffsetUnit</a>	[0..1]	CodeSet	Conditionally required when <a href="#">UnderlyingPaymentStreamCompoundingStartDateOffsetPeriod(42943)</a> is specified.
<a href="#">UnderlyingPaymentStreamCompoundingStartDateOffsetDayType</a>	[0..1]	CodeSet	
<a href="#">UnderlyingPaymentStreamCompoundingStartDateAdjusted</a>	[0..1]	LocalMktDate	

Used in components: [UnderlyingPaymentStreamCompoundingDates](#)

**171.2.6037 UnderlyingPaymentStreamCompoundingStartDateOffsetDayType**

Specifies the day type of the relative compounding start date offset.

Type: **int**

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

---

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in components: **UnderlyingPaymentStreamCompoundingStartDate**

**171.2.6038 UnderlyingPaymentStreamCompoundingStartDateOffsetPeriod**

Time unit multiplier for the relative compounding start date offset.

Type: **int**

Used in components: **UnderlyingPaymentStreamCompoundingStartDate**

**171.2.6039 UnderlyingPaymentStreamCompoundingStartDateOffsetUnit**

Time unit associated with the relative compounding start date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: **UnderlyingPaymentStreamCompoundingStartDate**

#### **171.2.6040 UnderlyingPaymentStreamCompoundingStartDateRelativeTo**

Specifies the anchor date when the compounding start date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: **int**

Used in components: **UnderlyingPaymentStreamCompoundingStartDate**

#### **171.2.6041 UnderlyingPaymentStreamCompoundingStartDateUnadjusted**

The unadjusted compounding start date.

Type: **LocalMktDate**

Used in components: **UnderlyingPaymentStreamCompoundingStartDate**

#### **171.2.6042 UnderlyingPaymentStreamCompoundingXIDRef**

Reference to the stream which details the compounding fixed or floating rate.

Type: **XIDREF**

Used in components: **UnderlyingPaymentStream**

#### **171.2.6043 UnderlyingPaymentStreamContractPrice**

The price per relevant unit for purposes of the calculation of a fixed amount for a dry voyage charter or time charter commodity swap.

Type: **Price**

Used in components: **UnderlyingPaymentStreamFixedRate**

#### **171.2.6044 UnderlyingPaymentStreamContractPriceCurrency**

Specifies the currency of UnderlyingPaymentStreamContractPrice(41907). Uses ISO 4217 currency codes.

Type: **Currency**

Used in components: **UnderlyingPaymentStreamFixedRate**

**171.2.6045 UnderlyingPaymentStreamDayCount**

The day count convention used in the payment stream calculations.

Type: **int**

Allowed values in CouponDayCountCodeSet:

Code	Name	Description
0	OneOne	1/1. If parties specify the Day Count Fraction to be 1/1 then in calculating the applicable amount, 1 is simply input into the calculation as the relevant Day Count Fraction. See also 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (a).
1	ThirtyThreeSixtyUS	30/360 (30U/360 or Bond Basis). See also ISO 15022 MICO code 'A001'.
2	ThirtyThreeSixtySIA	30/360 (SIA). A variant of "30/360" - when Date1 and Date2 are both Feb. 28th or 29th convert them to 30th using the same logic in the conversion of 31st to 30th.
3	ThirtyThreeSixtyM	30/360M. Commonly used day count convention for US mortgage backed securities. Feb 28th (or 29th in a leap year) is always considered as a 30th for a start date. As a comparison, in the regular 30/360 day count as used by most US agency and corporate bonds, a start date of Feb 28th (or 29th in a leap year) is still considered as the 28th (or 29th) day of a month of 30 days.
4	ThirtyEThreeSixty	30E/360 (Eurobond Basis). See also ISO 15022 MICO code 'A007'.
5	ThirtyEThreeSixtyISDA	30E/360 (ISDA). Date adjustment rules are: (1) if Date1 is the last day of the month, then change Date1 to 30; (2) if D2 is the last day of the month (unless Date2 is the maturity date and Date2 is in February), then change Date2 to 30. See also 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (h).
6	ActThreeSixty	Act/360. See also ISO 15022 MICO code 'A004'.
7	ActThreeSixtyFiveFixed	Act/365 (FIXED). See also ISO 15022 MICO code 'A005'.
8	ActActAFB	Act/Act (AFB). See also ISO 15022 MICO code 'A010'.
9	ActActICMA	Act/Act (ICMA). See also ISO 15022 MICO code 'A006'.
10	ActActISMAUltimo	Act/Act (ICMA Ultimo). The Act/Act (ICMA Ultimo) differs from Act/Act (ICMA) method only that it assumes that regular coupons always fall on the last day of the month.
11	ActActISDA	Act/Act (ISDA). See also ISO 15022 MICO code 'A008'.

Code	Name	Description
12	BusTwoFiftyTwo	BUS/252. Used for Brazilian Real swaps, which is based on business days instead of calendar days. The number of business days divided by 252.
13	ThirtyEPlusThreeSixty	30E+/360. Variation on 30E/360. Date adjustment rules: (1) If Date1 falls on the 31st, then change it to the 30th; (2) If Date2 falls on the 31st, then change it to 1 and increase Month2 by one, i.e. next month.
14	ActThreeSixtyFiveL	Act/365L. See also ISO 15022 MICO code 'A009'.
15	NLThreeSixtyFive	NL365. See also ISO 15022 MICO code 'A014'.
16	NLThreeSixty	NL360. This is the same as Act/360, with the exception of leap days (29th February) which are ignored.
17	Act364	Act/364. The actual number of days between Date1 and Date2, divided by 364.
18	ThirtyThreeSixtyFive	30/365. Interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and a 365-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31 is assumed to be a 30 and the 28 February (or 29 February for a leap year) is assumed to be a 28 (or 29). See also ISO 15022 MICO code 'A002'.
19	ThirtyActual	30/Actual. Interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and the assumed number of days in a year in a way similar to the Actual/Actual (ICMA). Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31 is assumed to be a 30 and the 28 February (or 29 February for a leap year) is assumed to be a 28 (or 29). The assumed number of days in a year is computed as the actual number of days in the coupon period multiplied by the number of interest payments in the year. See also ISO 15022 MICO code 'A003'.
20	ThirtyThreeSixtyICMA	30/360 (ICMA or basis rule). Interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30 calendar day of the same month, except for February. This means that a 31 is assumed to be a 30 and the 28 February (or 29 February for a leap year) is assumed to be a 28 (or 29). It is the most commonly used 30/360 method for non-US straight and convertible bonds issued before 1 January 1999. See also ISO 15022 MICO code 'A011'.

Code	Name	Description
21	ThirtyETwoThreeSixty	30E2/360 (Eurobond basis model two). Interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for the last day of February whose day of the month value shall be adapted to the value of the first day of the interest period if the latter is higher and if the period is one of a regular schedule. This means that a 31 is assumed to be a 30 and the 28 February of a non-leap year is assumed to be equivalent to a 29 February when the first day of the interest period is a 29, or to a 30 February when the first day of the interest period is a 30 or a 31. The 29 February of a leap year is assumed to be equivalent to a 30 February when the first day of the interest period is a 30 or a 31. Similarly, if the coupon period starts on the last day of February, it is assumed to produce only one day of interest in February as if it was starting on a 30 February when the end of the period is a 30 or a 31, or two days of interest in February when the end of the period is a 29, or three days of interest in February when it is the 28 February of a non-leap year and the end of the period is before the 29. See also ISO 15022 MICO code 'A012'.
22	ThirtyEThreeThreeSixty	30E3/360 (Eurobond basis model three). Interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that a 31 is assumed to be a 30 and the 28 February (or 29 February for a leap year) is assumed to be equivalent to a 30 February. It is a variation of the 30E/360 (or Eurobond basis) method where the last day of February is always assumed to be a 30, even if it is the last day of the maturity coupon period. See also ISO 15022 MICO code 'A013'.
99	Other	Other. For other day count method. See also ISO 15022 MICO code 'OTHR'.

Used in components: [UnderlyingPaymentStream](#)

### 171.2.6046 UnderlyingPaymentStreamDaysAdjustmentIndicator

Indicates whether the contract specifies that the notional should be scaled by the number of days in range divided by the estimate trading days or not. The number of "days in range" refers to the number of returns that contribute to the realized volatility.

Type: **Boolean**

Used in components: **UnderlyingPaymentStreamFloatingRate**

### **171.2.6047 UnderlyingPaymentStreamDelayIndicator**

Applicable to credit default swaps on mortgage backed securities to specify whether payment delays are applicable to the fixed amount.

Residential mortgage backed securities typically have a payment delay of 5 days between the coupon date of the reference obligation and the payment date of the synthetic swap.

Commercial mortgage backed securities do not typically have a payment delay, with both payment dates (the coupon date of the reference obligation and the payment date of the synthetic swap) being on the 25th of each month.

Type: **Boolean**

Used in components: **UnderlyingPaymentStream**

### **171.2.6048 UnderlyingPaymentStreamDiscountRate**

Discount rate. The rate is expressed in decimal, e.g. 5% is expressed as 0.05.

Type: **Percentage**

Used in components: **UnderlyingPaymentStream**

### **171.2.6049 UnderlyingPaymentStreamDiscountRateDayCount**

The day count convention applied to the UnderlyingPaymentStreamDiscountRate(40575).

Type: **int**

Allowed values in CouponDayCountCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	OneOne	1/1. If parties specify the Day Count Fraction to be 1/1 then in calculating the applicable amount, 1 is simply input into the calculation as the relevant Day Count Fraction. See also 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (a).

---

Code	Name	Description
1	ThirtyThreeSixtyUS	30/360 (30U/360 or Bond Basis). See also ISO 15022 MICO code 'A001'.
2	ThirtyThreeSixtySIA	30/360 (SIA). A variant of "30/360" - when Date1 and Date2 are both Feb. 28th or 29th convert them to 30th using the same logic in the conversion of 31st to 30th.
3	ThirtyThreeSixtyM	30/360M. Commonly used day count convention for US mortgage backed securities. Feb 28th (or 29th in a leap year) is always considered as a 30th for a start date. As a comparison, in the regular 30/360 day count as used by most US agency and corporate bonds, a start date of Feb 28th (or 29th in a leap year) is still considered as the 28th (or 29th) day of a month of 30 days.
4	ThirtyEThreeSixty	30E/360 (Eurobond Basis). See also ISO 15022 MICO code 'A007'.
5	ThirtyEThreeSixtyISDA	30E/360 (ISDA). Date adjustment rules are: (1) if Date1 is the last day of the month, then change Date1 to 30; (2) if D2 is the last day of the month (unless Date2 is the maturity date and Date2 is in February), then change Date2 to 30. See also 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (h).
6	ActThreeSixty	Act/360. See also ISO 15022 MICO code 'A004'.
7	ActThreeSixtyFiveFixed	Act/365 (FIXED). See also ISO 15022 MICO code 'A005'.
8	ActActAFB	Act/Act (AFB). See also ISO 15022 MICO code 'A010'.
9	ActActICMA	Act/Act (ICMA). See also ISO 15022 MICO code 'A006'.
10	ActActISMAUltimo	Act/Act (ICMA Ultimo). The Act/Act (ICMA Ultimo) differs from Act/Act (ICMA) method only that it assumes that regular coupons always fall on the last day of the month.
11	ActActISDA	Act/Act (ISDA). See also ISO 15022 MICO code 'A008'.
12	BusTwoFiftyTwo	BUS/252. Used for Brazilian Real swaps, which is based on business days instead of calendar days. The number of business days divided by 252.
13	ThirtyEPlusThreeSixty	30E+/360. Variation on 30E/360. Date adjustment rules: (1) If Date1 falls on the 31st, then change it to the 30th; (2) If Date2 falls on the 31st, then change it to 1 and increase Month2 by one, i.e. next month.
14	ActThreeSixtyFiveL	Act/365L. See also ISO 15022 MICO code 'A009'.
15	NLThreeSixtyFive	NL365. See also ISO 15022 MICO code 'A014'.
16	NLThreeSixty	NL360. This is the same as Act/360, with the exception of leap days (29th February) which are ignored.
17	Act364	Act/364. The actual number of days between Date1 and Date2, divided by 364.

<b>Code</b>	<b>Name</b>	<b>Description</b>
18	ThirtyThreeSixtyFive	30/365. Interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and a 365-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31 is assumed to be a 30 and the 28 February (or 29 February for a leap year) is assumed to be a 28 (or 29). See also ISO 15022 MICO code 'A002'.
19	ThirtyActual	30/Actual. Interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and the assumed number of days in a year in a way similar to the Actual/Actual (ICMA). Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31 is assumed to be a 30 and the 28 February (or 29 February for a leap year) is assumed to be a 28 (or 29). The assumed number of days in a year is computed as the actual number of days in the coupon period multiplied by the number of interest payments in the year. See also ISO 15022 MICO code 'A003'.
20	ThirtyThreeSixtyICMA	30/360 (ICMA or basis rule). Interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30 calendar day of the same month, except for February. This means that a 31 is assumed to be a 30 and the 28 February (or 29 February for a leap year) is assumed to be a 28 (or 29). It is the most commonly used 30/360 method for non-US straight and convertible bonds issued before 1 January 1999. See also ISO 15022 MICO code 'A011'.

Code	Name	Description
21	ThirtyETwoThreeSixty	30E2/360 (Eurobond basis model two). Interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for the last day of February whose day of the month value shall be adapted to the value of the first day of the interest period if the latter is higher and if the period is one of a regular schedule. This means that a 31 is assumed to be a 30 and the 28 February of a non-leap year is assumed to be equivalent to a 29 February when the first day of the interest period is a 29, or to a 30 February when the first day of the interest period is a 30 or a 31. The 29 February of a leap year is assumed to be equivalent to a 30 February when the first day of the interest period is a 30 or a 31. Similarly, if the coupon period starts on the last day of February, it is assumed to produce only one day of interest in February as if it was starting on a 30 February when the end of the period is a 30 or a 31, or two days of interest in February when the end of the period is a 29, or three days of interest in February when it is the 28 February of a non-leap year and the end of the period is before the 29. See also ISO 15022 MICO code 'A012'.
22	ThirtyEThreeThreeSixty	30E3/360 (Eurobond basis model three). Interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that a 31 is assumed to be a 30 and the 28 February (or 29 February for a leap year) is assumed to be equivalent to a 30 February. It is a variation of the 30E/360 (or Eurobond basis) method where the last day of February is always assumed to be a 30, even if it is the last day of the maturity coupon period. See also ISO 15022 MICO code 'A013'.
99	Other	Other. For other day count method. See also ISO 15022 MICO code 'OTHR'.

Used in components: [UnderlyingPaymentStream](#)

### 171.2.6050 UnderlyingPaymentStreamDiscountType

The method of calculating discounted payment amounts

Type: [int](#)

Allowed values in PaymentStreamDiscountTypeCodeSet:

Code	Name	Description
0	Standard	Standard
1	FRA	Forward Rate Agreement (FRA)

Used in components: [UnderlyingPaymentStream](#)

### 171.2.6051 UnderlyingPaymentStreamFinalPricePaymentDateAdjusted

The adjusted final price payment date.

Type: [LocalMktDate](#)

Used in components: [UnderlyingPaymentStreamFinalPricePaymentDate](#)

### 171.2.6052 UnderlyingPaymentStreamFinalPricePaymentDate

UnderlyingPaymentStreamFinalPricePaymentDate is a subcomponent of the UnderlyingPaymentStreamPaymentDates component used to specify the final price payment date, e.g. for an equity return swap.

Name	Mult.	Type	Description
<a href="#">UnderlyingPaymentStreamFinalPricePaymentDateUnadjusted</a>	[0..1]	LocalMktDate	
<a href="#">UnderlyingPaymentStreamFinalPricePaymentDateRelativeTo</a>	[0..1]	int	
<a href="#">UnderlyingPaymentStreamFinalPricePaymentDateOffsetPeriod</a>	[0..1]	int	Conditionally required when UnderlyingPaymentStreamFinalPricePaymentDateOffsetUnit(42952) is specified.
<a href="#">UnderlyingPaymentStreamFinalPricePaymentDateOffsetUnit</a>	[0..1]	CodeSet	Conditionally required when UnderlyingPaymentStreamFinalPricePaymentDateOffsetPeriod(42951) is specified.
<a href="#">UnderlyingPaymentStreamFinalPricePaymentDateOffsetDayType</a>	[0..1]	CodeSet	
<a href="#">UnderlyingPaymentStreamFinalPricePaymentDateAdjusted</a>	[0..1]	LocalMktDate	

Used in components: [UnderlyingPaymentStreamPaymentDates](#)

**171.2.6053 UnderlyingPaymentStreamFinalPricePaymentDateOffsetDayType**

Specifies the day type of the relative final price payment date offset.

Type: **int**

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

---

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in components: [UnderlyingPaymentStreamFinalPricePaymentDate](#)

**171.2.6054 UnderlyingPaymentStreamFinalPricePaymentDateOffsetPeriod**

Time unit multiplier for the relative final price payment date offset.

Type: **int**

Used in components: [UnderlyingPaymentStreamFinalPricePaymentDate](#)

**171.2.6055 UnderlyingPaymentStreamFinalPricePaymentDateOffsetUnit**

Time unit associated with the relative final price payment date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: [UnderlyingPaymentStreamFinalPricePaymentDate](#)

#### **171.2.6056 UnderlyingPaymentStreamFinalPricePaymentDateRelativeTo**

Specifies the anchor date when the final price payment date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: **int**

Used in components: **UnderlyingPaymentStreamFinalPricePaymentDate**

#### **171.2.6057 UnderlyingPaymentStreamFinalPricePaymentDateUnadjusted**

The unadjusted final price payment date.

Type: **LocalMktDate**

Used in components: **UnderlyingPaymentStreamFinalPricePaymentDate**

#### **171.2.6058 UnderlyingPaymentStreamFinalPrincipalExchangeIndicator**

Indicates whether there is a final exchange of principal on the termination date.

Type: **Boolean**

Used in components: **UnderlyingPaymentStream**

#### **171.2.6059 UnderlyingPaymentStreamFinalRate**

The floating rate determined at the final reset. The rate is expressed in decimal form, e.g. 5% is represented as 0.05.

Type: **Percentage**

Used in components: **UnderlyingPaymentStreamFloatingRate**

#### **171.2.6060 UnderlyingPaymentStreamFinalRatePrecision**

Specifies the rounding precision in terms of a number of decimal places. Note how a percentage rate rounding of 5 decimal places is expressed as a rounding precision of 7.

Type: **int**

Used in components: **UnderlyingPaymentStreamFloatingRate**

**171.2.6061 UnderlyingPaymentStreamFinalRateRoundingDirection**

Specifies the rounding direction.

Type: **char**

Allowed values in RoundingDirectionCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	RoundToNearest	Round to nearest
1	RoundDown	Round down
2	RoundUp	Round up

---

Used in components: **UnderlyingPaymentStreamFloatingRate**

**171.2.6062 UnderlyingPaymentStreamFirstObservationDateAdjusted**

The adjusted initial price observation date.

Type: **LocalMktDate**

Used in components: **UnderlyingPaymentStreamFloatingRate**

**171.2.6063 UnderlyingPaymentStreamFirstObservationDateOffsetDayType**

Specifies the day type of the initial price observation date offset.

Type: **int**

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in components: **UnderlyingPaymentStreamFloatingRate**

**171.2.6064 UnderlyingPaymentStreamFirstObservationDateOffsetPeriod**

Time unit multiplier for the relative first observation date offset.

Type: **int**

Used in components: **UnderlyingPaymentStreamFloatingRate**

**171.2.6065 UnderlyingPaymentStreamFirstObservationDateOffsetUnit**

Time unit associated with the relative first observation date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: **UnderlyingPaymentStreamFloatingRate**

**171.2.6066 UnderlyingPaymentStreamFirstObservationDateRelativeTo**

Specifies the anchor date when the initial price observation date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: **int**

Used in components: **UnderlyingPaymentStreamFloatingRate**

**171.2.6067 UnderlyingPaymentStreamFirstObservationDateUnadjusted**

The unadjusted initial price observation date.

Type: **LocalMktDate**

Used in components: **UnderlyingPaymentStreamFloatingRate**

**171.2.6068 UnderlyingPaymentStreamFirstPaymentDateUnadjusted**

The unadjusted first payment date.

Type: [LocalMktDate](#)

Used in components: [UnderlyingPaymentStreamPaymentDates](#)

**171.2.6069 UnderlyingPaymentStreamFixedAmount**

The underlying payment stream's fixed payment amount. In CDS an alternative to UnderlyingPaymentStreamRate(40615).

Type: [Amt](#)

Used in components: [UnderlyingPaymentStreamFixedRate](#)

**171.2.6070 UnderlyingPaymentStreamFixedAmountUnitOfMeasure**

Fixed payment amount unit of measure (UOM).

Type: [String](#)

Allowed values in UnitOfMeasureCodeSet:

Code	Name	Description
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet
Bbl	Barrels	Barrels. Equal to 42 US gallons
CBM	CubicMeters	Cubic Meters
BDFT	BoardFeet	Board feet. Equal to 144 cubic inches
GJ	Gigajoules	gigajoules
Bu	Bushels	Bushels
kHR	HeatRate	Heat rate. The number of BTUs required to produce one kilowatt hour of electricity, typically 3,412.14 BTUs per 1 kWh.
Ccy	Currency	Amount of currency
kWh	KilowattHours	Kilowatt hours
CDD	CoolingDegreeDay	Cooling degree day
MHR	MegaHeatRate	Mega heat rate. The number of million BTUs required to produce one megawatt hour of electricity, typically 3.41214 million BTUs per 1 MWh.

<b>Code</b>	<b>Name</b>	<b>Description</b>

Used in components: [UnderlyingPaymentStreamFixedRate](#)

### 171.2.6071 UnderlyingPaymentStreamFixedRate

UnderlyingPaymentStreamFixedRate is a subcomponent of the UnderlyingPaymentStream component used to report the fixed rate or fixed payment amount of the stream.

Name	Mult.	Type	Description
<a href="#">UnderlyingPaymentStreamRate</a>	[0..1]	Percentage	Mutually exclusive with UnderlyingPaymentStreamFixedAmount(40616).
<a href="#">UnderlyingPaymentStream-FixedAmount</a>	[0..1]	Amt	Mutually exclusive with UnderlyingPaymentStreamRate(40615).
<a href="#">UnderlyingPaymentStreamRateOrAmountCurrency</a>	[0..1]	Currency	
<a href="#">UnderlyingPaymentStream-FixedAmountUnitOfMeasure</a>	[0..1]	CodeSet	
<a href="#">UnderlyingPaymentStreamTotal-FixedAmount</a>	[0..1]	Amt	
<a href="#">UnderlyingPaymentStreamFutureValueNotional</a>	[0..1]	Amt	
<a href="#">UnderlyingPaymentStreamFutureValueDateAdjusted</a>	[0..1]	LocalMktDate	
<a href="#">UnderlyingPaymentStreamWorldScaleRate</a>	[0..1]	float	
<a href="#">UnderlyingPaymentStreamContract-Price</a>	[0..1]	Price	
<a href="#">UnderlyingPaymentStreamContract-PriceCurrency</a>	[0..1]	Currency	

Used in components: [UnderlyingPaymentStream](#)

**171.2.6072 UnderlyingPaymentStreamFixingDate**

The fixing date. Type of date is specified in UnderlyingPaymentStreamFixingDateType(42957).

Type: [LocalMktDate](#)

Used in groups: [UnderlyingPaymentStreamFixingDateGrp](#)

**171.2.6073 UnderlyingPaymentStreamFixingDateAdjusted**

The adjusted fixing date.

Type: [LocalMktDate](#)

Used in components: [UnderlyingPaymentStreamResetDates](#)

**171.2.6074 UnderlyingPaymentStreamFixingDateBusinessCenter**

The business center calendar used to adjust the payment stream's fixing date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in groups: [UnderlyingPaymentStreamFixingDateBusinessCenterGrp](#)

**171.2.6075 UnderlyingPaymentStreamFixingDateBusinessCenterGrp**

UnderlyingPaymentStreamFixingDateBusinessCenterGrp is a repeating subcomponent within the UnderlyingPaymentStreamResetDates component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the UnderlyingDateAdjustment component within the UnderlyingInstrument component.

---

Name	Mult.	Type	Description
<a href="#">NoUnderlyingPaymentStreamFixingDateBusinessCenters</a>	[1..1]	NumInGroup	
<a href="#">UnderlyingPaymentStreamFixingDateBusinessCenter</a>	[0..1]	String	Required if <a href="#">NoUnderlyingPaymentStreamFixingDateBusinessCenters</a> (40972) > 0.

Used in components: [UnderlyingPaymentStreamResetDates](#)

### 171.2.6076 UnderlyingPaymentStreamFixingDateBusinessDayConvention

The business day convention used to adjust the payment stream's fixing date. Used only to override the business day convention specified in the UnderlyingDateAdjustment component within the UnderlyingInstrument component.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [UnderlyingPaymentStreamResetDates](#)

### 171.2.6077 UnderlyingPaymentStreamFixingDateGrp

UnderlyingPaymentStreamFixingDateGrp is a subcomponent of the UnderlyingPaymentStreamResetDates component used to specify predetermined fixing dates.

Name	Mult.	Type	Description
<a href="#">NoUnderlyingPaymentStreamFixingDates</a>	[1..1]	NumInGroup	
<a href="#">UnderlyingPaymentStreamFixingDate</a>	[0..1]	LocalMktDate	Required if <a href="#">NoUnderlyingPaymentStreamFixingDates(42955)</a> > 0.
<a href="#">UnderlyingPaymentStreamFixingDate-Type</a>	[0..1]	CodeSet	When specified it applies not only to the current date instance but to all subsequent date instances in the group until overridden when a new type is specified.

Used in components: [UnderlyingPaymentStreamResetDates](#)

**171.2.6078 UnderlyingPaymentStreamFixingDateOffsetDayType**

Specifies the day type of the relative fixing date offset.

Type: **int**

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

---

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in components: [UnderlyingPaymentStreamResetDates](#)

**171.2.6079 UnderlyingPaymentStreamFixingDateOffsetPeriod**

Time unit multiplier for the relative fixing date offset.

Type: **int**

Used in components: [UnderlyingPaymentStreamResetDates](#)

**171.2.6080 UnderlyingPaymentStreamFixingDateOffsetUnit**

Time unit associated with the relative fixing date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: [UnderlyingPaymentStreamResetDates](#)

**171.2.6081 UnderlyingPaymentStreamFixingDateRelativeTo**

Specifies the anchor date when the fixing date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: **int**

Used in components: **UnderlyingPaymentStreamResetDates**

**171.2.6082 UnderlyingPaymentStreamFixingDateType**

Specifies the type of fixing date (e.g. adjusted for holidays).

Type: **int**

Allowed values in NonDeliverableFixingDateTypeCodeSet:

Code	Name	Description
0	Unadjusted	Unadjusted
1	Adjusted	Adjusted

Used in groups: **UnderlyingPaymentStreamFixingDateGrp**

**171.2.6083 UnderlyingPaymentStreamFlatRateAmount**

Specifies the actual monetary value of the flat rate when UnderlyingPaymentStreamFlatRateIndicator(41897) = 'Y'.

Type: **Amt**

Used in components: **UnderlyingPaymentStream**

**171.2.6084 UnderlyingPaymentStreamFlatRateCurrency**

Specifies the currency of the actual flat rate. Uses ISO 4217 currency codes.

Type: **Currency**

Used in components: **UnderlyingPaymentStream**

### 171.2.6085 UnderlyingPaymentStreamFlatRateIndicator

When this element is specified and set to 'Y', the Flat Rate is the New Worldwide Tanker Nominal Freight Scale for the Freight Index Route taken at the Trade Date of the transaction "Fixed". If 'N' it is taken on each Pricing Date "Floating".

Type: **Boolean**

Used in components: **UnderlyingPaymentStream**

### 171.2.6086 UnderlyingPaymentStreamFloatingRate

UnderlyingPaymentStreamFloatingRate is a subcomponent of the UnderlyingPaymentStream component used to report the floating rate attributes of the stream.

Name	Mult.	Type	Description
UnderlyingPaymentStreamRateIndex	[0..1]	String	
UnderlyingPaymentStreamRateIndex-Source	[0..1]	CodeSet	
UnderlyingPaymentStreamRateIndexID	[0..1]	String	Conditionally required when UnderlyingPaymentStreamRateIndexIDSource(43093) is specified.
UnderlyingPaymentStreamRateIndexIDSource	[0..1]	CodeSet	Conditionally required when UnderlyingPaymentStreamRateIndexID(43092) is specified.
UnderlyingPaymentStreamRateIndex-CurveUnit	[0..1]	CodeSet	Conditionally required when UnderlyingPaymentStreamRateIndexCurvePeriod(40623) is specified.
UnderlyingPaymentStreamRateIndex-CurvePeriod	[0..1]	int	Conditionally required when UnderlyingPaymentStreamRateIndexCurveUnit(40622) is specified.
UnderlyingPaymentStreamRateIndex2	[0..1]	String	
UnderlyingPaymentStreamRateIndex2Source	[0..1]	CodeSet	
UnderlyingPaymentStreamRateIndex2ID	[0..1]	String	Conditionally required when UnderlyingPaymentStreamRateIndex2IDSource(43123) is specified.
UnderlyingPaymentStreamRateIndex2IDSource	[0..1]	CodeSet	Conditionally required when UnderlyingPaymentStreamRateIndex2ID(43122) is specified.

Name	Mult.	Type	Description
UnderlyingPaymentStreamRateIndex2CurveUnit	[0..1]	CodeSet	Conditionally required when UnderlyingPaymentStreamRateIndex2CurvePeriod(41912) is specified.
UnderlyingPaymentStreamRateIndex2CurvePeriod	[0..1]	int	Conditionally required when UnderlyingPaymentStreamRateIndex2CurveUnit(41911) is specified.
UnderlyingPaymentStreamRateIndexLocation	[0..1]	String	
UnderlyingPaymentStreamRateIndexLevel	[0..1]	Qty	
UnderlyingPaymentStreamRateIndexUnitOfMeasure	[0..1]	CodeSet	
UnderlyingPaymentStreamSettlLevel	[0..1]	CodeSet	
UnderlyingPaymentStreamReferenceLevel	[0..1]	Qty	
UnderlyingPaymentStreamReferenceLevelUnitOfMeasure	[0..1]	CodeSet	
UnderlyingPaymentStreamReferenceLevelEqualsZeroIndicator	[0..1]	Boolean	
UnderlyingPaymentStreamRateMultiplier	[0..1]	float	
UnderlyingPaymentStreamRateSpread	[0..1]	PriceOffset	
UnderlyingPaymentStreamRateSpreadCurrency	[0..1]	Currency	
UnderlyingPaymentStreamRateSpreadUnitOfMeasure	[0..1]	CodeSet	
UnderlyingPaymentStreamRateConversionFactor	[0..1]	float	
UnderlyingPaymentStreamRateSpreadType	[0..1]	CodeSet	
UnderlyingPaymentStreamRateSpreadPositionType	[0..1]	CodeSet	
UnderlyingPaymentStreamRateTreatment	[0..1]	CodeSet	
UnderlyingPaymentStreamCapRate	[0..1]	Percentage	
UnderlyingPaymentStreamCapRateBuySide	[0..1]	CodeSet	
UnderlyingPaymentStreamCapRateSellSide	[0..1]	CodeSet	

Name	Mult.	Type	Description
UnderlyingPaymentStreamFloorRate	[0..1]	Percentage	
UnderlyingPaymentStreamFloorRate-BuySide	[0..1]	CodeSet	
UnderlyingPaymentStreamFloorRate-SellSide	[0..1]	CodeSet	
UnderlyingPaymentStreamInitialRate	[0..1]	Percentage	
UnderlyingPaymentStreamLastResetRate	[0..1]	Percentage	
UnderlyingPaymentStreamFinalRate	[0..1]	Percentage	
UnderlyingPaymentStreamFinalRateRoundingDirection	[0..1]	CodeSet	
UnderlyingPaymentStreamFinalRatePrecision	[0..1]	int	
UnderlyingPaymentStreamAveragingMethod	[0..1]	CodeSet	
UnderlyingPaymentStreamNegativeRateTreatment	[0..1]	CodeSet	
UnderlyingPaymentStreamCalculationLagPeriod	[0..1]	int	Conditionally required when UnderlyingPaymentStreamCalculationLagUnit(41927) is specified.
UnderlyingPaymentStreamCalculationLagUnit	[0..1]	CodeSet	Conditionally required when UnderlyingPaymentStreamCalculationLagPeriod(41926) is specified.
UnderlyingPaymentStreamFirstObservationDateUnadjusted	[0..1]	LocalMktDate	
UnderlyingPaymentStreamFirstObservationDateRelativeTo	[0..1]	int	
UnderlyingPaymentStreamFirstObservationDateOffsetDayType	[0..1]	CodeSet	
UnderlyingPaymentStreamFirstObservationDateOffsetPeriod	[0..1]	int	Conditionally required when UnderlyingPaymentStreamFirstObservationOffsetUnit(41929) is specified.
UnderlyingPaymentStreamFirstObservationDateOffsetUnit	[0..1]	CodeSet	Conditionally required when UnderlyingPaymentStreamFirstObservationOffsetPeriod(41928) is specified.
UnderlyingPaymentStreamFirstObservationDateAdjusted	[0..1]	LocalMktDate	
UnderlyingPaymentStreamPricingDayType	[0..1]	CodeSet	

Name	Mult.	Type	Description
UnderlyingPaymentStreamPricingDay-Distribution	[0..1]	CodeSet	
UnderlyingPaymentStreamPricingDay-Count	[0..1]	int	
UnderlyingPaymentStreamPricing-BusinessCalendar	[0..1]	String	
UnderlyingPaymentStreamPricing-BusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified value would be specific to this instance of pricing dates.
UnderlyingPaymentStreamPricing-BusinessCenterGrp	[0..*]	Group	
UnderlyingPaymentStreamPricingDay-Grp	[0..*]	Group	
UnderlyingPaymentStreamPricing-DateGrp	[0..*]	Group	
UnderlyingPaymentStreamInflation-LagPeriod	[0..1]	int	Conditionally required when UnderlyingPaymentStreamInflationLagUnit(40640) is specified.
UnderlyingPaymentStreamInflationLagUnit	[0..1]	CodeSet	Conditionally required when UnderlyingPaymentStreamInflationLagPeriod(40639) is specified.
UnderlyingPaymentStreamInflation-LagDayType	[0..1]	CodeSet	
UnderlyingPaymentStreamInflationInterpolationMethod	[0..1]	CodeSet	
UnderlyingPaymentStreamInflationIndexSource	[0..1]	CodeSet	
UnderlyingPaymentStreamInflation-PublicationSource	[0..1]	String	
UnderlyingPaymentStreamInflationInitialIndexLevel	[0..1]	float	
UnderlyingPaymentStreamInflation-FallbackBondApplicable	[0..1]	Boolean	
UnderlyingPaymentStreamFRADiscounting	[0..1]	CodeSet	
UnderlyingPaymentStreamUnderlier-RefID	[0..1]	String	
UnderlyingPaymentStreamFormula	[0..1]	Component	

Name	Mult.	Type	Description
UnderlyingDividendConditions	[0..1]	Component	
UnderlyingReturnRateNotionalReset	[0..1]	Boolean	
UnderlyingReturnRateGrp	[0..*]	Group	
UnderlyingPaymentStreamLinkInitialLevel	[0..1]	Price	
UnderlyingPaymentStreamLinkClosingLevelIndicator	[0..1]	Boolean	
UnderlyingPaymentStreamLinkExpiringLevelIndicator	[0..1]	Boolean	
UnderlyingPaymentStreamLinkEstimatedTradingDays	[0..1]	int	
UnderlyingPaymentStreamLinkStrikePrice	[0..1]	Price	
UnderlyingPaymentStreamLinkStrikePriceType	[0..1]	CodeSet	
UnderlyingPaymentStreamLinkMaximumBoundary	[0..1]	float	
UnderlyingPaymentStreamLinkMinimumBoundary	[0..1]	float	
UnderlyingPaymentStreamLinkNumberOfDataSeries	[0..1]	int	
UnderlyingPaymentStreamVarianceUnadjustedCap	[0..1]	float	
UnderlyingPaymentStreamRealizedVarianceMethod	[0..1]	CodeSet	
UnderlyingPaymentStreamDaysAdjustmentIndicator	[0..1]	Boolean	
UnderlyingPaymentStreamNearestExchangeContractRefID	[0..1]	String	
UnderlyingPaymentStreamVegaNotionalAmount	[0..1]	float	

Used in components: [UnderlyingPaymentStream](#)

**171.2.6087 UnderlyingPaymentStreamFloorRate**

The floor rate, if any, which applies to the floating rate. The floor rate (strike) is only required where the floating rate on a swap stream is floored at a certain strike level. The floor rate is assumed to be exclusive of any spread and is a per annum rate, expressed as a decimal. A floor rate of 5% would be represented as 0.05.

Type: **Percentage**

Used in components: **UnderlyingPaymentStreamFloatingRate**

**171.2.6088 UnderlyingPaymentStreamFloorRateBuySide**

Reference to the buyer of the floor rate option through its trade side.

Type: **int**

Allowed values in PaymentStreamFloorRateBuySideCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

---

Used in components: **UnderlyingPaymentStreamFloatingRate**

**171.2.6089 UnderlyingPaymentStreamFloorRateSellSide**

Reference to the seller of the floor rate option through its trade side.

Type: **int**

Allowed values in PaymentStreamFloorRateBuySideCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

---

Used in components: **UnderlyingPaymentStreamFloatingRate**

**171.2.6090 UnderlyingPaymentStreamFormula**

Contains an XML representation of the formula. Defined for flexibility in choice of language (MathML, OpenMath or text).

Type: [XMLData](#)

Used in groups: [UnderlyingPaymentStreamFormulaMathGrp](#)

**171.2.6091 UnderlyingPaymentStreamFormula**

UnderlyingPaymentStreamFormula is a subcomponent of the UnderlyingPaymentStreamFloatingRate component used to report the parameters for determining the floating rate of the stream e.g. for equity swaps.

---

Name	Mult.	Type	Description
<a href="#">UnderlyingPaymentStreamFormulaCurrency</a>	[0..1]	Currency	
<a href="#">UnderlyingPaymentStreamFormulaCurrencyDeterminationMethod</a>	[0..1]	String	
<a href="#">UnderlyingPaymentStreamFormulaReferenceAmount</a>	[0..1]	int	
<a href="#">UnderlyingPaymentStreamFormulaMathGrp</a>	[0..*]	Group	
<a href="#">UnderlyingPaymentStreamFormulaImage</a>	[0..1]	Component	

---

Used in components: [UnderlyingPaymentStreamFloatingRate](#)

**171.2.6092 UnderlyingPaymentStreamFormulaCurrency**

The currency in which the formula amount is denominated. Uses ISO 4217 currency codes.

Type: [Currency](#)

Used in components: [UnderlyingPaymentStreamFormula](#)

**171.2.6093 UnderlyingPaymentStreamFormulaCurrencyDeterminationMethod**

Specifies the method according to which the formula amount currency is determined.

See <http://www.fpml.org/coding-scheme/determination-method> for values.

Type: **String**

Used in components: **UnderlyingPaymentStreamFormula**

#### **171.2.6094 UnderlyingPaymentStreamFormulaDesc**

A description of the math formula in UnderlyingPaymentStreamFormula(42982).

Type: **String**

Used in groups: **UnderlyingPaymentStreamFormulaMathGrp**

#### **171.2.6095 UnderlyingPaymentStreamFormulImage**

Image of the formula image when represented through an encoded clip in base64Binary.

Type: **data**

Used in components: **UnderlyingPaymentStreamFormulImage**

#### **171.2.6096 UnderlyingPaymentStreamFormulImage**

UnderlyingPaymentStreamFormulImage is a subcomponent of the UnderlyingPaymentStreamFormula component used to include a base64Binary-encoded image clip of the formula.

---

<b>Name</b>	<b>Mult.</b>	<b>Type</b>	<b>Description</b>
<b>UnderlyingPaymentStreamFormulImageLength</b>	[0..1]	Length	Conditionally required when UnderlyingPaymentStreamFormulImage(42948) is specified.
<b>UnderlyingPaymentStreamFormulImage</b>	[0..1]	data	Conditionally required when UnderlyingPaymentStreamFormulImageLength(42947) is specified.

---

Used in components: **UnderlyingPaymentStreamFormula**

#### **171.2.6097 UnderlyingPaymentStreamFormulImageLength**

Length in bytes of the UnderlyingPaymentStreamFormulImage(42948) field.

Type: **Length**

Used in components: **UnderlyingPaymentStreamFormulaImage**

### **171.2.6098 UnderlyingPaymentStreamFormulaLength**

Byte length of encoded (non-ASCII characters) UnderlyingPaymentStreamFormula(42982) field.

Type: **Length**

Used in groups: **UnderlyingPaymentStreamFormulaMathGrp**

### **171.2.6099 UnderlyingPaymentStreamFormulaMathGrp**

UnderlyingPaymentStreamFormulaMathGrp is a repeating subcomponent within the UnderlyingPaymentStreamFormula component. It is used to specify the set of formulas, sub-formulas and descriptions from which the rate is derived.

<b>Name</b>	<b>Mult.</b>	<b>Type</b>	<b>Description</b>
<b>NoUnderlyingPaymentStreamFormulas</b>	[1..1]	NumInGroup	
<b>UnderlyingPaymentStreamFormulaLength</b>	[0..1]	Length	Required if NoUnderlyingPaymentStreamFormulas(42981) > 0
<b>UnderlyingPaymentStreamFormula</b>	[0..1]	XMLData	Required if NoUnderlyingPaymentStreamFormulas(42981) > 0.
<b>UnderlyingPaymentStreamFormulaDesc</b>	[0..1]	String	

Used in components: **UnderlyingPaymentStreamFormula**

### **171.2.6100 UnderlyingPaymentStreamFormulaReferenceAmount**

Specifies the reference amount when this term either corresponds to the standard ISDA Definition (either the 2002 Equity Definition for the Equity Amount, or the 2000 Definition for the Interest Amount), or refers to a term defined elsewhere in the swap document.

See [http://www.fixtradingcommunity.org/codelists#Payment\\_Amount\\_Relative\\_To](http://www.fixtradingcommunity.org/codelists#Payment_Amount_Relative_To) for code list of reference amounts.

Type: **int**

Used in components: **UnderlyingPaymentStreamFormula**

### **171.2.6101 UnderlyingPaymentStreamFRADiscounting**

The method of Forward Rate Agreement (FRA) discounting, if any, that will apply.

Type: **int**

Allowed values in PaymentStreamFRADiscountingCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	None	None
1	ISDA	International Swaps and Derivatives Association (ISDA)
2	AFMA	Australian Financial Markets Association (AFMA)

Used in components: **UnderlyingPaymentStreamFloatingRate**

### **171.2.6102 UnderlyingPaymentStreamFutureValueDateAdjusted**

The adjusted value date of the future value amount.

Type: **LocalMktDate**

Used in components: **UnderlyingPaymentStreamFixedRate**

### **171.2.6103 UnderlyingPaymentStreamFutureValueNotional**

The future value notional is normally only required for certain non-deliverable interest rate swaps (e.g. Brazillian Real (BRL) vs. CETIP Interbank Deposit Rate (CDI)). The value is calculated as follows: Future Value Notional = Notional Amount \* (1 + Fixed Rate) ^ (Fixed Rate Day Count Fraction). The currency is the same as the stream notional.

Type: **Amt**

Used in components: **UnderlyingPaymentStreamFixedRate**

**171.2.6104 UnderlyingPaymentStreamInflationFallbackBondApplicable**

Indicates whether a fallback bond as defined in the 2006 ISDA Inflation Derivatives Definitions, sections 1.3 and 1.8, is applicable or not. If not specified, the default value is "Y" (True/Yes).

Type: **Boolean**

Used in components: **UnderlyingPaymentStreamFloatingRate**

**171.2.6105 UnderlyingPaymentStreamInflationIndexSource**

The inflation index reference source.

Type: **int**

Allowed values in PaymentStreamRateIndexSourceCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Bloomberg	Bloomberg
1	Reuters	Reuters
2	Telerate	Telerate
99	Other	Other

---

Used in components: **UnderlyingPaymentStreamFloatingRate**

**171.2.6106 UnderlyingPaymentStreamInflationInitialIndexLevel**

Initial known index level for the first calculation period.

Type: **float**

Used in components: **UnderlyingPaymentStreamFloatingRate**

**171.2.6107 UnderlyingPaymentStreamInflationInterpolationMethod**

The method used when calculating the Inflation Index Level from multiple points - the most common is Linear.

Type: **int**

Allowed values in PaymentStreamInflationInterpolationMethodCodeSet:

---

Code	Name	Description
0	None	None
1	LinearZeroYield	Linear zero yield

---

Used in components: [UnderlyingPaymentStreamFloatingRate](#)

### **171.2.6108 UnderlyingPaymentStreamInflationLagDayType**

The inflation lag period day type.

Type: [int](#)

Allowed values in PaymentStreamInflationLagDayTypeCodeSet:

---

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in components: [UnderlyingPaymentStreamFloatingRate](#)

### **171.2.6109 UnderlyingPaymentStreamInflationLagPeriod**

Time unit multiplier for the inflation lag period. The lag period is the offsetting period from the payment date which determines the reference period for which the inflation index is observed.

Type: [int](#)

Used in components: [UnderlyingPaymentStreamFloatingRate](#)

### **171.2.6110 UnderlyingPaymentStreamInflationLagUnit**

Time unit associated with the inflation lag period.

Type: [String](#)

Allowed values in PaymentStreamInflationLagUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: [UnderlyingPaymentStreamFloatingRate](#)

#### **171.2.6111 UnderlyingPaymentStreamInflationPublicationSource**

The current main publication source such as relevant web site or a government body.

Type: [String](#)

Used in components: [UnderlyingPaymentStreamFloatingRate](#)

#### **171.2.6112 UnderlyingPaymentStreamInitialFixingDateAdjusted**

The adjusted initial fixing date.

Type: [LocalMktDate](#)

Used in components: [UnderlyingPaymentStreamResetDates](#)

#### **171.2.6113 UnderlyingPaymentStreamInitialFixingDateBusinessCenter**

The business center calendar used to adjust the payment stream's initial fixing date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in groups: [UnderlyingPaymentStreamInitialFixingDateBusinessCenterGrp](#)

#### **171.2.6114 UnderlyingPaymentStreamInitialFixingDateBusinessCenterGrp**

[UnderlyingPaymentStreamInitialFixingDateBusinessCenterGrp](#) is a repeating subcomponent within the [UnderlyingPaymentStreamResetDates](#) component. It is used to specify the set of business centers

whose calendars drive the date adjustment. Used only to override the business centers defined in the UnderlyingDateAdjustment component within the UnderlyingInstrument component.

Name	Mult.	Type	Description
NoUnderlyingPaymentStreamInitialFixingDateBusinessCenters	[1..1]	NumInGroup	
UnderlyingPaymentStreamInitialFixingDateBusinessCenter	[0..1]	String	Required if NoUnderlyingPaymentStreamInitialFixingDateBusinessCenters(40971) > 0.

Used in components: [UnderlyingPaymentStreamResetDates](#)

### 171.2.6115 UnderlyingPaymentStreamInitialFixingDateBusinessDayConvention

The business day convention used to adjust the payment stream's initial fixing date. Used only to override the business day convention specified in the UnderlyingDateAdjustment component within the UnderlyingInstrument component.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [UnderlyingPaymentStreamResetDates](#)

### 171.2.6116 UnderlyingPaymentStreamInitialFixingDateOffsetDayType

Specifies the day type of the relative initial fixing date offset.

Type: **int**

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: [UnderlyingPaymentStreamResetDates](#)

### 171.2.6117 UnderlyingPaymentStreamInitialFixingDateOffsetPeriod

Time unit multiplier for the relative initial fixing date offset.

Type: [int](#)

Used in components: [UnderlyingPaymentStreamResetDates](#)

### 171.2.6118 UnderlyingPaymentStreamInitialFixingDateOffsetUnit

Time unit associated with the relative initial fixing date offset.

Type: [String](#)

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: [UnderlyingPaymentStreamResetDates](#)

**171.2.6119 UnderlyingPaymentStreamInitialFixingDateRelativeTo**

Specifies the anchor date when the initial fixing date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: **int**

Used in components: **UnderlyingPaymentStreamResetDates**

**171.2.6120 UnderlyingPaymentStreamInitialPrincipalExchangeIndicator**

Indicates whether there is an initial exchange of principal on the effective date.

Type: **Boolean**

Used in components: **UnderlyingPaymentStream**

**171.2.6121 UnderlyingPaymentStreamInitialRate**

The initial floating rate reset agreed between the principal parties involved in the trade. This is assumed to be the first required reset rate for the first regular calculation period. It should only be included when the rate is not equal to the rate published on the source implied by the floating rate index. An initial rate of 5% would be represented as 0.05.

Type: **Percentage**

Used in components: **UnderlyingPaymentStreamFloatingRate**

**171.2.6122 UnderlyingPaymentStreamInterimPrincipalExchangeIndicator**

Indicates whether there are intermediate or interim exchanges of principal during the term of the swap.

Type: **Boolean**

Used in components: **UnderlyingPaymentStream**

**171.2.6123 UnderlyingPaymentStreamInterpolationMethod**

The method used when calculating the index rate from multiple points on the curve. The most common is linear method.

Type: **int**

Allowed values in PaymentStreamInflationInterpolationMethodCodeSet:

---

Code	Name	Description
0	None	None
1	LinearZeroYield	Linear zero yield

---

Used in components: [UnderlyingPaymentStream](#)

### **171.2.6124 UnderlyingPaymentStreamInterpolationPeriod**

Defines applicable periods for interpolation.

Type: **int**

Allowed values in PaymentStreamInterpolationPeriodCodeSet:

---

Code	Name	Description
0	Initial	Initial. Interpolation is applicable to the initial period only.
1	InitialAndFinal	Initial and final. Interpolation is applicable to the initial and final periods only.
2	Final	Final. Interpolation is applicable to the final period only.
3	AnyPeriod	Any period. Interpolation is applicable to any non-standard period.

---

Used in components: [UnderlyingPaymentStream](#)

### **171.2.6125 UnderlyingPaymentStreamLastRegularPaymentDateUnadjusted**

The unadjusted last regular payment date.

