1 Message Set Overview

1.1 List of Messages

The following table lists all messages described in this report.

Name	Category	Description
AccountSummaryReport	AccountReporting	The AccountSummaryReport is provided by the clearinghouse to its clearing members on a daily basis. It contains margin, settlement, collateral and pay/collect data for each clearing member level account type. Clearing member account types will be described through use of the Parties component and PtysSubGrp sub-component.
AllocationInstruction	Allocation	The AllocationInstruction(35=J) message provides the ability to specify how an order or set of orders should be subdivided amongst one or more accounts.
AllocationInstructionAck	Allocation	In versions of FIX prior to version 4.4, this message was known as the Allocation ACK message.
AllocationInstructionAlert	Allocation	This message is used in a 3-party allocation model (buy-side and sell-side using a central clearing entity) where notification of group creation and group updates to counterparties is needed. The message will also carry trade information that comprised the group to the counterparties.
AllocationInstructionAlertRequest	Allocation	This message is used in a clearinghouse 3-party allocation model to request for AllocationInstructionAlert(35=BM) from the clearinghouse. The request may be used to obtain a one-time notification of the status of an allocation group.

Name	Category	Description
AllocationInstructionAlertRequestAck	Allocation	This message is used in a clearinghouse 3-party allocation model to acknowledge a AllocationInstructionAlertRequest(35=DU) message for an AllocationInstructionAlert(35=BM) message from the clearinghouse.
AllocationReport	Allocation	Sent from sell-side to buy-side, sell-side to 3rd-party or 3rd-party to buy-side, the AllocationReport(35=AS) message (Claim) provides account breakdown of an order or set of orders plus any additional follow-up front-office information developed post-trade during the trade allocation, matching and calculation phase.
AllocationReportAck	Allocation	The Allocation Report Ack message is used to acknowledge the receipt of and provide status for an Allocation Report message.
ApplicationMessageReport	Application	This message is used for three difference purposes: to reset the ApplSeqNum (1181) of a specified ApplID (1180). to indicate that the last message has been sent for a particular ApplID, or as a keep-alive mechanism for ApplIDs with infrequent message traffic.
ApplicationMessageRequest	Application	This message is used to request a retransmission of a set of one or more messages generated by the application specified in RefApplID (1355).
ApplicationMessageRequestAck	Application	This message is used to acknowledge an Application Message Request providing a status on the request (i.e. whether successful or not). This message does not provide the actual content of the messages to be resent.

Name	Category	Description
BusinessMessageReject	BusinessReject	The Business Message Reject message can reject an application-level message which fulfills session-level rules and cannot be rejected via any other means. Note if the message fails a session-level rule (e.g. body length is incorrect), a session-level Reject message should be issued.
CollateralAssignment	CollateralManagement	Used to assign collateral to cover a trading position. This message can be sent unsolicited or in reply to a Collateral Request message.
CollateralInquiry	CollateralManagement	Used to inquire for collateral status.
CollateralInquiryAck	CollateralManagement	Used to respond to a Collateral Inquiry in the following situations:
CollateralReport	CollateralManagement	Used to report collateral status when responding to a Collateral Inquiry message.
CollateralReportAck	CollateralManagement	CollateralReportAck(35=DQ) is used as a response to the CollateralReport(35=BA). It can be used to reject a CollateralReport(35=BA) when the content of the report is invalid based on the business rules of the receiver. The message may also be used to acknowledge receipt of a valid CollateralReport(35=BA).
CollateralRequest	CollateralManagement	An initiator that requires collateral from a respondent sends a Collateral Request. The initiator can be either counterparty to a trade in a two party model or an intermediary such as an ATS or clearinghouse in a three party model. A Collateral Assignment is expected as a response to a request for collateral.
CollateralResponse	CollateralManagement	Used to respond to a Collateral Assignment message.

Name	Category	Description
Confirmation	Confirmation	The Confirmation messages are used to provide individual trade level confirmations from the sell side to the buy side. In versions of FIX prior to version 4.4, this role was performed by the allocation message. Unlike the allocation message, the confirmation message operates at an allocation account (trade) level rather than block level, allowing for the affirmation or rejection of individual confirmations.
ConfirmationAck	Confirmation	The Confirmation Ack (aka Affirmation) message is used to respond to a Confirmation message.
ConfirmationRequest	Confirmation	The Confirmation Request message is used to request a Confirmation message.
CrossOrderCancelReplaceRequest	CrossOrders	Used to modify a cross order previously submitted using the New Order - Cross message. See Order Cancel Replace Request for details concerning message usage.
CrossOrderCancelRequest	CrossOrders	Used to fully cancel the remaining open quantity of a cross order.
NewOrderCross	CrossOrders	Used to submit a cross order into a market. The cross order contains two order sides (a buy and a sell). The cross order is identified by its CrossID.
Email	EventCommunication	The email message is similar to the format and purpose of the News message, however, it is intended for private use between two parties.
News	EventCommunication	The news message is a general free format message between the broker and institution. The message contains flags to identify the news item's urgency and to allow sorting by subject company (symbol). The News message can be originated at either the broker or institution side, or exchanges and other marketplace venues.

Name	Category	Description
Advertisement	Indication	Advertisement messages are used to announce completed transactions. The advertisement message can be transmitted in various transaction types; NEW, CANCEL and REPLACE. All message types other than NEW modify the state of a previously transmitted advertisement identified in AdvRefID.
CrossRequest	Indication	The CrossRequest(35=DS) message is used to indicate the submission of orders or quotes that may result in a crossed trade.
CrossRequestAck	Indication	The CrossRequestAck(35=DT) message is used to confirm the receipt of a CrossRequest(35=DS) message.
IOI	Indication	Indication of interest messages are used to market merchandise which the broker is buying or selling in either a proprietary or agency capacity. The indications can be time bound with a specific expiration value. Indications are distributed with the understanding that other firms may react to the message first and that the merchandise may no longer be available due to prior trade.
MarginRequirementInquiry	MarginRequirementManagement	The purpose of this message is to initiate a margin requirement inquiry for a margin account. The inquiry may be submitted at the detail level or the summary level. It can also be used to inquire margin excess/deficit or net position information. Margin excess/deficit will provide information about the surplus or shortfall compared to the previous trading day or a more recent margin calculation. An inquiry for net position information will trigger one or more PositionReport messages instead of one or more MarginRequirementReport messages.
MarginRequirementInquiryAck	MarginRequirementManagement	Used to respond to a Margin Requirement Inquiry.

Name	Category	Description
MarginRequirementReport	MarginRequirementManagement	The Margin Requirement Report returns information about margin requirement either as an overview across all margin accounts or on a detailed level due to the inquiry making use of the optional Instrument component block. Application sequencing can be used to re-request a range of reports.
MarketDataIncrementalRefresh	MarketData	The Market Data message for incremental updates may contain any combination of new, changed, or deleted Market Data Entries, for any combination of instruments, with any combination of trades, imbalances, quotes, index values, open, close, settlement, high, low, and VWAP prices, trade volume and open interest so long as the maximum FIX message size is not exceeded. All of these types of Market Data Entries can be changed and deleted.
MarketDataReport	MarketData	The MarketDataReport(35=DR) message is used to provide delimiting references (e.g. start and end markers in a continuous broadcast) and details about the number of market data messages sent in a given distribution cycle.
MarketDataRequest	MarketData	Some systems allow the transmission of real-time quote, order, trade, trade volume, open interest, and/or other price information on a subscription basis. A MarketDataRequest(35=V) is a general request for market data on specific securities or forex quotes. The values in the fields provided within the request will serve as further filter criteria for the result set.

Name	Category	Description
MarketDataRequestReject	MarketData	The Market Data Request Reject is used when the broker cannot honor the Market Data Request, due to business or technical reasons. Brokers may choose to limit various parameters, such as the size of requests, whether just the top of book or the entire book may be displayed, and whether Full or Incremental updates must be used.
MarketDataSnapshotFullRefresh	MarketData	The Market Data messages are used as the response to a Market Data Request message. In all cases, one Market Data message refers only to one Market Data Request. It can be used to transmit a 2-sided book of orders or list of quotes, a list of trades, index values, opening, closing, settlement, high, low, or VWAP prices, the trade volume or open interest for a security, or any combination of these.
MarketDataStatisticsReport	MarketData	The MarketDataStatisticsReport(35=DP) is used to provide unsolicited statistical information or in response to a specific request. Each report contains a set of statistics for a single entity which could be a market, a market segment, a security list or an instrument.
MarketDataStatisticsRequest	MarketData	The MarketDataStatisticsRequest(35=DO) is used to request for statistical data. The simple form is to use an identifier (MDStatisticID(2475)) assigned by the market place which would denote a pre-defined statistical report. Alternatively, or also in addition, the request can define a number of parameters for the desired statistical information.

Name	Category	Description
StreamAssignmentReport	MarketData	The StreamAssignmentReport(35=CD) message is in response to the StreamAssignmentRequest(35=CC) message. It provides information back to the aggregator as to which clients to assign to receive which price stream based on requested CCY pair. This message can be sent unsolicited to the Aggregator from the Price Maker.
StreamAssignmentReportACK	MarketData	This message is used to respond to the Stream Assignment Report, to either accept or reject an unsolicited assignment.
StreamAssignmentRequest	MarketData	In certain markets where market data aggregators fan out to end clients the pricing streams provided by the price makers, the price maker may assign the clients to certain pricing streams that the price maker publishes via the aggregator. An example of this use is in the FX markets where clients may be assigned to different pricing streams based on volume bands and currency pairs.
MarketDefinition	MarketStructureReferenceData	The MarketDefinition(35=BU) message is used to respond to MarketDefinitionRequest(35=BT). In a subscription, it will be used to provide the initial snapshot of the information requested. Subsequent updates are provided by the MarketDefinitionUpdateReport(35=BV).
MarketDefinitionRequest	MarketStructureReferenceData	The Market Definition Request message is used to request for market structure information from the Respondent that receives this request.
MarketDefinitionUpdateReport	MarketStructureReferenceData	In a subscription for market structure information, this message is used once the initial snapshot of the information has been sent using the MarketDefinition(35=BU) message.

Name	Category	Description
TradingSessionList	MarketStructureReferenceData	The Trading Session List message is sent as a response to a Trading Session List Request. The Trading Session List should contain the characteristics of the trading session and the current state of the trading session.
TradingSessionListRequest	MarketStructureReferenceData	The Trading Session List Request is used to request a list of trading sessions available in a market place and the state of those trading sessions. A successful request will result in a response from the counterparty of a Trading Session List (MsgType=BJ) message that contains a list of zero or more trading sessions.
TradingSessionListUpdateReport	MarketStructureReferenceData	The Trading Session List Update Report is used by marketplaces to provide intra-day updates of trading sessions when there are changes to one or more trading sessions.
TradingSessionStatus	MarketStructureReferenceData	The Trading Session Status provides information on the status of a market. For markets multiple trading sessions on multiple-markets occurring (morning and evening sessions for instance), this message is able to provide information on what products are trading on what market during what trading session.
TradingSessionStatusRequest	MarketStructureReferenceData	The Trading Session Status Request is used to request information on the status of a market. With the move to multiple sessions occurring for a given trading party (morning and evening sessions for instance) there is a need to be able to provide information on what product is trading on what market.
MultilegOrderCancelReplace	MultilegOrders	Used to modify a multileg order previously submitted using the New Order - Multileg message. See Order Cancel Replace Request for details concerning message usage.

Name	Category	Description
NewOrderMultileg	MultilegOrders	The New Order - Multileg is provided to submit orders for securities that are made up of multiple securities, known as legs.
NetworkCounterpartySystemStatusRequest	Network	This message is send either immediately after logging on to inform a network (counterparty system) of the type of updates required or to at any other time in the FIX conversation to change the nature of the types of status updates required. It can also be used with a NetworkRequestType of Snapshot to request a one-off report of the status of a network (or counterparty) system. Finally this message can also be used to cancel a request to receive updates into the status of the counterparties on a network by sending a NetworkRequestStatusMessage with a NetworkRequestType of StopSubscribing.
NetworkCounterpartySystemStatusRespon	Network	This message is sent in response to a Network (Counterparty System) Status Request Message.
MassOrder	OrderMassHandling	The MassOrder(35=DJ) message can be used to add, modify or delete multiple unrelated orders with a single message. Apart from clearing related attributes, only the key order attributes for high performance trading are available.
MassOrderAck	OrderMassHandling	The mass order acknowledgement message is used to acknowledge the receipt of and the status for a MassOrder(35=DJ) message.
OrderMassActionReport	OrderMassHandling	The Order Mass Action Report is used to acknowledge an Order Mass Action Request. Note that each affected order that is suspended or released or canceled is acknowledged with a separate Execution Report for each order.

Name	Category	Description
OrderMassActionRequest	OrderMassHandling	The Order Mass Action Request message can be used to request the suspension or release of a group of orders that match the criteria specified within the request. This is equivalent to individual Order Cancel Replace Requests for each order with or without adding “S” to the ExecInst values. It can also be used for mass order cancellation.
OrderMassCancelReport	OrderMassHandling	The Order Mass Cancel Report is used to acknowledge an Order Mass Cancel Request. Note that each affected order that is canceled is acknowledged with a separate Execution Report or Order Cancel Reject message.
OrderMassCancelRequest	OrderMassHandling	The order mass cancel request message requests the cancellation of all of the remaining quantity of a group of orders matching criteria specified within the request. NOTE: This message can only be used to cancel order messages (reduce the full quantity).
OrderMassStatusRequest	OrderMassHandling	The order mass status request message requests the status for orders matching criteria specified within the request.
PartyActionReport	PartiesAction	Used to respond to the PartyActionRequest(35=DH) message, indicating whether the request has been received, accepted or rejected. Can also be used in an unsolicited manner to report party actions, e.g. reinstatements after a manual intervention out of band.
PartyActionRequest	PartiesAction	The PartyActionRequest message is used suspend or halt the specified party from further trading activities at the Respondent. The Respondent must respond with a PartyActionReport(35=DI) message.
PartyRiskLimitCheckRequest	PartiesAction	PartyRiskLimitCheckRequest is used to request for approval of credit or risk limit amount intended to be used by a party in a transaction from another party that holds the information.

Name	Category	Description
PartyRiskLimitCheckRequestAck	PartiesAction	PartyRiskLimitCheckRequestAck is used to acknowledge a PartyRiskLimitCheckRequest(35=DF) message and to respond whether the limit check request was approved or not. When used to accept the PartyRiskLimitCheckRequest(35=DF) message the Respondent may also include the limit amount that was approved.
PartyDetailsDefinitionRequest	PartiesReferenceData	The PartyDetailsDefinitionRequest(35=CX) is used for defining new parties and modifying or deleting existing parties information, including the relationships between parties.
PartyDetailsDefinitionRequestAck	PartiesReferenceData	The PartyDetailsDefinitionRequestAck(35=CY) is used as a response to the PartyDetailsDefinitionRequest(35=CX) message. The request can be accepted (with or without changes) or rejected.
PartyDetailsListReport	PartiesReferenceData	The PartyDetailsListReport message is used to disseminate party details between counterparties. PartyDetailsListReport messages may be sent in response to a PartyDetailsListRequest message or sent unsolicited.
PartyDetailsListRequest	PartiesReferenceData	The PartyDetailsListRequest is used to request party detail information.
PartyDetailsListUpdateReport	PartiesReferenceData	The PartyDetailsListUpdateReport(35=CK) is used to disseminate updates to party detail information.
PartyEntitlementsDefinitionRequest	PartiesReferenceData	The PartyEntitlementsDefinitionRequest(35=DA) is used for defining new entitlements, and modifying or deleting existing entitlements for the specified party(-ies).

Name	Category	Description
PartyEntitlementsDefinitionRequestAck	PartiesReferenceData	The PartyEntitlementsDefinitionRequestAck(35=DB) is used as a response to the PartyEntitlementsDefinitionRequest(35=DA) to accept (with or without changes) or reject the definition of party entitlements.
PartyEntitlementsReport	PartiesReferenceData	The PartyEntitlementsReport is used to report entitlements for one or more parties, party role(s), or specific instrument(s).
PartyEntitlementsRequest	PartiesReferenceData	The PartyEntitlementsRequest message is used to request for entitlement information for one or more party(-ies), specific party role(s), or specific instruments(s).
PartyEntitlementsUpdateReport	PartiesReferenceData	The PartyEntitlementsUpdateReport(35=CZ) is used to convey incremental changes to party entitlements. It is similar to the PartyEntitlementsReport(35=CV). This message uses the PartyEntitlementsUpdateGrp component which includes the ability to specify an update action using ListUpdateAction(1324).
PartyRiskLimitsDefinitionRequest	PartiesReferenceData	PartyRiskLimitDefinitionRequest is used for defining new risk limits.
PartyRiskLimitsDefinitionRequestAck	PartiesReferenceData	PartyRiskLimitDefinitionRequestAck is used for accepting (with or without changes) or rejecting the definition of risk limits.
PartyRiskLimitsReport	PartiesReferenceData	The PartyRiskLimitsReport message is used to communicate party risk limits. The message can either be sent as a response to the PartyRiskLimitsRequest message or can be published unsolicited.
PartyRiskLimitsReportAck	PartiesReferenceData	PartyRiskLimitsReportAck is an optional message used as a response to the PartyRiskLimitReport(35=CM) or PartyRiskLimitUpdateReport(35=CR) messages to acknowledge or reject those messages.

Name	Category	Description
PartyRiskLimitsRequest	PartiesReferenceData	The PartyRiskLimitsRequest message is used to request for risk information for specific parties, specific party roles or specific instruments.
PartyRiskLimitsUpdateReport	PartiesReferenceData	The PartyRiskLimitsUpdateReport(35=CR) is used to convey incremental changes to risk limits. It is similar to the regular report but uses the PartyRiskLimitsUpdateGrp component instead of the PartyRiskLimitsGrp component to include an update action.
PayManagementReport	PayManagement	PayManagementReport(35=EA) may be used to respond to the PayManagementRequest(35=DY) message. It provides the status of the request (e.g. accepted, disputed) and may provide additional information related to the request.
PayManagementReportAck	PayManagement	PayManagementReportAck(35=EB) is used as a response to the PayManagementReport(35=EA) message. It may be used to accept, reject or dispute the details of the PayManagementReport(35=EA) depending on the business rules of the receiver. This message may also be used to acknowledge the receipt of a PayManagementReport(35=EA) message.
PayManagementRequest	PayManagement	PayManagementRequest(35=DY) message is used to communicate a future or expected payment to be made or received related to a trade or contract after its settlement.
PayManagementRequestAck	PayManagement	PayManagementRequestAck(35=DZ) is used to acknowledge the receipt of the PayManagementRequest(35=DY) message (i.e. a technical acknowledgement of receipt). Acceptance or rejection of the request is reported in the corresponding PayManagementReport(35=EA).

Name	Category	Description
AdjustedPositionReport	PositionMaintenance	Used to report changes in position, primarily in equity options, due to modifications to the underlying due to corporate actions
AssignmentReport	PositionMaintenance	Assignment Reports are sent from a clearing house to counterparties, such as a clearing firm as a result of the assignment process.
ContraryIntentionReport	PositionMaintenance	The Contrary Intention Report is used for reporting of contrary expiration quantities for Saturday expiring options. This information is required by options exchanges for regulatory purposes.
PositionMaintenanceReport	PositionMaintenance	The Position Maintenance Report message is sent by the holder of a position in response to a Position Maintenance Request and is used to confirm that a request has been successfully processed or rejected.
PositionMaintenanceRequest	PositionMaintenance	The Position Maintenance Request message allows the position owner to submit requests to the holder of a position which will result in a specific action being taken which will affect the position. Generally, the holder of the position is a central counter party or clearing organization but can also be a party providing investment services.
PositionReport	PositionMaintenance	The Position Report message is returned by the holder of a position in response to a Request for Position message. The purpose of the message is to report all aspects of a position and may be provided on a standing basis to report end of day positions to an owner.
PositionTransferInstruction	PositionMaintenance	The PositionTransferInstruction(35=DL) is sent by clearing firms to CCPs to initiate position transfers, or to accept or decline position transfers.

Name	Category	Description
PositionTransferInstructionAck	PositionMaintenance	The PositionTransferInstructionAck(35=DM) is sent by CCPs to clearing firms to acknowledge position transfer instructions, and to report errors processing position transfer instructions.
PositionTransferReport	PositionMaintenance	The PositionTransferReport(35=DN) is sent by CCPs to clearing firms indicating of positions that are to be transferred to the clearing firm, or to report on status of the transfer to the clearing firms involved in the transfer process.
RequestForPositions	PositionMaintenance	The Request For Positions message is used by the owner of a position to request a Position Report from the holder of the position, usually the central counter party or clearing organization. The request can be made at several levels of granularity.
RequestForPositionsAck	PositionMaintenance	The Request for Positions Ack message is returned by the holder of the position in response to a Request for Positions message. The purpose of the message is to acknowledge that a request has been received and is being processed.
BidRequest	ProgramTrading	The BidRequest Message can be used in one of two ways depending on which market conventions are being followed.
BidResponse	ProgramTrading	The Bid Response message can be used in one of two ways depending on which market conventions are being followed.
ListCancelRequest	ProgramTrading	The List Cancel Request message type is used by institutions wishing to cancel previously submitted lists either before or during execution.
ListExecute	ProgramTrading	The List Execute message type is used by institutions to instruct the broker to begin execution of a previously submitted list. This message may or may not be used, as it may be mirroring a phone conversation.

Name	Category	Description
ListStatus	ProgramTrading	The list status message is issued as the response to a List Status Request message sent in an unsolicited fashion by the sell-side. It indicates the current state of the orders within the list as they exist at the broker's site. This message may also be used to respond to the List Cancel Request.
ListStatusRequest	ProgramTrading	The list status request message type is used by institutions to instruct the broker to generate status messages for a list.
ListStrikePrice	ProgramTrading	The strike price message is used to exchange strike price information for principal trades. It can also be used to exchange reference prices for agency trades.
NewOrderList	ProgramTrading	The NewOrderList Message can be used in one of two ways depending on which market conventions are being followed.
MassQuote	QuotationNegotiation	The Mass Quote message can contain quotes for multiple securities to support applications that allow for the mass quoting of an option series. Two levels of repeating groups have been provided to minimize the amount of data required to submit a set of quotes for a class of options (e.g. all option series for IBM).
MassQuoteAck	QuotationNegotiation	Mass Quote Acknowledgement is used as the application level response to a Mass Quote message.
Quote	QuotationNegotiation	The Quote message is used as the response to a Quote Request or a Quote Response message in both indicative, tradeable, and restricted tradeable quoting markets.
QuoteAck	QuotationNegotiation	The QuoteAck(35=CW) message is used to acknowledge a Quote(35=S) submittal or request to cancel an individual quote using the QuoteCancel(35=Z) message during a Quote/Negotiation dialog.
QuoteCancel	QuotationNegotiation	The Quote Cancel message is used by an originator of quotes to cancel quotes.

Name	Category	Description
QuoteRequest	QuotationNegotiation	In some markets it is the practice to request quotes from brokers prior to placement of an order. The quote request message is used for this purpose. This message is commonly referred to as an Request For Quote (RFQ)
QuoteRequestReject	QuotationNegotiation	The Quote Request Reject message is used to reject Quote Request messages for all quoting models.
QuoteResponse	QuotationNegotiation	The QuoteResponse(35=AJ) message is used for the following purposes:
QuoteStatusReport	QuotationNegotiation	The quote status report message is used:
QuoteStatusRequest	QuotationNegotiation	The quote status request message is used for the following purposes in markets that employ tradeable or restricted tradeable quotes:
RFQRequest	QuotationNegotiation	In tradeable and restricted tradeable quoting markets – Quote Requests are issued by counterparties interested in ascertaining the market for an instrument. Quote Requests are then distributed by the market to liquidity providers who make markets in the instrument. The RFQ Request is used by liquidity providers to indicate to the market for which instruments they are interested in receiving Quote Requests. It can be used to register interest in receiving quote requests for a single instrument or for multiple instruments
RegistrationInstructions	RegistrationInstruction	The Registration Instructions message type may be used by institutions or retail intermediaries wishing to electronically submit registration information to a broker or fund manager (for CIV) for an order or for an allocation.

Name	Category	Description
RegistrationInstructionsResponse	RegistrationInstruction	The Registration Instructions Response message type may be used by broker or fund manager (for CIV) in response to a Registration Instructions message submitted by an institution or retail intermediary for an order or for an allocation.
DerivativeSecurityList	SecuritiesReferenceData	The Derivative Security List message is used to return a list of securities that matches the criteria specified in a Derivative Security List Request.
DerivativeSecurityListRequest	SecuritiesReferenceData	The Derivative Security List Request message is used to return a list of securities from the counterparty that match criteria provided on the request
DerivativeSecurityListUpdateReport	SecuritiesReferenceData	The Derivative Security List Update Report message is used to send updates to an option family or the strikes that comprise an option family.
SecurityDefinition	SecuritiesReferenceData	The SecurityDefinition(35=d) message is used for the following:
SecurityDefinitionRequest	SecuritiesReferenceData	The SecurityDefinitionRequest(35=c) message is used for the following:
SecurityDefinitionUpdateReport	SecuritiesReferenceData	This message is used for reporting updates to a product security master file. Updates could be the result of corporate actions or other business events. Updates may include additions, modifications or deletions.
SecurityList	SecuritiesReferenceData	The Security List message is used to return a list of securities that matches the criteria specified in a Security List Request.
SecurityListRequest	SecuritiesReferenceData	The Security List Request message is used to return a list of securities from the counterparty that match criteria provided on the request

Name	Category	Description
SecurityListUpdateReport	SecuritiesReferenceData	The Security List Update Report is used for reporting updates to a Contract Security Masterfile. Updates could be due to Corporate Actions or other business events. Update may include additions, modifications and deletions.
SecurityMassStatus	SecuritiesReferenceData	
SecurityMassStatusRequest	SecuritiesReferenceData	
SecurityRiskMetricsReport	SecuritiesReferenceData	SecurityRiskMetricsReport(35=EG) is used for publishing the risk metrics, valuation metrics or analytics of one or more securities, or for an option series.
SecurityStatus	SecuritiesReferenceData	The Security Status message provides for the ability to report changes in status to a security. The Security Status message contains fields to indicate trading status, corporate actions, financial status of the company. The Security Status message is used by one trading entity (for instance an exchange) to report changes in the state of a security.
SecurityStatusRequest	SecuritiesReferenceData	The Security Status Request message provides for the ability to request the status of a security. One or more Security Status messages are returned as a result of a Security Status Request message.
SecurityTypeRequest	SecuritiesReferenceData	The Security Type Request message is used to return a list of security types available from a counterparty or market.
SecurityTypes	SecuritiesReferenceData	The Security Type Request message is used to return a list of security types available from a counterparty or market.
Heartbeat	Session	The Heartbeat monitors the status of the communication link and identifies when the last of a string of messages was not received.
Logon	Session	The logon message authenticates a user establishing a connection to a remote system. The logon message must be the first message sent by the application requesting to initiate a FIX session.

Name	Category	Description
Logout	Session	The logout message initiates or confirms the termination of a FIX session. Disconnection without the exchange of logout messages should be interpreted as an abnormal condition.
Reject	Session	The reject message should be issued when a message is received but cannot be properly processed due to a session-level rule violation. An example of when a reject may be appropriate would be the receipt of a message with invalid basic data which successfully passes de-encryption, CheckSum and BodyLength checks.
ResendRequest	Session	The resend request is sent by the receiving application to initiate the retransmission of messages. This function is utilized if a sequence number gap is detected, if the receiving application lost a message, or as a function of the initialization process.
SequenceReset	Session	The sequence reset message is used by the sending application to reset the incoming sequence number on the opposing side.
TestRequest	Session	The test request message forces a heartbeat from the opposing application. The test request message checks sequence numbers or verifies communication line status. The opposite application responds to the Test Request with a Heartbeat containing the TestReqID.
XMLnonFIX	Session	
SettlementInstructionRequest	SettlementInstruction	The Settlement Instruction Request message is used to request standing settlement instructions from another party.

Name	Category	Description
SettlementInstructions	SettlementInstruction	The Settlement Instructions message provides the broker's, the institution's, or the intermediary's instructions for trade settlement. This message has been designed so that it can be sent from the broker to the institution, from the institution to the broker, or from either to an independent "standing instructions" database or matching system or, for CIV, from an intermediary to a fund manager.
SettlementObligationReport	SettlementInstruction	The Settlement Obligation Report message provides a central counterparty, institution, or individual counterparty with a capacity for reporting the final details of a currency settlement obligation.
SettlementStatusReport	SettlementStatusManagement	SettlementStatusReport(35=EE) is a response to the SettlementStatusRequest(35=EC) to provide settlement status for the requested trade. It may also be sent unsolicited without an explicit request message by the party able to provide the settlement status for the trade identified in the report message.
SettlementStatusReportAck	SettlementStatusManagement	SettlementStatusReportAck(35=EF) is used to respond to the SettlementStatusReport(35=EE) to acknowledge or reject the report.
SettlementStatusRequest	SettlementStatusManagement	SettlementStatusRequest(35=EC) is used to request for the settlement status of a trade.
SettlementStatusRequestAck	SettlementStatusManagement	SettlementStatusRequestAck(35=ED) is used to respond to the SettlementStatusRequest(35=EC) to acknowledge the request and provide status for the request message.
DontKnowTrade	SingleGeneralOrderHandling	The Don't Know Trade (DK) message notifies a trading partner that an electronically received execution has been rejected. This message can be thought of as an execution reject message.

Name	Category	Description
ExecutionAck	SingleGeneralOrderHandling	The Execution Report Acknowledgement message is an optional message that provides dual functionality to notify a trading partner that an electronically received execution has either been accepted or rejected (DK'd).
ExecutionReport	SingleGeneralOrderHandling	The execution report message is used to:
NewOrderSingle	SingleGeneralOrderHandling	The new order message type is used by institutions wishing to electronically submit securities and forex orders to a broker for execution.
OrderCancelReject	SingleGeneralOrderHandling	The order cancel reject message is issued by the broker upon receipt of a cancel request or cancel/replace request message which cannot be honored.
OrderCancelReplaceRequest	SingleGeneralOrderHandling	The order cancel/replace request is used to change the parameters of an existing order.
OrderCancelRequest	SingleGeneralOrderHandling	The order cancel request message requests the cancellation of all of the remaining quantity of an existing order. Note that the Order Cancel/Replace Request should be used to partially cancel (reduce) an order).
OrderStatusRequest	SingleGeneralOrderHandling	The order status request message is used by the institution to generate an order status message back from the broker.
AlgoCertificateReport	Testing	AlgoCertificateReport(35=EJ) is a response to the AlgoCertificateRequest(35=EH) to certify an algo. It may also be sent unsolicited without an explicit request message by the party able to provide certificate information for the algo identified in the report message.
AlgoCertificateReportAck	Testing	AlgoCertificateReportAck(35=EK) is used to respond to the AlgoCertificateReport(35=EJ) to acknowledge or reject the report message.

Name	Category	Description
AlgoCertificateRequest	Testing	AlgoCertificateRequest(35=EH) is used to request algo testing certificate information for one or more algorithms.
AlgoCertificateRequestAck	Testing	AlgoCertificateRequestAck(35=EI) is used to respond to the AlgoCertificateRequest(35=EH) to acknowledge the request and provide status for the request message.
TestActionReport	Testing	TestActionReport(35=EP) is used to report the testing results of the identified test suite that has been executed with TestActionRequest(35=EN). In the context of algorithmic trading, the results may be used to create a certificate for the algorithm upon meeting the success criteria.
TestActionRequest	Testing	TestActionRequest(35=EN) is used to manage test executions or request for testing activity state of the identified test suite.
TestActionRequestAck	Testing	TestActionRequestAck(35=EO) is used to respond to the TestActionRequest(35=EN) to acknowledge the request and provide status for the request message.
TestSuiteDefinitionRequest	Testing	TestSuiteDefinitionRequest(35=EL) is used to convey to the test system the suite of test scenarios to perform.
TestSuiteDefinitionRequestAck	Testing	TestSuiteDefinitionRequestAck(35=EM) is used to respond to the TestSuiteDefinitionRequest(35=EL) to acknowledge the request and provide status for the request message.
TradeCaptureReport	TradeCapture	The Trade Capture Report message can be:
TradeCaptureReportAck	TradeCapture	The Trade Capture Report Ack message can be:
TradeCaptureReportRequest	TradeCapture	The Trade Capture Report Request can be used to:
TradeCaptureReportRequestAck	TradeCapture	The Trade Capture Request Ack message is used to:

Name	Category	Description
TradeMatchReport	TradeCapture	The TradeMatchReport(35=DC) message is used by exchanges and ECN's to report matched trades to central counterparties (CCPs) as an atomic event. The message is used to express the one-to-one, one-to-many and many-to-many matches as well as implied matches in which more complex instruments can match with simpler instruments.
TradeMatchReportAck	TradeCapture	The TradeMatchReportAck(35=DD) is used to respond to theTradeMatchReport(35=DC) message. It may be used to report on the status of the request (e.g. accepting the request or rejecting the request).
TradeAggregationReport	TradeManagement	TradeAggregationReport(35=DX) is used to respond to the TradeAggregationRequest(35=DW) message. It provides the status of the request (e.g. accepted or rejected) and may also provide additional information supplied by the respondent.
TradeAggregationRequest	TradeManagement	TradeAggregationRequest(35=DW) is used to request that the identified trades between the initiator and respondent be aggregated together for further processing.
UserNotification	UserManagement	The User Notification message is used to notify one or more users of an event or information from the sender of the message. This message is usually sent unsolicited from a marketplace (e.g. Exchange, ECN) to a market participant.
UserRequest	UserManagement	This message is used to initiate a user action, logon, logout or password change. It can also be used to request a report on a user's status.

UserResponse**UserManagement**

This message is used to respond to a user request message, it reports the status of the user after the completion of any action requested in the user request message.

2 AccountSummaryReport

Category: AccountReporting

2.1 Message Functionality

The AccountSummaryReport is provided by the clearinghouse to its clearing members on a daily basis. It contains margin, settlement, collateral and pay/collect data for each clearing member level account type. Clearing member account types will be described through use of the Parties component and PtysSubGrp sub-component.

In certain usages, the clearing members can send the AccountSummaryReport message to the clearinghouse as needed. For example, clearing members can send this message to the clearinghouse to identify the value of collateral for each customer (to satisfy CFTC Legally Segregated Operationally Commingled (LSOC) regulatory reporting obligations).

Clearing organizations can also send the AccountSummaryReport message to regulators to meet regulatory reporting obligations. For example, clearing organizations can use this message to submit daily reports for each clearing member ("CM") by house origin and by each customer origin for all futures, options, and swaps positions, and all securities positions held in a segregated account or pursuant to a cross margining agreement, to a regulator (e.g. to the CFTC to meet Part 39, Section 39.19 reporting obligations).

2.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = CQ
ApplicationSequenceControl	[0..1]	Component	
AccountSummaryReportID	[1..1]	String	
ClearingBusinessDate	[1..1]	LocalMktDate	
Currency	[0..1]	Currency	Identifies the base reporting currency used in this report.
TotalNetValue	[0..1]	Amt	
MarginExcess	[0..1]	Amt	
SettlSessID	[0..1]	CodeSet	
SettlSessSubID	[0..1]	String	
TransactTime	[0..1]	UTCTimestamp	

Name	Mult.	Type	Description
SettlementAmountGrp	[0..*]	Group	
MarginAmount	[0..*]	Group	
Parties	[1..*]	Group	Used to identify the parties for the account (clearing organization, clearing firm, account type, etc.)
CollateralAmountGrp	[0..*]	Group	
PayCollectGrp	[0..*]	Group	
PositionAmountData	[0..*]	Group	Can be used to identify mark to market information for the position.
StandardTrailer	[0..1]	Component	

3 AdjustedPositionReport

Category: PositionMaintenance

3.1 Message Functionality

Used to report changes in position, primarily in equity options, due to modifications to the underlying due to corporate actions

3.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = BL
PosMaintRptID	[1..1]	String	Unique identifier for this Adjusted Position report
PosReqType	[0..1]	CodeSet	
ClearingBusinessDate	[1..1]	LocalMktDate	The Clearing Business Date referred to by this maintenance request
SettlSessID	[0..1]	CodeSet	
PosMaintRptRefID	[0..1]	String	
Parties	[1..*]	Group	Position Account
PositionQty	[1..*]	Group	Insert here here the set of "Position Qty" fields defined in "Common Components of Application Messages"
InstrmtGrp	[0..*]	Group	
SettlPrice	[0..1]	Price	Settlement Price
PriorSettlPrice	[0..1]	Price	Prior Settlement Price
StandardTrailer	[1..1]	Component	

4 Advertisement

Category: Indication

4.1 Message Functionality

Advertisement messages are used to announce completed transactions. The advertisement message can be transmitted in various transaction types; NEW, CANCEL and REPLACE. All message types other than NEW modify the state of a previously transmitted advertisement identified in AdvRefID.