Type: **LocalMktDate**

Used in components: [UnderlyingPaymentStreamPaymentDates](#)

#### **171.2.6126 UnderlyingPaymentStreamLastResetRate**

The floating rate determined at the most recent reset. The rate is expressed in decimal form, e.g. 5% is represented as 0.05.

Type: **Percentage**

Used in components: **UnderlyingPaymentStreamFloatingRate**

#### **171.2.6127 UnderlyingPaymentStreamLinkClosingLevelIndicator**

Indicates whether the correlation or variance swap contract will ("Y") strike off the closing level of the default exchange traded contract or not.

Type: **Boolean**

Used in components: **UnderlyingPaymentStreamFloatingRate**

#### **171.2.6128 UnderlyingPaymentStreamLinkEstimatedTradingDays**

The expected number of trading days in the variance or correlation swap stream.

Type: **int**

Used in components: **UnderlyingPaymentStreamFloatingRate**

#### **171.2.6129 UnderlyingPaymentStreamLinkExpiringLevelIndicator**

Indicates whether the correlation or variance swap contract will ("Y") strike off the expiring level of the default exchange traded contract or not.

Type: **Boolean**

Used in components: **UnderlyingPaymentStreamFloatingRate**

#### **171.2.6130 UnderlyingPaymentStreamLinkInitialLevel**

Price level at which the correlation or variance swap contract will strike.

Type: **Price**

Used in components: **UnderlyingPaymentStreamFloatingRate**

**171.2.6131 UnderlyingPaymentStreamLinkMaximumBoundary**

Specifies the maximum or upper boundary for variance or strike determination.

For a variation swap stream all observations above this price level will be excluded from the variance calculation.

For a correlation swap stream the maximum boundary is a percentage of the strike price.

Type: **float**

Used in components: **UnderlyingPaymentStreamFloatingRate**

**171.2.6132 UnderlyingPaymentStreamLinkMinimumBoundary**

Specifies the minimum or lower boundary for variance or strike determination.

For a variation swap stream all observations below this price level will be excluded from the variance calculation.

For a correlation swap stream the minimum boundary is a percentage of the strike price.

Type: **float**

Used in components: **UnderlyingPaymentStreamFloatingRate**

**171.2.6133 UnderlyingPaymentStreamLinkNumberOfDataSeries**

Number of data series for a correlation swap. Normal market practice is that correlation data sets are drawn from geographic market areas, such as America, Europe and Asia Pacific. Each of these geographic areas will have its own data series to avoid contagion.

Type: **int**

Used in components: **UnderlyingPaymentStreamFloatingRate**

**171.2.6134 UnderlyingPaymentStreamLinkStrikePrice**

The strike price of a correlation or variance swap stream.

Type: **Price**

Used in components: **UnderlyingPaymentStreamFloatingRate**

**171.2.6135 UnderlyingPaymentStreamLinkStrikePriceType**

For a variance swap specifies how UnderlyingPaymentStreamLinkStrikePrice(42968) is expressed.

Type: **int**

Allowed values in PaymentStreamLinkStrikePriceTypeCodeSet:

Code	Name	Description
0	Volatility	Volatility
1	Variance	Variance

Used in components: **UnderlyingPaymentStreamFloatingRate**

**171.2.6136 UnderlyingPaymentStreamMarketRate**

Used only for credit index trade. This contains the credit spread ("fair value") at which the trade was executed. The market rate varies over the life of the index depending on market conditions. This is the price of the index as quoted by trading desks.

Type: **int**

Used in components: **UnderlyingPaymentStream**

**171.2.6137 UnderlyingPaymentStreamMasterAgreementPaymentDatesIndicator**

When set to 'Y', it indicates that payment dates are specified in the relevant master agreement.

Type: **Boolean**

Used in components: **UnderlyingPaymentStreamPaymentDates**

**171.2.6138 UnderlyingPaymentStreamMaximumPaymentAmount**

Specifies the limit on the total payment amount.

Type: **Amt**

Used in components: **UnderlyingPaymentStream**

#### **171.2.6139 UnderlyingPaymentStreamMaximumPaymentCurrency**

Specifies the currency of total payment amount limit. Uses ISO 4217 currency codes.

Type: **Currency**

Used in components: **UnderlyingPaymentStream**

#### **171.2.6140 UnderlyingPaymentStreamMaximumTransactionAmount**

Specifies the limit on the payment amount that goes out in any particular calculation period.

Type: **Amt**

Used in components: **UnderlyingPaymentStream**

#### **171.2.6141 UnderlyingPaymentStreamMaximumTransactionCurrency**

Specifies the currency of the period payment amount limit. Uses ISO 4217 currency codes.

Type: **Currency**

Used in components: **UnderlyingPaymentStream**

#### **171.2.6142 UnderlyingPaymentStreamNearestExchangeContractRefID**

References a contract listed on an exchange through the instrument's UnderlyingSecurityID(309) which must be fully specified in an instance of the UnderlyingInstrument component.

Type: **String**

Used in components: **UnderlyingPaymentStreamFloatingRate**

#### **171.2.6143 UnderlyingPaymentStreamNegativeRateTreatment**

The specification of any provisions for calculating payment obligations when a floating rate is negative (either due to a quoted negative floating rate or by operation of a spread that is subtracted from the floating rate).

Type: **int**

Allowed values in PaymentStreamNegativeRateTreatmentCodeSet:

Code	Name	Description
0	ZeroInterestRateMethod	Zero interest rate method
1	NegativeInterestRateMethod	Negative interest rate method

Used in components: [UnderlyingPaymentStreamFloatingRate](#)

#### 171.2.6144 UnderlyingPaymentStreamNonDeliverableFixingDateGrp

UnderlyingPaymentStreamNonDeliverableFixingDate is a subcomponent of the UnderlyingPaymentStreamNonDeliverableSettlTerms component used to specify predetermined fixing dates.

Name	Mult.	Type	Description
<a href="#">NoUnderlyingNonDeliverableFixingDates</a>	[1..1]	NumInGroup	
<a href="#">UnderlyingNonDeliverableFixingDate</a>	[0..1]	LocalMktDate	Required if <a href="#">NoUnderlyingNonDeliverableFixingDates(40656)</a> > 0.
<a href="#">UnderlyingNonDeliverableFixingDate-Type</a>	[0..1]	CodeSet	When specified it applies not only to the current date but to all subsequent dates in the group until overridden with a new type.

Used in components: [UnderlyingPaymentStreamNonDeliverableSettlTerms](#)

#### 171.2.6145 UnderlyingPaymentStreamNonDeliverableFixingDatesBizDayConvention

The business day convention used to adjust the payment stream's fixing date for the non-deliverable terms. Used only to override the business day convention specified in the UnderlyingDateAdjustment component within the UnderlyingInstrument component.

Type: [int](#)

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)

Code	Name	Description
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [UnderlyingPaymentStreamNonDeliverableSettlTerms](#)

### 171.2.6146 UnderlyingPaymentStreamNonDeliverableFixingDatesBusinessCenter

The business center calendar used to adjust the payment stream's fixing date for the non-deliverable terms, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in groups: [UnderlyingPaymentStreamNonDeliverableFixingDatesBusinessCenterGrp](#)

### 171.2.6147 UnderlyingPaymentStreamNonDeliverableFixingDatesBusinessCenterGrp

[UnderlyingPaymentStreamNonDeliverableFixingDatesBusinessCenterGrp](#) is a repeating subcomponent within the [UnderlyingPaymentStreamNonDeliverableSettlTerms](#) component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the [UnderlyingDateAdjustment](#) component in the [UnderlyingInstrument](#) component.

Name	Mult.	Type	Description
<a href="#">NoUnderlyingPaymentStreamNonDeliverableFixingDatesBizCenters</a>	[1..1]	NumInGroup	
<a href="#">UnderlyingPaymentStreamNonDeliverableFixingDatesBusinessCenter</a>	[0..1]	String	Required if <a href="#">NoUnderlyingPaymentStreamNonDeliverableFixingDatesBizCenters</a> (40968) > 0.

Used in components: [UnderlyingPaymentStreamNonDeliverableSettlTerms](#)

**171.2.6148 UnderlyingPaymentStreamNonDeliverableFixingDatesOffsetDayType**

Specifies the day type of the relative non-deliverable fixing date offset.

Type: **int**

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in components: [UnderlyingPaymentStreamNonDeliverableSettlTerms](#)

**171.2.6149 UnderlyingPaymentStreamNonDeliverableFixingDatesOffsetPeriod**

Time unit multiplier for the relative non-deliverable fixing date offset.

Type: **int**

Used in components: [UnderlyingPaymentStreamNonDeliverableSettlTerms](#)

**171.2.6150 UnderlyingPaymentStreamNonDeliverableFixingDatesOffsetUnit**

Time unit associated with the relative non-deliverable fixing date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: [UnderlyingPaymentStreamNonDeliverableSettlTerms](#)

**171.2.6151 UnderlyingPaymentStreamNonDeliverableFixingDatesRelativeTo**

Specifies the anchor date when the non-deliverable fixing dates are relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: **int**

Used in components: [UnderlyingPaymentStreamNonDeliverableSettlTerms](#)

**171.2.6152 UnderlyingPaymentStreamNonDeliverableRefCurrency**

The non-deliverable settlement reference currency. Uses ISO 4217 currency codes.

Type: **Currency**

Used in components: [UnderlyingPaymentStreamNonDeliverableSettlTerms](#)

**171.2.6153 UnderlyingPaymentStreamNonDeliverableSettlRateSource**

Identifies the source of rate information.

Type: **int**

Allowed values in RateSourceCodeSet:

Code	Name	Description
0	Bloomberg	Bloomberg
1	Reuters	Reuters
2	Telerate	Telerate
3	ISDARateOption	ISDA Settlement Rate Option. The source of the currency conversion as specified by the ISDA terms in Annex A to the 1998 FX and Currency Option Definitions. See <a href="http://www.fpml.org/coding-scheme/settlement-rate-option">http://www.fpml.org/coding-scheme/settlement-rate-option</a>
99	Other	Other

Used in components: [UnderlyingPaymentStreamNonDeliverableSettlRateSource](#)

**171.2.6154 UnderlyingPaymentStreamNonDeliverableSettlRateSource**

`UnderlyingPaymentStreamNonDeliverableSettlRateSource` is a subcomponent of the `UnderlyingPaymentStreamNonDeliverableSettlTerms` component used to specify the rate source in the event of payment non-delivery.

Name	Mult.	Type	Description
<a href="#">UnderlyingPaymentStreamNonDeliverableSettlRateSource</a>	[0..1]	CodeSet	
<a href="#">UnderlyingPaymentStreamNonDeliverableSettlReferencePage</a>	[0..1]	String	Conditionally required when UnderlyingPaymentStreamNonDeliverableSettlRateSource(40661) = 3 (ISDA Settlement Rate Option) or 99 (Other).

Used in components: [UnderlyingPaymentStreamNonDeliverableSettlTerms](#)

### 171.2.6155 UnderlyingPaymentStreamNonDeliverableSettlReferencePage

Identifies the reference "page" from the rate source.

When UnderlyingPaymentStreamNonDeliverableSettlRateSource(40661) = 3 (ISDA Settlement Rate Option) this contains the value from the scheme that reflects the terms of the Annex A to the ISDA 1998 FX and Currency Option Definitions. See: <http://www.fpml.org/coding-scheme/settlement-rate-option>

Type: [String](#)

Used in components: [UnderlyingPaymentStreamNonDeliverableSettlRateSource](#)

### 171.2.6156 UnderlyingPaymentStreamNonDeliverableSettlTerms

UnderlyingPaymentStreamNonDeliverableSettlTerms is a subcomponent of the UnderlyingPaymentStream component used to specify the non-deliverable settlement terms of the stream.

Name	Mult.	Type	Description
<a href="#">UnderlyingPaymentStreamNonDeliverableRefCurrency</a>	[0..1]	Currency	
<a href="#">UnderlyingPaymentStreamNonDeliverableFixingDatesBizDayConvention</a>	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified value would be specific to this instance of the underlying instrument's non-deliverable settlement terms.

Name	Mult.	Type	Description
<a href="#">UnderlyingPaymentStreamNonDeliverableFixingDatesBusinessCenterGrp</a>	[0..*]	Group	When specified, this overrides the business centers defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified values would be specific to this instance of the underlying instrument's non-deliverable settlement terms.
<a href="#">UnderlyingPaymentStreamNonDeliverableFixingDatesRelativeTo</a>	[0..1]	int	
<a href="#">UnderlyingPaymentStreamNonDeliverableFixingDatesOffsetPeriod</a>	[0..1]	int	Conditionally required when UnderlyingPaymentStreamNonDeliverableFixingDatesOffsetUnit(40653) is specified.
<a href="#">UnderlyingPaymentStreamNonDeliverableFixingDatesOffsetUnit</a>	[0..1]	CodeSet	Conditionally required when UnderlyingPaymentStreamNonDeliverableFixingDatesOffsetPeriod(40652) is specified.
<a href="#">UnderlyingPaymentStreamNonDeliverableFixingDatesOffsetDayType</a>	[0..1]	CodeSet	
<a href="#">UnderlyingPaymentStreamNonDeliverableSettlRateSource</a>	[0..1]	Component	
<a href="#">UnderlyingPaymentStreamNonDeliverableFixingDateGrp</a>	[0..*]	Group	
<a href="#">UnderlyingSettlRateDisruptionFallbackGrp</a>	[0..*]	Group	

Used in components: [UnderlyingPaymentStream](#)

### 171.2.6157 UnderlyingPaymentStreamOtherDayCount

The industry name of the day count convention not listed in UnderlyingPaymentStreamDayCount(40572).

Type: [String](#)

Used in components: [UnderlyingPaymentStream](#)

### 171.2.6158 UnderlyingPaymentStreamPaymentDate

The adjusted or unadjusted fixed stream payment date.

Type: [LocalMktDate](#)

Used in groups: [UnderlyingPaymentStreamPaymentDateGrp](#)

**171.2.6159 UnderlyingPaymentStreamPaymentDateBusinessCenter**

The business center calendar used to adjust the payment stream's payment date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **UnderlyingPaymentStreamPaymentDateBusinessCenterGrp**

**171.2.6160 UnderlyingPaymentStreamPaymentDateBusinessCenterGrp**

UnderlyingPaymentStreamPaymentDateBusinessCenterGrp is a repeating subcomponent within the UnderlyingPaymentStreamPaymentDates component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the UnderlyingDateAdjustment component in the UnderlyingInstrument component.

Name	Mult.	Type	Description
<b>NoUnderlyingPaymentStreamPaymentDateBusinessCenters</b>	[1..1]	NumInGroup	
<b>UnderlyingPaymentStreamPaymentDateBusinessCenter</b>	[0..1]	String	Required if NoUnderlyingPaymentStreamPaymentDateBusinessCenters(40969) > 0.

Used in components: **UnderlyingPaymentStreamPaymentDates**

**171.2.6161 UnderlyingPaymentStreamPaymentDateBusinessDayConvention**

The business day convention used to adjust the payment stream's payment date. Used only to override the business day convention specified in the UnderlyingDateAdjustment component within the UnderlyingInstrument component.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.

Code	Name	Description
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [UnderlyingPaymentStreamPaymentDates](#)

### 171.2.6162 UnderlyingPaymentStreamPaymentDateGrp

The UnderlyingPaymentStreamPaymentDateGrp is a repeating subcomponent of the UnderlyingPaymentStreamPaymentDates component used to detail fixed dates for swap stream payments.

Name	Mult.	Type	Description
<a href="#">NoUnderlyingPaymentStreamPaymentDates</a>	[1..1]	NumInGroup	
<a href="#">UnderlyingPaymentStreamPaymentDate</a>	[0..1]	LocalMktDate	Required if <a href="#">NoUnderlyingPaymentStreamPaymentDates(41937)</a> > 0.
<a href="#">UnderlyingPaymentStreamPaymentDateType</a>	[0..1]	CodeSet	When specified it applies not only to the current date but to all subsequent dates in the group until overridden with a new type.

Used in components: [UnderlyingPaymentStreamPaymentDates](#)

### 171.2.6163 UnderlyingPaymentStreamPaymentDateOffsetDayType

Specifies the day type of the relative payment date offset.

Type: [int](#)

Allowed values in [PaymentStreamPaymentDateOffsetDayTypeCodeSet](#):

Code	Name	Description
0	Business	Business
1	Calendar	Calendar

Code	Name	Description
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: [UnderlyingPaymentStreamPaymentDates](#)

#### **171.2.6164 UnderlyingPaymentStreamPaymentDateOffsetPeriod**

Time unit multiplier for the relative payment date offset.

Type: [int](#)

Used in components: [UnderlyingPaymentStreamPaymentDates](#)

#### **171.2.6165 UnderlyingPaymentStreamPaymentDateOffsetUnit**

Time unit associated with the relative payment date offset.

Type: [String](#)

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: [UnderlyingPaymentStreamPaymentDates](#)

#### **171.2.6166 UnderlyingPaymentStreamPaymentDateRelativeTo**

Specifies the anchor date when payment dates are relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: [int](#)

Used in components: [UnderlyingPaymentStreamPaymentDates](#)

### 171.2.6167 UnderlyingPaymentStreamPaymentDates

UnderlyingPaymentStreamPaymentDates is a subcomponent of the UnderlyingPaymentStream component used to specify the payment dates of the stream.

Name	Mult.	Type	Description
UnderlyingPaymentStreamPayment-DateBusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified value would be specific to this instance of the underlying instrument's payment stream's payment dates.
UnderlyingPaymentStreamPayment-DateBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified values would be specific to this instance of the underlying instrument's payment stream's payment dates.
UnderlyingPaymentStreamPayment-DateGrp	[0..*]	Group	
UnderlyingPaymentStreamPayment-FrequencyPeriod	[0..1]	int	Conditionally required when UnderlyingPaymentStreamPaymentFrequencyUnit(40584) is specified.
UnderlyingPaymentStreamPayment-FrequencyUnit	[0..1]	CodeSet	Conditionally required when UnderlyingPaymentStreamPaymentFrequencyPeriod(40583) is specified.
UnderlyingPaymentStreamPayment-RollConvention	[0..1]	CodeSet	When specified, this overrides the date roll convention defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified values would be specific to this instance of the stream payment dates.
UnderlyingPaymentStreamFirstPaymentDateUnadjusted	[0..1]	LocalMktDate	
UnderlyingPaymentStreamLastRegularPaymentDateUnadjusted	[0..1]	LocalMktDate	
UnderlyingPaymentStreamPayment-DateRelativeTo	[0..1]	int	
UnderlyingPaymentStreamPayment-DateOffsetPeriod	[0..1]	int	Conditionally required when UnderlyingPaymentStreamPaymentOffsetUnit(40590) is specified.

Name	Mult.	Type	Description
<a href="#">UnderlyingPaymentStreamPayment-DateOffsetUnit</a>	[0..1]	CodeSet	Conditionally required when <a href="#">UnderlyingPaymentStreamPaymentOffsetPeriod(40589)</a> is specified.
<a href="#">UnderlyingPaymentStreamPayment-DateOffsetDayType</a>	[0..1]	CodeSet	
<a href="#">UnderlyingPaymentStreamMasterAgreementPaymentDatesIndicator</a>	[0..1]	Boolean	
<a href="#">UnderlyingPaymentStreamFinalPrice-PaymentDate</a>	[0..1]	Component	

Used in components: [UnderlyingPaymentStream](#)

### 171.2.6168 UnderlyingPaymentStreamPaymentDateType

Specifies the type of payment date. When specified it applies not only to the current date but to all subsequent dates in the group until overridden with a new type.

Type: [int](#)

Allowed values in [OptionExerciseDateTypeCodeSet](#):

Code	Name	Description
0	Unadjusted	Unadjusted
1	Adjusted	Adjusted

Used in groups: [UnderlyingPaymentStreamPaymentDateGrp](#)

### 171.2.6169 UnderlyingPaymentStreamPaymentFrequencyPeriod

Time unit multiplier for the frequency of payments.

Type: [int](#)

Used in components: [UnderlyingPaymentStreamPaymentDates](#)

**171.2.6170 UnderlyingPaymentStreamPaymentFrequencyUnit**

Time unit associated with the frequency of payments.

Type: **String**

Allowed values in PaymentStreamPaymentFrequencyUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year
T	Term	Term

---

Used in components: **UnderlyingPaymentStreamPaymentDates**

**171.2.6171 UnderlyingPaymentStreamPaymentRollConvention**

The convention for determining the sequence of end dates. It is used in conjunction with a specified frequency. Used only to override the roll convention specified in the UnderlyingDateAdjustment component within the UnderlyingInstrument component.

Type: **String**

Allowed values in DateRollConventionCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	FirstDay	1st day of the month
2	SecondDay	2nd day of the month
3	ThirdDay	3rd day of the month
4	FourthDay	4th day of the month
5	FifthDay	5th day of the month
6	SixthDay	6thd day of the month
7	SeventhDay	7th day of the month
8	EighthDay	8th day of the month
9	NinthDay	9th day of the month
10	TenthDay	10th day of the month

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
11	EleventhDay	11th day of the month
12	TwelvthDay	12th day of the month
13	ThirteenthDay	13th day of the month
14	ForteenthDay	14th day of the month
15	FifteenthDay	15th day of the month
16	SixteenthDay	16th day of the month
17	SeventeenthDay	17th day of the month
18	EighteenthDay	18th day of the month
19	NineteenthDay	19th day of the month
20	TwentiethDay	20th day of the month
21	TwentyFirstDay	21st day of the month
22	TwentySecondDay	22nd day of the month
23	TwentyThirdDay	23rd day of the month
24	TwentyFourthDay	24th day of the month
25	TwentyFifthDay	25th day of the month
26	TwentySixthDay	26th day of the month
27	TwentySeventhDay	27th day of the month
28	TwentyEighthDay	28th day of the month
29	TwentyNinthDay	29th day of the month
30	ThirtiethDay	30th day of the month
EOM	EOM	The end of the month. Use EOM for 31st day of the month.
FRN	FRN	The floating rate note convention or Eurodollar convention.
IMM	IMM	The International Money Market settlement date, i.e. the 3rd Wednesday of the month.
IMMCAD	IMMCAD	The last trading day/expiration day of the Canadian Derivatives Exchange.
IMMAUD	IMMAUD	The last trading day of the Sydney Futures Exchange Australian 90-day bank accepted bill futures contract.
IMMNZD	IMMNZD	The last trading day of the Sydney Futures Exchange New Zealand 90-day bank bill futures contract.
SFE	SFE	The Sydney Futures Exchange 90-day bank accepted bill futures settlement dates.
NONE	NONE	No adjustment
TBILL	TBILL	The 13-week and 26-week U.S. Treasury Bill auction dates.
MON	MON	Monday

---

Code	Name	Description
TUE	TUE	Tuesday
WED	WED	Wednesday
THU	THU	Thursday
FRI	FRI	Friday
SAT	SAT	Saturday
SUN	SUN	Sunday

---

Used in components: [UnderlyingPaymentStreamPaymentDates](#)

### **171.2.6172 UnderlyingPaymentStreamPricingBusinessCalendar**

Specifies the business calendar to use for pricing.

See <http://www.fpml.org/coding-scheme/commodity-business-calendar> for values.

Type: [String](#)

Used in components: [UnderlyingPaymentStreamFloatingRate](#)

### **171.2.6173 UnderlyingPaymentStreamPricingBusinessCenter**

The business center calendar used to adjust the payment stream's pricing dates, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in groups: [UnderlyingPaymentStreamPricingBusinessCenterGrp](#)

### **171.2.6174 UnderlyingPaymentStreamPricingBusinessCenterGrp**

`UnderlyingPaymentStreamPricingBusinessCenterGrp` is a repeating subcomponent of the `UnderlyingPaymentStreamFloatingRate` component used to specify the set of business centers whose calendars drive date adjustment. Used only to override the business centers defined in the `UnderlyingDateAdjustment` component in `UnderlyingInstrument`.

Name	Mult.	Type	Description
NoUnderlyingPaymentStreamPricing-BusinessCenters	[1..1]	NumInGroup	
UnderlyingPaymentStreamPricing-BusinessCenter	[0..1]	String	Required if NoUnderlyingPaymentStreamPricing-BusinessCenters(41909) > 0.

Used in components: [UnderlyingPaymentStreamFloatingRate](#)

### 171.2.6175 UnderlyingPaymentStreamPricingBusinessDayConvention

The business day convention used to adjust the payment stream's pricing dates. Used only to override the business day convention specified in the UnderlyingDateAdjustment component within the UnderlyingInstrument component.

Type: [int](#)

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [UnderlyingPaymentStreamFloatingRate](#)

### 171.2.6176 UnderlyingPaymentStreamPricingDate

An adjusted or unadjusted fixed pricing date.

Type: [LocalMktDate](#)

Used in groups: [UnderlyingPaymentStreamPricingDateGrp](#)

**171.2.6177 UnderlyingPaymentStreamPricingDateGrp**

The UnderlyingPaymentStreamPricingDateGrp is a repeating subcomponent of the UnderlyingPaymentStreamFloatingRate component used to detail fixed pricing dates.

Name	Mult.	Type	Description
NoUnderlyingPaymentStreamPricing-Dates	[1..1]	NumInGroup	
UnderlyingPaymentStreamPricingDate	[0..1]	LocalMktDate	Required if NoUnderlyingPaymentStreamPricing-Dates(41941) > 0.
UnderlyingPaymentStreamPricing-DateType	[0..1]	CodeSet	When specified it applies not only to the current date but to all subsequent dates in the group until overridden with a new type.

Used in components: [UnderlyingPaymentStreamFloatingRate](#)

**171.2.6178 UnderlyingPaymentStreamPricingDateType**

Specifies the type of pricing date. When specified it applies not only to the current date but to all subsequent dates in the group until overridden with a new type.

Type: `int`

Allowed values in OptionExerciseDateTypeCodeSet:

Code	Name	Description
0	Unadjusted	Unadjusted
1	Adjusted	Adjusted

Used in groups: [UnderlyingPaymentStreamPricingDateGrp](#)

**171.2.6179 UnderlyingPaymentStreamPricingDayCount**

The number of days over which pricing should take place.

Type: `int`

Used in components: [UnderlyingPaymentStreamFloatingRate](#)

**171.2.6180 UnderlyingPaymentStreamPricingDayDistribution**

The distribution of pricing days.

Type: **int**

Allowed values in PaymentStreamPricingDayDistributionCodeSet:

Code	Name	Description
0	All	All
1	First	First
2	Last	Last
3	Penultimate	Penultimate

Used in components: **UnderlyingPaymentStreamFloatingRate**

**171.2.6181 UnderlyingPaymentStreamPricingDayGrp**

The UnderlyingPaymentStreamPricingDayGrp is a repeating subcomponent of the UnderlyingPaymentStreamFloatingRate component used to detail periodic pricing days.

Name	Mult.	Type	Description
<b>NoUnderlyingPaymentStreamPricing-Days</b>	[1..1]	NumInGroup	
<b>UnderlyingPaymentStreamPricingDay-OfWeek</b>	[0..1]	CodeSet	Required if NoUnderlyingPaymentStreamPricingDays(41944) > 0.
<b>UnderlyingPaymentStreamPricing-DayNumber</b>	[0..1]	int	

Used in components: **UnderlyingPaymentStreamFloatingRate**

**171.2.6182 UnderlyingPaymentStreamPricingDayNumber**

The occurrence of the day of week on which pricing takes place.

Type: **int**

Used in groups: **UnderlyingPaymentStreamPricingDayGrp**

**171.2.6183 UnderlyingPaymentStreamPricingDayOfWeek**

The day of the week on which pricing takes place.

Type: **int**

Allowed values in PaymentStreamPricingDayOfWeekCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	EveryDay	Every day (the default if not specified)
1	Monday	Monday
2	Tuesday	Tuesday
3	Wednesday	Wednesday
4	Thursday	Thursday
5	Friday	Friday
6	Saturday	Saturday
7	Sunday	Sunday

---

Used in groups: **UnderlyingPaymentStreamPricingDayGrp**

**171.2.6184 UnderlyingPaymentStreamPricingDayType**

Specifies the commodity pricing day type.

Type: **int**

Allowed values in ComplexEventDateOffsetDayTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in components: **UnderlyingPaymentStreamFloatingRate**

**171.2.6185 UnderlyingPaymentStreamRate**

The rate applicable to the fixed rate payment stream.

Type: **Percentage**

Used in components: **UnderlyingPaymentStreamFixedRate**

**171.2.6186 UnderlyingPaymentStreamRateConversionFactor**

The number to be multiplied by the derived floating rate of the underlying's payment stream in order to arrive at the payment rate. If omitted, the floating rate conversion factor is 1.

Type: **float**

Used in components: **UnderlyingPaymentStreamFloatingRate**

**171.2.6187 UnderlyingPaymentStreamRateCutoffDateOffsetDayType**

Specifies the day type of the relative rate cut-off date offset.

Type: **int**

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in components: **UnderlyingPaymentStreamResetDates**

**171.2.6188 UnderlyingPaymentStreamRateCutoffDateOffsetPeriod**

Time unit multiplier for the relative rate cut-off date offset.

Type: **int**

Used in components: **UnderlyingPaymentStreamResetDates**

**171.2.6189 UnderlyingPaymentStreamRateCutoffDateOffsetUnit**

Time unit associated with the relative rate cut-off date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: **UnderlyingPaymentStreamResetDates**

**171.2.6190 UnderlyingPaymentStreamRateIndex**

The payment stream's floating rate index.

Type: **String**

Used in components: **UnderlyingPaymentStreamFloatingRate**

**171.2.6191 UnderlyingPaymentStreamRateIndex2**

The payment stream's second floating rate index.

Type: **String**

Used in components: **UnderlyingPaymentStreamFloatingRate**

**171.2.6192 UnderlyingPaymentStreamRateIndex2CurvePeriod**

Secondary time unit multiplier for the payment stream's floating rate index curve.

Type: **int**

Used in components: **UnderlyingPaymentStreamFloatingRate**

**171.2.6193 UnderlyingPaymentStreamRateIndex2CurveUnit**

Secondary time unit associated with the payment stream's floating rate index curve.

Type: **String**

Allowed values in PaymentStreamRateIndexCurveUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: **UnderlyingPaymentStreamFloatingRate**

**171.2.6194 UnderlyingPaymentStreamRateIndex2ID**

Security identifier of the second floating rate index.

Type: **String**

Used in components: **UnderlyingPaymentStreamFloatingRate**

**171.2.6195 UnderlyingPaymentStreamRateIndex2IDSource**

Source for the second floating rate index identified in UnderlyingPaymentStreamRateIndex2ID(43122).

Type: **String**

Allowed values in SecurityIDSourceCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	CUSIP	CUSIP
2	SEDOL	SEDOL
3	QUIK	QUIK
4	ISINNumber	ISIN
5	RICCode	RIC

---

Code	Name	Description
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
7	ISOCountryCode	ISO Country Code
8	ExchangeSymbol	Exchange symbol
9	ConsolidatedTapeAssociation	Consolidated Tape Association (CTA) Symbol (SIAC CTS/CQS line format)
A	BloombergSymbol	Bloomberg Symbol
B	Wertpapier	Wertpapier
C	Dutch	Dutch
D	Valoren	Valoren
E	Sicovam	Sicovam
F	Belgian	Belgian
G	Common	"Common" (Clearstream and Euroclear)
H	ClearingHouse	Clearing house / Clearing organization
I	ISDAFpMLSpecification	ISDA/FpML product specification (XML in SecurityXML(1185))

Used in components: [UnderlyingPaymentStreamFloatingRate](#)

### **171.2.6205 UnderlyingPaymentStreamRateMultiplier**

A rate multiplier to apply to the floating rate. A multiplier schedule is expressed as explicit multipliers and dates. In the case of a schedule, the step dates may be subject to adjustment in accordance with any adjustments specified in the calculationPeriodDatesAdjustments. The multiplier can be less than or greater than 1 (one). This element should only be included if the multiplier is not equal to 1 (one) for the term of the stream.

Type: [float](#)

Used in components: [UnderlyingPaymentStreamFloatingRate](#)

### **171.2.6206 UnderlyingPaymentStreamRateOrAmountCurrency**

Specifies the currency in which UnderlyingPaymentStreamFixedAmount(40616) or UnderlyingPaymentStreamRate(40615) is denominated. Users ISO 4271 currency codes.

Type: [Currency](#)

Used in components: [UnderlyingPaymentStreamFixedRate](#)

### **171.2.6207 UnderlyingPaymentStreamRateSpread**

Spread from floating rate index.

Type: [PriceOffset](#)

Used in components: [UnderlyingPaymentStreamFloatingRate](#)

**171.2.6208 UnderlyingPaymentStreamRateSpreadCurrency**

Specifies the currency of the floating rate spread. Uses ISO 4217 currency codes.

Type: **Currency**

Used in components: **UnderlyingPaymentStreamFloatingRate**

**171.2.6209 UnderlyingPaymentStreamRateSpreadPositionType**

Identifies a short or long spread value.

Type: **int**

Allowed values in PaymentStreamRateSpreadPositionTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Short	Short
1	Long	Long

---

Used in components: **UnderlyingPaymentStreamFloatingRate**

**171.2.6210 UnderlyingPaymentStreamRateSpreadType**

Identifies whether the rate spread is an absolute value to be added to the index rate or a percentage of the index rate.

Type: **int**

Allowed values in PaymentStreamRateSpreadTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Absolute	Absolute
1	Percentage	Percentage

---

Used in components: **UnderlyingPaymentStreamFloatingRate**

**171.2.6211 UnderlyingPaymentStreamRateSpreadUnitOfMeasure**

Specifies the unit of measure (UOM) of the floating rate spread.

Type: **String**

Allowed values in UnitOfMeasureCodeSet:

Code	Name	Description
Alw	Allowances	Allowances

Used in components: [UnderlyingPaymentStreamFloatingRate](#)

### 171.2.6212 UnderlyingPaymentStreamRateTreatment

Specifies the yield calculation treatment for the index.

Type: [int](#)

Allowed values in PaymentStreamRateTreatmentCodeSet:

Code	Name	Description
0	BondEquivalentYield	Bond equivalent yield
1	MoneyMarketYield	Money market yield

Used in components: [UnderlyingPaymentStreamFloatingRate](#)

### **171.2.6213 UnderlyingPaymentStreamRealizedVarianceMethod**

Indicates which price to use to satisfy the boundary condition.

Type: [int](#)

Allowed values in PaymentStreamRealizedVarianceMethodCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Previous	Previous. For a return on day T, the observed price on T-1 must be in range.
1	Last	Last. For a return on day T, the observed price on T must be in range.
2	Both	Both. For a return on day T, the observed prices on both T and T-1 must be in range.

Used in components: [UnderlyingPaymentStreamFloatingRate](#)

### **171.2.6214 UnderlyingPaymentStreamReferenceLevel**

This is the weather Cooling Degree Days (CDD), Heating Degree Days (HDD) or HDD reference level specified as the number of (amount of) weather index units specified by the parties in the related confirmation.

Type: [Qty](#)

Used in components: [UnderlyingPaymentStreamFloatingRate](#)

### **171.2.6215 UnderlyingPaymentStreamReferenceLevelEqualsZeroIndicator**

When set to 'Y', it indicates that the weather reference level equals zero.

Type: [Boolean](#)

Used in components: [UnderlyingPaymentStreamFloatingRate](#)

**171.2.6216 UnderlyingPaymentStreamReferenceLevelUnitOfMeasure**

The unit of measure (UOM) of the rate reference level.

Type: **String**

Allowed values in UnitOfMeasureCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet

Used in components: [UnderlyingPaymentStreamFloatingRate](#)

### **171.2.6217 UnderlyingPaymentStreamResetDateBusinessCenter**

The business center calendar used to adjust the payment stream's reset date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in groups: [UnderlyingPaymentStreamResetDateBusinessCenterGrp](#)

### 171.2.6218 UnderlyingPaymentStreamResetDateBusinessCenterGrp

UnderlyingPaymentStreamResetDateBusinessCenterGrp is a repeating subcomponent within the UnderlyingPaymentStreamResetDates component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the UnderlyingDateAdjustment component within the UnderlyingInstrument component.

Name	Mult.	Type	Description
NoUnderlyingPaymentStreamResetDateBusinessCenters	[1..1]	NumInGroup	
UnderlyingPaymentStreamResetDateBusinessCenter	[0..1]	String	Required if NoUnderlyingPaymentStreamResetDateBusinessCenters(40970) > 0.

Used in components: [UnderlyingPaymentStreamResetDates](#)

### 171.2.6219 UnderlyingPaymentStreamResetDateBusinessDayConvention

The business day convention used to adjust the payment stream's reset date. Used only to override the business day convention specified in the UnderlyingDateAdjustment component within the UnderlyingInstrument component.

Type: `int`

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [UnderlyingPaymentStreamResetDates](#)

**171.2.6220 UnderlyingPaymentStreamResetDateRelativeTo**

Specifies the anchor date when the reset dates are relative to an anchor date.

If the reset frequency is specified as daily this element must not be included.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: **int**

Used in components: **UnderlyingPaymentStreamResetDates**

**171.2.6221 UnderlyingPaymentStreamResetDates**

UnderlyingPaymentStreamResetDates is a subcomponent of the UnderlyingPaymentStream component used to specify the floating rate reset dates of the stream.

Name	Mult.	Type	Description
<b>UnderlyingPaymentStreamResetDateRelativeTo</b>	[0..1]	int	
<b>UnderlyingPaymentStreamResetDate-BusinessDayConvention</b>	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified value would be specific to this instance of the underlying instrument's payment stream's reset dates.
<b>UnderlyingPaymentStreamResetDate-BusinessCenterGrp</b>	[0..*]	Group	When specified, this overrides the business centers defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified values would be specific to this instance of the underlying instrument's payment stream's reset dates.
<b>UnderlyingPaymentStreamResetFrequencyPeriod</b>	[0..1]	int	Conditionally required when UnderlyingPaymentStreamResetFrequencyUnit(40596) is specified.
<b>UnderlyingPaymentStreamResetFrequencyUnit</b>	[0..1]	CodeSet	Conditionally required when UnderlyingPaymentStreamResetFrequencyPeriod(40595) is specified.
<b>UnderlyingPaymentStreamResetWeeklyRollConvention</b>	[0..1]	CodeSet	When specified, this overrides the date roll convention defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified values would be specific to this instance of the reset dates.

Name	Mult.	Type	Description
UnderlyingPaymentStreamInitialFixingDateRelativeTo	[0..1]	int	
UnderlyingPaymentStreamInitialFixingDateBusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified value would be specific to this instance of the underlying instrument's payment stream's reset dates.
UnderlyingPaymentStreamInitialFixingDateBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified values would be specific to this instance of the underlying instrument's payment stream's reset dates.
UnderlyingPaymentStreamInitialFixingDateOffsetPeriod	[0..1]	int	Conditionally required when UnderlyingPaymentStreamInitialFixingDateOffsetUnit(40602) is specified.
UnderlyingPaymentStreamInitialFixingDateOffsetUnit	[0..1]	CodeSet	Conditionally required when UnderlyingPaymentStreamInitialFixingDateOffsetPeriod(40601) is specified.
UnderlyingPaymentStreamInitialFixingDateOffsetDayType	[0..1]	CodeSet	
UnderlyingPaymentStreamInitialFixingDateAdjusted	[0..1]	LocalMktDate	
UnderlyingPaymentStreamFixingDateRelativeTo	[0..1]	int	
UnderlyingPaymentStreamFixingDateBusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified value would be specific to this instance of the underlying instrument's payment stream's reset dates.
UnderlyingPaymentStreamFixingDateBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified values would be specific to this instance of the underlying instrument's payment stream's reset dates.
UnderlyingPaymentStreamFixingDateOffsetPeriod	[0..1]	int	Conditionally required when UnderlyingPaymentStreamFixingDateOffsetUnit(40609) is specified.

Name	Mult.	Type	Description
<a href="#">UnderlyingPaymentStreamFixingDate-OffsetUnit</a>	[0..1]	CodeSet	Conditionally required when <a href="#">UnderlyingPaymentStreamFixingDateOffsetPeriod(40608)</a> is specified.
<a href="#">UnderlyingPaymentStreamFixingDate-OffsetDayType</a>	[0..1]	CodeSet	
<a href="#">UnderlyingPaymentStreamFixingDateAdjusted</a>	[0..1]	LocalMktDate	
<a href="#">UnderlyingPaymentStreamRateCutoffDateOffsetPeriod</a>	[0..1]	int	Conditionally required when <a href="#">UnderlyingPaymentStreamRateCutoffDateOffsetUnit(40613)</a> is specified.
<a href="#">UnderlyingPaymentStreamRateCutoffDateOffsetUnit</a>	[0..1]	CodeSet	Conditionally required when <a href="#">UnderlyingPaymentStreamRateCutoffDateOffsetPeriod(40612)</a> is specified.
<a href="#">UnderlyingPaymentStreamRateCutoffDateOffsetDayType</a>	[0..1]	CodeSet	
<a href="#">UnderlyingPaymentStreamFixingDate-Grp</a>	[0..*]	Group	

Used in components: [UnderlyingPaymentStream](#)

### 171.2.6222 UnderlyingPaymentStreamResetFrequencyPeriod

Time unit multiplier for frequency of resets.

Type: [int](#)

Used in components: [UnderlyingPaymentStreamResetDates](#)

### 171.2.6223 UnderlyingPaymentStreamResetFrequencyUnit

Time unit associated with frequency of resets.

Type: [String](#)

Allowed values in [CouponFrequencyUnitCodeSet](#):

Code	Name	Description
D	Day	Day
Wk	Week	Week

---

Code	Name	Description
Mo	Month	Month
Yr	Year	Year
H	Hour	Hour
Min	Minute	Minute
S	Second	Second
T	Term	Term

---

Used in components: [UnderlyingPaymentStreamResetDates](#)

### 171.2.6224 UnderlyingPaymentStreamResetWeeklyRollConvention

Used to specify the day of the week in which the reset occurs for payments that reset on a weekly basis.

Type: [String](#)

Allowed values in PaymentStreamResetWeeklyRollConventionCodeSet:

---

Code	Name	Description
MON	Monday	Monday
TUE	Tuesday	Tuesday
WED	Wednesday	Wednesday
THU	Thursday	Thursday
FRI	Friday	Friday
SAT	Saturday	Saturday
SUN	Sunday	Sunday

---

Used in components: [UnderlyingPaymentStreamResetDates](#)

### 171.2.6225 UnderlyingPaymentStreamSettlCurrency

Specifies the currency that the stream settles in (to support swaps that settle in a currency different from the notional currency). Uses ISO 4217 currency codes.

Type: [Currency](#)

Used in components: [UnderlyingPaymentStream](#)

**171.2.6226 UnderlyingPaymentStreamSettlLevel**

Specifies how weather index units are to be calculated.

Type: **int**

Allowed values in PaymentStreamSettlLevelCodeSet:

---

Code	Name	Description
0	Average	Average. The cumulative number of weather index units for each day in the calculation period divided by the number of days in the calculation period.
1	Maximum	Maximum. The maximum number of weather index units for any day in the calculation period.
2	Minimum	Minimum. The minimum number of weather index units for any day in the calculation period.
3	Cumulative	Cumulative. The cumulative number of weather index units for each day in the calculation period.

---

Used in components: **UnderlyingPaymentStreamFloatingRate**

**171.2.6227 UnderlyingPaymentStreamTotalFixedAmount**

Specifies the total fixed payment amount.

Type: **Amt**

Used in components: **UnderlyingPaymentStreamFixedRate**

**171.2.6228 UnderlyingPaymentStreamType**

Identifies the type of payment stream applicable to the swap stream associated with the underlying instrument.

Type: **int**

Allowed values in PaymentStreamTypeCodeSet:

---

Code	Name	Description
0	Periodic	Periodic (default)
1	Initial	Initial

---

Code	Name	Description
2	Single	Single
3	Dividend	Dividend
4	Interest	Interest
5	DividendReturn	Dividend return
6	PriceReturn	Price return
7	TotalReturn	Total return
8	Variance	Variance
9	Correlation	Correlation

Used in components: [UnderlyingPaymentStream](#)

#### **171.2.6229 UnderlyingPaymentStreamUnderlierRefID**

References the dividend underlier through the instrument's UnderlyingSecurityID(309) which must be fully specified in an instance of the UnderlyingInstrument component.

Type: [String](#)

Used in components: [UnderlyingPaymentStreamFloatingRate](#)

#### **171.2.6230 UnderlyingPaymentStreamVarianceUnadjustedCap**

Indicates the scaling factor to be multiplied by the variance strike price thereby making variance cap applicable.

Type: [float](#)

Used in components: [UnderlyingPaymentStreamFloatingRate](#)

#### **171.2.6231 UnderlyingPaymentStreamVegaNotionalAmount**

Vega Notional represents the approximate gain/loss at maturity for a 1% difference between RVol (realised volatility) and KVol (strike volatility). It does not necessarily represent the Vega risk of the trade.

Type: [float](#)

Used in components: [UnderlyingPaymentStreamFloatingRate](#)

**171.2.6232 UnderlyingPaymentStreamWorldScaleRate**

The number of Worldscale points for purposes of the calculation of a fixed amount for a wet voyage charter commodity swap.

Type: **float**

Used in components: **UnderlyingPaymentStreamFixedRate**

**171.2.6233 UnderlyingPaymentStubEndDateAdjusted**

The adjusted stub end date.

Type: **LocalMktDate**

Used in components: **UnderlyingPaymentStubEndDate**

**171.2.6234 UnderlyingPaymentStubEndDateBusinessCenter**

The business center calendar used for date adjustment of the payment stub end date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **UnderlyingPaymentStubEndDateBusinessCenterGrp**

**171.2.6235 UnderlyingPaymentStubEndDateBusinessCenterGrp**

UnderlyingPaymentStubEndDateBusinessCenterGrp is a repeating subcomponent within the UnderlyingPaymentStubEndDate component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the UnderlyingDateAdjustment component in UnderlyingInstrument.

Name	Mult.	Type	Description
<b>NoUnderlyingPaymentStubEndDateBusinessCenters</b>	[1..1]	NumInGroup	
<b>UnderlyingPaymentStubEndDateBusinessCenter</b>	[0..1]	String	Required if NoUnderlyingPaymentStubEndDateBusinessCenters(42991) > 0.

Used in components: **UnderlyingPaymentStubEndDate**

### 171.2.6236 UnderlyingPaymentStubEndDateBusinessDayConvention

The stub end date business day convention.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: **UnderlyingPaymentStubEndDate**

### 171.2.6237 UnderlyingPaymentStubEndDate

UnderlyingPaymentStubEndDate is a subcomponent of the UnderlyingPaymentStubGrp component used to specify the end date of the payment stub.

Name	Mult.	Type	Description
<b>UnderlyingPaymentStubEndDateUnadjusted</b>	[0..1]	LocalMktDate	
<b>UnderlyingPaymentStubEndDateBusinessDayConvention</b>	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified value would be specific to this payment stub instance.
<b>UnderlyingPaymentStubEndDateBusinessCenterGrp</b>	[0..*]	Group	When specified, this overrides the business centers defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified values would be specific to this payment stub instance.

Name	Mult.	Type	Description
<a href="#">UnderlyingPaymentStubEndDateRelativeTo</a>	[0..1]	int	
<a href="#">UnderlyingPaymentStubEndDateOffsetPeriod</a>	[0..1]	int	Conditionally required when <a href="#">UnderlyingPaymentStubEndDateOffsetUnit(42988)</a> is specified.
<a href="#">UnderlyingPaymentStubEndDateOffsetUnit</a>	[0..1]	CodeSet	Conditionally required when <a href="#">UnderlyingPaymentStubEndDateOffsetPeriod(42987)</a> is specified.
<a href="#">UnderlyingPaymentStubEndDateOffsetDayType</a>	[0..1]	CodeSet	
<a href="#">UnderlyingPaymentStubEndDateAdjusted</a>	[0..1]	LocalMktDate	

Used in groups: [UnderlyingPaymentStubGrp](#)

### 171.2.6238 UnderlyingPaymentStubEndDateOffsetDayType

Specifies the day type of the relative stub end date offset.

Type: [int](#)

Allowed values in [PaymentStreamPaymentDateOffsetDayTypeCodeSet](#):

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: [UnderlyingPaymentStubEndDate](#)

### 171.2.6239 UnderlyingPaymentStubEndDateOffsetPeriod

Time unit multiplier for the relative stub end date offset.

Type: [int](#)

Used in components: [UnderlyingPaymentStubEndDate](#)

**171.2.6240 UnderlyingPaymentStubEndDateOffsetUnit**

Time unit associated with the relative stub end date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: **UnderlyingPaymentStubEndDate**

**171.2.6241 UnderlyingPaymentStubEndDateRelativeTo**

Specifies the anchor date when the stub end date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: **int**

Used in components: **UnderlyingPaymentStubEndDate**

**171.2.6242 UnderlyingPaymentStubEndDateUnadjusted**

The unadjusted stub end date.

Type: **LocalMktDate**

Used in components: **UnderlyingPaymentStubEndDate**

**171.2.6243 UnderlyingPaymentStubFixedAmount**

A fixed payment amount for the stub.

Type: **Amt**

Used in groups: **UnderlyingPaymentStubGrp**

**171.2.6244 UnderlyingPaymentStubFixedCurrency**

The currency of the fixed payment amount. Uses ISO 4217 currency codes.

Type: [Currency](#)

Used in groups: [UnderlyingPaymentStubGrp](#)

**171.2.6245 UnderlyingPaymentStubGrp**

The UnderlyingPaymentStubGrp is a repeating subcomponent of the UnderlyingPaymentStream component used to specify front and back stubs in the payment stream.

Name	Mult.	Type	Description
<a href="#">NoUnderlyingPaymentStubs</a>	[1..1]	NumInGroup	
<a href="#">UnderlyingPaymentStubType</a>	[0..1]	CodeSet	Required if <a href="#">NoUnderlyingPaymentStubs(40708)</a> > 0.
<a href="#">UnderlyingPaymentStubLength</a>	[0..1]	CodeSet	
<a href="#">UnderlyingPaymentStubStartDate</a>	[0..1]	Component	
<a href="#">UnderlyingPaymentStubEndDate</a>	[0..1]	Component	
<a href="#">UnderlyingPaymentStubRate</a>	[0..1]	Percentage	
<a href="#">UnderlyingPaymentStubFixedAmount</a>	[0..1]	Amt	
<a href="#">UnderlyingPaymentStubFixedCurrency</a>	[0..1]	Currency	
<a href="#">UnderlyingPaymentStubIndex</a>	[0..1]	String	
<a href="#">UnderlyingPaymentStubIndexSource</a>	[0..1]	CodeSet	
<a href="#">UnderlyingPaymentStubIndexCurvePeriod</a>	[0..1]	int	Conditionally required when <a href="#">UnderlyingPaymentStubIndexCurveUnit(40717)</a> is specified.
<a href="#">UnderlyingPaymentStubIndexCurveUnit</a>	[0..1]	CodeSet	Conditionally required when <a href="#">UnderlyingPaymentStubIndexCurvePeriod(40716)</a> is specified.
<a href="#">UnderlyingPaymentStubIndexRateMultiplier</a>	[0..1]	float	
<a href="#">UnderlyingPaymentStubIndexRateSpread</a>	[0..1]	PriceOffset	
<a href="#">UnderlyingPaymentStubIndexRateSpreadPositionType</a>	[0..1]	CodeSet	
<a href="#">UnderlyingPaymentStubIndexRateTreatment</a>	[0..1]	CodeSet	

Name	Mult.	Type	Description
UnderlyingPaymentStubIndexCapRate	[0..1]	Percentage	
UnderlyingPaymentStubIndex-CapRateBuySide	[0..1]	CodeSet	
UnderlyingPaymentStubIndex-CapRateSellSide	[0..1]	CodeSet	
UnderlyingPaymentStubIndexFloor-Rate	[0..1]	Percentage	
UnderlyingPaymentStubIndexFloor-RateBuySide	[0..1]	CodeSet	
UnderlyingPaymentStubIndexFloor-RateSellSide	[0..1]	CodeSet	
UnderlyingPaymentStubIndex2	[0..1]	String	
UnderlyingPaymentStubIndex2Source	[0..1]	CodeSet	
UnderlyingPaymentStubIndex2CurvePeriod	[0..1]	int	Conditionally required when UnderlyingPaymentStubIndex2CurveUnit(40731) is specified.
UnderlyingPaymentStubIndex2CurveUnit	[0..1]	CodeSet	Conditionally required when UnderlyingPaymentStubIndex2CurvePeriod(40730) is specified.
UnderlyingPaymentStubIndex2RateMultiplier	[0..1]	float	
UnderlyingPaymentStubIndex2RateSpread	[0..1]	PriceOffset	
UnderlyingPaymentStubIndex2RateSpreadPositionType	[0..1]	CodeSet	
UnderlyingPaymentStubIndex2RateTreatment	[0..1]	CodeSet	
UnderlyingPaymentStubIndex2CapRate	[0..1]	Percentage	
UnderlyingPaymentStubIndex2FloorRate	[0..1]	Percentage	

Used in groups: [UnderlyingStreamGrp](#)

### 171.2.6246 UnderlyingPaymentStubIndex

The stub floating rate index.

Type: [String](#)

Used in groups: [UnderlyingPaymentStubGrp](#)

### **171.2.6247 UnderlyingPaymentStubIndex2**

The second stub floating rate index.

Type: [String](#)

Used in groups: [UnderlyingPaymentStubGrp](#)

### **171.2.6248 UnderlyingPaymentStubIndex2CapRate**

The cap rate, if any, which applies to the second floating rate. The cap rate (strike) is only required where the floating rate on a swap stream is capped at a certain level. The cap rate is assumed to be exclusive of any spread and is a per annum rate, expressed as a decimal. A cap rate of 5% would be represented as 0.05.

Type: [Percentage](#)

Used in groups: [UnderlyingPaymentStubGrp](#)

### **171.2.6249 UnderlyingPaymentStubIndex2CurvePeriod**

Secondary time unit multiplier for the stub floating rate index curve.

Type: [int](#)

Used in groups: [UnderlyingPaymentStubGrp](#)

### **171.2.6250 UnderlyingPaymentStubIndex2CurveUnit**

Secondary time unit associated with the stub floating rate index curve.

Type: [String](#)

Allowed values in [PaymentStreamRateIndexCurveUnitCodeSet](#):

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month

---

Code	Name	Description
Yr	Year	Year

Used in groups: [UnderlyingPaymentStubGrp](#)

#### **171.2.6251 UnderlyingPaymentStubIndex2FloorRate**

The floor rate, if any, which applies to the second floating rate. The floor rate (strike) is only required where the floating rate on a swap stream is floored at a certain strike level. The floor rate is assumed to be exclusive of any spread and is a per annum rate, expressed as a decimal. A floor rate of 5% would be represented as 0.05.

Type: [Percentage](#)

Used in groups: [UnderlyingPaymentStubGrp](#)

#### **171.2.6252 UnderlyingPaymentStubIndex2RateMultiplier**

A rate multiplier to apply to the second floating rate. The multiplier can be less than or greater than 1 (one). This element should only be included if the multiplier is not equal to 1 (one) for the term of the stream.

Type: [float](#)

Used in groups: [UnderlyingPaymentStubGrp](#)

#### **171.2.6253 UnderlyingPaymentStubIndex2RateSpread**

Spread from the second floating rate index.

Type: [PriceOffset](#)

Used in groups: [UnderlyingPaymentStubGrp](#)

#### **171.2.6254 UnderlyingPaymentStubIndex2RateSpreadPositionType**

Identifies whether the rate spread is applied to a long or short position.

Type: [int](#)

Allowed values in [PaymentStreamRateSpreadPositionTypeCodeSet](#):

---

Code	Name	Description
0	Short	Short
1	Long	Long

---

Used in groups: [UnderlyingPaymentStubGrp](#)

### 171.2.6255 UnderlyingPaymentStubIndex2RateTreatment

Specifies the yield calculation treatment for the second stub index.

Type: **int**

Allowed values in PaymentStreamRateTreatmentCodeSet:

---

Code	Name	Description
0	BondEquivalentYield	Bond equivalent yield
1	MoneyMarketYield	Money market yield

---

Used in groups: [UnderlyingPaymentStubGrp](#)

### 171.2.6256 UnderlyingPaymentStubIndex2Source

The source of the second stub floating rate index.

Type: **int**

Allowed values in PaymentStreamRateIndexSourceCodeSet:

---

Code	Name	Description
0	Bloomberg	Bloomberg
1	Reuters	Reuters
2	Telerate	Telerate
99	Other	Other

---

Used in groups: [UnderlyingPaymentStubGrp](#)

**171.2.6257 UnderlyingPaymentStubIndexCapRate**

The cap rate, if any, which applies to the floating rate. The cap rate (strike) is only required where the floating rate on a swap stream is capped at a certain level. The cap rate is assumed to be exclusive of any spread and is a per annum rate, expressed as a decimal. A cap rate of 5% would be represented as 0.05.

Type: **Percentage**

Used in groups: **UnderlyingPaymentStubGrp**

**171.2.6258 UnderlyingPaymentStubIndexCapRateBuySide**

Reference to the buyer of the cap rate option through its trade side.

Type: **int**

Allowed values in PaymentStreamCapRateBuySideCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

---

Used in groups: **UnderlyingPaymentStubGrp**

**171.2.6259 UnderlyingPaymentStubIndexCapRateSellSide**

Reference to the seller of the cap rate option through its trade side.

Type: **int**

Allowed values in PaymentStreamCapRateBuySideCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

---

Used in groups: **UnderlyingPaymentStubGrp**

**171.2.6260 UnderlyingPaymentStubIndexCurvePeriod**

Time unit multiplier for the underlying payment stub floating rate index.

Type: **int**

Used in groups: **UnderlyingPaymentStubGrp**

**171.2.6261 UnderlyingPaymentStubIndexCurveUnit**

Time unit associated with the underlying payment stub floating rate index.

Type: **String**

Allowed values in PaymentStreamRateIndexCurveUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in groups: **UnderlyingPaymentStubGrp**

**171.2.6262 UnderlyingPaymentStubIndexFloorRate**

The floor rate, if any, which applies to the floating rate. The floor rate (strike) is only required where the floating rate on a swap stream is floored at a certain strike level. The floor rate is assumed to be exclusive of any spread and is a per annum rate, expressed as a decimal. A floor rate of 5% would be represented as 0.05.

Type: **Percentage**

Used in groups: **UnderlyingPaymentStubGrp**

**171.2.6263 UnderlyingPaymentStubIndexFloorRateBuySide**

Reference to the buyer of the floor rate option through its trade side.

Type: **int**

Allowed values in PaymentStreamFloorRateBuySideCodeSet:

Code	Name	Description
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

Used in groups: [UnderlyingPaymentStubGrp](#)

### **171.2.6264 UnderlyingPaymentStubIndexFloorRateSellSide**

Reference to the seller of the floor rate option through its trade side.

Type: [int](#)

Allowed values in PaymentStreamFloorRateBuySideCodeSet:

Code	Name	Description
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

Used in groups: [UnderlyingPaymentStubGrp](#)

### **171.2.6265 UnderlyingPaymentStubIndexRateMultiplier**

A rate multiplier to apply to the floating rate. The multiplier can be less than or greater than 1 (one). This element should only be included if the multiplier is not equal to 1 (one) for the term of the stream.

Type: [float](#)

Used in groups: [UnderlyingPaymentStubGrp](#)

### **171.2.6266 UnderlyingPaymentStubIndexRateSpread**

Spread from floating rate index.

Type: [PriceOffset](#)

Used in groups: [UnderlyingPaymentStubGrp](#)

**171.2.6267 UnderlyingPaymentStubIndexRateSpreadPositionType**

Identifies whether the rate spread is applied to a long or short position.

Type: **int**

Allowed values in PaymentStreamRateSpreadPositionTypeCodeSet:

---

Code	Name	Description
0	Short	Short
1	Long	Long

---

Used in groups: **UnderlyingPaymentStubGrp**

**171.2.6268 UnderlyingPaymentStubIndexRateTreatment**

Specifies the yield calculation treatment for the stub index.

Type: **int**

Allowed values in PaymentStreamRateTreatmentCodeSet:

---

Code	Name	Description
0	BondEquivalentYield	Bond equivalent yield
1	MoneyMarketYield	Money market yield

---

Used in groups: **UnderlyingPaymentStubGrp**

**171.2.6269 UnderlyingPaymentStubIndexSource**

The source for the underlying payment stub floating rate index.

Type: **int**

Allowed values in PaymentStreamRateIndexSourceCodeSet:

---

Code	Name	Description
0	Bloomberg	Bloomberg
1	Reuters	Reuters

---

---

Code	Name	Description
2	Telerate	Telerate
99	Other	Other

---

Used in groups: [UnderlyingPaymentStubGrp](#)

### **171.2.6270 UnderlyingPaymentStubLength**

Optional indication whether stub is shorter or longer than the regular swap period.

Type: [int](#)

Allowed values in PaymentStubLengthCodeSet:

---

Code	Name	Description
0	Short	Short
1	Long	Long

---

Used in groups: [UnderlyingPaymentStubGrp](#)

### **171.2.6271 UnderlyingPaymentStubRate**

The agreed upon fixed rate for this stub.

Type: [Percentage](#)

Used in groups: [UnderlyingPaymentStubGrp](#)

### **171.2.6272 UnderlyingPaymentStubStartDateAdjusted**

The adjusted stub start date.

Type: [LocalMktDate](#)

Used in components: [UnderlyingPaymentStubStartDate](#)

**171.2.6273 UnderlyingPaymentStubStartDateBusinessCenter**

The business center calendar used for date adjustment of the payment stub start date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **UnderlyingPaymentStubStartDateBusinessCenterGrp**

**171.2.6274 UnderlyingPaymentStubStartDateBusinessCenterGrp**

UnderlyingPaymentStubStartDateBusinessCenterGrp is a repeating subcomponent within the UnderlyingPaymentStubStartDate component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the UnderlyingDateAdjustment component in UnderlyingInstrument.

Name	Mult.	Type	Description
<b>NoUnderlyingPaymentStubStartDate-BusinessCenters</b>	[1..1]	NumInGroup	
<b>UnderlyingPaymentStubStartDate-BusinessCenter</b>	[0..1]	String	Required if NoUnderlyingPaymentStubStartDate-BusinessCenters(43000) > 0.

Used in components: **UnderlyingPaymentStubStartDate**

**171.2.6275 UnderlyingPaymentStubStartDateBusinessDayConvention**

The stub start date business day convention.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.

Code	Name	Description
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [UnderlyingPaymentStubStartDate](#)

### 171.2.6276 UnderlyingPaymentStubStartDate

UnderlyingPaymentStubStartDate is a subcomponent of the UnderlyingPaymentStubGrp component used to specify the start date of the payment stub.

Name	Mult.	Type	Description
<a href="#">UnderlyingPaymentStubStartDateUnadjusted</a>	[0..1]	LocalMktDate	
<a href="#">UnderlyingPaymentStubStartDate-BusinessDayConvention</a>	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified value would be specific to this payment stub instance.
<a href="#">UnderlyingPaymentStubStartDate-BusinessCenterGrp</a>	[0..*]	Group	When specified, this overrides the business centers defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified values would be specific to this payment stub instance.
<a href="#">UnderlyingPaymentStubStartDateRelativeTo</a>	[0..1]	int	
<a href="#">UnderlyingPaymentStubStartDateOffsetPeriod</a>	[0..1]	int	Conditionally required when UnderlyingPaymentStubStartDateOffsetUnit(42997) is specified.
<a href="#">UnderlyingPaymentStubStartDateOffsetUnit</a>	[0..1]	CodeSet	Conditionally required when UnderlyingPaymentStubStartDateOffsetPeriod(42996) is specified.
<a href="#">UnderlyingPaymentStubStartDateOffsetDayType</a>	[0..1]	CodeSet	
<a href="#">UnderlyingPaymentStubStartDateAdjusted</a>	[0..1]	LocalMktDate	

Used in groups: [UnderlyingPaymentStubGrp](#)

**171.2.6277 UnderlyingPaymentStubStartDateOffsetDayType**

Specifies the day type of the relative stub start date offset.

Type: **int**

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

---

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in components: **UnderlyingPaymentStubStartDate**

**171.2.6278 UnderlyingPaymentStubStartDateOffsetPeriod**

Time unit multiplier for the relative stub start date offset.

Type: **int**

Used in components: **UnderlyingPaymentStubStartDate**

**171.2.6279 UnderlyingPaymentStubStartDateOffsetUnit**

Time unit associated with the relative stub start date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: **UnderlyingPaymentStubStartDate**

**171.2.6280 UnderlyingPaymentStubStartDateRelativeTo**

Specifies the anchor date when the stub start date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: **int**

Used in components: **UnderlyingPaymentStubStartDate**

**171.2.6281 UnderlyingPaymentStubStartDateUnadjusted**

The unadjusted stub start date.

Type: **LocalMktDate**

Used in components: **UnderlyingPaymentStubStartDate**

**171.2.6282 UnderlyingPaymentStubType**

Stub type.

Type: **int**

Allowed values in PaymentStubTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Initial	Initial
1	Final	Final
2	CompoundingInitial	Compounding initial
3	CompoundingFinal	Compounding final

---

Used in groups: **UnderlyingPaymentStubGrp**

**171.2.6283 UnderlyingPhysicalSettlBusinessDays**

A number of business days. Its precise meaning is dependent on the context in which this element is used.

Type: **int**

Used in groups: **UnderlyingPhysicalSettlTermGrp**

**171.2.6284 UnderlyingPhysicalSettlCurrency**

Currency of physical settlement. Uses ISO 4217 currency codes.

Type: **Currency**

Used in groups: **UnderlyingPhysicalSettlTermGrp**

**171.2.6285 UnderlyingPhysicalSettlDeliverableObligationGrp**

The UnderlyingPhysicalSettlDeliverableObligationGrp is a repeating component within the UnderlyingPhysicalSettlTermGrp component used to report CDS physical settlement delivery obligations.

Name	Mult.	Type	Description
NoUnderlyingPhysicalSettlDeliverableObligations	[1..1]	NumInGroup	
UnderlyingPhysicalSettlDeliverableObligationType	[0..1]	String	Required if NoUnderlyingPhysicalSettlDeliverableObligations(42065) > 0.
UnderlyingPhysicalSettlDeliverableObligationValue	[0..1]	String	

Used in groups: **UnderlyingPhysicalSettlTermGrp**

**171.2.6286 UnderlyingPhysicalSettlDeliverableObligationType**

Specifies the type of delivery obligation applicable for physical settlement.

See [http://www.fixtradingcommunity.org/codelists#Deliverable\\_Obligation\\_Types](http://www.fixtradingcommunity.org/codelists#Deliverable_Obligation_Types) for code list for applicable deliverable obligation types.

Type: **String**

Used in groups: **UnderlyingPhysicalSettlDeliverableObligationGrp**

**171.2.6287 UnderlyingPhysicalSettlDeliverableObligationValue**

Physical settlement delivery obligation value appropriate to UnderlyingPhysicalSettlDeliverableObligationType(42066).

See [http://www.fixtradingcommunity.org/codelists#Deliverable\\_Obligation\\_Types](http://www.fixtradingcommunity.org/codelists#Deliverable_Obligation_Types) for applicable obligation type values.

Type: **String**

Used in groups: **UnderlyingPhysicalSettlDeliverableObligationGrp**

### **171.2.6288 UnderlyingPhysicalSettlMaximumBusinessDays**

A maximum number of business days. Its precise meaning is dependent on the context in which this element is used. Intended to be used to limit a particular ISDA fallback provision.

Type: **int**

Used in groups: **UnderlyingPhysicalSettlTermGrp**

### **171.2.6289 UnderlyingPhysicalSettlTermGrp**

The UnderlyingPhysicalSettlTermGrp is a repeating component within the UnderlyingInstrument component used to report physical settlement terms.

---

<b>Name</b>	<b>Mult.</b>	<b>Type</b>	<b>Description</b>
<b>NoUnderlyingPhysicalSettlTerms</b>	[1..1]	NumInGroup	
<b>UnderlyingPhysicalSettlDeliverableObligationGrp</b>	[0..*]	Group	Required if NoUnderlyingPhysicalSettlTerms(42060) > 0.
<b>UnderlyingPhysicalSettlCurrency</b>	[0..1]	Currency	
<b>UnderlyingPhysicalSettlBusinessDays</b>	[0..1]	int	
<b>UnderlyingPhysicalSettlMaximumBusinessDays</b>	[0..1]	int	
<b>UnderlyingPhysicalSettlTermXID</b>	[0..1]	XID	

---

Used in components: **UnderlyingInstrument**

### **171.2.6290 UnderlyingPhysicalSettlTermXID**

A named string value referenced by UnderlyingSettlTermXIDRef(41315).

Type: **XID**

Used in groups: **UnderlyingPhysicalSettlTermGrp**

**171.2.6291 UnderlyingPool**

Identifies the mortgage backed security (MBS) / asset backed security (ABS) pool.

Type: **String**

Used in components: **UnderlyingInstrument**

**171.2.6292 UnderlyingPositionLimit**

Position limit for the instrument.

Type: **int**

Used in components: **UnderlyingInstrument**

**171.2.6293 UnderlyingPriceDeterminationMethod**

Specifies how the underlying price is determined at the point of option exercise. The underlying price may be set to the current settlement price, set to a special reference, set to the optimal value of the underlying during the defined period ("Look-back") or set to the average value of the underlying during the defined period ("Asian option").

Type: **int**

Allowed values in UnderlyingPriceDeterminationMethodCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	Regular	Regular
2	SpecialReference	Special reference
3	OptimalValue	Optimal value (Lookback)
4	AverageValue	Average value (Asian option)

---

Used in components: **Instrument**

**171.2.6294 UnderlyingPriceQuoteCurrency**

Default currency in which the price is quoted. Defined at the instrument level. Used in place of Currency (tag 15) to express the currency of a product when the former is implemented as the FX dealt currency.

Type: **Currency**

Used in components: **UnderlyingInstrument**

**171.2.6295 UnderlyingPriceQuoteCurrencyCodeSource**

Identifies class or source of the UnderlyingPriceQuoteCurrency(1526) value.

Type: **String**

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in components: **UnderlyingInstrument**

**171.2.6296 UnderlyingPriceQuoteMethod**

Method for price quotation.

Type: **String**

Allowed values in PriceQuoteMethodCodeSet:

Code	Name	Description
STD	Standard	Standard, money per unit of a physical
INX	Index	Index
INT	InterestRateIndex	Interest rate Index
PCTPAR	PercentOfPar	Percent of Par

Used in components: **UnderlyingInstrument**

**171.2.6297 UnderlyingPriceUnitOfMeasure**

Refer to definition for PriceUnitOfMeasure(1191)

Type: **String**

Allowed values in UnitOfMeasureCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet
Bbl	Barrels	Barrels. Equal to 42 US gallons
CBM	CubicMeters	Cubic Meters
BDFT	BoardFeet	Board feet. Equal to 144 cubic inches
GJ	Gigajoules	gigajoules
Bu	Bushels	Bushels
kHR	HeatRate	Heat rate. The number of BTUs required to produce one kilowatt hour of electricity, typically 3,412.14 BTUs per 1 kWh.
Ccy	Currency	Amount of currency
kWh	KilowattHours	Kilowatt hours
CDD	CoolingDegreeDay	Cooling degree day
MHR	MegaHeatRate	Mega heat rate. The number of million BTUs required to produce one megawatt hour of electricity, typically 3.41214 million BTUs per 1 MWh.
CER	CertifiedEmissionsReduction	Certified emissions reduction
MMBtu	OneMillionBTU	One Million BTU
CPD	CriticalPrecipDay	Critical precipitation day
MWh	MegawattHours	Megawatt hours
CRT	ClimateReserveTonnes	Climate reserve tonnes
thm	Therms	therms. Equal to 100,000 BTU
cwt	Hundredweight	Hundredweight(US). Equal to 100 lbs
tnCO2	TonsOfCarbonDioxide	Tons of carbon dioxide
day	Day	Days
dt	DryMetricTons	Dry metric tons
EnvAllwnc	EnvAllwncCert	Environmental allowance certificates
EnvCrd	EnvironmentalCredit	Environmental credit
EnvOfst	EnvironmentalOffset	Environmental Offset
g	Grams	Grams
Gal	Gallons	Gallons
GT	GrossTons	Gross tons. Also known as long tons or imperial tons, equal to 2240 lbs

<b>Code</b>	<b>Name</b>	<b>Description</b>
HDD	HeatingDegreeDay	Heating degree day
IPNT	IndexPoint	Index point
kg	Kilograms	Kilograms
kL	Kiloliters	kiloliters
kW-a	KilowattYear	Kilowatt year (electrical capacity)
kW-d	KilowattDay	Kilowatt day (electrical capacity)
kW-h	KilowattHour	Kilowatt hour (electrical capacity)
kW-M	KilowattMonth	Kilowatt month (electrical capacity)
kW-min	KilowattMinute	Kilowatt-Minute (electrical capacity)
L	Liters	liters
lbs	Pounds	pounds
MW-a	MegawattYear	Megawatt year (electrical capacity)
MW-d	MegawattDay	Megawatt day (electrical capacity)
MW-h	MegawattHour	Megawatt hour (electrical capacity)
MW-M	MegawattMonth	Megawatt month (electrical capacity)
MW-min	MegawattMinute	Megawatt minute (electrical capacity)
oz_tr	TroyOunces	Troy ounces
PRINC	PrincipalWithRelationToDebtInstrument	Principal with relation to debt instrument
t	MetricTons	Metric tons. Also known as Tonnes, equal to 1000 kg
tn	Tons	Tons (US). Equal to 2000 lbs
a	Are	Are
ac	Acre	Acre
cL	Centiliter	Centiliter
cM	Centimeter	Centimeter
DGE	DieselGallonEquivalent	Diesel gallon equivalent
ft	Foot	Foot
Gal_gb	GBGallon	GB Gallon
GGE	GasolineGallonEquivalent	Gasonline gallon equivalent
ha	Hectare	Hectare
in	Inch	Inch
kM	Kilometer	Kilometer
M	Meter	Meter
mi	Mile	Mile

Code	Name	Description
mL	Milliliter	Milliliter
mM	Millimeter	Millimeter
oz	USOunce	US ounce
pc	Piece	Piece
pt	USPint	US Pint
pt_gb	GBPint	GB pint
qt	USQuart	US Quart
qt_gb	GBQuart	GB Quart
SqcM	SquareCentimeter	Square centimeter
Sqft	SquareFoot	Square foot
Sqin	SquareInch	Square inch
SqkM	SquareKilometer	Square kilometer
SqM	SquareMeter	Square meter
Sqmi	SquareMile	Square mile
SqmM	SquareMillimeter	Square millimeter
Sqyd	SquareYard	Square yard
yd	Yard	Yard
MMbbl	MillionBarrels	Million Barrels
USD	USDollars	US Dollars

---

Used in components: [UnderlyingInstrument](#)

#### **171.2.6298 UnderlyingPriceUnitOfMeasureCurrency**

Indicates the currency of the underlying price unit of measure. Conditionally required when UnderlyingPriceUnitOfMeasure(1424) = Ccy

Type: [Currency](#)

Used in components: [UnderlyingInstrument](#)

#### **171.2.6299 UnderlyingPriceUnitOfMeasureCurrencyCodeSource**

Identifies class or source of the UnderlyingPriceUnitOfMeasureCurrency(1719) value.

Type: [String](#)

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in components: [UnderlyingInstrument](#)

### **171.2.6300 UnderlyingPriceUnitOfMeasureQty**

Refer to definition of PriceUnitOfMeasureQty(1192)

Type: [Qty](#)

Used in components: [UnderlyingInstrument](#)

### **171.2.6301 UnderlyingPricingDateAdjusted**

The adjusted pricing or fixing date.

Type: [LocalMktDate](#)

Used in components: [UnderlyingPricingDateTime](#)

### **171.2.6302 UnderlyingPricingDateBusinessCenter**

The business center calendar used to adjust the pricing or fixing date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in groups: [UnderlyingPricingDateBusinessCenterGrp](#)

**171.2.6303 UnderlyingPricingDateBusinessCenterGrp**

UnderlyingPricingDateBusinessCenterGrp is a repeating subcomponent of the UnderlyingPricingDate-Time component used to specify the set of business centers whose calendars drive date adjustment. Used only to override the business centers defined in the UnderlyingDateAdjustment component in UnderlyingInstrument.

Name	Mult.	Type	Description
NoUnderlyingPricingDateBusinessCenters	[1..1]	NumInGroup	
UnderlyingPricingDateBusinessCenter	[0..1]	String	Required if NoUnderlyingPricingDateBusinessCenters(41947) > 0.

Used in components: [UnderlyingPricingDateTime](#)

**171.2.6304 UnderlyingPricingDateBusinessDayConvention**

The business day convention used to adjust the pricing or fixing date. Used only to override the business day convention specified in the UnderlyingDateAdjustment component within the UnderlyingInstrument component.

Type: [int](#)

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [UnderlyingPricingDateTime](#)

**171.2.6305 UnderlyingPricingDateTime**

The UnderlyingPricingDateTime component is a subcomponent of UnderlyingInstrument used to specify an adjusted or unadjusted pricing or fixing date and optionally the time, e.g. for a commodity or FX forward trade.

Name	Mult.	Type	Description
<a href="#">UnderlyingPricingDateUnadjusted</a>	[0..1]	LocalMktDate	
<a href="#">UnderlyingPricingDateBusinessDay-Convention</a>	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified value would be specific to the underlying complex event dates.
<a href="#">UnderlyingPricingDateBusinessCenter-Grp</a>	[0..*]	Group	When specified, this overrides the business centers defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified values would be specific to the underlying complex event dates.
<a href="#">UnderlyingPricingDateAdjusted</a>	[0..1]	LocalMktDate	
<a href="#">UnderlyingPricingTime</a>	[0..1]	LocalMktTime	
<a href="#">UnderlyingPricingTimeBusinessCenter</a>	[0..1]	String	

Used in components: [UnderlyingInstrument](#)

**171.2.6306 UnderlyingPricingDateUnadjusted**

The unadjusted pricing or fixing date.

Type: [LocalMktDate](#)

Used in components: [UnderlyingPricingDateTime](#)

**171.2.6307 UnderlyingPricingTime**

The local market pricing or fixing time.

Type: [LocalMktTime](#)

Used in components: [UnderlyingPricingDateTime](#)

**171.2.6308 UnderlyingPricingTimeBusinessCenter**

Specifies the business center for determining the pricing or fixing time. See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in components: **UnderlyingPricingDateTime**

**171.2.6309 UnderlyingProduct**

Underlying security's Product.

Valid values: see Product(460) field

Type: **int**

Allowed values in ProductCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	AGENCY	AGENCY
2	COMMODITY	COMMODITY
3	CORPORATE	CORPORATE
4	CURRENCY	CURRENCY
5	EQUITY	EQUITY
6	GOVERNMENT	GOVERNMENT
7	INDEX	INDEX
8	LOAN	LOAN
9	MONEYMARKET	MONEYMARKET
10	MORTGAGE	MORTGAGE
11	MUNICIPAL	MUNICIPAL
12	OTHER	OTHER
13	FINANCING	FINANCING

---

Used in components: **UnderlyingInstrument**

**171.2.6310 UnderlyingProductComplex**

Identifies an entire suite of products for a given market. In Futures this may be "interest rates", "agricultural", "equity indexes", etc

Type: **String**

Used in components: **UnderlyingInstrument**

#### **171.2.6311 UnderlyingProtectionTermBuyerNotifies**

The notifying party is the party that notifies the other party when a credit event has occurred by means of a credit event notice. If more than one party is referenced as being the notifying party then either party may notify the other of a credit event occurring.

UnderlyingProtectionTermBuyerNotifies(42072)=Y indicates that the buyer notifies.

Type: **Boolean**

Used in groups: **UnderlyingProtectionTermGrp**

#### **171.2.6312 UnderlyingProtectionTermCurrency**

The currency of UnderlyingProtectionTermNotional(42069). Uses ISO 4217 currency codes.

Type: **Currency**

Used in groups: **UnderlyingProtectionTermGrp**

#### **171.2.6313 UnderlyingProtectionTermEventBusinessCenter**

When used, the business center indicates the local time of the business center that replaces the Greenwich Mean Time in Section 3.3 of the 2003 ISDA Credit Derivatives Definitions.

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **UnderlyingProtectionTermGrp**

#### **171.2.6314 UnderlyingProtectionTermEventCurrency**

Applicable currency if UnderlyingProtectionTermEventValue(42079) is an amount. Uses ISO 4217 currency codes.

Type: **Currency**

Used in groups: **UnderlyingProtectionTermEventGrp**

**171.2.6315 UnderlyingProtectionTermEventDayType**

Day type for events that specify a period and unit.

Type: **int**

Allowed values in ProtectionTermEventDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in groups: **UnderlyingProtectionTermEventGrp**

**171.2.6316 UnderlyingProtectionTermEventGrp**

The UnderlyingProtectionTermEventGrp is a repeating component within the UnderlyingProtectionTermGrp component used to report applicable CDS credit events.

Name	Mult.	Type	Description
<b>NoUnderlyingProtectionTermEvents</b>	[1..1]	NumInGroup	
<b>UnderlyingProtectionTermEventType</b>	[0..1]	String	Required if NoUnderlyingProtectionTermEvents (42078) > 0.
<b>UnderlyingProtectionTermEventValue</b>	[0..1]	String	
<b>UnderlyingProtectionTermEventCurrency</b>	[0..1]	Currency	
<b>UnderlyingProtectionTermEventPeriod</b>	[0..1]	int	Conditionally required when UnderlyingProtectionTermEventUnit(42082) is specified.
<b>UnderlyingProtectionTermEventUnit</b>	[0..1]	CodeSet	Conditionally required when UnderlyingProtectionTermEventPeriod(42081) is specified.
<b>UnderlyingProtectionTermEventDayType</b>	[0..1]	CodeSet	

Name	Mult.	Type	Description
UnderlyingProtectionTermEventRate-Source	[0..1]	String	
UnderlyingProtectionTermEventQualifierGrp	[0..*]	Group	

Used in groups: [UnderlyingProtectionTermGrp](#)

### 171.2.6317 UnderlyingProtectionTermEventMinimumSources

The minimum number of the specified public information sources that must publish information that reasonably confirms that a credit event has occurred. The market convention is two.

Type: [int](#)

Used in groups: [UnderlyingProtectionTermGrp](#)

### 171.2.6318 UnderlyingProtectionTermEventNewsSource

Newspaper or electronic news service or source that may publish relevant information used in the determination of whether or not a credit event has occurred.

Type: [String](#)

Used in groups: [UnderlyingProtectionTermEventNewsSourceGrp](#)

### 171.2.6319 UnderlyingProtectionTermEventNewsSourceGrp

UnderlyingProtectionTermEventNewsSourceGrp is a repeating subcomponent within the UnderlyingProtectionTermGrp component. It is used to specify the particular newspapers or electronic news services and sources that may publish relevant information used in the determination of whether or not a credit event has occurred.

Name	Mult.	Type	Description
NoUnderlyingProtectionTermEventNewsSources	[1..1]	NumInGroup	
UnderlyingProtectionTermEventNewsSource	[0..1]	String	Required if NoUnderlyingProtectionTermEventNewsSources(42090) > 0.

Used in groups: [UnderlyingProtectionTermGrp](#)

**171.2.6320 UnderlyingProtectionTermEventPeriod**

Time unit multiplier for protection term events.

Type: **int**

Used in groups: **UnderlyingProtectionTermEventGrp**

**171.2.6321 UnderlyingProtectionTermEventQualifier**

Protection term event qualifier. Used to further qualify UnderlyingProtectionTermEventType(43078).

Type: **char**

Allowed values in ProtectionTermEventQualifierCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
H	RestructuringMultipleHoldingObligations	Restructuring - multiple holding obligations. In relation to a restructuring credit event, unless multiple holder obligation is not specified restructurings are limited to multiple holder obligations. A multiple holder obligation means an obligation that is held by more than three holders that are not affiliates of each other and where at least two thirds of the holders must agree to the event that constitutes the restructuring credit event. ISDA 2003 Term: Multiple Holder Obligation.
E	RestructuringMultipleCreditEventNotices	Restructuring - multiple credit event notices. Presence of this element and value set to 'true' indicates that Section 3.9 of the 2003 Credit Derivatives Definitions shall apply. Absence of this element indicates that Section 3.9 shall not apply. NOTE: Not allowed under ISDA Credit 1999.
C	FloatingRateInterestShortfall	Floating rate interest shortfall. Indicates compounding.

---

Used in groups: **UnderlyingProtectionTermEventQualifierGrp**

**171.2.6322 UnderlyingProtectionTermEventQualifierGrp**

The UnderlyingProtectionTermEventQualifierGrp is a repeating component within the UnderlyingProtectionTermEventGrp component used to specify qualifying attributes to the event.

Name	Mult.	Type	Description
NoUnderlyingProtectionTermEventQualifiers	[1..1]	NumInGroup	
UnderlyingProtectionTermEventQualifier	[0..1]	CodeSet	Required if NoUnderlyingProtectionTermEventQualifiers(42085) > 0.

Used in groups: [UnderlyingProtectionTermEventGrp](#)

### 171.2.6323 UnderlyingProtectionTermEventRateSource

Rate source for events that specify a rate source, e.g. Floating rate interest shortfall.

Type: [String](#)

Used in groups: [UnderlyingProtectionTermEventGrp](#)

### 171.2.6324 UnderlyingProtectionTermEventType

Specifies the type of credit event applicable to the protection terms.

See [http://www.fixtradingcommunity.org/codelists#Protection\\_Term\\_Event\\_Types](http://www.fixtradingcommunity.org/codelists#Protection_Term_Event_Types) for code list of applicable event types.

Type: [String](#)

Used in groups: [UnderlyingProtectionTermEventGrp](#)

### 171.2.6325 UnderlyingProtectionTermEventUnit

Time unit associated with protection term events.

Type: [String](#)

Allowed values in ProtectionTermEventUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in groups: [UnderlyingProtectionTermEventGrp](#)

### 171.2.6326 UnderlyingProtectionTermEventValue

Protection term event value appropriate to UnderlyingProtectionTermEventType(42078).

See [http://www.fixtradingcommunity.org/codelists#Protection\\_Term\\_Event\\_Types](http://www.fixtradingcommunity.org/codelists#Protection_Term_Event_Types) for applicable event type values.

Type: [String](#)

Used in groups: [UnderlyingProtectionTermEventGrp](#)

### 171.2.6327 UnderlyingProtectionTermGrp

The UnderlyingProtectionTermGrp is a repeating component within the UnderlyingInstrument component used to report contract protection term details.

---

Name	Mult.	Type	Description
<a href="#">NoUnderlyingProtectionTerms</a>	[1..1]	NumInGroup	
<a href="#">UnderlyingProtectionTermNotional</a>	[0..1]	Amt	Required if NoUnderlyingProtectionTerms(42068) > 0.
<a href="#">UnderlyingProtectionTermCurrency</a>	[0..1]	Currency	
<a href="#">UnderlyingProtectionTermSellerNotifies</a>	[0..1]	Boolean	
<a href="#">UnderlyingProtectionTermBuyerNotifies</a>	[0..1]	Boolean	
<a href="#">UnderlyingProtectionTermEventBusinessCenter</a>	[0..1]	String	
<a href="#">UnderlyingProtectionTermStandardSources</a>	[0..1]	Boolean	
<a href="#">UnderlyingProtectionTermEventMinimumSources</a>	[0..1]	int	
<a href="#">UnderlyingProtectionTermEventNewsSourceGrp</a>	[0..*]	Group	
<a href="#">UnderlyingProtectionTermEventGrp</a>	[0..*]	Group	
<a href="#">UnderlyingProtectionTermObligationGrp</a>	[0..*]	Group	
<a href="#">UnderlyingProtectionTermXID</a>	[0..1]	XID	

---

Used in components: [UnderlyingInstrument](#)

### 171.2.6328 UnderlyingProtectionTermNotional

The notional amount of protection coverage for a floating rate.

Type: [Amt](#)

Used in groups: [UnderlyingProtectionTermGrp](#)

### 171.2.6329 UnderlyingProtectionTermObligationGrp

The UnderlyingProtectionTermObligationGrp is a repeating component within the UnderlyingProtectionTermGrp component used to report applicable CDS obligations.

Name	Mult.	Type	Description
<a href="#">NoUnderlyingProtectionTermObligations</a>	[1..1]	NumInGroup	
<a href="#">UnderlyingProtectionTermObligationType</a>	[0..1]	String	Required if <a href="#">NoUnderlyingProtectionTermObligations(42087)</a> > 0.
<a href="#">UnderlyingProtectionTermObligationValue</a>	[0..1]	String	

Used in groups: [UnderlyingProtectionTermGrp](#)

### 171.2.6330 UnderlyingProtectionTermObligationType

Specifies the type of obligation applicable to the protection terms.

See [http://www.fixtradingcommunity.org/codelists#Protection\\_Term\\_Obligation\\_Types](http://www.fixtradingcommunity.org/codelists#Protection_Term_Obligation_Types) for code list of applicable obligation types.

Type: [String](#)

Used in groups: [UnderlyingProtectionTermObligationGrp](#)

### **171.2.6331 UnderlyingProtectionTermObligationValue**

Protection term obligation value appropriate to UnderlyingProtectionTermObligationType(42088).

See [http://www.fixtradingcommunity.org/codelists#Protection\\_Term\\_Obligation\\_Types](http://www.fixtradingcommunity.org/codelists#Protection_Term_Obligation_Types) for applicable obligation type values.

Type: **String**

Used in groups: **UnderlyingProtectionTermObligationGrp**

### **171.2.6332 UnderlyingProtectionTermSellerNotifies**

The notifying party is the party that notifies the other party when a credit event has occurred by means of a credit event notice. If more than one party is referenced as being the notifying party then either party may notify the other of a credit event occurring.

UnderlyingProtectionTermSellerNotifies(42071)=Y indicates that the seller notifies.

Type: **Boolean**

Used in groups: **UnderlyingProtectionTermGrp**

### **171.2.6333 UnderlyingProtectionTermStandardSources**

Indicates whether ISDA defined Standard Public Sources are applicable (UnderlyingProtectionTermStandardSources(42074)=Y) or not.

Type: **Boolean**

Used in groups: **UnderlyingProtectionTermGrp**

### **171.2.6334 UnderlyingProtectionTermXID**

A named string value referenced by UnderlyingProtectionTermXIDRef(41314).

Type: **XID**

Used in groups: **UnderlyingProtectionTermGrp**

**171.2.6335 UnderlyingProtectionTermXIDRef**

Reference to the protection terms applicable to this entity or obligation. Contains the same XID named string value of the instance in the ProtectionTerms repeating group that applies to this Underlying.

Type: **XIDREF**

Used in components: **UnderlyingInstrument**

**171.2.6336 UnderlyingProvisionBreakFeeElection**

Type of fee elected for the break provision.

Type: **int**

Allowed values in ProvisionBreakFeeElectionCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	FlatFee	Flat fee
1	AmortizedFee	Amortized fee
2	FundingFee	Funding fee
3	FlatAndFundingFee	Flat fee and funding fee
4	AmortizedAndFundingFee	Amortized fee and funding fee

---

Used in groups: **UnderlyingProvisionGrp**

**171.2.6337 UnderlyingProvisionBreakFeeRate**

Break fee election rate when the break fee is proportional to the notional. A fee rate of 5% would be represented as "0.05".

Type: **Percentage**

Used in groups: **UnderlyingProvisionGrp**

**171.2.6338 UnderlyingProvisionCalculationAgent**

Used to identify the calculation agent. The calculation agent may be identified in UnderlyingProvisionCalculationAgent(42156) or in the underlying provision parties component.

Type: **int**

Allowed values in ProvisionCalculationAgentCodeSet:

Code	Name	Description
0	ExercisingParty	Exercising party
1	NonExercisingParty	Non-exercising party
2	MasterAgreement	As specified in the master agreement
3	Supplement	As specified in the standard terms supplement

Used in groups: [UnderlyingProvisionGrp](#)

#### **171.2.6339 UnderlyingProvisionCashSettlCurrency**

Specifies the currency of settlement. Uses ISO 4217 currency codes.

Type: [Currency](#)

Used in groups: [UnderlyingProvisionGrp](#)

#### **171.2.6340 UnderlyingProvisionCashSettlCurrency2**

Specifies the currency of settlement for a cross-currency provision. Uses ISO 4217 currency codes.

Type: [Currency](#)

Used in groups: [UnderlyingProvisionGrp](#)

#### **171.2.6341 UnderlyingProvisionCashSettlMethod**

An ISDA defined cash settlement method used for the determination of the applicable cash settlement amount. The method is defined in the 2006 ISDA Definitions, Section 18.3. Cash Settlement Methods, paragraph (e).

Type: [int](#)

Allowed values in ProvisionCashSettlMethodCodeSet:

Code	Name	Description
0	CashPrice	Cash price
1	CashPriceAlternate	Cash price alternate

Code	Name	Description
2	ParYieldCurveAdjusted	Par yield curve adjusted
3	ZeroCouponYieldCurveAdjusted	Zero coupon yield curve adjusted
4	ParYieldCurveUnadjusted	Par yield curve unadjusted
5	CrossCurrency	Cross currency
6	CollateralizedPrice	Collateralized price

---

Used in groups: [UnderlyingProvisionGrp](#)

#### **171.2.6342 UnderlyingProvisionCashSettlPaymentDate**

The cash settlement payment date, unadjusted or adjusted depending on [UnderlyingProvisionCashSettlPaymentDateType](#)(42101).

Type: [LocalMktDate](#)

Used in groups: [UnderlyingProvisionCashSettlPaymentFixedDateGrp](#)

#### **171.2.6343 UnderlyingProvisionCashSettlPaymentDateBusinessCenter**

The business center calendar used to adjust the provision's cash settlement payment's termination, or relative termination, date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in groups: [UnderlyingProvisionCashSettlPaymentDateBusinessCenterGrp](#)

#### **171.2.6344 UnderlyingProvisionCashSettlPaymentDateBusinessCenterGrp**

[UnderlyingProvisionCashSettlPaymentDateBusinessCenterGrp](#) is a repeating subcomponent within the [UnderlyingProvisionCashSettlPaymentDates](#) component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the [UnderlyingDateAdjustment](#) component in [UnderlyingInstrument](#).

Name	Mult.	Type	Description
NoUnderlyingProvisionCashSettlPaymentDateBusinessCenters	[1..1]	NumInGroup	
UnderlyingProvisionCashSettlPaymentDateBusinessCenter	[0..1]	String	Required if NoUnderlyingProvisionCashSettlPaymentDateBusinessCenters(42180) > 0.

Used in components: [UnderlyingProvisionCashSettlPaymentDates](#)

### 171.2.6345 UnderlyingProvisionCashSettlPaymentDateBusinessDayConvention

The business day convention used to adjust the provisional cash settlement payment's termination, or relative termination, date. Used only to override the business day convention specified in the UnderlyingDateAdjustment component within the UnderlyingInstrument component.

Type: [int](#)

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [UnderlyingProvisionCashSettlPaymentDates](#)

### 171.2.6346 UnderlyingProvisionCashSettlPaymentDateOffsetDayType

Specifies the day type of the provision's relative cash settlement payment date offset.

Type: [int](#)

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: [UnderlyingProvisionCashSettlPaymentDates](#)

#### 171.2.6347 UnderlyingProvisionCashSettlPaymentDateOffsetPeriod

Time unit multiplier for the relative cash settlement payment date offset.

Type: [int](#)

Used in components: [UnderlyingProvisionCashSettlPaymentDates](#)

#### 171.2.6348 UnderlyingProvisionCashSettlPaymentDateOffsetUnit

Time unit associated with the relative cash settlement payment date offset.

Type: [String](#)

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: [UnderlyingProvisionCashSettlPaymentDates](#)

#### 171.2.6349 UnderlyingProvisionCashSettlPaymentDateRangeFirst

First date in range when a settlement date range is provided.

Type: [LocalMktDate](#)

Used in components: [UnderlyingProvisionCashSettlPaymentDates](#)

### **171.2.6350 UnderlyingProvisionCashSettlPaymentDateRangeLast**

Last date in range when a settlement date range is provided.

Type: [LocalMktDate](#)

Used in components: [UnderlyingProvisionCashSettlPaymentDates](#)

### **171.2.6351 UnderlyingProvisionCashSettlPaymentDateRelativeTo**

Specifies the anchor date when the cash settlement payment date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: [int](#)

Used in components: [UnderlyingProvisionCashSettlPaymentDates](#)

### **171.2.6352 UnderlyingProvisionCashSettlPaymentDates**

The UnderlyingProvisionCashSettlPaymentDates component is a sub-component within the UnderlyingProvisionGrp component used to report the cash settlement payment dates defined in the provision.

<b>Name</b>	<b>Mult.</b>	<b>Type</b>	<b>Description</b>
<a href="#">UnderlyingProvisionCashSettlPaymentDateBusinessDayConvention</a>	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified value would be specific to this instance of the provisional cash settlement payment date.
<a href="#">UnderlyingProvisionCashSettlPaymentDateBusinessCenterGrp</a>	[0..*]	Group	When specified, this overrides the business centers defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified values would be specific to this instance of the provisional cash settlement payment date.
<a href="#">UnderlyingProvisionCashSettlPaymentDateRelativeTo</a>	[0..1]	int	

Name	Mult.	Type	Description
<a href="#">UnderlyingProvisionCashSettlPaymentDateOffsetPeriod</a>	[0..1]	int	Conditionally required when <a href="#">UnderlyingProvisionCashSettlPaymentDateOffsetUnit(42095)</a> is specified.
<a href="#">UnderlyingProvisionCashSettlPaymentDateOffsetUnit</a>	[0..1]	CodeSet	Conditionally required when <a href="#">UnderlyingProvisionCashSettlPaymentDateOffsetPeriod(42094)</a> is specified.
<a href="#">UnderlyingProvisionCashSettlPaymentDateOffsetDayType</a>	[0..1]	CodeSet	
<a href="#">UnderlyingProvisionCashSettlPaymentDateRangeFirst</a>	[0..1]	LocalMktDate	
<a href="#">UnderlyingProvisionCashSettlPaymentDateRangeLast</a>	[0..1]	LocalMktDate	
<a href="#">UnderlyingProvisionCashSettlPaymentFixedDateGrp</a>	[0..*]	Group	

Used in groups: [UnderlyingProvisionGrp](#)

### 171.2.6353 UnderlyingProvisionCashSettlPaymentDateType

Specifies the type of date (e.g. adjusted for holidays).

Type: [int](#)

Allowed values in [ProvisionCashSettlPaymentDateTypeCodeSet](#):

Code	Name	Description
0	Unadjusted	Unadjusted
1	Adjusted	Adjusted

Used in groups: [UnderlyingProvisionCashSettlPaymentFixedDateGrp](#)

### 171.2.6354 UnderlyingProvisionCashSettlPaymentFixedDateGrp

The [UnderlyingProvisionCashSettlPaymentFixedDateGrp](#) is a repeating component within the [UnderlyingProvisionCashSettlPaymentDates](#) component used to report fixed cash settlement payment dates defined in the provision.

Name	Mult.	Type	Description
NoUnderlyingProvisionCashSettlPaymentDates	[1..1]	NumInGroup	
UnderlyingProvisionCashSettlPaymentDate	[0..1]	LocalMktDate	Required if NoUnderlyingProvisionCashSettlPaymentDates (42099) > 0.
UnderlyingProvisionCashSettlPaymentDateType	[0..1]	CodeSet	When specified it applies not only to the current date but to all subsequent dates in the group until overridden with a new type.

Used in components: [UnderlyingProvisionCashSettlPaymentDates](#)

### 171.2.6355 UnderlyingProvisionCashSettlQuoteReferencePage

Identifies the reference "page" from the quote source.

Type: [String](#)

Used in components: [UnderlyingProvisionCashSettlQuoteSource](#)

### 171.2.6356 UnderlyingProvisionCashSettlQuoteSource

Identifies the source of quote information.