4.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = 7
AdvId	[1..1]	String	
AdvTransType	[1..1]	CodeSet	
AdvRefID	[0..1]	String	Required for Cancel and Replace AdvTransType messages
Instrument	[1..1]	Component	Insert here the set of "Instrument" (symbology) fields defined in "Common Components of Application Messages"
InstrumentExtension	[0..1]	Component	
FinancingDetails	[0..1]	Component	
InstrmtLegGrp	[0..*]	Group	Number of legs. Identifies a Multi-leg Execution if present and non-zero.
UndInstrmtGrp	[0..*]	Group	Number of underlyings
RelatedInstrumentGrp	[0..*]	Group	
AdvSide	[1..1]	CodeSet	
Quantity	[1..1]	Qty	
QtyType	[0..1]	CodeSet	
Price	[0..1]	Price	
Currency	[0..1]	Currency	
CurrencyCodeSource	[0..1]	CodeSet	
TradeDate	[0..1]	LocalMktDate	
TransactTime	[0..1]	UTCTimestamp	
Text	[0..1]	String	

Name	Mult.	Type	Description
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.
URLLink	[0..1]	String	A URL (Uniform Resource Locator) link to additional information (i.e. http://www.XYZ.com/research.html)
LastMkt	[0..1]	Exchange	
TradingSessionID	[0..1]	CodeSet	
TradingSessionSubID	[0..1]	CodeSet	
RoutingGrp	[0..*]	Group	
StandardTrailer	[1..1]	Component	

5 AlgoCertificateReport

Category: Testing

5.1 Message Functionality

AlgoCertificateReport(35=EJ) is a response to the AlgoCertificateRequest(35=EH) to certify an algo. It may also be sent unsolicited without an explicit request message by the party able to provide certificate information for the algo identified in the report message.

5.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType=EJ
AlgoCertificateReportID	[1..1]	String	Unique identifier assigned by sender of this message.
AlgoCertificateRequestID	[0..1]	String	Identifier of the AlgoCertificateRequest(35=EH) this message is responding to.
AlgoCertificateReportTransType	[1..1]	CodeSet	
AlgoCertificateReportType	[0..1]	CodeSet	
AlgoCertificateReportRefID	[0..1]	String	Required for AlgoCertificateReportTransType(3020)=1 (Cancel) or 2 (Replace).
AlgoCertificateID	[1..1]	String	
AlgoCertificateDesc	[0..1]	String	
AlgoCertificateStatus	[1..1]	CodeSet	
Parties	[1..*]	Group	Required to specify the algo for which a certification is reported and the firm using it. Requires the authorized person for AlgoCertificateStatus(3022)=1 (Approved) or 2 (Submitted).
EffectiveTime	[0..1]	UTCTimestamp	Required for AlgoCertificateStatus(3022)=1 (Approved) or 2 (Submitted).
ApprovalTime	[0..1]	UTCTimestamp	Required for AlgoCertificateStatus(3022)=1 (Approved) or 2 (Submitted).
LastUpdateTime	[1..1]	UTCTimestamp	
TransactTime	[0..1]	UTCTimestamp	

Name	Mult.	Type	Description
AlgoTestDesc	[0..1]	String	Required for AlgoCertificateStatus(3022)=1 (Approved) or 2 (Submitted).
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText(355) field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text(58) field in the encoded format specified via the MessageEncoding(347) field.
StrategyParametersGrp	[0..*]	Group	
AlgoSystemModuleGrp	[0..*]	Group	
TestScenarioGrp	[0..*]	Group	
TestSuiteStatus	[0..1]	CodeSet	Overall status across all individual test scenarios defined in TestScenarioGrp.
StandardTrailer	[1..1]	Component	

6 AlgoCertificateReportAck

Category: Testing

6.1 Message Functionality

AlgoCertificateReportAck(35=EK) is used to respond to the AlgoCertificateReport(35=EJ) to acknowledge or reject the report message.

6.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType=EK
AlgoCertificateReportID	[1..1]	String	Identifier of report message assigned by report sender.
AlgoCertificateReportStatus	[1..1]	CodeSet	
AlgoCertificateReportType	[0..1]	CodeSet	
RejectText	[0..1]	String	
EncodedRejectTextLen	[0..1]	Length	Must be set if EncodedRejectText(1665) field is specified and must immediately precede it.
EncodedRejectText	[0..1]	data	Encoded (non-ASCII characters) representation of the RejectText(1328) field in the encoded format specified via the MessageEncoding(347) field.
StandardTrailer	[1..1]	Component	

7 AlgoCertificateRequest

Category: Testing

7.1 Message Functionality

AlgoCertificateRequest(35=EH) is used to request algo testing certificate information for one or more algorithms.

7.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType=EH
AlgoCertificateRequestID	[1..1]	String	Unique identifier assigned by request initiator.
AlgoCertificateRequestTransType	[1..1]	CodeSet	
AlgoCertificateRequestType	[1..1]	CodeSet	
AlgoCertificateRequestRefID	[0..1]	String	Required for AlgoCertificateRequestTransType(3016)=1 (Cancel) or 2 (Replace).
AlgoCertificateID	[0..1]	String	May be used when the certificate identifier is already known to the requesting party. Conditionally required when AlgoCertificateRequestType(3077)=2 (Change certificate status) or 3 (Forward certificate).
AlgoCertificateDesc	[0..1]	String	
AlgoCertificateStatus	[0..1]	CodeSet	May be used to change the status of the certificate.
Parties	[0..*]	Group	May be used to specify the algos and/or venues subject to the request identified by AlgoCertificateRequestType(3077).
TargetParties	[0..*]	Group	May be used to identify a venue to send the certificate to. Requires AlgoCertificateRequestType(3077)=3 (Forward certificate).
TestScenarioGroupID	[0..1]	String	May be used to reference a group of test scenarios to be included in the certificate. Requires AlgoCertificateRequestType(3077)=1 (Generate certificate).

Name	Mult.	Type	Description
TestScenarioGrp	[0..*]	Group	May be used to provide details for the test scenarios to be included in the certificate. Requires AlgoCertificateRequestType(3077)=1 (Generate certificate).
EffectiveTime	[0..1]	UTCTimestamp	May be used to provide the activation time of the certificate to the test system.
ApprovalTime	[0..1]	UTCTimestamp	May be used to provide the approval time of the certificate to the test system.
TransactTime	[1..1]	UTCTimestamp	
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText(355) field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text(58) field in the encoded format specified via the MessageEncoding(347) field.
StandardTrailer	[1..1]	Component	

8 AlgoCertificateRequestAck

Category: Testing

8.1 Message Functionality

AlgoCertificateRequestAck(35=EI) is used to respond to the AlgoCertificateRequest(35=EH) to acknowledge the request and provide status for the request message.

8.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType=EI
AlgoCertificateRequestID	[1..1]	String	Identifier of request assigned by request initiator.
AlgoCertificateRequestType	[1..1]	CodeSet	
AlgoCertificateRequestStatus	[1..1]	CodeSet	
RejectText	[0..1]	String	
EncodedRejectTextLen	[0..1]	Length	Must be set if EncodedRejectText(1665) field is specified and must immediately precede it.
EncodedRejectText	[0..1]	data	Encoded (non-ASCII characters) representation of the RejectText(1328) field in the encoded format specified via the MessageEncoding(347) field.
StandardTrailer	[1..1]	Component	

9 AllocationInstruction

Category: Allocation

9.1 Message Functionality

The AllocationInstruction(35=J) message provides the ability to specify how an order or set of orders should be subdivided amongst one or more accounts.

9.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = J
AllocID	[1..1]	String	Unique identifier for this allocation instruction message
AllocRequestID	[0..1]	String	May be used to link to a previously submitted AllocationInstructionAlertRequest(35=DU) message.
AllocTransType	[1..1]	CodeSet	
AllocType	[1..1]	CodeSet	Specifies the purpose or type of Allocation message
SecondaryAllocID	[0..1]	String	Optional second identifier for this allocation instruction (need not be unique)
RefAllocID	[0..1]	String	Required for AllocTransType = Replace or Cancel
AllocCancReplaceReason	[0..1]	CodeSet	Required for AllocTransType = Replace or Cancel. Gives the reason for replacing or cancelling the allocation instruction
AllocIntermedReqType	[0..1]	CodeSet	Required if AllocType = 8 (Request to Intermediary). Indicates status that is requested to be transmitted to counterparty by the intermediary (i.e. clearing house)
AllocLinkID	[0..1]	String	Can be used to link two different Allocation messages (each with unique AllocID) together, i.e. for F/X "Netting" or "Swaps"
AllocLinkType	[0..1]	CodeSet	Can be used to link two different Allocation messages and identifies the type of link. Required if AllocLinkID is specified.
AllocGroupID	[0..1]	String	Group identifier assigned by the clearinghouse

Name	Mult.	Type	Description
FirmGroupID	[0..1]	String	Group identifier assigned by the firm.
BookingRefID	[0..1]	String	Can be used with AllocType=" Ready-To-Book "
AllocNoOrdersType	[0..1]	CodeSet	Indicates how the orders being booked and allocated by an AllocationInstruction or AllocationReport message are identified, e.g. by explicit definition in the OrdAllocGrp or ExecAllocGrp components, or not identified explicitly.
OrdAllocGrp	[0..*]	Group	Indicates number of orders to be combined for allocation. If order(s) were manually delivered set to 1 (one). Required when AllocNoOrdersType = 1
ExecAllocGrp	[0..*]	Group	Indicates number of individual execution or trade entries. Absence indicates that no individual execution or trade entries are included. Primarily used to support step-outs.
PreviouslyReported	[0..1]	CodeSet	
ReversalIndicator	[0..1]	Boolean	
MatchType	[0..1]	CodeSet	
Side	[1..1]	CodeSet	
Instrument	[1..1]	Component	Insert here the set of "Instrument" (symbology) fields defined in "Common Components of Application Messages". For NDFs fixing date and time can be optionally specified using MaturityDate and MaturityTime.
InstrumentExtension	[0..1]	Component	Insert here the set of "InstrumentExtension" fields defined in "Common Components of Application Messages"
FinancingDetails	[0..1]	Component	Insert here the set of "FinancingDetails" fields defined in "Common Components of Application Messages"
UndInstrmtGrp	[0..*]	Group	
InstrmtLegGrp	[0..*]	Group	
Quantity	[1..1]	Qty	Total quantity (e.g. number of shares) allocated to all accounts, or that is Ready-To-Book
QtyType	[0..1]	CodeSet	
AllocGroupSubQtyID	[0..1]	String	May be used as an alternative to attribute based subgrouping.
LastMkt	[0..1]	Exchange	Market of the executions.
TradeOriginationDate	[0..1]	LocalMktDate	

Name	Mult.	Type	Description
TradingSessionID	[0..1]	CodeSet	
TradingSessionSubID	[0..1]	CodeSet	
PriceType	[0..1]	CodeSet	
PriceQualifierGrp	[0..*]	Group	
AvgPx	[0..1]	Price	For FX orders, should be the "all-in" rate (spot rate adjusted for forward points), expressed in terms of Currency(15). For 3rd party allocations used to convey either basic price or averaged price. Optional for average price allocations in the listed derivatives markets where the central counterparty calculates and manages average price across an allocation group.
AvgParPx	[0..1]	Price	
SpreadOrBenchmarkCurveData	[0..1]	Component	Insert here the set of "SpreadOrBenchmarkCurveData" fields defined in "Common Components of Application Messages"
Currency	[0..1]	Currency	Currency of AvgPx. Should be the currency of the local market or exchange where the trade was conducted.
CurrencyCodeSource	[0..1]	CodeSet	
AvgPxPrecision	[0..1]	int	Absence of this field indicates that default precision arranged by the broker/institution is to be used
OffshoreIndicator	[0..1]	CodeSet	
Parties	[0..*]	Group	Insert here the set of "Parties" (firm identification) fields defined in "Common Components of Application Messages"
TradeDate	[1..1]	LocalMktDate	
TransactTime	[0..1]	UTCTimestamp	Date/time when allocation is generated
SettlType	[0..1]	CodeSet	
SettlDate	[0..1]	LocalMktDate	Takes precedence over SettlType value and conditionally required/omitted for specific SettlType values. Required for NDFs to specify the "value date".
BookingType	[0..1]	CodeSet	Method for booking. Used to provide notification that this is to be booked out as an OTC derivative (e.g. CFD or similar). Absence of this field implies regular booking.

Name	Mult.	Type	Description
GrossTradeAmt	[0..1]	Amt	Expressed in same currency as AvgPx(6). (Quantity(53) * AvgPx(6) or AvgParPx(860)) or sum of (AllocQty(80) * AllocAvgPx(153) or AllocPrice(366)). For Fixed Income, AvgParPx(860) is used when AvgPx(6) is not expressed as "percent of par" price.
Concession	[0..1]	Amt	
TotalTakedown	[0..1]	Amt	
NetMoney	[0..1]	Amt	Expressed in same currency as AvgPx. Sum of AllocNetMoney. For FX, if specified, expressed in terms of Currency(15).
PositionEffect	[0..1]	CodeSet	
AutoAcceptIndicator	[0..1]	Boolean	Indicates if Allocation has been automatically accepted on behalf of the Take-up Firm by the Clearing House
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.
NumDaysInterest	[0..1]	int	Applicable for Convertible Bonds and fixed income
AccruedInterestRate	[0..1]	Percentage	Applicable for Convertible Bonds and fixed income
AccruedInterestAmt	[0..1]	Amt	Applicable for Convertible Bonds and fixed income
TotalAccruedInterestAmt	[0..1]	Amt	
InterestAtMaturity	[0..1]	Amt	
EndAccruedInterestAmt	[0..1]	Amt	For repurchase agreements the accrued interest on termination.
StartCash	[0..1]	Amt	For repurchase agreements the start (dirty) cash consideration
EndCash	[0..1]	Amt	For repurchase agreements the end (dirty) cash consideration
LegalConfirm	[0..1]	CodeSet	
Stipulations	[0..*]	Group	
YieldData	[0..1]	Component	
RegulatoryTradeIDGrp	[0..*]	Group	
TrdRegTimestamps	[0..*]	Group	

Name	Mult.	Type	Description
PositionAmountData	[0..*]	Group	Insert here the set of "Position Amount Data" fields defined in "Common Components of Application Messages"
TotNoAllocs	[0..1]	int	Indicates total number of allocation groups (used to support fragmentation). Must equal the sum of all NoAllocs values across all message fragments making up this allocation instruction. Only required where message has been fragmented.
LastFragment	[0..1]	CodeSet	Indicates whether this is the last fragment in a sequence of message fragments. Only required where message has been fragmented.
AllocGrp	[0..*]	Group	Conditionally required except when AllocTransType(71) = 2 (Cancel), or when AllocType(626) = 5 (Ready-To-Book single order) or 7 (Warehouse instruction).
AvgPxIndicator	[0..1]	CodeSet	Indicates if an allocation is to be average priced. Is also used to indicate if average price allocation group is complete or incomplete.
AvgPxGroupID	[0..1]	String	Firm designated group identifier for average pricing
ClearingBusinessDate	[0..1]	LocalMktDate	Indicates Clearing Business Date for which transaction will be settled.
TrdType	[0..1]	CodeSet	Indicates trade type of allocation. May be used as an alternative to AllocGroupSubQtyID(2974) for subgrouping.
TrdSubType	[0..1]	CodeSet	Indicates trade subtype of allocation.
SecondaryTrdType	[0..1]	CodeSet	
TertiaryTrdType	[0..1]	CodeSet	
TradePublishIndicator	[0..1]	CodeSet	May be used as an alternative to AllocGroupSubQtyID(2974) for subgrouping.
CustOrderHandlingInst	[0..1]	CodeSet	May be used as an alternative to AllocGroupSubQtyID(2974) for subgrouping.
TradeContinuation	[0..1]	CodeSet	
TradeContinuationText	[0..1]	String	
EncodedTradeContinuationTextLen	[0..1]	Length	Must be set if EncodedTradeContinuationText(2371) field is specified and must immediately precede it.

Name	Mult.	Type	Description
EncodedTradeContinuationText	[0..1]	data	Encoded (non-ASCII characters) representation of the TradeContinuationText(2374) field in the encoded format specified via the MessageEncoding(347) field.
CustOrderCapacity	[0..1]	CodeSet	Indicates CTI of original trade marked for allocation.
TradeInputSource	[0..1]	String	Indicates input source of original trade marked for allocation.
MultiLegReportingType	[0..1]	CodeSet	Indicates MultiLegReportType of original trade marked for allocation.
MessageEventSource	[0..1]	String	Used to identify the event or source which gave rise to a message.
RndPx	[0..1]	Price	Specifies the rounded price to quoted precision.
RateSource	[0..*]	Group	
VenueType	[0..1]	CodeSet	Used to identify on what kind of venue the trade originated when communicating with a party that may not have access to all trade details, e.g. a clearing organization.
RefRiskLimitCheckID	[0..1]	String	Conditionally required when RefRiskLimitCheckIDType(2335) is specified.
RefRiskLimitCheckIDType	[0..1]	CodeSet	Conditionally required when RefRiskLimitCheckID(2334) is specified.
RiskLimitCheckStatus	[0..1]	CodeSet	
StandardTrailer	[1..1]	Component	

10 AllocationInstructionAck

Category: Allocation

10.1 Message Functionality

In versions of FIX prior to version 4.4, this message was known as the Allocation ACK message.

The Allocation Instruction Ack message is used to acknowledge the receipt of and provide status for an Allocation Instruction message.

10.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = P
AllocID	[1..1]	String	
AllocRequestID	[0..1]	String	May be used to link to a previously submitted AllocationInstructionAlertRequest(35=DU) message.
Instrument	[0..1]	Component	
Parties	[0..*]	Group	
SecondaryAllocID	[0..1]	String	Optional second identifier for the allocation instruction being acknowledged (need not be unique)
AllocGroupID	[0..1]	String	Group identifier assigned by the clearinghouse
FirmGroupID	[0..1]	String	Firm assigned entity identifier for the allocation
AvgPxGroupID	[0..1]	String	Firm designated group identifier for average pricing
TradeDate	[0..1]	LocalMktDate	
TransactTime	[0..1]	UTCTimestamp	Date/Time Allocation Instruction Ack generated
AllocStatus	[1..1]	CodeSet	Denotes the status of the allocation instruction; received (but not yet processed), rejected (at block or account level) or accepted (and processed).
AllocRejCode	[0..1]	CodeSet	Required for AllocStatus = 1 (block level reject) and for AllocStatus 2 (account level reject) if the individual accounts and reject reasons are not provided in this message
AllocType	[0..1]	CodeSet	

Name	Mult.	Type	Description
AllocIntermedReqType	[0..1]	CodeSet	Required if AllocType = 8 (Request to Intermediary). Indicates status that is requested to be transmitted to counterparty by the intermediary (i.e. clearing house)
MatchStatus	[0..1]	CodeSet	Denotes whether the financial details provided on the Allocation Instruction were successfully matched.
Text	[0..1]	String	Can include explanation for AllocRejCode = 7 (other)
EncodedTextLen	[0..1]	Length	Must be set if EncodedText(355) field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text(58) field in the encoded format specified via the MessageEncoding(347) field.
RejectText	[0..1]	String	
EncodedRejectTextLen	[0..1]	Length	Must be set if EncodedRejectText(1665) field is specified and must immediately precede it.
EncodedRejectText	[0..1]	data	Encoded (non-ASCII characters) representation of the RejectText(1328) field in the encoded format specified via the MessageEncoding(347) field.
RegulatoryTradeIDGrp	[0..*]	Group	
AllocAckGrp	[0..*]	Group	This repeating group is optionally used for messages with AllocStatus = 2 (account level reject) to provide details of the individual accounts that caused the rejection, together with reject reasons. This group should not be populated when AllocStatus has any other value. Indicates number of allocation groups to follow.
StandardTrailer	[1..1]	Component	

11 AllocationInstructionAlert

Category: Allocation

11.1 Message Functionality

This message is used in a 3-party allocation model (buy-side and sell-side using a central clearing entity) where notification of group creation and group updates to counterparties is needed. The message will also carry trade information that comprised the group to the counterparties.

11.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = BM
AllocID	[1..1]	String	Unique identifier for this allocation instruction alert message
AllocTransType	[1..1]	CodeSet	
AllocType	[1..1]	CodeSet	Specifies the purpose or type of Allocation message
AllocRequestID	[0..1]	String	Identifier of the request this message is responding to when responding to an AllocationInstructionAlertRequest(35=DU).
SecondaryAllocID	[0..1]	String	Optional second identifier for this allocation instruction (need not be unique)
RefAllocID	[0..1]	String	Required for AllocTransType = Replace or Cancel
AllocCancReplaceReason	[0..1]	CodeSet	Required for AllocTransType = Replace or Cancel. Gives the reason for replacing or cancelling the allocation instruction
AllocIntermedReqType	[0..1]	CodeSet	Required if AllocType = 8 (Request to Intermediary). Indicates status that is requested to be transmitted to counterparty by the intermediary (i.e. clearing house)
AllocLinkID	[0..1]	String	Can be used to link two different Allocation messages (each with unique AllocID) together, i.e. for F/X "Netting" or "Swaps"
AllocLinkType	[0..1]	CodeSet	Can be used to link two different Allocation messages and identifies the type of link. Required if AllocLinkID is specified.

Name	Mult.	Type	Description
AllocGroupID	[0..1]	String	Group identifier assigned by the clearinghouse
FirmGroupID	[0..1]	String	Firm assigned entity identifier for the allocation
BookingRefID	[0..1]	String	Can be used with AllocType=" Ready-To-Book "
AllocNoOrdersType	[0..1]	CodeSet	Indicates how the orders being booked and allocated by an Allocation Instruction or Allocation Report message are identified, e.g. by explicit definition in the OrdAllocGrp or ExecAllocGrp components , or not identified explicitly.
OrdAllocGrp	[0..*]	Group	Indicates number of orders to be combined for allocation. If order(s) were manually delivered set to 1 (one).Required when AllocNoOrdersType = 1
ExecAllocGrp	[0..*]	Group	Indicates number of individual execution or trade entries. Absence indicates that no individual execution or trade entries are included. Primarily used to support step-outs.
PreviouslyReported	[0..1]	CodeSet	
ReversalIndicator	[0..1]	Boolean	
MatchType	[0..1]	CodeSet	
Side	[1..1]	CodeSet	
Instrument	[1..1]	Component	Insert here the set of "Instrument" (symbology) fields defined in "common components of application messages"
InstrumentExtension	[0..1]	Component	Insert here the set of "InstrumentExtension" fields defined in "common components of application messages"
FinancingDetails	[0..1]	Component	Insert here the set of "FinancingDetails" fields defined in "common components of application messages"
UndInstrmtGrp	[0..*]	Group	
InstrmtLegGrp	[0..*]	Group	

Name	Mult.	Type	Description
Quantity	[0..1]	Qty	When not using allocation groups, this is the total quantity (e.g. number of shares) allocated to all accounts, or that is Ready-To-Book. When using allocation groups, this is the quantity added or removed when trades are added to or removed from an allocation group. To remove quantity from the allocation group a negative value is specified in Quantity(53). When the allocation group quantity is unchanged, such as when AllocType(626) changes from 12(Incomplete group) to 13(Complete group) , the value for Quantity(53) should be zero (0).
QtyType	[0..1]	CodeSet	
AllocGroupQuantity	[0..1]	Qty	
AllocGroupRemainingQuantity	[0..1]	Qty	
AllocGroupSubQtyGrp	[0..*]	Group	
GroupAmount	[0..1]	Amt	
GroupRemainingAmount	[0..1]	Amt	
LastMkt	[0..1]	Exchange	Market of the executions.
TradeOriginationDate	[0..1]	LocalMktDate	
TradingSessionID	[0..1]	CodeSet	
TradingSessionSubID	[0..1]	CodeSet	
PriceType	[0..1]	CodeSet	
PriceQualifierGrp	[0..*]	Group	
AvgPx	[0..1]	Price	For F/X orders, should be the "all-in" rate (spot rate adjusted for forward points). For 3rd party allocations used to convey either basic price or averaged price. Optional for average price allocations in the listed derivatives markets where the central counterparty calculates and manages average price across an allocation group.
AvgParPx	[0..1]	Price	
HighPx	[0..1]	Price	Maybe used to indicate the highest price within the specified allocation group.
LowPx	[0..1]	Price	Maybe used to indicate the lowest price within the specified allocation group.
SpreadOrBenchmarkCurveData	[0..1]	Component	Insert here the set of "SpreadOrBenchmarkCurveData" fields defined in "common components of application messages"

Name	Mult.	Type	Description
Currency	[0..1]	Currency	Currency of AvgPx. Should be the currency of the local market or exchange where the trade was conducted.
CurrencyCodeSource	[0..1]	CodeSet	
AvgPxPrecision	[0..1]	int	Absence of this field indicates that default precision arranged by the broker/institution is to be used
Parties	[0..*]	Group	Insert here the set of "Parties" (firm identification) fields defined in "common components of application messages"
TradeDate	[1..1]	LocalMktDate	
TransactTime	[0..1]	UTCTimestamp	Date/time when allocation is generated
AllocStatus	[0..1]	CodeSet	Identifies status of allocation.
SettlType	[0..1]	CodeSet	
SettlDate	[0..1]	LocalMktDate	Takes precedence over SettlType value and conditionally required/omitted for specific SettlType values.
BookingType	[0..1]	CodeSet	Method for booking. Used to provide notification that this is to be booked out as an OTC derivative (e.g. CFD or similar). Absence of this field implies regular booking.
GrossTradeAmt	[0..1]	Amt	Expressed in same currency as AvgPx. Sum of (AllocQty * AllocAvgPx or AllocPrice).
Concession	[0..1]	Amt	
TotalTakedown	[0..1]	Amt	
NetMoney	[0..1]	Amt	Expressed in same currency as AvgPx. Sum of AllocNetMoney.
PositionEffect	[0..1]	CodeSet	
AutoAcceptIndicator	[0..1]	Boolean	Indicates if Allocation has been automatically accepted on behalf of the Carry Firm by the Clearing House
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.
NumDaysInterest	[0..1]	int	Applicable for Convertible Bonds and fixed income

Name	Mult.	Type	Description
AccruedInterestRate	[0..1]	Percentage	Applicable for Convertible Bonds and fixed income
AccruedInterestAmt	[0..1]	Amt	Applicable for Convertible Bonds and fixed income (REMOVED FROM THIS LOCATION AS OF FIX 4.4, REPLACED BY AllocAccruedInterest)
TotalAccruedInterestAmt	[0..1]	Amt	(Deprecated) use AccruedInterestAmt Sum of AccruedInterestAmt within repeating group.
InterestAtMaturity	[0..1]	Amt	
EndAccruedInterestAmt	[0..1]	Amt	For repurchase agreements the accrued interest on termination.
StartCash	[0..1]	Amt	For repurchase agreements the start (dirty) cash consideration
EndCash	[0..1]	Amt	For repurchase agreements the end (dirty) cash consideration
LegalConfirm	[0..1]	CodeSet	
Stipulations	[0..*]	Group	
YieldData	[0..1]	Component	
PositionAmountData	[0..*]	Group	Insert here here the set of "Position Amount Data" fields defined in "Common Components of Application Messages"
TotNoAllocs	[0..1]	int	Indicates total number of allocation groups (used to support fragmentation). Must equal the sum of all NoAllocs values across all message fragments making up this allocation instruction. Only required where message has been fragmented.
LastFragment	[0..1]	CodeSet	Indicates whether this is the last fragment in a sequence of message fragments. Only required where message has been fragmented.
AllocGrp	[0..*]	Group	Indicates number of allocation groups to follow. Not required for AllocTransType=Cancel. Not required for AllocType="Ready-To-Book" or "Warehouse instruction".
AvgPxIndicator	[0..1]	CodeSet	Indicates if an allocation is to be average priced. Is also used to indicate if average price allocation group is complete or incomplete.
AvgPxGroupID	[0..1]	String	Firm designated group identifier for average pricing.
ClearingBusinessDate	[0..1]	LocalMktDate	Indicates Clearing Business Date for which transaction will be settled.
TrdType	[0..1]	CodeSet	Indicates trade type of allocation.

Name	Mult.	Type	Description
TrdSubType	[0..1]	CodeSet	Indicates trade subtype of allocation.
SecondaryTrdType	[0..1]	CodeSet	
TertiaryTrdType	[0..1]	CodeSet	
CustOrderCapacity	[0..1]	CodeSet	Indicates CTI of original trade marked for allocation.
TradeInputSource	[0..1]	String	Indicates input source of original trade marked for allocation.
MultiLegReportingType	[0..1]	CodeSet	Indicates MultiLegReportType of original trade marked for allocation.
MessageEventSource	[0..1]	String	Used to identify the event or source which gave rise to a message.
RndPx	[0..1]	Price	Specifies the rounded price to quoted precision.
CustOrderHandlingInst	[0..1]	CodeSet	
OrderHandlingInstSource	[0..1]	CodeSet	
StandardTrailer	[1..1]	Component	

12 AllocationInstructionAlertRequest

Category: Allocation

12.1 Message Functionality

This message is used in a clearinghouse 3-party allocation model to request for AllocationInstructionAlert(35=BM) from the clearinghouse. The request may be used to obtain a one-time notification of the status of an allocation group.

12.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType(35)=DU
AllocRequestID	[0..1]	String	Unique identifier for this message. If used, other allocation messages may link to the request through this field.
AllocGroupID	[0..1]	String	
AvgPxGroupID	[0..1]	String	
TradeDate	[0..1]	LocalMktDate	
Parties	[0..*]	Group	
StandardTrailer	[1..1]	Component	

13 AllocationInstructionAlertRequestAck

Category: Allocation

13.1 Message Functionality

This message is used in a clearinghouse 3-party allocation model to acknowledge a AllocationInstructionAlertRequest(35=DU) message for an AllocationInstructionAlert(35=BM) message from the clearinghouse.

13.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType=DV
AllocRequestID	[1..1]	String	Used when responding to an AllocationInstructionAlertRequest(35=DU).
AllocRequestStatus	[1..1]	CodeSet	
RejectText	[0..1]	String	May be used to further describe rejection reasons when AllocRequestStatus(2768)=1 (Rejected).
EncodedRejectTextLen	[0..1]	Length	Must be set if EncodedRejectText(1665) field is specified and must immediately precede it.
EncodedRejectText	[0..1]	data	Encoded (non-ASCII characters) representation of the RejectText(1328) field in the encoded format specified via the MessageEncoding(347) field.
StandardTrailer	[1..1]	Component	

14 AllocationReport

Category: Allocation

14.1 Message Functionality

Sent from sell-side to buy-side, sell-side to 3rd-party or 3rd-party to buy-side, the AllocationReport(35=AS) message (Claim) provides account breakdown of an order or set of orders plus any additional follow-up front-office information developed post-trade during the trade allocation, matching and calculation phase.

14.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = AS
AllocReportID	[1..1]	String	Unique identifier for this message
AllocID	[0..1]	String	
AllocRequestID	[0..1]	String	May be used to link to a previously submitted AllocationInstructionAlertRequest(35=DU).
AllocTransType	[1..1]	CodeSet	
AllocReportRefID	[0..1]	String	Required for AllocTransType = Replace or Cancel
AllocCancReplaceReason	[0..1]	CodeSet	Required for AllocTransType = Replace or Cancel. Gives the reason for replacing or cancelling the allocation report
SecondaryAllocID	[0..1]	String	Optional second identifier for this allocation instruction (need not be unique)
AllocGroupID	[0..1]	String	Group identifier assigned by the clearinghouse
PreviousAllocGroupID	[0..1]	String	May be used to identify the previous AllocGroupID(1730) being changed by this message when AllocGroupStatus(2767)=3 (Changed).
GroupAmount	[0..1]	Amt	
AllocGroupStatus	[0..1]	CodeSet	
FirmGroupID	[0..1]	String	Firm assigned entity identifier for the allocation
AllocReportType	[1..1]	CodeSet	Specifies the purpose or type of Allocation Report message
AllocStatus	[1..1]	CodeSet	

Name	Mult.	Type	Description
AllocRejCode	[0..1]	CodeSet	Required for AllocStatus = 1 (rejected)
RefAllocID	[0..1]	String	Required for AllocTransType = Replace or Cancel
AllocReversalStatus	[0..1]	CodeSet	Can be used for reporting on status of reversal transaction when AllocReportType(794) is 18 (Alleged reversal) or 17 (Reversal).
AllocIntermedReqType	[0..1]	CodeSet	Required if AllocReportType = 8 (Request to Intermediary). Indicates status that is requested to be transmitted to counterparty by the intermediary (i.e. clearing house)
AllocLinkID	[0..1]	String	Can be used to link two different Allocation messages (each with unique AllocID) together, i.e. for F/X "Netting" or "Swaps"
AllocLinkType	[0..1]	CodeSet	Can be used to link two different Allocation messages and identifies the type of link. Required if AllocLinkID is specified.
BookingRefID	[0..1]	String	
ClearingBusinessDate	[0..1]	LocalMktDate	Indicates Clearing Business Date for which transaction will be settled.
TrdType	[0..1]	CodeSet	Indicates trade type of allocation.
TrdSubType	[0..1]	CodeSet	Indicates trade subtype of allocation.
SecondaryTrdType	[0..1]	CodeSet	
TertiaryTrdType	[0..1]	CodeSet	
TradeContinuation	[0..1]	CodeSet	
TradeContinuationText	[0..1]	String	
EncodedTradeContinuationTextLen	[0..1]	Length	Must be set if EncodedTradeContinuationText(2371) field is specified and must immediately precede it.
EncodedTradeContinuationText	[0..1]	data	Encoded (non-ASCII characters) representation of the TradeContinuationText(2374) field in the encoded format specified via the MessageEncoding(347) field.
MultiLegReportingType	[0..1]	CodeSet	Indicates MultiLegReportType of original trade marked for allocation.
CustOrderCapacity	[0..1]	CodeSet	Indicates CTI of original trade marked for allocation.
TradeInputSource	[0..1]	String	Indicates input source of original trade marked for allocation.
RndPx	[0..1]	Price	Specifies the rounded price to quoted precision.

Name	Mult.	Type	Description
MessageEventSource	[0..1]	String	Used to identify the event or source which gave rise to a message.
TradeInputDevice	[0..1]	String	Specific device number, terminal number or station where trade was entered
AvgPxIndicator	[0..1]	CodeSet	Indicates if an allocation is to be average priced. Is also used to indicate if average price allocation group is complete or incomplete.
AvgPxGroupID	[0..1]	String	Firm designated group identifier for average pricing
AllocNoOrdersType	[0..1]	CodeSet	Indicates how the orders being booked and allocated by an AllocationInstruction or AllocationReport message are identified, e.g. by explicit definition in the OrdAllocGrp or ExecAllocGrp components, or not identified explicitly.
OrdAllocGrp	[0..*]	Group	Indicates number of orders to be combined for allocation. If order(s) were manually delivered set to 1 (one). Required when AllocNoOrdersType = 1
ExecAllocGrp	[0..*]	Group	Indicates number of individual execution or trade entries. Absence indicates that no individual execution or trade entries are included. Primarily used to support step-outs.
PreviouslyReported	[0..1]	CodeSet	
ReversalIndicator	[0..1]	Boolean	
MatchType	[0..1]	CodeSet	
Side	[1..1]	CodeSet	
Instrument	[1..1]	Component	Insert here the set of "Instrument" (symbology) fields defined in "Common Components of Application Messages". For NDFs, fixing date (specified in MaturityDate(541)) is required. Fixing time (specified in MaturityTime(1079)) is optional.
InstrumentExtension	[0..1]	Component	Insert here the set of "InstrumentExtension" fields defined in "Common Components of Application Messages"
FinancingDetails	[0..1]	Component	Insert here the set of "FinancingDetails" fields defined in "Common Components of Application Messages"
UndInstrmtGrp	[0..*]	Group	
InstrmtLegGrp	[0..*]	Group	

Name	Mult.	Type	Description
Quantity	[1..1]	Qty	Total quantity (e.g. number of shares) allocated to all accounts, or that is Ready-To-Book
QtyType	[0..1]	CodeSet	
AllocGroupQuantity	[0..1]	Qty	
AllocGroupRemainingQuantity	[0..1]	Qty	
LastMkt	[0..1]	Exchange	Market of the executions.
TradeOriginationDate	[0..1]	LocalMktDate	
TradingSessionID	[0..1]	CodeSet	
TradingSessionSubID	[0..1]	CodeSet	
PriceType	[0..1]	CodeSet	
PriceQualifierGrp	[0..*]	Group	
AvgPx	[1..1]	Price	For FX orders, should be the "all-in" rate (spot rate adjusted for forward points), expressed in terms of Currency(15).
AvgParPx	[0..1]	Price	
SpreadOrBenchmarkCurveData	[0..1]	Component	Insert here the set of "SpreadOrBenchmarkCurveData" fields defined in "Common Components of Application Messages"
Currency	[0..1]	Currency	Currency of AvgPx. Should be the currency of the local market or exchange where the trade was conducted.
CurrencyCodeSource	[0..1]	CodeSet	
AvgPxPrecision	[0..1]	int	Absence of this field indicates that default precision arranged by the broker/institution is to be used
Parties	[0..*]	Group	Insert here the set of "Parties" (firm identification) fields defined in "Common Components of Application Messages"
TradeDate	[1..1]	LocalMktDate	
TransactTime	[0..1]	UTCTimestamp	Date/time when allocation is generated
SettlType	[0..1]	CodeSet	
SettlDate	[0..1]	LocalMktDate	Takes precedence over SettlType value and conditionally required/omitted for specific SettlType values. Required for NDFs to specify the "value date".