Type: [int](#)

Allowed values in PaymentStreamRateIndexSourceCodeSet:

Code	Name	Description
0	Bloomberg	Bloomberg
1	Reuters	Reuters
2	Telerate	Telerate
99	Other	Other

Used in components: [UnderlyingProvisionCashSettlQuoteSource](#)

**171.2.6357 UnderlyingProvisionCashSettlQuoteSource**

The UnderlyingProvisionCashSettlQuoteSource is a subcomponent of the UnderlyingProvisionGrp component used to specify the reference source for currency or rate quote for cash settlement purposes.

Name	Mult.	Type	Description
UnderlyingProvisionCashSettlQuoteSource	[0..1]	CodeSet	
UnderlyingProvisionCashSettlQuoteReferencePage	[0..1]	String	

Used in groups: [UnderlyingProvisionGrp](#)

**171.2.6358 UnderlyingProvisionCashSettlQuoteType**

Identifies the type of quote to be used.

Type: [int](#)

Allowed values in ProvisionCashSettlQuoteTypeCodeSet:

Code	Name	Description
0	Bid	Bid
1	Mid	Mid
2	Offer	Offer
3	ExercisingPartyPays	Exercising party pays. See 2000 ISDA Definitions, Section 17.2, Certain Definitions Relating to Cash Settlement, paragraph (j) for definition of "exercising party pays".

Used in groups: [UnderlyingProvisionGrp](#)

**171.2.6359 UnderlyingProvisionCashSettlValueDateAdjusted**

The adjusted cash settlement value date.

Type: [LocalMktDate](#)

Used in components: [UnderlyingProvisionCashSettlValueDates](#)

**171.2.6360 UnderlyingProvisionCashSettlValueDateBusinessCenter**

The business center calendar used to adjust the cash settlement valuation date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **UnderlyingProvisionCashSettlValueDateBusinessCenterGrp**

**171.2.6361 UnderlyingProvisionCashSettlValueDateBusinessCenterGrp**

UnderlyingProvisionCashSettlValueDateBusinessCenterGrp is a repeating subcomponent within the UnderlyingProvisionCashSettlValueDates component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the UnderlyingDateAdjustment component in UnderlyingInstrument.

Name	Mult.	Type	Description
<b>NoUnderlyingProvisionCashSettlValueDateBusinessCenters</b>	[1..1]	NumInGroup	
<b>UnderlyingProvisionCashSettlValueDateBusinessCenter</b>	[0..1]	String	Required if NoUnderlyingProvisionCashSettlValueDateBusinessCenters(42182) > 0.

Used in components: **UnderlyingProvisionCashSettlValueDates**

**171.2.6362 UnderlyingProvisionCashSettlValueDateBusinessDayConvention**

The business day convention used to adjust the cash settlement valuation date. Used only to override the business day convention specified in the UnderlyingDateAdjustment component within the UnderlyingInstrument component.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.

Code	Name	Description
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [UnderlyingProvisionCashSettlValueDates](#)

### 171.2.6363 UnderlyingProvisionCashSettlValueDateOffsetDayType

Specifies the day type of the provision's relative cash settlement value date offset.

Type: **int**

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: [UnderlyingProvisionCashSettlValueDates](#)

### 171.2.6364 UnderlyingProvisionCashSettlValueDateOffsetPeriod

Time unit multiplier for the relative cash settlement value date offset.

Type: **int**

Used in components: [UnderlyingProvisionCashSettlValueDates](#)

**171.2.6365 UnderlyingProvisionCashSettlValueDateOffsetUnit**

Time unit associated with the relative cash settlement value date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: **UnderlyingProvisionCashSettlValueDates**

**171.2.6366 UnderlyingProvisionCashSettlValueDateRelativeTo**

Specifies the anchor date when the cash settlement value date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: **int**

Used in components: **UnderlyingProvisionCashSettlValueDates**

**171.2.6367 UnderlyingProvisionCashSettlValueDates**

The UnderlyingProvisionCashSettlValueDates is a subcomponent within the UnderlyingProvisionGrp component used to report the cash settlement value date and time defined in the provision.

Name	Mult.	Type	Description
<b>UnderlyingProvisionCashSettlValue-Time</b>	[0..1]	LocalMktTime	
<b>UnderlyingProvisionCashSettlValue-TimeBusinessCenter</b>	[0..1]	String	

Name	Mult.	Type	Description
<a href="#">UnderlyingProvisionCashSettlValue-DateBusinessDayConvention</a>	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified value would be specific to this instance of the provisional cash settlement value date.
<a href="#">UnderlyingProvisionCashSettlValue-DateBusinessCenterGrp</a>	[0..*]	Group	When specified, this overrides the business centers defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified values would be specific to this instance of the provisional cash settlement value date.
<a href="#">UnderlyingProvisionCashSettlValue-DateRelativeTo</a>	[0..1]	int	
<a href="#">UnderlyingProvisionCashSettlValueDateOffsetPeriod</a>	[0..1]	int	Conditionally required when UnderlyingProvisionCashSettlValueDateOffsetUnit(42109) is specified.
<a href="#">UnderlyingProvisionCashSettlValueDateOffsetUnit</a>	[0..1]	CodeSet	Conditionally required when UnderlyingProvisionCashSettlValueDateOffsetPeriod(42108) is specified.
<a href="#">UnderlyingProvisionCashSettlValueDateOffsetDayType</a>	[0..1]	CodeSet	
<a href="#">UnderlyingProvisionCashSettlValue-DateAdjusted</a>	[0..1]	LocalMktDate	

Used in groups: [UnderlyingProvisionGrp](#)

### 171.2.6368 UnderlyingProvisionCashSettlValueTime

A time specified in 24-hour format, e.g. 11am would be represented as 11:00:00. The time of the cash settlement valuation date when the cash settlement amount will be determined according to the cash settlement method if the parties have not otherwise been able to agree to the cash settlement amount.

Type: [LocalMktTime](#)

Used in components: [UnderlyingProvisionCashSettlValueDates](#)

### 171.2.6369 UnderlyingProvisionCashSettlValueTimeBusinessCenter

Identifies the business center calendar used with the provision's cash settlement valuation time.

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in components: **UnderlyingProvisionCashSettlValueDates**

### **171.2.6370 UnderlyingProvisionDateAdjusted**

The adjusted date of the provision.

Type: **LocalMktDate**

Used in groups: **UnderlyingProvisionGrp**

### **171.2.6371 UnderlyingProvisionDateBusinessCenter**

The business center calendar used to adjust the underlying instrument's provision's date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **UnderlyingProvisionDateBusinessCenterGrp**

### **171.2.6372 UnderlyingProvisionDateBusinessCenterGrp**

UnderlyingProvisionDateBusinessCenterGrp is a repeating subcomponent within the UnderlyingProvisionGrp component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the UnderlyingDateAdjustment component in UnderlyingInstrument.

---

<b>Name</b>	<b>Mult.</b>	<b>Type</b>	<b>Description</b>
<b>NoUnderlyingProvisionDateBusinessCenters</b>	[1..1]	NumInGroup	
<b>UnderlyingProvisionDateBusinessCenter</b>	[0..1]	String	Required if NoUnderlyingProvisionDateBusinessCenters(42190) > 0.

---

Used in groups: **UnderlyingProvisionGrp**

**171.2.6373 UnderlyingProvisionDateBusinessDayConvention**

The business day convention used to adjust the underlying instrument's provision's date. Used only to override the business day convention specified in the UnderlyingDateAdjustment component within the UnderlyingInstrument component.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

---

Used in groups: **UnderlyingProvisionGrp**

**171.2.6374 UnderlyingProvisionDateTenorPeriod**

Time unit multiplier for the provision's tenor period.

Type: **int**

Used in groups: **UnderlyingProvisionGrp**

**171.2.6375 UnderlyingProvisionDateTenorUnit**

Time unit associated with the provision's tenor period.

Type: **String**

Allowed values in ProvisionDateTenorUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in groups: [UnderlyingProvisionGrp](#)

### 171.2.6376 UnderlyingProvisionDateUnadjusted

The unadjusted date of the provision.

Type: [LocalMktDate](#)

Used in groups: [UnderlyingProvisionGrp](#)

### 171.2.6377 UnderlyingProvisionGrp

The UnderlyingProvisionGrp is a repeating subcomponent of the UnderlyingInstrument component used to detail additional terms and conditions associated with the instrument.

Name	Mult.	Type	Description
<a href="#">NoUnderlyingProvisions</a>	[1..1]	NumInGroup	
<a href="#">UnderlyingProvisionType</a>	[0..1]	CodeSet	Required if <a href="#">NoUnderlyingProvisions(42149)</a> > 0.
<a href="#">UnderlyingProvisionDateUnadjusted</a>	[0..1]	LocalMktDate	
<a href="#">UnderlyingProvisionDateBusinessDay-Convention</a>	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the <a href="#">UnderlyingDateAdjustment</a> component in <a href="#">UnderlyingInstrument</a> . The specified value would be specific to this instance of the instrument provisions.
<a href="#">UnderlyingProvisionDateBusinessCenterGrp</a>	[0..*]	Group	When specified, this overrides the business centers defined in the <a href="#">UnderlyingDateAdjustment</a> component in <a href="#">UnderlyingInstrument</a> . The specified values would be specific to this instance of the instrument provisions.
<a href="#">UnderlyingProvisionDateAdjusted</a>	[0..1]	LocalMktDate	

Name	Mult.	Type	Description
UnderlyingProvisionDateTenorPeriod	[0..1]	int	Conditionally required when UnderlyingProvisionDateTenorUnit(42155) is specified.
UnderlyingProvisionDateTenorUnit	[0..1]	CodeSet	Conditionally required when UnderlyingProvisionDateTenorPeriod(42154) is specified.
UnderlyingProvisionBreakFeeElection	[0..1]	CodeSet	
UnderlyingProvisionBreakFeeRate	[0..1]	Percentage	
UnderlyingProvisionCalculationAgent	[0..1]	CodeSet	
UnderlyingProvisionOptionSinglePartyBuyerSide	[0..1]	CodeSet	
UnderlyingProvisionOptionSinglePartySellerSide	[0..1]	CodeSet	
UnderlyingProvisionCashSettlValueDates	[0..1]	Component	
UnderlyingProvisionOptionExerciseDates	[0..1]	Component	
UnderlyingProvisionOptionExpirationDate	[0..1]	Component	
UnderlyingProvisionOptionRelevantUnderlyingDate	[0..1]	Component	
UnderlyingProvisionOptionExerciseStyle	[0..1]	CodeSet	
UnderlyingProvisionOptionExerciseMultipleNotional	[0..1]	Amt	
UnderlyingProvisionOptionExerciseMinimumNotional	[0..1]	Amt	
UnderlyingProvisionOptionExerciseMaximumNotional	[0..1]	Amt	
UnderlyingProvisionOptionMinimumNumber	[0..1]	int	
UnderlyingProvisionOptionMaximumNumber	[0..1]	int	
UnderlyingProvisionOptionExerciseConfirmation	[0..1]	Boolean	
UnderlyingProvisionCashSettlPaymentDates	[0..1]	Component	
UnderlyingProvisionCashSettlMethod	[0..1]	CodeSet	

Name	Mult.	Type	Description
UnderlyingProvisionCashSettlCur- rency	[0..1]	Currency	
UnderlyingProvisionCashSettlCur- rency2	[0..1]	Currency	
UnderlyingProvisionCashSettlQuote- Type	[0..1]	CodeSet	
UnderlyingProvisionCashSettlQuote- Source	[0..1]	Component	
UnderlyingProvisionText	[0..1]	String	
EncodedUnderlyingProvisionTextLen	[0..1]	Length	Must be set if EncodedProvisionText(40987) field is specified and must immediately precede it.
EncodedUnderlyingProvisionText	[0..1]	data	Encoded (non-ASCII characters) representation of the UnderlyingProvisionText(42170) field in the encoded format specified via the MessageEncoding(347) field.
UnderlyingProvisionParties	[0..*]	Group	

Used in components: [UnderlyingInstrument](#)

### 171.2.6378 UnderlyingProvisionOptionExerciseBoundsFirstDateUnadjusted

The unadjusted first date of a schedule. This can be used to restrict the range of exercise dates when they are relative.

Type: [LocalMktDate](#)

Used in components: [UnderlyingProvisionOptionExerciseDates](#)

### 171.2.6379 UnderlyingProvisionOptionExerciseBoundsLastDateUnadjusted

The unadjusted last date of a schedule. This can be used to restrict the range of exercise dates when they are relative.

Type: [LocalMktDate](#)

Used in components: [UnderlyingProvisionOptionExerciseDates](#)

**171.2.6380 UnderlyingProvisionOptionExerciseBusinessCenter**

The business center calendar used to adjust the underlying instrument's provision's option exercise date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **UnderlyingProvisionOptionExerciseBusinessCenterGrp**

**171.2.6381 UnderlyingProvisionOptionExerciseBusinessCenterGrp**

UnderlyingProvisionOptionExerciseBusinessCenterGrp is a repeating subcomponent within the UnderlyingProvisionOptionExerciseDates component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the UnderlyingDateAdjustment component in UnderlyingInstrument.

Name	Mult.	Type	Description
<b>NoUnderlyingProvisionOptionExerciseBusinessCenters</b>	[1..1]	NumInGroup	
<b>UnderlyingProvisionOptionExerciseBusinessCenter</b>	[0..1]	String	Required if NoUnderlyingProvisionOptionExerciseBusinessCenters(42184) > 0.

Used in components: **UnderlyingProvisionOptionExerciseDates**

**171.2.6382 UnderlyingProvisionOptionExerciseBusinessDayConvention**

The business day convention used to adjust the underlying instrument's provision's option exercise date. Used only to override the business day convention specified in the UnderlyingDateAdjustment component within the UnderlyingInstrument component.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)

Code	Name	Description
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [UnderlyingProvisionOptionExerciseDates](#)

### 171.2.6383 UnderlyingProvisionOptionExerciseConfirmation

Used to indicate whether follow-up confirmation of exercise (written or electronic) is required following telephonic notice by the buyer to the seller or seller's agent.

Type: [Boolean](#)

Used in groups: [UnderlyingProvisionGrp](#)

### 171.2.6384 UnderlyingProvisionOptionExerciseDates

The UnderlyingProvisionOptionExerciseDates is a subcomponent within the UnderlyingProvisionGrp component used to report the option exercise dates and times defined in the provision.

Name	Mult.	Type	Description
<a href="#">UnderlyingProvisionOptionExercise-BusinessDayConvention</a>	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified value would be specific to this instance of the provisional option exercise date.
<a href="#">UnderlyingProvisionOptionExercise-BusinessCenterGrp</a>	[0..*]	Group	When specified, this overrides the business centers defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified values would be specific to this instance of the provisional option exercise date.
<a href="#">UnderlyingProvisionOptionExercise-FixedDateGrp</a>	[0..*]	Group	

Name	Mult.	Type	Description
UnderlyingProvisionOptionExerciseEarliestDateOffsetPeriod	[0..1]	int	Conditionally required when UnderlyingProvisionOptionExerciseEarliestDateUnit(42117) is specified.
UnderlyingProvisionOptionExerciseEarliestDateOffsetUnit	[0..1]	CodeSet	Conditionally required when UnderlyingProvisionOptionExerciseEarliestDatePeriod(42116) is specified.
UnderlyingProvisionOptionExerciseFrequencyPeriod	[0..1]	int	Conditionally required when UnderlyingProvisionOptionExerciseFrequencyUnit(42119) is specified.
UnderlyingProvisionOptionExerciseFrequencyUnit	[0..1]	CodeSet	Conditionally required when UnderlyingProvisionOptionExerciseFrequencyPeriod(42118) is specified.
UnderlyingProvisionOptionExerciseStartDateUnadjusted	[0..1]	LocalMktDate	
UnderlyingProvisionOptionExerciseStartDateRelativeTo	[0..1]	int	
UnderlyingProvisionOptionExerciseStartDateOffsetPeriod	[0..1]	int	Conditionally required when UnderlyingProvisionOptionExerciseStartDateOffsetUnit(42123) is specified.
UnderlyingProvisionOptionExerciseStartDateOffsetUnit	[0..1]	CodeSet	Conditionally required when UnderlyingProvisionOptionExerciseStartDateOffsetPeriod(42122) is specified.
UnderlyingProvisionOptionExerciseStartDateOffsetDayType	[0..1]	CodeSet	
UnderlyingProvisionOptionExerciseStartDateAdjusted	[0..1]	LocalMktDate	
UnderlyingProvisionOptionExercisePeriodSkip	[0..1]	int	
UnderlyingProvisionOptionExerciseBoundsFirstDateUnadjusted	[0..1]	LocalMktDate	
UnderlyingProvisionOptionExerciseBoundsLastDateUnadjusted	[0..1]	LocalMktDate	
UnderlyingProvisionOptionExerciseEarliestTime	[0..1]	LocalMktTime	
UnderlyingProvisionOptionExerciseEarliestTimeBusinessCenter	[0..1]	String	
UnderlyingProvisionOptionExerciseLatestTime	[0..1]	LocalMktTime	

**UnderlyingProvisionOptionExercise-  
LatestTimeBusinessCenter** [0..1] String

---

Used in groups: [UnderlyingProvisionGrp](#)

### **171.2.6385 UnderlyingProvisionOptionExerciseEarliestDateOffsetPeriod**

Time unit multiplier for the interval to the first (and possibly only) exercise date in the exercise period.

Type: [int](#)

Used in components: [UnderlyingProvisionOptionExerciseDates](#)

### **171.2.6386 UnderlyingProvisionOptionExerciseEarliestDateOffsetUnit**

Time unit associated with the interval to the first (and possibly only) exercise date in the exercise period.

Type: [String](#)

Allowed values in ProvisionOptionExerciseEarliestDateOffsetUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: [UnderlyingProvisionOptionExerciseDates](#)

### **171.2.6387 UnderlyingProvisionOptionExerciseEarliestTime**

The earliest time at which notice of exercise can be given by the buyer to the seller (or seller's agent) i) on the expiration date, in the case of a European style option, (ii) on each bermuda option exercise date and the expiration date, in the case of a Bermuda style option the commencement date to, and including, the expiration date, in the case of an American option.

Type: [LocalMktTime](#)

Used in components: [UnderlyingProvisionOptionExerciseDates](#)

**171.2.6388 UnderlyingProvisionOptionExerciseEarliestTimeBusinessCenter**

Identifies the business center calendar used with the provision's earliest time for notice of exercise.

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in components: **UnderlyingProvisionOptionExerciseDates**

**171.2.6389 UnderlyingProvisionOptionExerciseFixedDate**

A predetermined option exercise date, unadjusted or adjusted depending on UnderlyingProvisionOptionExerciseFixedDateType(42114).

Type: **LocalMktDate**

Used in groups: **UnderlyingProvisionOptionExerciseFixedDateGrp**

**171.2.6390 UnderlyingProvisionOptionExerciseFixedDateGrp**

The UnderlyingProvisionOptionExerciseFixedDateGrp is a repeating component within the UnderlyingProvisionOptionExerciseDates component used to report an array of unadjusted or adjusted fixed exercise dates.

Name	Mult.	Type	Description
<b>NoUnderlyingProvisionOptionExerciseFixedDates</b>	[1..1]	NumInGroup	
<b>UnderlyingProvisionOptionExerciseFixedDate</b>	[0..1]	LocalMktDate	Required if NoUnderlyingProvisionOptionExerciseFixedDates(42112) > 0.
<b>UnderlyingProvisionOptionExerciseFixedDateType</b>	[0..1]	CodeSet	When specified it applies not only to the current date but to all subsequent dates in the group until overridden with a new type.

Used in components: **UnderlyingProvisionOptionExerciseDates**

**171.2.6391 UnderlyingProvisionOptionExerciseFixedDateType**

Specifies the type of date (e.g. adjusted for holidays).

Type: **int**

Allowed values in ProvisionOptionExerciseFixedDateTypeCodeSet:

Code	Name	Description
0	Unadjusted	Unadjusted
1	Adjusted	Adjusted

Used in groups: [UnderlyingProvisionOptionExerciseFixedDateGrp](#)

### 171.2.6392 UnderlyingProvisionOptionExerciseFrequencyPeriod

Time unit multiplier for the frequency of subsequent exercise dates in the exercise period following the earliest exercise date. An interval of 1 day should be used to indicate an American style exercise frequency.

Type: [int](#)

Used in components: [UnderlyingProvisionOptionExerciseDates](#)

### 171.2.6393 UnderlyingProvisionOptionExerciseFrequencyUnit

Time unit associated with the frequency of subsequent exercise dates in the exercise period following the earliest exercise date.

Type: [String](#)

Allowed values in CouponFrequencyUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year
H	Hour	Hour
Min	Minute	Minute
S	Second	Second
T	Term	Term

Used in components: [UnderlyingProvisionOptionExerciseDates](#)

**171.2.6394 UnderlyingProvisionOptionExerciseLatestTime**

For a Bermuda or American style option, the latest time on an exercise business day (excluding the expiration date) within the exercise period that notice can be given by the buyer to the seller or seller's agent. Notice of exercise given after this time will be deemed to have been given on the next exercise business day.

Type: **LocalMktTime**

Used in components: **UnderlyingProvisionOptionExerciseDates**

**171.2.6395 UnderlyingProvisionOptionExerciseLatestTimeBusinessCenter**

Identifies the business center calendar used with the provision's latest time for notice of exercise.

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in components: **UnderlyingProvisionOptionExerciseDates**

**171.2.6396 UnderlyingProvisionOptionExerciseMaximumNotional**

The maximum notional amount that can be exercised on a given exercise date.

Type: **Amt**

Used in groups: **UnderlyingProvisionGrp**

**171.2.6397 UnderlyingProvisionOptionExerciseMinimumNotional**

The minimum notional amount that can be exercised on a given exercise date.

Type: **Amt**

Used in groups: **UnderlyingProvisionGrp**

**171.2.6398 UnderlyingProvisionOptionExerciseMultipleNotional**

A notional amount which restricts the amount of notional that can be exercised when partial exercise or multiple exercise is applicable. The integral multiple amount defines a lower limit of notional that can be exercised and also defines a unit multiple of notional that can be exercised, i.e. only integer multiples of this amount can be exercised.

Type: **Amt**

Used in groups: **UnderlyingProvisionGrp**

### **171.2.6399 UnderlyingProvisionOptionExercisePeriodSkip**

The number of periods in the referenced date schedule that are between each date in the relative date schedule. Thus a skip of 2 would mean that dates are relative to every second date in the referenced schedule. If present this should have a value greater than 1.

Type: **int**

Used in components: **UnderlyingProvisionOptionExerciseDates**

### **171.2.6400 UnderlyingProvisionOptionExerciseStartDateAdjusted**

The adjusted first day of the exercise period for an American style option.

Type: **LocalMktDate**

Used in components: **UnderlyingProvisionOptionExerciseDates**

### **171.2.6401 UnderlyingProvisionOptionExerciseStartDateOffsetDayType**

Specifies the day type of the provision's relative option exercise start date offset.

Type: **int**

Allowed values in **PaymentStreamPaymentDateOffsetDayTypeCodeSet**:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in components: **UnderlyingProvisionOptionExerciseDates**

**171.2.6402 UnderlyingProvisionOptionExerciseStartDateOffsetPeriod**

Time unit multiplier for the relative option exercise start date offset.

Type: **int**

Used in components: **UnderlyingProvisionOptionExerciseDates**

**171.2.6403 UnderlyingProvisionOptionExerciseStartDateOffsetUnit**

Time unit associated with the relative option exercise start date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: **UnderlyingProvisionOptionExerciseDates**

**171.2.6404 UnderlyingProvisionOptionExerciseStartDateRelativeTo**

Specifies the anchor date when the option exercise start date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: **int**

Used in components: **UnderlyingProvisionOptionExerciseDates**

**171.2.6405 UnderlyingProvisionOptionExerciseStartDateUnadjusted**

The unadjusted first day of the exercise period for an American style option.

Type: **LocalMktDate**

Used in components: **UnderlyingProvisionOptionExerciseDates**

**171.2.6406 UnderlyingProvisionOptionExerciseStyle**

The instrument provision's exercise style.

Type: **int**

Allowed values in ExerciseStyleCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	European	European
1	American	American
2	Bermuda	Bermuda
99	Other	Other

---

Used in groups: **UnderlyingProvisionGrp**

**171.2.6407 UnderlyingProvisionOptionExpirationDateAdjusted**

The adjusted last date within an exercise period for an American style option. For a European style option it is the only date within the exercise period.

Type: **LocalMktDate**

Used in components: **UnderlyingProvisionOptionExpirationDate**

**171.2.6408 UnderlyingProvisionOptionExpirationDateBusinessCenter**

The business center calendar used to adjust the underlying instrument's provision's option expiration date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **UnderlyingProvisionOptionExpirationDateBusinessCenterGrp**

**171.2.6409 UnderlyingProvisionOptionExpirationDateBusinessCenterGrp**

UnderlyingProvisionOptionExpirationDateBusinessCenterGrp is a repeating subcomponent within the UnderlyingProvisionOptionExpirationDate component. It is used to specify the set of business centers

whose calendars drive the date adjustment. Used only to override the business centers defined in the UnderlyingDateAdjustment component in UnderlyingInstrument.

Name	Mult.	Type	Description
NoUnderlyingProvisionOptionExpirationDateBusinessCenters	[1..1]	NumInGroup	
UnderlyingProvisionOptionExpirationDateBusinessCenter	[0..1]	String	Required if NoUnderlyingProvisionOptionExpirationDateBusinessCenters(42186) > 0.

Used in components: [UnderlyingProvisionOptionExpirationDate](#)

### 171.2.6410 UnderlyingProvisionOptionExpirationDateBusinessDayConvention

The business day convention used to adjust the underlying instrument's provision's option expiration date. Used only to override the business day convention specified in the UnderlyingDateAdjustment component within the UnderlyingInstrument component.

Type: [int](#)

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [UnderlyingProvisionOptionExpirationDate](#)

### 171.2.6411 UnderlyingProvisionOptionExpirationDate

The UnderlyingProvisionOptionExerciseDate is a subcomponent within the UnderlyingProvisionGrp component used to report the option expiration date and times defined in the provision.

Name	Mult.	Type	Description
<a href="#">UnderlyingProvisionOptionExpirationDateUnadjusted</a>	[0..1]	LocalMktDate	
<a href="#">UnderlyingProvisionOptionExpirationDateBusinessDayConvention</a>	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified value would be specific to this instance of the provisional option expiration date.
<a href="#">UnderlyingProvisionOptionExpirationDateBusinessCenterGrp</a>	[0..*]	Group	When specified, this overrides the business centers defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified values would be specific to this instance of the provisional option expiration date.
<a href="#">UnderlyingProvisionOptionExpirationDateRelativeTo</a>	[0..1]	int	
<a href="#">UnderlyingProvisionOptionExpirationDateOffsetPeriod</a>	[0..1]	int	Conditionally required when UnderlyingProvisionOptionExpirationDateOffsetUnit(42137) is specified.
<a href="#">UnderlyingProvisionOptionExpirationDateOffsetUnit</a>	[0..1]	CodeSet	Conditionally required when UnderlyingProvisionOptionExpirationDateOffsetPeriod(42136) is specified.
<a href="#">UnderlyingProvisionOptionExpirationDateOffsetDayType</a>	[0..1]	CodeSet	
<a href="#">UnderlyingProvisionOptionExpirationDateAdjusted</a>	[0..1]	LocalMktDate	
<a href="#">UnderlyingProvisionOptionExpirationTime</a>	[0..1]	LocalMktTime	
<a href="#">UnderlyingProvisionOptionExpirationTimeBusinessCenter</a>	[0..1]	String	

Used in groups: [UnderlyingProvisionGrp](#)

### 171.2.6412 UnderlyingProvisionOptionExpirationDateOffsetDayType

Specifies the day type of the provision's relative option expiration date offset.

Type: **int**

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

---

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in components: [UnderlyingProvisionOptionExpirationDate](#)

### **171.2.6413 UnderlyingProvisionOptionExpirationDateOffsetPeriod**

Time unit multiplier for the relative option expiration date offset.

Type: [int](#)

Used in components: [UnderlyingProvisionOptionExpirationDate](#)

### **171.2.6414 UnderlyingProvisionOptionExpirationDateOffsetUnit**

Time unit associated with the relative option expiration date offset.

Type: [String](#)

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: [UnderlyingProvisionOptionExpirationDate](#)

### **171.2.6415 UnderlyingProvisionOptionExpirationDateRelativeTo**

Specifies the anchor date when the option expiration date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: **int**

Used in components: **UnderlyingProvisionOptionExpirationDate**

#### **171.2.6416 UnderlyingProvisionOptionExpirationDateUnadjusted**

The unadjusted last day within an exercise period for an American style option. For a European style option it is the only day within the exercise period.

Type: **LocalMktDate**

Used in components: **UnderlyingProvisionOptionExpirationDate**

#### **171.2.6417 UnderlyingProvisionOptionExpirationTime**

The latest time for exercise on the expiration date.

Type: **LocalMktTime**

Used in components: **UnderlyingProvisionOptionExpirationDate**

#### **171.2.6418 UnderlyingProvisionOptionExpirationTimeBusinessCenter**

Identifies the business center calendar used with the provision's latest exercise time on expiration date.

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in components: **UnderlyingProvisionOptionExpirationDate**

#### **171.2.6419 UnderlyingProvisionOptionMaximumNumber**

The maximum number of options that can be exercised on a given exercise date. If the number is not specified, it means that the maximum number of options corresponds to the remaining unexercised options.

Type: **int**

Used in groups: **UnderlyingProvisionGrp**

**171.2.6420 UnderlyingProvisionOptionMinimumNumber**

The minimum number of options that can be exercised on a given exercise date.

Type: **int**

Used in groups: **UnderlyingProvisionGrp**

**171.2.6421 UnderlyingProvisionOptionRelevantUnderlyingDateAdjusted**

The adjusted date on the underlying set by the exercise of an option. What this date is depends on the option (e.g. in a swaption it is the swap effective date, in an extendible/cancelable provision it is the swap termination date).

Type: **LocalMktDate**

Used in components: **UnderlyingProvisionOptionRelevantUnderlyingDate**

**171.2.6422 UnderlyingProvisionOptionRelevantUnderlyingDateBizDayConvention**

The business day convention used to adjust the underlying instrument provision's option underlying date. Used only to override the business day convention specified in the UnderlyingDateAdjustment component within the UnderlyingInstrument component.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

---

Used in components: **UnderlyingProvisionOptionRelevantUnderlyingDate**

**171.2.6423 UnderlyingProvisionOptionRelevantUnderlyingDateBusinessCenter**

The business center calendar used to adjust the underlying instrument's provision's option underlying date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **UnderlyingProvisionOptionRelevantUnderlyingDateBusinessCenterGrp**

**171.2.6424 UnderlyingProvisionOptionRelevantUnderlyingDateBusinessCenterGrp**

UnderlyingProvisionOptionRelevantUnderlyingDateBusinessCenterGrp is a repeating subcomponent within the UnderlyingProvisionOptionRelevantUnderlyingDate component. It is used to specify the set of business centers whose calendars drive date adjustment. Used only to override the business centers defined in the UnderlyingDateAdjustment component in UnderlyingInstrument.

Name	Mult.	Type	Description
<b>NoUnderlyingProvisionOptionRelevantUnderlyingDateBusinessCenters</b>	[1..1]	NumInGroup	
<b>UnderlyingProvisionOptionRelevantUnderlyingDateBusinessCenter</b>	[0..1]	String	Required if NoUnderlyingProvisionOptionRelevantUnderlyingDateBusinessCenters(42188) > 0.

Used in components: **UnderlyingProvisionOptionRelevantUnderlyingDate**

**171.2.6425 UnderlyingProvisionOptionRelevantUnderlyingDate**

The UnderlyingProvisionOptionRelevantUnderlyingDate is a subcomponent within the UnderlyingProvisionGrp component used to report the option relevant underlying date defined in the provision.

Name	Mult.	Type	Description
<b>UnderlyingProvisionOptionRelevantUnderlyingDateUnadjusted</b>	[0..1]	LocalMktDate	

Name	Mult.	Type	Description
<a href="#">UnderlyingProvisionOptionRelevantUnderlyingDateBizDayConvention</a>	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified value would be specific to this instance of the provisional option relevant underlying date.
<a href="#">UnderlyingProvisionOptionRelevantUnderlyingDateBusinessCenterGrp</a>	[0..*]	Group	When specified, this overrides the business centers defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified values would be specific to this instance of the provisional option relevant underlying date.
<a href="#">UnderlyingProvisionOptionRelevantUnderlyingDateRelativeTo</a>	[0..1]	int	
<a href="#">UnderlyingProvisionOptionRelevantUnderlyingDateOffsetPeriod</a>	[0..1]	int	Conditionally required when UnderlyingProvisionOptionRelevantUnderlyingDateOffsetUnit(42146) is specified.
<a href="#">UnderlyingProvisionOptionRelevantUnderlyingDateOffsetUnit</a>	[0..1]	CodeSet	Conditionally required when UnderlyingProvisionOptionRelevantUnderlyingDateOffsetPeriod(42145) is specified.
<a href="#">UnderlyingProvisionOptionRelevantUnderlyingDateOffsetDayType</a>	[0..1]	CodeSet	
<a href="#">UnderlyingProvisionOptionRelevantUnderlyingDateAdjusted</a>	[0..1]	LocalMktDate	

Used in groups: [UnderlyingProvisionGrp](#)

### 171.2.6426 UnderlyingProvisionOptionRelevantUnderlyingDateOffsetDayType

Specifies the day type of the provision's relative option relevant underlying date offset.

Type: [int](#)

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business

Code	Name	Description
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: [UnderlyingProvisionOptionRelevantUnderlyingDate](#)

### 171.2.6427 UnderlyingProvisionOptionRelevantUnderlyingDateOffsetPeriod

Time unit multiplier for the relative option relevant underlying date offset.

Type: [int](#)

Used in components: [UnderlyingProvisionOptionRelevantUnderlyingDate](#)

### 171.2.6428 UnderlyingProvisionOptionRelevantUnderlyingDateOffsetUnit

Time unit associated with the relative option relevant underlying date offset.

Type: [String](#)

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: [UnderlyingProvisionOptionRelevantUnderlyingDate](#)

### 171.2.6429 UnderlyingProvisionOptionRelevantUnderlyingDateRelativeTo

Specifies the anchor date when the date relevant to the underlying trade on exercise is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: [int](#)

Used in components: [UnderlyingProvisionOptionRelevantUnderlyingDate](#)

**171.2.6430 UnderlyingProvisionOptionRelevantUnderlyingDateUnadjusted**

The unadjusted date on the underlying set by the exercise of an option. What this date is depends on the option (e.g. in a swaption it is the swap effective date, in an extendible/cancelable provision it is the swap termination date).

Type: [LocalMktDate](#)

Used in components: [UnderlyingProvisionOptionRelevantUnderlyingDate](#)

**171.2.6431 UnderlyingProvisionOptionSinglePartyBuyerSide**

If optional early termination is not available to both parties then this component identifies the buyer of the option through its side of the trade.

Type: [int](#)

Allowed values in ProvisionOptionSinglePartyBuyerSideCodeSet:

---

Code	Name	Description
1	Buy	Buy
2	Sell	Sell

---

Used in groups: [UnderlyingProvisionGrp](#)

**171.2.6432 UnderlyingProvisionOptionSinglePartySellerSide**

If optional early termination is not available to both parties then this component identifies the seller of the option through its side of the trade.

Type: [int](#)

Allowed values in ProvisionOptionSinglePartyBuyerSideCodeSet:

---

Code	Name	Description
1	Buy	Buy
2	Sell	Sell

---

Used in groups: [UnderlyingProvisionGrp](#)

### 171.2.6433 UnderlyingProvisionParties

UnderlyingProvisionParties is a repeating component within the UnderlyingProvisionGrp component used to report the parties identified in the contract provision.

Name	Mult.	Type	Description
NoUnderlyingProvisionPartyIDs	[1..1]	NumInGroup	
UnderlyingProvisionPartyID	[0..1]	String	Required if NoUnderlyingProvisionPartyIDs(42173) > 0.
UnderlyingProvisionPartyIDSource	[0..1]	CodeSet	Required if NoUnderlyingProvisionPartyIDs(42173) > 0.
UnderlyingProvisionPartyRole	[0..1]	CodeSet	Required if NoUnderlyingProvisionPartyIDs(42173) > 0.
UnderlyingProvisionPartyRoleQualifier	[0..1]	CodeSet	
UnderlyingProvisionPtysSubGrp	[0..*]	Group	

Used in groups: [UnderlyingProvisionGrp](#)

### 171.2.6434 UnderlyingProvisionPartyID

The party identifier for the payment settlement party.

Type: [String](#)

Used in groups: [UnderlyingProvisionParties](#)

### 171.2.6435 UnderlyingProvisionPartyIDSource

Identifies the class or source of the UnderlyingProvisionPartyID(42174) value.

Type: [char](#)

Allowed values in PartyIDSourceCodeSet:

Code	Name	Description
1	KoreanInvestorID	Korean Investor ID
6	UKNationalInsuranceOrPension-Number	UK National Insurance or Pension Number

Code	Name	Description
B	BIC	BIC (Bank Identification Code - SWIFT managed) code (ISO9362 - See "Appendix 6-B")
I	ISITCAcronym	Directed broker three character acronym as defined in ISITC "ETC Best Practice" guidelines document
2	TaiwaneseForeignInvestorID	Taiwanese Qualified Foreign Investor ID QFII/FID
7	USSocialSecurityNumber	US Social Security Number
C	GeneralIdentifier	Generally accepted market participant identifier (e.g. NASD mnemonic)
3	TaiwaneseTradingAcct	Taiwanese Trading Acct
8	USEmployerOrTaxIDNumber	US Employer or Tax ID Number
D	Proprietary	Proprietary / Custom code. Custom ID schema used between counterparties, trading platforms and repositories.
4	MalaysianCentralDepository	Malaysian Central Depository (MCD) number
9	AustralianBusinessNumber	Australian Business Number
E	ISOCountryCode	ISO Country Code
5	ChineseInvestorID	Chinese Investor ID
A	AustralianTaxFileNumber	Australian Tax File Number
F	SettlementEntityLocation	Settlement Entity Location (note if Local Market Settlement use "E=ISO Country Code") (see "Appendix 6-G" for valid values)
G	MIC	Market Identifier Code (ISO 10383) MIC
J	TaxID	Tax ID
H	CSDParticipant	CSD participant/member code (e.g. Euroclear, DTC, CREST or Kassenverein number)
K	AustralianCompanyNumber	Australian Company Number
L	AustralianRegisteredBodyNumber	Australian Registered Body Number
M	CFTCReportingFirmIdentifier	CFTC reporting firm identifier
N	LegalEntityIdentifier	Legal Entity Identifier (ISO 17442) LEI
O	InterimIdentifier	Interim identifier. An interim entity identifier assigned by a regulatory agency prior to an LEI (ISO 17442) being assigned.
P	ShortCodeIdentifier	Short code identifier. A generic means for trading venues, brokers, investment managers to convey a bilaterally agreed upon "short hand" code for an identifier that is a reference to a mapping between the parties.

Code	Name	Description
Q	NationalIDNaturalPerson	National ID of natural person. An identification number generally assigned by a government authority or agency to a natural person which is unique to the person it is assigned to. Examples include, but not limited to, "social security number", "pension number".
R	IndiaPermanentAccountNumber	India Permanent Account Number. Also referred to as PAN ID. An identifier issued by the Income Tax Department of India.
S	FDID	Firm designated identifier. Also referred to as FDID. A unique identifier required by the SEC for each trading account designated by Industry Members for purposes of reporting to CAT (Consolidated Audit Trail).
T	SPSAID	Special Segregated Account ID. Also referred to as SPSA ID. The Special Segregated Account identifier issued by Hong Kong Exchanges and Clearing.
U	MasterSPSAID	Master Special Segregated Account ID. Also referred to as Master SPSA ID. The master identifier issued by Hong Kong Exchanges and Clearing for the aggregation of SPSA IDs.

Used in groups: [UnderlyingProvisionParties](#)

### 171.2.6436 UnderlyingProvisionPartyRole

Identifies the type or role of UnderlyingProvisionPartyID(42174) specified.

Type: [int](#)

Allowed values in PartyRoleCodeSet:

Code	Name	Description
1	ExecutingFirm	Executing Firm (formerly FIX 4.2 ExecBroker)
2	BrokerOfCredit	Broker of Credit (formerly FIX 4.2 BrokerOfCredit)
3	ClientID	Client ID (formerly FIX 4.2 ClientID)
4	ClearingFirm	Clearing Firm (formerly FIX 4.2 ClearingFirm)
5	InvestorID	Investor ID
6	IntroducingFirm	Introducing Firm
7	EnteringFirm	Entering Firm
8	Locate	Locate / Lending Firm (for short-sales)
9	FundManagerClientID	Fund Manager Client ID (for CIV)

<b>Code</b>	<b>Name</b>	<b>Description</b>
10	SettlementLocation	Settlement Location (formerly FIX 4.2 SettlLocation)
11	OrderOriginationTrader	Order Origination Trader (associated with Order Origination Firm - i.e. trader who initiates/submits the order)
12	ExecutingTrader	Executing Trader (associated with Executing Firm - actually executes)
13	OrderOriginationFirm	Order Origination Firm (e.g. buy-side firm)
14	GiveupClearingFirmDepr	Giveup Clearing Firm (firm to which trade is given up)
15	CorrespondantClearingFirm	Correspondant Clearing Firm
16	ExecutingSystem	Executing System
17	ContraFirm	Contra Firm
18	ContraClearingFirm	Contra Clearing Firm
19	SponsoringFirm	Sponsoring Firm
20	UnderlyingContraFirm	Underlying Contra Firm
21	ClearingOrganization	Clearing Organization
22	Exchange	Exchange. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
24	CustomerAccount	Customer Account
25	CorrespondentClearingOrganization	Correspondent Clearing Organization
26	CorrespondentBroker	Correspondent Broker
27	Buyer	Buyer/Seller (Receiver/Deliverer)
28	Custodian	Custodian
29	Intermediary	Intermediary
30	Agent	Agent
31	SubCustodian	Sub-custodian
32	Beneficiary	Beneficiary
33	InterestedParty	Interested party
34	RegulatoryBody	Regulatory body. In the context of regulatory reporting, this identifies the regulator the trade is being reported to.
35	LiquidityProvider	Liquidity provider
36	EnteringTrader	Entering trader
37	ContraTrader	Contra trader
38	PositionAccount	Position account. The account which positions are maintained. Typically represents the aggregation of one or more customer accounts.
39	ContraInvestorID	Contra Investor ID
40	TransferToFirm	Transfer to Firm

<b>Code</b>	<b>Name</b>	<b>Description</b>
41	ContraPositionAccount	Contra Position Account
42	ContraExchange	Contra Exchange
43	InternalCarryAccount	Internal Carry Account
44	OrderEntryOperatorID	Order Entry Operator ID
45	SecondaryAccountNumber	Secondary Account Number
46	ForeignFirm	Foreign Firm
47	ThirdPartyAllocationFirm	Third Party Allocation Firm
48	ClaimingAccount	Claiming Account
49	AssetManager	Asset Manager
50	PledgorAccount	Pledgor Account
51	PledgeeAccount	Pledgee Account
52	LargeTraderReportableAccount	Large Trader Reportable Account
53	TraderMnemonic	Trader mnemonic
54	SenderLocation	Sender Location
55	SessionID	Session ID
56	AcceptableCounterparty	Acceptable Counterparty
57	UnacceptableCounterparty	Unacceptable Counterparty
58	EnteringUnit	Entering Unit
59	ExecutingUnit	Executing Unit
60	IntroducingBroker	Introducing Broker
61	QuoteOriginator	Quote originator
62	ReportOriginator	Report originator
63	SystematicInternaliser	Systematic internaliser (SI)
64	MultilateralTradingFacility	Multilateral Trading Facility (MTF). Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
65	RegulatedMarket	Regulated Market (RM). Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
66	MarketMaker	Market Maker
67	InvestmentFirm	Investment Firm
68	HostCompetentAuthority	Host Competent Authority (Host CA)
69	HomeCompetentAuthority	Home Competent Authority (Home CA)
70	CompetentAuthorityLiquidity	Competent Authority of the most relevant market in terms of liquidity (CAL)

Code	Name	Description
71	CompetentAuthorityTransactionVenue	Competent Authority of the Transaction (Execution) Venue (CATV)
72	ReportingIntermediary	Reporting intermediary. The medium or vendor used to report to a regulator, non-regulatory agency or data repository.
73	ExecutionVenue	Execution Venue. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
74	MarketDataEntryOriginator	Market data entry originator
75	LocationID	Location ID
76	DeskID	Desk ID
77	MarketDataMarket	Market data market
78	AllocationEntity	Allocation Entity
79	PrimeBroker	Prime Broker providing General Trade Services
80	StepOutFirm	Step-Out Firm (Prime Broker)
81	BrokerClearingID	Broker clearing identifier
82	CentralRegistrationDepository	Central Registration Depository (CRD)
83	ClearingAccount	Clearing Account
84	AcceptableSettlingCounterparty	Acceptable Settling Counterparty
85	UnacceptableSettlingCounterparty	Unacceptable Settling Counterparty
86	CLSMemberBank	CLS Member Bank
87	InConcertGroup	In Concert Group
88	InConcertControllingEntity	In Concert Controlling Entity
89	LargePositionsReportingAccount	Large Positions Reporting Account
90	SettlementFirm	Settlement Firm
91	SettlementAccount	Settlement account. The account to which individual payment obligations are aggregated for netting and funds movement. Typically represents the aggregation of many margin (performance bond) accounts.
92	ReportingMarketCenter	Reporting Market Center
93	RelatedReportingMarketCenter	Related Reporting Market Center
94	AwayMarket	Away Market. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
95	GiveupTradingFirm	Give-up (trading) firm
96	TakeupTradingFirm	Take-up (trading) firm
97	GiveupClearingFirm	Give-up clearing firm
98	TakeupClearingFirm	Take-up clearing firm

<b>Code</b>	<b>Name</b>	<b>Description</b>
99	OriginatingMarket	Originating Market. Identifies the Market using PartyIDSource(tag 447) = G (Market Identifier Code) where an order originated in the event that the order is sent to an alternative market for execution. Serves as an inverse of an away market.
100	MarginAccount	Margin account. Also referred to as "performance bond account". The margin account is the calculated margin requirements. Typically represents the aggregation of one or more position accounts.
101	CollateralAssetAccount	Collateral asset account. The account at which individual collateral assets are maintained. Typically, although not always, one-for-one with the settlement account.
102	DataRepository	Data repository. Multiple instances of this PartyRole may appear for reporting purposes.
103	CalculationAgent	Calculation agent
104	ExerciseNoticeSender	Sender of exercise notice
105	ExerciseNoticeReceiver	Receiver of exercise notice
106	RateReferenceBank	Rate reference bank. The bank providing the reference rate. Multiple instance of this PartyRole may appear.
107	Correspondent	Correspondent
109	BeneficiaryBank	Beneficiary's bank or depository institution. The institution in which the beneficiary, a person or an entity, has their account with. The institution may be a bank or non-bank institution.
110	Borrower	Borrower
111	PrimaryObligator	Primary obligator
112	Guarantor	Guarantor
113	ExcludedReferenceEntity	Excluded reference entity
114	DeterminingParty	Determining party
115	HedgingParty	Hedging party
116	ReportingEntity	Reporting entity. The entity that is reporting the information.
117	SalesPerson	Sales person. The person who is involved in the sales activities for their firm.
118	Operator	Operator. The person who has the capabilities and authorization to take certain actions; for example, setting entitlements, etc.
119	CSD	Central Securities Depository (CSD)
120	ICSD	International Central Securities Depository (ICSD)

Code	Name	Description
121	TradingSubAccount	Trading sub-account. Example of sub-accounts include a clearing account that has multiple trading sub-accounts, a trading account that has multiple trading sub-accounts belonging to different trading firms.
122	InvestmentDecisionMaker	Investment decision maker. In the context of ESMA RTS reporting, this is used to specify party responsible for the investment decision. See RTS 24, Annex, Table 2, Field 4.
123	PublishingIntermediary	Publishing intermediary. The medium or vendor used to publish to the market.
124	CSDParticipant	Central Securities Depository (CSD) Participant. In the context of EU SFTR reporting the identifier of the CSD participant or indirect participant of the reporting counterparty. Where both the CSD participant and indirect participant are involved in the transaction this should identify the indirect participant.
125	Issuer	Issuer. The issuer of the security.
126	ContraCustomerAccount	Contra Customer Account. Same as PartyRole(452) = 24 (Customer Account) but for the counterparty. Can be used whenever the parties component is not nested in a repeating group representing both sides.
127	ContraInvestmentDecisionMaker	Contra Investment Decision Maker. Same as PartyRole(452) = 122 (Investment Decision Maker) but for the counterparty. Can be used whenever the parties component is not nested in a repeating group representing both sides.

Used in groups: [UnderlyingProvisionParties](#)

### 171.2.6437 UnderlyingProvisionPartyRoleQualifier

Used to further qualify the value of UnderlyingProvisionPartyRole(42176).

Type: [int](#)

Allowed values in PartyDetailRoleQualifierCodeSet:

Code	Name	Description
0	Agency	Agency
1	Principal	Principal
2	RisklessPrincipal	Riskless principal
3	GeneralClearingMember	General clearing member

Code	Name	Description
30	ExchangeOrderSubmitter	Exchange order submitter. Used to identify original or initial exchange order submitting broker when party role "1" (Executing Firm) appears more than once.
4	IndividualClearingMember	Individual clearing member
5	PreferredMarketMaker	Preferred market maker. Market maker getting a part of the matched quantity before primary or default market maker.
6	DirectedMarketMaker	Directed market maker. Single market maker to handle the order provided.
7	Bank	Bank
8	Hub	Hub. Indicates that the Intermediary party is a hub system or service provider.
9	PrimaryTrdRepository	Primary trade repository. Used to differentiate the principal trade repository from the Original or Additional trade repositories when there are multiple trade repositories being reported.
10	OrigTrdRepository	Original trade repository. Used to identify the trade repository to which the trade was originally reported if different from the current repository to which the trade is being reported.
11	AddnlIntlTrdRepository	Additional international trade repository. Used with InternationalSwapIndicator(2526) to identify the trade repository that is in addition to the local swaps data repository as required by U.S. law.
12	AddnlDomesticTrdRepository	Additional domestic trade repository. Used with MixedSwapIndicator(1929) to identify the trade repository that is in addition to the current trade repository when the assets in the swap are subject to two different domestic regulators.
13	RelatedExchange	Related exchange
14	OptionsExchange	Options exchange
15	SpecifiedExchange	Specified exchange
16	ConstituentExchange	Constituent exchange.
17	ExemptFromTradeReporting	Exempt from trade reporting. In the context of FINRA TRACE reporting requirements, this is used to indicate the ATS has been granted a regulatory exemption from reporting.
18	Current	Current. Can be used to convey an existing party identifier for the same party role in a single message.
19	New	New. Can be used to convey a future party identifier for the same party role in a single message.
20	DesignatedSponsor	Designated sponsor. Market maker jointly providing liquidity for the same security with other market makers.