Name	Mult.	Type	Description
BookingType	[0..1]	CodeSet	Method for booking. Used to provide notification that this is to be booked out as an OTC derivative (e.g. CFD or similar). Absence of this field implies regular booking.
GrossTradeAmt	[0..1]	Amt	Expressed in same currency as AvgPx(6). (Quantity(53) * AvgPx(6) or AvgParPx(860)) or sum of (AllocQty(80) * AllocAvgPx(153) or AllocPrice(366)). For Fixed Income, AvgParPx(860) is used when AvgPx(6) is not expressed as "percent of par" price.
Concession	[0..1]	Amt	
TotalTakedown	[0..1]	Amt	
NetMoney	[0..1]	Amt	Expressed in same currency as AvgPx. Sum of AllocNetMoney. For FX expressed in terms of Currency(15).
PositionEffect	[0..1]	CodeSet	
AutoAcceptIndicator	[0..1]	Boolean	Indicates if Allocation has been automatically accepted on behalf of the Carry Firm by the Clearing House
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.
RejectText	[0..1]	String	
EncodedRejectTextLen	[0..1]	Length	Must be set if EncodedRejectText(1665) field is specified and must immediately precede it.
EncodedRejectText	[0..1]	data	Encoded (non-ASCII characters) representation of the RejectText(1328) field in the encoded format specified via the MessageEncoding(347) field.
NumDaysInterest	[0..1]	int	Applicable for Convertible Bonds and fixed income
AccruedInterestRate	[0..1]	Percentage	Applicable for Convertible Bonds and fixed income
AccruedInterestAmt	[0..1]	Amt	Sum of AllocAccruedInterestAmt within repeating group.
TotalAccruedInterestAmt	[0..1]	Amt	
InterestAtMaturity	[0..1]	Amt	
EndAccruedInterestAmt	[0..1]	Amt	For repurchase agreements the accrued interest on termination.

Name	Mult.	Type	Description
StartCash	[0..1]	Amt	For repurchase agreements the start (dirty) cash consideration
EndCash	[0..1]	Amt	For repurchase agreements the end (dirty) cash consideration
LegalConfirm	[0..1]	CodeSet	
Stipulations	[0..*]	Group	
YieldData	[0..1]	Component	
RegulatoryTradeIDGrp	[0..*]	Group	
TrdRegTimestamps	[0..*]	Group	
PositionAmountData	[0..*]	Group	Insert here here the set of "Position Amount Data" fields defined in "Common Components of Application Messages"
CustOrderHandlingInst	[0..1]	CodeSet	
OrderHandlingInstSource	[0..1]	CodeSet	
TotNoAllocs	[0..1]	int	Indicates total number of allocation groups (used to support fragmentation). Must equal the sum of all NoAllocs values across all message fragments making up this allocation instruction. Only required where message has been fragmented.
LastFragment	[0..1]	CodeSet	Indicates whether this is the last fragment in a sequence of message fragments. Only required where message has been fragmented.
AllocGrp	[0..*]	Group	Conditionally required except when AllocTransType(71) = 2 (Cancel).
RateSource	[0..*]	Group	
VenueType	[0..1]	CodeSet	Used to identify on what kind of venue the trade originated when communicating with a party that may not have access to all trade details, e.g. a clearing organization.
RefRiskLimitCheckID	[0..1]	String	Conditionally required when RefRiskLimitCheckIDType(2335) is specified.
RefRiskLimitCheckIDType	[0..1]	CodeSet	Conditionally required when RefRiskLimitCheckID(2334) is specified.
RiskLimitCheckStatus	[0..1]	CodeSet	
StandardTrailer	[1..1]	Component	

15 AllocationReportAck

Category: Allocation

15.1 Message Functionality

The Allocation Report Ack message is used to acknowledge the receipt of and provide status for an Allocation Report message.

15.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = AT
AllocReportID	[1..1]	String	
AllocID	[0..1]	String	
AllocRequestID	[0..1]	String	May be used to link to a previously submitted AllocationInstructionAlertRequest(35=DU) message.
ClearingBusinessDate	[0..1]	LocalMktDate	Indicates Clearing Business Date for which transaction will be settled.
AvgPxIndicator	[0..1]	CodeSet	Indicates if an allocation is to be average priced. Is also used to indicate if average price allocation group is complete or incomplete.
Quantity	[0..1]	Qty	
AllocTransType	[0..1]	CodeSet	
Instrument	[0..1]	Component	
Parties	[0..*]	Group	
SecondaryAllocID	[0..1]	String	Optional second identifier for the allocation report being acknowledged (need not be unique)
AllocGroupID	[0..1]	String	Group identifier assigned by the clearinghouse
FirmGroupID	[0..1]	String	Firm assigned entity identifier for the allocation
AvgPxGroupID	[0..1]	String	Firm designated group identifier for average pricing
TradeDate	[0..1]	LocalMktDate	
TransactTime	[0..1]	UTCTimestamp	Date/Time Allocation Report Ack generated

Name	Mult.	Type	Description
AllocStatus	[0..1]	CodeSet	Denotes the status of the allocation report; received (but not yet processed), rejected (at block or account level) or accepted (and processed). AllocStatus will be conditionally required in a 2-party model when used by a counterparty to convey a change in status. It will be optional in a 3-party model in which only the central counterparty may issue the status of an allocation
AllocRejCode	[0..1]	CodeSet	Required for AllocStatus = 1 (block level reject) and for AllocStatus 2 (account level reject) if the individual accounts and reject reasons are not provided in this message
AllocReportType	[0..1]	CodeSet	
AllocIntermedReqType	[0..1]	CodeSet	Required if AllocReportType = 8 (Request to Intermediary). Indicates status that is requested to be transmitted to counterparty by the intermediary (i.e. clearing house)
MatchStatus	[0..1]	CodeSet	Denotes whether the financial details provided on the Allocation Report were successfully matched.
CustOrderHandlingInst	[0..1]	CodeSet	
OrderHandlingInstSource	[0..1]	CodeSet	
Text	[0..1]	String	Can include explanation for AllocRejCode = 7 (other)
EncodedTextLen	[0..1]	Length	Must be set if EncodedText(355) field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text(58) field in the encoded format specified via the MessageEncoding(347) field.
RejectText	[0..1]	String	
EncodedRejectTextLen	[0..1]	Length	EncodedRejectText(1665) field is specified and must immediately precede it.
EncodedRejectText	[0..1]	data	Encoded (non-ASCII characters) representation of the RejectText(1328) field in the encoded format specified via the MessageEncoding(347) field.
RegulatoryTradeIDGrp	[0..*]	Group	

Name	Mult.	Type	Description
AllocAckGrp	[0..*]	Group	This repeating group is optionally used for messages with AllocStatus = 2 (account level reject) to provide details of the individual accounts that caused the rejection, together with reject reasons. This group should not be populated where AllocStatus has any other value. Indicates number of allocation groups to follow.
StandardTrailer	[1..1]	Component	

16 ApplicationMessageReport

Category: Application

16.1 Message Functionality

This message is used for three different purposes: to reset the ApplSeqNum (1181) of a specified ApplID (1180), to indicate that the last message has been sent for a particular ApplID, or as a keep-alive mechanism for ApplIDs with infrequent message traffic.

16.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = BY
ApplReportID	[1..1]	String	Identifier for the Application Message Report
ApplReqID	[0..1]	String	If the application message report is generated in response to an ApplicationMessageRequest(MsgType=BW), then this tag contains the ApplReqID(1346) of that request.
ApplReportType	[1..1]	CodeSet	Type of report
ApplIDReportGrp	[0..*]	Group	
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	
EncodedText	[0..1]	data	
StandardTrailer	[1..1]	Component	

17 ApplicationMessageRequest

Category: Application

17.1 Message Functionality

This message is used to request a retransmission of a set of one or more messages generated by the application specified in RefApplID (1355).

17.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = BW
ApplReqID	[1..1]	String	Unique identifier for request
ApplReqType	[1..1]	CodeSet	Type of Application Message Request being made
ApplIDRequestGrp	[0..*]	Group	
Parties	[0..*]	Group	
Text	[0..1]	String	Allows user to provide reason for request
EncodedTextLen	[0..1]	Length	
EncodedText	[0..1]	data	
StandardTrailer	[1..1]	Component	

18 ApplicationMessageRequestAck

Category: Application

18.1 Message Functionality

This message is used to acknowledge an Application Message Request providing a status on the request (i.e. whether successful or not). This message does not provide the actual content of the messages to be resent.

18.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = BX
ApplResponseID	[1..1]	String	Identifier for the Application Message Request Ack
ApplReqID	[0..1]	String	Identifier of the request associated with this ACK message
ApplReqType	[0..1]	CodeSet	
ApplResponseType	[0..1]	CodeSet	
ApplTotalMessageCount	[0..1]	int	Total number of messages included in transmission
ApplIDRequestAckGrp	[0..*]	Group	
Parties	[0..*]	Group	
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	
EncodedText	[0..1]	data	
StandardTrailer	[1..1]	Component	

19 AssignmentReport

Category: PositionMaintenance

19.1 Message Functionality

Assignment Reports are sent from a clearing house to counterparties, such as a clearing firm as a result of the assignment process.

19.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = AW
ApplicationSequenceControl	[0..1]	Component	
AsgnRptID	[1..1]	String	Unique identifier for the Assignment report
PosReqID	[0..1]	String	If specified,the identifier of the RequestForPositions(MsgType=AN) to which this message is sent in response.
TotNumAssignmentReports	[0..1]	int	Total Number of Assignment Reports being returned to a firm
LastRptRequested	[0..1]	CodeSet	
Parties	[1..*]	Group	Clearing Organization. Clearing Firm. Contra Clearing Organization. Contra Clearing Firm. Position Account
Account	[0..1]	String	Customer Account
AccountType	[0..1]	CodeSet	Type of account associated with the order (Origin)
Instrument	[0..1]	Component	CFI Code - Market Indicator (col 4) used to indicate Market of Assignment
Currency	[0..1]	Currency	
CurrencyCodeSource	[0..1]	CodeSet	
InstrmtLegGrp	[0..*]	Group	Number of legs that make up the Security
UndInstrmtGrp	[0..*]	Group	Number of legs that make up the Security
PositionQty	[0..*]	Group	Insert here here the set of "PositionQty" fields defined in "Common Components of Application Messages."

Name	Mult.	Type	Description
PositionAmountData	[0..*]	Group	Insert here the set of "PositionAmountData" fields defined in "Common Components of Application Messages."
ThresholdAmount	[0..1]	PriceOffset	
SettlPrice	[0..1]	Price	Settlement Price of Option
SettlPriceType	[0..1]	CodeSet	Values = Final, Theoretical
UnderlyingSettlPrice	[0..1]	Price	Settlement Price of Underlying
PriorSettlPrice	[0..1]	Price	
PositionContingentPrice	[0..1]	Price	
ExpireDate	[0..1]	LocalMktDate	Expiration Date of Option
AssignmentMethod	[0..1]	CodeSet	Method under which assignment was conducted
AssignmentUnit	[0..1]	Qty	Quantity Increment used in performing assignment
OpenInterest	[0..1]	Amt	Open interest that was eligible for assignment
ExerciseMethod	[0..1]	CodeSet	Exercise Method used to in performing assignment. Values = Automatic, Manual
SettlSessID	[0..1]	CodeSet	
SettlSessSubID	[0..1]	String	
ClearingBusinessDate	[1..1]	LocalMktDate	Business date of assignment
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.
StandardTrailer	[1..1]	Component	

20 BidRequest

Category: ProgramTrading

20.1 Message Functionality

The BidRequest Message can be used in one of two ways depending on which market conventions are being followed.

In the "Non disclosed" convention (e.g. US/European model) the BidRequest message can be used to request a bid based on the sector, country, index and liquidity information contained within the message itself. In the "Non disclosed" convention the entry repeating group is used to define liquidity of the program. See " Program/Basket/List Trading" for an example.

In the "Disclosed" convention (e.g. Japanese model) the BidRequest message can be used to request bids based on the ListOrderDetail messages sent in advance of BidRequest message. In the "Disclosed" convention the list repeating group is used to define which ListOrderDetail messages a bid is being sort for and the directions of the required bids.

20.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = k (lowercase)
BidID	[0..1]	String	Required to relate the bid response
ClientBidID	[1..1]	String	
BidRequestTransType	[1..1]	CodeSet	Identifies the Bid Request message transaction type
ListName	[0..1]	String	
TotNoRelatedSym	[1..1]	int	
BidType	[1..1]	CodeSet	e.g. "Non Disclosed", "Disclosed", No Bidding Process
NumTickets	[0..1]	int	Total number of tickets/allocations assuming fully executed
Currency	[0..1]	Currency	Used to represent the currency of monetary amounts.
CurrencyCodeSource	[0..1]	CodeSet	
SideValue1	[0..1]	Amt	Expressed in Currency
SideValue2	[0..1]	Amt	Expressed in Currency

Name	Mult.	Type	Description
BidDescReqGrp	[0..*]	Group	Used if BidType="Non Disclosed"
BidCompReqGrp	[0..*]	Group	Used if BidType="Disclosed"
LiquidityIndType	[0..1]	CodeSet	
WtAverageLiquidity	[0..1]	Percentage	Overall weighted average liquidity expressed as a % of average daily volume
ExchangeForPhysical	[0..1]	CodeSet	
OutMainCntryUIndex	[0..1]	Amt	% value of stocks outside main country in Currency
CrossPercent	[0..1]	Percentage	% of program that crosses in Currency
ProgRptReqs	[0..1]	CodeSet	
ProgPeriodInterval	[0..1]	int	Time in minutes between each ListStatus report sent by SellSide. Zero means don't send status.
IncTaxInd	[0..1]	CodeSet	Net/Gross
ForexReq	[0..1]	CodeSet	Is foreign exchange required
NumBidders	[0..1]	int	Indicates the total number of bidders on the list
TradeDate	[0..1]	LocalMktDate	
BidTradeType	[1..1]	CodeSet	
BasisPxType	[1..1]	CodeSet	
StrikeTime	[0..1]	UTCTimestamp	Used when BasisPxType = "C"
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.
StandardTrailer	[1..1]	Component	

21 BidResponse

Category: ProgramTrading

21.1 Message Functionality

The Bid Response message can be used in one of two ways depending on which market conventions are being followed.

In the "Non disclosed" convention the Bid Response message can be used to supply a bid based on the sector, country, index and liquidity information contained within the corresponding bid request message. See "Program/Basket/List Trading" for an example.

In the "Disclosed" convention the Bid Response message can be used to supply bids based on the List Order Detail messages sent in advance of the corresponding Bid Request message.

21.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = l (lowercase L)
BidID	[0..1]	String	
ClientBidID	[0..1]	String	
BidCompRspGrp	[1..*]	Group	Number of bid repeating groups
StandardTrailer	[1..1]	Component	

22 BusinessMessageReject

Category: BusinessReject

22.1 Message Functionality

The Business Message Reject message can reject an application-level message which fulfills session-level rules and cannot be rejected via any other means. Note if the message fails a session-level rule (e.g. body length is incorrect), a session-level Reject message should be issued.

22.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = j (lowercase)
RefSeqNum	[0..1]	SeqNum	MsgSeqNum of rejected message
RefMsgType	[1..1]	CodeSet	The MsgType of the FIX message being referenced.
RefApplVerID	[0..1]	CodeSet	Recommended when rejecting an application message that does not explicitly provide ApplVerID (1128) on the message being rejected. In this case the value from the DefaultApplVerID(1137) or the default value specified in the NoMsgTypes repeating group on the logon message should be provided.
RefApplExtID	[0..1]	int	Recommended when rejecting an application message that does not explicitly provide ApplExtID(1156) on the rejected message. In this case the value from the DefaultApplExtID(1407) or the default value specified in the NoMsgTypes repeating group on the logon message should be provided.
RefCstmApplVerID	[0..1]	String	Recommended when rejecting an application message that does not explicitly provide CstmApplVerID(1129) on the message being rejected. In this case the value from the DefaultCstmApplVerID(1408) or the default value specified in the NoMsgTypes repeating group on the logon message should be provided.

Name	Mult.	Type	Description
BusinessRejectRefID	[0..1]	String	The value of the business-level "ID" field on the message being referenced. Required unless the corresponding ID field (see list above) was not specified.
BusinessRejectReason	[1..1]	CodeSet	Code to identify reason for a Business Message Reject message.
Text	[0..1]	String	Where possible, message to explain reason for rejection
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.
StandardTrailer	[1..1]	Component	

23 CollateralAssignment

Category: CollateralManagement

23.1 Message Functionality

Used to assign collateral to cover a trading position. This message can be sent unsolicited or in reply to a Collateral Request message.

23.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = AY
CollAsgnID	[1..1]	String	Unique Identifier for collateral assignment
CollReqID	[0..1]	String	Identifier of CollReqID to which the Collateral Assignment is in response
CollAsgnReason	[1..1]	CodeSet	Reason for collateral assignment
CollAsgnTransType	[1..1]	CodeSet	Collateral Transaction Type
CollAsgnRefID	[0..1]	String	Collateral assignment to which this transaction refers
TransactTime	[1..1]	UTCTimestamp	
ExpireTime	[0..1]	UTCTimestamp	For an Initial assignment, time by which a response is expected
Parties	[0..*]	Group	
Account	[0..1]	String	Customer Account
AccountType	[0..1]	CodeSet	Type of account associated with the order (Origin)
ClOrdID	[0..1]	String	Identifier of order for which collateral is required
OrderID	[0..1]	String	Identifier of order for which collateral is required
SecondaryOrderID	[0..1]	String	Identifier of order for which collateral is required
SecondaryClOrdID	[0..1]	String	Identifier of order for which collateral is required
ExecCollGrp	[0..*]	Group	Executions for which collateral is required
TrdCollGrp	[0..*]	Group	Trades for which collateral is required
Instrument	[0..1]	Component	
FinancingDetails	[0..1]	Component	

Name	Mult.	Type	Description
SettlDate	[0..1]	LocalMktDate	Can be used to provide the value date of the collateral transaction where the deposit or withdrawal is for a specific future date.
Quantity	[0..1]	Qty	
QtyType	[0..1]	CodeSet	
Currency	[0..1]	Currency	
CurrencyCodeSource	[0..1]	CodeSet

Stipulations	[0..*]	Group	Insert here the set of "Stipulations" fields defined in "Common Components of Application Messages"
SettlInstructionsData	[0..1]	Component	Insert here the set of "SettlInstructionsData" fields defined in "Common Components of Application Messages"
TradingSessionID	[0..1]	CodeSet	Trading Session in which trade occurred
TradingSessionSubID	[0..1]	CodeSet	Trading Session Subid in which trade occurred
SettlSessID	[0..1]	CodeSet	
SettlSessSubID	[0..1]	String	
WireReference	[0..1]	String	

Name	Mult.	Type	Description
TradeDate	[0..1]	LocalMktDate	
TransactionID	[0..1]	String	The unique transaction entity identifier assigned by counterparty to the transaction receiving this message, if known.
FirmTransactionID	[0..1]	String	The unique transaction entity identifier assigned by the firm sending the CollateralAssignment(35=AY).
ClearingBusinessDate	[0..1]	LocalMktDate	The clearing business date of the collateral assignment.
CollateralRequestLinkID	[0..1]	String	
TotNumCollateralRequests	[0..1]	int	
CollateralRequestNumber	[0..1]	int	
CollateralRequestInstruction	[0..1]	String	Values are custom to a particular implementation and will be maintained externally.
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText(355) field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text(58) field in the encoded format specified via the MessageEncoding(347) field.
StandardTrailer	[1..1]	Component	

24 CollateralInquiry

Category: CollateralManagement

24.1 Message Functionality

Used to inquire for collateral status.

24.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = BB
CollInquiryID	[1..1]	String	Unique identifier for this message.
CollInqQualGrp	[0..*]	Group	Number of qualifiers to inquiry
SubscriptionRequestType	[0..1]	CodeSet	Used to subscribe / unsubscribe for collateral status reports. If the field is absent, the default will be snapshot request only - no subscription.
ResponseTransportType	[0..1]	CodeSet	Ability to specify whether the response to the request should be delivered inband or via pre-arranged out-of-band transport.
ResponseDestination	[0..1]	String	URI destination name. Used if ResponseTransportType is out-of-band.
Parties	[0..*]	Group	
Account	[0..1]	String	Customer Account
AccountType	[0..1]	CodeSet	Type of account associated with the order (Origin)
ClOrdID	[0..1]	String	Identifier of order for which collateral is required

StandardTrailer	[1..1]	Component	

25 CollateralInquiryAck

Category: CollateralManagement

25.1 Message Functionality

Used to respond to a Collateral Inquiry in the following situations:

- When the CollateralInquiry will result in an out of band response (such as a file transfer).
- When the inquiry is otherwise valid but no collateral is found to match the criteria specified on the Collateral Inquiry message.
- When the Collateral Inquiry is invalid based upon the business rules of the counterparty.

25.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = BG
CollInquiryID	[1..1]	String	Identifier for the collateral inquiry to which this message is a reply
CollInquiryStatus	[1..1]	CodeSet	Status of the Collateral Inquiry referenced by CollInquiryID
CollInquiryResult	[0..1]	CodeSet	Result of the Collateral Inquiry referenced by CollInquiryID - specifies any errors or warnings
CollInqQualGrp	[0..*]	Group	Number of qualifiers to inquiry
TotNumReports	[0..1]	int	Total number of reports generated in response to this inquiry
Parties	[0..*]	Group	
Account	[0..1]	String	Customer Account
AccountType	[0..1]	CodeSet	Type of account associated with the order (Origin)
CIOrdID	[0..1]	String	Identifier of order for which collateral is required
OrderID	[0..1]	String	Identifier of order for which collateral is required
SecondaryOrderID	[0..1]	String	Identifier of order for which collateral is required
SecondaryCIOrdID	[0..1]	String	Identifier of order for which collateral is required
ExecCollGrp	[0..*]	Group	Executions for which collateral is required
TrdCollGrp	[0..*]	Group	Trades for which collateral is required

Name	Mult.	Type	Description
Instrument	[0..1]	Component	Insert here the set of "Instrument" (symbology) fields defined in "Common Components of Application Messages".

SettlSessID	[0..1]	CodeSet	
SettlSessSubID	[0..1]	String	
RegulatoryReportType	[0..1]	CodeSet	

Name	Mult.	Type	Description
RegulatoryReportTypeBusinessDate	[0..1]	LocalMktDate	May be used when the business event date differs from when the regulatory report is actually being submitted (typically specified in TrdRegTimestamps component).
ClearingBusinessDate	[0..1]	LocalMktDate	The clearing business date of the report.
WireReference	[0..1]	String	
TradeDate	[0..1]	LocalMktDate	
TransactionID	[0..1]	String	The unique transaction entity identifier assigned by the firm sending the CollateralReport(35=BA).
FirmTransactionID	[0..1]	String	The unique transaction entity identifier assigned by the counterparty to the transaction receiving this message, if known.
FundingSourceGrp	[0..*]	Group	
TransactionAttributeGrp	[0..*]	Group	
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText(355) field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text(58) field in the encoded format specified via the MessageEncoding(347) field.
StandardTrailer	[1..1]	Component	

27 CollateralReportAck

Category: CollateralManagement

27.1 Message Functionality

CollateralReportAck(35=DQ) is used as a response to the CollateralReport(35=BA). It can be used to reject a CollateralReport(35=BA) when the content of the report is invalid based on the business rules of the receiver. The message may also be used to acknowledge receipt of a valid CollateralReport(35=BA).

27.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	
CollRptID	[1..1]	String	Identifier of the CollateralReport(35=BA) being acknowledged.
TransactTime	[0..1]	UTCTimestamp	
CollRptStatus	[1..1]	CodeSet	
CollRptRejectReason	[0..1]	CodeSet	Conditionally required when CollRptStatus(2488) = 2 (Rejected).
RejectText	[0..1]	String	Conditionally required when CollRptStatus(2488) = 2 (Rejected).
EncodedRejectTextLen	[0..1]	Length	Must be set if EncodedRejectText(1665) field is specified and must immediately precede it.
EncodedRejectText	[0..1]	data	Encoded (non-ASCII characters) representation of the RejectText(1328) field in the encoded format specified via the MessageEncoding(347) field.
Parties	[0..*]	Group	
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText(355) field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text(58) field in the encoded format specified via the MessageEncoding(347) field.
StandardTrailer	[1..1]	Component	

28 CollateralRequest

Category: CollateralManagement

28.1 Message Functionality

An initiator that requires collateral from a respondent sends a Collateral Request. The initiator can be either counterparty to a trade in a two party model or an intermediary such as an ATS or clearinghouse in a three party model. A Collateral Assignment is expected as a response to a request for collateral.

28.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = AX
CollReqID	[1..1]	String	Unique identifier for collateral request
CollAsgnReason	[1..1]	CodeSet	Reason collateral assignment is being requested
TransactTime	[1..1]	UTCTimestamp	
ExpireTime	[0..1]	UTCTimestamp	Time until when Respondent has to assign collateral
Parties	[0..*]	Group	
Account	[0..1]	String	Customer Account
AccountType	[0..1]	CodeSet	Type of account associated with the order (Origin)
ClOrdID	[0..1]	String	Identifier of order for which collateral is required
OrderID	[0..1]	String	Identifier of order for which collateral is required
SecondaryOrderID	[0..1]	String	Identifier of order for which collateral is required
SecondaryClOrdID	[0..1]	String	Identifier of order for which collateral is required
ExecCollGrp	[0..*]	Group	Executions for which collateral is required
TrdCollGrp	[0..*]	Group	Trades for which collateral is required
Instrument	[0..1]	Component	Instrument that was traded for which collateral is required
FinancingDetails	[0..1]	Component	Details of the Agreement and Deal
SettlDate	[0..1]	LocalMktDate	
Quantity	[0..1]	Qty	
QtyType	[0..1]	CodeSet

StandardTrailer	[1..1]	Component	

29 CollateralResponse

Category: CollateralManagement

29.1 Message Functionality

Used to respond to a Collateral Assignment message.

29.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = AZ
CollRespID	[1..1]	String	Unique identifier for the collateral response
CollAsgnID	[0..1]	String	Conditionally required when responding to a Collateral Assignment message
CollReqID	[0..1]	String	Identifier of CollReqID to which the Collateral Assignment is in response
CollAsgnReason	[0..1]	CodeSet	Conditionally required when responding to a Collateral Assignment message
CollAsgnTransType	[0..1]	CodeSet	Collateral Transaction Type - not recommended because it causes confusion
CollAsgnRespType	[1..1]	CodeSet	Collateral Assignment Response Type
CollAsgnRejectReason	[0..1]	CodeSet	Conditionally required when CollAsgnRespType(905) = 3 (Rejected).
TransactTime	[1..1]	UTCTimestamp	
CollApplType	[0..1]	CodeSet	
FinancialStatus	[0..1]	CodeSet	Tells whether security has been restricted.
ClearingBusinessDate	[0..1]	LocalMktDate	The clearing business date of the assignment. The date on which the transaction was entered.
Parties	[0..*]	Group	
Account	[0..1]	String	Customer Account
AccountType	[0..1]	CodeSet	Type of account associated with the order (Origin)
ClOrdID	[0..1]	String	Identifier of order for which collateral is required
OrderID	[0..1]	String	Identifier of order for which collateral is required
SecondaryOrderID	[0..1]	String	Identifier of order for which collateral is required
SecondaryClOrdID	[0..1]	String	Identifier of order for which collateral is required

Name	Mult.	Type	Description
ExecCollGrp	[0..*]	Group	Executions for which collateral is required
TrdCollGrp	[0..*]	Group	Trades for which collateral is required
Instrument	[0..1]	Component	
FinancingDetails	[0..1]	Component	
SettlDate	[0..1]	LocalMktDate	Can be used to specify the value date of the collateral transaction where the transaction is for a specific future date (e.g. to be "settled" on a future date).
Quantity	[0..1]	Qty	
QtyType	[0..1]	CodeSet	
Currency	[0..1]	Currency

Name	Mult.	Type	Description
FirmTransactionID	[0..1]	String	The unique transaction entity identifier assigned by the counterparty to the transaction, if known. Echoes the value from CollateralAssignment(35=AY) if provided.
CollateralRequestLinkID	[0..1]	String	
TotNumCollateralRequests	[0..1]	int	
CollateralRequestNumber	[0..1]	int	
CollateralRequestInstruction	[0..1]	String	Values are custom to a particular implementation and will be maintained externally.
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText(355) field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text(58) field in the encoded format specified via the MessageEncoding(347) field.
WarningText	[0..1]	String	Conditionally required when CollAsgnRespType(905) = 5 (Completed with warning).
EncodedWarningTextLen	[0..1]	Length	Must be set if EncodedWarningText(2521) field is specified and must immediately precede it.
EncodedWarningText	[0..1]	data	Encoded (non-ASCII characters) representation of the WarningText(2520) field in the encoded format specified via the MessageEncoding field.
RejectText	[0..1]	String	Conditionally required when CollAsgnRespType(905) = 3 (Rejected).
EncodedRejectTextLen	[0..1]	Length	Must be set if EncodedRejectText(1665) field is specified and must immediately precede it.
EncodedRejectText	[0..1]	data	Encoded (non-ASCII characters) representation of the RejectText(1328) field in the encoded format specified via the MessageEncoding(347) field.
StandardTrailer	[1..1]	Component	

30 Confirmation

Category: Confirmation

30.1 Message Functionality

The Confirmation messages are used to provide individual trade level confirmations from the sell side to the buy side. In versions of FIX prior to version 4.4, this role was performed by the allocation message. Unlike the allocation message, the confirmation message operates at an allocation account (trade) level rather than block level, allowing for the affirmation or rejection of individual confirmations.

30.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = AK
ConfirmID	[1..1]	String	Unique ID for this message
ConfirmRefID	[0..1]	String	Mandatory if ConfirmTransType is Replace or Cancel
ConfirmReqID	[0..1]	String	Only used when this message is used to respond to a confirmation request (to which this ID refers)
ConfirmTransType	[1..1]	CodeSet	New, Cancel or Replace
ConfirmType	[1..1]	CodeSet	Denotes whether this message represents a confirmation or a trade status message
CopyMsgIndicator	[0..1]	Boolean	Denotes whether or not this message represents copy confirmation (or status message). Absence of this field indicates message is not a drop copy.
LegalConfirm	[0..1]	CodeSet	Denotes whether this message represents the legally binding confirmation. Absence of this field indicates message is not a legal confirm.
ConfirmStatus	[1..1]	CodeSet	
MatchStatus	[0..1]	CodeSet	
AffirmStatus	[0..1]	CodeSet	Used to communicate an "affirmed" Confirmation(35=AK) status message (i.e. when ConfirmType(773) = 1 (Status)) to interested parties that need to or should receive such confirmation status message. This field must not be used when sending a Confirmation(35=AK) message that needs to be affirmed.

Name	Mult.	Type	Description
RegulatoryTradeIDGrp	[0..*]	Group	
TradeConfirmationReferenceID	[0..1]	String	
ClearedIndicator	[0..1]	CodeSet	Used to communicate the status of the central clearing workflow.
Parties	[0..*]	Group	Insert here the set of "Parties" (firm identification) fields defined in "Common Components of Application Messages". Required for fixed income. Also to be used in associated with ProcessCode for broker of credit (e.g. for directed brokerage trades). Also to be used to specify party-specific regulatory details (e.g. full legal name of contracting legal entity, registered address, regulatory status, any registration details)
OrdAllocGrp	[0..*]	Group	Indicates number of orders to be combined for allocation. If order(s) were manually delivered set to 1 (one). Required when AllocNoOrdersType = 1
ExecAllocGrp	[0..*]	Group	
AllocID	[0..1]	String	Used to refer to an earlier Allocation Instruction.
SecondaryAllocID	[0..1]	String	Used to refer to an earlier Allocation Instruction via its secondary identifier
IndividualAllocID	[0..1]	String	Used to refer to an allocation account within an earlier Allocation Instruction.
TrdType	[0..1]	CodeSet	
TrdSubType	[0..1]	CodeSet	
SecondaryTrdType	[0..1]	CodeSet	
TradeContinuation	[0..1]	CodeSet	
TradeContinuationText	[0..1]	String	
EncodedTradeContinuationTextLen	[0..1]	Length	Must be set if EncodedTradeContinuationText(2371) field is specified and must immediately precede it.
EncodedTradeContinuationText	[0..1]	data	Encoded (non-ASCII characters) representation of the TradeContinuationText(2374) field in the encoded format specified via the MessageEncoding(347) field.
MatchType	[0..1]	CodeSet	
TransactTime	[1..1]	UTCTimestamp	Represents the time this message was generated
TradeDate	[1..1]	LocalMktDate	

Name	Mult.	Type	Description
TrdRegTimestamps	[0..*]	Group	Time of last execution being confirmed by this message. Use ExecutionTimestamp(2749) in ExecAllocGrp component when there are multiple trades.
Instrument	[1..1]	Component	Insert here the set of "Instrument" (symbology) fields defined in "Common Components of Application Messages"
InstrumentExtension	[0..1]	Component	Insert here the set of "InstrumentExtension" fields defined in "Common Components of Application Messages"
FinancingDetails	[0..1]	Component	Insert here the set of "FinancingDetails" fields defined in "Common Components of Application Messages"
UndInstrmtGrp	[0..*]	Group	
InstrmtLegGrp	[0..*]	Group	
YieldData	[0..1]	Component	If traded on Yield, price must be calculated "to worst" and the <Yield> component block must specify how calculated, redemption date and price (if not par). If traded on Price, the <Yield> component block must specify how calculated - "Worst", and include redemptiondate and price (if not par).
AllocQty	[1..1]	Qty	The quantity being confirmed by this message (this is at a trade level, not block or order level)
QtyType	[0..1]	CodeSet	
Side	[1..1]	CodeSet	
Currency	[0..1]	Currency	
CurrencyCodeSource	[0..1]	CodeSet	
LastMkt	[0..1]	Exchange	
CpctyConfGrp	[1..*]	Group	
AllocAccount	[1..1]	String	Account number for the trade being confirmed by this message
AllocAcctIDSource	[0..1]	CodeSet	
AllocAccountType	[0..1]	CodeSet	
AvgPx	[1..1]	Price	Gross price for the trade being confirmed. Always expressed in percent-of-par for Fixed Income
AvgPxPrecision	[0..1]	int	Absence of this field indicates that default precision arranged by the broker/institution is to be used

Name	Mult.	Type	Description
PriceType	[0..1]	CodeSet	Price type for the AvgPx field
PriceQualifierGrp	[0..*]	Group	
AvgParPx	[0..1]	Price	
SpreadOrBenchmarkCurveData	[0..1]	Component	Insert here the set of "SpreadOrBenchmarkCurveData" fields defined in "Common Components of Application Messages"
ReportedPx	[0..1]	Price	Reported price (may be different to AvgPx in the event of a marked-up or marked-down principal trade)
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	
EncodedText	[0..1]	data	
ProcessCode	[0..1]	CodeSet	Used to identify whether the trade was a soft dollar trade, step in/out etc. Broker of credit, where relevant, can be specified using the Parties nested block above.
GrossTradeAmt	[1..1]	Amt	Gross trade amount for the allocated account being confirmed.
NumDaysInterest	[0..1]	int	
ExDate	[0..1]	LocalMktDate	Optional "next coupon date" for Fixed Income
AccruedInterestRate	[0..1]	Percentage	
AccruedInterestAmt	[0..1]	Amt	Required for Fixed Income products that trade with accrued interest
InterestAtMaturity	[0..1]	Amt	Required for Fixed Income products that pay lump sum interest at maturity
EndAccruedInterestAmt	[0..1]	Amt	For repurchase agreements the accrued interest on termination.
StartCash	[0..1]	Amt	For repurchase agreements the start (dirty) cash consideration
EndCash	[0..1]	Amt	For repurchase agreements the end (dirty) cash consideration
Concession	[0..1]	Amt	
TotalTakedown	[0..1]	Amt	
NetMoney	[1..1]	Amt	
MaturityNetMoney	[0..1]	Amt	Net Money at maturity if Zero Coupon and maturity value is different from par value
SettlCurrAmt	[0..1]	Amt	

Name	Mult.	Type	Description
SettlCurrency	[0..1]	Currency	
SettlCurrencyCodeSource	[0..1]	CodeSet	
SettlCurrFxRate	[0..1]	float	
SettlCurrFxRateCalc	[0..1]	CodeSet	
SettlType	[0..1]	CodeSet	
SettlDate	[0..1]	LocalMktDate	
SettlInstructionsData	[0..1]	Component	Insert here the set of "SettlInstructionsData" fields defined in "Common Components of Application Messages". Used to communicate settlement instructions for this Confirmation.
CommissionData	[0..1]	Component	
SharedCommission	[0..1]	Amt	Used to identify any commission shared with a third party (e.g. directed brokerage)
CommissionDataGrp	[0..*]	Group	Use as an alternative to CommissionData if multiple commissions or enhanced attributes are needed.
Stipulations	[0..*]	Group	
MiscFeesGrp	[0..*]	Group	Required if any miscellaneous fees are reported.
MatchExceptionGrp	[0..*]	Group	
MatchingDataPointGrp	[0..*]	Group	
StandardTrailer	[1..1]	Component	

31 ConfirmationAck

Category: Confirmation

31.1 Message Functionality

The Confirmation Ack (aka Affirmation) message is used to respond to a Confirmation message.