Code	Name	Description
21	Specialist	Specialist. Market maker being the only one providing liquidity for a security.
22	Algorithm	Algorithm
23	FirmOrLegalEntity	Firm or legal entity
24	NaturalPerson	Natural person
25	RegularTrader	Regular trader. Standard trader profile.
26	HeadTrader	Head trader. Senior trader leading a group of regular traders.
27	Supervisor	Supervisor. Administrative user that has only limited rights for normal trading but possibly special rights for emergency actions.
28	TriParty	Tri-party. In the context of EU SFTR reporting, identifies the third party, not necessarily the custodian, to which the reporting counterparty has outsourced the post-trade processing of an SFT (if applicable).
29	Lender	Lender. In the context of EU SFTR reporting, identifies the agent lender involved in the securities lending transaction.

Used in groups: [UnderlyingProvisionParties](#)

#### 171.2.6438 UnderlyingProvisionPartySubID

Underlying provision party sub-identifier, if applicable for UnderlyingProvisionPartyID(42174).

Type: [String](#)

Used in groups: [UnderlyingProvisionPtysSubGrp](#)

#### 171.2.6439 UnderlyingProvisionPartySubIDType

The type of UnderlyingProvisionPartySubID(42178).

Type: [int](#)

Allowed values in PartySubIDTypeCodeSet:

Code	Name	Description
1	Firm	Firm
2	Person	Person

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
3	System	System
4	Application	Application
5	FullLegalNameOfFirm	Full legal name of firm
6	PostalAddress	Postal address
7	PhoneNumber	Phone number
8	EmailAddress	Email address
9	ContactName	Contact name
10	SecuritiesAccountNumber	Securities account number (for settlement instructions)
11	RegistrationNumber	Registration number (for settlement instructions and confirmations)
12	RegisteredAddressForConfirmation	Registered address (for confirmation purposes)
13	RegulatoryStatus	Regulatory status (for confirmation purposes)
14	RegistrationName	Registration name (for settlement instructions)
15	CashAccountNumber	Cash account number (for settlement instructions)
16	BIC	BIC
17	CSDParticipantMemberCode	CSD participant member code
18	RegisteredAddress	Registered address
19	FundAccountName	Fund account name
20	TelexNumber	Telex number
21	FaxNumber	Fax number
22	SecuritiesAccountName	Securities account name
23	CashAccountName	Cash account name
24	Department	Department
25	LocationDesk	Location desk
26	PositionAccountType	Position account type
27	SecurityLocateID	Security locate ID
28	MarketMaker	Market maker
29	EligibleCounterparty	Eligible counterparty
30	ProfessionalClient	Professional client
31	Location	Location
32	ExecutionVenue	Execution venue
33	CurrencyDeliveryIdentifier	Currency delivery identifier
34	AddressCity	Address City
35	AddressStateOrProvince	Address State/Province

---

Code	Name	Description
36	AddressPostalCode	Address Postal Code
37	AddressStreet	Address Street
38	AddressISOCountryCode	Address Country (ISO country code)
39	ISOCountryCode	ISO country code
40	MarketSegment	Market segment
41	CustomerAccountType	Customer account type
42	OmnibusAccount	Omnibus account
43	FundsSegregationType	Funds segregation type
44	GuaranteeFund	Guarantee fund. Identifies a guarantee fund related to an account. Used when one account has multiple funds of collateral, each guaranteeing different positions. Can be used for PartyRole(452) = Customer Account(24).
45	SwapDealer	Swap dealer. The US regulator's defined term for identifying the trade counterparty as "any person who holds itself out as a dealer in swaps, makes a market in swaps, regularly enters into swaps with counterparties as an ordinary course of business for its own account, or engages in activity causing itself to be commonly known in the trade as a dealer or market maker in swaps".
46	MajorParticipant	Major participant. When PartySubID(523)=Y the counterparty is not the swap dealer but is a major swap participant as defined in the regulations.
47	FinancialEntity	Financial entity. When PartySubID(523)=Y the counterparty is neither a swap dealer nor a major swap participant but is a financial entity as defined in the regulations.
48	USPerson	U.S. person. A legal term referring to any U.S. person or legal entity anywhere in the world that should be taxed under U.S. law.
49	ReportingEntityIndicator	Reporting entity indicator. Indicates the entity obligated or delegated to report to their regulator, a non-regulatory agency or data repository. Set PartySubID(523)=Y if true.
50	ElectedClearingRequirementException	Elected clearing requirement exception
51	BusinessCenter	Business center.
52	ReferenceText	Reference text
53	ShortMarkingExemptAccount	Short-marking exempt account
54	ParentFirmIdentifier	Parent firm identifier. Implementation-specific identifier of this party's parent entity.
55	ParentFirmName	Parent firm name. Full name of this party's parent entity.

Code	Name	Description
56	DealIdentifier	Deal identifier. The internal identifier assigned to the trade by this party, particularly by a Clearing Organization.
57	SystemTradeID	System trade identifier
58	SystemTradeSubID	System trade sub-identifier
59	FCMCode	Futures Commission Merchant (FCM) code. The FCM's code or identifier in relation to the PartyRole(452). For example, if PartyRole(452) is the exchange or clearinghouse, the FCM code/ID specified in PartySubID(523) is the FCM's identifier at the exchange or clearinghouse.
60	DlvryTrmlCode	Delivery terminal customer account/code. Usually used for gas delivery to identify whose account the gas is allocated to at the delivery terminal. Often referred to as "HUB" code.
61	VolntyRptEntity	Voluntary reporting entity. The entity voluntarily reporting the trade to the regulator. Set PartySubID(523)=Y if true.
62	RptObligJurisdiction	Reporting obligation jurisdiction. For a trade that falls under multiple jurisdictions this may be used to identify, through PartySubID(523), the reporting jurisdiction to which the party is obligated to report.
63	VolntyRptJurisdiction	Voluntary reporting jurisdiction. For a trade that falls under multiple jurisdictions this may be used to identify, through PartySubID(523), the regulatory jurisdiction to which the party is submitting a voluntary report.
64	CompanyActivities	Company activities. For regulatory reporting. ID values include: A = Assurance undertaking authorized in accordance with Directive 2002/83/EC C = Credit institution authorized in accordance with Directive 2006/48/EC F = Investment firm in accordance with Directive 2004/39/EC I = Insurance undertaking authorized in accordance with Directive 73/239/EC L = Alternative investment fund managed by AIFMs authorized or registered in accordance with Directive 2011/61/EC O = Institution for occupational retirement provision within the meaning of Article 6(a) of Directive 2003/41/EC R = Reinsurance undertaking authorized in accordance with Directive 2005/68/EC U = UCITS and its management company, authorized in accordance with Directive 2009/65/EC or blank in case of coverage by LEI or in case of non-financial counterparties. In the context of EU SFTR reporting use the appropriate 4- or 1-character code noted in the regulations. See SFTR ITS "Commission Implementing Regulation (EU) 2019/363" Annexes 1 and 2 for values.
65	EEAreaDomiciled	European Economic Area domiciled. ID values: Y or N

<b>Code</b>	<b>Name</b>	<b>Description</b>
66	ContractLinked	Contract linked to commercial or treasury financing for this counterparty. ID values: Y or N
67	ContractAbove	Contract above clearing threshold for this counterparty. ID values: Y or N
68	VolntyRptPty	Voluntary reporting party. When PartySubID(523)=Y, identifies that the trading party is reporting voluntarily when VoluntaryRegulatoryReport(1935)=Y.
69	EndUser	End user. When PartySubID(523)=Y, the counterparty is neither the swap dealer, major swap participant nor financial entity as defined in the regulations.
70	LocationOrJurisdiction	Location or jurisdiction. One or more instances may be used in combination with PartySubIDType(803) = 49 (Reporting entity indicator) or 102 (Data repository) to identify the jurisdiction, countries, regions or provinces for which the party is a reporting entity or data repository when that characteristic is ambiguous or where there are multiple locations. The party sub-ID value is either a jurisdiction acronym, a 2-character ISO 3166 country code, or a hyphenated combination of the country code and the standard post-office abbreviation for province, state or region if necessary. E.g. "US" for United States or "CA-QC" for Quebec Canada.
71	DerivativesDealer	Derivatives dealer. Indicates whether the party is a derivatives dealer or not (Y/N). The Canadian regulator's defined term for identifying the trade counterparty as "a person or company engaging in or holding himself, herself or itself out as engaging in the business of trading in derivatives in Ontario as principal or agent".
72	Domicile	Domicile. Country and optionally province, state or region of domicile. The party sub-ID value is either a 2-character ISO 3166 country code or a hyphenated combination of the country code and the standard post-office abbreviation of province, state or region if necessary. E.g. "US" for United States or "CA-QC" for Quebec Canada.
73	ExemptFromRecognition	Exempt from recognition. Used with party role 21 "Clearing Organization" to indicate exemption (Y/N). Identifies a clearing agency as exempt from oversight in Ontario, i.e. one that 1) only provides limited services and does not present significant risks or 2) is foreign-based, intends to operate in Ontario but is subject to regulatory oversight in another jurisdiction.

Code	Name	Description
74	Payer	Payer. Identifies the party as the payer of a particular payment stream or bullet payment by quoting the stream's StreamDesc(40051) (or LegStreamDesc(40243) or UnderlyingStreamDesc(40542)) or payment's PaymentDesc(43087) in the associated party sub-identifier field.
75	Receiver	Receiver. Identifies the party as the receiver of a particular payment stream or bullet payment by quoting the stream's StreamDesc(40051) (or LegStreamDesc(40243) or UnderlyingStreamDesc(40542)) or payment's PaymentDesc(43087) in the associated party sub-identifier field.
76	SystematicInternaliser	Systematic Internaliser (SI). In the context of ESMA reporting, this is used to indicate whether the specified party is a Systematic Internaliser or not for the security defined in the Instrument component (Y/N).
77	PublishingEntityIndicator	Publishing entity indicator. Indicates the entity obligated or delegated to publish to the market. Set PartySubID(523)=Y if true.
78	FirstName	First name. The first name(s) of a natural person. If multiple names, separate entries by a comma.
79	Surname	Surname. The surname(s) or lastname(s) of a natural person. If multiple names, separate entries by a comma.
80	DateOfBirth	Date of birth. The date of birth of a natural person in the format YYYYMMDD.
81	OrderTransmittingFirm	Order transmitting firm. Identifies whether the party specified in PartyID(448) is the firm that transmitted the order. In the context of RTS 22 Article 4, when "true" the PartySubID(523)=Y shall be set "by the transmitting firm within the transmitting firm's report where conditions for transmission specified in Article 4 were not satisfied."
82	OrderTransmittingFirmBuyer	Order transmitting firm for buyer. Identifies the firm that transmitted the order for the buyer. In the context of ESMA RTS 22, PartySubID(523)=Y is used to indicate the firm identified in PartyID(448) is the firm that transmitted the order for the buyer. "This shall be populated by the receiving firm within the receiving firm's report with the identification code provided by the transmitting firm."

Code	Name	Description
83	OrderTransmitterSeller	Order transmitter for seller. Identifies the order transmitting firm for the seller. In the context of ESMA RTS 22, PartySubID(523)=Y is used to indicate the firm identified in PartyID(448) is the firm that transmitted the order for the seller. "This shall be populated by the receiving firm within the receiving firm's report with the identification code provided by the transmitting firm."
84	LegalEntityIdentifier	Legal Entity Identifier (ISO 17442) LEI
85	SubSectorClassification	Sub-sector classification. Supplemental to party sub-ID type "64" (Company activities) for regulatory reporting. For EU SFTR reporting use the appropriate 4-character code noted in the regulations applying the conditional association rules. See SFTR ITS "Commission Implementing Regulation (EU) 2019/363" Annexes 1 and 2 for values.
86	PartySide	Party side. May be used, when appropriate, to explicitly indicate the transaction side of the party, e.g. Buyer, Seller, Lender, Borrower, Maker, Taker, etc. in the ID. In the context of EU SFTR reporting, use values as required by SFTR, "GIVE" and "TAKE" in the ID, to identify collateral giver and taker.
87	LegalRegistrationCountry	Legal registration country. ISO Country Code where the registered office of the party is located as specified in the LEI reference data.

Used in groups: [UnderlyingProvisionPtysSubGrp](#)

### 171.2.6440 UnderlyingProvisionPtysSubGrp

UnderlyingProvisionPtysSubGrp is a repeating component within the UnderlyingProvisionParties component used to extend information to be reported for the party.

Name	Mult.	Type	Description
<a href="#">NoUnderlyingProvisionPartySubIDs</a>	[1..1]	NumInGroup	
<a href="#">UnderlyingProvisionPartySubID</a>	[0..1]	String	Required if NoUnderlyingProvisionPartySubIDs(42177) > 0.
<a href="#">UnderlyingProvisionPartySubIDType</a>	[0..1]	CodeSet	Required if NoUnderlyingProvisionPartySubIDs(42177) > 0.

Used in groups: [UnderlyingProvisionParties](#)

**171.2.6441 UnderlyingProvisionText**

Free form text to specify additional information or enumeration description when a standard value does not apply.

Type: **String**

Used in groups: **UnderlyingProvisionGrp**

**171.2.6442 UnderlyingProvisionType**

Type of provision.

Type: **int**

Allowed values in ProvisionTypeCodeSet:

Code	Name	Description
0	MandatoryEarlyTermination	Mandatory early termination
1	OptionalEarlyTermination	Optional early termination
2	Cancelable	Cancelable
3	Extendable	Extendable. The contract can be extended by either party usually with a specific time notice prior to the expiry date. In the context of EU SFTR reporting this corresponds to "termination optionality" code "ETSB".
4	MutualEarlyTermination	Mutual early termination
5	Evergreen	Evergreen. The contract automatically renews after the expiry date until one party gives the other notice to terminate. In the context of EU SFTR reporting this corresponds to "termination optionality" code "EGRN".
6	Callable	Callable. Contract is callable.
7	Puttable	Puttable. Contract is puttable.

Used in groups: **UnderlyingProvisionGrp**

**171.2.6443 UnderlyingPutOrCall**

Indicates whether an underlying option contract is a put, call, chooser or undetermined.

Type: **int**

Allowed values in PutOrCallCodeSet:

Code	Name	Description
0	Put	Put. Also used for the case in which the buyer of a Swaption has the right to enter into an IRS contract as a fixed-rate receiver or into a CDS contract as a seller of protection or for the case of a Floor.
1	Call	Call. Also used for the case in which the buyer of a Swaption has the right to enter into an IRS contract as a fixed-rate payer or into a CDS contract as a buyer of protection or for the case of a Cap.
2	Other	Other. In the context of ESMA RTS 22 reporting, this value may be used when, at the time of execution, the option right cannot be determined.
3	Chooser	Chooser. Indicates that the option buyer may choose to buy or sell the underlying security on exercise or if a Swaption to pay or receive the underlying IRS cash flow stream or to buy or sell CDS protection.

Used in components: [UnderlyingInstrument](#)

#### **171.2.6444 UnderlyingPx**

Underlying price associate with a derivative instrument.

Type: [Price](#)

Used in components: [UnderlyingInstrument](#)

#### **171.2.6445 UnderlyingQty**

Unit amount of the underlying security (par, shares, currency, etc.)

Type: [Qty](#)

Used in components: [UnderlyingInstrument](#)

#### **171.2.6446 UnderlyingRateSpreadInitialValue**

Specifies the initial rate spread for a basket underlier.

Type: [float](#)

Used in components: [UnderlyingRateSpreadSchedule](#)

### 171.2.6447 UnderlyingRateSpreadSchedule

UnderlyingRateSpreadSchedule is a subcomponent of UnderlyingInstrument used to specify the rate spread schedule for a basket underlier.

---

Name	Mult.	Type	Description
<a href="#">UnderlyingRateSpreadInitialValue</a>	[0..1]	float	
<a href="#">UnderlyingRateSpreadStepGrp</a>	[0..*]	Group	

---

Used in components: [UnderlyingInstrument](#)

### 171.2.6448 UnderlyingRateSpreadStepDate

The date that the rate spread step takes affect.

Type: [LocalMktDate](#)

Used in groups: [UnderlyingRateSpreadStepGrp](#)

### 171.2.6449 UnderlyingRateSpreadStepGrp

UnderlyingRateSpreadStepGrp is a repeating subcomponent of UnderlyingRateSpreadSchedule used to specify the step dates and amounts of a basket spread schedule.

---

Name	Mult.	Type	Description
<a href="#">NoUnderlyingRateSpreadSteps</a>	[1..1]	NumInGroup	
<a href="#">UnderlyingRateSpreadStepDate</a>	[0..1]	LocalMktDate	Required if NoUnderlyingRateSpreadSteps(43005) > 0.
<a href="#">UnderlyingRateSpreadStepValue</a>	[0..1]	float	Required if NoUnderlyingRateSpreadSteps(43005) > 0.

---

Used in components: [UnderlyingRateSpreadSchedule](#)

**171.2.6450 UnderlyingRateSpreadStepValue**

The the value of the new rate spread as of the UnderlyingRateSpreadStepDate(43006).

Type: **float**

Used in groups: **UnderlyingRateSpreadStepGrp**

**171.2.6451 UnderlyingRedemptionDate**

Underlying security's RedemptionDate. See RedemptionDate (240) field for description (Note tag # was reserved in FIX 4.1, added in FIX 4.3) (prior to FIX 4.4 field was of type UTCDate)

Type: **LocalMktDate**

Used in components: **UnderlyingInstrument**

**171.2.6452 UnderlyingReferenceEntityType**

Specifies the type of reference entity for first-to-default CDS basket contracts.

Type: **int**

Allowed values in ReferenceEntityTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	Asian	Asian
2	AustralianNewZealand	Australian and New Zealand
3	EuropeanEmergingMarkets	European emerging markets
4	Japanese	Japanese
5	NorthAmericanHighYield	North American high yield
6	NorthAmericanInsurance	North American insurance
7	NorthAmericanInvestmentGrade	North American investment grade
8	Singaporean	Singaporean
9	WesternEuropean	Western European
10	WesternEuropeanInsurance	Western European insurance

---

Used in components: **UnderlyingInstrument**

### **171.2.6453 UnderlyingRefID**

Identifies the underlying instrument the entity applies to by referencing the underlying instrument's UnderlyingID(2874).

Type: **String**

Used in groups: **CollateralAmountGrp**

### **171.2.6454 UnderlyingRefTickTableID**

Spread table code referred by the security or symbol.

Type: **int**

Used in components: **UnderlyingInstrument**

### **171.2.6455 UnderlyingRepoCollateralSecurityType**

Underlying security's RepoCollateralSecurityType. See RepoCollateralSecurityType (239) field for description.(Note tag # was reserved in FIX 4.1, added in FIX 4.3)

Type: **String**

Used in components: **UnderlyingInstrument**

### **171.2.6456 UnderlyingRepurchaseRate**

Underlying security's RepurchaseRate. See RepurchaseRate (227) field for description (Note tag # was reserved in FIX 4.1, added in FIX 4.3)

Type: **Percentage**

Used in components: **UnderlyingInstrument**

### **171.2.6457 UnderlyingRepurchaseTerm**

Underlying security's RepurchaseTerm. See RepurchaseTerm (226) field for description (Note tag # was reserved in FIX 4.1, added in FIX 4.3)

Type: **int**

Used in components: **UnderlyingInstrument**

**171.2.6458 UnderlyingRestructuringType**

See RestructuringType(1449)

Type: **String**

Allowed values in RestructuringTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
FR	FullRestructuring	Full Restructuring
MR	ModifiedRestructuring	Modified Restructuring
MM	ModifiedModRestructuring	Modified Mod Restructuring
XR	NoRestructuringSpecified	No Restructuring specified

---

Used in components: **UnderlyingInstrument**

**171.2.6459 UnderlyingReturnRateAmountRelativeTo**

Specifies the reference amount when the return rate amount is relative to another amount in the trade.

See [http://www.fixtradingcommunity.org/codelists#Payment\\_Amount\\_Relative\\_To](http://www.fixtradingcommunity.org/codelists#Payment_Amount_Relative_To) for code list of relative amounts.

Type: **int**

Used in groups: **UnderlyingReturnRateGrp**

**171.2.6460 UnderlyingReturnRateCashFlowType**

Specifies the type of cash flows, e.g. coupon payment, premium fee, settlement fee, etc.

See <http://www.fpml.org/coding-scheme/cashflow-type> for values.

Type: **String**

Used in groups: **UnderlyingReturnRateGrp**

**171.2.6461 UnderlyingReturnRateCommissionAmount**

The commission amount.

Type: **Amt**

Used in groups: **UnderlyingReturnRateGrp**

### **171.2.6462 UnderlyingReturnRateCommissionBasis**

Specifies the basis or unit used to calculate the commission.

Type: **char**

Allowed values in CommTypeCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	PerUnit	Amount per unit. Implying shares, par, currency, physical unit etc. Use CommissionUnitOfMeasure(1238) to clarify for commodities.
2	Percent	Percent
3	Absolute	Absolute. Total monetary amount.
4	PercentageWaivedCashDiscount	Percentage waived, cash discount basis. For use with CIV buy orders.
5	PercentageWaivedEnhancedUnits	Percentage waived, enhanced units basis. For use with CIV buy orders.
6	PointsPerBondOrContract	Points per bond or contract. Specify ContractMultiplier(231) in the Instrument component if the security is denominated in a size other than the market convention, e.g. 1000 par for bonds.
7	BasisPoints	Basis points. The commission is expressed in basis points in reference to the gross price of the reference asset.
8	AmountPerContract	Amount per contract. Specify ContractMultiplier(231) in the Instrument component if the security is denominated in a size other than the market convention.

Used in groups: **UnderlyingReturnRateGrp**

### **171.2.6463 UnderlyingReturnRateCommissionCurrency**

Specifies the currency the commission amount is denominated in. Uses ISO 4217 currency codes.

Type: **Currency**

Used in groups: **UnderlyingReturnRateGrp**

**171.2.6464 UnderlyingReturnRateDateGrp**

UnderlyingReturnRateDateGrp is a repeating subcomponent within the UnderlyingReturnRateGrp component. It is used to specify the equity and dividend valuation dates for an equity return swap payment stream.

Name	Mult.	Type	Description
NoUnderlyingReturnRateDates	[1..1]	NumInGroup	
UnderlyingReturnRateDateMode	[0..1]	CodeSet	Required if NoUnderlyingReturnRateDates(43008) > 0.
UnderlyingReturnRateValuationDate-Grp	[0..*]	Group	
UnderlyingReturnRateValuation-DateRelativeTo	[0..1]	int	
UnderlyingReturnRateValuationDate-OffsetPeriod	[0..1]	int	Conditionally required when UnderlyingReturnRateValuationDateOffsetUnit(43012) is specified.
UnderlyingReturnRateValuationDate-OffsetUnit	[0..1]	CodeSet	Conditionally required when UnderlyingReturnRateValuationDateOffsetPeriod(43011) is specified.
UnderlyingReturnRateValuationDate-OffsetDayType	[0..1]	CodeSet	
UnderlyingReturnRateValuationStart-DateUnadjusted	[0..1]	LocalMktDate	
UnderlyingReturnRateValuationStart-DateRelativeTo	[0..1]	int	
UnderlyingReturnRateValuationStart-DateOffsetPeriod	[0..1]	int	Conditionally required when UnderlyingReturnRateValuationStartDateOffsetUnit(43017) is specified.
UnderlyingReturnRateValuationStart-DateOffsetUnit	[0..1]	CodeSet	Conditionally required when UnderlyingReturnRateValuationStartDateOffsetPeriod(43016) is specified.
UnderlyingReturnRateValuationStart-DateOffsetDayType	[0..1]	CodeSet	
UnderlyingReturnRateValuationStart-DateAdjusted	[0..1]	LocalMktDate	
UnderlyingReturnRateValuationEnd-DateUnadjusted	[0..1]	LocalMktDate	
UnderlyingReturnRateValuationEnd-DateRelativeTo	[0..1]	int	

Name	Mult.	Type	Description
<a href="#">UnderlyingReturnRateValuationEndDateOffsetPeriod</a>	[0..1]	int	Conditionally required when <a href="#">UnderlyingReturnRateValuationEndDateOffsetUnit(43023)</a> is specified.
<a href="#">UnderlyingReturnRateValuationEndDateOffsetUnit</a>	[0..1]	CodeSet	Conditionally required when <a href="#">UnderlyingReturnRateValuationEndDateOffsetPeriod(43022)</a> is specified.
<a href="#">UnderlyingReturnRateValuationEndDateOffsetDayType</a>	[0..1]	CodeSet	
<a href="#">UnderlyingReturnRateValuationEndDateAdjusted</a>	[0..1]	LocalMktDate	
<a href="#">UnderlyingReturnRateValuationFrequencyPeriod</a>	[0..1]	int	Conditionally required when <a href="#">UnderlyingReturnRateValuationFrequencyUnit(43027)</a> is specified.
<a href="#">UnderlyingReturnRateValuationFrequencyUnit</a>	[0..1]	CodeSet	Conditionally required when <a href="#">UnderlyingReturnRateValuationFrequencyPeriod(43026)</a> is specified.
<a href="#">UnderlyingReturnRateValuationFrequencyRollConvention</a>	[0..1]	CodeSet	When specified, this overrides the date roll convention defined in the <a href="#">UnderlyingDateAdjustment</a> component in <a href="#">UnderlyingInstrument</a> . The specified values would be specific to this instance of the return rate dates.
<a href="#">UnderlyingReturnRateValuationDateBusinessDayConvention</a>	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the <a href="#">UnderlyingDateAdjustment</a> component in <a href="#">UnderlyingInstrument</a> . The specified value would be specific to payment stream return rate valuation dates.
<a href="#">UnderlyingReturnRateValuationDateBusinessCenterGrp</a>	[0..*]	Group	When specified, this overrides the business day convention defined in the <a href="#">UnderlyingDateAdjustment</a> component in <a href="#">UnderlyingInstrument</a> . The specified values would be specific to payment stream return rate valuation dates.

Used in groups: [UnderlyingReturnRateGrp](#)

### 171.2.6465 UnderlyingReturnRateDateMode

Specifies the valuation type applicable to the return rate date.

Type: int

Allowed values in ReturnRateDateModeCodeSet:

Code	Name	Description
0	PriceValuation	Price valuation
1	DividendValuation	Dividend valuation

Used in groups: [UnderlyingReturnRateDateGrp](#)

### **171.2.6466 UnderlyingReturnRateDeterminationMethod**

Specifies the method by which the underlier prices are determined.

See <http://www.fpml.org/coding-scheme/determination-method> for values.

Type: [String](#)

Used in groups: [UnderlyingReturnRateGrp](#)

### **171.2.6467 UnderlyingReturnRateFinalPriceFallback**

Specifies the fallback provision for the hedging party in the determination of the final price.

Type: [int](#)

Allowed values in ComplexEventPVFinalPriceElectionFallbackCodeSet:

Code	Name	Description
0	Close	Close. In respect of the "early final valuation date", the provisions for "future present value close" shall apply.
1	HedgeElection	Hedge election. In respect of the "early final valuation date", the provisions for "future present value hedge execution" shall apply.

Used in groups: [UnderlyingReturnRateGrp](#)

### **171.2.6468 UnderlyingReturnRateFXConversionGrp**

[UnderlyingReturnRateFXConversionGrp](#) is a repeating subcomponent within the [UnderlyingReturnRateGrp](#) component. It is used to specify the FX conversion rates for an equity return swap payment stream.

Name	Mult.	Type	Description
NoUnderlyingReturnRateFXConversions	[1..1]	NumInGroup	
UnderlyingReturnRateFXCurrencySymbol	[0..1]	String	Required if NoUnderlyingReturnRateFXConversions(43030) > 0.
UnderlyingReturnRateFXRate	[0..1]	float	Required if NoUnderlyingReturnRateFXConversions(43030) > 0.
UnderlyingReturnRateFXRateCalc	[0..1]	CodeSet	

Used in groups: [UnderlyingReturnRateGrp](#)

#### 171.2.6469 UnderlyingReturnRateFXCurrencySymbol

Specifies the currency pair for the FX conversion expressed using the CCY1/CCY2 convention. Uses ISO 4217 currency codes.

Type: [String](#)

Used in groups: [UnderlyingReturnRateFXConversionGrp](#)

#### 171.2.6470 UnderlyingReturnRateFXRate

The rate of exchange between the two currencies specified in UnderlyingReturnRateFXCurrencySymbol(43031).

Type: [float](#)

Used in groups: [UnderlyingReturnRateFXConversionGrp](#)

#### 171.2.6471 UnderlyingReturnRateFXRateCalc

Specifies whether UnderlyingReturnRateFXRate(43032) should be multiplied or divided.

Type: [char](#)

Allowed values in [SettlCurrFxRateCalcCodeSet](#):

Code	Name	Description
M	Multiply	Multiply
D	Divide	Divide

Used in groups: [UnderlyingReturnRateFXConversionGrp](#)

### 171.2.6472 UnderlyingReturnRateGrp

UnderlyingReturnRateGrp is a repeating subcomponent within the UnderlyingPaymentStreamFloatingRate component. It is used to specify the multiple return rates for an equity return swap payment stream.

Name	Mult.	Type	Description
NoUnderlyingReturnRates	[1..1]	NumInGroup	
UnderlyingReturnRatePriceSequence	[0..1]	CodeSet	Required if NoUnderlyingReturnRates(43034) > 0.
UnderlyingReturnRateCommissionBasis	[0..1]	CodeSet	
UnderlyingReturnRateCommissionAmount	[0..1]	Amt	
UnderlyingReturnRateCommissionCurrency	[0..1]	Currency	If not specified, this is defaulted to the reporting currency.
UnderlyingReturnRateTotalCommissionPerTrade	[0..1]	Amt	
UnderlyingReturnRateDeterminationMethod	[0..1]	String	
UnderlyingReturnRatePriceGrp	[0..*]	Group	
UnderlyingReturnRateFXConversionGrp	[0..*]	Group	
UnderlyingReturnRateAmountRelativeTo	[0..1]	int	
UnderlyingReturnRateQuoteMeasureType	[0..1]	String	
UnderlyingReturnRateQuoteUnits	[0..1]	String	
UnderlyingReturnRateQuoteMethod	[0..1]	CodeSet	
UnderlyingReturnRateQuoteCurrency	[0..1]	Currency	
UnderlyingReturnRateQuoteCurrencyType	[0..1]	String	

Name	Mult.	Type	Description
UnderlyingReturnRateQuoteTimeType	[0..1]	CodeSet	Mutually exclusive with UnderlyingReturnRateQuoteTime(43048).
UnderlyingReturnRateQuoteTime	[0..1]	LocalMktDate	Mutually exclusive with UnderlyingReturnRateQuoteTimeType(43047).
UnderlyingReturnRateQuoteDate	[0..1]	LocalMktDate	
UnderlyingReturnRateQuoteExpirationTime	[0..1]	LocalMktTime	
UnderlyingReturnRateQuoteBusinessCenter	[0..1]	String	
UnderlyingReturnRateQuoteExchange	[0..1]	Exchange	
UnderlyingReturnRateInformationSourceGrp	[0..*]	Group	
UnderlyingReturnRateQuotePricingModel	[0..1]	String	
UnderlyingReturnRateCashFlowType	[0..1]	String	
UnderlyingReturnRateDateGrp	[0..*]	Group	
UnderlyingReturnRateValuationTimeType	[0..1]	CodeSet	Mutually exclusive with UnderlyingReturnRateValuationTime(43056)
UnderlyingReturnRateValuationTime	[0..1]	LocalMktTime	Mutually exclusive with UnderlyingReturnRateValuationTimeType(43055).
UnderlyingReturnRateValuationTimeBusinessCenter	[0..1]	String	
UnderlyingReturnRateValuationPriceOption	[0..1]	CodeSet	
UnderlyingReturnRateFinalPriceFallback	[0..1]	CodeSet	

Used in components: [UnderlyingPaymentStreamFloatingRate](#)

### 171.2.6473 UnderlyingReturnRateInformationSource

Identifies the source of rate information. For FX the references source to be used for the FX spot rate.

Type: `int`

Allowed values in RateSourceCodeSet:

Code	Name	Description
0	Bloomberg	Bloomberg
1	Reuters	Reuters
2	Telerate	Telerate
3	ISDARateOption	ISDA Settlement Rate Option. The source of the currency conversion as specified by the ISDA terms in Annex A to the 1998 FX and Currency Option Definitions. See <a href="http://www.fpml.org/coding-scheme/settlement-rate-option">http://www.fpml.org/coding-scheme/settlement-rate-option</a>
99	Other	Other

Used in groups: [UnderlyingReturnRateInformationSourceGrp](#)

#### 171.2.6474 UnderlyingReturnRateInformationSourceGrp

UnderlyingReturnRateInformationSourceGrp is a repeating subcomponent within the UnderlyingReturnRateGrp component. It is used to specify the information sources for equity prices and FX rates for an equity return swap payment stream.

Name	Mult.	Type	Description
<a href="#">NoUnderlyingReturnRateInformationSources</a>	[1..1]	NumInGroup	
<a href="#">UnderlyingReturnRateInformationSource</a>	[0..1]	CodeSet	Required if <a href="#">NoUnderlyingReturnRateInformationSources(43060)</a> > 0.
<a href="#">UnderlyingReturnRateReferencePage</a>	[0..1]	String	
<a href="#">UnderlyingReturnRateReferencePageHeading</a>	[0..1]	String	

Used in groups: [UnderlyingReturnRateGrp](#)

#### 171.2.6475 UnderlyingReturnRateNotionalReset

Indicates whether the term "Equity Notional Reset" as defined in the ISDA 2002 Equity Derivatives Definitions is applicable ("Y") or not.

Type: [Boolean](#)

Used in components: [UnderlyingPaymentStreamFloatingRate](#)

**171.2.6476 UnderlyingReturnRatePrice**

Specifies the price of the underlying swap asset.

Type: **Price**

Used in groups: **UnderlyingReturnRatePriceGrp**

**171.2.6477 UnderlyingReturnRatePriceBasis**

The basis of the return price.

Type: **int**

Allowed values in ReturnRatePriceBasisCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Gross	Gross.
1	Net	Net
2	Accrued	Accrued
3	CleanNet	Clean net

---

Used in groups: **UnderlyingReturnRatePriceGrp**

**171.2.6478 UnderlyingReturnRatePriceCurrency**

Specifies the currency of the price of the underlying swap asset. Uses ISO 4217 currency codes.

Type: **Currency**

Used in groups: **UnderlyingReturnRatePriceGrp**

**171.2.6479 UnderlyingReturnRatePriceGrp**

UnderlyingReturnRatePriceGrp is a repeating subcomponent within the UnderlyingReturnRateGrp component. It is used to specify the return rate prices for an equity return swap payment stream.

---

<b>Name</b>	<b>Mult.</b>	<b>Type</b>	<b>Description</b>
<b>NoUnderlyingReturnRatePrices</b>	[1..1]	NumInGroup	

---

Name	Mult.	Type	Description
<a href="#">UnderlyingReturnRatePriceBasis</a>	[0..1]	CodeSet	Required if NoUnderlyingReturnRatePrices(43064) > 0.
<a href="#">UnderlyingReturnRatePrice</a>	[0..1]	Price	
<a href="#">UnderlyingReturnRatePriceCurrency</a>	[0..1]	Currency	
<a href="#">UnderlyingReturnRatePriceType</a>	[0..1]	CodeSet	

Used in groups: [UnderlyingReturnRateGrp](#)

### 171.2.6480 UnderlyingReturnRatePriceSequence

Specifies the type of price sequence of the return rate.

Type: [int](#)

Allowed values in ReturnRatePriceSequenceCodeSet:

Code	Name	Description
0	Initial	Initial
1	Interim	Interim
2	Final	Final

Used in groups: [UnderlyingReturnRateGrp](#)

### 171.2.6481 UnderlyingReturnRatePriceType

Specifies whether the UnderlyingReturnRatePrice(43066) is expressed in absolute or relative terms.

Type: [int](#)

Allowed values in ReturnRatePriceTypeCodeSet:

Code	Name	Description
0	AbsoluteTerms	Absolute terms
1	PercentageOfNotional	Percentage of notional

Used in groups: [UnderlyingReturnRatePriceGrp](#)

#### **171.2.6482 UnderlyingReturnRateQuoteBusinessCenter**

The business center calendar used for adjustments associated with UnderlyingReturnRateQuoteTimeType(43047) or UnderlyingReturnRateQuoteTime(43048) and UnderlyingReturnRateQuoteDate(43049), e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **UnderlyingReturnRateGrp**

#### **171.2.6483 UnderlyingReturnRateQuoteCurrency**

Specifies the currency the return rate quote is denominated in. Uses ISO 4217 Currency Code.

Type: **Currency**

Used in groups: **UnderlyingReturnRateGrp**

#### **171.2.6484 UnderlyingReturnRateQuoteCurrencyType**

Specifies the type of currency, e.g. settlement currency, base currency, etc., that the quote is reported in.

See <http://www.fpml.org/coding-scheme/reporting-currency-type> for values.

Type: **String**

Used in groups: **UnderlyingReturnRateGrp**

#### **171.2.6485 UnderlyingReturnRateQuoteDate**

The date when the quote is to be generated.

Type: **LocalMktDate**

Used in groups: **UnderlyingReturnRateGrp**

#### **171.2.6486 UnderlyingReturnRateQuoteExchange**

Specifies the exchange (e.g. stock or listed futures/options exchange) from which the quote is obtained.

Type: **Exchange**

Used in groups: **UnderlyingReturnRateGrp**

### **171.2.6487 UnderlyingReturnRateQuoteExpirationTime**

The time when the quote ceases to be valid.

Type: **LocalMktTime**

Used in groups: **UnderlyingReturnRateGrp**

### **171.2.6488 UnderlyingReturnRateQuoteMeasureType**

Specifies the type of the measure applied to the return rate's asset, e.g. valuation, sensitivity risk. This could be an NPV, a cash flow, a clean price, etc.

See <http://www.fpml.org/coding-scheme/asset-measure> for values.

Type: **String**

Used in groups: **UnderlyingReturnRateGrp**

### **171.2.6489 UnderlyingReturnRateQuoteMethod**

Specifies the type of quote used to determine the return rate of the swap.

Type: **int**

Allowed values in CashSettlQuoteMethodCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Bid	Bid
1	Mid	Mid
2	Offer	Offer

---

Used in groups: **UnderlyingReturnRateGrp**

**171.2.6490 UnderlyingReturnRateQuotePricingModel**

Specifies the pricing model used to evaluate the underlying asset price.

See <http://www.fpml.org/coding-scheme/pricing-model> for values.

Type: **String**

Used in groups: **UnderlyingReturnRateGrp**

**171.2.6491 UnderlyingReturnRateQuoteTime**

The time when the quote is to be generated.

Type: **LocalMktDate**

Used in groups: **UnderlyingReturnRateGrp**

**171.2.6492 UnderlyingReturnRateQuoteTimeType**

Specifies how or the timing when the quote is to be obtained.

Type: **int**

Allowed values in ReturnRateQuoteTimeTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Open	Open. The official opening time of the exchange on valuation date.
1	OfficialSettlPx	Official settlement price time. The time at which the official settlement price is determined.
2	Xetra	XETRA. The time at which the official settlement price (following the auction by the exchange) is determined by the exchange.
3	Close	Close. The official closing time of the exchange on valuation date.
4	DerivativesClose	Derivatives close. The official closing time for derivative trading of the exchange on valuation date.
5	High	High. The high price for the day.
6	Low	Low. The low price for the day.
7	AsSpecifiedInMasterConfirmation	As specified in the master confirmation

---

Used in groups: **UnderlyingReturnRateGrp**

#### **171.2.6493 UnderlyingReturnRateQuoteUnits**

Specifies the units that the measure is expressed in. If not specified, the default is a price/value in currency units.

See <http://www.fpml.org/coding-scheme/price-quote-units> for values.

Type: **String**

Used in groups: **UnderlyingReturnRateGrp**

#### **171.2.6494 UnderlyingReturnRateReferencePage**

Identifies the reference "page" from the rate source.

For FX, the reference page to the spot rate to be used for the reference FX spot rate.

When `UnderlyingReturnRateInformationSource(43061) = 3` (ISDA Settlement Rate Option) this contains the value from the scheme that reflects the terms of the Annex A to the ISDA 1998 FX and Currency Option Definitions.

See: <http://www.fpml.org/coding-scheme/settlement-rate-option>

Type: **String**

Used in groups: **UnderlyingReturnRateInformationSourceGrp**

#### **171.2.6495 UnderlyingReturnRateReferencePageHeading**

Identifies the page heading from the rate source.

Type: **String**

Used in groups: **UnderlyingReturnRateInformationSourceGrp**

#### **171.2.6496 UnderlyingReturnRateTotalCommissionPerTrade**

The total commission per trade.

Type: **Amt**

Used in groups: **UnderlyingReturnRateGrp**

**171.2.6497 UnderlyingReturnRateValuationDate**

The return rate valuation date. Type of date is specified in UnderlyingReturnRateValuationDateType(43073).

Type: [LocalMktDate](#)

Used in groups: [UnderlyingReturnRateValuationDateGrp](#)

**171.2.6498 UnderlyingReturnRateValuationDateBusinessCenter**

The business center calendar used for date adjustment of the return rate valuation unadjusted or relative dates, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in groups: [UnderlyingReturnRateValuationDateBusinessCenterGrp](#)

**171.2.6499 UnderlyingReturnRateValuationDateBusinessCenterGrp**

UnderlyingReturnRateValuationDateBusinessCenterGrp is a repeating subcomponent within the UnderlyingReturnRateValuationDateGrp component. It is used to specify the valuation date business center adjustments for an equity return swap payment stream.

Name	Mult.	Type	Description
<a href="#">NoUnderlyingReturnRateValuationDateBusinessCenters</a>	[1..1]	NumInGroup	
<a href="#">UnderlyingReturnRateValuationDateBusinessCenter</a>	[0..1]	String	Required if <a href="#">NoUnderlyingReturnRateValuationDateBusinessCenters(43069)</a> > 0.

Used in groups: [UnderlyingReturnRateDateGrp](#)

**171.2.6500 UnderlyingReturnRateValuationDateBusinessDayConvention**

The return rate valuation dates business day convention.

Type: [int](#)

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in groups: [UnderlyingReturnRateDateGrp](#)

### 171.2.6501 UnderlyingReturnRateValuationDateGrp

UnderlyingReturnRateValuationDateGrp is a repeating subcomponent within the UnderlyingReturnRateDateGrp component. It is used to specify the fixed valuation dates for an equity return swap payment stream.

Name	Mult.	Type	Description
<a href="#">NoUnderlyingReturnRateValuationDates</a>	[1..1]	NumInGroup	
<a href="#">UnderlyingReturnRateValuationDate</a>	[0..1]	LocalMktDate	Required if <a href="#">NoUnderlyingReturnRateValuationDates(43071)</a> > 0.
<a href="#">UnderlyingReturnRateValuationDateType</a>	[0..1]	CodeSet	When specified it applies not only to the current date instance but to all subsequent date instances in the group until overridden when a new type is specified.

Used in groups: [UnderlyingReturnRateDateGrp](#)

### 171.2.6502 UnderlyingReturnRateValuationDateOffsetDayType

Specifies the day type of the relative return rate valuation date offset.

Type: [int](#)

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in groups: [UnderlyingReturnRateDateGrp](#)

### **171.2.6503 UnderlyingReturnRateValuationDateOffsetPeriod**

Time unit multiplier for the relative return rate valuation date offset.

Type: [int](#)

Used in groups: [UnderlyingReturnRateDateGrp](#)

### **171.2.6504 UnderlyingReturnRateValuationDateOffsetUnit**

Time unit associated with the relative return rate valuation date offset.

Type: [String](#)

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in groups: [UnderlyingReturnRateDateGrp](#)

**171.2.6505 UnderlyingReturnRateValuationDateRelativeTo**

Specifies the anchor date when the return rate valuation dates are relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: **int**

Used in groups: **UnderlyingReturnRateDateGrp**

**171.2.6506 UnderlyingReturnRateValuationDateType**

Specifies the type of return rate valuation date (e.g. adjusted for holidays).

Type: **int**

Allowed values in NonDeliverableFixingDateTypeCodeSet:

Code	Name	Description
0	Unadjusted	Unadjusted
1	Adjusted	Adjusted

Used in groups: **UnderlyingReturnRateValuationDateGrp**

**171.2.6507 UnderlyingReturnRateValuationEndDateAdjusted**

The adjusted end date for return rate valuation. This can be used to restrict the range of dates when they are relative.

Type: **LocalMktDate**

Used in groups: **UnderlyingReturnRateDateGrp**

**171.2.6508 UnderlyingReturnRateValuationEndDateOffsetDayType**

Specifies the day type of the relative return rate valuation end date offset.

Type: **int**

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

---

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in groups: [UnderlyingReturnRateDateGrp](#)

### **171.2.6509 UnderlyingReturnRateValuationEndDateOffsetPeriod**

Time unit multiplier for the relative return rate valuation end date offset.

Type: [int](#)

Used in groups: [UnderlyingReturnRateDateGrp](#)

### **171.2.6510 UnderlyingReturnRateValuationEndDateOffsetUnit**

Time unit associated with the relative return rate valuation end date offset.

Type: [String](#)

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in groups: [UnderlyingReturnRateDateGrp](#)

### **171.2.6511 UnderlyingReturnRateValuationEndDateRelativeTo**

Specifies the anchor date when the return rate valuation end date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: **int**

Used in groups: **UnderlyingReturnRateDateGrp**

### **171.2.6512 UnderlyingReturnRateValuationEndDateUnadjusted**

The unadjusted end date for return rate valuation. This can be used to restrict the range of dates when they are relative.

Type: **LocalMktDate**

Used in groups: **UnderlyingReturnRateDateGrp**

### **171.2.6513 UnderlyingReturnRateValuationFrequencyPeriod**

Time unit multiplier for the frequency at which return rate valuation dates occur.

Type: **int**

Used in groups: **UnderlyingReturnRateDateGrp**

### **171.2.6514 UnderlyingReturnRateValuationFrequencyRollConvention**

The convention for determining the sequence of return rate valuation dates. It is used in conjunction with a specified frequency.

Type: **String**

Allowed values in DateRollConventionCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	FirstDay	1st day of the month
2	SecondDay	2nd day of the month
3	ThirdDay	3rd day of the month
4	FourthDay	4th day of the month
5	FifthDay	5th day of the month
6	SixthDay	6thd day of the month
7	SeventhDay	7th day of the month
8	EighthDay	8th day of the month

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
9	NinthDay	9th day of the month
10	TenthDay	10th day of the month
11	EleventhDay	11th day of the month
12	TwelvthDay	12th day of the month
13	ThirteenthDay	13th day of the month
14	ForteenthDay	14th day of the month
15	FifteenthDay	15th day of the month
16	SixteenthDay	16th day of the month
17	SeventeenthDay	17th day of the month
18	EighteenthDay	18th day of the month
19	NineteenthDay	19th day of the month
20	TwentiethDay	20th day of the month
21	TwentyFirstDay	21st day of the month
22	TwentySecondDay	22nd day of the month
23	TwentyThirdDay	23rd day of the month
24	TwentyFourthDay	24th day of the month
25	TwentyFifthDay	25th day of the month
26	TwentySixthDay	26th day of the month
27	TwentySeventhDay	27th day of the month
28	TwentyEighthDay	28th day of the month
29	TwentyNinthDay	29th day of the month
30	ThirtiethDay	30th day of the month
EOM	EOM	The end of the month. Use EOM for 31st day of the month.
FRN	FRN	The floating rate note convention or Eurodollar convention.
IMM	IMM	The International Money Market settlement date, i.e. the 3rd Wednesday of the month.
IMMCAD	IMMCAD	The last trading day/expiration day of the Canadian Derivatives Exchange.
IMMAUD	IMMAUD	The last trading day of the Sydney Futures Exchange Australian 90-day bank accepted bill futures contract.
IMMNZD	IMMNZD	The last trading day of the Sydney Futures Exchange New Zealand 90-day bank bill futures contract.
SFE	SFE	The Sydney Futures Exchange 90-day bank accepted bill futures settlement dates.
NONE	NONE	No adjustment

---

Code	Name	Description
TBILL	TBILL	The 13-week and 26-week U.S. Treasury Bill auction dates.
MON	MON	Monday
TUE	TUE	Tuesday
WED	WED	Wednesday
THU	THU	Thursday
FRI	FRI	Friday
SAT	SAT	Saturday
SUN	SUN	Sunday

---

Used in groups: [UnderlyingReturnRateDateGrp](#)

### 171.2.6515 UnderlyingReturnRateValuationFrequencyUnit

Time unit associated with the frequency at which return rate valuation dates occur.

Type: [String](#)

Allowed values in CouponFrequencyUnitCodeSet:

---

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year
H	Hour	Hour
Min	Minute	Minute
S	Second	Second
T	Term	Term

---

Used in groups: [UnderlyingReturnRateDateGrp](#)

### 171.2.6516 UnderlyingReturnRateValuationPriceOption

Indicates whether an ISDA price option applies, and if applicable which type of price.

Type: [int](#)

Allowed values in ReturnRateValuationPriceOptionCodeSet:

Code	Name	Description
0	None	None (the default)
1	FuturesPrice	Futures price. The official settlement price as announced by the related futures exchange is applicable.
2	OptionsPrice	Options price. The official settlement price as announced by the related options exchange is applicable.

Used in groups: [UnderlyingReturnRateGrp](#)

### 171.2.6517 UnderlyingReturnRateValuationStartDateAdjusted

The adjusted start date for return rate valuation. This can be used to restrict the range of dates when they are relative.