31.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = AU
ConfirmID	[1..1]	String	
TradeDate	[1..1]	LocalMktDate	
TransactTime	[1..1]	UTCTimestamp	Date/Time Allocation Instruction Ack generated
AffirmStatus	[1..1]	CodeSet	
RegulatoryTradeIDGrp	[0..*]	Group	
TradeConfirmationReferenceID	[0..1]	String	
ConfirmRejReason	[0..1]	CodeSet	Conditionally required for AffirmStatus(940) = 2 (Confirm rejected).
MatchStatus	[0..1]	CodeSet	Denotes whether the financial details provided on the Confirmation were successfully matched.
MatchExceptionGrp	[0..*]	Group	
MatchingDataPointGrp	[0..*]	Group	
Text	[0..1]	String	Can include explanation for ConfirmRejReason(774) = 99 (Other)
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.
StandardTrailer	[1..1]	Component	

32 ConfirmationRequest

Category: Confirmation

32.1 Message Functionality

The Confirmation Request message is used to request a Confirmation message.

32.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = BH
ConfirmReqID	[1..1]	String	Unique identifier for this message
ConfirmType	[1..1]	CodeSet	Denotes whether this message is being used to request a confirmation or a trade status message
OrdAllocGrp	[0..*]	Group	Indicates number of orders to be combined for allocation. If order(s) were manually delivered set to 1 (one). Required when AllocNoOrdersType = 1
AllocID	[0..1]	String	Used to refer to an earlier Allocation Instruction.
SecondaryAllocID	[0..1]	String	Used to refer to an earlier Allocation Instruction via its secondary identifier
IndividualAllocID	[0..1]	String	Used to refer to an allocation account within an earlier Allocation Instruction.
TransactTime	[1..1]	UTCTimestamp	Represents the time this message was generated
AllocAccount	[0..1]	String	Account number for the trade being confirmed by this message
AllocAcctIDSource	[0..1]	CodeSet	
AllocAccountType	[0..1]	CodeSet	
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	
EncodedText	[0..1]	data	
StandardTrailer	[1..1]	Component	

33 ContraryIntentionReport

Category: PositionMaintenance

33.1 Message Functionality

The Contrary Intention Report is used for reporting of contrary expiration quantities for Saturday expiring options. This information is required by options exchanges for regulatory purposes.

33.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = BO
ApplicationSequenceControl	[0..1]	Component	
ContIntRptID	[1..1]	String	Unique identifier for the Contrary Intention report
TransactTime	[0..1]	UTCTimestamp	Time the contrary intention was received by clearing organization.
LateIndicator	[0..1]	Boolean	Indicates if the contrary intention was received after the exchange imposed cutoff time
InputSource	[0..1]	String	Source of the contrary intention
ClearingBusinessDate	[1..1]	LocalMktDate	Business date of contrary intention
Parties	[1..*]	Group	Clearing Organization. Clearing Firm. Position Account
ExpirationQty	[1..*]	Group	Expiration Quantities
Instrument	[1..1]	Component	
UndInstrmtGrp	[0..*]	Group	
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.
StandardTrailer	[1..1]	Component	

34 CrossOrderCancelReplaceRequest

Category: CrossOrders

34.1 Message Functionality

Used to modify a cross order previously submitted using the New Order - Cross message. See Order Cancel Replace Request for details concerning message usage.

34.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = t (lowercase T)
OrderID	[0..1]	String	Unique identifier of most recent order as assigned by sell-side (broker, exchange, ECN).
OrderRequestID	[0..1]	int	Required if provided on the order being replaced (or cancelled). Echo back the value provided by the requester.
CrossID	[1..1]	String	CrossID for the replacement order
OrigCrossID	[1..1]	String	Must match the CrossID of the previous cross order. Same order chaining mechanism as CLOrdID/OrigCLOrdID with single order Cancel/Replace.
HostCrossID	[0..1]	String	Host assigned entity ID that can be used to reference all components of a cross; sides + strategy + legs
CrossType	[1..1]	CodeSet	
CrossPrioritization	[1..1]	CodeSet	
RootParties	[0..*]	Group	Insert here the set of "Root Parties" fields defined in "common components of application messages" Used for acting parties that applies to the whole message, not individual sides.
SideCrossOrdModGrp	[1..*]	Group	Must be 1 or 2
Instrument	[1..1]	Component	Insert here the set of "Instrument" (symbology) fields defined in "Common Components of Application Messages"
UndInstrmtGrp	[0..*]	Group	Number of underlyings
InstrmtLegGrp	[0..*]	Group	Number of Legs

Name	Mult.	Type	Description
SettlType	[0..1]	CodeSet	
SettlDate	[0..1]	LocalMktDate	Takes precedence over SettlType value and conditionally required/omitted for specific SettlType values.
HandlInst	[0..1]	CodeSet	
ExecInst	[0..1]	CodeSet	Can contain multiple instructions, space delimited. If OrdType=P, exactly one of the following values (ExecInst = L, R, M, P, O, T, or W) must be specified.
MinQty	[0..1]	Qty	
MinQtyMethod	[0..1]	CodeSet	
MatchIncrement	[0..1]	Qty	
MaxPriceLevels	[0..1]	int	
DisplayInstruction	[0..1]	Component	Insert here the set of "DisplayInstruction" fields defined in "common components of application messages"
MaxFloor	[0..1]	Qty	
MarketSegmentID	[0..1]	String	
ExDestination	[0..1]	Exchange	
ExDestinationIDSource	[0..1]	CodeSet	
TrdgSesGrp	[0..*]	Group	Specifies the number of repeating TradingSessionIDs
ProcessCode	[0..1]	CodeSet	Used to identify soft trades at order entry.
PrevClosePx	[0..1]	Price	Useful for verifying security identification
LocateReqd	[0..1]	CodeSet	Required for short sell orders
TransactTime	[1..1]	UTCTimestamp	Time this order request was initiated/released by the trader, trading system, or intermediary.
TransBkdTime	[0..1]	UTCTimestamp	A date and time stamp to indicate when this order was booked with the agent prior to submission to the VMU
Stipulations	[0..*]	Group	Insert here the set of "Stipulations" (repeating group of Fixed Income stipulations) fields defined in "Common Components of Application Messages"
OrdType	[1..1]	CodeSet	
PriceType	[0..1]	CodeSet	

Name	Mult.	Type	Description
Price	[0..1]	Price	Required for limit OrdTypes. For F/X orders, should be the "all-in" rate (spot rate adjusted for forward points). Can be used to specify a limit price for a pegged order, previously indicated, etc.
PriceProtectionScope	[0..1]	CodeSet	
StopPx	[0..1]	Price	Required for OrdType = "Stop" or OrdType = "Stop limit".
TriggeringInstruction	[0..1]	Component	Insert here the set of "TriggeringInstruction" fields defined in "common components of application messages"
SpreadOrBenchmarkCurveData	[0..1]	Component	Insert here the set of "SpreadOrBenchmarkCurveData" (Fixed Income spread or benchmark curve) fields defined in "Common Components of Application Messages"
YieldData	[0..1]	Component	Insert here the set of "YieldData" (yield-related) fields defined in "Common Components of Application Messages"
Currency	[0..1]	Currency	
CurrencyCodeSource	[0..1]	CodeSet	
ComplianceID	[0..1]	String	
IOIID	[0..1]	String	Required for Previously Indicated Orders (OrdType=E)
QuoteID	[0..1]	String	Required for Previously Quoted Orders (OrdType=D)
TimeInForce	[0..1]	CodeSet	Absence of this field indicates Day order
EffectiveTime	[0..1]	UTCTimestamp	Can specify the time at which the order should be considered valid
ExpireDate	[0..1]	LocalMktDate	Conditionally required if TimeInForce = GTD and ExpireTime is not specified.
ExpireTime	[0..1]	UTCTimestamp	Conditionally required if TimeInForce = GTD and ExpireDate is not specified.
GTBookingInst	[0..1]	CodeSet	States whether executions are booked out or accumulated on a partially filled GT order
ExposureDuration	[0..1]	int	Conditionally required when TimeInForce(59)=10 (Good for Time)
ExposureDurationUnit	[0..1]	CodeSet	
TradingCapacity	[0..1]	CodeSet	
MaxShow	[0..1]	Qty	

Name	Mult.	Type	Description
PegInstructions	[0..1]	Component	Insert here the set of "PegInstruction" fields defined in "Common Components of Application Messages"
DiscretionInstructions	[0..1]	Component	Insert here the set of "DiscretionInstruction" fields defined in "Common Components of Application Messages"
TargetStrategy	[0..1]	CodeSet	The target strategy of the order
StrategyParametersGrp	[0..*]	Group	Strategy parameter block
TargetStrategyParameters	[0..1]	String	For further specification of the TargetStrategy
ParticipationRate	[0..1]	Percentage	Mandatory for a TargetStrategy=Participate order and specifies the target participation rate. For other order types optionally specifies a volume limit (i.e. do not be more than this percent of the market volume)
CancellationRights	[0..1]	CodeSet	For CIV - Optional
MoneyLaunderingStatus	[0..1]	CodeSet	
RegistID	[0..1]	String	Reference to Registration Instructions message for this Order.
Designation	[0..1]	String	Supplementary registration information for this Order
ThrottleInst	[0..1]	CodeSet	
StandardTrailer	[1..1]	Component	

35 CrossOrderCancelRequest

Category: CrossOrders

35.1 Message Functionality

Used to fully cancel the remaining open quantity of a cross order.

35.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = u (lowercase U)
OrderID	[0..1]	String	Unique identifier of most recent order as assigned by sell-side (broker, exchange, ECN).
OrderRequestID	[0..1]	int	Required if provided on the order being cancelled. Echo back the value provided by the requester.
CrossID	[1..1]	String	CrossID for the replacement order
OrigCrossID	[1..1]	String	Must match the CrossID of previous cross order. Same order chaining mechanism as ClOrdID/OrigClOrdID with single order Cancel/Replace.
HostCrossID	[0..1]	String	Host assigned entity ID that can be used to reference all components of a cross; sides + strategy + legs
CrossType	[1..1]	CodeSet	
CrossPrioritization	[1..1]	CodeSet	
RootParties	[0..*]	Group	Insert here the set of "Root Parties" fields defined in "common components of application messages" Used for acting parties that applies to the whole message, not individual sides.
SideCrossOrdCxlGrp	[1..*]	Group	Must be 1 or 2
Instrument	[1..1]	Component	Insert here the set of "Instrument" (symbology) fields defined in "Common Components of Application Messages"
UndInstrmtGrp	[0..*]	Group	Number of underlyings
InstrmtLegGrp	[0..*]	Group	Number of Leg
MarketSegmentID	[0..1]	String	

Name	Mult.	Type	Description
TransactTime	[1..1]	UTCTimestamp	Time this order request was initiated/released by the trader, trading system, or intermediary.
StandardTrailer	[1..1]	Component	

36 CrossRequest

Category: Indication

36.1 Message Functionality

The CrossRequest(35=DS) message is used to indicate the submission of orders or quotes that may result in a crossed trade.

36.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = DS
CrossRequestID	[1..1]	String	Unique identifier for cross request message.
MarketID	[0..1]	Exchange	
MarketSegmentID	[0..1]	String	
Instrument	[1..1]	Component	
OrderQty	[0..1]	Qty	Can be used to announce a maximum quantity that is subject to crossing.
ComplianceID	[0..1]	String	
ComplianceText	[0..1]	String	
StandardTrailer	[1..1]	Component	

37 CrossRequestAck

Category: Indication

37.1 Message Functionality

The CrossRequestAck(35=DT) message is used to confirm the receipt of a CrossRequest(35=DS) message.

37.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = DT
CrossRequestID	[1..1]	String	Unique identifier for the cross request message being confirmed.
MarketID	[0..1]	Exchange	
MarketSegmentID	[0..1]	String	
Instrument	[1..1]	Component	
OrderQty	[0..1]	Qty	
ComplianceID	[0..1]	String	
ComplianceText	[0..1]	String	
StandardTrailer	[1..1]	Component	

38 DerivativeSecurityList

Category: SecuritiesReferenceData

38.1 Message Functionality

The Derivative Security List message is used to return a list of securities that matches the criteria specified in a Derivative Security List Request.

38.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = AA (2 A's)
ApplicationSequenceControl	[0..1]	Component	
SecurityReportID	[0..1]	int	
SecurityReqID	[0..1]	String	
SecurityResponseID	[0..1]	String	Identifier for the Derivative Security List message
SecurityRequestResult	[0..1]	CodeSet	Result of the Security Request identified by SecurityReqID
SecurityRejectReason	[0..1]	CodeSet	Used to specify a rejection reason when SecurityResponseType (323) is equal to 1 (Invalid or unsupported request) or 5 (Request for instrument data not supported).
ClearingBusinessDate	[0..1]	LocalMktDate	
UnderlyingInstrument	[0..1]	Component	Underlying security for which derivatives are being returned
DerivativeSecurityDefinition	[0..1]	Component	Group block which contains all information for an option family. If provided DerivativeSecurityDefinition qualifies the strikes specified in the Instrument block.
LastUpdateTime	[0..1]	UTCTimestamp	Represents the time at which a security was last updated
TransactTime	[0..1]	UTCTimestamp	
TotNoRelatedSym	[0..1]	int	Used to indicate the total number of securities being returned for this request. Used in the event that message fragmentation is required.

Name	Mult.	Type	Description
LastFragment	[0..1]	CodeSet	Indicates whether this is the last fragment in a sequence of message fragments. Only required where message has been fragmented.
RelSymDerivSecGrp	[0..*]	Group	Specifies the number of repeating symbols (instruments) specified
StandardTrailer	[1..1]	Component	

39 DerivativeSecurityListRequest

Category: SecuritiesReferenceData

39.1 Message Functionality

The Derivative Security List Request message is used to return a list of securities from the counterparty that match criteria provided on the request

39.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = z (lowercase Z)
SecurityReqID	[1..1]	String	
SecurityListRequestType	[1..1]	CodeSet	
MarketID	[0..1]	Exchange	
MarketSegmentID	[0..1]	String	
UnderlyingInstrument	[0..1]	Component	Specifies the underlying instrument
DerivativeInstrument	[0..1]	Component	Group block which contains all information for an option family.
SecuritySubType	[0..1]	String	
Currency	[0..1]	Currency	
CurrencyCodeSource	[0..1]	CodeSet	
Text	[0..1]	String	Comment, instructions, or other identifying information.
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.
TradingSessionID	[0..1]	CodeSet	Optional Trading Session Identifier to specify a particular trading session for which you want to obtain a list of securities that are tradeable.
TradingSessionSubID	[0..1]	CodeSet	
SubscriptionRequestType	[0..1]	CodeSet	Subscribe or unsubscribe for security status to security specified in request.
StandardTrailer	[1..1]	Component	

40 DerivativeSecurityListUpdateReport

Category: SecuritiesReferenceData

40.1 Message Functionality

The Derivative Security List Update Report message is used to send updates to an option family or the strikes that comprise an option family.

40.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = BR
ApplicationSequenceControl	[0..1]	Component	
SecurityReqID	[0..1]	String	
SecurityResponseID	[0..1]	String	Identifier for the Derivative Security List message
SecurityRequestResult	[0..1]	CodeSet	Result of the Security Request identified by SecurityReqID
SecurityUpdateAction	[0..1]	CodeSet	Updates can be applied to Underlying or option class. If Series information provided, then Series has explicitly changed
UnderlyingInstrument	[0..1]	Component	Underlying security for which derivatives are being returned
DerivativeSecurityDefinition	[0..1]	Component	Group block which contains all information for an option family. If provided DerivativeSecurityDefinition qualifies the strikes specified in the Instrument block. DerivativeSecurityDefinition contains the following components: DerivativeInstrument, DerivativeInstrumentExtension, MarketSegmentGrp
LastUpdateTime	[0..1]	UTCTimestamp	Represents the time at which a security was last updated
TransactTime	[0..1]	UTCTimestamp	
TotNoRelatedSym	[0..1]	int	Used to indicate the total number of securities being returned for this request. Used in the event that message fragmentation is required.

Name	Mult.	Type	Description
LastFragment	[0..1]	CodeSet	Indicates whether this is the last fragment in a sequence of message fragments. Only required where message has been fragmented.
RelSymDerivSecUpdGrp	[0..*]	Group	
StandardTrailer	[1..1]	Component	

41 DontKnowTrade

Category: SingleGeneralOrderHandling

41.1 Message Functionality

The Don't Know Trade (DK) message notifies a trading partner that an electronically received execution has been rejected. This message can be thought of as an execution reject message.

41.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = Q
OrderID	[1..1]	String	Broker Order ID as identified on problem execution
SecondaryOrderID	[0..1]	String	
ExecID	[1..1]	String	Execution ID of problem execution
DKReason	[1..1]	CodeSet	
Instrument	[1..1]	Component	Insert here the set of "Instrument" (symbology) fields defined in "Common Components of Application Messages"
UndInstrmtGrp	[0..*]	Group	Number of underlyings
InstrmtLegGrp	[0..*]	Group	Number of Legs
Side	[1..1]	CodeSet	
OrderQtyData	[1..1]	Component	Insert here the set of "OrderQtyData" fields defined in "Common Components of Application Messages"
LastQty	[0..1]	Qty	Required if specified on the ExecutionRpt
LastPx	[0..1]	Price	Required if specified on the ExecutionRpt
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.
StandardTrailer	[1..1]	Component	

42 Email

Category: EventCommunication

42.1 Message Functionality

The email message is similar to the format and purpose of the News message, however, it is intended for private use between two parties.

42.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = C
EmailThreadID	[1..1]	String	Unique identifier for the email message thread
EmailType	[1..1]	CodeSet	
OrigTime	[0..1]	UTCTimestamp	
Subject	[1..1]	String	Specifies the Subject text
EncodedSubjectLen	[0..1]	Length	Must be set if EncodedSubject field is specified and must immediately precede it.
EncodedSubject	[0..1]	data	Encoded (non-ASCII characters) representation of the Subject field in the encoded format specified via the MessageEncoding field.
RoutingGrp	[0..*]	Group	
InstrmtGrp	[0..*]	Group	Specifies the number of repeating symbols (instruments) specified
UndInstrmtGrp	[0..*]	Group	Number of underlyings
InstrmtLegGrp	[0..*]	Group	
OrderID	[0..1]	String	
ClOrdID	[0..1]	String	
LinesOfTextGrp	[1..*]	Group	Specifies the number of repeating lines of text specified
RawDataLength	[0..1]	Length	
RawData	[0..1]	data	
AttachmentGrp	[0..*]	Group	
StandardTrailer	[1..1]	Component	

43 ExecutionAck

Category: SingleGeneralOrderHandling

43.1 Message Functionality

The Execution Report Acknowledgement message is an optional message that provides dual functionality to notify a trading partner that an electronically received execution has either been accepted or rejected (DK'd).

43.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = BN
OrderID	[1..1]	String	
SecondaryOrderID	[0..1]	String	
ClOrdID	[0..1]	String	Conditionally required if the Execution Report message contains a ClOrdID.
ExecAckStatus	[1..1]	CodeSet	Indicates the status of the execution acknowledgement. The "received, not yet processed" is an optional intermediary status that can be used to notify the counterparty that the Execution Report has been received.
ExecID	[1..1]	String	The ExecID of the Execution Report being acknowledged.
DKReason	[0..1]	CodeSet	Conditionally required when ExecAckStatus = 2 (Don't know / Rejected).
Instrument	[1..1]	Component	
UndInstrmtGrp	[0..*]	Group	
InstrmtLegGrp	[0..*]	Group	
Side	[1..1]	CodeSet	
OrderQtyData	[0..1]	Component	Conditionally required if specified in the ExecutionReport(35=8).
LastQty	[0..1]	Qty	Conditionally required if specified on the Execution Report
LastPx	[0..1]	Price	Conditionally Required if specified on the Execution Report

Name	Mult.	Type	Description
PriceType	[0..1]	CodeSet	Conditionally required if specified on the Execution Report
PriceQualifierGrp	[0..*]	Group	
LastParPx	[0..1]	Price	Conditionally required if specified on the Execution Report
CumQty	[0..1]	Qty	Conditionally required if specified on the Execution Report
AvgPx	[0..1]	Price	Conditionally required if specified on the Execution Report
RegulatoryTradeIDGrp	[0..*]	Group	
Text	[0..1]	String	Conditionally required if DKReason = "other"
EncodedTextLen	[0..1]	Length	
EncodedText	[0..1]	data	
StandardTrailer	[1..1]	Component	

44 ExecutionReport

Category: SingleGeneralOrderHandling

44.1 Message Functionality

The execution report message is used to:

1. confirm the receipt of an order
2. confirm changes to an existing order (i.e. accept cancel and replace requests)
3. relay order status information
4. relay fill information on working orders
5. relay fill information on tradeable or restricted tradeable quotes
6. reject orders
7. report post-trade fees calculations associated with a trade

44.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = 8
ApplicationSequenceControl	[0..1]	Component	For use in drop copy applications. NOT FOR USE in transactional applications.
OrderID	[1..1]	String	OrderID is required to be unique for each chain of orders.
OrderRequestID	[0..1]	int	Required if provided on the order message. Echo back the value provided in the order message.
MassOrderRequestID	[0..1]	String	Can be used to link execution to the MassOrder(35=DJ) message.
SecondaryOrderID	[0..1]	String	Can be used to provide order id used by exchange or executing system. Can alternatively be used to convey implicit order priority.
SecondaryClOrdID	[0..1]	String	
SecondaryExecID	[0..1]	String	

Name	Mult.	Type	Description
ClOrdID	[0..1]	String	Required when referring to orders that were electronically submitted over FIX or otherwise assigned a ClOrdID(11). In the case of quotes can be mapped to: - QuoteID(117) of a single Quote(35=S). - QuoteEntryID(299) of a MassQuote(35=i). - BidID(390) or OfferID(1867) of a two-sided Quote(35=S). - MassOrderReportID(2424) of a MassOrderAck(35=DK)
QuoteMsgID	[0..1]	String	In the case of quotes can be mapped to: o QuoteMsgID(1166) of a single Quote(35=S). o QuoteID(117) of a MassQuote(35=i)
OrigClOrdID	[0..1]	String	Conditionally required for response to a Cancel or Cancel/Replace request (ExecType(150) = 6 (Pending Cancel, 5 (Replaced), or 4 (Canceled)) when referring to orders that were electronically submitted over FIX or otherwise assigned a ClOrdID(11). ClOrdID(11) of the previous accepted order (NOT the initial order of the day) when canceling or replacing an order.
ClOrdLinkID	[0..1]	String	
MDEntryID	[0..1]	String	Reference to the MDEntryID(278) of this order or quote in the market data.
QuoteRespID	[0..1]	String	Required if responding to a QuoteResponse(35=AJ) message. Echo back the Initiator's value specified in the message.
OrdStatusReqID	[0..1]	String	Required if responding to and if provided on the OrderStatusRequest(35=H) message. Echo back the value provided by the requester.
MassStatusReqID	[0..1]	String	Required if responding to a OrderMassStatusRequest(35=AF). Echo back the value provided by the requester.
HostCrossID	[0..1]	String	Host assigned entity ID that can be used to reference all components of a cross; sides + strategy + legs
TotNumReports	[0..1]	int	Can be used when responding to an OrderMassStatusRequest(35=AF) to identify the total number of ExecutionReport(35=8) messages which will be returned.

Name	Mult.	Type	Description
LastRptRequested	[0..1]	CodeSet	Can be used when responding to an OrderMassStatusRequest(35=AF) to indicate that this is the last ExecutionReport(35=8) messages which will be returned as a result of the request.
Parties	[0..*]	Group	Specifies party information related to the submitter.
TargetParties	[0..*]	Group	Specifies parties not directly associated with or owning the order, who are to be informed to effect processing of the order.
TradeOriginationDate	[0..1]	LocalMktDate	
ContraGrp	[0..*]	Group	
ListID	[0..1]	String	Required for executions against orders which were submitted as part of a list.
CrossID	[0..1]	String	CrossID for the replacement order
OrigCrossID	[0..1]	String	Must match original cross order. Same order chaining mechanism as ClOrdID(11)/OrigClOrdID(41) with OrderCancelReplaceRequest(35=G).
CrossType	[0..1]	CodeSet	
RefRiskLimitCheckID	[0..1]	String	
RefRiskLimitCheckIDType	[0..1]	CodeSet	Conditionally required when RefRiskLimitCheckID(2334) is specified.
TrdMatchID	[0..1]	String	
TrdMatchSubID	[0..1]	String	
ExecID	[1..1]	String	Unique identifier of execution message as assigned by sell-side (broker, exchange, ECN) (will be 0 (zero) for ExecType(150) = I (Order Status)).
ExecRefID	[0..1]	String	Required for ExecType(150) = H (Trade Cancel) and ExecType(150) = G (Trade Correct).
ExecType	[1..1]	CodeSet	Describes the purpose of the execution report.
ExecTypeReason	[0..1]	CodeSet	Can be used to provide further detail for ExecType(150) field.
OrdStatus	[1..1]	CodeSet	Describes the current state of a CHAIN of orders, same scope as OrderQty, CumQty, LeavesQty, and AvgPx
WorkingIndicator	[0..1]	CodeSet	For optional use with OrdStatus = 0 (New)
CurrentWorkingPrice	[0..1]	Price	
OrdRejReason	[0..1]	CodeSet	For optional use with ExecType = 8 (Rejected)

Name	Mult.	Type	Description
RejectText	[0..1]	String	Reason description for rejecting the transaction request.
EncodedRejectTextLen	[0..1]	Length	Must be set if EncodedRejectText(1665) field is specified and must immediately precede it.
EncodedRejectText	[0..1]	data	Encoded (non-ASCII characters) representation of the RejectText(1328) field in the encoded format specified via the MessageEncoding(347) field.
ExecRestatementReason	[0..1]	CodeSet	Required for ExecType = D (Restated).
AnonymousTradeIndicator	[0..1]	Boolean	
AlgorithmicTradeIndicator	[0..1]	CodeSet	
AlgoTrialID	[0..1]	String	For optional use in algo trials.
LastAlgoID	[0..1]	String	If ExecType(150)=F (Trade), indicates the algorithm used for last fill.
AlgoCertificateID	[0..1]	String	
TrdType	[0..1]	CodeSet	For optional use in reporting trades.
TrdSubType	[0..1]	CodeSet	For optional use in reporting trades.
SecondaryTrdType	[0..1]	CodeSet	For optional use in reporting trades. Conditionally requires presence of TrdType(828).
TertiaryTrdType	[0..1]	CodeSet	For optional use in reporting trades. Conditionally requires presence of SecondaryTrdType(855).
TradeTypeGrp	[0..*]	Group	For optional use in reporting trades as alternative to the use of individual fields.
RegulatoryTransactionType	[0..1]	CodeSet	
RegulatoryTradeIDGrp	[0..*]	Group	
PreviouslyReported	[0..1]	CodeSet	
TradeReportingIndicator	[0..1]	CodeSet	May be used to bilaterally inform counterparty of trade reporting status.
Account	[0..1]	String	Required for executions against electronically submitted orders which were assigned an account by the institution or intermediary
AcctIDSource	[0..1]	CodeSet	
AccountType	[0..1]	CodeSet	Specifies type of account
DayBookingInst	[0..1]	CodeSet	
BookingUnit	[0..1]	CodeSet	
PreallocMethod	[0..1]	CodeSet	
AllocID	[0..1]	String	
PreAllocGrp	[0..*]	Group	Pre-trade allocation instructions.

Name	Mult.	Type	Description
SettlType	[0..1]	CodeSet	
SettlDate	[0..1]	LocalMktDate	Takes precedence over SettlType value and conditionally required/omitted for specific SettleType values. Required for NDFs to specify the "value date".
MatchType	[0..1]	CodeSet	
OrderCategory	[0..1]	CodeSet	
CashMargin	[0..1]	CodeSet	
ClearingFeeIndicator	[0..1]	CodeSet	
Instrument	[1..1]	Component	
FinancingDetails	[0..1]	Component	
UndInstrmtGrp	[0..*]	Group	Number of underlyings
PaymentGrp	[0..*]	Group	
Side	[1..1]	CodeSet	
ShortMarkingExemptIndicator	[0..1]	Boolean	
ShortSaleExemptionReason	[0..1]	CodeSet	Available for optional use when Side(54) = 6(Sell short exempt).
Stipulations	[0..*]	Group	
QtyType	[0..1]	CodeSet	
OrderQtyData	[0..1]	Component	Conditionally required when the OrderQtyData component is required or specified in a prior, related message. For example, when used in a work flow including a NewOrderSingle(35=D) or NewOrderCross(35=s) message, the OrderQtyData component is a required component in these messages and thus the component is required here. When the OrderQtyData component is optional in a related message, such as the NewOrderMultileg(35=AB), the component is required here when specified in the prior, related NewOrderMultileg(35=AB) message.
LotType	[0..1]	CodeSet	
OrdType	[0..1]	CodeSet	
PriceType	[0..1]	CodeSet	
PriceQualifierGrp	[0..*]	Group	
Price	[0..1]	Price	Required if specified on the order
PriceProtectionScope	[0..1]	CodeSet	
StopPx	[0..1]	Price	Required if specified on the order

Name	Mult.	Type	Description
TriggeringInstruction	[0..1]	Component	
Triggered	[0..1]	CodeSet	
PegInstructions	[0..1]	Component	
DiscretionInstructions	[0..1]	Component	
PeggedPrice	[0..1]	Price	The current price the order is pegged at
PeggedRefPrice	[0..1]	Price	The reference price of a pegged order.
DiscretionPrice	[0..1]	Price	The current discretionary price of the order
TradePriceNegotiationMethod	[0..1]	CodeSet	
UpfrontPrice	[0..1]	Price	Required if specified on the order
UpfrontPriceType	[0..1]	CodeSet	
TargetStrategy	[0..1]	CodeSet	The target strategy of the order
StrategyParametersGrp	[0..*]	Group	Strategy parameter block
TargetStrategyParameters	[0..1]	String	For further specification of the TargetStrategy
ParticipationRate	[0..1]	Percentage	Mandatory for a TargetStrategy=Participate order and specifies the target participation rate. For other order types optionally specifies a volume limit (i.e. do not be more than this percent of the market volume)
TargetStrategyPerformance	[0..1]	float	For communication of the performance of the order versus the target strategy
Currency	[0..1]	Currency	
CurrencyCodeSource	[0..1]	CodeSet	
ComplianceID	[0..1]	String	
ComplianceText	[0..1]	String	
EncodedComplianceTextLen	[0..1]	Length	Must be set if EncodedComplianceText(2352) field is specified and must immediately precede it.
EncodedComplianceText	[0..1]	data	Encoded (non-ASCII characters) representation of the ComplianceText(2404) field in the encoded format specified via the MessageEncoding(347) field.
SolicitedFlag	[0..1]	CodeSet	
TimeInForce	[0..1]	CodeSet	Absence of this field indicates Day order
EffectiveTime	[0..1]	UTCTimestamp	Time specified on the order at which the order should be considered valid
ExpireDate	[0..1]	LocalMktDate	Conditionally required if TimeInForce(59) = 6 (GTD) and ExpireTime(126) is not specified.

Name	Mult.	Type	Description
ExpireTime	[0..1]	UTCTimestamp	Conditionally required if TimeInForce(59) = 6 (GTD) and ExpireDate(432) is not specified.
ExposureDuration	[0..1]	int	Conditionally required when TimeInForce(59)=10 (Good for Time)
ExposureDurationUnit	[0..1]	CodeSet	
ExecInst	[0..1]	CodeSet	Can contain multiple instructions, space delimited.
AuctionInstruction	[0..1]	CodeSet	
AggressorIndicator	[0..1]	CodeSet	
OrderCapacity	[0..1]	CodeSet	
OrderRestrictions	[0..1]	CodeSet	
TradingCapacity	[0..1]	CodeSet	
RegulatoryReportType	[0..1]	CodeSet	
PreTradeAnonymity	[0..1]	Boolean	
TradePublishIndicator	[0..1]	CodeSet	Applies to trades resulting from the order.
CustOrderCapacity	[0..1]	CodeSet	
OrderAttributeGrp	[0..*]	Group	
LastQty	[0..1]	Qty	Quantity (e.g. shares) bought/sold on this (last) fill. Required if ExecType(150) = F (Trade) or ExecType(150) = G (Trade Correct) unless FillsGrp or OrderEventGrp is used. If ExecType(150) = 7 (Stopped), represents the quantity stopped/guaranteed/protected for.
CalculatedCcyLastQty	[0..1]	Qty	Used for FX trades to express the quantity or amount of the other side of the currency. Conditionally required if ExecType(150) = F (Trade) or G (Trade Correct) and is an FX trade.
LastSwapPoints	[0..1]	PriceOffset	Optionally used when ExecType(150) = F (Trade) or G (Trade Correct) and is a FX Swap trade. Used to express the swap points for the swap trade event.
UnderlyingLastQty	[0..1]	Qty	
LastQtyVariance	[0..1]	Qty	

Name	Mult.	Type	Description
LastPx	[0..1]	Price	Price of this (last) fill. Required if ExecType(150) = ExecType = F (Trade) or G (Trade Correct) unless FillsGrp or OrderEventGrp or TradePriceCondition(1839)=17 (Price is pending) or 18 (Price is not applicable) is used. Should represent the "all-in" (LastSpotRate(194) + LastForwardPoints(195)) rate for F/X orders.). If ExecType(150) = 7 (Stopped), represents the price stopped/guaranteed/protected at. Not required for FX Swap when ExecType(150) = F (Trade) or G (Trade Correct) as there is no "all-in" rate that applies to both legs of the FX Swap.
UnderlyingLastPx	[0..1]	Price	
LastParPx	[0..1]	Price	Last price expressed in percent-of-par. Conditionally required for Fixed Income trades when LastPx(31) is expressed in Yield, Spread, Discount or any other price type that is not percent-of-par.
MidPx	[0..1]	Price	
LastSpotRate	[0..1]	Price	Applicable for F/X orders
LastForwardPoints	[0..1]	PriceOffset	Applicable for F/X orders
LastUpfrontPrice	[0..1]	Price	Upfront Price for CDS transactions. Conditionally required if TradePriceNegotiationMethod(1740) = 4(Percent of par and upfront amount), 5(Deal spread and upfront amount) or 6(Upfront points and upfront amount).
ReportingPx	[0..1]	Price	
ReportingQty	[0..1]	Qty	
LastMkt	[0..1]	Exchange	If ExecType(150) = F (Trade), indicates the market where the trade was executed. If ExecType(150) = 0 (New (0), indicates the market where the order was routed.
VenueType	[0..1]	CodeSet	
MarketSegmentID	[0..1]	String	
ExDestination	[0..1]	Exchange	
ExDestinationIDSource	[0..1]	CodeSet	
ExDestinationType	[0..1]	CodeSet	
TradingSessionID	[0..1]	CodeSet	
TradingSessionSubID	[0..1]	CodeSet	

Name	Mult.	Type	Description
TimeBracket	[0..1]	String	
LastCapacity	[0..1]	CodeSet	
LimitAmts	[0..*]	Group	Insert here the set of "LimitAmts" fields defined in "Common Components"
LeavesQty	[1..1]	Qty	Quantity open for further execution. If the OrdStatus(39) is = 4 (Canceled), 3 (Done For Day), C (Expired), B (Calculated), or 8 (Rejected) (in which case the order is no longer active) then LeavesQty(151) could be 0, otherwise $\text{LeavesQty}(151) = \text{OrderQty}(38) - \text{CumQty}(14)$.
CumQty	[1..1]	Qty	Currently executed quantity for chain of orders.
CxlQty	[0..1]	Qty	Can be used to specify the remaining quantity that was cancelled prior to order reaching terminal state (i.e. when $\text{LeavesQty}(151)=0$). If specified, $\text{OrderQty}(38) = \text{CumQty}(14) + \text{CxlQty}(84)$.
AvgPx	[0..1]	Price	Not required for markets where average price is not calculated by the market. Conditionally required otherwise.
DayOrderQty	[0..1]	Qty	For GT orders on days following the day of the first trade.
DayCumQty	[0..1]	Qty	For GT orders on days following the day of the first trade.
DayAvgPx	[0..1]	Price	For GT orders on days following the day of the first trade.
TotNoFills	[0..1]	int	Used to support fragmentation. Sum of NoFills(1362) across all messages with the same ExecID(17).
LastFragment	[0..1]	CodeSet	Indicates whether this is the last fragment in a sequence of message fragments. Only required where message has been fragmented.
FillsGrp	[0..*]	Group	Specifies the partial fills included in this ExecutionReport(35=8), mutually exclusive with OrderEventGrp component.
OrderEventGrp	[0..*]	Group	Specifies the order events included in this ExecutionReport(35=8), mutually exclusive with FillsGrp component.
EventInitiatorType	[0..1]	CodeSet	
GTBookingInst	[0..1]	CodeSet	States whether executions are booked out or accumulated on a partially filled GT order

Name	Mult.	Type	Description
TradeDate	[0..1]	LocalMktDate	Used when reporting other than current day trades.
TransactTime	[0..1]	UTCTimestamp	Time the transaction represented by this ExecutionReport(35=8) occurred.
ReportToExch	[0..1]	CodeSet	
CommissionData	[0..1]	Component	Note: On a fill/partial-fill message, it represents value for that fill/partial fill. On ExecType(150) = B (Calculated), it represents cumulative value for the order.
CommissionDataGrp	[0..*]	Group	Use as an alternative to CommissionData component if multiple commissions or enhanced attributes are needed.
SpreadOrBenchmarkCurveData	[0..1]	Component	
RelativeValueGrp	[0..*]	Group	
YieldData	[0..1]	Component	
GrossTradeAmt	[0..1]	Amt	
NumDaysInterest	[0..1]	int	
ExDate	[0..1]	LocalMktDate	
AccruedInterestRate	[0..1]	Percentage	
AccruedInterestAmt	[0..1]	Amt	
InterestAtMaturity	[0..1]	Amt	For fixed income products which pay lump-sum interest at maturity.
EndAccruedInterestAmt	[0..1]	Amt	For repurchase agreements the accrued interest on termination.
StartCash	[0..1]	Amt	For repurchase agreements the start (dirty) cash consideration.
EndCash	[0..1]	Amt	For repurchase agreements the end (dirty) cash consideration.
TradedFlatSwitch	[0..1]	CodeSet	
BasisFeatureDate	[0..1]	LocalMktDate	
BasisFeaturePrice	[0..1]	Price	
Concession	[0..1]	Amt	
TotalTakedown	[0..1]	Amt	
NetMoney	[0..1]	Amt	On a fill/partial fill message, it represents value for that fill/partial fill. On a ExecType(150) = B (Calculated) message, it represents cumulative value for the order. Value expressed in the currency reflected by the Currency(15) field.

Name	Mult.	Type	Description
SettlCurrAmt	[0..1]	Amt	Used to report results of forex accommodation trade.
SettlCurrency	[0..1]	Currency	Used to report results of forex accommodation trade. Required for Non-Deliverable Forwards.
SettlCurrencyCodeSource	[0..1]	CodeSet	
RateSource	[0..*]	Group	
OffshoreIndicator	[0..1]	CodeSet	
SettlCurrFxRate	[0..1]	float	Foreign exchange rate used to compute SettlCurrAmt(119) from Currency(15) to SettlCurrency(120).
SettlCurrFxRateCalc	[0..1]	CodeSet	Specifies whether the SettlCurrFxRate(155) should be multiplied or divided.
HandlInst	[0..1]	CodeSet	
MinQty	[0..1]	Qty	
MinQtyMethod	[0..1]	CodeSet	
MatchIncrement	[0..1]	Qty	
MaxPriceLevels	[0..1]	int	
MaximumPriceDeviation	[0..1]	Percentage	
ValueChecksGrp	[0..*]	Group	
MatchingInstructions	[0..*]	Group	
SelfMatchPreventionID	[0..1]	String	May be used as an alternative to MatchingInstructions when the identifier does not appear in another field.
SelfMatchPreventionInstruction	[0..1]	CodeSet	May be used to return the self-match prevention instruction provided on the order placement message. Omit for unsolicited cancellations and use ExecRestatementReason(378) to convey the self-match prevention instruction that caused the cancellation.
CrossedIndicator	[0..1]	CodeSet	
DisplayInstruction	[0..1]	Component	
DisclosureInstructionGrp	[0..*]	Group	
MaxFloor	[0..1]	Qty	
ClearingAccountType	[0..1]	CodeSet	
PositionEffect	[0..1]	CodeSet	For use in derivatives omnibus accounting
MaxShow	[0..1]	Qty	

Name	Mult.	Type	Description
BookingType	[0..1]	CodeSet	Method for booking out this order. Used when notifying a broker that an order to be settled by that broker is to be booked out as an OTC derivative (e.g. CFD or similar). Absence of this field implies regular booking.
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.
SettlDate2	[0..1]	LocalMktDate	Can be used with OrdType = "Forex - Swap" to specify the "value date" for the future portion of a F/X swap.
OrderQty2	[0..1]	Qty	Can be used with OrdType = "Forex - Swap" to specify the order quantity for the future portion of a F/X swap.
LastForwardPoints2	[0..1]	PriceOffset	Can be used with OrdType = "Forex - Swap" to specify the forward points (added to LastSpotRate) for the future portion of a F/X swap.
MultiLegReportingType	[0..1]	CodeSet	Default is a single security if not specified.
ContingencyType	[0..1]	CodeSet	For contingency orders, the type of contingency as specified in the order.
CancellationRights	[0..1]	CodeSet	For CIV - Optional
MoneyLaunderingStatus	[0..1]	CodeSet	
RegistID	[0..1]	String	Reference to Registration Instructions message for this Order.
Designation	[0..1]	String	Supplementary registration information for this Order
TransBkdTime	[0..1]	UTCTimestamp	For CIV - Optional
ExecValuationPoint	[0..1]	UTCTimestamp	For CIV - Optional
ExecPriceType	[0..1]	CodeSet	For CIV - Optional
ExecPriceAdjustment	[0..1]	float	For CIV - Optional
PriorityIndicator	[0..1]	CodeSet	
PriceImprovement	[0..1]	PriceOffset	
LastLiquidityInd	[0..1]	CodeSet	Applicable only on OrdStatus(39) = 1 of (Partially filled) or 2(Filled).
ContAmtGrp	[0..*]	Group	

Name	Mult.	Type	Description
InstrmtLegExecGrp	[0..*]	Group	Specifies the leg executions of a multi-leg order or quote.
CopyMsgIndicator	[0..1]	Boolean	
MiscFeesGrp	[0..*]	Group	Required if any miscellaneous fees are reported.
DividendYield	[0..1]	Percentage	
ManualOrderIndicator	[0..1]	Boolean	
CustDirectedOrder	[0..1]	Boolean	
ReceivedDeptID	[0..1]	String	
CustOrderHandlingInst	[0..1]	CodeSet	
OrderHandlingInstSource	[0..1]	CodeSet	
OrderOrigination	[0..1]	CodeSet	
ContraOrderOrigination	[0..1]	CodeSet	May be used for cross orders submitted with single order messages.
OriginatingDeptID	[0..1]	String	
ReceivingDeptID	[0..1]	String	
RoutingArrangementIndicator	[0..1]	CodeSet	
ContraRoutingArrangementIndicator	[0..1]	CodeSet	May be used for cross orders submitted with single order messages.
AffiliatedFirmsTradeIndicator	[0..1]	Boolean	
OwnerType	[0..1]	CodeSet	
OrderOwnershipIndicator	[0..1]	CodeSet	Can be used to highlight change of order ownership.
TrdRegTimestamps	[0..*]	Group	
TrdRegPublicationGrp	[0..*]	Group	
TradePriceConditionGrp	[0..*]	Group	
TradeContinuation	[0..1]	CodeSet	May be used to indicate the post-execution trade continuation or lifecycle event. This should echo the value in the message that resulted in this report.
TradeContinuationText	[0..1]	String	
EncodedTradeContinuationTextLen	[0..1]	Length	Must be set if EncodedTradeContinuationText(2371) field is specified and must immediately precede it.
EncodedTradeContinuationText	[0..1]	data	Encoded (non-ASCII characters) representation of the TradeContinuationText(2374) field in the encoded format specified via the MessageEncoding(347) field.

Name	Mult.	Type	Description
Volatility	[0..1]	float	
TimeToExpiration	[0..1]	float	
RiskFreeRate	[0..1]	float	
PriceDelta	[0..1]	float	
CoverPrice	[0..1]	Price	
ThrottleResponse	[0..1]	Component	
RefOrderID	[0..1]	String	
RefOrderIDSource	[0..1]	CodeSet	
RefClOrdID	[0..1]	String

45 Heartbeat

Category: Session

45.1 Message Functionality

The Heartbeat monitors the status of the communication link and identifies when the last of a string of messages was not received.

45.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = 0
TestReqID	[0..1]	String	Required when the heartbeat is the result of a Test Request message.
StandardTrailer	[1..1]	Component	

46 IOI

Category: Indication

46.1 Message Functionality

Indication of interest messages are used to market merchandise which the broker is buying or selling in either a proprietary or agency capacity. The indications can be time bound with a specific expiration value. Indications are distributed with the understanding that other firms may react to the message first and that the merchandise may no longer be available due to prior trade.

Indication messages can be transmitted in various transaction types; NEW, CANCEL, and REPLACE. All message types other than NEW modify the state of the message identified in IOIRefID.

46.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = 6
ApplicationSequenceControl	[0..1]	Component	
IOIID	[1..1]	String	
IOITransType	[1..1]	CodeSet	
IOIRefID	[0..1]	String	Required for Cancel and Replace IOITransType messages

47 ListCancelRequest

Category: ProgramTrading

47.1 Message Functionality

The List Cancel Request message type is used by institutions wishing to cancel previously submitted lists either before or during execution.

47.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = K
ListID	[1..1]	String	
Parties	[0..*]	Group	Insert here the set of "Parties" (firm identification) fields defined in "common components of application messages"
TransactTime	[1..1]	UTCTimestamp	Time this order request was initiated/released by the trader or trading system.
TradeOriginationDate	[0..1]	LocalMktDate	
TradeDate	[0..1]	LocalMktDate	
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.
StandardTrailer	[1..1]	Component	

48 ListExecute

Category: ProgramTrading

48.1 Message Functionality

The List Execute message type is used by institutions to instruct the broker to begin execution of a previously submitted list. This message may or may not be used, as it may be mirroring a phone conversation.

48.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = L
ListID	[1..1]	String	Must be unique, by customer, for the day
ClientBidID	[0..1]	String	Used with BidType=Disclosed to provide the sell side the ability to determine the direction of the trade to execute.
BidID	[0..1]	String	
TransactTime	[1..1]	UTCTimestamp	Time this order request was initiated/released by the trader or trading system.
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.
StandardTrailer	[1..1]	Component	

49 ListStatus

Category: ProgramTrading

49.1 Message Functionality

The list status message is issued as the response to a List Status Request message sent in an unsolicited fashion by the sell-side. It indicates the current state of the orders within the list as they exist at the broker's site. This message may also be used to respond to the List Cancel Request.

49.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = N
ListID	[1..1]	String	
ListStatusType	[1..1]	CodeSet	
NoRpts	[1..1]	int	Total number of messages required to status complete list.
ListOrderStatus	[1..1]	CodeSet	
ContingencyType	[0..1]	CodeSet	
ListRejectReason	[0..1]	CodeSet	
RptSeq	[1..1]	int	Sequence number of this report message.
ListStatusText	[0..1]	String	
EncodedListStatusTextLen	[0..1]	Length	Must be set if EncodedListStatusText field is specified and must immediately precede it.
EncodedListStatusText	[0..1]	data	Encoded (non-ASCII characters) representation of the ListStatusText field in the encoded format specified via the MessageEncoding field.
TransactTime	[0..1]	UTCTimestamp	
TotNoOrders	[1..1]	int	Used to support fragmentation. Sum of NoOrders across all messages with the same ListID.
LastFragment	[0..1]	CodeSet	Indicates whether this is the last fragment in a sequence of message fragments. Only required where message has been fragmented.
OrdListStatGrp	[1..*]	Group	Number of orders statused in this message, i.e. number of repeating groups to follow.
StandardTrailer	[1..1]	Component	

50 ListStatusRequest

Category: ProgramTrading

50.1 Message Functionality

The list status request message type is used by institutions to instruct the broker to generate status messages for a list.

50.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = M
ListID	[1..1]	String	
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.
StandardTrailer	[1..1]	Component	

51 ListStrikePrice

Category: ProgramTrading

51.1 Message Functionality

The strike price message is used to exchange strike price information for principal trades. It can also be used to exchange reference prices for agency trades.

51.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = m (lowercase)
ListID	[1..1]	String	
TotNoStrikes	[1..1]	int	Used to support fragmentation. Sum of NoStrikes across all messages with the same ListID.
LastFragment	[0..1]	CodeSet	Indicates whether this is the last fragment in a sequence of message fragments. Only required where message has been fragmented.
InstrmtStrkPxGrp	[1..*]	Group	Number of strike price entries
StandardTrailer	[1..1]	Component	

52 Logon

Category: Session

52.1 Message Functionality

The logon message authenticates a user establishing a connection to a remote system. The logon message must be the first message sent by the application requesting to initiate a FIX session.

52.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = A
EncryptMethod	[1..1]	CodeSet	(Always unencrypted)
HeartBtInt	[1..1]	int	Note same value used by both sides
RawDataLength	[0..1]	Length	Required for some authentication methods
RawData	[0..1]	data	Required for some authentication methods
ResetSeqNumFlag	[0..1]	CodeSet	Indicates both sides of a FIX session should reset sequence numbers
NextExpectedMsgSeqNum	[0..1]	SeqNum	Optional, alternative via counterparty bi-lateral agreement message gap detection and recovery approach (see "Logon Message NextExpectedMsgSeqNum Processing" section)
MaxMessageSize	[0..1]	Length	Can be used to specify the maximum number of bytes supported for messages received
MsgTypeGrp	[0..*]	Group	
TestMessageIndicator	[0..1]	CodeSet	Can be used to specify that this FIX session will be sending and receiving "test" vs. "production" messages.
Username	[0..1]	String	
Password	[0..1]	String	Note: minimal security exists without transport-level encryption.
NewPassword	[0..1]	String	Specifies a new password for the FIX Logon. The new password is used for subsequent logons.
EncryptedPasswordMethod	[0..1]	int	
EncryptedPasswordLen	[0..1]	Length	
EncryptedPassword	[0..1]	data	

Name	Mult.	Type	Description
EncryptedNewPasswordLen	[0..1]	Length	
EncryptedNewPassword	[0..1]	data	Encrypted new password- encrypted via the method specified in the field EncryptedPasswordMethod(1400)
SessionStatus	[0..1]	CodeSet	Session status at time of logon. Field is intended to be used when the logon is sent as an acknowledgement from acceptor of the FIX session.
DefaultApplVerID	[1..1]	CodeSet	The default version of FIX messages used in this session.
DefaultApplExtID	[0..1]	int	The default extension pack for FIX messages used in this session
DefaultCstmApplVerID	[0..1]	String	The default custom application version (dictionary) for FIX messages used in this session
Text	[0..1]	String	Available to provide a response to logon when used as a logon acknowledgement from acceptor back to the logon initiator.
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.
StandardTrailer	[1..1]	Component	

53 Logout

Category: Session

53.1 Message Functionality

The logout message initiates or confirms the termination of a FIX session. Disconnection without the exchange of logout messages should be interpreted as an abnormal condition.

53.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = 5
SessionStatus	[0..1]	CodeSet	Session status at time of logout.
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.
StandardTrailer	[1..1]	Component	

54 MarginRequirementInquiry

Category: MarginRequirementManagement

54.1 Message Functionality

The purpose of this message is to initiate a margin requirement inquiry for a margin account. The inquiry may be submitted at the detail level or the summary level. It can also be used to inquire margin excess/deficit or net position information. Margin excess/deficit will provide information about the surplus or shortfall compared to the previous trading day or a more recent margin calculation. An inquiry for net position information will trigger one or more PositionReport messages instead of one or more MarginRequirementReport messages.

If the inquiry is made at the detail level, an Instrument block must be provided with the desired level of detail. If the inquiry is made at the summary level, the Instrument block is not provided, implying a summary request is being made. For example, if the inquiring firm specifies the Security Type of “FUT” in the Instrument block, then a detail report will be generated containing the margin requirements for all futures positions for the inquiring account. Similarly, if the inquiry is made at the summary level, the report will contain the total margin requirement aggregated to the margin account level.

54.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = CH
MarginReqmtInqID	[1..1]	String	Unique identifier for this message
MarginReqmtInqQualGrp	[1..*]	Group	Type of margin requirement inquiry
SubscriptionRequestType	[0..1]	CodeSet	Used to subscribe / unsubscribe for margin requirement reports. If the field is absent, the default will be snapshot request only - no subscription.
ResponseTransportType	[0..1]	CodeSet	Ability to specify whether the response to the request should be delivered inband or via pre-arranged out-of-band transport.
ResponseDestination	[0..1]	String	URI destination name. Used if ResponseTransportType is out-of-band.
Parties	[0..*]	Group	
ClearingBusinessDate	[0..1]	LocalMktDate	Indicates the date for which the margin is to be calculated

Name	Mult.	Type	Description
SettlSessID	[0..1]	CodeSet	Indicates the settlement session for which the margin is to be calculated – End Of Day or Intraday
SettlSessSubID	[0..1]	String	
MarginClass	[0..1]	String	Used to identify a group of instruments with similar risk profile.
Instrument	[0..1]	Component	
TransactTime	[0..1]	UTCTimestamp	Represents the time the inquiry was submitted
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.
StandardTrailer	[1..1]	Component	

55 MarginRequirementInquiryAck

Category: MarginRequirementManagement

55.1 Message Functionality

Used to respond to a Margin Requirement Inquiry.

55.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = CI
MarginReqmtInqID	[1..1]	String	Unique identifier for this message
MarginReqmtInqQualGrp	[1..*]	Group	Type of margin requirement inquiry
MarginReqmtInqStatus	[1..1]	CodeSet	Status of the Margin Requirement Inquiry referenced by MarginReqmtInqID
MarginReqmtInqResult	[0..1]	CodeSet	Result of the Margin Requirement Inquiry referenced by MarginReqmtInqID – specifies any errors or warnings
TotNumReports	[0..1]	int	Total number of reports generated in response to this inquiry
SubscriptionRequestType	[0..1]	CodeSet	Used to subscribe / unsubscribe for margin requirement reports. If the field is absent, the default will be snapshot request only - no subscription.
ResponseTransportType	[0..1]	CodeSet	Ability to specify whether the response to the request should be delivered inband or via pre-arranged out-of-band transport.
ResponseDestination	[0..1]	String	URI destination name. Used if ResponseTransportType is out-of-band.
Parties	[0..*]	Group	
ClearingBusinessDate	[0..1]	LocalMktDate	Indicates the date for which the margin is to be calculated
SettlSessID	[0..1]	CodeSet	Indicates the settlement session for which the margin is to be calculated – End Of Day or Intraday
SettlSessSubID	[0..1]	String	
MarginClass	[0..1]	String	Used to identify a group of instruments with similar risk profile.

Name	Mult.	Type	Description
Instrument	[0..1]	Component	
TransactTime	[0..1]	UTCTimestamp	Represents the time this message was generated
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.
StandardTrailer	[1..1]	Component	

56 MarginRequirementReport

Category: MarginRequirementManagement

56.1 Message Functionality

The Margin Requirement Report returns information about margin requirement either as an overview across all margin accounts or on a detailed level due to the inquiry making use of the optional Instrument component block. Application sequencing can be used to re-request a range of reports.

56.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = CJ
ApplicationSequenceControl	[0..1]	Component	
MarginReqmtRptID	[1..1]	String	Unique identifier for this margin requirement report
MarginReqmtInqID	[0..1]	String	Unique identifier for the inquiry associated with this report. This field should not be provided if the report was sent unsolicited.
MarginReqmtRptType	[1..1]	CodeSet	Type of report provided
TotNumReports	[0..1]	int	Total number of reports generated in response to inquiry referenced by MarginReqmtInqID
LastRptRequested	[0..1]	CodeSet	
UnsolicitedIndicator	[0..1]	CodeSet	Set to 'Y' if message is sent as a result of a subscription request or out of band configuration as opposed to a Margin Requirement Inquiry.
Parties	[0..*]	Group	
RegulatoryReportType	[0..1]	CodeSet	
RegulatoryReportTypeBusinessDate	[0..1]	LocalMktDate	May be used when the business event date differs from when the regulatory report is actually being submitted (typically specified in TrdRegTimestamps component).
TrdRegTimestamps	[0..*]	Group	
ClearingBusinessDate	[0..1]	LocalMktDate	Indicates the date for which the margin is to be calculated
ClearingPortfolioID	[0..1]	String	

Name	Mult.	Type	Description
SettlSessID	[0..1]	CodeSet	Indicates the settlement session for which the margin is to be calculated – End Of Day or Intraday
SettlSessSubID	[0..1]	String	
MarginClass	[0..1]	String	Used to identify a group of instruments with similar risk profile.
Currency	[0..1]	Currency	Base currency of the margin requirement
CurrencyCodeSource	[0..1]	CodeSet	
Instrument	[0..1]	Component	
MarginAmount	[1..*]	Group	Margin requirement amounts
TransactTime	[0..1]	UTCTimestamp	Represents the time this message was generated
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.
StandardTrailer	[1..1]	Component	

57 MarketDataIncrementalRefresh

Category: MarketData

57.1 Message Functionality

The Market Data message for incremental updates may contain any combination of new, changed, or deleted Market Data Entries, for any combination of instruments, with any combination of trades, imbalances, quotes, index values, open, close, settlement, high, low, and VWAP prices, trade volume and open interest so long as the maximum FIX message size is not exceeded. All of these types of Market Data Entries can be changed and deleted.

57.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = X
ApplicationSequenceControl	[0..1]	Component	
MDBookType	[0..1]	CodeSet	Describes the type of book for which the feed is intended. Can be used when multiple feeds are provided over the same connection
MDFeedType	[0..1]	String	Describes a class of service for a given data feed, ie Regular and Market Maker
MDSubFeedType	[0..1]	String	
TradeDate	[0..1]	LocalMktDate	Used to specify the trading date for which a set of market data applies
MDReqID	[0..1]	String	Conditionally required if this message is in response to a Market Data Request.
MarketID	[0..1]	Exchange	
MarketSegmentID	[0..1]	String	
MDIncGrp	[1..*]	Group	Number of entries following.
ApplQueueDepth	[0..1]	int	Depth of application messages queued for transmission as of delivery of this message
ApplQueueResolution	[0..1]	CodeSet	Action taken to resolve application queuing
RoutingGrp	[0..*]	Group	
StandardTrailer	[1..1]	Component	

58 MarketDataReport

Category: MarketData

58.1 Message Functionality

The MarketDataReport(35=DR) message is used to provide delimiting references (e.g. start and end markers in a continuous broadcast) and details about the number of market data messages sent in a given distribution cycle.

58.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = DR
ApplicationSequenceControl	[0..1]	Component	
MDReportID	[0..1]	int	Unique identifier for MarketDataReport(35=DR).
MDReportEvent	[1..1]	CodeSet	
MDReportCount	[1..1]	int	
TransactTime	[0..1]	UTCTimestamp	
TotNumReports	[0..1]	int	
TotNoMarketSegmentReports	[0..1]	int	
TotNoInstrumentReports	[0..1]	int	
TotNoPartyDetailReports	[0..1]	int	
TotNoEntitlementReports	[0..1]	int	
TotNoRiskLimitReports	[0..1]	int	
StandardTrailer	[1..1]	Component	

59 MarketDataRequest

Category: MarketData

59.1 Message Functionality

Some systems allow the transmission of real-time quote, order, trade, trade volume, open interest, and/or other price information on a subscription basis. A MarketDataRequest(35=V) is a general request for market data on specific securities or forex quotes. The values in the fields provided within the request will serve as further filter criteria for the result set.

59.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = V
MDReqID	[1..1]	String	Must be unique, or the ID of previous Market Data Request to disable if SubscriptionRequestType(263) = 2(Disable previous Snapshot + Updates Request).
SubscriptionRequestType	[1..1]	CodeSet	SubscriptionRequestType(263) indicates to the other party what type of response is expected. A snapshot request only asks for current information. A subscribe request asks for updates as the status changes. Unsubscribe will cancel any future update messages from the counter party.
Parties	[0..*]	Group	
MarketDepth	[1..1]	int	
MDUpdateType	[0..1]	CodeSet	Required if SubscriptionRequestType(263) = 1(Snapshot + Updates).
AggregatedBook	[0..1]	CodeSet	
OpenCloseSettlFlag	[0..1]	CodeSet	Can be used to clarify a request if MDEntryType(269) = 4 (Opening price), 5 (Closing price), or 6 (Settlement price).
Scope	[0..1]	CodeSet	Defines the scope(s) of the request
MDImplicitDelete	[0..1]	CodeSet	Can be used when MarketDepth(254) >= 2 and MDUpdateType(265) = 1(Incremental Refresh).
MDReqGrp	[1..*]	Group	

Name	Mult.	Type	Description
MarketSegmentScopeGrp	[0..*]	Group	Can be used to limit the result set to the specified markets or market segments.
InstrmtMDReqGrp	[1..*]	Group	
TrdgSesGrp	[0..*]	Group	
ApplQueueAction	[0..1]	CodeSet	Action to take if application level queuing exists
ApplQueueMax	[0..1]	int	Maximum application queue depth that must be exceeded before queuing action is taken.
MDQuoteType	[0..1]	CodeSet	
FastMarketIndicator	[0..1]	Boolean	
StandardTrailer	[1..1]	Component	

60 MarketDataRequestReject

Category: MarketData

60.1 Message Functionality

The Market Data Request Reject is used when the broker cannot honor the Market Data Request, due to business or technical reasons. Brokers may choose to limit various parameters, such as the size of requests, whether just the top of book or the entire book may be displayed, and whether Full or Incremental updates must be used.

60.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = Y
MDReqID	[1..1]	String	Must refer to the MDReqID of the request.
Parties	[0..*]	Group	Insert here the set of Parties (firm identification) fields defined in "Common Components of Application Messages".
MDReqRejReason	[0..1]	CodeSet	
MDRjctGrp	[0..*]	Group	
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.
StandardTrailer	[1..1]	Component	

61 MarketDataSnapshotFullRefresh

Category: MarketData

61.1 Message Functionality

The Market Data messages are used as the response to a Market Data Request message. In all cases, one Market Data message refers only to one Market Data Request. It can be used to transmit a 2-sided book of orders or list of quotes, a list of trades, index values, opening, closing, settlement, high, low, or VWAP prices, the trade volume or open interest for a security, or any combination of these.

61.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = W
ApplicationSequenceControl	[0..1]	Component	
TotNumReports	[0..1]	int	Total number of reports returned in response to a request.
MDReportID	[0..1]	int	Unique identifier for the market data report.
ClearingBusinessDate	[0..1]	LocalMktDate	
MDBookType	[0..1]	CodeSet	Describes the type of book for which the feed is intended. Can be used when multiple feeds are provided over the same connection
MDSubBookType	[0..1]	int	Can be used to define a subordinate book.
MarketDepth	[0..1]	int	Can be used to define the current depth of the book.
MDFeedType	[0..1]	String	Describes a class of service for a given data feed, ie Regular and Market Maker
MDSubFeedType	[0..1]	String	
RefreshIndicator	[0..1]	Boolean	
TradeDate	[0..1]	LocalMktDate	Used to specify the trading date for which a set of market data applies
MDReqID	[0..1]	String	Conditionally required if this message is in response to a MarketDataRequest(35=V).

63 MarketDataStatisticsRequest

Category: MarketData

63.1 Message Functionality

The MarketDataStatisticsRequest(35=DO) is used to request for statistical data. The simple form is to use an identifier (MDStatisticID(2475)) assigned by the market place which would denote a pre-defined statistical report. Alternatively, or also in addition, the request can define a number of parameters for the desired statistical information.

63.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType=DO
MDStatisticReqID	[1..1]	String	Unique message identifier for the request or the identifier of a previous request when unsubscribing.
SubscriptionRequestType	[1..1]	CodeSet	Used to subscribe / unsubscribe for market data statistics reports or to request a one-time snapshot of the current information.
Parties	[0..*]	Group	
TradeDate	[0..1]	LocalMktDate	Used to specify the business date.
MarketID	[0..1]	Exchange	Used to specify a single market.
MarketSegmentID	[0..1]	String	Used to specify a single market segment.
MarketSegmentDesc	[0..1]	String	
EncodedMktSegmDescLen	[0..1]	Length	Must be set if EncodedMktSegmDesc(1398) field is specified and must immediately precede it.
EncodedMktSegmDesc	[0..1]	data	Encoded (non-ASCII characters) representation of the MarketSegmentDesc(1396) field in the encoded format specified via the MessageEncoding(347) field.
SecurityListID	[0..1]	String	Used to reference an entire group of instruments for which a single set of statistics is to be calculated.
Instrument	[0..1]	Component	Used to specify an individual instrument or instrument attributes for which a single set of statistics is to be calculated.

Name	Mult.	Type	Description
InstrumentExtension	[0..1]	Component	
FinancingDetails	[0..1]	Component	
UndInstrmtGrp	[0..*]	Group	
InstrmtLegGrp	[0..*]	Group	
RelatedInstrumentGrp	[0..*]	Group	
MDStatisticReqGrp	[1..*]	Group	Used to specify the parameters for the calculation of statistics.
TransactTime	[0..1]	UTCTimestamp	Time that the request was submitted.
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText(355) field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text(58) field in the encoded format specified via the MessageEncoding(347) field.
StandardTrailer	[0..1]	Component	

64 MarketDefinition

Category: MarketStructureReferenceData

64.1 Message Functionality

The MarketDefinition(35=BU) message is used to respond to MarketDefinitionRequest(35=BT). In a subscription, it will be used to provide the initial snapshot of the information requested. Subsequent updates are provided by the MarketDefinitionUpdateReport(35=BV).

64.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = BU
ApplicationSequenceControl	[0..1]	Component	
MarketReportID	[1..1]	String	Unique identifier for each market definition message.
MarketReqID	[0..1]	String	
MarketID	[1..1]	Exchange	
MarketSegmentID	[0..1]	String	
MarketSegmentDesc	[0..1]	String	
EncodedMktSegmDescLen	[0..1]	Length	Must be set if EncodedMktSegmDesc(1398) field is specified and must immediately precede it.
EncodedMktSegmDesc	[0..1]	data	Encoded (non-ASCII characters) representation of the MarketSegmDesc(1396) field in the encoded format specified via the MessageEncoding(347) field.
ParentMktSegmID	[0..1]	String	Specifies that the market segment specified in this message is a sub-segment of the market segment defined in this field.
MarketSegmentStatus	[0..1]	CodeSet	
MarketSegmentType	[0..1]	CodeSet	Used to specify the purpose of a special market segment identified by MarketSegmentID(1300). Conditionally required if MarketSegmentSubType(2544) is specified.
MarketSegmentSubType	[0..1]	CodeSet	
InstrumentScopeGrp	[0..*]	Group	Used to specify the types of securities that belong to the market segment.

Name	Mult.	Type	Description
RelatedMarketSegmentGrp	[0..*]	Group	Used to specify market segments that have a relationship to the market segment defined in this message.
Currency	[0..1]	Currency	The default trading currency
CurrencyCodeSource	[0..1]	CodeSet	
BaseTradingRules	[0..1]	Component	Used to specify the base trading rules for the identified market or market segment.
OrdTypeRules	[0..*]	Group	Used to specify the order types that are valid for trading on the identified market or market segment.
TimeInForceRules	[0..*]	Group	Used to specify the time in force rules that are valid for trading on the identified market or market segment.
ExecInstRules	[0..*]	Group	Used to specify the execution instructions that are valid for trading on the identified market or market segment.
AuctionTypeRuleGrp	[0..*]	Group	Used to specify the auction order types that are valid for trading on the identified market or market segment.
MarketDataFeedTypes	[0..*]	Group	Used to specify the market data feed types that are valid for trading on the identified market or market segment.
MatchRules	[0..*]	Group	Used to specify the matching rules that are valid for trading on the identified market or market segment.
FlexProductEligibilityGrp	[0..*]	Group	Specifies the eligibility indicators for the creation of flexible securities.
Parties	[0..*]	Group	Specifies parties relevant for the market or market segment, e.g. market makers.
MiscFeesGrp	[0..*]	Group	
EffectiveBusinessDate	[0..1]	LocalMktDate	
TransactTime	[0..1]	UTCTimestamp	
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText(355) field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text(58) field in the encoded format specified via the MessageEncoding(347) field.

StandardTrailer

[1..1] Component

65 MarketDefinitionRequest

Category: MarketStructureReferenceData

65.1 Message Functionality

The Market Definition Request message is used to request for market structure information from the Respondent that receives this request.

65.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = BT
MarketReqID	[1..1]	String	Must be unique, or the ID of previous Market Segment Request to disable if SubscriptionRequestType = Disable previous Snapshot + Updates Request(2).
SubscriptionRequestType	[1..1]	CodeSet	
MarketID	[0..1]	Exchange	Conditionally required if MarketSegmentID(1300) is specified on the request
MarketSegmentID	[0..1]	String	
ParentMktSegmID	[0..1]	String	Specifies that the Market Segment is a sub segment of the Market Segment defined in this field.
StandardTrailer	[1..1]	Component	

66 MarketDefinitionUpdateReport

Category: MarketStructureReferenceData

66.1 Message Functionality

In a subscription for market structure information, this message is used once the initial snapshot of the information has been sent using the MarketDefinition(35=BU) message.

66.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = BV
ApplicationSequenceControl	[0..1]	Component	
MarketReportID	[1..1]	String	Unique identifier for each market definition message.
MarketReqID	[0..1]	String	
MarketUpdateAction	[0..1]	CodeSet	Specifies the action taken
MarketID	[1..1]	Exchange	
MarketSegmentID	[0..1]	String	
MarketSegmentDesc	[0..1]	String	
EncodedMktSegmDescLen	[0..1]	Length	Must be set if EncodedMktSegmDesc(1398) field is specified and must immediately precede it.
EncodedMktSegmDesc	[0..1]	data	Encoded (non-ASCII characters) representation of the MarketSegmDesc(1396) field in the encoded format specified via the MessageEncoding(347) field.
ParentMktSegmID	[0..1]	String	Specifies that the market segment specified in this message is a sub-segment of the market segment defined in this field.
MarketSegmentStatus	[0..1]	CodeSet	
MarketSegmentType	[0..1]	CodeSet	Used to specify the purpose of a special market segment identified by MarketSegmentID(1300). Conditionally required if MarketSegmentSubType(2544) is specified.
MarketSegmentSubType	[0..1]	CodeSet	
InstrumentScopeGrp	[0..*]	Group	Used to specify the types of securities that belong to the market segment.

Name	Mult.	Type	Description
RelatedMarketSegmentGrp	[0..*]	Group	Used to specify market segments that have a relationship to the market segment defined in this message.
Currency	[0..1]	Currency	The default trading currency
CurrencyCodeSource	[0..1]	CodeSet	
BaseTradingRules	[0..1]	Component	Used to specify the valid base trading rules for the identified market or market segment.
OrdTypeRules	[0..*]	Group	Used to specify the order types that are valid for trading on the identified market or market segment.
TimeInForceRules	[0..*]	Group	Used to specify the time in force rules that are valid for trading on the identified market or market segment.
ExecInstRules	[0..*]	Group	Used to specify the execution instructions that are valid for trading on the identified market or market segment.
AuctionTypeRuleGrp	[0..*]	Group	Used to specify the auction order types that are valid for trading on the identified market or market segment.
MarketDataFeedTypes	[0..*]	Group	Used to specify the market data feed types that are valid for trading on the identified market or market segment.
MatchRules	[0..*]	Group	Used to specify the matching rules that are valid for trading on the identified market or market segment.
FlexProductEligibilityGrp	[0..*]	Group	Specifies the eligibility indicators for the creation of flexible securities.
Parties	[0..*]	Group	Specifies parties relevant for the market or market segment, e.g. market makers.
EffectiveBusinessDate	[0..1]	LocalMktDate	
TransactTime	[0..1]	UTCTimestamp	
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText(355) field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text(58) field in the encoded format specified via the MessageEncoding(347) field.
StandardTrailer	[1..1]	Component	

67 MassOrder

Category: OrderMassHandling

67.1 Message Functionality

The MassOrder(35=DJ) message can be used to add, modify or delete multiple unrelated orders with a single message. Apart from clearing related attributes, only the key order attributes for high performance trading are available.