Type: [LocalMktDate](#)

Used in groups: [UnderlyingReturnRateDateGrp](#)

### 171.2.6518 UnderlyingReturnRateValuationStartDateOffsetDayType

Specifies the day type of the relative return rate valuation start date offset.

Type: [int](#)

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in groups: [UnderlyingReturnRateDateGrp](#)

**171.2.6519 UnderlyingReturnRateValuationStartDateOffsetPeriod**

Time unit multiplier for the relative return rate valuation start date offset.

Type: **int**

Used in groups: **UnderlyingReturnRateDateGrp**

**171.2.6520 UnderlyingReturnRateValuationStartDateOffsetUnit**

Time unit associated with the relative return rate valuation start date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in groups: **UnderlyingReturnRateDateGrp**

**171.2.6521 UnderlyingReturnRateValuationStartDateRelativeTo**

Specifies the anchor date when the return rate valuation start date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: **int**

Used in groups: **UnderlyingReturnRateDateGrp**

**171.2.6522 UnderlyingReturnRateValuationStartDateUnadjusted**

The unadjusted start date for return rate valuation. This can be used to restrict the range of dates when they are relative.

Type: **LocalMktDate**

Used in groups: **UnderlyingReturnRateDateGrp**

**171.2.6523 UnderlyingReturnRateValuationTime**

The time at which the calculation agent values the underlying asset.

Type: **LocalMktTime**

Used in groups: **UnderlyingReturnRateGrp**

**171.2.6524 UnderlyingReturnRateValuationTimeBusinessCenter**

The business center calendar used for adjustments associated with UnderlyingReturnRateValuationTimeType(43055) or UnderlyingReturnRateValuationTime(43056) , e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **UnderlyingReturnRateGrp**

**171.2.6525 UnderlyingReturnRateValuationTimeType**

Specifies the timing at which the calculation agent values the underlying.

Type: **int**

Allowed values in ReturnRateQuoteTimeTypeCodeSet:

Code	Name	Description
0	Open	Open. The official opening time of the exchange on valuation date.
1	OfficialSettlePx	Official settlement price time. The time at which the official settlement price is determined.
2	Xetra	XETRA. The time at which the official settlement price (following the auction by the exchange) is determined by the exchange.
3	Close	Close. The official closing time of the exchange on valuation date.
4	DerivativesClose	Derivatives close. The official closing time for derivative trading of the exchange on valuation date.
5	High	High. The high price for the day.
6	Low	Low. The low price for the day.
7	AsSpecifiedInMasterConfirmation	As specified in the master confirmation

Used in groups: **UnderlyingReturnRateGrp**

**171.2.6526 UnderlyingReturnTrigger**

Indicates the type of return or payout trigger for the swap or forward.

Type: **int**

Allowed values in ReturnTriggerCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	Dividend	Dividend
2	Variance	Variance
3	Volatility	Volatility
4	TotalReturn	Total return
5	ContractForDifference	Contract for difference
6	CreditDefault	Credit default
7	SpreadBet	Spread bet
8	Price	Price
9	ForwardPriceUnderlyingInstrument	Forward price of underlying instrument
99	Other	Other

---

Used in components: **UnderlyingInstrument**

**171.2.6527 UnderlyingSecondaryAssetClass**

The broad asset category for assessing risk exposure for a multi-asset trade.

Type: **int**

Allowed values in AssetClassCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	InterestRate	Interest rate
2	Currency	Currency
3	Credit	Credit
4	Equity	Equity
5	Commodity	Commodity
6	Other	Other
7	Cash	Cash

---

Code	Name	Description
8	Debt	Debt
9	Fund	Fund. Such as mutual fund, collective investment vehicle, investment program, specialized account program.
10	LoanFacility	Loan facility
11	Index	Index. A main index identified as a security type, for example under EU SFTR reporting.

Used in groups: [UnderlyingSecondaryAssetGrp](#)

### 171.2.6528 UnderlyingSecondaryAssetGrp

UnderlyingSecondaryAssetGrp is a repeating subcomponent of the UnderlyingInstrument component used to specify secondary assets of a multi-asset swap.

Name	Mult.	Type	Description
<a href="#">NoUnderlyingSecondaryAssetClasses</a>	[1..1]	NumInGroup	
<a href="#">UnderlyingSecondaryAssetClass</a>	[0..1]	CodeSet	Required if <a href="#">NoUnderlyingSecondaryAssetClasses(2080)</a> > 0.
<a href="#">UnderlyingSecondaryAssetSubClass</a>	[0..1]	CodeSet	Required if <a href="#">UnderlyingSecondaryAssetType(2083)</a> is specified.
<a href="#">UnderlyingSecondaryAssetType</a>	[0..1]	String	Required if <a href="#">UnderlyingSecondaryAssetSubType(2745)</a> is specified.
<a href="#">UnderlyingSecondaryAssetSubType</a>	[0..1]	String	

Used in components: [UnderlyingInstrument](#)

### 171.2.6529 UnderlyingSecondaryAssetSubClass

An indication of the general description of the asset class.

Type: [int](#)

Allowed values in [AssetSubClassCodeSet](#):

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	SingleCurrency	Single currency
2	CrossCurrency	Cross currency
3	Basket	Basket [for multi-currency]
4	SingleName	Single name
5	CreditIndex	Credit index
6	IndexTranche	Index tranche
7	CreditBasket	Credit basket
8	Exotic	Exotic
9	Common	Common
10	Preferred	Preferred
11	EquityIndex	Equity index
12	EquityBasket	Equity basket
13	Metals	Metals
14	Bullion	Bullion
15	Energy	Energy
16	CommodityIndex	Commodity index
17	Agricultural	Agricultural
18	Environmental	Environmental
19	Freight	Freight
20	Government	Government
21	Agency	Agency
22	Corporate	Corporate
23	Financing	Financing
24	MoneyMarket	Money market
25	Mortgage	Mortgage
26	Municipal	Municipal
27	MutualFund	Mutual fund
28	CollectiveInvestmentVehicle	Collective investment vehicle
29	InvestmentProgram	Investment program. A generalized fund for major investors.
30	SpecializedAccountProgram	Specialized account program. A specialized fund setup for a particular account or group of accounts.
31	TermLoan	Term loan
32	BridgeLoan	Bridge loan
33	LetterOfCredit	Letter of credit

---

Code	Name	Description
34	DividendIndex	Dividend index
35	StockDividend	Stock dividend
36	ExchangeTradedFund	Exchange traded fund
37	VolatilityIndex	Volatility index
38	FXCrossRates	FX cross rates
39	FXEmergingMarkets	FX emerging markets
40	FXMajors	FX Majors
41	Fertilizer	Fertilizer
42	IndustrialProduct	Industrial product
43	Inflation	Inflation
44	Paper	Paper
45	Polypropylene	Polypropylene
46	OfficialEconomicStatistics	Official economic statistics
47	OtherC10	Other C10. Defined under MiFID II (Directive 2014/65/EU) Section C(10) of Annex I and paraphrased in ESMA RTS 2 Annex III Section 10, "Other C10" is a financial instrument "which is not a 'Freight derivative', any of the following interest rate derivatives sub-asset classes: 'Inflation multi-currency swap or cross-currency swap', a 'Future/forward on inflation multi-currency swaps or cross-currency swaps', an 'Inflation single currency swap', a 'Future/forward on inflation single currency swap' and any of the following equity derivatives sub-asset classes: a 'Volatility index option', a 'Volatility index future/forward', a swap with parameter return variance, a swap with parameter return volatility, a portfolio swap with parameter return variance, a portfolio swap with parameter return volatility".
48	Other	Other. May be used with any AssetClass(1938) values.

Used in groups: [UnderlyingSecondaryAssetGrp](#)

### 171.2.6530 UnderlyingSecondaryAssetSubType

May be used to provide a more specific description of the asset specified in UnderlyingSecondaryAssetType(2083).

See <https://www.fixtrading.org/codelists/AssetSubType> for code list of applicable values.

Type: [String](#)

Used in groups: [UnderlyingSecondaryAssetGrp](#)

### **171.2.6531 UnderlyingSecondaryAssetType**

Used to provide more specific description of the asset specified in UnderlyingSecondaryAssetSub-Class(2082).

See <https://www.fixtrading.org/codelists/AssetType> for code list of applicable values. ISO 4721 Currency Code values are to be used when specific currency as an asset type is to be expressed.

Other values may be used by mutual agreement of the counterparties.

Type: [String](#)

Used in groups: [UnderlyingSecondaryAssetGrp](#)

### **171.2.6532 UnderlyingSecurityAltID**

Alternate Security identifier value for this underlying security of UnderlyingSecurityAltIDSource (459) type (e.g. CUSIP, SEDOL, ISIN, etc). Requires UnderlyingSecurityAltIDSource.

Type: [String](#)

Used in groups: [UndSecAltIDGrp](#)

### **171.2.6533 UnderlyingSecurityAltIDSource**

Identifies class or source of the UnderlyingSecurityAltID(458) value.

Required if UnderlyingSecurityAltID is specified.

Type: [String](#)

Allowed values in SecurityIDSourceCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	CUSIP	CUSIP
2	SEDOL	SEDOL
3	QUIK	QUIK
4	ISINNumber	ISIN
5	RICCode	RIC
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)

---

Code	Name	Description
7	ISOCountryCode	ISO Country Code
8	ExchangeSymbol	Exchange symbol
9	ConsolidatedTapeAssociation	Consolidated Tape Association (CTA) Symbol (SIAC CTS/CQS line format)
A	BloombergSymbol	Bloomberg Symbol
B	Wertpapier	Wertpapier
C	Dutch	Dutch
D	Valoren	Valoren
E	Sicovam	Sicovam
F	Belgian	Belgian
G	Common	"Common" (Clearstream and Euroclear)
H	ClearingHouse	Clearing house / Clearing organization
I	ISDAFpMLSpecification	ISDA/FpML product specification (XML in SecurityXML(1185))
J	OptionPriceReportingAuthority	Option Price Reporting Authority
K	ISDAFpMLURL	ISDA/FpML product URL (URL in SecurityID(48))
L	LetterOfCredit	Letter of credit
M	MarketplaceAssignedIdentifier	Marketplace-assigned Identifier
N	MarkitREDEntityCLIP	Markit RED entity CLIP
P	MarkitREDPairCLIP	Markit RED pair CLIP
Q	CFTCCommodityCode	CFTC commodity code
R	ISDACommodityReferencePrice	ISDA Commodity Reference Price
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
T	LegalEntityIdentifier	Legal entity identifier
U	Synthetic	Synthetic. Used to specify that the security identifier is synthetic for linking nested underliers when there is no market identifier for the collection.
V	FidessaInstrumentMnemonic	Fidessa Instrument Mnemonic (FIM)
W	IndexName	Index name. Standard name of the index or rate index, e.g. "LIBOR" or "iTraxx Australia".
X	UniformSymbol	Uniform Symbol (UMTF Symbol)
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in groups: **UndSecAltIDGrp**

#### **171.2.6534 UnderlyingSecurityDesc**

Description of the underlying security.

Can be used by the venue or one of the trading parties to provide an optional non-normative textual description of the financial instrument.

Type: **String**

Used in components: **UnderlyingInstrument**

#### **171.2.6535 UnderlyingSecurityExchange**

Underlying security's SecurityExchange. Can be used to identify the underlying security.

Valid values: see SecurityExchange (207)

Type: **Exchange**

Used in components: **UnderlyingInstrument**

#### **171.2.6536 UnderlyingSecurityGroup**

An exchange specific name assigned to a group of related securities which may be concurrently affected by market events and actions.

Type: **String**

Used in components: **UnderlyingInstrument**

#### **171.2.6537 UnderlyingSecurityID**

Underlying security's SecurityID.

See SecurityID (48) field for description

Type: **String**

Used in components: **UnderlyingInstrument**

#### **171.2.6538 UnderlyingSecurityIDSource**

Identifies class or source of the UnderlyingSecurityID(309) value.

Type: **String**

## Allowed values in SecurityIDSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
3	QUIK	QUIK
4	ISINNumber	ISIN
5	RICCode	RIC
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
7	ISOCountryCode	ISO Country Code
8	ExchangeSymbol	Exchange symbol
9	ConsolidatedTapeAssociation	Consolidated Tape Association (CTA) Symbol (SIAC CTS/CQS line format)
A	BloombergSymbol	Bloomberg Symbol
B	Wertpapier	Wertpapier
C	Dutch	Dutch
D	Valoren	Valoren
E	Sicovam	Sicovam
F	Belgian	Belgian
G	Common	"Common" (Clearstream and Euroclear)
H	ClearingHouse	Clearing house / Clearing organization
I	ISDAFpMLSpecification	ISDA/FpML product specification (XML in SecurityXML(1185))
J	OptionPriceReportingAuthority	Option Price Reporting Authority
K	ISDAFpMLURL	ISDA/FpML product URL (URL in SecurityID(48))
L	LetterOfCredit	Letter of credit
M	MarketplaceAssignedIdentifier	Marketplace-assigned Identifier
N	MarkitREDEntityCLIP	Markit RED entity CLIP
P	MarkitREDPairCLIP	Markit RED pair CLIP
Q	CFTCCommodityCode	CFTC commodity code
R	ISDACommodityReferencePrice	ISDA Commodity Reference Price
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
T	LegalEntityIdentifier	Legal entity identifier
U	Synthetic	Synthetic. Used to specify that the security identifier is synthetic for linking nested underliers when there is no market identifier for the collection.

Code	Name	Description
V	FidessaInstrumentMnemonic	Fidessa Instrument Mnemonic (FIM)
W	IndexName	Index name. Standard name of the index or rate index, e.g. "LIBOR" or "iTraxx Australia".
X	UniformSymbol	Uniform Symbol (UMTF Symbol)
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in components: [UnderlyingInstrument](#)

### 171.2.6539 UnderlyingSecurityStatus

Indicates the current state of the underlying instrument.

Type: [String](#)

Allowed values in SecurityStatusCodeSet:

Code	Name	Description
1	Active	Active. Instrument is active, i.e. trading is possible.
2	Inactive	Inactive. Instrument has previously been active and is now no longer traded but has not expired yet. The instrument may become active again.
3	ActiveClosingOrdersOnly	Active, closing orders only. Instrument is active but only orders closing positions (reducing risk) are allowed.
4	Expired	Expired. Instrument has expired. E.g. An instrument may expire due to reaching maturity or expired based on contract definitions or exchange rules.
5	Delisted	Delisted. Instrument has been removed from securities reference data. Delisting rules varies from exchange to exchange, which may include non-compliance of capitalization, revenue, consecutive minimum closing price. The instrument may become listed again once the instrument is back in compliance. A delisted instrument would not trade on the exchange but it may still be traded over-the-counter (e.g. OTCBB) or on Pink Sheets, or other similar trading service.
6	KnockedOut	Knocked-out. Instrument has breached a pre-defined price threshold.
7	KnockOutRevoked	Knock-out revoked. Instrument reinstated, i.e. threshold has not been breached.

Code	Name	Description
8	PendingExpiry	Pending Expiry. Instrument is currently still active but will expire after the current business day. For example, a contract that expires intra-day (e.g. at noon time) and is no longer tradeable but will still show up in the current day's order book with related statistics.
9	Suspended	Suspended. Instrument has been temporarily disabled for trading (i.e. halted).
10	Published	Published. Instrument information is provided prior to its first activation.
11	PendingDeletion	Pending Deletion. Instrument is awaiting deletion from security reference data.

---

Used in components: [UnderlyingInstrument](#)

#### **171.2.6540 UnderlyingSecuritySubType**

Underlying security's SecuritySubType.

See SecuritySubType (762) field for description

Type: [String](#)

Used in components: [UnderlyingInstrument](#)

#### **171.2.6541 UnderlyingSecurityType**

Underlying security's SecurityType.

Valid values: see SecurityType (167) field

(see below for details concerning this fields use in conjunction with SecurityType=REPO)

The following applies when used in conjunction with SecurityType=REPO

Represents the general or specific type of security that underlies a financing agreement

Valid values for SecurityType=REPO:

If bonds of a particular issuer or country are wanted in an Order or are in the basket of an Execution and the SecurityType is not granular enough, include the UnderlyingIssuer (306), UnderlyingCountryOfIssue (592), UnderlyingProgram, UnderlyingRegType and/or < UnderlyingStipulations > block e.g.:

Type: [String](#)

## Allowed values in SecurityTypeCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
ABS	AssetBackedSecurities	Asset-backed Securities

TFRN	USTreasuryFloatingRateNote	US Treasury Floating Rate Note
TRAN	TaxRevenueAnticipationNote	Tax Revenue Anticipation Note
OPT	Option	Option
PZFJ	PlazosFijos	Plazos Fijos
VRDN	VariableRateDemandNote	Variable Rate Demand Note
SLQN	SecuredLiquidityNote	Secured Liquidity Note
SPOTFWD	SpotForward	Spot forward
WAR	Warrant	Warrant
MCPIB	MunicipalInterestBearingCommercialPaper	Municipal Interest Bearing Commercial Paper
SWAPTION	SwapOption	Swap option
TD	TimeDeposit	Time Deposit
TMB	TaxableMunicipalBond	Taxable Municipal Bond
XMISSION	Transmission	Transmission
INDEX	Index	General type for a contract based on an established index
TLQN	TermLiquidityNote	Term Liquidity Note
VRDO	VariableRateDemandObligation	Variable Rate Demand Obligation
BDBSKT	BondBasket	Bond basket
XCN	ExtendedCommNote	Extended Comm Note
CFD	ContractForDifference	Contract for difference
YCD	YankeeCertificateOfDeposit	Yankee Certificate Of Deposit
BAB	BankAcceptedBill	Bank Accepted Bill. Also known as Bank Bill.

Code	Name	Description
CRLNSWAP	CorrelationSwap	Correlation swap
BNST	ShortTermBankNote	Short Term Bank Note
DVDNSWAP	DividendSwap	Dividend swap
CLCP	CallableCommercialPaper	Callable Commercial Paper
EQBSKT	EquityBasket	Equity basket
CN	CommercialNote	Commercial Note
EQFWD	EquityForward	Equity forward
CPIB	InterestBearingCommercialPaper	Interest Bearing Commercial Paper
RTRNSWAP	ReturnSwap	Return swap
EUMTN	EuroMediumTermNote	Euro Medium Term Note
VARSWAP	VarianceSwap	Variance swap
EUNCP	EuroNegotiableCommercialPaper	Euro Negotiable Commercial Paper
PRTFLIOSWAP	PortfolioSwaps	Portfolio swap
EUSTLQN	EuroStructuredLiquidityNote	Euro Structured Liquidity Note
FUTSWAP	FuturesOnASwap	Futures on a Swap
EUTD	EuroTimeDeposit	Euro Time Deposit
FWDSWAP	ForwardsOnASwap	Forwards on a Swap
FWDFRTAGMT	ForwardFreightAgreement	Forward Freight Agreement
JCD	JumboCertificateOfDeposit	Jumbo Certificate of Deposit
MMF	MoneyMarketFund	Money Market Fund
SPREADBET	SpreadBetting	Spread Betting
ETC	ExchangeTradedCommodity	Exchange traded commodity
MN	MasterNote	Master Note. Short term notes issued by Federal Farm Credit Banks Funding Corporation to provide loans and funding under Federal Farm Credit System (FFCS).
NCD	NegotiableCertificateOfDeposit	Negotiable Certificate of Deposit
NCP	NegotiableCommercialPaper	Negotiable Commercial Paper
RCD	RetailCertificateOfDeposit	Retail Certificate of Deposit
TDR	TermDepositReceipt	Term Deposit Receipt

Used in components: [UnderlyingInstrument](#)

### 171.2.6542 UnderlyingSecurityXML

XML definition for the underlying security.

Type: [XMLData](#)

Used in components: [UnderlyingSecurityXML](#)

### **171.2.6543 UnderlyingSecurityXML**

The UnderlyingSecurityXML component is used to provide a definition in an XML format for the underlying instrument.

<b>Name</b>	<b>Mult.</b>	<b>Type</b>	<b>Description</b>
<a href="#">UnderlyingSecurityXMLLen</a>	[0..1]	Length	Must be provided if UnderlyingSecurityXML(1875) field is specified and must immediately precede it.
<a href="#">UnderlyingSecurityXML</a>	[0..1]	XMLData	
<a href="#">UnderlyingSecurityXMLSchema</a>	[0..1]	String	

Used in components: [UnderlyingInstrument](#)

### **171.2.6544 UnderlyingSecurityXMLLen**

The length of the UnderlyingSecurityXML(1875) data block.

Type: [Length](#)

Used in components: [UnderlyingSecurityXML](#)

### **171.2.6545 UnderlyingSecurityXMLSchema**

The schema used to validate the contents of UnderlyingSecurityXML(1875).

Type: [String](#)

Used in components: [UnderlyingSecurityXML](#)

### **171.2.6546 UnderlyingSeniority**

See Seniority(1450)

Type: [String](#)

Allowed values in SeniorityCodeSet:

Code	Name	Description
SD	SeniorSecured	Senior Secured
SR	Senior	Senior
SB	Subordinated	Subordinated
JR	Junior	Junior. In the context of MiFID II this value is used as identified in RTS 23 Annex I Table 3 Field 23 "Seniority of the bond".
MZ	Mezzanine	Mezzanine. In the context of MiFID II this value is used as identified in RTS 23 Annex I Table 3 Field 23 "Seniority of the bond".
SN	SeniorNonPreferred	Senior Non-Preferred. For CDS reference obligations of non-preferred senior debt issued by European Financials that constitute a layer of debt ranking between the bank's normal senior debt but above the bank's normal tier 2 subordinated debt (reference: ISDA Credit Market Infrastructure Group).

Used in components: [UnderlyingInstrument](#)

### 171.2.6547 UnderlyingSettlDisruptionProvision

Specifies the consequences of settlement disruption events.

Type: [int](#)

Allowed values in SettlDisruptionProvisionCodeSet:

Code	Name	Description
1	Negotiation	Negotiation
2	Cancellation	Cancellation and payment

Used in components: [UnderlyingInstrument](#)

### 171.2.6548 UnderlyingSettledEntityMatrixPublicationDate

Specifies the publication date of the applicable version of the matrix. If not specified, the Standard Terms Supplement defines rules for which version of the matrix is applicable.

Type: [LocalMktDate](#)

Used in components: [UnderlyingInstrument](#)

**171.2.6549 UnderlyingSettledEntityMatrixSource**

Relevant settled entity matrix source.

Type: **String**

Used in components: **UnderlyingInstrument**

**171.2.6550 UnderlyingSettlementDate**

Date the underlying instrument will settle. Used for derivatives that deliver into more than one underlying instrument. Settlement dates can vary across underlying instruments.

Type: **LocalMktDate**

Used in groups: **UnderlyingAmount**

Used in messages: **TradeCaptureReport**

**171.2.6551 UnderlyingSettlementStatus**

Settlement status of the underlying instrument. Used for derivatives that deliver into more than one underlying instrument. Settlement can be delayed for an underlying instrument.

Type: **String**

Used in groups: **UnderlyingAmount**

**171.2.6552 UnderlyingSettlementType**

Indicates order settlement period for the underlying instrument.

Type: **int**

Allowed values in UnderlyingSettlementTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
2	TPlus1	T+1
4	TPlus3	T+3
5	TPlus4	T+4

---

Used in components: **UnderlyingInstrument**

**171.2.6553 UnderlyingSettleOnOpenFlag**

Indicator to determine if Instrument is Settle on Open.

Type: **String**

Used in components: **UnderlyingInstrument**

**171.2.6554 UnderlyingSettlMethod**

Settlement method for a contract or instrument. Additional values may be used with bilateral agreement.

Type: **String**

Allowed values in SettlMethodCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
C	CashSettlementRequired	Cash settlement required
P	PhysicalSettlementRequired	Physical settlement required
E	Election	Election at exercise. The settlement method will be elected at the time of contract exercise.

---

Used in components: **UnderlyingInstrument**

**171.2.6555 UnderlyingSettlMethodElectingPartySide**

Side value of the party electing the settlement method.

Type: **int**

Allowed values in PaymentPaySideCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	Buy	Buy
2	Sell	Sell

---

Used in components: **UnderlyingOptionExercise**

**171.2.6556 UnderlyingSettlMethodElectionDateAdjusted**

The adjusted settlement method election date.

Type: [LocalMktDate](#)

Used in components: [UnderlyingSettlMethodElectionDate](#)

**171.2.6557 UnderlyingSettlMethodElectionDateBusinessCenter**

The business center calendar used for date adjustment of the settlement method election unadjusted or relative date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in groups: [UnderlyingSettlMethodElectionDateBusinessCenterGrp](#)

**171.2.6558 UnderlyingSettlMethodElectionDateBusinessCenterGrp**

[UnderlyingSettlMethodElectionDateBusinessCenterGrp](#) is a repeating subcomponent within the [UnderlyingSettlMethodElectionDate](#) component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the [UnderlyingDateAdjustment](#) component in [UnderlyingInstrument](#).

Name	Mult.	Type	Description
<a href="#">NoUnderlyingSettlMethodElectionDateBusinessCenters</a>	[1..1]	NumInGroup	
<a href="#">UnderlyingSettlMethodElectionDateBusinessCenter</a>	[0..1]	String	Required if <a href="#">NoUnderlyingSettlMethodElectionDateBusinessCenters(43074)</a> > 0.

Used in components: [UnderlyingSettlMethodElectionDate](#)

**171.2.6559 UnderlyingSettlMethodElectionDateBusinessDayConvention**

The settlement method election date adjustment business day convention.

Type: [int](#)

Allowed values in [BusinessDayConventionCodeSet](#):

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [UnderlyingSettlMethodElectionDate](#)

### 171.2.6560 UnderlyingSettlMethodElectionDate

The UnderlyingSettlMethodElectionDate component is a subcomponent within the UnderlyingOptionExercise component used to report the settlement method election date.

Name	Mult.	Type	Description
<a href="#">UnderlyingSettlMethodElectionDateUnadjusted</a>	[0..1]	LocalMktDate	
<a href="#">UnderlyingSettlMethodElectionDate-BusinessDayConvention</a>	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified value would be specific to UnderlyingOptionExercise.
<a href="#">UnderlyingSettlMethodElectionDate-BusinessCenterGrp</a>	[0..*]	Group	When specified, this overrides the business centers defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified values would be specific to UnderlyingOptionExercise.
<a href="#">UnderlyingSettlMethodElectionDateRelativeTo</a>	[0..1]	int	
<a href="#">UnderlyingSettlMethodElectionDate-OffsetPeriod</a>	[0..1]	int	Conditionally required when UnderlyingSettlMethodElectionDateOffsetUnit(43080) is specified.
<a href="#">UnderlyingSettlMethodElectionDate-OffsetUnit</a>	[0..1]	CodeSet	Conditionally required when UnderlyingSettlMethodElectionDateOffsetPeriod(43079) is specified.
<a href="#">UnderlyingSettlMethodElectionDate-OffsetDayType</a>	[0..1]	CodeSet	

Name	Mult.	Type	Description
<a href="#">UnderlyingSettlMethodElection-DateAdjusted</a>	[0..1]	LocalMktDate	

Used in components: [UnderlyingOptionExercise](#)

### 171.2.6561 UnderlyingSettlMethodElectionDateOffsetDayType

Specifies the day type of the relative settlement method election date offset.

Type: [int](#)

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: [UnderlyingSettlMethodElectionDate](#)

### 171.2.6562 UnderlyingSettlMethodElectionDateOffsetPeriod

Time unit multiplier for the relative settlement method election date offset.

Type: [int](#)

Used in components: [UnderlyingSettlMethodElectionDate](#)

### 171.2.6563 UnderlyingSettlMethodElectionDateOffsetUnit

Time unit associated with the relative settlement method election date offset.

Type: [String](#)

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: [UnderlyingSettlMethodElectionDate](#)

#### **171.2.6564 UnderlyingSettlMethodElectionDateRelativeTo**

Specifies the anchor date when the settlement method election date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: [int](#)

Used in components: [UnderlyingSettlMethodElectionDate](#)

#### **171.2.6565 UnderlyingSettlMethodElectionDateUnadjusted**

The unadjusted settlement method election date.

Type: [LocalMktDate](#)

Used in components: [UnderlyingSettlMethodElectionDate](#)

#### **171.2.6566 UnderlyingSettlPrice**

Underlying security's SettlPrice.

See SettlPrice (730) field for description

Type: [Price](#)

Used in groups: [PosUndInstrmtGrp](#)

Used in messages: [AssignmentReport](#)

**171.2.6567 UnderlyingSettlPriceType**

Underlying security's SettlPriceType.

See SettlPriceType (731) field for description

Type: **int**

Allowed values in SettlPriceTypeCodeSet:

Code	Name	Description
1	Final	Final
2	Theoretical	Theoretical

Used in groups: **PosUndInstrmtGrp**

**171.2.6568 UnderlyingSettlRateDisruptionFallbackGrp**

The UnderlyingSettlRateDisruptionFallbackGrp is a repeating subcomponent of the UnderlyingPaymentStreamNonDeliverableSettlTermGrp component used to specify the method, prioritized by the order it is listed, to get a replacement rate for a disrupted settlement rate option for a non-deliverable settlement currency.

Name	Mult.	Type	Description
<b>NoUnderlyingSettlRateFallbacks</b>	[1..1]	NumInGroup	
<b>UnderlyingSettlRatePostponementMaximumDays</b>	[0..1]	int	Required if NoUnderlyingSettlRateFallbacks(40659) > 0.
<b>UnderlyingSettlRateFallbackRateSource</b>	[0..1]	Component	
<b>UnderlyingSettlRatePostponementSurvey</b>	[0..1]	Boolean	
<b>UnderlyingSettlRatePostponementCalculationAgent</b>	[0..1]	CodeSet	

Used in components: **UnderlyingPaymentStreamNonDeliverableSettlTerms**

**171.2.6569 UnderlyingSettlRateFallbackRateSource**

Identifies the source of rate information.

Type: **int**

Allowed values in RateSourceCodeSet:

Code	Name	Description
0	Bloomberg	Bloomberg
1	Reuters	Reuters
2	Telerate	Telerate
3	ISDARateOption	ISDA Settlement Rate Option. The source of the currency conversion as specified by the ISDA terms in Annex A to the 1998 FX and Currency Option Definitions. See <a href="http://www.fpml.org/coding-scheme/settlement-rate-option">http://www.fpml.org/coding-scheme/settlement-rate-option</a>
99	Other	Other

Used in components: **UnderlyingSettlRateFallbackRateSource**

### 171.2.6570 UnderlyingSettlRateFallbackRateSource

UnderlyingSettlRateFallbackRateSource is a subcomponent of the UnderlyingSettlRateDisruptionFallbackGrp component used to specify the rate source in the event of rate disruption fallback.

Name	Mult.	Type	Description
<b>UnderlyingSettlRateFallbackRateSource</b>	[0..1]	CodeSet	
<b>UnderlyingSettlRateFallbackReferencePage</b>	[0..1]	String	Conditionally required when UnderlyingSettlRateFallbackRateSource(40904) = 3 (ISDA Settlement Rate Option) or 99 (Other).

Used in groups: **UnderlyingSettlRateDisruptionFallbackGrp**

### 171.2.6571 UnderlyingSettlRateFallbackReferencePage

Identifies the reference "page" from the rate source.

When UnderlyingSettlRateFallbackRateSource(40904) = 3 (ISDA Settlement Rate Option) this contains the value from the scheme that reflects the terms of the Annex A to the ISDA 1998 FX and Currency Option Definitions. See: <http://www.fpml.org/coding-scheme/settlement-rate-option>

Type: **String**

Used in components: **UnderlyingSettlRateFallbackRateSource**

**171.2.6572 UnderlyingSettlRateIndex**

In an outright or forward commodity trade that is cash settled this is the index used to determine the cash payment.

Type: **String**

Used in components: **UnderlyingInstrument**

**171.2.6573 UnderlyingSettlRateIndexLocation**

This is an optional qualifying attribute of UnderlyingSettlementRateIndex(2284) such as the delivery zone for an electricity contract.

Type: **String**

Used in components: **UnderlyingInstrument**

**171.2.6574 UnderlyingSettlRatePostponementCalculationAgent**

Used to identify the settlement rate postponement calculation agent.

Type: **int**

Allowed values in ProvisionCalculationAgentCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	ExercisingParty	Exercising party
1	NonExercisingParty	Non-exercising party
2	MasterAgreement	As specified in the master agreement
3	Supplement	As specified in the standard terms supplement

---

Used in groups: **UnderlyingSettlRateDisruptionFallbackGrp**

**171.2.6575 UnderlyingSettlRatePostponementMaximumDays**

The maximum number of days to wait for a quote from the disrupted settlement rate option before proceeding to this method.

Type: **int**

Used in groups: **UnderlyingSettlRateDisruptionFallbackGrp**

**171.2.6576 UnderlyingSettlRatePostponementSurvey**

Indicates whether to request a settlement rate quote from the market.

Type: **Boolean**

Used in groups: **UnderlyingSettlRateDisruptionFallbackGrp**

**171.2.6577 UnderlyingSettlTermXIDRef**

Reference to the cash or physical settlement terms applicable to this entity or obligation. Contains the same XID named string value of the instance in the appropriate repeating group that applies to this Underlying.

Type: **XIDREF**

Used in components: **UnderlyingInstrument**

**171.2.6578 UnderlyingShortSaleRestriction**

Indicates whether a restriction applies to short selling a security.

Type: **int**

Allowed values in ShortSaleRestrictionCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	NoRestrictions	No restrictions
1	SecurityNotShortable	Security is not shortable
2	SecurityNotShortableAtOrBelowBestBid	Security not shortable at or below the best bid
3	SecurityNotShortableWithoutPre-Borrow	Security is not shortable without pre-borrow

---

Used in components: **UnderlyingInstrument**

**171.2.6579 UnderlyingSpecialDividendsIndicator**

Indicates whether special dividends are applicable.

Type: **Boolean**

Used in components: **UnderlyingDividendConditions**

**171.2.6580 UnderlyingStartValue**

Currency value attributed to this collateral at the start of the agreement

Type: **Amt**

Used in components: **UnderlyingInstrument**

**171.2.6581 UnderlyingStateOrProvinceOfIssue**

Underlying security's StateOrProvinceOfIssue.

See StateOrProvinceOfIssue (471) field for description

Type: **String**

Used in components: **UnderlyingInstrument**

**171.2.6582 UnderlyingStipType**

Type of stipulation.

Same values as StipulationType (233)

Type: **String**

Allowed values in StipulationTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
ABS	AbsolutePrepaymentSpeed	Absolute Prepayment Speed
AMT	AlternativeMinimumTax	Alternative Minimum Tax (Y/N)
INCURRCVY	IncurredRecovery	Incurred recovery (Y/N). Specifies whether incurred recovery is applicable (Y) or not (N). Outstanding Swap Notional Amount is defined at any time on any day, as the greater of: (a) Zero; If Incurred Recovery Amount Applicable: (b) The Original Swap Notional Amount minus the sum of all Incurred Loss Amounts and all Incurred Recovery Amounts (if any) determined under this Confirmation at or prior to such time. Incurred Recovery Amount not populated: (b) The Original Swap Notional Amount minus the sum of all Incurred Loss Amounts determined under this Confirmation at or prior to such time. 2009 CDX Tranche Terms.

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
ADDTRM	AdditionalTerm	Additional term. Used for representing information contained in the Additional Terms field of the 2003 Master Credit Derivatives confirm.
AUTOREINV	AutoReinvestment	Auto Reinvestment at <rate> or better
CPP	ConstantPrepaymentPenalty	Constant Prepayment Penalty
BANKQUAL	BankQualified	Bank qualified (Y/N)
CPR	ConstantPrepaymentRate	Constant Prepayment Rate
MODEQTYDLVY	ModifiedEquityDelivery	Modified equity delivery. Indicates whether delivery of selected obligations having an amount greater than the reference entity notional amount is allowed (Y) or (N). 2005 iTraxx tranching Transactions Standard Terms Supplement.
BGNCON	BargainConditions	Bargain conditions (see StipulationValue (234) for values)
CPY	ConstantPrepaymentYield	Constant Prepayment Yield
NOREFOBLIG	NoReferenceObligation	No reference obligation (Y/N). When specified as "Y" this indicates that there is no Reference Obligation associated with this Credit Default Swap and that there will never be one. 2003 ISDA Credit Derivatives Definitions.
COUPON	CouponRange	Coupon range
HEP	FinalCPRofHomeEquityPrepaymentCurve	final CPR of Home Equity Prepayment Curve
UNKREFOBLIG	UnknownReferenceObligation	Unknown reference obligation (Y/N). When specified as "Y" this indicates that the Reference obligation associated with the Credit Default Swap is currently not known. This is not valid for Legal Confirmation purposes, but is valid for earlier stages in the trade life cycle (e.g. Broker Confirmation). 2003 FpML-CD-4.0.
ALLGUARANTEES	AllGuarantees	All guarantees (Y/N). Indicates whether an obligation of the Reference Entity, guaranteed by the Reference Entity on behalf of a non-Affiliate, is to be considered an Obligation for the purpose of the transaction (Y) or (N). ISDA 2003 Term: All Guarantees.
CURRENCY	ISOCurrencyCode	ISO Currency Code
MHP	PercentOfManufacturedHousingPrepaymentCurve	Percent of Manufactured Housing Prepayment Curve
CUSTOMDATE	CustomStart	Custom start/end date
MPR	MonthlyPrepaymentRate	Monthly Prepayment Rate

<b>Code</b>	<b>Name</b>	<b>Description</b>
REFPX	ReferencePrice	Reference price (Y/N). Specifies the reference price expressed as a percentage between 0 and 1 (e.g. 0.05 is 5%). The reference price is used to determine (a) for physically settled trades, the Physical Settlement Amount, which equals the Floating Rate Payer Calculation Amount times the Reference Price and (b) for cash settled trades, the Cash Settlement Amount, which equals the greater of (i) the difference between the Reference Price and the Final Price and (ii) zero. ISDA 2003 Term: Reference Price.
GEOG	Geographics	Geographics and % range (ex. 234=CA 0-80 [minimum of 80% California assets])
PPC	PercentOfProspectusPrepaymentCurve	Percent of Prospectus Prepayment Curve
REFPOLICY	ReferencePolicy	Reference policy (Y/N). Indicates whether the reference obligation is guaranteed (Y), or not (N), under a reference policy. If the Reference Obligation is guaranteed under a Reference Policy, and such Reference Policy by its terms excludes any component of the Expected Principal Amount for purposes of determining the liability of the relevant Insurer, or the Insurer is otherwise not required to pay any such amounts under the terms of the Reference Policy, the relevant component or amount shall also be excluded for purposes of determining the Expected Principal Amount with respect to any determination of Principal Shortfall hereunder. 2006 ISDA CDS on MBS Terms.
HAIRCUT	ValuationDiscount	Valuation Discount
PSA	PercentOfBMAPrepaymentCurve	Percent of BMA Prepayment Curve
SECRDLIST	SecuredList	Secured list (Y/N). Specifies whether a list of Syndicated Secured Obligations (also known as the Relevant Secured List) exists (Y), or not (N), for the Reference Entity. With respect to any day, the list of Syndicated Secured Obligations of the Designated Priority of the Reference Entity published by Markit Group Limited or any successor thereto appointed by the Specified Dealers (the "Secured List Publisher") on or most recently before such day, which list is currently available at [ <a href="http://www.markit.com">http://www.markit.com</a> ]. ISDA 2003 Term: Relevant Secured List.
INSURED	Insured	Insured (Y/N)
SMM	SingleMonthlyMortality	Single Monthly Mortality

<b>Code</b>	<b>Name</b>	<b>Description</b>
ISSUE	IssueDate	Year Or Year/Month of Issue (ex. 234=2002/09)
ISSUER	Issuer	Issuer's ticker
ISSUESIZE	IssueSizeRange	issue size range
LOOKBACK	LookbackDays	Lookback Days
LOT	ExplicitLotIdentifier	Explicit lot identifier
LOTVAR	LotVariance	Lot Variance (value in percent maximum over- or under-allocation allowed)
MAT	MaturityYearAndMonth	Maturity Year And Month
MATURITY	MaturityRange	Maturity range
MAXSUBS	MaximumSubstitutions	Maximum substitutions (Repo)
MINDNOM	MinimumDenomination	Minimum denomination
MININCR	MinimumIncrement	Minimum increment
MINQTY	MinimumQuantity	Minimum quantity
PAYFREQ	PaymentFrequency	Payment frequency, calendar
PIECES	NumberOfPieces	Number Of Pieces
PMAX	PoolsMaximum	Pools Maximum
PPL	PoolsPerLot	Pools per Lot
PPM	PoolsPerMillion	Pools per Million
PPT	PoolsPerTrade	Pools per Trade
PRICE	PriceRange	Price Range
PRICEFREQ	PricingFrequency	Pricing frequency
PROD	ProductionYear	Production Year
PROTECT	CallProtection	Call protection
PURPOSE	Purpose	Purpose
PXSOURCE	BenchmarkPriceSource	Benchmark price source
RATING	RatingSourceAndRange	Rating source and range
REDEMPTION	TypeOfRedemption	Type Of Redemption - values are: NonCallable, Prefunded, EscrowedToMaturity, Puttable, Convertible
RESTRICTED	Restricted	Restricted (Y/N)
SECTOR	MarketSector	Market Sector
SECTYPE	SecurityTypeIncludedOrExcluded	Security Type included or excluded
STRUCT	Structure	Structure
SUBSFREQ	SubstitutionsFrequency	Substitutions frequency (Repo)
SUBSLEFT	SubstitutionsLeft	Substitutions left (Repo)

<b>Code</b>	<b>Name</b>	<b>Description</b>
TEXT	FreeformText	Freeform Text
TRDVAR	TradeVariance	Trade Variance (value in percent maximum over- or under-allocation allowed)
WAC	WeightedAverageCoupon	Weighted Average Coupon - value in percent (exact or range) plus "Gross" or "Net" of servicing spread (the default) (ex. 234=6.5-Net [minimum of 6.5% net of servicing fee])
WAL	WeightedAverageLifeCoupon	Weighted Average Life Coupon - value in percent (exact or range)
WALA	WeightedAverageLoanAge	Weighted Average Loan Age - value in months (exact or range)
WAM	WeightedAverageMaturity	Weighted Average Maturity - value in months (exact or range)
WHOLE	WholePool	Whole Pool (Y/N)
YIELD	YieldRange	Yield Range
AVFICO	AverageFICOScore	Average FICO Score
ORIGAMT	OriginalAmount	Original amount. The original issued amount of a mortgage backed security or other loan/asset backed security.
AVSIZE	AverageLoanSize	Average Loan Size
POOLEFFDT	PoolEffectiveDate	Pool effective date
MAXBAL	MaximumLoanBalance	Maximum Loan Balance
POOLINITFCTR	PoolInitialFactor	Pool initial factor. For mortgage backed securities, the part of the mortgage that is outstanding on trade inception, i.e. has not been repaid yet as principal. It is expressed as a multiplier factor to the mortgage: where 1 means that the whole mortgage amount is outstanding, 0.8 means that 80% remains to be repaid and 20% has been repaid.
POOL	PoolIdentifier	Pool Identifier
TRANCHE	Tranche	Tranche identifier. Identifies the tranche of a mortgage backed security, loan, collateralized mortgage obligation or similar securities that can be split into different risk or maturity (for example) classes.
ROLLTYPE	TypeOfRollTrade	Type of Roll trade
SUBSTITUTION	Substitution	Substitution (Y/N). Indicates whether substitution is applicable (Y) or (N).

<b>Code</b>	<b>Name</b>	<b>Description</b>
MULTEXCHFLLBCK	MULTEXCHFLLBCK	Multiple exchange fallback (Y/N). For an index option transaction, indicates whether a relevant "Multiple Exchange Index Annex" is applicable (Y) to the transaction or not (N). This annex defines additional provisions which are applicable where an index is comprised of component securities that are traded on multiple exchanges.
REFTRADE	ReferenceToRollingOrClosing-Trade	Reference to rolling or closing trade
COMPSECFLLBCK	COMPSECFLLBCK	Component security fallback (Y/N). For an index option transaction, indicates whether a relevant "Component Security Index Annex" is applicable (Y) to the transaction or not (N).
REFPRIN	PrincipalOfRollingOrClosing-Trade	Principal to rolling or closing trade
LOCLJRSRCTN	LOCLJRSRCTN	Local jurisdiction (Y/N). "Local Jurisdiction" is used in the AEJ Master Confirmation to determine applicability (Y), or not (N), of local taxes (including taxes, duties, and similar charges) imposed by the taxing authority of the local jurisdiction.
REFINT	InterestOfRollingOrClosingTrade	Interest of rolling or closing trade
AVAILQTY	AvailableOfferQuantity-ToBeShownToTheStreet	Available offer quantity to be shown to the street
RELVJRSRCTN	RELVJRSRCTN	Relevant jurisdiction (Y/N). "Relevant Jurisdiction" is used in the AEJ Master Confirmation to determine applicability (Y), or not (N), of local taxes (including taxes, duties and similar charges) that would be imposed by the taxing authority of the "country of underlier" on a "hypothetical broker dealer" assuming that the applicable hedge positions are held by its office in the Relevant Jurisdiction.
BROKERCREDIT	BrokerCredit	Broker's sales credit
INTERNALPX	OfferPriceToBeShownToInternalBrokers	Offer price to be shown to internal brokers
INTERNALQTY	OfferQuantityToBeShownToInternalBrokers	Offer quantity to be shown to internal brokers
LEAVEQTY	TheMinimumResidualOffer-Quantity	The minimum residual offer quantity
MAXORDQTY	MaximumOrderSize	Maximum order size
ORDRINCR	OrderQuantityIncrement	Order quantity increment

Code	Name	Description
PRIMARY	PrimaryOrSecondaryMarketIndicator	Primary or Secondary market indicator
SALESCREDITOVR	BrokerSalesCreditOverride	Broker sales credit override
TRADERCREDIT	TraderCredit	Trader's credit
DISCOUNT	DiscountRate	Discount Rate (when price is denominated in percent of par)
YTM	YieldToMaturity	Yield to Maturity (when YieldType(235) and Yield(236) show a different yield)
PAYOFF	InterestPayoffOfRollingOrAmendingTrade	Interest payoff of rolling or amending trade

Used in groups: [UnderlyingStipulations](#)

### 171.2.6583 UnderlyingStipulations

The UnderlyingStipulations component block has the same usage as the Stipulations component block, but for an underlying security.

Name	Mult.	Type	Description
<a href="#">NoUnderlyingStips</a>	[1..1]	NumInGroup	
<a href="#">UnderlyingStipType</a>	[0..1]	CodeSet	Required if NoUnderlyingStips >0
<a href="#">UnderlyingStipValue</a>	[0..1]	String	

Used in components: [UnderlyingInstrument](#)

### 171.2.6584 UnderlyingStipValue

Value of stipulation.

Same values as StipulationValue (234)

Type: [String](#)

Used in groups: [UnderlyingStipulations](#)

**171.2.6585 UnderlyingStrategyType**

Specifies the type of trade strategy.

Type: **String**

Allowed values in StrategyTypeCodeSet:

Code	Name	Description
STD	Straddle	Straddle
STG	Strangle	Strangle
BF	Butterfly	Butterfly
CNDR	Condor	Condor
CISN	CallableInversibleSnowball	Callable inversible snowball
OTHER	Other	Other

Used in components: **UnderlyingInstrument**

**171.2.6586 UnderlyingStreamAssetAttributeGrp**

The UnderlyingStreamAssetAttributeGrp is a repeating subcomponent of the UnderlyingStreamCommodity component used to detail commodity attributes, quality standards and reject limits.

Name	Mult.	Type	Description
<b>NoUnderlyingStreamAssetAttributes</b>	[1..1]	NumInGroup	
<b>UnderlyingStreamAssetAttributeType</b>	[0..1]	String	Required if NoUnderlyingStreamAssetAttributes(41800) > 0.
<b>UnderlyingStreamAssetAttributeValue</b>	[0..1]	String	
<b>UnderlyingStreamAssetAttributeLimit</b>	[0..1]	String	

Used in components: **UnderlyingStreamCommodity**

**171.2.6587 UnderlyingStreamAssetAttributeLimit**

The limit or lower acceptable value of the attribute.

Type: **String**

Used in groups: **UnderlyingStreamAssetAttributeGrp**

### **171.2.6588 UnderlyingStreamAssetAttributeType**

Specifies the name of the attribute.

See [http://www.fixtradingcommunity.org/codelists#Asset\\_Attribute\\_Types](http://www.fixtradingcommunity.org/codelists#Asset_Attribute_Types) for code list of applicable asset attribute types.

Type: **String**

Used in groups: **UnderlyingStreamAssetAttributeGrp**

### **171.2.6589 UnderlyingStreamAssetAttributeValue**

Specifies the value of the attribute.

Type: **String**

Used in groups: **UnderlyingStreamAssetAttributeGrp**

### **171.2.6590 UnderlyingStreamCalculationBalanceOfFirstPeriod**

When specified and set to 'Y', it indicates that the first calculation period should run from the effective date to the end of the calendar period in which the effective date falls (e.g. Jan 15 - Jan 31 if the calculation periods are one month long and effective date is Jan 15.). If 'N' or not specified, it indicates that the first calculation period should run from the effective date for one whole period (e.g. Jan 15 to Feb 14 if the calculation periods are one month long and the effective date is Jan 15.).

Type: **Boolean**

Used in components: **UnderlyingStreamCalculationPeriodDates**

### **171.2.6591 UnderlyingStreamCalculationCorrectionPeriod**

Time unit multiplier for the length of time after the publication of the data when corrections can be made.

Type: **int**

Used in components: **UnderlyingStreamCalculationPeriodDates**

**171.2.6592 UnderlyingStreamCalculationCorrectionUnit**

Time unit associated with the length of time after the publication of the data when corrections can be made.

Type: **String**

Allowed values in ProtectionTermEventUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: **UnderlyingStreamCalculationPeriodDates**

**171.2.6593 UnderlyingStreamCalculationFrequencyPeriod**

Time unit multiplier for the frequency at which calculation period end dates occur.

Type: **int**

Used in components: **UnderlyingStreamCalculationPeriodDates**

**171.2.6594 UnderlyingStreamCalculationFrequencyUnit**

Time unit associated with the frequency at which calculation period end dates occur.