67.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType=DJ
MassOrderRequestID	[1..1]	String	
OrderResponseLevel	[0..1]	CodeSet	
MarketID	[0..1]	Exchange	
MarketSegmentID	[0..1]	String	
Parties	[0..*]	Group	This is party information related to the submitter.
TradingCapacity	[0..1]	CodeSet	
ClearingAccountType	[0..1]	CodeSet	
Account	[0..1]	String	
AcctIDSource	[0..1]	CodeSet	
AccountType	[0..1]	CodeSet

CustOrderCapacity	[0..1]	CodeSet	
ManualOrderIndicator	[0..1]	Boolean	
CustOrderHandlingInst	[0..1]	CodeSet	
TransactTime	[0..1]	UTCTimestamp	
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText(355) field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text(58) field in the encoded format specified via the MessageEncoding(347) field.

Name	Mult.	Type	Description
ThrottleInst	[0..1]	CodeSet	
TotNoOrderEntries	[0..1]	int	Used to support fragmentation. Sum of NoOrderEntries(2428) within the OrderEntryGrp across all messages with the same MassOrderRequestID(2423).
LastFragment	[0..1]	CodeSet	Indicates whether this is the last fragment in a sequence of message fragments. Only required where message has been fragmented.
OrderEntryGrp	[1..*]	Group	
StandardTrailer	[1..1]	Component	

68 MassOrderAck

Category: OrderMassHandling

68.1 Message Functionality

The mass order acknowledgement message is used to acknowledge the receipt of and the status for a MassOrder(35=DJ) message.

68.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType=DK
ApplicationSequenceControl	[0..1]	Component	For use in drop copy applications. NOT FOR USE in transactional applications.
MassOrderRequestID	[0..1]	String	
MassOrderReportID	[0..1]	String	
MassOrderRequestStatus	[1..1]	CodeSet	Message level request status
MassOrderRequestResult	[0..1]	CodeSet	Message level request result
OrderResponseLevel	[0..1]	CodeSet	Level of response requested from receiver of MassOrder (35=DJ) message.
RejectText	[0..1]	String	
EncodedRejectTextLen	[0..1]	Length	Must be set if EncodedRejectText(1665) field is specified and must immediately precede it.
EncodedRejectText	[0..1]	data	Encoded (non-ASCII characters) representation of the RejectText(1328) field in the encoded format specified via the MessageEncoding(347) field.
MarketID	[0..1]	Exchange	
MarketSegmentID	[0..1]	String	
Parties	[0..*]	Group

EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the RejectText(1328) field in the encoded format specified via the MessageEncoding(347) field.
CopyMsgIndicator	[0..1]	Boolean	
TotNoOrderEntries	[0..1]	int	Used to support fragmentation. Sum of NoOrderEntries(2428) within the OrderEntryAckGrp across all messages with the same MassOrderRequestID(2423).
LastFragment	[0..1]	CodeSet	Indicates whether this is the last fragment in a sequence of message fragments. Only required where message has been fragmented.
ThrottleResponse	[0..1]	Component	
OrderEntryAckGrp	[0..*]	Group	
StandardTrailer	[1..1]	Component	

69 MassQuote

Category: QuotationNegotiation

69.1 Message Functionality

The Mass Quote message can contain quotes for multiple securities to support applications that allow for the mass quoting of an option series. Two levels of repeating groups have been provided to minimize the amount of data required to submit a set of quotes for a class of options (e.g. all option series for IBM).

69.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = i (lowercase)
QuoteReqID	[0..1]	String	Required when quote is in response to a Quote Request message
QuoteID	[1..1]	String	
QuoteType	[0..1]	CodeSet	Type of Quote. Default is Indicative if not specified
QuoteModelType	[0..1]	CodeSet	
QuoteResponseLevel	[0..1]	CodeSet	Level of Response requested from receiver of quote messages.
Parties	[0..*]	Group	Insert here the set of "Parties" (firm identification) fields defined in "Common Components of Application Messages"
Account	[0..1]	String	
AcctIDSource	[0..1]	CodeSet	
AccountType	[0..1]	CodeSet	Type of account associated with the order (Origin)
DefBidSize	[0..1]	Qty	Default Bid Size for quote contained within this quote message - if not explicitly provided.
DefOfferSize	[0..1]	Qty	Default Offer Size for quotes contained within this quote message - if not explicitly provided.
QuotSetGrp	[1..*]	Group	The number of sets of quotes in the message
SelfMatchPreventionID	[0..1]	String	
SelfMatchPreventionInstruction	[0..1]	CodeSet	
ThrottleInst	[0..1]	CodeSet	

Name	Mult.	Type	Description
ComplianceID	[0..1]	String	
ComplianceText	[0..1]	String	
EncodedComplianceTextLen	[0..1]	Length	Must be set if EncodedComplianceText(2352) field is specified and must immediately precede it.
EncodedComplianceText	[0..1]	data	Encoded (non-ASCII characters) representation of the ComplianceText(2404) field in the encoded format specified via the MessageEncoding(347) field.
StandardTrailer	[1..1]	Component	

70 MassQuoteAck

Category: QuotationNegotiation

70.1 Message Functionality

Mass Quote Acknowledgement is used as the application level response to a Mass Quote message.

70.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = b (lowercase)
QuoteReqID	[0..1]	String	Required when acknowledgment is in response to a Quote Request message
QuoteID	[0..1]	String	Required when acknowledgment is in response to a Mass Quote, mass Quote Cancel or mass Quote Status Request message. Maps to: - QuoteID(117) of a Mass Quote. - QuoteMsgID(1166) of Quote Cancel. - QuoteStatusReqID(649) of Quote Status Request
QuoteStatus	[1..1]	CodeSet	Status of the mass quote acknowledgement.
QuoteRejectReason	[0..1]	CodeSet	Reason Quote was rejected.
QuoteResponseLevel	[0..1]	CodeSet	Level of Response requested from receiver of quote messages. Is echoed back to the counterparty.
QuoteType	[0..1]	CodeSet	Type of Quote
QuoteCancelType	[0..1]	CodeSet	
Parties	[0..*]	Group	Insert here the set of "Parties" (firm identification) fields defined in "Common Components of Application Messages"
TargetParties	[0..*]	Group	Should be populated if the Mass Quote Acknowledgement is acknowledging a mass quote cancellation by party.
Account	[0..1]	String	
AcctIDSource	[0..1]	CodeSet	
AccountType	[0..1]	CodeSet	Type of account associated with the order (Origin)
ComplianceID	[0..1]	String	
ComplianceText	[0..1]	String	

Name	Mult.	Type	Description
EncodedComplianceTextLen	[0..1]	Length	Must be set if EncodedComplianceText(2352) field is specified and must immediately precede it.
EncodedComplianceText	[0..1]	data	Encoded (non-ASCII characters) representation of the ComplianceText(2404) field in the encoded format specified via the MessageEncoding(347) field.
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	
EncodedText	[0..1]	data	
QuotSetAckGrp	[0..*]	Group	The number of sets of quotes in the message
ThrottleResponse	[0..1]	Component	
StandardTrailer	[1..1]	Component	

71 MultilegOrderCancelReplace

Category: MultilegOrders

71.1 Message Functionality

Used to modify a multileg order previously submitted using the New Order - Multileg message. See Order Cancel Replace Request for details concerning message usage.

71.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = AC
OrderID	[0..1]	String	Unique identifier of most recent order as assigned by sell-side (broker, exchange, ECN).
OrderRequestID	[0..1]	int	Required if provided on the order being replaced (or cancelled). Echo back the value provided by the requester.
OrigClOrdID	[0..1]	String	ClOrdID of the previous order (NOT the initial order of the day) when canceling or replacing an order. Required when referring to orders that were electronically submitted over FIX or otherwise assigned a ClOrdID.
ClOrdID	[0..1]	String	Unique identifier of replacement order as assigned by institution or by the intermediary with closest association with the investor. Note that this identifier will be used in ClOrdID field of the Cancel Reject message if the replacement request is rejected.
SecondaryClOrdID	[0..1]	String	
ClOrdLinkID	[0..1]	String	
OrigOrdModTime	[0..1]	UTCTimestamp	
Parties	[0..*]	Group	This is party information related to the submitter of the request.
TargetParties	[0..*]	Group	Identifies parties not directly associated with or owning the order, who are to be informed to effect processing of the order.
TradeOriginationDate	[0..1]	LocalMktDate	

Name	Mult.	Type	Description
TradeDate	[0..1]	LocalMktDate	
Account	[0..1]	String	
AcctIDSource	[0..1]	CodeSet	
AccountType	[0..1]	CodeSet	
DayBookingInst	[0..1]	CodeSet	
BookingUnit	[0..1]	CodeSet	
PreallocMethod	[0..1]	CodeSet	
AllocID	[0..1]	String	Used to assign an identifier to the block of individual preallocations
PreAllocMlegGrp	[0..*]	Group	Number of repeating groups for pre-trade allocation
SettlType	[0..1]	CodeSet	
SettlDate	[0..1]	LocalMktDate	Takes precedence over SettlType value and conditionally required/omitted for specific SettlType values.
CashMargin	[0..1]	CodeSet	
ClearingFeeIndicator	[0..1]	CodeSet	
HandlInst	[0..1]	CodeSet	
ExecInst	[0..1]	CodeSet	Can contain multiple instructions, space delimited. If OrdType=P, exactly one of the following values (ExecInst = L, R, M, P, O, T, or W) must be specified.
AuctionInstruction	[0..1]	CodeSet	
MinQty	[0..1]	Qty	
MinQtyMethod	[0..1]	CodeSet	
MatchIncrement	[0..1]	Qty	
MaxPriceLevels	[0..1]	int	
MaximumPriceDeviation	[0..1]	Percentage	
ValueChecksGrp	[0..*]	Group	
MatchingInstructions	[0..*]	Group	
SelfMatchPreventionID	[0..1]	String	May be used as an alternative to MatchingInstructions when the identifier does not appear in another field.
SelfMatchPreventionInstruction	[0..1]	CodeSet	
DisplayInstruction	[0..1]	Component	
DisclosureInstructionGrp	[0..*]	Group	Specifies instructions to disclose certain order level information in market data.

Name	Mult.	Type	Description
MaxFloor	[0..1]	Qty	
MarketSegmentID	[0..1]	String	
ExDestination	[0..1]	Exchange	
ExDestinationIDSource	[0..1]	CodeSet	
ExDestinationType	[0..1]	CodeSet	
TrdgSesGrp	[0..*]	Group	Specifies the number of repeating TradingSessionIDs
ProcessCode	[0..1]	CodeSet	Used to identify soft trades at order entry.
Side	[1..1]	CodeSet	Additional enumeration that indicates this is an order for a multileg order and that the sides are specified in the Instrument Leg component block.
ShortMarkingExemptIndicator	[0..1]	Boolean	
Instrument	[0..1]	Component	
UndInstrmtGrp	[0..*]	Group	Number of underlyings
PrevClosePx	[0..1]	Price	Useful for verifying security identification
SwapPoints	[0..1]	PriceOffset	
LegOrdGrp	[0..*]	Group	Number of legs
LocateReqd	[0..1]	CodeSet	Required for short sell orders
TransactTime	[1..1]	UTCTimestamp	Time this order request was initiated/released by the trader, trading system, or intermediary.
QtyType	[0..1]	CodeSet	
OrderQtyData	[0..1]	Component	Conditionally required when the OrderQtyData component is specified in the NewOrderMultileg(35=AB) message.
OrdType	[1..1]	CodeSet	
MultilegModel	[0..1]	CodeSet	
MultilegPriceMethod	[0..1]	CodeSet	
PriceType	[0..1]	CodeSet	
Price	[0..1]	Price	Required for limit OrdTypes. For F/X orders, should be the "all-in" rate (spot rate adjusted for forward points). Can be used to specify a limit price for a pegged order, previously indicated, etc.
PriceProtectionScope	[0..1]	CodeSet	
StopPx	[0..1]	Price	Required for OrdType = "Stop" or OrdType = "Stop limit".

Name	Mult.	Type	Description
TriggeringInstruction	[0..1]	Component	Insert here the set of "TriggeringInstruction" fields defined in "common components of application messages"
Currency	[0..1]	Currency	
CurrencyCodeSource	[0..1]	CodeSet	
ComplianceID	[0..1]	String	
ComplianceText	[0..1]	String	
EncodedComplianceTextLen	[0..1]	Length	Must be set if EncodedComplianceText(2352) field is specified and must immediately precede it.
EncodedComplianceText	[0..1]	data	Encoded (non-ASCII characters) representation of the ComplianceText(2404) field in the encoded format specified via the MessageEncoding(347) field.
SolicitedFlag	[0..1]	CodeSet	
IOIID	[0..1]	String	Required for Previously Indicated Orders (OrdType=E)
QuotelD	[0..1]	String	Required for Previously Quoted Orders (OrdType=D)
TimeInForce	[0..1]	CodeSet	Absence of this field indicates Day order
EffectiveTime	[0..1]	UTCTimestamp	Can specify the time at which the order should be considered valid
ExpireDate	[0..1]	LocalMktDate	Conditionally required if TimeInForce = GTD and ExpireTime is not specified.
ExpireTime	[0..1]	UTCTimestamp	Conditionally required if TimeInForce = GTD and ExpireDate is not specified.
GTBookingInst	[0..1]	CodeSet	States whether executions are booked out or accumulated on a partially filled GT order
ExposureDuration	[0..1]	int	Conditionally required when TimeInForce(59)=10 (Good for Time)
ExposureDurationUnit	[0..1]	CodeSet	
CommissionData	[0..1]	Component	
CommissionDataGrp	[0..*]	Group	Use as an alternative to CommissionData component if multiple commissions or enhanced attributes are needed.
OrderCapacity	[0..1]	CodeSet	
OrderRestrictions	[0..1]	CodeSet	
TradingCapacity	[0..1]	CodeSet	
PreTradeAnonymity	[0..1]	Boolean	

Name	Mult.	Type	Description
TradePublishIndicator	[0..1]	CodeSet	
CustOrderCapacity	[0..1]	CodeSet	
OrderOrigination	[0..1]	CodeSet	
OrderAttributeGrp	[0..*]	Group	
ForexReq	[0..1]	CodeSet	Indicates that broker is requested to execute a Forex accommodation trade in conjunction with the security trade.
SettlCurrency	[0..1]	Currency	Required if ForexReq = Y.
SettlCurrencyCodeSource	[0..1]	CodeSet	
BookingType	[0..1]	CodeSet	Method for booking out this order. Used when notifying a broker that an order to be settled by that broker is to be booked out as an OTC derivative (e.g. CFD or similar). Absence of this field implies regular booking.
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.
ClearingAccountType	[0..1]	CodeSet	
PositionEffect	[0..1]	CodeSet	For use in derivatives omnibus accounting
CoveredOrUncovered	[0..1]	CodeSet	For use with derivatives, such as options
MaxShow	[0..1]	Qty	
PegInstructions	[0..1]	Component	Insert here the set of "PegInstruction" fields defined in "Common Components of Application Messages"
DiscretionInstructions	[0..1]	Component	Insert here the set of "DiscretionInstruction" fields defined in "Common Components of Application Messages"
TargetStrategy	[0..1]	CodeSet	The target strategy of the order
StrategyParametersGrp	[0..*]	Group	Strategy parameter block
TargetStrategyParameters	[0..1]	String	For further specification of the TargetStrategy
RiskFreeRate	[0..1]	float	

Name	Mult.	Type	Description
ParticipationRate	[0..1]	Percentage	Mandatory for a TargetStrategy=Participate order and specifies the target participation rate. For other order types optionally specifies a volume limit (i.e. do not be more than this percent of the market volume)
CancellationRights	[0..1]	CodeSet	For CIV - Optional
MoneyLaunderingStatus	[0..1]	CodeSet	
RegistID	[0..1]	String	Reference to Registration Instructions message for this Order.
Designation	[0..1]	String	Supplementary registration information for this Order
OwnerType	[0..1]	CodeSet	
OrderOwnershipIndicator	[0..1]	CodeSet	Can be used to request change of order ownership.
MultiLegRptTypeReq	[0..1]	CodeSet	Indicates the method of execution reporting requested by issuer of the order.
ThrottleInst	[0..1]	CodeSet	
AuctionType	[0..1]	CodeSet	Conditionally required for auction orders.
AuctionAllocationPct	[0..1]	Percentage	
RelatedHighPrice	[0..1]	Price	
RelatedLowPrice	[0..1]	Price	
RelatedPriceSource	[0..1]	CodeSet	
StandardTrailer	[1..1]	Component	

72 NetworkCounterpartySystemStatusRequest

Category: Network

72.1 Message Functionality

This message is send either immediately after logging on to inform a network (counterparty system) of the type of updates required or to at any other time in the FIX conversation to change the nature of the types of status updates required. It can also be used with a NetworkRequestType of Snapshot to request a one-off report of the status of a network (or counterparty) system. Finally this message can also be used to cancel a request to receive updates into the status of the counterparties on a network by sending a NetworkRequestStatusMessage with a NetworkRequestType of StopSubscribing.

72.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = "BC"
NetworkRequestType	[1..1]	CodeSet	
NetworkRequestID	[1..1]	String	
CompIDReqGrp	[0..*]	Group	Used to restrict updates/request to a list of specific CompID/SubID/LocationID/DeskID combinations. If not present request applies to all applicable available counterparties. EG Unless one sell side broker was a customer of another you would not expect to see information about other brokers, similarly one fund manager etc.
StandardTrailer	[1..1]	Component	

73 NetworkCounterpartySystemStatusResponse

Category: Network

73.1 Message Functionality

This message is sent in response to a Network (Counterparty System) Status Request Message.

73.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = "BD"
NetworkStatusResponseType	[1..1]	CodeSet	
NetworkRequestID	[0..1]	String	
NetworkResponseID	[1..1]	String	
LastNetworkResponseID	[0..1]	String	Required when NetworkStatusResponseType=2
ComplIDStatGrp	[1..*]	Group	Specifies the number of repeating Compld's
StandardTrailer	[1..1]	Component	

74 NewOrderCross

Category: CrossOrders

74.1 Message Functionality

Used to submit a cross order into a market. The cross order contains two order sides (a buy and a sell). The cross order is identified by its CrossID.

74.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = s (lowercase S)
CrossID	[1..1]	String	
OrderRequestID	[0..1]	int	
CrossType	[1..1]	CodeSet	
CrossPrioritization	[1..1]	CodeSet	
RootParties	[0..*]	Group	Insert here the set of "Root Parties" fields defined in "common components of application messages" Used for acting parties that applies to the whole message, not individual sides.
SideCrossOrdModGrp	[1..*]	Group	Must be 1 or 2. 1 or 2 if CrossType=1. 2 otherwise
Instrument	[1..1]	Component	Insert here the set of "Instrument" (symbology) fields defined in "Common Components of Application Messages"
UndInstrmtGrp	[0..*]	Group	Number of underlyings
InstrmtLegGrp	[0..*]	Group	Number of Legs
SettlType	[0..1]	CodeSet	
SettlDate	[0..1]	LocalMktDate	Takes precedence over SettlType value and conditionally required/omitted for specific SettlType values.
HandlInst	[0..1]	CodeSet	
ExecInst	[0..1]	CodeSet	Can contain multiple instructions, space delimited. If OrdType=P, exactly one of the following values (ExecInst = L, R, M, P, O, T, or W) must be specified.
MinQty	[0..1]	Qty	

Name	Mult.	Type	Description
MinQtyMethod	[0..1]	CodeSet	
MatchIncrement	[0..1]	Qty	
MaxPriceLevels	[0..1]	int	
DisplayInstruction	[0..1]	Component	Insert here the set of "DisplayInstruction" fields defined in "common components of application messages"
MaxFloor	[0..1]	Qty	
MarketSegmentID	[0..1]	String	
ExDestination	[0..1]	Exchange	
ExDestinationIDSource	[0..1]	CodeSet	
TrdgSesGrp	[0..*]	Group	Specifies the number of repeating TradingSessionIDs
ProcessCode	[0..1]	CodeSet	Used to identify soft trades at order entry.
PrevClosePx	[0..1]	Price	Useful for verifying security identification
LocateReqd	[0..1]	CodeSet	Required for short sell orders
TransactTime	[1..1]	UTCTimestamp	Time this order request was initiated/released by the trader, trading system, or intermediary.
TransBkdTime	[0..1]	UTCTimestamp	A date and time stamp to indicate when this order was booked with the agent prior to submission to the VMU
Stipulations	[0..*]	Group	Insert here the set of "Stipulations" (repeating group of Fixed Income stipulations) fields defined in "Common Components of Application Messages"
OrdType	[1..1]	CodeSet	
PriceType	[0..1]	CodeSet	
Price	[0..1]	Price	Required for limit OrdTypes. For F/X orders, should be the "all-in" rate (spot rate adjusted for forward points). Can be used to specify a limit price for a pegged order, previously indicated, etc.
PriceProtectionScope	[0..1]	CodeSet	
StopPx	[0..1]	Price	Required for OrdType = "Stop" or OrdType = "Stop limit".
TriggeringInstruction	[0..1]	Component	Insert here the set of "TriggeringInstruction" fields defined in "common components of application messages"

Name	Mult.	Type	Description
SpreadOrBenchmarkCurveData	[0..1]	Component	Insert here the set of "SpreadOrBenchmarkCurveData" (Fixed Income spread or benchmark curve) fields defined in "Common Components of Application Messages"
YieldData	[0..1]	Component	Insert here the set of "YieldData" (yield-related) fields defined in "Common Components of Application Messages"
Currency	[0..1]	Currency	
CurrencyCodeSource	[0..1]	CodeSet	
ComplianceID	[0..1]	String	
IOIID	[0..1]	String	Required for Previously Indicated Orders (OrdType=E)
QuotelD	[0..1]	String	Required for Previously Quoted Orders (OrdType=D)
TimeInForce	[0..1]	CodeSet	Absence of this field indicates Day order
EffectiveTime	[0..1]	UTCTimestamp	Can specify the time at which the order should be considered valid
ExpireDate	[0..1]	LocalMktDate	Conditionally required if TimeInForce = GTD and ExpireTime is not specified.
ExpireTime	[0..1]	UTCTimestamp	Conditionally required if TimeInForce = GTD and ExpireDate is not specified.
GTBookingInst	[0..1]	CodeSet	States whether executions are booked out or accumulated on a partially filled GT order
ExposureDuration	[0..1]	int	Conditionally required when TimeInForce(59)=10 (Good for Time)
ExposureDurationUnit	[0..1]	CodeSet	
TradingCapacity	[0..1]	CodeSet	
MaxShow	[0..1]	Qty	
PegInstructions	[0..1]	Component	Insert here the set of "PegInstruction" fields defined in "Common Components of Application Messages"
DiscretionInstructions	[0..1]	Component	Insert here the set of "DiscretionInstruction" fields defined in "Common Components of Application Messages"
TargetStrategy	[0..1]	CodeSet	The target strategy of the order
StrategyParametersGrp	[0..*]	Group	Strategy parameter block
TargetStrategyParameters	[0..1]	String	For further specification of the TargetStrategy

Name	Mult.	Type	Description
ParticipationRate	[0..1]	Percentage	Mandatory for a TargetStrategy=Participate order and specifies the target participation rate. For other order types optionally specifies a volume limit (i.e. do not be more than this percent of the market volume)
CancellationRights	[0..1]	CodeSet	For CIV - Optional
MoneyLaunderingStatus	[0..1]	CodeSet	
RegistID	[0..1]	String	Reference to Registration Instructions message for this Order.
Designation	[0..1]	String	Supplementary registration information for this Order
ThrottleInst	[0..1]	CodeSet	
StandardTrailer	[1..1]	Component	

75 NewOrderList

Category: ProgramTrading

75.1 Message Functionality

The NewOrderList Message can be used in one of two ways depending on which market conventions are being followed.

75.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = E
ListID	[1..1]	String	Must be unique, by customer, for the day
BidID	[0..1]	String	Should refer to an earlier program if bidding took place.
ClientBidID	[0..1]	String	
ProgRptReqs	[0..1]	CodeSet	
BidType	[1..1]	CodeSet	e.g. Non Disclosed Model, Disclosed Model, No Bidding Process
ProgPeriodInterval	[0..1]	int	
CancellationRights	[0..1]	CodeSet	For CIV - Optional
MoneyLaunderingStatus	[0..1]	CodeSet	
RegistID	[0..1]	String	Reference to Registration Instructions message applicable to all Orders in this List.
ListExecInstType	[0..1]	CodeSet	Controls when execution should begin For CIV Orders indicates order of execution.
ListExecInst	[0..1]	String	Free-form text.
ContingencyType	[0..1]	CodeSet	Used for contingency orders.
EncodedListExecInstLen	[0..1]	Length	Must be set if EncodedListExecInst field is specified and must immediately precede it.
EncodedListExecInst	[0..1]	data	Encoded (non-ASCII characters) representation of the ListExecInst field in the encoded format specified via the MessageEncoding field.
AllowableOneSidednessPct	[0..1]	Percentage	The maximum percentage that execution of one side of a program trade can exceed execution of the other.

Name	Mult.	Type	Description
AllowableOneSidednessValue	[0..1]	Amt	The maximum amount that execution of one side of a program trade can exceed execution of the other.
AllowableOneSidednessCurr	[0..1]	Currency	The currency that AllowableOneSidedness is expressed in if AllowableOneSidednessValue is used.
ListManualOrderIndicator	[0..1]	Boolean	
TotNoOrders	[1..1]	int	Used to support fragmentation. Sum of NoOrders across all messages with the same ListID.
LastFragment	[0..1]	CodeSet	Indicates whether this is the last fragment in a sequence of message fragments. Only required where message has been fragmented.
RootParties	[0..*]	Group	Insert here the set of "Root Parties" fields defined in "common components of application messages" Used for acting parties that applies to the whole message, not individual orders.
ListOrdGrp	[1..*]	Group	Number of orders in this message (number of repeating groups to follow)
ThrottleInst	[0..1]	CodeSet	
StandardTrailer	[1..1]	Component	

76 NewOrderMultileg

Category: MultilegOrders

76.1 Message Functionality

The New Order - Multileg is provided to submit orders for securities that are made up of multiple securities, known as legs.

76.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = AB
ClOrdID	[1..1]	String	Unique identifier of the order as assigned by institution or by the intermediary with closest association with the investor.
OrderRequestID	[0..1]	int	
SecondaryClOrdID	[0..1]	String	
ClOrdLinkID	[0..1]	String	
Parties	[0..*]	Group	This is party information related to the submitter of the request.
TargetParties	[0..*]	Group	Identifies parties not directly associated with or owning the order, who are to be informed to effect processing of the order.
TradeOriginationDate	[0..1]	LocalMktDate	
TradeDate	[0..1]	LocalMktDate	
Account	[0..1]	String	
AcctIDSource	[0..1]	CodeSet	
AccountType	[0..1]	CodeSet	
DayBookingInst	[0..1]	CodeSet	
BookingUnit	[0..1]	CodeSet	
PreallocMethod	[0..1]	CodeSet	
AllocID	[0..1]	String	Used to assign an identifier to the block of individual preallocations
PreAllocMlegGrp	[0..*]	Group	Number of repeating groups for pre-trade allocation
SettlType	[0..1]	CodeSet	

Name	Mult.	Type	Description
SettlDate	[0..1]	LocalMktDate	Takes precedence over SettlType value and conditionally required/omitted for specific SettlType values.
CashMargin	[0..1]	CodeSet	
ClearingFeeIndicator	[0..1]	CodeSet	
HandlInst	[0..1]	CodeSet	
ExecInst	[0..1]	CodeSet	Can contain multiple instructions, space delimited. If OrdType=P, exactly one of the following values (ExecInst = L, R, M, P, O, T, or W) must be specified.
AuctionInstruction	[0..1]	CodeSet	
MinQty	[0..1]	Qty	
MinQtyMethod	[0..1]	CodeSet	
MatchIncrement	[0..1]	Qty	
MaxPriceLevels	[0..1]	int	
MaximumPriceDeviation	[0..1]	Percentage	
ValueChecksGrp	[0..*]	Group	
MatchingInstructions	[0..*]	Group	
SelfMatchPreventionID	[0..1]	String	May be used as an alternative to MatchingInstructions when the identifier does not appear in another field.
SelfMatchPreventionInstruction	[0..1]	CodeSet	
DisplayInstruction	[0..1]	Component	
DisclosureInstructionGrp	[0..*]	Group	Specifies instructions to disclose certain order level information in market data.
MaxFloor	[0..1]	Qty	
MarketSegmentID	[0..1]	String	
ExDestination	[0..1]	Exchange	
ExDestinationIDSource	[0..1]	CodeSet	
ExDestinationType	[0..1]	CodeSet	
TrdgSesGrp	[0..*]	Group	Specifies the number of repeating TradingSessionIDs
ProcessCode	[0..1]	CodeSet	Used to identify soft trades at order entry.
Side	[1..1]	CodeSet	Additional enumeration that indicates this is an order for a multileg order and that the sides are specified in the Instrument Leg component block.
ShortMarkingExemptIndicator	[0..1]	Boolean	

Name	Mult.	Type	Description
Instrument	[0..1]	Component	
UndInstrmtGrp	[0..*]	Group	Number of underlyings
PrevClosePx	[0..1]	Price	Useful for verifying security identification
SwapPoints	[0..1]	PriceOffset	For FX Swaps. Used to express the differential between the far leg's bid/offer and the near leg's bid/offer.
LegOrdGrp	[0..*]	Group	Number of legs
LocateReqd	[0..1]	CodeSet	Required for short sell orders
TransactTime	[1..1]	UTCTimestamp	Time this order request was initiated/released by the trader, trading system, or intermediary.
QtyType	[0..1]	CodeSet	
OrderQtyData	[0..1]	Component	Conditionally required when the multileg order is not for a FX Swap, or any other swaps or multilegged transaction where having OrderQty(38) is irrelevant as the amounts are expressed in the LegOrderQty(685).
OrdType	[1..1]	CodeSet	
MultilegModel	[0..1]	CodeSet	
MultilegPriceMethod	[0..1]	CodeSet	
PriceType	[0..1]	CodeSet	
Price	[0..1]	Price	Required for limit OrdTypes. For F/X orders, should be the "all-in" rate (spot rate adjusted for forward points). Can be used to specify a limit price for a pegged order, previously indicated, etc.
PriceProtectionScope	[0..1]	CodeSet	
StopPx	[0..1]	Price	Required for OrdType = "Stop" or OrdType = "Stop limit".
TriggeringInstruction	[0..1]	Component	Insert here the set of "TriggeringInstruction" fields defined in "common components of application messages"
Currency	[0..1]	Currency	
CurrencyCodeSource	[0..1]	CodeSet	
TradePriceNegotiationMethod	[0..1]	CodeSet	
UpfrontPriceType	[0..1]	CodeSet	

Name	Mult.	Type	Description
UpfrontPrice	[0..1]	Price	Upfront Price for CDS transactions. Conditionally required if TradePriceNegotiationMethod(1740) = 4(Percent of par and upfront amount), 5(Deal spread and upfront amount) or 6(Upfront points and upfront amount).
ComplianceID	[0..1]	String	
ComplianceText	[0..1]	String	
EncodedComplianceTextLen	[0..1]	Length	Must be set if EncodedComplianceText(2352) field is specified and must immediately precede it.
EncodedComplianceText	[0..1]	data	Encoded (non-ASCII characters) representation of the ComplianceText(2404) field in the encoded format specified via the MessageEncoding(347) field.
SolicitedFlag	[0..1]	CodeSet	
IOIID	[0..1]	String	Required for Previously Indicated Orders (OrdType=E)
QuoteID	[0..1]	String	Required for Previously Quoted Orders (OrdType=D)
RefOrderID	[0..1]	String	Required for counter-order selection / Hit / Take Orders. (OrdType = Q)
RefOrderIDSource	[0..1]	CodeSet	Conditionally required if RefOrderID is specified.
RefClOrdID	[0..1]	String	
TimeInForce	[0..1]	CodeSet	Absence of this field indicates Day order
EffectiveTime	[0..1]	UTCTimestamp	Can specify the time at which the order should be considered valid
ExpireDate	[0..1]	LocalMktDate	Conditionally required if TimeInForce = GTD and ExpireTime is not specified.
ExpireTime	[0..1]	UTCTimestamp	Conditionally required if TimeInForce = GTD and ExpireDate is not specified.
GTBookingInst	[0..1]	CodeSet	States whether executions are booked out or accumulated on a partially filled GT order
ExposureDuration	[0..1]	int	Conditionally required when TimeInForce(59)=10 (Good for Time)
ExposureDurationUnit	[0..1]	CodeSet	
CommissionData	[0..1]	Component	
CommissionDataGrp	[0..*]	Group	Use as an alternative to CommissionData component if multiple commissions or enhanced attributes are needed.

Name	Mult.	Type	Description
OrderCapacity	[0..1]	CodeSet	
OrderRestrictions	[0..1]	CodeSet	
TradingCapacity	[0..1]	CodeSet	
PreTradeAnonymity	[0..1]	Boolean	
TradePublishIndicator	[0..1]	CodeSet	
CustOrderCapacity	[0..1]	CodeSet	
OrderOrigination	[0..1]	CodeSet	
OrderAttributeGrp	[0..*]	Group	
ForexReq	[0..1]	CodeSet	Indicates that broker is requested to execute a Forex accommodation trade in conjunction with the security trade.
SettlCurrency	[0..1]	Currency	Required if ForexReq = Y.
SettlCurrencyCodeSource	[0..1]	CodeSet	
BookingType	[0..1]	CodeSet	Method for booking out this order. Used when notifying a broker that an order to be settled by that broker is to be booked out as an OTC derivative (e.g. CFD or similar). Absence of this field implies regular booking.
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.
ClearingAccountType	[0..1]	CodeSet	
PositionEffect	[0..1]	CodeSet	For use in derivatives omnibus accounting
CoveredOrUncovered	[0..1]	CodeSet	For use with derivatives, such as options
MaxShow	[0..1]	Qty	
PegInstructions	[0..1]	Component	Insert here the set of "PegInstruction" fields defined in "Common Components of Application Messages"
DiscretionInstructions	[0..1]	Component	Insert here the set of "DiscretionInstruction" fields defined in "Common Components of Application Messages"
TargetStrategy	[0..1]	CodeSet	The target strategy of the order
StrategyParametersGrp	[0..*]	Group	Strategy parameter block
TargetStrategyParameters	[0..1]	String	For further specification of the TargetStrategy

Name	Mult.	Type	Description
RiskFreeRate	[0..1]	float	
ParticipationRate	[0..1]	Percentage	Mandatory for a TargetStrategy=Participate order and specifies the target participation rate. For other order types optionally specifies a volume limit (i.e. do not be more than this percent of the market volume)
CancellationRights	[0..1]	CodeSet	For CIV - Optional
MoneyLaunderingStatus	[0..1]	CodeSet	
RegistID	[0..1]	String	Reference to Registration Instructions message for this Order.
Designation	[0..1]	String	Supplementary registration information for this Order
MultiLegRptTypeReq	[0..1]	CodeSet	Indicates the method of execution reporting requested by issuer of the order.
ThrottleInst	[0..1]	CodeSet	
AuctionType	[0..1]	CodeSet	Conditionally required for auction orders.
AuctionAllocationPct	[0..1]	Percentage	
RelatedHighPrice	[0..1]	Price	
RelatedLowPrice	[0..1]	Price

77 NewOrderSingle

Category: SingleGeneralOrderHandling

77.1 Message Functionality

The new order message type is used by institutions wishing to electronically submit securities and forex orders to a broker for execution.

The New Order message type may also be used by institutions or retail intermediaries wishing to electronically submit Collective Investment Vehicle (CIV) orders to a broker or fund manager for execution.