Type: **String**

Allowed values in CouponFrequencyUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year
H	Hour	Hour
Min	Minute	Minute

---

Code	Name	Description
S	Second	Second
T	Term	Term

Used in components: [UnderlyingStreamCalculationPeriodDates](#)

### 171.2.6595 UnderlyingStreamCalculationPeriodBusinessCenter

The business center calendar used to adjust the calculation periods, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in groups: [UnderlyingStreamCalculationPeriodBusinessCenterGrp](#)

### 171.2.6596 UnderlyingStreamCalculationPeriodBusinessCenterGrp

UnderlyingStreamCalculationPeriodBusinessCenterGrp is a repeating subcomponent within the UnderlyingStreamCalculationPeriodDates component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the UnderlyingDateAdjustment component within the UnderlyingInstrument component.

Name	Mult.	Type	Description
<a href="#">NoUnderlyingStreamCalculationPeriodBusinessCenters</a>	[1..1]	NumInGroup	
<a href="#">UnderlyingStreamCalculationPeriodBusinessCenter</a>	[0..1]	String	Required if <a href="#">NoUnderlyingStreamCalculationPeriodBusinessCenters(40973)</a> > 0.

Used in components: [UnderlyingStreamCalculationPeriodDates](#)

### 171.2.6597 UnderlyingStreamCalculationPeriodBusinessDayConvention

The business day convention used to adjust the calculation periods. Used only to override the business day convention specified in the UnderlyingDateAdjustment component within the UnderlyingInstrument component.

Type: [int](#)

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [UnderlyingStreamCalculationPeriodDates](#)

#### 171.2.6598 UnderlyingStreamCalculationPeriodDate

The adjusted or unadjusted fixed calculation period date.

Type: [LocalMktDate](#)

Used in groups: [UnderlyingStreamCalculationPeriodDateGrp](#)

#### 171.2.6599 UnderlyingStreamCalculationPeriodDateGrp

The UnderlyingStreamCalculationPeriodDateGrp is a repeating subcomponent of the UnderlyingStreamCalculationPeriodDates component used to detail fixed dates for the swap stream.

Name	Mult.	Type	Description
<a href="#">NoUnderlyingStreamCalculationPeriodDates</a>	[1..1]	NumInGroup	
<a href="#">UnderlyingStreamCalculationPeriodDate</a>	[0..1]	LocalMktDate	Required if <a href="#">NoUnderlyingStreamCalculationPeriodDates(41954)</a> > 0.
<a href="#">UnderlyingStreamCalculationPeriodDateType</a>	[0..1]	CodeSet	When specified it applies not only to the current date but to all subsequent dates in the group until overridden with a new type.

Used in components: [UnderlyingStreamCalculationPeriodDates](#)

## 171.2.6600 UnderlyingStreamCalculationPeriodDates

UnderlyingStreamCalculationPeriodDates is a subcomponent of the UnderlyingStreamGrp component used to specify the calculation period dates of the stream.

Name	Mult.	Type	Description
UnderlyingStreamCalculationPeriod-DatesXID	[0..1]	XID	
UnderlyingStreamCalculationPeriod-DatesXIDRef	[0..1]	XIDREF	
UnderlyingStreamCalculationPeriod-BusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified value would be specific to this instance of the underlying instrument's calculation period dates.
UnderlyingStreamCalculationPeriod-BusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified values would be specific to this instance of the underlying instrument's calculation period dates.
UnderlyingStreamCalculationPeriod-DateGrp	[0..*]	Group	
UnderlyingStreamFirstPeriodStartDateUnadjusted	[0..1]	LocalMktDate	
UnderlyingStreamFirstPeriodStartDateBusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified value would be specific to this instance of the underlying instrument's calculation period dates.
UnderlyingStreamFirstPeriodStartDateBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified values would be specific to this instance of the underlying instrument's calculation period dates.
UnderlyingStreamFirstPeriodStartDateAdjusted	[0..1]	LocalMktDate	
UnderlyingStreamFirstRegularPeriodStartDateUnadjusted	[0..1]	LocalMktDate	

Name	Mult.	Type	Description
<a href="#">UnderlyingStreamFirstCompounding-PeriodEndDateUnadjusted</a>	[0..1]	LocalMktDate	
<a href="#">UnderlyingStreamLastRegularPeriodEndDateUnadjusted</a>	[0..1]	LocalMktDate	
<a href="#">UnderlyingStreamCalculationFrequencyPeriod</a>	[0..1]	int	Conditionally required when <a href="#">UnderlyingStreamCalculationFrequencyUnit(40566)</a> is specified.
<a href="#">UnderlyingStreamCalculationFrequencyUnit</a>	[0..1]	CodeSet	Conditionally required when <a href="#">UnderlyingStreamCalculationFrequencyPeriod(40565)</a> is specified.
<a href="#">UnderlyingStreamCalculationRollConvention</a>	[0..1]	CodeSet	When specified, this overrides the date roll convention defined in the <a href="#">UnderlyingDateAdjustment</a> component in <a href="#">UnderlyingInstrument</a> . The specified values would be specific to this instance of the stream payment dates.
<a href="#">UnderlyingStreamCalculationBalanceOfFirstPeriod</a>	[0..1]	Boolean	
<a href="#">UnderlyingStreamCalculationCorrectionPeriod</a>	[0..1]	int	Conditionally required when <a href="#">UnderlyingStreamCalculationCorrectionUnit(41961)</a> is specified.
<a href="#">UnderlyingStreamCalculationCorrectionUnit</a>	[0..1]	CodeSet	Conditionally required when <a href="#">UnderlyingStreamCalculationCorrectionPeriod(41960)</a> is specified.

Used in groups: [UnderlyingStreamGrp](#)

### 171.2.6601 UnderlyingStreamCalculationPeriodDatesXID

Identifier of this calculation period for cross referencing elsewhere in the message.

Type: [XID](#)

Used in components: [UnderlyingStreamCalculationPeriodDates](#)

### 171.2.6602 UnderlyingStreamCalculationPeriodDatesXIDRef

Cross reference to another calculation period for duplicating its properties.

Type: [XIDREF](#)

Used in components: [UnderlyingStreamCalculationPeriodDates](#)

**171.2.6603 UnderlyingStreamCalculationPeriodDateType**

Specifies the type of fixed calculation period date. When specified it applies not only to the current date but to all subsequent dates in the group until overridden with a new type.

Type: **int**

Allowed values in OptionExerciseDateTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Unadjusted	Unadjusted
1	Adjusted	Adjusted

---

Used in groups: **UnderlyingStreamCalculationPeriodDateGrp**

**171.2.6604 UnderlyingStreamCalculationRollConvention**

The convention for determining the sequence of end dates. It is used in conjunction with a specified frequency. Used only to override the roll convention specified in the UnderlyingDateAdjustment component within the UnderlyingInstrument component.

Type: **String**

Allowed values in DateRollConventionCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	FirstDay	1st day of the month
2	SecondDay	2nd day of the month
3	ThirdDay	3rd day of the month
4	FourthDay	4th day of the month
5	FifthDay	5th day of the month
6	SixthDay	6th day of the month
7	SeventhDay	7th day of the month
8	EighthDay	8th day of the month
9	NinthDay	9th day of the month
10	TenthDay	10th day of the month
11	EleventhDay	11th day of the month
12	TwelvthDay	12th day of the month

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
13	ThirteenthDay	13th day of the month
14	ForteenthDay	14th day of the month
15	FifteenthDay	15th day of the month
16	SixteenthDay	16th day of the month
17	SeventeenthDay	17th day of the month
18	EighteenthDay	18th day of the month
19	NineteenthDay	19th day of the month
20	TwentiethDay	20th day of the month
21	TwentyFirstDay	21st day of the month
22	TwentySecondDay	22nd day of the month
23	TwentyThirdDay	23rd day of the month
24	TwentyFourthDay	24th day of the month
25	TwentyFifthDay	25th day of the month
26	TwentySixthDay	26th day of the month
27	TwentySeventhDay	27th day of the month
28	TwentyEighthDay	28th day of the month
29	TwentyNinthDay	29th day of the month
30	ThirtiethDay	30th day of the month
EOM	EOM	The end of the month. Use EOM for 31st day of the month.
FRN	FRN	The floating rate note convention or Eurodollar convention.
IMM	IMM	The International Money Market settlement date, i.e. the 3rd Wednesday of the month.
IMMCAD	IMMCAD	The last trading day/expiration day of the Canadian Derivatives Exchange.
IMMAUD	IMMAUD	The last trading day of the Sydney Futures Exchange Australian 90-day bank accepted bill futures contract.
IMMNZD	IMMNZD	The last trading day of the Sydney Futures Exchange New Zealand 90-day bank bill futures contract.
SFE	SFE	The Sydney Futures Exchange 90-day bank accepted bill futures settlement dates.
NONE	NONE	No adjustment
TBILL	TBILL	The 13-week and 26-week U.S. Treasury Bill auction dates.
MON	MON	Monday
TUE	TUE	Tuesday
WED	WED	Wednesday

Code	Name	Description
THU	THU	Thursday
FRI	FRI	Friday
SAT	SAT	Saturday
SUN	SUN	Sunday

---

Used in components: [UnderlyingStreamCalculationPeriodDates](#)

### 171.2.6605 UnderlyingStreamCommodityAltID

Alternate security identifier value for the commodity.

Type: [String](#)

Used in groups: [UnderlyingStreamCommodityAltIDGrp](#)

### 171.2.6606 UnderlyingStreamCommodityAltIDGrp

UnderlyingStreamCommodityAltIDGrp is a subcomponent of the UnderlyingStreamCommodity component used to specify alternate identifiers.

---

Name	Mult.	Type	Description
<a href="#">NoUnderlyingStreamCommodityAltIDs</a>	[1..1]	NumInGroup	
<a href="#">UnderlyingStreamCommodityAltID</a>	[0..1]	String	Required if <a href="#">NoUnderlyingStreamCommodityAltIDs(41990)</a> > 0.
<a href="#">UnderlyingStreamCommodityAltID-Source</a>	[0..1]	String	Required if <a href="#">NoUnderlyingStreamCommodityAltIDs(41990)</a> > 0.

---

Used in components: [UnderlyingStreamCommodity](#)

### 171.2.6607 UnderlyingStreamCommodityAltIDSource

Identifies the class or source of the alternate commodity security identifier.

Type: [String](#)

Used in groups: [UnderlyingStreamCommodityAltIDGrp](#)

**171.2.6608 UnderlyingStreamCommodityBase**

Specifies the general base type of the commodity traded. Where possible, this should follow the naming convention used in the 2005 ISDA Commodity Definitions.

Type: **String**

Used in components: **UnderlyingStreamCommodity**

**171.2.6609 UnderlyingStreamCommodity**

UnderlyingStreamCommodity is a subcomponent of the UnderlyingStream component used to identify and describe the underlying commodity.

Name	Mult.	Type	Description
<b>UnderlyingStreamCommodityBase</b>	[0..1]	String	
<b>UnderlyingStreamCommodityType</b>	[0..1]	String	
<b>UnderlyingStreamCommoditySecurityID</b>	[0..1]	String	Conditionally required when UnderlyingStreamCommoditySecurityIDSource(41967) is specified.
<b>UnderlyingStreamCommoditySecurityIDSource</b>	[0..1]	CodeSet	Conditionally required when UnderlyingStreamCommoditySecurityID(41966) is specified.
<b>UnderlyingStreamCommodityAltIDGrp</b>	[0..*]	Group	
<b>UnderlyingStreamCommodityDesc</b>	[0..1]	String	
<b>EncodedUnderlyingStreamCommodityDescLen</b>	[0..1]	Length	Must be set if EncodedUnderlyingStreamCommodityDesc(41970) field is specified and must immediately precede it.
<b>EncodedUnderlyingStreamCommodityDesc</b>	[0..1]	data	Encoded (non-ASCII characters) representation of the UnderlyingStreamCommodityDesc(41968) field in the encoded format specified via the MessageEncoding(347) field.
<b>UnderlyingStreamCommodityDeliveryPricingRegion</b>	[0..1]	String	May be used to specify the delivery or pricing region of a non-standard commodity swap contract (e.g. when InstrAttribType(871)=38 (US standard contract indicator) and InstrAttribValue(872)=N).
<b>UnderlyingStreamAssetAttributeGrp</b>	[0..*]	Group	
<b>UnderlyingStreamCommodityUnitOfMeasure</b>	[0..1]	CodeSet	
<b>UnderlyingStreamCommodityCurrency</b>	[0..1]	Currency	

Name	Mult.	Type	Description
UnderlyingStreamCommodityExchange	[0..1]	Exchange	
UnderlyingStreamCommodityRateSource	[0..1]	int	
UnderlyingStreamCommodityRateReferencePage	[0..1]	String	
UnderlyingStreamCommodityRateReferencePageHeading	[0..1]	String	
UnderlyingStreamDataProvider	[0..1]	String	
UnderlyingStreamCommodityDataSourceGrp	[0..*]	Group	
UnderlyingStreamCommodityPricingType	[0..1]	String	
UnderlyingStreamCommodityNearbySettlDayPeriod	[0..1]	int	Conditionally required when UnderlyingStreamCommodityNearbySettlDayUnit(41980) is specified.
UnderlyingStreamCommodityNearbySettlDayUnit	[0..1]	CodeSet	Conditionally required when UnderlyingStreamCommodityNearbySettlDayPeriod(41979) is specified.
UnderlyingStreamCommoditySettlDateUnadjusted	[0..1]	LocalMktDate	
UnderlyingStreamCommoditySettlDateBusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified value would be specific to the underlying settlement dates.
UnderlyingStreamCommoditySettlBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified values would be specific to the settlement dates.
UnderlyingStreamCommoditySettlDateAdjusted	[0..1]	LocalMktDate	
UnderlyingStreamCommoditySettlMonth	[0..1]	int	
UnderlyingStreamCommoditySettlDateRollPeriod	[0..1]	int	Conditionally required when UnderlyingStreamCommoditySettlDateRollUnit(41986) is specified.
UnderlyingStreamCommoditySettlDateRollUnit	[0..1]	CodeSet	Conditionally required when UnderlyingStreamCommoditySettlDateRollPeriod(41985) is specified.

Name	Mult.	Type	Description
<a href="#">UnderlyingStreamCommoditySettleDayType</a>	[0..1]	CodeSet	
<a href="#">UnderlyingStreamCommoditySettlePeriodGrp</a>	[0..*]	Group	
<a href="#">UnderlyingStreamCommodityXID</a>	[0..1]	XID	
<a href="#">UnderlyingStreamCommodityXIDRef</a>	[0..1]	XIDREF	

Used in groups: [UnderlyingStreamGrp](#)

### 171.2.6610 UnderlyingStreamCommodityCurrency

Identifies the currency of the commodity asset. Uses ISO 4217 currency codes.

Type: [Currency](#)

Used in components: [UnderlyingStreamCommodity](#)

### 171.2.6611 UnderlyingStreamCommodityDataSourceGrp

[UnderlyingStreamCommodityDataSourceGrp](#) is a subcomponent of the [UnderlyingStreamCommodity](#) component used to specify sources of data, e.g. weather stations. The order of entry determines priority – first is the main source, second is fallback, third is second fallback.

Name	Mult.	Type	Description
<a href="#">NoUnderlyingStreamCommodityDataSources</a>	[1..1]	NumInGroup	
<a href="#">UnderlyingStreamCommodityDataSourceID</a>	[0..1]	String	Required if <a href="#">NoUnderlyingStreamCommodityDataSources(41993)</a> > 0.
<a href="#">UnderlyingStreamCommodityDataSourceIDType</a>	[0..1]	CodeSet	Required if <a href="#">NoUnderlyingStreamCommodityDataSources(41993)</a> > 0.

Used in components: [UnderlyingStreamCommodity](#)

### 171.2.6612 UnderlyingStreamCommodityDataSourceID

Data source identifier.

Type: **String**

Used in groups: **UnderlyingStreamCommodityDataSourceGrp**

### **171.2.6613 UnderlyingStreamCommodityDataSourceIDType**

Specifies the type of data source identifier.

Type: **int**

Allowed values in StreamCommodityDataSourceIDTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	City	City (4 character business center code)
1	Airport	Airport (IATA standard)
2	WeatherStation	Weather station WBAN (Weather Bureau Army Navy)
3	WeatherIndex	Weather index WMO (World Meteorological Organization)

---

Used in groups: **UnderlyingStreamCommodityDataSourceGrp**

### **171.2.6614 UnderlyingStreamCommodityDeliveryPricingRegion**

The delivery or pricing region associated with the commodity swap. See [http://www.ecfr.gov/cgi-bin/text-idx?SID=660d6a40f836aa6ddf213cba080c5b22&node=ap17.2.43\\_17.e&rgn=div9](http://www.ecfr.gov/cgi-bin/text-idx?SID=660d6a40f836aa6ddf213cba080c5b22&node=ap17.2.43_17.e&rgn=div9) for the external code list.

Type: **String**

Used in components: **UnderlyingStreamCommodity**

### **171.2.6615 UnderlyingStreamCommodityDesc**

Description of the commodity asset.

Type: **String**

Used in components: **UnderlyingStreamCommodity**

**171.2.6616 UnderlyingStreamCommodityExchange**

Identifies the exchange where the commodity is traded.

Type: **Exchange**

Used in components: **UnderlyingStreamCommodity**

**171.2.6617 UnderlyingStreamCommodityNearbySettlDayPeriod**

Time unit multiplier for the nearby settlement day.

Type: **int**

Used in components: **UnderlyingStreamCommodity**

**171.2.6618 UnderlyingStreamCommodityNearbySettlDayUnit**

Time unit associated with the nearby settlement day.

Type: **String**

Allowed values in StreamCommodityNearbySettlDayUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
Wk	Week	Week
Mo	Month	Month

---

Used in components: **UnderlyingStreamCommodity**

**171.2.6619 UnderlyingStreamCommodityPricingType**

Specifies how the pricing or rate setting of the trade is to be determined or based upon.

See [http://www.fixtradingcommunity.org/codelists#Commodity\\_Rate\\_Pricing\\_Type](http://www.fixtradingcommunity.org/codelists#Commodity_Rate_Pricing_Type) for code list of applicable commodity pricing types.

Type: **String**

Used in components: **UnderlyingStreamCommodity**

#### **171.2.6620 UnderlyingStreamCommodityRateReferencePage**

Identifies the reference "page" from the rate source.

Type: **String**

Used in components: **UnderlyingStreamCommodity**

#### **171.2.6621 UnderlyingStreamCommodityRateReferencePageHeading**

Identifies the page heading from the rate source.

Type: **String**

Used in components: **UnderlyingStreamCommodity**

#### **171.2.6622 UnderlyingStreamCommodityRateSource**

Identifies the source of rate information used for commodities.

See [http://www.fixtradingcommunity.org/codelists#Commodity\\_Rate\\_Source](http://www.fixtradingcommunity.org/codelists#Commodity_Rate_Source) for code list of applicable sources.

Type: **int**

Used in components: **UnderlyingStreamCommodity**

#### **171.2.6623 UnderlyingStreamCommoditySecurityID**

Specifies the market identifier for the commodity.

Type: **String**

Used in components: **UnderlyingStreamCommodity**

#### **171.2.6624 UnderlyingStreamCommoditySecurityIDSource**

Identifies the class or source of the UnderlyingStreamCommoditySecurityIDSource(41966) value.

Type: **String**

Allowed values in SecurityIDSourceCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	CUSIP	CUSIP
2	SEDOL	SEDOL
3	QUIK	QUIK
4	ISINNumber	ISIN
5	RICCode	RIC
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
7	ISOCountryCode	ISO Country Code
8	ExchangeSymbol	Exchange symbol
9	ConsolidatedTapeAssociation	Consolidated Tape Association (CTA) Symbol (SIAC CTS/CQS line format)
A	BloombergSymbol	Bloomberg Symbol
B	Wertpapier	Wertpapier
C	Dutch	Dutch
D	Valoren	Valoren
E	Sicovam	Sicovam
F	Belgian	Belgian
G	Common	"Common" (Clearstream and Euroclear)
H	ClearingHouse	Clearing house / Clearing organization
I	ISDAFpMLSpecification	ISDA/FpML product specification (XML in SecurityXML(1185))
J	OptionPriceReportingAuthority	Option Price Reporting Authority
K	ISDAFpMLURL	ISDA/FpML product URL (URL in SecurityID(48))
L	LetterOfCredit	Letter of credit
M	MarketplaceAssignedIdentifier	Marketplace-assigned Identifier
N	MarkitREDEntityCLIP	Markit RED entity CLIP
P	MarkitREDPairCLIP	Markit RED pair CLIP
Q	CFTCCommodityCode	CFTC commodity code
R	ISDACommodityReferencePrice	ISDA Commodity Reference Price
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
T	LegalEntityIdentifier	Legal entity identifier
U	Synthetic	Synthetic. Used to specify that the security identifier is synthetic for linking nested underliers when there is no market identifier for the collection.
V	FidessaInstrumentMnemonic	Fidessa Instrument Mnemonic (FIM)

Code	Name	Description
W	IndexName	Index name. Standard name of the index or rate index, e.g. "LIBOR" or "iTraxx Australia".
X	UniformSymbol	Uniform Symbol (UMTF Symbol)
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in components: [UnderlyingStreamCommodity](#)

### 171.2.6625 UnderlyingStreamCommoditySettlBusinessCenter

The business center calendar used to adjust the commodity delivery date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in groups: [UnderlyingStreamCommoditySettlBusinessCenterGrp](#)

### 171.2.6626 UnderlyingStreamCommoditySettlBusinessCenterGrp

UnderlyingStreamCommoditySettlBusinessCenterGrp is a repeating subcomponent of the UnderlyingStreamCommodity component used to specify the set of business centers whose calendars drive date adjustment. Used only to override the business centers defined in the UnderlyingDateAdjustment component in UnderlyingInstrument.

Name	Mult.	Type	Description
<a href="#">NoUnderlyingStreamCommoditySettlBusinessCenters</a>	[1..1]	NumInGroup	
<a href="#">UnderlyingStreamCommoditySettlBusinessCenter</a>	[0..1]	String	Required if <a href="#">NoUnderlyingStreamCommoditySettlBusinessCenters(41962)</a> > 0.

Used in components: [UnderlyingStreamCommodity](#)

### 171.2.6627 UnderlyingStreamCommoditySettlCountry

Specifies the country where delivery takes place. Uses ISO 3166 2-character country code.

Type: [Country](#)

Used in groups: [UnderlyingStreamCommoditySettlPeriodGrp](#)

**171.2.6628 UnderlyingStreamCommoditySettlDateAdjusted**

The adjusted commodity delivery date.

Type: [LocalMktDate](#)

Used in components: [UnderlyingStreamCommodity](#)

**171.2.6629 UnderlyingStreamCommoditySettlDateBusinessDayConvention**

The business day convention used to adjust the commodity delivery date. Used only to override the business day convention specified in the UnderlyingDateAdjustment component within the UnderlyingInstrument component.

Type: [int](#)

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [UnderlyingStreamCommodity](#)

**171.2.6630 UnderlyingStreamCommoditySettlDateRollPeriod**

Time unit multiplier for the commodity delivery date roll.

Type: [int](#)

Used in components: [UnderlyingStreamCommodity](#)

**171.2.6631 UnderlyingStreamCommoditySettlDateRollUnit**

Time unit associated with the commodity delivery date roll.

Type: **String**

Allowed values in StreamCommoditySettlDateRollUnitCodeSet:

---

Code	Name	Description
D	Day	Day

---

Used in components: **UnderlyingStreamCommodity**

**171.2.6632 UnderlyingStreamCommoditySettlDateUnadjusted**

The unadjusted commodity delivery date.

Type: **LocalMktDate**

Used in components: **UnderlyingStreamCommodity**

**171.2.6633 UnderlyingStreamCommoditySettlDay**

Specifies the day or group of days for delivery.

Type: **int**

Allowed values in DeliveryScheduleSettlDayCodeSet:

---

Code	Name	Description
1	Monday	Monday
2	Tuesday	Tuesday
3	Wednesday	Wednesday
4	Thursday	Thursday
5	Friday	Friday
6	Saturday	Saturday
7	Sunday	Sunday
8	AllWeekdays	All weekdays
9	AllDays	All days

---

Code	Name	Description
10	AllWeekends	All weekends

Used in groups: [UnderlyingStreamCommoditySettlDayGrp](#)

### 171.2.6634 UnderlyingStreamCommoditySettlDayGrp

The UnderlyingStreamCommoditySettlDayGrp is a repeating subcomponent of the UnderlyingStreamCommoditySettlPeriodGrp component used to define the settlement days associated with the commodity contract.

Name	Mult.	Type	Description
<a href="#">NoUnderlyingStreamCommoditySettlDays</a>	[1..1]	NumInGroup	
<a href="#">UnderlyingStreamCommoditySettlDay</a>	[0..1]	CodeSet	Required if <a href="#">NoUnderlyingStreamCommoditySettlDays</a> (41996) > 0.
<a href="#">UnderlyingStreamCommoditySettlTotalHours</a>	[0..1]	int	
<a href="#">UnderlyingStreamCommoditySettlTimeGrp</a>	[0..*]	Group	

Used in groups: [UnderlyingStreamCommoditySettlPeriodGrp](#)

### 171.2.6635 UnderlyingStreamCommoditySettlDayType

Specifies the commodity delivery roll day type.

Type: [int](#)

Allowed values in [ComplexEventDateOffsetDayTypeCodeSet](#):

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business

---

Code	Name	Description
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in components: [UnderlyingStreamCommodity](#)

### **171.2.6636 UnderlyingStreamCommoditySettleEnd**

The end time for commodity settlement where delivery occurs over time. The time format is specified by the settlement time type.

Type: [String](#)

Used in groups: [UnderlyingStreamCommoditySettleTimeGrp](#)

### **171.2.6637 UnderlyingStreamCommoditySettleFlowType**

Specifies the commodity delivery flow type.

Type: [int](#)

Allowed values in DeliveryScheduleSettleFlowTypeCodeSet:

---

Code	Name	Description
0	AllTimes	All times
1	OnPeak	On peak
2	OffPeak	Off peak
3	Base	Base
4	BlockHours	Block hours
5	Other	Other

---

Used in groups: [UnderlyingStreamCommoditySettlePeriodGrp](#)

### **171.2.6638 UnderlyingStreamCommoditySettleHolidaysProcessingInstruction**

Indicates whether holidays are included in the settlement periods. Required for electricity contracts.

Type: [int](#)

Allowed values in DeliveryScheduleSettlHolidaysProcessingInstructionCodeSet:

Code	Name	Description
0	DoNotIncludeHolidays	Do not include holidays
1	IncludeHolidays	Include holidays

Used in groups: [UnderlyingStreamCommoditySettlPeriodGrp](#)

#### **171.2.6639 UnderlyingStreamCommoditySettlMonth**

Specifies a fixed single month for commodity delivery.

Type: [int](#)

Used in components: [UnderlyingStreamCommodity](#)

#### **171.2.6640 UnderlyingStreamCommoditySettlPeriodFrequencyPeriod**

Time unit multiplier for the settlement period frequency.

Type: [int](#)

Used in groups: [UnderlyingStreamCommoditySettlPeriodGrp](#)

#### **171.2.6641 UnderlyingStreamCommoditySettlPeriodFrequencyUnit**

Time unit associated with the settlement period frequency.

Type: [String](#)

Allowed values in ProtectionTermEventUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in groups: [UnderlyingStreamCommoditySettlPeriodGrp](#)

**171.2.6642 UnderlyingStreamCommoditySettlPeriodGrp**

The UnderlyingStreamCommoditySettlPeriodGrp is a repeating subcomponent of the UnderlyingStreamCommodity component used to defined the settlement period details associated with the commodity contract.

Name	Mult.	Type	Description
NoUnderlyingStreamCommoditySettlPeriods	[1..1]	NumInGroup	
UnderlyingStreamCommoditySettlCountry	[0..1]	Country	Required if NoUnderlyingStreamCommoditySettlPeriods(42002) > 0.
UnderlyingStreamCommoditySettlTimeZone	[0..1]	String	
UnderlyingStreamCommoditySettlFlowType	[0..1]	CodeSet	
UnderlyingStreamCommoditySettlPeriodNotional	[0..1]	Qty	
UnderlyingStreamCommoditySettlPeriodNotionalUnitOfMeasure	[0..1]	CodeSet	
UnderlyingStreamCommoditySettlPeriodFrequencyPeriod	[0..1]	int	Conditionally required when UnderlyingStreamCommoditySettlPeriodFrequencyUnit(42009) is specified.
UnderlyingStreamCommoditySettlPeriodFrequencyUnit	[0..1]	CodeSet	Conditionally required when UnderlyingStreamCommoditySettlPeriodFrequencyPeriod(42008) is specified.
UnderlyingStreamCommoditySettlPeriodPrice	[0..1]	Price	
UnderlyingStreamCommoditySettlPeriodPriceUnitOfMeasure	[0..1]	CodeSet	
UnderlyingStreamCommoditySettlPeriodPriceCurrency	[0..1]	Currency	
UnderlyingStreamCommoditySettlHolidaysProcessingInstruction	[0..1]	CodeSet	
UnderlyingStreamCommoditySettlDayGrp	[0..*]	Group	
UnderlyingStreamCommoditySettlPeriodXID	[0..1]	XID	
UnderlyingStreamCommoditySettlPeriodXIDRef	[0..1]	XIDREF	

Used in components: [UnderlyingStreamCommodity](#)

### **171.2.6643 UnderlyingStreamCommoditySettlPeriodNotional**

Specifies the delivery quantity associated with this settlement period.

Type: [Qty](#)

Used in groups: [UnderlyingStreamCommoditySettlPeriodGrp](#)

### **171.2.6644 UnderlyingStreamCommoditySettlPeriodNotionalUnitOfMeasure**

Specifies the unit of measure (UOM) of the delivery quantity associated with this settlement period.

Type: [String](#)

Allowed values in UnitOfMeasureCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet
Bbl	Barrels	Barrels. Equal to 42 US gallons
CBM	CubicMeters	Cubic Meters
BDFT	BoardFeet	Board feet. Equal to 144 cubic inches
GJ	Gigajoules	gigajoules
Bu	Bushels	Bushels
kHR	HeatRate	Heat rate. The number of BTUs required to produce one kilowatt hour of electricity, typically 3,412.14 BTUs per 1 kWh.
Ccy	Currency	Amount of currency
kWh	KilowattHours	Kilowatt hours
CDD	CoolingDegreeDay	Cooling degree day
MHR	MegaHeatRate	Mega heat rate. The number of million BTUs required to produce one megawatt hour of electricity, typically 3.41214 million BTUs per 1 MWh.
CER	CertifiedEmissionsReduction	Certified emissions reduction
MMBtu	OneMillionBTU	One Million BTU
CPD	CriticalPrecipDay	Critical precipitation day
MWh	MegawattHours	Megawatt hours
CRT	ClimateReserveTonnes	Climate reserve tonnes

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
thm	Therms	therms. Equal to 100,000 BTU
cwt	Hundredweight	Hundredweight(US). Equal to 100 lbs
tnCO2	TonsOfCarbonDioxide	Tons of carbon dioxide
day	Day	Days
dt	DryMetricTons	Dry metric tons
EnvAllwnc	EnvAllwncCert	Environmental allowance certificates
EnvCrd	EnvironmentalCredit	Environmental credit
EnvOfst	EnvironmentalOffset	Environmental Offset
g	Grams	Grams
Gal	Gallons	Gallons
GT	GrossTons	Gross tons. Also known as long tons or imperial tons, equal to 2240 lbs
HDD	HeatingDegreeDay	Heating degree day
IPNT	IndexPoint	Index point
kg	Kilograms	Kilograms
kL	Kiloliters	kiloliters
kW-a	KilowattYear	Kilowatt year (electrical capacity)
kW-d	KilowattDay	Kilowatt day (electrical capacity)
kW-h	KilowattHour	Kilowatt hour (electrical capacity)
kW-M	KilowattMonth	Kilowatt month (electrical capacity)
kW-min	KilowattMinute	Kilowatt-Minute (electrical capacity)
L	Liters	liters
lbs	Pounds	pounds
MW-a	MegawattYear	Megawatt year (electrical capacity)
MW-d	MegawattDay	Megawatt day (electrical capacity)
MW-h	MegawattHour	Megawatt hour (electrical capacity)
MW-M	MegawattMonth	Megawatt month (electrical capacity)
MW-min	MegawattMinute	Megawatt minute (electrical capacity)
oz_tr	TroyOunces	Troy ounces
PRINC	PrincipalWithRelationToDebtInstrument	Principal with relation to debt instrument
t	MetricTons	Metric tons. Also known as Tonnes, equal to 1000 kg
tn	Tons	Tons (US). Equal to 2000 lbs
a	Are	Are
ac	Acre	Acre

<b>Code</b>	<b>Name</b>	<b>Description</b>
cL	Centiliter	Centiliter
cM	Centimeter	Centimeter

MMbbl	MillionBarrels	Million Barrels
USD	USDollars	US Dollars

Used in groups: [UnderlyingStreamCommoditySettlPeriodGrp](#)

**171.2.6645 UnderlyingStreamCommoditySettlPeriodPrice**

The settlement period price.

Type: **Price**

Used in groups: **UnderlyingStreamCommoditySettlPeriodGrp**

**171.2.6646 UnderlyingStreamCommoditySettlPeriodPriceCurrency**

The currency of the settlement period price. Uses ISO 4217 currency codes.

Type: **Currency**

Used in groups: **UnderlyingStreamCommoditySettlPeriodGrp**

**171.2.6647 UnderlyingStreamCommoditySettlPeriodPriceUnitOfMeasure**

Specifies the settlement period price unit of measure (UOM).

Type: **String**

Allowed values in UnitOfMeasureCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
Alw	Allowances	Allowances

Used in groups: [UnderlyingStreamCommoditySettlPeriodGrp](#)

#### **171.2.6648 UnderlyingStreamCommoditySettlPeriodXID**

Identifier of this settlement period for cross referencing elsewhere in the message.

Type: [XID](#)

Used in groups: [UnderlyingStreamCommoditySettlPeriodGrp](#)

#### **171.2.6649 UnderlyingStreamCommoditySettlPeriodXIDRef**

Cross reference to another settlement period for duplicating its properties.

Type: [XIDREF](#)

Used in groups: [UnderlyingStreamCommoditySettlPeriodGrp](#)

#### **171.2.6650 UnderlyingStreamCommoditySettlStart**

The start time for commodity settlement where delivery occurs over time. The time format is specified by the settlement time type.

Type: [String](#)

Used in groups: [UnderlyingStreamCommoditySettlTimeGrp](#)

#### **171.2.6651 UnderlyingStreamCommoditySettlTimeGrp**

The [UnderlyingStreamCommoditySettlTimeGrp](#) is a repeating subcomponent of the [UnderlyingStreamCommoditySettlDayGrp](#) component used to define the settlement time periods associated with the commodity contract.

---

<b>Name</b>	<b>Mult.</b>	<b>Type</b>	<b>Description</b>
<a href="#">NoUnderlyingStreamCommoditySettlTimes</a>	[1..1]	NumInGroup	
<a href="#">UnderlyingStreamCommoditySettlStart</a>	[0..1]	String	Required if <a href="#">NoUnderlyingStreamCommoditySettlTimes(41999)</a> > 0.
<a href="#">UnderlyingStreamCommoditySettlEnd</a>	[0..1]	String	Required if <a href="#">NoUnderlyingStreamCommoditySettlTimes(41999)</a> > 0.

---

Name	Mult.	Type	Description
<b>UnderlyingStreamCommoditySettlTimeType</b>	[0..1]	CodeSet	May be defaulted to market convention or bilaterally agreed if not specified.

Used in groups: **UnderlyingStreamCommoditySettlDayGrp**

### 171.2.6652 UnderlyingStreamCommoditySettlTimeType

Specifies the format of the commodity settlement start and end times.

Type: **int**

Allowed values in DeliveryScheduleSettlTimeTypeCodeSet:

Code	Name	Description
0	Hour	Hour of the day. Applicable for electricity contracts. Time value is expressed as an integer hour of the day (1-24). The delivery start/end hour is specified as the end of the included hour. For example, a start hour of "4" begins at 3 a.m.; an end hour of "20" ends at 8 p.m.; a start hour of "1" and end hour of "24" indicates midnight to midnight delivery.
1	Timestamp	HH:MM time format. Applicable for gas contracts. Time value is expressed using a 24-hour time format. For example, a time value of "13:30" is 1:30 p.m.

Used in groups: **UnderlyingStreamCommoditySettlTimeGrp**

### 171.2.6653 UnderlyingStreamCommoditySettlTimeZone

Commodity delivery timezone specified as "prevailing" rather than "standard" or "daylight".

See [http://www.fixtradingcommunity.org/codelists#Prevailing\\_Timezones](http://www.fixtradingcommunity.org/codelists#Prevailing_Timezones) for code list of applicable prevailing timezones.

Type: **String**

Used in groups: **UnderlyingStreamCommoditySettlPeriodGrp**

**171.2.6654 UnderlyingStreamCommoditySettlTotalHours**

Sum of the hours specified in UnderlyingStreamCommoditySettlTimeGrp.

Type: **int**

Used in groups: **UnderlyingStreamCommoditySettlDayGrp**

**171.2.6655 UnderlyingStreamCommodityType**

Specifies the type of commodity product.

For coal see <http://www.fpml.org/coding-scheme/commodity-coal-product-type> for values.

For metals see <http://www.fpml.org/coding-scheme/commodity-metal-product-type> for values.

For bullion see [http://www.fixtradingcommunity.org/codelists#Bullion\\_Types](http://www.fixtradingcommunity.org/codelists#Bullion_Types) for the external code list of bullion types.

Type: **String**

Used in components: **UnderlyingStreamCommodity**

**171.2.6656 UnderlyingStreamCommodityUnitOfMeasure**

The unit of measure (UOM) of the commodity asset.

Type: **String**

Allowed values in UnitOfMeasureCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
Alw	Allowances	Allowances

Used in components: [UnderlyingStreamCommodity](#)

#### **171.2.6657 UnderlyingStreamCommodityXID**

Identifier of this stream commodity for cross referencing elsewhere in the message.

Type: [XID](#)

Used in components: [UnderlyingStreamCommodity](#)

#### **171.2.6658 UnderlyingStreamCommodityXIDRef**

Reference to a stream commodity elsewhere in the message.

Type: [XIDREF](#)

Used in components: [UnderlyingStreamCommodity](#)

#### **171.2.6659 UnderlyingStreamCurrency**

Specifies the currency the UnderlyingStreamNotional(40545) is denominated in. Uses ISO 4217 currency codes.

Type: [Currency](#)

Used in groups: [UnderlyingStreamGrp](#)

#### **171.2.6660 UnderlyingStreamDataProvider**

Specifies the commodity data or information provider.

See <http://www.fpml.org/coding-scheme/commodity-information-provider> for values.

Type: **String**

Used in components: **UnderlyingStreamCommodity**

#### **171.2.6661 UnderlyingStreamDesc**

A short descriptive name given to payment stream. Eg. CDS, Fixed, Float, Float2, GBP. The description has no intrinsic meaning but should be arbitrarily chosen by the remitter as a reference.

Type: **String**

Used in groups: **UnderlyingStreamGrp**

#### **171.2.6662 UnderlyingStreamEffectiveDateAdjusted**

The adjusted effective date.

Type: **LocalMktDate**

Used in components: **UnderlyingStreamEffectiveDate**

#### **171.2.6663 UnderlyingStreamEffectiveDateBusinessCenter**

The business center calendar used to adjust the underlying instrument's stream's effective, or relative effective, date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **UnderlyingStreamEffectiveDateBusinessCenterGrp**

#### **171.2.6664 UnderlyingStreamEffectiveDateBusinessCenterGrp**

**UnderlyingStreamEffectiveDateBusinessCenterGrp** is a repeating subcomponent within the **UnderlyingStreamEffectiveDate** component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the **UnderlyingDateAdjustment** component within the **UnderlyingInstrument** component.

Name	Mult.	Type	Description
NoUnderlyingStreamEffectiveDate-BusinessCenters	[1..1]	NumInGroup	
UnderlyingStreamEffectiveDateBusinessCenter	[0..1]	String	Required if NoUnderlyingStreamEffectiveDate-BusinessCenters(40975) > 0.

Used in components: [UnderlyingStreamEffectiveDate](#)

### 171.2.6665 UnderlyingStreamEffectiveDateBusinessDayConvention

The business day convention used to adjust the underlying instrument's stream's effective, or relative effective, date. Used only to override the business day convention specified in the UnderlyingDateAdjustment component within the UnderlyingInstrument component.

Type: [int](#)

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [UnderlyingStreamEffectiveDate](#)

### 171.2.6666 UnderlyingStreamEffectiveDate

UnderlyingStreamEffectivedDate is a subcomponent of the UnderlyingStreamGrp component used to specify the effective date of the stream.

Name	Mult.	Type	Description
<a href="#">UnderlyingStreamEffectiveDateUnadjusted</a>	[0..1]	LocalMktDate	
<a href="#">UnderlyingStreamEffectiveDateBusinessDayConvention</a>	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified value would be specific to this instance of the underlying instrument's stream effective dates.
<a href="#">UnderlyingStreamEffectiveDateBusinessCenterGrp</a>	[0..*]	Group	When specified, this overrides the business centers defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified values would be specific to this instance of the underlying instrument's stream effective dates.
<a href="#">UnderlyingStreamEffectiveDateRelativeTo</a>	[0..1]	int	
<a href="#">UnderlyingStreamEffectiveDateOffsetPeriod</a>	[0..1]	int	Conditionally required when UnderlyingStreamEffectiveDateOffsetUnit(40062) is specified.
<a href="#">UnderlyingStreamEffectiveDateOffsetUnit</a>	[0..1]	CodeSet	Conditionally required when UnderlyingStreamEffectiveDateOffsetPeriod(40061) is specified.
<a href="#">UnderlyingStreamEffectiveDateOffsetDayType</a>	[0..1]	CodeSet	
<a href="#">UnderlyingStreamEffectiveDateAdjusted</a>	[0..1]	LocalMktDate	

Used in groups: [UnderlyingStreamGrp](#)

### 171.2.6667 UnderlyingStreamEffectiveDateOffsetDayType

Specifies the day type of the relative effective date offset.

Type: [int](#)

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar

---

Code	Name	Description
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in components: [UnderlyingStreamEffectiveDate](#)

### **171.2.6668 UnderlyingStreamEffectiveDateOffsetPeriod**

Time unit multiplier for the relative effective date offset.

Type: [int](#)

Used in components: [UnderlyingStreamEffectiveDate](#)

### **171.2.6669 UnderlyingStreamEffectiveDateOffsetUnit**

Time unit associated with the relative effective date offset.

Type: [String](#)

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: [UnderlyingStreamEffectiveDate](#)

### **171.2.6670 UnderlyingStreamEffectiveDateRelativeTo**

Specifies the anchor date when the effective date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: [int](#)

Used in components: [UnderlyingStreamEffectiveDate](#)

### **171.2.6671 UnderlyingStreamEffectiveDateUnadjusted**

The unadjusted effective date.

Type: [LocalMktDate](#)

Used in components: [UnderlyingStreamEffectiveDate](#)

### **171.2.6672 UnderlyingStreamFirstCompoundingPeriodEndDateUnadjusted**

The unadjusted end date of the initial compounding period.

Type: [LocalMktDate](#)

Used in components: [UnderlyingStreamCalculationPeriodDates](#)

### **171.2.6673 UnderlyingStreamFirstPeriodStartDateAdjusted**

The adjusted first calculation period start date, if it is before the effective date.

Type: [LocalMktDate](#)

Used in components: [UnderlyingStreamCalculationPeriodDates](#)

### **171.2.6674 UnderlyingStreamFirstPeriodStartDateBusinessCenter**

The business center calendar used to adjust the underlying instrument's stream's first calculation period start date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in groups: [UnderlyingStreamFirstPeriodStartDateBusinessCenterGrp](#)

### **171.2.6675 UnderlyingStreamFirstPeriodStartDateBusinessCenterGrp**

[UnderlyingStreamFirstPeriodStartDateBusinessCenterGrp](#) is a repeating subcomponent within the [UnderlyingStreamCalculationPeriodDates](#) component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the [UnderlyingDateAdjustment](#) component within the [UnderlyingInstrument](#) component.

Name	Mult.	Type	Description
NoUnderlyingStreamFirstPeriodStartDateBusinessCenters	[1..1]	NumInGroup	
UnderlyingStreamFirstPeriodStartDateBusinessCenter	[0..1]	String	Required if NoUnderlyginstreamFirstPeriodStartDateBusinessCenters(40974) > 0.

Used in components: [UnderlyingStreamCalculationPeriodDates](#)

### 171.2.6676 UnderlyingStreamFirstPeriodStartDateBusinessDayConvention

The business day convention used to adjust the underlying instrument's stream's first calculation period start date. Used only to override the business day convention specified in the UnderlyingDateAdjustment component within the UnderlyingInstrument component.

Type: [int](#)

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [UnderlyingStreamCalculationPeriodDates](#)

### 171.2.6677 UnderlyingStreamFirstPeriodStartDateUnadjusted

The unadjusted first calculation period start date if before the effective date.

Type: [LocalMktDate](#)

Used in components: [UnderlyingStreamCalculationPeriodDates](#)

**171.2.6678 UnderlyingStreamFirstRegularPeriodStartDateUnadjusted**

The unadjusted first start date of the regular calculation period, if there is an initial stub period.

Type: [LocalMktDate](#)

Used in components: [UnderlyingStreamCalculationPeriodDates](#)

**171.2.6679 UnderlyingStreamGrp**

The UnderlyingStreamGrp is a repeating subcomponent of the UnderlyingInstrument component used to detail the swap streams associated with the instrument.

Name	Mult.	Type	Description
<a href="#">NoUnderlyingStreams</a>	[1..1]	NumInGroup	
<a href="#">UnderlyingStreamType</a>	[0..1]	CodeSet	Required if <a href="#">NoUnderlyingStreams(40540)</a> > 0.
<a href="#">UnderlyingStreamXID</a>	[0..1]	XID	
<a href="#">UnderlyingStreamDesc</a>	[0..1]	String	
<a href="#">UnderlyingStreamVersion</a>	[0..1]	String	
<a href="#">UnderlyingStreamVersionEffectiveDate</a>	[0..1]	LocalMktDate	
<a href="#">UnderlyingStreamPaySide</a>	[0..1]	CodeSet	
<a href="#">UnderlyingStreamReceiveSide</a>	[0..1]	CodeSet	
<a href="#">UnderlyingStreamNotionalXIDRef</a>	[0..1]	XIDREF	
<a href="#">UnderlyingStreamNotional</a>	[0..1]	Amt	
<a href="#">UnderlyingStreamCurrency</a>	[0..1]	Currency	
<a href="#">UnderlyingStreamNotionalDeterminationMethod</a>	[0..1]	String	
<a href="#">UnderlyingStreamNotionalAdjustments</a>	[0..1]	CodeSet	
<a href="#">UnderlyingStreamNotionalFrequencyPeriod</a>	[0..1]	int	Conditionally required when <a href="#">UnderlyingStreamNotionalFrequencyUnit(42020)</a> is specified.
<a href="#">UnderlyingStreamNotionalFrequencyUnit</a>	[0..1]	CodeSet	Conditionally required when <a href="#">UnderlyingStreamNotionalFrequencyPeriod(42019)</a> is specified.
<a href="#">UnderlyingStreamNotionalCommodityFrequency</a>	[0..1]	CodeSet	
<a href="#">UnderlyingStreamNotionalUnitOfMeasure</a>	[0..1]	CodeSet	
<a href="#">UnderlyingStreamTotalNotional</a>	[0..1]	Qty	

Name	Mult.	Type	Description
UnderlyingStreamTotalNotionalUnitOfMeasure	[0..1]	CodeSet	
UnderlyingStreamCommodity	[0..1]	Component	
UnderlyingStreamEffectiveDate	[0..1]	Component	
UnderlyingStreamTerminationDate	[0..1]	Component	
UnderlyingStreamCalculationPeriodDates	[0..1]	Component	
UnderlyingPaymentStream	[0..1]	Component	
UnderlyingPaymentScheduleGrp	[0..*]	Group	
UnderlyingPaymentStubGrp	[0..*]	Group	
UnderlyingDeliveryStream	[0..1]	Component	
UnderlyingDeliveryScheduleGrp	[0..*]	Group	
UnderlyingStreamText	[0..1]	String	
EncodedUnderlyingStreamTextLen	[0..1]	Length	Must be set if EncodedUnderlyingStreamText(40989) field is specified and must immediately precede it.
EncodedUnderlyingStreamText	[0..1]	data	Encoded (non-ASCII characters) representation of the UnderlyingStreamText(40547) field in the encoded format specified via the MessageEncoding(347) field.

Used in components: [UnderlyingInstrument](#)

### 171.2.6680 UnderlyingStreamLastRegularPeriodEndDateUnadjusted

The unadjusted last regular period end date if there is a final stub period.

Type: [LocalMktDate](#)

Used in components: [UnderlyingStreamCalculationPeriodDates](#)

### 171.2.6681 UnderlyingStreamNotional

Notional, or initial notional value for the payment stream. Use SwapSchedule for steps.

Type: [Amt](#)

Used in groups: [UnderlyingStreamGrp](#)

**171.2.6682 UnderlyingStreamNotionalAdjustments**

For equity swaps this specifies the conditions that govern the adjustment to the number of units of the swap.

Type: **int**

Allowed values in StreamNotionalAdjustmentsCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Execution	Execution. The adjustments to the number of units are governed by an execution clause.
1	PortfolioRebalancing	Portfolio rebalancing. The adjustments to the number of units are governed by a portfolio rebalancing clause.
2	Standard	Standard. The adjustments to the number of units are not governed by any specific clause.

---

Used in groups: **UnderlyingStreamGrp**

**171.2.6683 UnderlyingStreamNotionalCommodityFrequency**

The commodity's notional or quantity delivery frequency.

Type: **int**

Allowed values in StreamNotionalCommodityFrequencyCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
0	Term	Term
1	PerBusinessDay	Per business day
2	PerCalculationPeriod	Per calculation period
3	PerSettlPeriod	Per settlement period
4	PerCalendarDay	Per calendar day
5	PerHour	Per hour
6	PerMonth	Per month

---

Used in groups: **UnderlyingStreamGrp**

**171.2.6684 UnderlyingStreamNotionalDeterminationMethod**

Specifies the method for determining the floating notional value for equity swaps.