77.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = D
ClOrdID	[1..1]	String	Unique identifier of the order as assigned by institution or by the intermediary (CIV term, not a hub/service bureau) with closest association with the investor.
OrderRequestID	[0..1]	int	
SecondaryClOrdID	[0..1]	String	
ClOrdLinkID	[0..1]	String	
DuplicateClOrdIDIndicator	[0..1]	CodeSet	
Parties	[0..*]	Group	This is party information related to the submitter of the request.
TargetParties	[0..*]	Group	Identifies parties not directly associated with or owning the order, who are to be informed to effect processing of the order.
TradeOriginationDate	[0..1]	LocalMktDate	
TradeDate	[0..1]	LocalMktDate	
Account	[0..1]	String	
AcctIDSource	[0..1]	CodeSet	
AccountType	[0..1]	CodeSet	Type of account associated with the order (Origin)
DayBookingInst	[0..1]	CodeSet	
BookingUnit	[0..1]	CodeSet	

Name	Mult.	Type	Description
PreallocMethod	[0..1]	CodeSet	
AllocID	[0..1]	String	Used to assign an overall allocation id to the block of preallocations
PreAllocGrp	[0..*]	Group	Number of repeating groups for pre-trade allocation
SettlType	[0..1]	CodeSet	For NDFs either SettlType or SettlDate should be specified.
SettlDate	[0..1]	LocalMktDate	Takes precedence over SettlType value and conditionally required/omitted for specific SettlType values. For NDFs either SettlType or SettlDate should be specified.
CashMargin	[0..1]	CodeSet	
ClearingFeeIndicator	[0..1]	CodeSet	
HandlInst	[0..1]	CodeSet	
ExecInst	[0..1]	CodeSet	Can contain multiple instructions, space delimited. If OrdType=P, exactly one of the following values (ExecInst = L, R, M, P, O, T, W, a, d) must be specified.
AuctionInstruction	[0..1]	CodeSet	
MinQty	[0..1]	Qty	
MinQtyMethod	[0..1]	CodeSet	
MatchIncrement	[0..1]	Qty	
MaxPriceLevels	[0..1]	int	
MaximumPriceDeviation	[0..1]	Percentage	
ValueChecksGrp	[0..*]	Group	
MatchingInstructions	[0..*]	Group	
SelfMatchPreventionID	[0..1]	String	May be used as an alternative to MatchingInstructions when the identifier does not appear in another field.
SelfMatchPreventionInstruction	[0..1]	CodeSet	
DisplayInstruction	[0..1]	Component	
DisclosureInstructionGrp	[0..*]	Group	Specifies instructions to disclose certain order level information in market data.
MaxFloor	[0..1]	Qty	
MarketSegmentID	[0..1]	String	
ExDestination	[0..1]	Exchange	
ExDestinationIDSource	[0..1]	CodeSet	

Name	Mult.	Type	Description
ExDestinationType	[0..1]	CodeSet	
TrdgSesGrp	[0..*]	Group	Specifies the number of repeating TradingSessionIDs
ProcessCode	[0..1]	CodeSet	Used to identify soft trades at order entry.
Instrument	[1..1]	Component	Insert here the set of "Instrument" (symbology) fields defined in "Common Components of Application Messages"
FinancingDetails	[0..1]	Component	Insert here the set of "FinancingDetails" (symbology) fields defined in "Common Components of Application Messages"
UndInstrmtGrp	[0..*]	Group	Number of underlyings
PrevClosePx	[0..1]	Price	Useful for verifying security identification
Side	[1..1]	CodeSet	
ShortMarkingExemptIndicator	[0..1]	Boolean	
ShortSaleExemptionReason	[0..1]	CodeSet	Available for optional use when Side(54) = 6(Sell short exempt).
LocateReqd	[0..1]	CodeSet	Required for short sell orders
TransactTime	[1..1]	UTCTimestamp	Time this order request was initiated/released by the trader, trading system, or intermediary.
Stipulations	[0..*]	Group	Insert here the set of "Stipulations" (repeating group of Fixed Income stipulations) fields defined in "Common Components of Application Messages"
QtyType	[0..1]	CodeSet	
OrderQtyData	[1..1]	Component	
OrdType	[1..1]	CodeSet	
PriceType	[0..1]	CodeSet	
Price	[0..1]	Price	Required for limit OrdTypes. For F/X orders, should be the "all-in" rate (spot rate adjusted for forward points). Can be used to specify a limit price for a pegged order, previously indicated, etc.
CurrentWorkingPrice	[0..1]	Price	May be used for new (child) orders stemming from the split of a parent order. Refers to the working price of the parent order.
PriceProtectionScope	[0..1]	CodeSet	
StopPx	[0..1]	Price	Required for OrdType = "Stop" or OrdType = "Stop limit".

Name	Mult.	Type	Description
TriggeringInstruction	[0..1]	Component	Insert here the set of "TriggeringInstruction" fields defined in "common components of application messages"
SpreadOrBenchmarkCurveData	[0..1]	Component	Insert here the set of "SpreadOrBenchmarkCurveData" (Fixed Income spread or benchmark curve) fields defined in "Common Components of Application Messages"
YieldData	[0..1]	Component	Insert here the set of "YieldData" (yield-related) fields defined in "Common Components of Application Messages"
Currency	[0..1]	Currency	
CurrencyCodeSource	[0..1]	CodeSet	
TradePriceNegotiationMethod	[0..1]	CodeSet	
UpfrontPriceType	[0..1]	CodeSet	
UpfrontPrice	[0..1]	Price	Upfront Price for CDS transactions. Conditionally required if TradePriceNegotiationMethod(1740) = 4(Percent of par and upfront amount), 5(Deal spread and upfront amount) or 6(Upfront points and upfront amount).
ComplianceID	[0..1]	String	
ComplianceText	[0..1]	String	
EncodedComplianceTextLen	[0..1]	Length	Must be set if EncodedComplianceText(2352) field is specified and must immediately precede it.
EncodedComplianceText	[0..1]	data	Encoded (non-ASCII characters) representation of the ComplianceText(2404) field in the encoded format specified via the MessageEncoding(347) field.
SolicitedFlag	[0..1]	CodeSet	
CopyMsgIndicator	[0..1]	Boolean	May be used when intentionally sending an order more than once, e.g. an order being received manually as well as electronically in conjunction with a regulatory requirement to report both events.
IOIID	[0..1]	String	Required for Previously Indicated Orders (OrdType=E)
QuoteID	[0..1]	String	Required for Previously Quoted Orders (OrdType=D)
TimeInForce	[0..1]	CodeSet	Absence of this field indicates Day order

Name	Mult.	Type	Description
EffectiveTime	[0..1]	UTCTimestamp	Can specify the time at which the order should be considered valid
ExpireDate	[0..1]	LocalMktDate	Conditionally required if TimeInForce = GTD and ExpireTime is not specified.
ExpireTime	[0..1]	UTCTimestamp	Conditionally required if TimeInForce = GTD and ExpireDate is not specified.
GTBookingInst	[0..1]	CodeSet	States whether executions are booked out or accumulated on a partially filled GT order
ExposureDuration	[0..1]	int	Conditionally required when TimeInForce(59)=10 (Good for Time)
ExposureDurationUnit	[0..1]	CodeSet	
CommissionData	[0..1]	Component	
CommissionDataGrp	[0..*]	Group	Use as an alternative to CommissionData component if multiple commissions or enhanced attributes are needed.
OrderCapacity	[0..1]	CodeSet	
OrderRestrictions	[0..1]	CodeSet	
TradingCapacity	[0..1]	CodeSet	
RegulatoryReportType	[0..1]	CodeSet	
PreTradeAnonymity	[0..1]	Boolean	
TradePublishIndicator	[0..1]	CodeSet	Applies to trades resulting from the order.
CustOrderCapacity	[0..1]	CodeSet	
OrderAttributeGrp	[0..*]	Group	
ForexReq	[0..1]	CodeSet	Indicates that broker is requested to execute a Forex accommodation trade in conjunction with the security trade.
SettlCurrency	[0..1]	Currency	Required if ForexReq=Y. Required for NDFs.
SettlCurrencyCodeSource	[0..1]	CodeSet	
RateSource	[0..*]	Group	
OffshoreIndicator	[0..1]	CodeSet	
BookingType	[0..1]	CodeSet	Method for booking out this order. Used when notifying a broker that an order to be settled by that broker is to be booked out as an OTC derivative (e.g. CFD or similar). Absence of this field implies regular booking.
Text	[0..1]	String	

Name	Mult.	Type	Description
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.
SettlDate2	[0..1]	LocalMktDate	Can be used with OrdType = "Forex - Swap" to specify the "value date" for the future portion of a F/X swap.
OrderQty2	[0..1]	Qty	Can be used with OrdType = "Forex - Swap" to specify the order quantity for the future portion of a F/X swap.
Price2	[0..1]	Price	Can be used with OrdType = "Forex - Swap" to specify the price for the future portion of a F/X swap which is also a limit order. For F/X orders, should be the "all-in" rate (spot rate adjusted for forward points).
ClearingAccountType	[0..1]	CodeSet	
PositionEffect	[0..1]	CodeSet	For use in derivatives omnibus accounting
CoveredOrUncovered	[0..1]	CodeSet	For use with derivatives, such as options
MaxShow	[0..1]	Qty	
PegInstructions	[0..1]	Component	Insert here the set of "PegInstruction" fields defined in "Common Components of Application Messages"
DiscretionInstructions	[0..1]	Component	Insert here the set of "DiscretionInstruction" fields defined in "Common Components of Application Messages"
TargetStrategy	[0..1]	CodeSet	The target strategy of the order
StrategyParametersGrp	[0..*]	Group	Strategy parameter block
TargetStrategyParameters	[0..1]	String	For further specification of the TargetStrategy
ParticipationRate	[0..1]	Percentage	Mandatory for a TargetStrategy=Participate order and specifies the target participation rate. For other order types optionally specifies a volume limit (i.e. do not be more than this percent of the market volume)
CancellationRights	[0..1]	CodeSet	For CIV - Optional
MoneyLaunderingStatus	[0..1]	CodeSet	
RegistID	[0..1]	String	Reference to Registration Instructions message for this Order.

Name	Mult.	Type	Description
Designation	[0..1]	String	Supplementary registration information for this Order
ManualOrderIndicator	[0..1]	Boolean	
CustDirectedOrder	[0..1]	Boolean

78 News

Category: EventCommunication

78.1 Message Functionality

The news message is a general free format message between the broker and institution. The message contains flags to identify the news item's urgency and to allow sorting by subject company (symbol). The News message can be originated at either the broker or institution side, or exchanges and other marketplace venues.

78.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = B
ApplicationSequenceControl	[0..1]	Component	
NewsID	[0..1]	String	Unique identifier for News message
NewsRefGrp	[0..*]	Group	News items referenced by this News message
NewsCategory	[0..1]	CodeSet	
LanguageCode	[0..1]	Language	Used to optionally specify the national language used for the News item.
OrigTime	[0..1]	UTCTimestamp	
Urgency	[0..1]	CodeSet	
Headline	[1..1]	String	Specifies the headline text
EncodedHeadlineLen	[0..1]	Length	Must be set if EncodedHeadline field is specified and must immediately precede it.
EncodedHeadline	[0..1]	data	Encoded (non-ASCII characters) representation of the Headline field in the encoded format specified via the MessageEncoding field.
RoutingGrp	[0..*]	Group	
MarketID	[0..1]	Exchange	Used to optionally specify the market to which this News applies.
MarketSegmentID	[0..1]	String	Used to optionally specify the market segment to which this News applies.
InstrmtGrp	[0..*]	Group	Specifies the number of repeating symbols (instruments) specified
InstrmtLegGrp	[0..*]	Group	

Name	Mult.	Type	Description
UndInstrmtGrp	[0..*]	Group	Number of underlyings
LinesOfTextGrp	[1..*]	Group	Specifies the number of repeating lines of text specified
URLLink	[0..1]	String	A URL (Uniform Resource Locator) link to additional information (i.e. http://www.XYZ.com/research.html)
RawDataLength	[0..1]	Length	
RawData	[0..1]	data	
StandardTrailer	[1..1]	Component	

79 OrderCancelReject

Category: SingleGeneralOrderHandling

79.1 Message Functionality

The order cancel reject message is issued by the broker upon receipt of a cancel request or cancel/replace request message which cannot be honored.

79.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = 9
OrderID	[1..1]	String	If CxlRejReason="Unknown order", specify "NONE".
OrderRequestID	[0..1]	int	Required if provided on the order cancel or cancel/replace request. Echo back the value provided by the requester.
SecondaryOrderID	[0..1]	String	Can be used to provide order id used by exchange or executing system.
SecondaryCLOrdID	[0..1]	String	
CLOrdID	[1..1]	String	Unique order id assigned by institution or by the intermediary with closest association with the investor. to the cancel request or to the replacement order.
CLOrdLinkID	[0..1]	String	
OrigCLOrdID	[0..1]	String	CLOrdID(11) which could not be canceled/replaced. CLOrdID of the previous accepted order (NOT the initial order of the day) when canceling or replacing an order. Required when referring to orders that were electronically submitted over FIX or otherwise assigned a CLOrdID.
OrdStatus	[1..1]	CodeSet	OrdStatus value after this cancel reject is applied. If CxlRejReason = "Unknown Order", specify Rejected.
WorkingIndicator	[0..1]	CodeSet	For optional use with OrdStatus = 0 (New)
OrigOrdModTime	[0..1]	UTCTimestamp	

Name	Mult.	Type	Description
ListID	[0..1]	String	Required for rejects against orders which were submitted as part of a list.
Account	[0..1]	String	
AcctIDSource	[0..1]	CodeSet	
AccountType	[0..1]	CodeSet	
TradeOriginationDate	[0..1]	LocalMktDate	
TradeDate	[0..1]	LocalMktDate	
TransactTime	[0..1]	UTCTimestamp	
CxlRejResponseTo	[1..1]	CodeSet	
CxlRejReason	[0..1]	CodeSet	
RejectText	[0..1]	String	Reason description for rejecting the transaction request.
EncodedRejectTextLen	[0..1]	Length	Must be set if EncodedRejectText(1665) field is specified and must immediately precede it.
EncodedRejectText	[0..1]	data	Encoded (non-ASCII characters) representation of the RejectText(1328) field in the encoded format specified via the MessageEncoding(347) field.
ExDestination	[0..1]	Exchange	
ExDestinationIDSource	[0..1]	CodeSet	
Parties	[0..*]	Group	
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.
StandardTrailer	[1..1]	Component	

80 OrderCancelReplaceRequest

Category: SingleGeneralOrderHandling

80.1 Message Functionality

The order cancel/replace request is used to change the parameters of an existing order.

Do not use this message to cancel the remaining quantity of an outstanding order, use the Order Cancel Request message for this purpose.

80.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = G
OrderID	[0..1]	String	Unique identifier of most recent order as assigned by sell-side (broker, exchange, ECN).
OrderRequestID	[0..1]	int	Required if provided on the order being replaced (or cancelled). Echo back the value provided by the requester.
Parties	[0..*]	Group	This is party information related to the submitter of the request.
TargetParties	[0..*]	Group	Identifies parties not directly associated with or owning the order, who are to be informed to effect processing of the order.
TradeOriginationDate	[0..1]	LocalMktDate	
TradeDate	[0..1]	LocalMktDate	
OrigClOrdID	[0..1]	String	ClOrdID(11) of the previous non rejected order (NOT the initial order of the day) when canceling or replacing an order. Required when referring to orders that were electronically submitted over FIX or otherwise assigned a ClOrdID
ClOrdID	[1..1]	String	Unique identifier of replacement order as assigned by institution or by the intermediary with closest association with the investor. Note that this identifier will be used in ClOrdID field of the Cancel Reject message if the replacement request is rejected.
SecondaryClOrdID	[0..1]	String	

Name	Mult.	Type	Description
ClOrdLinkID	[0..1]	String	
DuplicateClOrdIDIndicator	[0..1]	CodeSet	
ListID	[0..1]	String	Required for List Orders
OrigOrdModTime	[0..1]	UTCTimestamp	TransactTime of the last state change that occurred to the original order
Account	[0..1]	String	
AcctIDSource	[0..1]	CodeSet	
AccountType	[0..1]	CodeSet	
DayBookingInst	[0..1]	CodeSet	
BookingUnit	[0..1]	CodeSet	
PreallocMethod	[0..1]	CodeSet	
AllocID	[0..1]	String	Used to assign an overall allocation id to the block of preallocations
PreAllocGrp	[0..*]	Group	Number of repeating groups for pre-trade allocation
SettlType	[0..1]	CodeSet	For NDFs either SettlType or SettlDate should be specified.
SettlDate	[0..1]	LocalMktDate	Takes precedence over SettlType value and conditionally required/omitted for specific SettlType values. For NDFs either SettlType or SettlDate should be specified.
CashMargin	[0..1]	CodeSet	
ClearingFeeIndicator	[0..1]	CodeSet	
HandlInst	[0..1]	CodeSet	
ExecInst	[0..1]	CodeSet	Can contain multiple instructions, space delimited. Replacement order must be created with new parameters (i.e. original order values will not be brought forward to replacement order unless redefined within this message).
AuctionInstruction	[0..1]	CodeSet	
MinQty	[0..1]	Qty	
MinQtyMethod	[0..1]	CodeSet	
MatchIncrement	[0..1]	Qty	
MaxPriceLevels	[0..1]	int	
MaximumPriceDeviation	[0..1]	Percentage	
ValueChecksGrp	[0..*]	Group	
MatchingInstructions	[0..*]	Group	

Name	Mult.	Type	Description
SelfMatchPreventionID	[0..1]	String	May be used as an alternative to MatchingInstructions when the identifier does not appear in another field.
SelfMatchPreventionInstruction	[0..1]	CodeSet	
DisplayInstruction	[0..1]	Component	
DisclosureInstructionGrp	[0..*]	Group	Specifies instructions to disclose certain order level information in market data.
MaxFloor	[0..1]	Qty	
MarketSegmentID	[0..1]	String	
ExDestination	[0..1]	Exchange	
ExDestinationIDSource	[0..1]	CodeSet	
ExDestinationType	[0..1]	CodeSet	
TrdgSesGrp	[0..*]	Group	Specifies the number of repeating TradingSessionIDs
Instrument	[1..1]	Component	Insert here the set of "Instrument" (symbology) fields defined in "Common Components of Application Messages". Must match original order
FinancingDetails	[0..1]	Component	Insert here the set of "FinancingDetails" (symbology) fields defined in "Common Components of Application Messages". Must match original order
UndInstrmtGrp	[0..*]	Group	Number of underlyings
Side	[1..1]	CodeSet	Should match original order's side, however, if bilaterally agreed to the following groups could potentially be interchanged: Buy and Buy Minus, Sell, Sell Plus, Sell Short, and Sell Short Exempt, Cross, Cross Short, and Cross Short Exempt
ShortMarkingExemptIndicator	[0..1]	Boolean	
ShortSaleExemptionReason	[0..1]	CodeSet	Available for optional use when Side(54) = 6(Sell short exempt).
TransactTime	[1..1]	UTCTimestamp	Time this order request was initiated/released by the trader or trading system.
Stipulations	[0..*]	Group	
QtyType	[0..1]	CodeSet	
OrderQtyData	[1..1]	Component	Note: OrderQty(38) value should be the "Total Intended Order Quantity" (including the amount already executed for this chain of orders).
OrdType	[1..1]	CodeSet	

Name	Mult.	Type	Description
PriceType	[0..1]	CodeSet	
Price	[0..1]	Price	Required for limit OrdTypes. For F/X orders, should be the "all-in" rate (spot rate adjusted for forward points). Can be used to specify a limit price for a pegged order, previously indicated, etc.
CurrentWorkingPrice	[0..1]	Price	May be used to correct the initial working price of the parent order when this (child) order was entered.
PriceProtectionScope	[0..1]	CodeSet	
StopPx	[0..1]	Price	Required for OrdType = "Stop" or OrdType = "Stop limit".
TriggeringInstruction	[0..1]	Component	Insert here the set of "TriggeringInstruction" fields defined in "common components of application messages"
SpreadOrBenchmarkCurveData	[0..1]	Component	Insert here the set of "SpreadOrBenchmarkCurveData" (Fixed Income spread or benchmark curve) fields defined in "Common Components of Application Messages"
YieldData	[0..1]	Component	Insert here the set of "YieldData" (yield-related) fields defined in "Common Components of Application Messages"
PegInstructions	[0..1]	Component	Insert here the set of "PegInstruction" fields defined in "Common Components of Application Messages"
DiscretionInstructions	[0..1]	Component	Insert here the set of "DiscretionInstruction" fields defined in "Common Components of Application Messages"
TargetStrategy	[0..1]	CodeSet	The target strategy of the order
StrategyParametersGrp	[0..*]	Group	Strategy parameter block
TargetStrategyParameters	[0..1]	String	For further specification of the TargetStrategy
ParticipationRate	[0..1]	Percentage	Mandatory for a TargetStrategy=Participate order and specifies the target participation rate. For other order types optionally specifies a volume limit (i.e. do not be more than this percent of the market volume)
ComplianceID	[0..1]	String	
ComplianceText	[0..1]	String	
EncodedComplianceTextLen	[0..1]	Length	Must be set if EncodedComplianceText(2352) field is specified and must immediately precede it.

Name	Mult.	Type	Description
EncodedComplianceText	[0..1]	data	Encoded (non-ASCII characters) representation of the ComplianceText(2404) field in the encoded format specified via the MessageEncoding(347) field.
SolicitedFlag	[0..1]	CodeSet	
Currency	[0..1]	Currency	Must match original order.
CurrencyCodeSource	[0..1]	CodeSet	
TimeInForce	[0..1]	CodeSet	Absence of this field indicates Day order
EffectiveTime	[0..1]	UTCTimestamp	Can specify the time at which the order should be considered valid
ExpireDate	[0..1]	LocalMktDate	Conditionally required if TimeInForce = GTD and ExpireTime is not specified.
ExpireTime	[0..1]	UTCTimestamp	Conditionally required if TimeInForce = GTD and ExpireDate is not specified.
GTBookingInst	[0..1]	CodeSet	States whether executions are booked out or accumulated on a partially filled GT order
ExposureDuration	[0..1]	int	Conditionally required when TimeInForce(59)=10 (Good for Time)
ExposureDurationUnit	[0..1]	CodeSet	
CommissionData	[0..1]	Component	
CommissionDataGrp	[0..*]	Group	Use as an alternative to CommissionData component if multiple commissions or enhanced attributes are needed.

81 OrderCancelRequest

Category: SingleGeneralOrderHandling

81.1 Message Functionality

The order cancel request message requests the cancellation of all of the remaining quantity of an existing order. Note that the Order Cancel/Replace Request should be used to partially cancel (reduce) an order).

81.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = F
OrderRequestID	[0..1]	int	Required if provided on the order being cancelled. Echo back the value provided by the requester.
OrigClOrdID	[0..1]	String	ClOrdID(11) of the previous non-rejected order (NOT the initial order of the day) when canceling or replacing an order. Required when referring to orders that were electronically submitted over FIX or otherwise assigned a ClOrdID
OrderID	[0..1]	String	Unique identifier of most recent order as assigned by sell-side (broker, exchange, ECN).
ClOrdID	[1..1]	String	Unique ID of cancel request as assigned by the institution.
SecondaryClOrdID	[0..1]	String	
ClOrdLinkID	[0..1]	String	
ListID	[0..1]	String	Required for List Orders
OrigOrdModTime	[0..1]	UTCTimestamp	
Account	[0..1]	String	
AcctIDSource	[0..1]	CodeSet	
AccountType	[0..1]	CodeSet	
Parties	[0..*]	Group	Insert here the set of "Parties" (firm identification) fields defined in "Common Components of Application Messages"
Instrument	[1..1]	Component	Insert here the set of "Instrument" (symbology) fields defined in "Common Components of Application Messages"

Name	Mult.	Type	Description
FinancingDetails	[0..1]	Component	Insert here the set of "FinancingDetails" (symbology) fields defined in "Common Components of Application Messages". Must match original order
UndInstrmtGrp	[0..*]	Group	Number of underlyings
MarketSegmentID	[0..1]	String	
ExDestination	[0..1]	Exchange	Execution destination when referring to orders that were not electronically submitted over FIX and ClOrdID has not been assigned or is not available to the recipient of the request.
ExDestinationIDSource	[0..1]	CodeSet	
Side	[1..1]	CodeSet	
TransactTime	[1..1]	UTCTimestamp	Time this order request was initiated/released by the trader or trading system.
OrderQtyData	[0..1]	Component	Conditionally required when the OrderQtyData component is required or specified in a prior, related message. For example, when used in a work flow including a NewOrderSingle(35=D) or NewOrderCross(35=s) message, the OrderQtyData component is a required component in these messages and thus the component is required here. When the OrderQtyData component is optional in a related message, such as the NewOrderMultileg(35=AB), the component is required here when specified in the prior, related NewOrderMultileg(35=AB) message.
ComplianceID	[0..1]	String	
ComplianceText	[0..1]	String	
EncodedComplianceTextLen	[0..1]	Length	Must be set if EncodedComplianceText(2352) field is specified and must immediately precede it.
EncodedComplianceText	[0..1]	data	Encoded (non-ASCII characters) representation of the ComplianceText(2404) field in the encoded format specified via the MessageEncoding(347) field.
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.

82 OrderMassActionReport

Category: OrderMassHandling

82.1 Message Functionality

The Order Mass Action Report is used to acknowledge an Order Mass Action Request. Note that each affected order that is suspended or released or canceled is acknowledged with a separate Execution Report for each order.

82.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = BZ
ClOrdID	[0..1]	String	ClOrdID provided on the Order Mass Action Request.
SecondaryClOrdID	[0..1]	String	
MassActionReportID	[1..1]	String	Unique Identifier for the Order Mass Action Report
MassActionType	[1..1]	CodeSet	Order Mass Action Request Type accepted by the system
MassActionScope	[1..1]	CodeSet	Specifies the scope of the action
MassActionReason	[0..1]	CodeSet	Specifies the reason for the action taken.
MassActionResponse	[1..1]	CodeSet	Indicates the action taken by the counterparty order handling system as a result of the Action Request.
MassActionRejectReason	[0..1]	CodeSet	Indicates why Order Mass Action Request was rejected. Required if MassActionResponse(1375) = 0 (Rejected).
TotalAffectedOrders	[0..1]	int	Optional field used to indicate the total number of orders affected by the Order Mass Action Request
TotalNotAffectedOrders	[0..1]	int	Optional field used to indicate the total number of orders within the scope but not affected by the OrderMassActionRequest(35=CA).
LastFragment	[0..1]	CodeSet	Indicates whether this is the last fragment in a sequence of message fragments. Only required where message has been fragmented.
AffectedOrdGrp	[0..*]	Group	List of orders affected by the Order Mass Action Request.

Name	Mult.	Type	Description
NotAffectedOrdGrp	[0..*]	Group	List of orders not affected by the Order Mass Action Request.
AffectedMarketSegmentGrp	[0..*]	Group	List of market segments affected by the Order Mass Action Request. Should only be used when request uses TargetMarketSegmentGrp component.
NotAffectedMarketSegmentGrp	[0..*]	Group	List of market segments not affected by the Order Mass Action Request. Should only be used when request uses TargetMarketSegmentGrp component.
MarketID	[0..1]	Exchange	MarketID for which orders are to be affected
MarketSegmentID	[0..1]	String	MarketSegmentID for which orders are to be affected. Mutually exclusive with TargetMarketSegmentGrp component.
TargetMarketSegmentGrp	[0..*]	Group	Mutually exclusive with MarketSegmentID(1300).
TradingSessionID	[0..1]	CodeSet	TradingSessionID for which orders are to be affected
TradingSessionSubID	[0..1]	CodeSet	TradingSessionSubID for which orders are to be affected
Parties	[0..*]	Group	
TargetParties	[0..*]	Group	Should be populated with the values provided on the associated OrderMassActionRequest(MsgType=CA).
Instrument	[0..1]	Component	
UnderlyingInstrument	[0..1]	Component	
Side	[0..1]	CodeSet	Side of the market specified on the Order Mass Action Request
Price	[0..1]	Price	
TransactTime	[0..1]	UTCTimestamp	Time this report was initiated/released by the sells-side (broker, exchange, ECN) or sell-side executing system.
ComplianceID	[0..1]	String	
ComplianceText	[0..1]	String	
EncodedComplianceTextLen	[0..1]	Length	Must be set if EncodedComplianceText(2352) field is specified and must immediately precede it.
EncodedComplianceText	[0..1]	data	Encoded (non-ASCII characters) representation of the ComplianceText(2404) field in the encoded format specified via the MessageEncoding(347) field.

Name	Mult.	Type	Description
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.

83 OrderMassActionRequest

Category: OrderMassHandling

83.1 Message Functionality

The Order Mass Action Request message can be used to request the suspension or release of a group of orders that match the criteria specified within the request. This is equivalent to individual Order Cancel Replace Requests for each order with or without adding "S" to the ExecInst values. It can also be used for mass order cancellation.

83.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = CA
ClOrdID	[1..1]	String	Unique ID of Order Mass Action Request as assigned by the institution.
SecondaryClOrdID	[0..1]	String	
MassActionType	[1..1]	CodeSet	Specifies the type of action requested
MassActionScope	[1..1]	CodeSet	Specifies the scope of the action
MassActionReason	[0..1]	CodeSet	Specifies the reason for the action requested.
MarketID	[0..1]	Exchange	MarketID for which orders are to be affected
MarketSegmentID	[0..1]	String	MarketSegmentID for which orders are to be affected. Mutually exclusive with TargetMarketSegmentGrp component.
TargetMarketSegmentGrp	[0..*]	Group	List of market segments for which orders are to be affected. Mutually exclusive with MarketSegmentID(1300).
TradingSessionID	[0..1]	CodeSet	Trading Session in which orders are to be affected
TradingSessionSubID	[0..1]	CodeSet	
Parties	[0..*]	Group	
TargetParties	[0..*]	Group	Can be used to specify the parties to whom the Order Mass Action should apply.
Instrument	[0..1]	Component	
UnderlyingInstrument	[0..1]	Component	
Side	[0..1]	CodeSet	Can be used to filter for orders of a single instrument.

Name	Mult.	Type	Description
Price	[0..1]	Price	Can be used to filter for orders of a single instrument.
TransactTime	[1..1]	UTCTimestamp	
ComplianceID	[0..1]	String	
ComplianceText	[0..1]	String	
EncodedComplianceTextLen	[0..1]	Length	Must be set if EncodedComplianceText(2352) field is specified and must immediately precede it.
EncodedComplianceText	[0..1]	data	Encoded (non-ASCII characters) representation of the ComplianceText(2404) field in the encoded format specified via the MessageEncoding(347) field.
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.
StandardTrailer	[1..1]	Component	

84 OrderMassCancelReport

Category: OrderMassHandling

84.1 Message Functionality

The Order Mass Cancel Report is used to acknowledge an Order Mass Cancel Request. Note that each affected order that is canceled is acknowledged with a separate Execution Report or Order Cancel Reject message.

84.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = r (lowercase R)
ClOrdID	[0..1]	String	ClOrdID provided on the Order Mass Cancel Request. Unavailable in case of an unsolicited report, such as after a trading halt or a corporate action requiring the deletion of outstanding orders.
SecondaryClOrdID	[0..1]	String	
OrderID	[1..1]	String	Unique Identifier for the Order Mass Cancel Request assigned by the recipient of the Order Mass Cancel Request.
MassActionReportID	[1..1]	String	Unique Identifier for the Order Mass Cancel Report assigned by the recipient of the Order Mass Cancel Request
SecondaryOrderID	[0..1]	String	Secondary Order ID assigned by the recipient of the Order Mass Cancel Request.
MassCancelRequestType	[1..1]	CodeSet	Order Mass Cancel Request Type accepted by the system
MassCancelResponse	[1..1]	CodeSet	Indicates the action taken by the counterparty order handling system as a result of the Cancel Request. 0 - Indicates Order Mass Cancel Request was rejected.
MassCancelRejectReason	[0..1]	CodeSet	Indicates why Order Mass Cancel Request was rejected. Required if MassCancelResponse = 0
TotalAffectedOrders	[0..1]	int	Optional field used to indicate the total number of orders affected by the Order Mass Cancel Request

Name	Mult.	Type	Description
AffectedOrdGrp	[0..*]	Group	List of orders affected by the Order Mass Cancel Request
NotAffectedOrdGrp	[0..*]	Group	List of orders not affected by Order Mass Cancel Request.
TradingSessionID	[0..1]	CodeSet	Trading Session in which orders are to be canceled
TradingSessionSubID	[0..1]	CodeSet	
Parties	[0..*]	Group	Insert here the set of "Parties" (firm identification) fields defined in "common components of application messages"
TargetParties	[0..*]	Group	Should be populated with the values provided on the associated OrderMassCancelRequest(MsgType=Q).
Instrument	[0..1]	Component	Insert here the set of "Instrument" (symbology) fields defined in "Common Components of Application Messages"
UnderlyingInstrument	[0..1]	Component	Insert here the set of "UnderlyingInstrument" (underlying symbology) fields defined in "Common Components of Application Messages"
MarketID	[0..1]	Exchange	
MarketSegmentID	[0..1]	String	
Side	[0..1]	CodeSet	Side of the market specified on the Order Mass Cancel Request
TransactTime	[0..1]	UTCTimestamp	Time this report was initiated/released by the sells-side (broker, exchange, ECN) or sell-side executing system.
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.
StandardTrailer	[1..1]	Component	

85 OrderMassCancelRequest

Category: OrderMassHandling

85.1 Message Functionality

The order mass cancel request message requests the cancellation of all of the remaining quantity of a group of orders matching criteria specified within the request. NOTE: This message can only be used to cancel order messages (reduce the full quantity).

85.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = q (lowercase Q)
ClOrdID	[1..1]	String	Unique ID of Order Mass Cancel Request as assigned by the institution.
SecondaryClOrdID	[0..1]	String	
MassCancelRequestType	[1..1]	CodeSet	Specifies the type of cancellation requested
TradingSessionID	[0..1]	CodeSet	Trading Session in which orders are to be canceled
TradingSessionSubID	[0..1]	CodeSet	
Parties	[0..*]	Group	Insert here the set of "Parties" (firm identification) fields defined in "common components of application messages"
TargetParties	[0..*]	Group	Can be used to specify the parties to whom the Order Mass Cancel should apply.
Instrument	[0..1]	Component	Insert here the set of "Instrument" (symbology) fields defined in "Common Components of Application Messages"
UnderlyingInstrument	[0..1]	Component	Insert here the set of "UnderlyingInstrument" (underlying symbology) fields defined in "Common Components of Application Messages"
MarketID	[0..1]	Exchange	Required for MassCancelRequestType = 8 (Cancel orders for a market)
MarketSegmentID	[0..1]	String	Required for MassCancelRequestType = 9 (Cancel orders for a market segment)

Name	Mult.	Type	Description
Side	[0..1]	CodeSet	Optional qualifier used to indicate the side of the market for which orders are to be canceled. Absence of this field indicates that orders are to be canceled regardless of side.
TransactTime	[1..1]	UTCTimestamp	Time this order request was initiated/released by the trader or trading system.
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.
StandardTrailer	[1..1]	Component	

86 OrderMassStatusRequest

Category: OrderMassHandling

86.1 Message Functionality

The order mass status request message requests the status for orders matching criteria specified within the request.

86.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = AF
MassStatusReqID	[1..1]	String	Unique ID of mass status request as assigned by the institution.
MassStatusReqType	[1..1]	CodeSet	
Parties	[0..*]	Group	Insert here the set of "Parties" (firm identification) fields defined in "Common Components of Application Messages"
TargetParties	[0..*]	Group	Can be used to specify the parties to whom the Order Mass Status Request should apply.
Account	[0..1]	String	Account
AcctIDSource	[0..1]	CodeSet	
TradingSessionID	[0..1]	CodeSet	Trading Session
TradingSessionSubID	[0..1]	CodeSet	
Instrument	[0..1]	Component	Insert here the set of "Instrument" (symbology) fields defined in "Common Components of Application Messages"
UnderlyingInstrument	[0..1]	Component	Insert here the set of "UnderlyingInstrument" (underlying symbology) fields defined in "Common Components of Application Messages"
Side	[0..1]	CodeSet	Optional qualifier used to indicate the side of the market for which orders will be returned.
StandardTrailer	[1..1]	Component	

87 OrderStatusRequest

Category: SingleGeneralOrderHandling

87.1 Message Functionality

The order status request message is used by the institution to generate an order status message back from the broker.

87.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = H
OrderID	[0..1]	String	Conditionally required if CIOrdID(11) is not provided. Either OrderID or CIOrdID must be provided.
CIOrdID	[0..1]	String	The CIOrdID of the order whose status is being requested. Conditionally required if the OrderID(37) is not provided. Either OrderID or CIOrdID must be provided.
SecondaryCIOrdID	[0..1]	String	
CIOrdLinkID	[0..1]	String	
Parties	[0..*]	Group	Insert here the set of "Parties" (firm identification) fields defined in "Common Components of Application Messages"
OrdStatusReqID	[0..1]	String	Optional, can be used to uniquely identify a specific Order Status Request message. Echoed back on Execution Report if provided.
Account	[0..1]	String	
AcctIDSource	[0..1]	CodeSet	
Instrument	[1..1]	Component	Insert here the set of "Instrument" (symbology) fields defined in "Common Components of Application Messages"
FinancingDetails	[0..1]	Component	Insert here the set of "FinancingDetails" (symbology) fields defined in "Common Components of Application Messages". Must match original order
UndInstrmtGrp	[0..*]	Group	Number of underlyings

Name	Mult.	Type	Description
MarketSegmentID	[0..1]	String	
Side	[1..1]	CodeSet	
StandardTrailer	[1..1]	Component	

88 PartyActionReport

Category: PartiesAction

88.1 Message Functionality

Used to respond to the PartyActionRequest(35=DH) message, indicating whether the request has been received, accepted or rejected. Can also be used in an unsolicited manner to report party actions, e.g. reinstatements after a manual intervention out of band.