See <http://www.fpml.org/coding-scheme/determination-method> for values.

Type: **String**

Used in groups: **UnderlyingStreamGrp**

**171.2.6685 UnderlyingStreamNotionalFrequencyPeriod**

Time unit multiplier for the swap stream's notional frequency.

Type: **int**

Used in groups: **UnderlyingStreamGrp**

**171.2.6686 UnderlyingStreamNotionalFrequencyUnit**

Time unit associated with the swap stream's notional frequency.

Type: **String**

Allowed values in TimeUnitCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
H	Hour	Hour
Min	Minute	Minute
S	Second	Second
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year
Q	Quarter	Quarter
EOM	EndOfMonth	End of Month. End of Month identifies a relative time unit, e.g. until the third Friday of each month.
F	Flexible	Flexible. A flexible time unit indicates that a specific time unit for the contract is currently undetermined.

---

Used in groups: **UnderlyingStreamGrp**

**171.2.6687 UnderlyingStreamNotionalUnitOfMeasure**

Specifies the delivery quantity unit of measure (UOM).

Type: **String**

Allowed values in UnitOfMeasureCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet
Bbl	Barrels	Barrels. Equal to 42 US gallons
CBM	CubicMeters	Cubic Meters
BDFT	BoardFeet	Board feet. Equal to 144 cubic inches
GJ	Gigajoules	gigajoules
Bu	Bushels	Bushels
kHR	HeatRate	Heat rate. The number of BTUs required to produce one kilowatt hour of electricity, typically 3,412.14 BTUs per 1 kWh.
Ccy	Currency	Amount of currency
kWh	KilowattHours	Kilowatt hours
CDD	CoolingDegreeDay	Cooling degree day
MHR	MegaHeatRate	Mega heat rate. The number of million BTUs required to produce one megawatt hour of electricity, typically 3.41214 million BTUs per 1 MWh.
CER	CertifiedEmissionsReduction	Certified emissions reduction
MMBtu	OneMillionBTU	One Million BTU
CPD	CriticalPrecipDay	Critical precipitation day
MWh	MegawattHours	Megawatt hours
CRT	ClimateReserveTonnes	Climate reserve tonnes

---

Used in groups: [UnderlyingStreamGrp](#)

### **171.2.6688 UnderlyingStreamNotionalXIDRef**

Cross reference to another UnderlyingStream notional for duplicating its properties.

Type: [XIDREF](#)

Used in groups: [UnderlyingStreamGrp](#)

### **171.2.6689 UnderlyingStreamPaySide**

The side of the party paying the stream.

Type: **int**

Allowed values in PaymentPaySideCodeSet:

Code	Name	Description
1	Buy	Buy
2	Sell	Sell

Used in groups: **UnderlyingStreamGrp**

### **171.2.6690 UnderlyingStreamReceiveSide**

The side of the party receiving the stream.

Type: **int**

Allowed values in PaymentPaySideCodeSet:

Code	Name	Description
1	Buy	Buy
2	Sell	Sell

Used in groups: **UnderlyingStreamGrp**

### **171.2.6691 UnderlyingStreamTerminationDateAdjusted**

The adjusted termination date.

Type: **LocalMktDate**

Used in components: **UnderlyingStreamTerminationDate**

### **171.2.6692 UnderlyingStreamTerminationDateBusinessCenter**

The business center calendar used to adjust the underlying instrument's stream's termination, or relative termination, date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **UnderlyingStreamTerminationDateBusinessCenterGrp**

**171.2.6693 UnderlyingStreamTerminationDateBusinessCenterGrp**

UnderlyingStreamTerminationDateBusinessCenterGrp is a repeating subcomponent within the UnderlyingStreamTerminationDate component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the UnderlyingDateAdjustment component within the UnderlyingInstrument component.

Name	Mult.	Type	Description
NoUnderlyingStreamTerminationDate-BusinessCenters	[1..1]	NumInGroup	
UnderlyingStreamTerminationDate-BusinessCenter	[0..1]	String	Required if NoUnderlyingStreamTerminationDate-BusinessCenters(40976) > 0.

Used in components: [UnderlyingStreamTerminationDate](#)

**171.2.6694 UnderlyingStreamTerminationDateBusinessDayConvention**

The business day convention used to adjust the underlying instrument's stream's termination, or relative termination, date. Used only to override the business day convention specified in the UnderlyingDateAdjustment component within the UnderlyingInstrument component.

Type: [int](#)

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [UnderlyingStreamTerminationDate](#)

**171.2.6695 UnderlyingStreamTerminationDate**

UnderlyingStreamTerminationDate is a subcomponent of the UnderlyingStreamGrp component used to specify the termination date of the stream.

Name	Mult.	Type	Description
<a href="#">UnderlyingStreamTerminationDateUnadjusted</a>	[0..1]	LocalMktDate	
<a href="#">UnderlyingStreamTerminationDate-BusinessDayConvention</a>	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified value would be specific to this instance of the underlying instrument's termination date of the stream.
<a href="#">UnderlyingStreamTerminationDate-BusinessCenterGrp</a>	[0..*]	Group	When specified, this overrides the business centers defined in the UnderlyingDateAdjustment component in UnderlyingInstrument. The specified values would be specific to this instance of the underlying instrument's termination date of the stream.
<a href="#">UnderlyingStreamTerminationDateRelativeTo</a>	[0..1]	int	
<a href="#">UnderlyingStreamTerminationDateOffsetPeriod</a>	[0..1]	int	Conditionally required when UnderlyingStreamTerminationDateOffsetUnit(40553) is specified.
<a href="#">UnderlyingStreamTerminationDateOffsetUnit</a>	[0..1]	CodeSet	Conditionally required when UnderlyingPaymentTerminationDateOffsetPeriod(40552) is specified.
<a href="#">UnderlyingStreamTerminationDateOffsetDayType</a>	[0..1]	CodeSet	
<a href="#">UnderlyingStreamTerminationDateAdjusted</a>	[0..1]	LocalMktDate	

Used in groups: [UnderlyingStreamGrp](#)

**171.2.6696 UnderlyingStreamTerminationDateOffsetDayType**

Specifies the day type of the relative termination date offset.

Type: **int**

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

---

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

---

Used in components: [UnderlyingStreamTerminationDate](#)

### **171.2.6697 UnderlyingStreamTerminationDateOffsetPeriod**

Time unit multiplier for the relative termination date offset.

Type: [int](#)

Used in components: [UnderlyingStreamTerminationDate](#)

### **171.2.6698 UnderlyingStreamTerminationDateOffsetUnit**

Time unit associated with the relative termination date offset.

Type: [String](#)

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

---

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

---

Used in components: [UnderlyingStreamTerminationDate](#)

### **171.2.6699 UnderlyingStreamTerminationDateRelativeTo**

Specifies the anchor date when the termination date is relative to an anchor date.

See [http://www.fixtradingcommunity.org/codelists#Relative\\_To\\_Date](http://www.fixtradingcommunity.org/codelists#Relative_To_Date) for values.

Type: **int**

Used in components: **UnderlyingStreamTerminationDate**

### **171.2.6700 UnderlyingStreamTerminationDateUnadjusted**

The unadjusted termination date.

Type: **LocalMktDate**

Used in components: **UnderlyingStreamTerminationDate**

### **171.2.6701 UnderlyingStreamText**

Free form text to specify additional information or enumeration description when a standard value does not apply.

Type: **String**

Used in groups: **UnderlyingStreamGrp**

### **171.2.6702 UnderlyingStreamTotalNotional**

Specifies the total notional or delivery quantity over the term of the contract.

Type: **Qty**

Used in groups: **UnderlyingStreamGrp**

### **171.2.6703 UnderlyingStreamTotalNotionalUnitOfMeasure**

Specifies the unit of measure (UOM) for the total notional or delivery quantity over the term of the contract.

Type: **String**

Allowed values in UnitOfMeasureCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet

---

<b>Code</b>	<b>Name</b>	<b>Description</b>

Used in groups: [UnderlyingStreamGrp](#)

### 171.2.6704 UnderlyingStreamType

Type of swap stream.

Type: [int](#)

Allowed values in StreamTypeCodeSet:

Code	Name	Description
0	PaymentCashSettlement	Payment / cash settlement
1	PhysicalDelivery	Physical delivery

---

Used in groups: [UnderlyingStreamGrp](#)

### 171.2.6705 UnderlyingStreamVersion

The stream version identifier when there have been modifications to the contract over time. Helps signal when there are embedded changes.

Type: **String**

Used in groups: **UnderlyingStreamGrp**

### **171.2.6706 UnderlyingStreamVersionEffectiveDate**

The effective date of the UnderlyingStreamVersion(43083).

Type: **LocalMktDate**

Used in groups: **UnderlyingStreamGrp**

### **171.2.6707 UnderlyingStreamXID**

Identifier of this UnderlyingStream for cross referencing elsewhere in the message.

Type: **XID**

Used in groups: **UnderlyingStreamGrp**

### **171.2.6708 UnderlyingStrikeCurrency**

Currency in which the strike price of an underlying instrument is denominated

Type: **Currency**

Used in components: **UnderlyingInstrument**

### **171.2.6709 UnderlyingStrikeCurrencyCodeSource**

Identifies class or source of the UnderlyingStrikeCurrency(941) value.

Type: **String**

Allowed values in CurrencyCodeSourceCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)

---

Code	Name	Description
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in components: [UnderlyingInstrument](#)

### **171.2.6710 UnderlyingStrikeIndex**

Specifies the index used to calculate the strike price.

Type: [String](#)

Used in components: [UnderlyingInstrument](#)

### **171.2.6711 UnderlyingStrikeIndexCurvePoint**

The point on the floating rate index curve. Sample values:

M = combination of a number between 1-12 and an "M" for month, e.g. 3M

Y = combination of number between 1-100 and a "Y" for year, e.g. 10Y

10Y-OLD = see above, then add "-OLD" when appropriate

INTERPOLATED = the point is mathematically derived

2/2031 5 3/8 = the point is stated via a combination of maturity month / year and coupon.

Type: [String](#)

Used in components: [UnderlyingInstrument](#)

### **171.2.6712 UnderlyingStrikeIndexQuote**

The quote side from which the index price is to be determined.

Type: [int](#)

Allowed values in StrikeIndexQuoteCodeSet:

---

Code	Name	Description
0	Bid	Bid.
1	Mid	Mid
2	Offer	Offer

---

Used in components: [UnderlyingInstrument](#)

### **171.2.6713 UnderlyingStrikeIndexSpread**

Specifies the strike price offset from the named index.

Type: [PriceOffset](#)

Used in components: [UnderlyingInstrument](#)

### **171.2.6714 UnderlyingStrikeMultiplier**

Used for derivatives. Multiplier applied to the strike price for the purpose of calculating the settlement value.

Type: [float](#)

Used in components: [UnderlyingInstrument](#)

### **171.2.6715 UnderlyingStrikePrice**

Underlying security's StrikePrice.

See StrikePrice (202) field for description

Type: [Price](#)

Used in components: [UnderlyingInstrument](#)

### **171.2.6716 UnderlyingStrikePriceBoundaryMethod**

Specifies the boundary condition to be used for the strike price relative to the underlying price at the point of option exercise.

Type: [int](#)

Allowed values in StrikePriceBoundaryMethodCodeSet:

Code	Name	Description
1	LessThan	Less than underlying price is in-the-money (ITM)
2	LessThanOrEqual	Less than or equal to the underlying price is in-the-money(ITM)
3	Equal	Equal to the underlying price is in-the-money(ITM)
4	GreaterThanOrEqual	Greater than or equal to underlying price is in-the-money(ITM)
5	GreaterThan	Greater than underlying is in-the-money(ITM)

Used in components: [UnderlyingInstrument](#)

### 171.2.6717 UnderlyingStrikePriceBoundaryPrecision

Used in combination with StrikePriceBoundaryMethod(1479) to specify the percentage of the strike price in relation to the underlying price. The percentage is generally 100 or greater for puts and 100 or less for calls.

Type: [Percentage](#)

Used in components: [UnderlyingInstrument](#)

### 171.2.6718 UnderlyingStrikePriceDeterminationMethod

Specifies how the strike price is determined at the point of option exercise. The strike may be fixed throughout the life of the option, set at expiration to the value of the underlying, set to the average value of the underlying , or set to the optimal value of the underlying.

Type: [int](#)

Allowed values in StrikePriceDeterminationMethodCodeSet:

Code	Name	Description
1	FixedStrike	Fixed strike (default if not specified)
2	StrikeSetAtExpiration	Strike set at expiration to underlying or other value (lookback floating)
3	StrikeSetToAverageAcrossLife	Strike set to average of underlying settlement price across the life of the option
4	StrikeSetToOptimalValue	Strike set to optimal value

Used in components: [UnderlyingInstrument](#)

**171.2.6719 UnderlyingStrikeUnitOfMeasure**

Used to express the unit of measure (UOM) of the price if different from the contract.

Type: **String**

Allowed values in UnitOfMeasureCodeSet:

<b>Code</b>	<b>Name</b>	<b>Description</b>
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet
Bbl	Barrels	Barrels. Equal to 42 US gallons
CBM	CubicMeters	Cubic Meters
BDFT	BoardFeet	Board feet. Equal to 144 cubic inches
GJ	Gigajoules	gigajoules
Bu	Bushels	Bushels
kHR	HeatRate	Heat rate. The number of BTUs required to produce one kilowatt hour of electricity, typically 3,412.14 BTUs per 1 kWh.
Ccy	Currency	Amount of currency
kWh	KilowattHours	Kilowatt hours
CDD	CoolingDegreeDay	Cooling degree day
MHR	MegaHeatRate	Mega heat rate. The number of million BTUs required to produce one megawatt hour of electricity, typically 3.41214 million BTUs per 1 MWh.
CER	CertifiedEmissionsReduction	Certified emissions reduction
MMBtu	OneMillionBTU	One Million BTU
CPD	CriticalPrecipDay	Critical precipitation day
MWh	MegawattHours	Megawatt hours
CRT	ClimateReserveTonnes	Climate reserve tonnes
thm	Therms	therms. Equal to 100,000 BTU
cwt	Hundredweight	Hundredweight(US). Equal to 100 lbs
tnCO2	TonsOfCarbonDioxide	Tons of carbon dioxide
day	Day	Days
dt	DryMetricTons	Dry metric tons

USD	USDollars	US Dollars

---

Used in components: [UnderlyingInstrument](#)

### **171.2.6720 UnderlyingStrikeValue**

Used for derivatives. The number of shares/units for the financial instrument involved in the option trade.

Type: [float](#)

Used in components: [UnderlyingInstrument](#)

**171.2.6721 UnderlyingSwapClass**

The type or classification of swap. Additional values may be used by mutual agreement of the counterparties.

Type: **String**

Allowed values in SwapClassCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
BS	BasisSwap	Basis swap
IX	IndexSwap	Index swap
BB	BroadBasedSecuritySwap	Broad-based security swap
SK	BasketSwap	Basket swap

---

Used in components: **UnderlyingInstrument**

**171.2.6722 UnderlyingSwapSubClass**

The sub-classification or notional schedule type of the swap.

Type: **String**

Allowed values in SwapSubClassCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
AMTZ	Amortizing	Amortizing notional schedule
COMP	Compounding	Compounding
CNST	ConstantNotionalSchedule	Constant notional schedule
ACRT	AccretingNotionalSchedule	Accreting notional schedule
CUST	CustomNotionalSchedule	Custom notional schedule

---

Used in components: **UnderlyingInstrument**

**171.2.6723 UnderlyingSymbol**

Underlying security's Symbol.

See Symbol (55) field for description

Type: **String**

Used in components: **UnderlyingInstrument**

### **171.2.6724 UnderlyingSymbolPositionNumber**

Reference to the first or second currency or digital asset in UnderlyingSymbol(311) for FX-style trading.

Conditionally required when one or both symbols in UnderlyingSymbol(311) represent a digital asset.

Type: **int**

Used in groups: **UndSecAltIDGrp**

### **171.2.6725 UnderlyingSymbolSfx**

Underlying security's SymbolSfx.

See SymbolSfx (65) field for description

Type: **String**

Allowed values in SymbolSfxCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
CD	EUCPWithLumpSumInterest	EUCP with lump-sum interest rather than discount price
WI	WhenIssued	"When Issued" for a security to be reissued under an old CUSIP or ISIN

---

Used in components: **UnderlyingInstrument**

### **171.2.6726 UnderlyingTimeUnit**

See TimeUnit(997) for complete definition.

Type: **String**

Allowed values in TimeUnitCodeSet:

Code	Name	Description
H	Hour	Hour
Min	Minute	Minute
S	Second	Second
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year
Q	Quarter	Quarter
EOM	EndOfMonth	End of Month. End of Month identifies a relative time unit, e.g. until the third Friday of each month.
F	Flexible	Flexible. A flexible time unit indicates that a specific time unit for the contract is currently undetermined.

Used in components: [UnderlyingInstrument](#)

#### **171.2.6727 UnderlyingTotalIssuedAmount**

Specifies the total amount of the issue. Corresponds to the par value multiplied by the number of issued security.

Type: [Amt](#)

Used in components: [UnderlyingInstrument](#)

#### **171.2.6728 UnderlyingTradingSessionID**

Trading Session in which the underlying instrument trades

Type: [String](#)

Used in messages: [TradeCaptureReport](#), [TradeCaptureReportAck](#)

#### **171.2.6729 UnderlyingTradingSessionSubID**

Trading Session sub identifier in which the underlying instrument trades

Type: [String](#)

Used in messages: [TradeCaptureReport](#), [TradeCaptureReportAck](#)

**171.2.6730 UnderlyingTradingUnitPeriodMultiplier**

Indicates the number of contract periods associated with the minimum trading unit for a given contract duration resulting in the number of total traded contracts.

Type: **int**

Used in components: **UnderlyingInstrument**

**171.2.6731 UnderlyingUnitOfMeasure**

Underlying unit of measure.

See UnitOfMeasure(996) for complete definition.

Type: **String**

Allowed values in UnitOfMeasureCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet

Used in components: [UnderlyingInstrument](#)

**171.2.6732 UnderlyingUnitOfMeasureCurrency**

Indicates the currency of the underlying unit of measure. Conditionally required when UnderlyingUnitOfMeasure(998) = Ccy

Type: **Currency**

Used in components: **UnderlyingInstrument**

**171.2.6733 UnderlyingUnitOfMeasureCurrencyCodeSource**

Identifies class or source of the UnderlyingUnitOfMeasureCurrency(1718) value.

Type: **String**

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in components: **UnderlyingInstrument**

**171.2.6734 UnderlyingUnitOfMeasureQty**

Refer to definition of UnitOfMeasureQty(1147)

Type: **Qty**

Used in components: **UnderlyingInstrument**

**171.2.6735 UnderlyingUPICode**

Uniquely identifies the product of an underlying instrument using ISO 4914. See UPICode(2891) for further detail.

Type: **String**

Used in components: **UnderlyingInstrument**

### **171.2.6736 UnderlyingValuationMethod**

Indicates type of valuation method used.

Type: **String**

Allowed values in ValuationMethodCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
EQTY	PremiumStyle	premium style
FUT	FuturesStyleMarkToMarket	futures style mark-to-market
FUTDA	FuturesStyleWithAnAttachedCashAdjustment	futures style with an attached cash adjustment
CDS	CDSStyleCollateralization	CDS style collateralization of market to market and coupon
CSDS	CDSInDeliveryUseRecoveryRateToCalculate	CDS in delivery - use recovery rate to calculate obligation

---

Used in components: **UnderlyingInstrument**

### **171.2.6737 UnderlyingValuationReferenceModel**

Specifies the methodology and/or assumptions used to generate the trade value.

Type: **String**

Used in components: **UnderlyingInstrument**

### **171.2.6738 UnderlyingValuationSource**

Specifies the source of trade valuation data.

Type: **String**

Used in components: **UnderlyingInstrument**

**171.2.6739 UndInstrmtCollGrp**

Name	Mult.	Type	Description
NoUnderlyings	[1..1]	NumInGroup	Number of legs that make up the Security
UnderlyingInstrument	[0..1]	Component	Insert here the set of "Underlying Instrument" fields defined in "Common Components of Application Messages". Required if NoUnderlyings > 0
CollAction	[0..1]	CodeSet	Required if NoUnderlyings > 0

Used in messages: [CollateralAssignment](#), [CollateralRequest](#), [CollateralResponse](#)

**171.2.6740 UndInstrmtGrp**

Name	Mult.	Type	Description
NoUnderlyings	[1..1]	NumInGroup	Number of underlyings
UnderlyingInstrument	[0..1]	Component	Required if NoUnderlyings(711) > 0.

Used in groups: [InstrmtMDReqGrp](#), [InstrmtMatchSideGrp](#), [InstrmtStrkPxGrp](#), [ListOrdGrp](#), [MDIncGrp](#), [QuotCxlEntriesGrp](#), [QuotReqGrp](#), [QuotReqRjctGrp](#), [RFQReqGrp](#), [SecListGrp](#), [SecLstUpdRelSymGrp](#), [SecMassStatGrp](#)

Used in messages: [Advertisement](#), [AllocationInstruction](#), [AllocationInstructionAlert](#), [AllocationReport](#), [AssignmentReport](#), [CollateralInquiry](#), [CollateralInquiryAck](#), [CollateralReport](#), [Confirmation](#), [ContraryIntentionReport](#), [CrossOrderCancelReplaceRequest](#), [CrossOrderCancelRequest](#), [DontKnowTrade](#), [Email](#), [ExecutionAck](#), [ExecutionReport](#), [IOI](#), [MarketDataSnapshotFullRefresh](#), [MarketDataStatisticsReport](#), [MarketDataStatisticsRequest](#), [MultilegOrderCancelReplace](#), [NewOrderCross](#), [NewOrderMultileg](#), [NewOrderSingle](#), [News](#), [OrderCancelReplaceRequest](#), [OrderCancelRequest](#), [OrderStatusRequest](#), [PartyRiskLimitCheckRequest](#), [PartyRiskLimitCheckRequestAck](#), [PositionMaintenanceReport](#), [PositionMaintenanceRequest](#), [PositionTransferInstruction](#), [PositionTransferReport](#), [Quote](#), [QuoteResponse](#), [QuoteStatusReport](#), [QuoteStatusRequest](#), [RequestForPositions](#), [RequestForPositionsAck](#), [SecurityDefinition](#), [SecurityDefinitionRequest](#), [SecurityDefinitionUpdateReport](#), [SecurityListRequest](#), [SecurityStatus](#), [SecurityStatusRequest](#), [TradeCaptureReport](#), [TradeCaptureReportAck](#), [TradeCaptureReportRequest](#), [TradeCaptureReportRequestAck](#)

**171.2.6741 UndlyInstrumentParties**

The use of this component block is restricted to instrument definition only and is not permitted to contain transactional information. Only a specified subset of party roles will be supported within the InstrumentParty block.

Name	Mult.	Type	Description
NoUndlyInstrumentParties	[1..1]	NumInGroup	Repeating group below should contain unique combinations of UnderlyingInstrumentPartyID(1059), UnderlyingInstrumentPartyIDSource(1060) and UnderlyingInstrumentPartyRole(1061).
UnderlyingInstrumentPartyID	[0..1]	String	Used to identify the source of PartyID. Required if UnderlyingInstrumentPartyIDSource(1060) is specified. Required if NoUndlyInstrumentParties(1058) > 0.
UnderlyingInstrumentPartyIDSource	[0..1]	CodeSet	Used to identify class source of UnderlyingInstrumentPartyID(1059) value (e.g. BIC). Required if UnderlyingInstrumentPartyID(1059) is specified. Required if NoUndlyInstrumentParties(1058) > 0.
UnderlyingInstrumentPartyRole	[0..1]	CodeSet	Identifies the type of UnderlyingInstrumentPartyID(1059) (e.g. Executing Broker). Required if NoUndlyInstrumentParties(1058) > 0.
UnderlyingInstrumentPartyRoleQualifier	[0..1]	CodeSet	
UndlyInstrumentPtysSubGrp	[0..*]	Group	Repeating group of party sub-identifiers.

Used in components: [UnderlyingInstrument](#)

**171.2.6742 UndlyInstrumentPtysSubGrp**

Name	Mult.	Type	Description
NoUndlyInstrumentPartySubIDs	[1..1]	NumInGroup	
UnderlyingInstrumentPartySubID	[0..1]	String	
UnderlyingInstrumentPartySubIDType	[0..1]	CodeSet	

Used in groups: [UndlyInstrumentParties](#)

**171.2.6743 UndSecAltIDGrp**

Name	Mult.	Type	Description
NoUnderlyingSecurityAltID	[1..1]	NumInGroup	
UnderlyingSecurityAltID	[0..1]	String	
UnderlyingSecurityAltIDSource	[0..1]	CodeSet	
UnderlyingSymbolPositionNumber	[0..1]	int	

Used in components: [UnderlyingInstrument](#)

**171.2.6744 UnencodedAttachmentLen**

Unencoded content length in bytes. Can be used to validate successful unencoding.

Type: [int](#)

Used in groups: [AttachmentGrp](#)

**171.2.6745 UnitOfMeasure**

The unit of measure of the underlying commodity upon which the contract is based. Two groups of units of measure enumerations are supported.

Fixed Magnitude UOMs are primarily used in energy derivatives and specify a magnitude (such as, MM, Kilo, M, etc.) and the dimension (such as, watt hours, BTU's) to produce standard fixed measures (such as MWh - Megawatt-hours, MMBtu - One million BTUs).

The second group, Variable Quantity UOMs, specifies the dimension as a single unit without a magnitude (or more accurately a magnitude of one) and uses the UnitOfMeasureQty(1147) field to define the quantity of units per contract. Variable Quantity UOMs are used for both commodities (such as lbs of lean cattle, bushels of corn, ounces of gold) and financial futures.

Examples:

For lean cattle futures contracts, a UnitOfMeasure of 'lbs' with a UnitOfMeasureQty(1147) of 40,000, means each lean cattle futures contract represents 40,000 lbs of lean cattle.

For Eurodollars futures contracts, a UnitOfMeasure of Ccy with a UnitOfMeasureCurrency(1716) of USD and a UnitOfMeasureQty(1147) of 1,000,000, means a Eurodollar futures contract represents 1,000,000 USD.

For gold futures contracts, a UnitOfMeasure is oz\_tr (Troy ounce) with a UnitOfMeasureQty(1147) of 1,000, means each gold futures contract represents 1,000 troy ounces of gold.

Type: **String**

Allowed values in UnitOfMeasureCodeSet:

Code	Name	Description
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet
Bbl	Barrels	Barrels. Equal to 42 US gallons
CBM	CubicMeters	Cubic Meters
BDFT	BoardFeet	Board feet. Equal to 144 cubic inches
GJ	Gigajoules	gigajoules
Bu	Bushels	Bushels
kHR	HeatRate	Heat rate. The number of BTUs required to produce one kilowatt hour of electricity, typically 3,412.14 BTUs per 1 kWh.
Ccy	Currency	Amount of currency
kWh	KilowattHours	Kilowatt hours
CDD	CoolingDegreeDay	Cooling degree day
MHR	MegaHeatRate	Mega heat rate. The number of million BTUs required to produce one megawatt hour of electricity, typically 3.41214 million BTUs per 1 MWh.
CER	CertifiedEmissionsReduction	Certified emissions reduction
MMBtu	OneMillionBTU	One Million BTU
CPD	CriticalPrecipDay	Critical precipitation day
MWh	MegawattHours	Megawatt hours
CRT	ClimateReserveTonnes	Climate reserve tonnes
thm	Therms	therms. Equal to 100,000 BTU
cwt	Hundredweight	Hundredweight(US). Equal to 100 lbs
tnCO2	TonsOfCarbonDioxide	Tons of carbon dioxide
day	Day	Days
dt	DryMetricTons	Dry metric tons
EnvAllwnc	EnvAllwncCert	Environmental allowance certificates
EnvCrd	EnvironmentalCredit	Environmental credit
EnvOfst	EnvironmentalOffset	Environmental Offset
g	Grams	Grams
Gal	Gallons	Gallons

<b>Code</b>	<b>Name</b>	<b>Description</b>
GT	GrossTons	Gross tons. Also known as long tons or imperial tons, equal to 2240 lbs
HDD	HeatingDegreeDay	Heating degree day
IPNT	IndexPoint	Index point
kg	Kilograms	Kilograms
kL	Kiloliters	kiloliters
kW-a	KilowattYear	Kilowatt year (electrical capacity)
kW-d	KilowattDay	Kilowatt day (electrical capacity)
kW-h	KilowattHour	Kilowatt hour (electrical capacity)
kW-M	KilowattMonth	Kilowatt month (electrical capacity)
kW-min	KilowattMinute	Kilowatt-Minute (electrical capacity)

yd	Yard	Yard
MMbbl	MillionBarrels	Million Barrels
USD	USDollars	US Dollars

---

Used in components: [Instrument](#)

#### **171.2.6746 UnitOfMeasureCurrency**

Indicates the currency of the unit of measure. Conditionally required when UnitOfMeasure(996) = Ccy

Type: [Currency](#)

Used in components: [Instrument](#)

#### **171.2.6747 UnitOfMeasureCurrencyCodeSource**

Identifies class or source of the UnitOfMeasureCurrency(1716) value.

Type: **String**

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in components: **Instrument**

#### 171.2.6748 UnitOfMeasureQty

Used to indicate the quantity of the underlying commodity unit of measure on which the contract is based, such as, 2500 lbs of lean cattle, 1000 barrels of crude oil, 1000 bushels of corn, etc. UnitOfMeasureQty is required for UnitOfMeasure(996) Variable Quantity UOMs enumerations. Refer to the definition of UnitOfMeasure(996) for more information on the use of UnitOfMeasureQty.

Type: **Qty**

Used in components: **Instrument**

#### 171.2.6749 UnsolicitedIndicator

Indicates whether or not message is being sent as a result of a subscription request or not.

Type: **Boolean**

Allowed values in UnsolicitedIndicatorCodeSet:

Code	Name	Description
N	MessagesBeingSentAsAResultOfAPriorRequest	Message is being sent as a result of a prior request
Y	MessagesBeingSentUnsolicited	Message is being sent unsolicited

Used in groups: [TrdSessLstGrp](#)

Used in messages: [MarginRequirementReport](#), [MarketDataStatisticsReport](#), [PartyRiskLimitsReport](#), [PositionReport](#), [RequestForPositionsAck](#), [SecurityMassStatus](#), [SecurityStatus](#), [TradeCaptureReport](#), [TradingSessionStatus](#)

### **171.2.6750 UpfrontPrice**

Price used to determine upfront payment for swaps contracts.

Type: [Price](#)

Used in messages: [ExecutionReport](#), [NewOrderMultileg](#), [NewOrderSingle](#)

### **171.2.6751 UpfrontPriceType**

Type of price used to determine upfront payment for swaps contracts.

Type: [int](#)

Allowed values in UpfrontPriceTypeCodeSet:

Code	Name	Description
1	Percentage	Percentage (i.e. percent of par) (often called "dollar price" for fixed income)
3	FixedAmount	Fixed amount (absolute value)

Used in messages: [ExecutionReport](#), [NewOrderMultileg](#), [NewOrderSingle](#), [TradeCaptureReport](#)

### **171.2.6752 UPICode**

Uniquely identifies the product of a security using ISO 4914 standard, Unique Product Identifier (UPI). The DSB (Derivative Service Bureau Ltd) is acting as designated service provider for UPI System.

Type: [String](#)

Used in components: [Instrument](#)

Used in groups: [SecTypesGrp](#), [SettlInstGrp](#)

Used in messages: [SettlementInstructionRequest](#)

**171.2.6753 Urgency**

Urgency flag

Type: **char**

Allowed values in UrgencyCodeSet:

---

Code	Name	Description
0	Normal	Normal
1	Flash	Flash
2	Background	Background

---

Used in messages: **News**

**171.2.6754 URLLink**

A URI (Uniform Resource Identifier) or URL (Uniform Resource Locator) link to additional information (i.e. <http://www.XYZ.com/research.html>)

See "Appendix 6-B FIX Fields Based Upon Other Standards"

Type: **String**

Used in messages: **Advertisement, IOI, News**

**171.2.6755 Username**

Userid or username.

Type: **String**

Used in groups: **UsernameGrp**

Used in messages: **Logon, UserRequest, UserResponse**

**171.2.6756 UsernameGrp**

---

Name	Mult.	Type	Description
<b>NoUsernames</b>	[1..1]	NumInGroup	Number of usernames

---

---

Name	Mult.	Type	Description
Username	[0..1]	String	Recipient of the notification

---

Used in messages: [UserNotification](#)

### 171.2.6757 UserRequestID

Unique identifier for a User Request.

Type: [String](#)

Used in messages: [UserRequest](#), [UserResponse](#)

### 171.2.6758 UserRequestType

Indicates the action required by a User Request Message

Type: [int](#)

Allowed values in UserRequestTypeCodeSet:

---

Code	Name	Description
1	LogOnUser	Log On User
2	LogOffUser	Log Off User
3	ChangePasswordForUser	Change Password For User
4	RequestIndividualUserStatus	Request Individual User Status
5	RequestThrottleLimit	Request Throttle Limit

---

Used in messages: [UserRequest](#)

### 171.2.6759 UserStatus

Indicates the status of a user

Type: [int](#)

Allowed values in UserStatusCodeSet:

---

Code	Name	Description
1	LoggedIn	Logged In
2	NotLoggedIn	Not Logged In
3	UserNotRecognised	User Not Recognised
4	PasswordIncorrect	Password Incorrect
5	PasswordChanged	Password Changed
6	Other	Other
7	ForcedUserLogoutByExchange	Forced user logout by Exchange
8	SessionShutdownWarning	Session shutdown warning
9	ThrottleParametersChanged	Throttle parameters changed

---

Used in messages: [UserNotification](#), [UserResponse](#)

#### **171.2.6760 UserStatusText**

A text description associated with a user status.

Type: [String](#)

Used in messages: [UserResponse](#)

#### **171.2.6761 ValidUntilTime**

Indicates expiration time of indication message (always expressed in UTC (Universal Time Coordinated, also known as "GMT"))

Type: [UTCTimestamp](#)

Used in groups: [QuotEntryAckGrp](#), [QuotEntryGrp](#), [QuotReqGrp](#)

Used in messages: [IOI](#), [Quote](#), [QuoteResponse](#), [QuoteStatusReport](#)

#### **171.2.6762 ValuationBusinessCenter**

Identifies the business center whose calendar is used for valuation, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in messages: [PositionMaintenanceReport](#), [PositionReport](#), [TradeCaptureReport](#)

**171.2.6763 ValuationDate**

The valuation date of the trade.

Type: [LocalMktDate](#)

Used in messages: [PositionMaintenanceReport](#), [PositionReport](#), [TradeCaptureReport](#)

**171.2.6764 ValuationMethod**

Specifies the type of valuation method applied.

Type: [String](#)

Allowed values in ValuationMethodCodeSet:

Code	Name	Description
EQTY	PremiumStyle	premium style
FUT	FuturesStyleMarkToMarket	futures style mark-to-market
FUTDA	FuturesStyleWithAnAttachedCashAdjustment	futures style with an attached cash adjustment
CDS	CDSStyleCollateralization	CDS style collateralization of market to market and coupon
CSDS	CDSInDeliveryUseRecoveryRateToCalculate	CDS in delivery - use recovery rate to calculate obligation

Used in components: [Instrument](#)

**171.2.6765 ValuationReferenceModel**

Specifies the methodology and/or assumptions used to generate the trade value.

Type: [String](#)

Used in components: [Instrument](#)

**171.2.6766 ValuationSource**

Specifies the source of trade valuation data.

Type: [String](#)

Used in components: [Instrument](#)

**171.2.6767 ValuationTime**

The valuation time of the trade.

Type: [LocalMktTime](#)

Used in messages: [PositionMaintenanceReport](#), [PositionReport](#), [TradeCaptureReport](#)

**171.2.6768 ValueCheckAction**

Action to be taken for the ValueCheckType(1869).

Type: [int](#)

Allowed values in ValueCheckActionCodeSet:

---

Code	Name	Description
0	DoNotCheck	Do not check. Checks will not be done for the specified ValueCheckType(1869).
1	Check	Check. Checks will be done for the specified ValueCheckType(1869)
2	BestEffort	Best effort. The market may or may not check the specified ValueCheckType(1869) depending on availability of reference data.

---

Used in groups: [ValueChecksGrp](#)

**171.2.6769 ValueChecksGrp**

This component can be used by the message submitter to provide a list of value types to be checked by the counterparty or message recipient.

---

Name	Mult.	Type	Description
<a href="#">NoValueChecks</a>	[1..1]	NumInGroup	
<a href="#">ValueCheckType</a>	[0..1]	CodeSet	Required if NoValueChecks(1868) > 0.
<a href="#">ValueCheckAction</a>	[0..1]	CodeSet	Required if NoValueChecks(1868) > 0.

---

Used in messages: [ExecutionReport](#), [MultilegOrderCancelReplace](#), [NewOrderMultileg](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#), [Quote](#)

**171.2.6770 ValueCheckType**

Type of value to be checked.

Type: **int**

Allowed values in ValueCheckTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	PriceCheck	Price check. In the context of ESMA RTS 6 Article 15(1)(a) investment firms are required to perform pre-trade controls using "price collars, which automatically block or cancel orders that do not meet set price parameters, differentiating between different financial instruments, both on an order-by-order basis and over a specified period of time".
2	NotionalValueCheck	Notional value check. In the context of ESMA RTS 6 Article 15(1)(b) investment firms are required to perform pre-trade controls using "maximum order values, which prevent orders with an uncommonly large order value from entering the order book".
3	QuantityCheck	Quantity check. In the context of ESMA RTS 6 Article 15(1)(c) investment firms are required to perform pre-trade controls using "maximum order volumes, which prevent orders with an uncommonly large order quantity from entering the order book".

---

Used in groups: **ValueChecksGrp**

**171.2.6771 ValueOfFutures**

Used in EFP trades

Type: **Amt**

Used in groups: **BidDescReqGrp**

**171.2.6772 Vega**

The security's price sensitivity to change in volatility of the underlying asset price.

Type: **float**

Used in groups: **SecurityRiskMetricGrp**

**171.2.6773 VegaMultiplier**

Constant value required for the calculation of the clearing quantity, e.g. for variance futures.

Type: **float**

Used in groups: **ClearingPriceParametersGrp**

**171.2.6774 VenueType**

Identifies the type of venue where a trade was executed.

Type: **char**

Allowed values in VenueTypeCodeSet:

---

<b>Code</b>	<b>Name</b>	<b>Description</b>
E	Electronic	Electronic exchange
P	Pit	Pit
X	ExPit	Ex-pit
C	ClearingHouse	Clearinghouse
R	RegisteredMarket	Registered market. Markets registered with regulators such as exchange, multilateral trading facility (MTF), swap execution facility (SEF). In the context of regulatory reporting (e.g. CFTC reporting), this is used for regulated markets, e.g. swap markets.
O	OffMarket	Off-market. Off-book, off-facility. In the context of regulatory reporting (e.g. CFTC reporting) this identifies trades conducted away from a regulated market.
B	CentralLimitOrderBook	Central limit order book
Q	QuoteDrivenMarket	Quote driven market
D	DarkOrderBook	Dark order book
A	AuctionDrivenMarket	Auction driven market. Markets where matching occurs only in scheduled auctions.
N	QuoteNegotiation	Quote negotiation. Discretionary quoting on request or "request for quote" market.
V	VoiceNegotiation	Voice negotiation. A trading system where transactions between members are arranged through voice negotiation.

Code	Name	Description
H	HybridMarket	Hybrid market. A hybrid system falling into two or more types of trading systems. In the context of ESMA reporting, this is for "Hybrid system." In the context of FCA reporting, this is for "Any other, including hybrid."
z	OtherMarket	Other market (lowercase "z"). A market that does not fall under any of the market types defined for VenueType(1430). In the context of ESMA reporting, this is for "Any other, excluding hybrid."

Used in messages: [AllocationInstruction](#), [AllocationReport](#), [ExecutionReport](#), [TradeCaptureReport](#), [TradeCaptureReportAck](#), [TradeMatchReport](#)

### 171.2.6775 VerificationMethod

Indication of how a trade was verified.

Type: [int](#)

Allowed values in VerificationMethodCodeSet:

Code	Name	Description
0	NonElectronic	Non-electronic
1	Electronic	Electronic

Used in messages: [TradeCaptureReport](#)

### 171.2.6776 VersusPurchaseDate

The effective acquisition date of the lot that would be used for gain-loss trade lot reporting. The versus purchase date used to identify the lot in situations where a custodial lot identifier is not available.

Type: [LocalMktDate](#)

Used in groups: [AllocAckGrp](#), [AllocGrp](#), [PreAllocGrp](#), [PreAllocMlegGrp](#), [TrdAllocGrp](#)

### **171.2.6777 VersusPurchasePrice**

The versus purchase price used to identify the lot in situations where a custodial lot identifier is not available. The value should be calculated based on current cost basis / quantity held.

Type: **Price**

Used in groups: **AllocAckGrp, AllocGrp, PreAllocGrp, PreAllocMlegGrp, TrdAllocGrp**

### **171.2.6778 Volatility**

Annualized volatility for option model calculations

Type: **float**

Used in groups: **ClearingPriceParametersGrp, SecurityRiskMetricGrp**

Used in messages: **ExecutionReport, TradeCaptureReport**

### **171.2.6779 VolatilityTime**

Time at which volatility was computed.

Type: **UTCTimestamp**

Used in groups: **SecurityRiskMetricGrp**

### **171.2.6780 VoluntaryRegulatoryReport**

Used in conjunction with RegulatoryReportType(1934) to indicate whether the trade report is a voluntary regulatory report. If not specified, the default for a regulatory report is "N".

When VoluntaryRegulatoryReport(1935)=Y it is recommended that one of the parties to the trade be identified as the voluntary reporting party through PartySubIDType(803) = 63 (Voluntary reporting entity).

Type: **Boolean**

Used in messages: **TradeCaptureReport**

**171.2.6781 WarningText**

Communicates the underlying condition when the request response indicates "warning".

Type: **String**

Used in messages: **CollateralResponse**

**171.2.6782 WireReference**

The reference to a wire transfer associated with the transaction. Wire references done via wire services such as Fedwire Output Message Accountability Data "OMAD" or SWIFT Output Sequence Number "OSN".

Type: **String**

Used in messages: **CollateralAssignment, CollateralReport, CollateralResponse**

**171.2.6783 WorkingIndicator**

Indicates if the order is currently being worked. Applicable only for OrdStatus = "New". For open outcry markets this indicates that the order is being worked in the crowd. For electronic markets it indicates that the order has transitioned from a contingent order to a market order.

Type: **Boolean**

Allowed values in WorkingIndicatorCodeSet:

Code	Name	Description
N	NotWorking	Order has been accepted but not yet in a working state
Y	Working	Order is currently being worked

Used in groups: **OrdListStatGrp**

Used in messages: **ExecutionReport, OrderCancelReject**

**171.2.6784 WtAverageLiquidity**

Overall weighted average liquidity expressed as a % of average daily volume. Represented as a percentage.

Type: **Percentage**

Used in messages: [BidRequest](#)

#### **171.2.6785 XmlData**

Actual XML data stream (e.g. FIXML). See appropriate XML reference (e.g. FIXML). Note: may contain embedded SOH characters.

Type: [XMLData](#)

Used in components: [StandardHeader](#)

#### **171.2.6786 XmlDataLen**

Length of the XmlData data block.

Type: [Length](#)

Used in components: [StandardHeader](#)

#### **171.2.6787 Yield**

Yield percentage.

(Note tag # was reserved in FIX 4.1, added in FIX 4.3)

Type: [Percentage](#)

Used in components: [YieldData](#)

#### **171.2.6788 YieldCalcDate**

Include as needed to clarify yield irregularities associated with date, e.g. when it falls on a non-business day.

Type: [LocalMktDate](#)

Used in components: [YieldData](#)

#### **171.2.6789 YieldData**

The YieldData component block conveys yield information for a given Fixed Income security.

Name	Mult.	Type	Description
YieldType	[0..1]	CodeSet	
Yield	[0..1]	Percentage	
YieldCalcDate	[0..1]	LocalMktDate	
YieldRedemptionDate	[0..1]	LocalMktDate	
YieldRedemptionPrice	[0..1]	Price	
YieldRedemptionPriceType	[0..1]	CodeSet	

Used in groups: [ListOrdGrp](#), [MDFullGrp](#), [MDIncGrp](#), [QuotReqGrp](#), [QuotReqRjctGrp](#), [SecListGrp](#), [SecLstUpdRelSymGrp](#)

Used in messages: [AllocationInstruction](#), [AllocationInstructionAlert](#), [AllocationReport](#), [Confirmation](#), [CrossOrderCancelReplaceRequest](#), [ExecutionReport](#), [IOI](#), [NewOrderCross](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#), [Quote](#), [QuoteResponse](#), [QuoteStatusReport](#), [SecurityDefinition](#), [SecurityDefinitionRequest](#), [SecurityDefinitionUpdateReport](#), [TradeCaptureReport](#)

#### 171.2.6790 YieldRedemptionDate

Date to which the yield has been calculated (i.e. maturity, par call or current call, pre-refunded date).

Type: [LocalMktDate](#)

Used in components: [YieldData](#)

#### 171.2.6791 YieldRedemptionPrice

Price to which the yield has been calculated.

Type: [Price](#)

Used in components: [YieldData](#)

#### 171.2.6792 YieldRedemptionPriceType

The price type of the [YieldRedemptionPrice](#) (697)

See [PriceType](#) (423) for description and valid values.

Type: [int](#)

Allowed values in [PriceTypeCodeSet](#):

<b>Code</b>	<b>Name</b>	<b>Description</b>
1	Percentage	Percentage (i.e. percent of par) (often called "dollar price" for fixed income)
2	PerUnit	Per unit (i.e. per share or contract)
3	FixedAmount	Fixed amount (absolute value)
4	Discount	Discount - percentage points below par
5	Premium	Premium - percentage points over par
6	Spread	Spread (basis points spread). Usually the difference in yield between two switched bonds or a corporate bond traded spread-to-benchmark.
7	TEDPrice	TED Price
8	TEDYield	TED Yield
9	Yield	Yield
10	FixedCabinetTradePrice	Fixed cabinet trade price (primarily for listed futures and options)
11	VariableCabinetTradePrice	Variable cabinet trade price (primarily for listed futures and options)
12	PriceSpread	Price spread. Price spread is expressed based on market convention for the asset being priced or traded. For example, the difference between the prices of a multileg switch or strategy expressed in basis points for a CDS or TBA roll; a price value to be added to a reference price, such as a "pay up" for specified pools
13	ProductTicksInHalves	Product ticks in halves
14	ProductTicksInFourths	Product ticks in fourths
15	ProductTicksInEighths	Product ticks in eighths
16	ProductTicksInSixteenths	Product ticks in sixteenths
17	ProductTicksInThirtySeconds	Product ticks in thirty-seconds
18	ProductTicksInSixtyFourths	Product ticks in sixty-fourths
19	ProductTicksInOneTwentyEighths	Product ticks in one-twenty-eighths
20	NormalRateRepresentation	Normal rate representation (e.g. FX rate)
21	InverseRateRepresentation	Inverse rate representation (e.g. FX rate)
22	BasisPoints	Basis points. When the price is not spread based.
23	UpfrontPoints	Up front points. Used specifically for CDS pricing.
24	InterestRate	Interest rate. When the price is an interest rate. For example, used with benchmark reference rate.
25	PercentageNotional	Percentage of notional

Used in components: [YieldData](#)

### 171.2.6793 YieldType

Type of yield. (Note tag # was reserved in FIX 4.1, added in FIX 4.3)

Type: [String](#)

Allowed values in YieldTypeCodeSet:

Code	Name	Description
AFTERTAX	AfterTaxYield	After Tax Yield (Municipals)
ANNUAL	AnnualYield	Annual Yield
ATISSUE	YieldAtIssue	Yield At Issue (Municipals)
AVGMATURITY	YieldToAverageMaturity	Yield To Avg Maturity
BOOK	BookYield	Book Yield
CALL	YieldToNextCall	Yield to Next Call
CHANGE	YieldChangeSinceClose	Yield Change Since Close
CLOSE	ClosingYield	Closing Yield
COMPOUND	CompoundYield	Compound Yield
CURRENT	CurrentYield	Current Yield
GOVTEQUIV	GvntEquivalentYield	Gvnt Equivalent Yield
GROSS	TrueGrossYield	True Gross Yield
INFLATION	YieldWithInflationAssumption	Yield with Inflation Assumption
INVERSEFLOATER	InverseFloaterBondYield	Inverse Floater Bond Yield
LASTCLOSE	MostRecentClosingYield	Most Recent Closing Yield
LASTMONTH	ClosingYieldMostRecentMonth	Closing Yield Most Recent Month
LASTQUARTER	ClosingYieldMostRecentQuarter	Closing Yield Most Recent Quarter
LASTYEAR	ClosingYieldMostRecentYear	Closing Yield Most Recent Year
LONGAVGLIFE	YieldToLongestAverageLife	Yield to Longest Average Life
MARK	MarkToMarketYield	Mark to Market Yield
MATURITY	YieldToMaturity	Yield to Maturity
NEXTREFUND	YieldToNextRefund	Yield to Next Refund (Sinking Fund Bonds)
OPENAVG	OpenAverageYield	Open Average Yield
PREVCLOSE	PreviousCloseYield	Previous Close Yield
PROCEEDS	ProceedsYield	Proceeds Yield
PUT	YieldToNextPut	Yield to Next Put

<b>Code</b>	<b>Name</b>	<b>Description</b>
SEMIANNUAL	SemiAnnualYield	Semi-annual Yield
SHORTAVGLIFE	YieldToShortestAverageLife	Yield to Shortest Average Life
SIMPLE	SimpleYield	Simple Yield
TAXEQUIV	TaxEquivalentYield	Tax Equivalent Yield
TENDER	YieldToTenderDate	Yield to Tender Date
TRUE	TrueYield	True Yield
VALUE1_32	YieldValueOf32nds	Yield Value Of 1/32
WORST	YieldToWorst	Yield To Worst

Used in components: [YieldData](#)