88.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType=DI
EffectiveBusinessDate	[0..1]	LocalMktDate	
PartyActionRequestID	[0..1]	String	Conditionally required when responding to a PartyActionRequest(35=DH) message.
PartyActionReportID	[1..1]	String	
PartyActionType	[1..1]	CodeSet	
PartyActionResponse	[1..1]	CodeSet	
PartyActionRejectReason	[0..1]	CodeSet	Conditionally required when PartyActionResponse(2332) = 2 (Rejected).
ApplTestMessageIndicator	[0..1]	Boolean	Conditionally required if present in the PartyActionRequest(35=DH) message.
RejectText	[0..1]	String	
EncodedRejectTextLen	[0..1]	Length	Must be set if EncodedRejectText(1665) field is specified and must immediately precede it.
EncodedRejectText	[0..1]	data	Encoded (non-ASCII characters) representation of the RejectText(1328) field in the encoded format specified via the MessageEncoding(347) field.
MarketID	[0..1]	Exchange	
MarketSegmentID	[0..1]	String	
InstrumentScope	[0..1]	Component	
RequestingPartyGrp	[0..*]	Group	May be used to identify the party making the request and their role.

Name	Mult.	Type	Description
Parties	[1..*]	Group	Used to specify the trading party on which the action is applied to. If in response to PartyActionRequest(35=DH) message, this should echo back the values from the request.
RelatedPartyDetailGrp	[0..*]	Group	
TransactTime	[0..1]	UTCTimestamp	
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText(355) field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text(58) field in the encoded format specified via the MessageEncoding(347) field.
CopyMsgIndicator	[0..1]	Boolean	
StandardTrailer	[1..1]	Component	

89 PartyActionRequest

Category: PartiesAction

89.1 Message Functionality

The PartyActionRequest message is used suspend or halt the specified party from further trading activities at the Respondent. The Respondent must respond with a PartyActionReport(35=DI) message.

89.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType=DH
PartyActionRequestID	[1..1]	String	
PartyActionType	[1..1]	CodeSet	
ApplTestMessageIndicator	[0..1]	Boolean	
MarketID	[0..1]	Exchange	Use to reduce the scope to a market
MarketSegmentID	[0..1]	String	Use to reduce the scope to a market segment
InstrumentScope	[0..1]	Component	Use to reduce the scope of instruments
RequestingPartyGrp	[0..*]	Group	May be used to identify the party making the request and their role.
Parties	[1..*]	Group	Used to specify the trading party on which the action is applied to.
RelatedPartyDetailGrp	[0..*]	Group	
TransactTime	[0..1]	UTCTimestamp	
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText(355) field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text(58) field in the encoded format specified via the MessageEncoding(347) field.
StandardTrailer	[1..1]	Component	

90 PartyDetailsDefinitionRequest

Category: PartiesReferenceData

90.1 Message Functionality

The PartyDetailsDefinitionRequest(35=CX) is used for defining new parties and modifying or deleting existing parties information, including the relationships between parties.

The recipient of the message responds with a PartyDetailsDefinitionRequestAck(35=CY) to indicate whether the request was accepted or rejected.

90.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType=CX
PartyDetailsListRequestID	[1..1]	String	
RequestingPartyGrp	[0..*]	Group	Can be used to identify the party making the request and their role.
PartyDetailsUpdateGrp	[1..*]	Group	Specifies the parties and relationships between parties to be defined, modified, or deleted.
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	
EncodedText	[0..1]	data	
StandardTrailer	[1..1]	Component	

91 PartyDetailsDefinitionRequestAck

Category: PartiesReferenceData

91.1 Message Functionality

The PartyDetailsDefinitionRequestAck(35=CY) is used as a response to the PartyDetailsDefinitionRequest(35=CX) message. The request can be accepted (with or without changes) or rejected.

91.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType=CY
PartyDetailsListRequestID	[1..1]	String	
PartyDetailRequestStatus	[1..1]	CodeSet	
PartyDetailRequestResult	[0..1]	CodeSet	
RequestingPartyGrp	[0..*]	Group	
PartyDetailAckGrp	[0..*]	Group

StandardTrailer	[1..1]	Component	

99 PartyEntitlementsUpdateReport

Category: PartiesReferenceData

99.1 Message Functionality

The PartyEntitlementsUpdateReport(35=CZ) is used to convey incremental changes to party entitlements. It is similar to the PartyEntitlementsReport(35=CV). This message uses the PartyEntitlementsUpdateGrp component which includes the ability to specify an update action using ListUpdateAction(1324).

99.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType=CZ
ApplicationSequenceControl	[0..1]	Component	
EntitlementReportID	[1..1]	String	
EntitlementRequestID	[0..1]	String	Conditionally required when responding to a PartyEntitlementsRequest(35=CU) message.
TotNoParties	[0..1]	int	
LastFragment	[0..1]	CodeSet	
RequestingPartyGrp	[0..*]	Group	May be used to specify the requesting party in the event the request was made verbally or via other means.
PartyEntitlementUpdateGrp	[1..*]	Group	Specifies the updated entitlements to be enforced for the given party(-ies) and related party(-ies).
TransactTime	[0..1]	UTCTimestamp	
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText(355) field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text(58) field in the encoded format specified via the MessageEncoding(347) field.
StandardTrailer	[1..1]	Component	

100 PartyRiskLimitCheckRequest

Category: PartiesAction

100.1 Message Functionality

PartyRiskLimitCheckRequest is used to request for approval of credit or risk limit amount intended to be used by a party in a transaction from another party that holds the information.

100.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType=DE
RiskLimitCheckRequestID	[0..1]	String	Either RiskLimitCheckRequestID(2318) or RiskLimitCheckID(2319) must be specified. RiskLimitCheckRequestID(2318) is conditionally required in a message-chaining model in which a subsequent message may refer to a prior message via RiskLimitCheckRequestRefID(2322). The alternative is an entity-based model in which RiskLimitCheckID(2319) is used to statically identify a given request. In this case RiskLimitCheckID(2319) is required and RiskLimitRequestID(1666) can be optionally specified.
RiskLimitCheckID	[0..1]	String	Either RiskLimitCheckRequestID(2318) or RiskLimitCheckID(2319) must be specified.
RiskLimitCheckTransType	[1..1]	CodeSet	
RiskLimitCheckType	[1..1]	CodeSet	
RiskLimitCheckRequestRefID	[0..1]	int	Conditionally required when RiskLimitCheckTransType(2320) = 1 (Cancel) or 2 (Replace), and message-chaining model is used.
RefOrderID	[0..1]	String	Used to specify the transaction reference for this limit check request.
RefOrderIDSource	[0..1]	CodeSet	Identifies the type of reference specified in RefOrderID(1080) for this limit check request.
RiskLimitCheckRequestType	[0..1]	CodeSet	

Name	Mult.	Type	Description
RiskLimitCheckAmount	[0..1]	Amt	Specifies the amount being requested or consumed, as indicated by RiskLimitCheckType(2321).
Currency	[0..1]	Currency	
CurrencyCodeSource	[0..1]	CodeSet	
RiskLimitID	[0..1]	String	
RequestingPartyGrp	[0..*]	Group	May be used to identify the party making the limit check request and their role.
Parties	[0..*]	Group	May be used to specify the trading party on which the limit check request is for. Each request is for a single trading party and the specified transaction reference.
RelatedPartyDetailGrp	[0..*]	Group	
Instrument	[0..1]	Component	
LegOrdGrp	[0..*]	Group	
UndInstrmtGrp	[0..*]	Group	
Side	[0..1]	CodeSet	
TransactTime	[0..1]	UTCTimestamp	
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText(355) field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text(58) field in the encoded format specified via the MessageEncoding(347) field.
StandardTrailer	[1..1]	Component	

101 PartyRiskLimitCheckRequestAck

Category: PartiesAction

101.1 Message Functionality

PartyRiskLimitCheckRequestAck is used to acknowledge a PartyRiskLimitCheckRequest(35=DF) message and to respond whether the limit check request was approved or not. When used to accept the PartyRiskLimitCheckRequest(35=DF) message the Respondent may also include the limit amount that was approved.

101.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType=DG
RiskLimitCheckRequestID	[0..1]	String	Either RiskLimitCheckRequestID(2318) or RiskLimitCheckID(2319) must be provided from the request message
RiskLimitCheckID	[0..1]	String	Either RiskLimitCheckRequestID(2318) or RiskLimitCheckID(2319) must be provided from the request message.
RiskLimitCheckRequestStatus	[1..1]	CodeSet	
RiskLimitCheckRequestResult	[0..1]	CodeSet	
RiskLimitCheckTransType	[1..1]	CodeSet	Identifies the RiskLimitCheckTransType(2320) this message is responding to as specified in the request message.
RiskLimitCheckType	[1..1]	CodeSet	Identifies the RiskLimitCheckType(2321) this message is responding to as specified in the request message.
RiskLimitCheckRequestRefID	[0..1]	int	Conditionally required when RiskLimitCheckTransType(2320) = 1 (Cancel) or 2 (Replace)
RejectText	[0..1]	String	
EncodedRejectTextLen	[0..1]	Length	Must be set if EncodedRejectText(1665) field is specified and must immediately precede it.
EncodedRejectText	[0..1]	data	Encoded (non-ASCII characters) representation of the RejectText(1328) field in the encoded format specified via the MessageEncoding(347) field.

Name	Mult.	Type	Description
RefOrderID	[0..1]	String	
RefOrderIDSource	[0..1]	CodeSet	
Side	[0..1]	CodeSet	
RiskLimitApprovedAmount	[0..1]	Amt	Conditionally required when RiskLimitCheckRequestStatus(2325)=1 (Partially approved)
RiskLimitCheckAmount	[0..1]	Amt	
RiskLimitID	[0..1]	String	
Currency	[0..1]	Currency	
CurrencyCodeSource	[0..1]	CodeSet	
ExpireTime	[0..1]	UTCTimestamp	Optionally used to specify when the approved credit limit being reserved will expire.
RequestingPartyGrp	[0..*]	Group	
Parties	[0..*]	Group	The trading party identified in the limit check request.
RelatedPartyDetailGrp	[0..*]	Group

EncodedTextLen	[0..1]	Length	Must be set if EncodedText(355) field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text(58) field in the encoded format specified via the MessageEncoding(347) field.
StandardTrailer	[1..1]	Component	

102 PartyRiskLimitsDefinitionRequest

Category: PartiesReferenceData

102.1 Message Functionality

PartyRiskLimitDefinitionRequest is used for defining new risk limits.

102.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType=CS
RiskLimitRequestID	[1..1]	String	
RequestingPartyGrp	[0..*]	Group	May be used to identify the party making the request and their role.
PartyRiskLimitsUpdateGrp	[0..*]	Group	Risk limits to be enforced for given party(-ies) and related party(-ies).
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	
EncodedText	[0..1]	data	
StandardTrailer	[1..1]	Component	

103 PartyRiskLimitsDefinitionRequestAck

Category: PartiesReferenceData

103.1 Message Functionality

PartyRiskLimitDefinitionRequestAck is used for accepting (with or without changes) or rejecting the definition of risk limits.

103.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType=CT
RiskLimitRequestID	[1..1]	String	
RiskLimitRequestResult	[0..1]	CodeSet	
RiskLimitRequestStatus	[1..1]	CodeSet	
RequestingPartyGrp	[0..*]	Group	
PartyRiskLimitsAckGrp	[0..*]	Group	
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	
EncodedText	[0..1]	data	
StandardTrailer	[1..1]	Component	

104 PartyRiskLimitsReport

Category: PartiesReferenceData

104.1 Message Functionality

The PartyRiskLimitsReport message is used to communicate party risk limits. The message can either be sent as a response to the PartyRiskLimitsRequest message or can be published unsolicited.

104.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = CM
ApplicationSequenceControl	[0..1]	Component	
RiskLimitReportID	[1..1]	String	
RiskLimitRequestID	[0..1]	String	Conditionally required when responding to PartyRiskLimitsRequest(35=CL).
RiskLimitRequestType	[0..1]	CodeSet	Can be used when responding to a PartyRiskLimitsRequest(35=CL).
RequestResult	[0..1]	CodeSet	Conditionally required when responding to a PartyRiskLimitsRequest(35=CL).
UnsolicitedIndicator	[0..1]	CodeSet	
TotNoParties	[0..1]	int	
LastFragment	[0..1]	CodeSet	
PartyRiskLimitsGrp	[0..*]	Group	Optionally includes utilization (consumption) information.
TransactTime	[0..1]	UTCTimestamp	
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	
EncodedText	[0..1]	data	
RejectText	[0..1]	String	
EncodedRejectTextLen	[0..1]	Length	
EncodedRejectText	[0..1]	data	
StandardTrailer	[1..1]	Component	

105 PartyRiskLimitsReportAck

Category: PartiesReferenceData

105.1 Message Functionality

PartyRiskLimitsReportAck is an optional message used as a response to the PartyRiskLimitReport(35=CM) or PartyRiskLimitUpdateReport(35=CR) messages to acknowledge or reject those messages.

105.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType=DE
RiskLimitReportID	[1..1]	String	The identifier of the PartyRiskLimitReport(35=CM) or PartyRiskLimitUpdateReport(35=CR) message.
RiskLimitRequestID	[0..1]	String	
RiskLimitReportStatus	[1..1]	CodeSet	
RiskLimitReportRejectReason	[0..1]	CodeSet	Conditionally required when RiskLimitReportStatus(2316)=1 (Rejected).
PartyRiskLimitsUpdateGrp	[0..*]	Group	
TransactTime	[0..1]	UTCTimestamp	
RejectText	[0..1]	String	
EncodedRejectTextLen	[0..1]	Length	Must be set if EncodedRejectText(1665) field is specified and must immediately precede it.
EncodedRejectText	[0..1]	data	Encoded (non-ASCII characters) representation of the RejectText(1328) field in the encoded format specified via the MessageEncoding(347) field.
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText(355) field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text(58) field in the encoded format specified via the MessageEncoding(347) field.
StandardTrailer	[1..1]	Component	

106 PartyRiskLimitsRequest

Category: PartiesReferenceData

106.1 Message Functionality

The PartyRiskLimitsRequest message is used to request for risk information for specific parties, specific party roles or specific instruments.

106.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = CL
RiskLimitRequestID	[1..1]	String	
RiskLimitRequestType	[0..1]	CodeSet	Scope of risk limit information.
SubscriptionRequestType	[0..1]	CodeSet	
RequestingPartyGrp	[0..*]	Group	May be used to identify the party making the request and their role.
Parties	[0..*]	Group	Scope of the query/request for specific party(-ies)
RequestedPartyRoleGrp	[0..*]	Group	Scope of the query/request for specific party role(s). For example, "all information for PartyRole=24."
RequestedRiskLimitTypesGrp	[0..*]	Group	
RiskLimitPlatform	[0..1]	String	
RiskInstrumentScopeGrp	[0..*]	Group	Scope of the query/request for specific securities. Absence means all instruments for a given party or party role.
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	
EncodedText	[0..1]	data	
StandardTrailer	[1..1]	Component	

107 PartyRiskLimitsUpdateReport

Category: PartiesReferenceData

107.1 Message Functionality

The PartyRiskLimitsUpdateReport(35=CR) is used to convey incremental changes to risk limits. It is similar to the regular report but uses the PartyRiskLimitsUpdateGrp component instead of the PartyRiskLimitsGrp component to include an update action.

107.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType=CR
ApplicationSequenceControl	[0..1]	Component	
RiskLimitReportID	[1..1]	String	
RiskLimitRequestID	[0..1]	String	Conditionally required when sent as part of a subscription requested by a PartyRiskLimitsRequest(35=CL).
RiskLimitRequestType	[0..1]	CodeSet	Can be used if sent as part of a subscription started by a PartyRiskLimitsRequest(35=CL).
TotNoParties	[0..1]	int	
LastFragment	[0..1]	CodeSet	
RequestingPartyGrp	[0..*]	Group	May be used to specify the requesting party in the event the request was made verbally or via other means.
PartyRiskLimitsUpdateGrp	[0..*]	Group	
TransactTime	[0..1]	UTCTimestamp	
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText(355) field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text(58) field in the encoded format specified via the MessageEncoding(347) field.
StandardTrailer	[1..1]	Component	

108 PayManagementReport

Category: PayManagement

108.1 Message Functionality

PayManagementReport(35=EA) may be used to respond to the PayManagementRequest(35=DY) message. It provides the status of the request (e.g. accepted, disputed) and may provide additional information related to the request.

PayManagementReport(35=EA) may also be sent unsolicited by the broker to a client. In which case the client may acknowledge and resolve disputes out-of-band or with a simple PayManagementReportAck(35=EB).

PayManagementReport(35=EA) may also be sent unsolicited to report the progress status of the payment itself with PayReportTransType(2804)=2 (Status).

108.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType=EA
PayReportID	[1..1]	String	
PayRequestID	[0..1]	String	Conditionally required when responding to PayManagementRequest(35=DY).
PayReportTransType	[1..1]	CodeSet	
PayReportRefID	[0..1]	String	Required for PayReportTransType(2804)=1 (Replace).
ReplaceText	[0..1]	String	May be used to provide reason for PayReportTransType(2804)=1 (Replace).
EncodedReplaceTextLen	[0..1]	Length	Must be set if EncodedReplaceText(2801) field is specified and must immediately precede it.
EncodedReplaceText	[0..1]	data	Encoded (non-ASCII characters) representation of the ReplaceText(2805) field in the encoded format specified via the MessageEncoding(347) field.
PayRequestStatus	[0..1]	CodeSet	PayRequestStatus(2813)=0 (Received) is not applicable in this message.
PayDisputeReason	[0..1]	int	May be used to provide reason for PayRequestStatus(2813)=3 (Disputed).

Name	Mult.	Type	Description
RejectText	[0..1]	String	May be used to elaborate the reason for rejection or dispute.
EncodedRejectTextLen	[0..1]	Length	Must be set if EncodedRejectText(1665) field is specified and must immediately precede it.
EncodedRejectText	[0..1]	data	Encoded (non-ASCII characters) representation of the RejectText(1328) field in the encoded format specified via the MessageEncoding(347) field.
ClearingBusinessDate	[0..1]	LocalMktDate	Echos back the business date of the PayManagementRequest(35=DY) message if this report is responding to a request. When the report is sent unsolicited, this is the business date of the report. This may carry the same date as the payment calculation date in PostTradePaymentCalculationDate(2825).
TransactTime	[1..1]	UTCTimestamp	
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText(355) field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text(58) field in the encoded format specified via the MessageEncoding(347) field.
Instrument	[0..1]	Component	May be included with minimal detail to identify the security or contract for which payments are to be made.
RelatedTradeGrp	[0..*]	Group	May be included to identify the trade(s) for which payments are to be made. Each instance identifies a separate trade.
Parties	[0..*]	Group	Identifies the parties to the contracts or trades. The account to be debited or credited is identified in the PostTradePayment component.
PostTradePayment	[1..1]	Component	
SettlDetails	[0..*]	Group	
StandardTrailer	[1..1]	Component	

109 PayManagementReportAck

Category: PayManagement

109.1 Message Functionality

PayManagementReportAck(35=EB) is used as a response to the PayManagementReport(35=EA) message. It may be used to accept, reject or dispute the details of the PayManagementReport(35=EA) depending on the business rules of the receiver. This message may also be used to acknowledge the receipt of a PayManagementReport(35=EA) message.

109.2 Structure

Name	Mult.	Type	Description
StandardHeader	[0..1]	Component	MsgType=EB
PayReportID	[1..1]	String	
PayReportStatus	[1..1]	CodeSet	
PayDisputeReason	[0..1]	int	May be used to provide reason for PayReportStatus(2806)=3 (Disputed).
RejectText	[0..1]	String	May be used to elaborate the reason for rejection or dispute.
EncodedRejectTextLen	[0..1]	Length	Must be set if EncodedRejectText(1665) field is specified and must immediately precede it.
EncodedRejectText	[0..1]	data	Encoded (non-ASCII characters) representation of the RejectText(1328) field in the encoded format specified via the MessageEncoding(347) field.
StandardTrailer	[1..1]	Component	

110 PayManagementRequest

Category: PayManagement

110.1 Message Functionality

PayManagementRequest(35=DY) message is used to communicate a future or expected payment to be made or received related to a trade or contract after its settlement.

110.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType=DY
PayRequestID	[1..1]	String	
PayRequestTransType	[1..1]	CodeSet	
PayRequestRefID	[0..1]	String	Required for PayRequestTransType(2811)=1 (Cancel).
CancelText	[0..1]	String	May be used to provide reason for PayRequestTransType(2811)=1 (Cancel).
EncodedCancelTextLen	[0..1]	Length	Must be set if EncodedCancelText(2808) field is specified and must immediately precede it.
EncodedCancelText	[0..1]	data	Encoded (non-ASCII characters) representation of the CancelText(2807) field in the encoded format specified via the MessageEncoding(347) field.
ClearingBusinessDate	[0..1]	LocalMktDate	The business date of the request. This may carry the same date as the payment calculation date in PostTradePaymentCalculationDate(2825).
TransactTime	[1..1]	UTCTimestamp	
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText(355) field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text(58) field in the encoded format specified via the MessageEncoding(347) field.
Instrument	[0..1]	Component	May be included with minimal detail to identify the security or contract for which payments are to be made.

Name	Mult.	Type	Description
RelatedTradeGrp	[0..*]	Group	May be included to identify the trade(s) for which payments are to be made. Each instance identifies a separate trade.
Parties	[0..*]	Group	Identifies the parties to the contracts or trades. The account to be debited or credited is identified in the PostTradePayment component.
PostTradePayment	[1..1]	Component	
SettlDetails	[0..*]	Group	
StandardTrailer	[1..1]	Component	

111 PayManagementRequestAck

Category: PayManagement

111.1 Message Functionality

PayManagementRequestAck(35=DZ) is used to acknowledge the receipt of the PayManagementRequest(35=DY) message (i.e. a technical acknowledgement of receipt). Acceptance or rejection of the request is reported in the corresponding PayManagementReport(35=EA).

111.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgTyp=DZ
PayRequestID	[1..1]	String	
PayRequestStatus	[1..1]	CodeSet	Only PayRequestStatus(2813)=0 (Received) is applicable in this message.
StandardTrailer	[1..1]	Component	

112 PositionMaintenanceReport

Category: PositionMaintenance

112.1 Message Functionality

The Position Maintenance Report message is sent by the holder of a position in response to a Position Maintenance Request and is used to confirm that a request has been successfully processed or rejected.

112.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = AM
PosMaintRptID	[1..1]	String	Unique identifier for this position report
PosTransType	[1..1]	CodeSet	
PositionID	[0..1]	String	Unique identifier for this position entity.
PosReqID	[0..1]	String	Unique identifier for the position maintenance request associated with this report
PosMaintAction	[1..1]	CodeSet	
OrigPosReqRefID	[0..1]	String	Reference to the PosReqID of a previous maintenance request that is being replaced or canceled.
PosMaintStatus	[0..1]	CodeSet	Status of PositionMaintenanceRequest. Conditionally required when responding to a PositionMaintenanceRequest.
PosMaintResult	[0..1]	CodeSet	
ClearingBusinessDate	[1..1]	LocalMktDate	The Clearing Business Date covered by this request
PreviousClearingBusinessDate	[0..1]	LocalMktDate	The business date previous to the clearing business date referred to by this maintenance request.
ValuationDate	[0..1]	LocalMktDate	Valuation date of the position(s) in this report.
ValuationTime	[0..1]	LocalMktTime	Valuation time of the position(s) in this report.
ValuationBusinessCenter	[0..1]	String	Business center of ValuationDate(2085) and ValuationTime(2086). Single value only.

Name	Mult.	Type	Description
DiscountFactor	[0..1]	float	For a forward position this is an appropriate value to discount the mark to market amount from the contract's maturity date back to present value.
RejectText	[0..1]	String	
EncodedRejectTextLen	[0..1]	Length	
EncodedRejectText	[0..1]	data	
SettlSessID	[0..1]	CodeSet	
SettlSessSubID	[0..1]	String	
ClearedIndicator	[0..1]	CodeSet	
ContractRefPosType	[0..1]	CodeSet	
PositionCapacity	[0..1]	CodeSet	
TerminatedIndicator	[0..1]	Boolean	
InputSource	[0..1]	String	
Parties	[0..*]	Group	Position Account
Account	[0..1]	String	
AcctIDSource	[0..1]	CodeSet	
AccountType	[0..1]	CodeSet	Type of account associated with the order (Origin)
PosMaintRptRefID	[0..1]	String	Reference to a PosMaintRptID (Tag 721) from a previous Position Maintenance Report that is being replaced or canceled
Instrument	[1..1]	Component	
Currency	[0..1]	Currency	
CurrencyCodeSource	[0..1]	CodeSet	
SettlDate	[0..1]	LocalMktDate	
SettlCurrency	[0..1]	Currency	
SettlCurrencyCodeSource	[0..1]	CodeSet	
ContraryInstructionIndicator	[0..1]	Boolean	Can be set to true when a position maintenance request is being performed contrary to current money position, i.e. for an exercise of an out of the money position or an abandonment (do not exercise) of an in the money position
PriorSpreadIndicator	[0..1]	Boolean	
InstrmtLegGrp	[0..*]	Group	Specifies the number of legs that make up the Security
RelatedInstrumentGrp	[0..*]	Group	
UndInstrmtGrp	[0..*]	Group	Specifies the number of underlying legs that make up the Security

Name	Mult.	Type	Description
TrdgSesGrp	[0..*]	Group	Specifies the number of repeating TradingSessionIDs
TransactTime	[0..1]	UTCTimestamp	Time this order request was initiated/released by the trader, trading system, or intermediary. Conditionally required except when requests for reports are processed in batch, transaction time is not available, or when PosReqID is not present.
PositionQty	[0..*]	Group	Conditionally required when PosMaintAction(712) = 1(New), 2(Replace) or 4(Reverse).
PositionAmountData	[0..*]	Group	Insert here here the set of "Position Amount Data" fields defined in "Common Components of Application Messages"
RegulatoryTradeIDGrp	[0..*]	Group	The source, value and relationship of multiple trade identifiers for the same trade, e.g. Unique Swap Identifiers.
PaymentGrp	[0..*]	Group	Additional payments or bullet payments.
AdjustmentType	[0..1]	CodeSet	Type of adjustment to be applied. Delta_plus, Delta_minus, Final. If Adjustment Type is null, the PCS request will be processed as Margin Disposition only
ThresholdAmount	[0..1]	PriceOffset	
RelatedTradeGrp	[0..*]	Group	
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.
StandardTrailer	[1..1]	Component	

113 PositionMaintenanceRequest

Category: PositionMaintenance

113.1 Message Functionality

The Position Maintenance Request message allows the position owner to submit requests to the holder of a position which will result in a specific action being taken which will affect the position. Generally, the holder of the position is a central counter party or clearing organization but can also be a party providing investment services.

113.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = AL
PosReqID	[0..1]	String	Unique identifier for the position maintenance request as assigned by the submitter. Conditionally required when used in a request/reply scenario (i.e. not required in batch scenario)
PosTransType	[1..1]	CodeSet	
PosMaintAction	[1..1]	CodeSet	
OrigPosReqRefID	[0..1]	String	Reference to the PosReqID of a previous maintenance request that is being replaced or canceled.
PosMaintRptRefID	[0..1]	String	Reference to a PosMaintRptID from a previous Position Maintenance Report that is being replaced or canceled.
ClearingBusinessDate	[1..1]	LocalMktDate	The Clearing Business Date referred to by this maintenance request
SettlDate	[0..1]	LocalMktDate	
SettlSessID	[0..1]	CodeSet	
SettlSessSubID	[0..1]	String	
Parties	[1..*]	Group	The Following PartyRoles can be specified:. ClearingOrganization. Clearing Firm. Position Account
Account	[0..1]	String	
AcctIDSource	[0..1]	CodeSet	

Name	Mult.	Type	Description
AccountType	[0..1]	CodeSet	Type of account associated with the order (Origin)
Instrument	[1..1]	Component	
Currency	[0..1]	Currency	
CurrencyCodeSource	[0..1]	CodeSet	
InstrmtLegGrp	[0..*]	Group	Specifies the number of legs that make up the Security
RelatedInstrumentGrp	[0..*]	Group	
UndInstrmtGrp	[0..*]	Group	Specifies the number of underlying legs that make up the Security
TrdgSesGrp	[0..*]	Group	Specifies the number of repeating TradingSessionIDs
TransactTime	[0..1]	UTCTimestamp	Time this order request was initiated/released by the trader, trading system, or intermediary.
PositionQty	[1..*]	Group	
PositionAmountData	[0..*]	Group	
AdjustmentType	[0..1]	CodeSet	Type of adjustment to be applied, used for PCS & PAJ. Delta_plus, Delta_minus, Final, If Adjustment Type is null, the request will be processed as Margin Disposition
ContraryInstructionIndicator	[0..1]	Boolean	Boolean - if Y then indicates you are requesting a position maintenance that acting
PriorSpreadIndicator	[0..1]	Boolean	Boolean - Y indicates you are requesting rollover of prior day's spread submissions
ThresholdAmount	[0..1]	PriceOffset	
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.
SettlCurrency	[0..1]	Currency	
SettlCurrencyCodeSource	[0..1]	CodeSet	
StandardTrailer	[1..1]	Component	

114 PositionReport

Category: PositionMaintenance

114.1 Message Functionality

The Position Report message is returned by the holder of a position in response to a Request for Position message. The purpose of the message is to report all aspects of a position and may be provided on a standing basis to report end of day positions to an owner.

114.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = AP
ApplicationSequenceControl	[0..1]	Component	
PosMaintRptID	[1..1]	String	Unique identifier for this position report
PositionID	[0..1]	String	Unique identifier for this position entity.
PosReqID	[0..1]	String	Unique identifier for the Request for Positions associated with this report. This field should not be provided if the report was sent unsolicited.
PosReqType	[0..1]	CodeSet	Will be 7=Net Position if the report contains net position information for margin requirements.
PosReportAction	[0..1]	CodeSet	
MarginReqmtInqID	[0..1]	String	Unique identifier for the inquiry associated with this report. This field should not be provided if the report was sent unsolicited.
SubscriptionRequestType	[0..1]	CodeSet	Used to subscribe / unsubscribe for trade capture reports. If the field is absent, the value 0 will be the default
TotalNumPosReports	[0..1]	int	Total number of Position Reports being returned
TotNumReports	[0..1]	int	
LastRptRequested	[0..1]	CodeSet	
PosReqResult	[0..1]	CodeSet	Result of a Request for Position
UnsolicitedIndicator	[0..1]	CodeSet	Set to 'Y' if message is sent as a result of a subscription request or out of band configuration as opposed to a Position Request.
RegulatoryReportType	[0..1]	CodeSet	

Name	Mult.	Type	Description
RegulatoryReportTypeBusinessDate	[0..1]	LocalMktDate	May be used when the business event date differs from when the regulatory report is actually being submitted (typically specified in TrdRegTimestamps component).
TransactionAttributeGrp	[0..*]	Group	
TrdRegTimestamps	[0..*]	Group	
ClearingBusinessDate	[1..1]	LocalMktDate	The Clearing Business Date referred to by this maintenance request
PreviousClearingBusinessDate	[0..1]	LocalMktDate	The business date previous to the clearing business date referred to by this maintenance request.
ClearingPortfolioID	[0..1]	String	
SettlSessID	[0..1]	CodeSet	
SettlSessSubID	[0..1]	String	
PriceType	[0..1]	CodeSet	
SettlCurrency	[0..1]	Currency	
SettlCurrencyCodeSource	[0..1]	CodeSet	
MessageEventSource	[0..1]	String	Used to identify the event or source which gave rise to a message
ClearedIndicator	[0..1]	CodeSet	
ContractRefPosType	[0..1]	CodeSet	
PositionCapacity	[0..1]	CodeSet	
TerminatedIndicator	[0..1]	Boolean	
TerminationDate	[0..1]	LocalMktDate	
IntraFirmTradeIndicator	[0..1]	Boolean	
TradeContinuation	[0..1]	CodeSet	
TradeContinuationText	[0..1]	String	
EncodedTradeContinuationTextLen	[0..1]	Length	Must be set if EncodedTradeContinuationText(2371) field is specified and must immediately precede it.
EncodedTradeContinuationText	[0..1]	data	Encoded (non-ASCII characters) representation of the TradeContinuationText(2374) field in the encoded format specified via the MessageEncoding(347) field.
TradeCollateralization	[0..1]	CodeSet	
Parties	[1..*]	Group	Position Account

Name	Mult.	Type	Description
Account	[0..1]	String	Account may also be specified through via Parties Block using Party Role 27 which signifies Account
AcctIDSource	[0..1]	CodeSet	
AccountType	[0..1]	CodeSet	Type of account associated with the order (Origin). Account may also be specified through via Parties Block using Party Role 27 which signifies Account

115 PositionTransferInstruction

Category: PositionMaintenance

115.1 Message Functionality

The PositionTransferInstruction(35=DL) is sent by clearing firms to CCPs to initiate position transfers, or to accept or decline position transfers.

115.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = DL
TransferInstructionID	[1..1]	String	Submitting, cancelling, changing, accepting, and declining a transfer are all considered separate instructions, and each must have a unique ID. Chaining of firm generated IDs is not supported; TransferID(2437) assigned by the CCP must be used when sending an instruction referencing a previously submitted transfer.
TransferID	[0..1]	String	Conditionally required when responding to a PositionTransferReport(35=DN) message (e.g. when accepting or declining a transfer) or performing an action on a transfer (e.g. cancel or replace).
TransferTransType	[0..1]	CodeSet	
TransferType	[0..1]	CodeSet	
TransferScope	[0..1]	CodeSet	
Parties	[1..*]	Group	Specifies the source of the position transfer, e.g. the transferor.
TargetParties	[1..*]	Group	Specifies the target of the position transfer.
ClearingBusinessDate	[0..1]	LocalMktDate	Business date the transfer would clear.
TradeDate	[0..1]	LocalMktDate	Trade date associated with the position being transferred.
TransactTime	[0..1]	UTCTimestamp	
Instrument	[0..1]	Component	If not specified, indicates the transfer is for all instruments.
UndInstrmtGrp	[0..*]	Group	

Name	Mult.	Type	Description
PositionQty	[0..*]	Group	Position to transfer from the perspective of the source party prior to the transfer. If not specified, indicates transfer of all positions for a specified instrument, if Instrument is specified, or transfer of all positions if Instrument is not specified.
ClearingTradePrice	[0..1]	Price	Price at which the position is transferred.
Currency	[0..1]	Currency	
CurrencyCodeSource	[0..1]	CodeSet	
PriceType	[0..1]	CodeSet	
PositionAmountData	[0..*]	Group	Optionally used to include cash residuals, etc., from the perspective of the source party prior to the transfer.
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText(355) field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text(58) field in the encoded format specified via the MessageEncoding(347) field.
StandardTrailer	[1..1]	Component	

116 PositionTransferInstructionAck

Category: PositionMaintenance

116.1 Message Functionality

The PositionTransferInstructionAck(35=DM) is sent by CCPs to clearing firms to acknowledge position transfer instructions, and to report errors processing position transfer instructions.

116.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType=DM
TransferInstructionID	[1..1]	String	The identifier of the PositionTransferInstruction(35=DL) this message is responding to.
TransferID	[0..1]	String	Optional when responding to a "new" transfer. When responding to a PositionTransferInstruction(35=DM) accepting, declining, or cancelling a transfer already initiated, this field can echo the TransferID(2437) sent.
TransferTransType	[0..1]	CodeSet	
TransferType	[0..1]	CodeSet	
TransferStatus	[0..1]	CodeSet	
TransferRejectReason	[0..1]	CodeSet	Conditionally required when TransferStatus(2442) = 1(Rejected by intermediary).
TransferScope	[0..1]	CodeSet	
Parties	[0..*]	Group	Specifies the source of the position transfer, e.g. the transferor.
TargetParties	[0..*]	Group	Specifies the target of the position transfer.
TransactTime	[0..1]	UTCTimestamp	
RejectText	[0..1]	String	
EncodedRejectTextLen	[0..1]	Length	Must be set if EncodedRejectText(1665) field is specified and must immediately precede it.
EncodedRejectText	[0..1]	data	Encoded (non-ASCII characters) representation of the RejectText(1328) field in the encoded format specified via the MessageEncoding(347) field.
Text	[0..1]	String	

Name	Mult.	Type	Description
EncodedTextLen	[0..1]	Length	Must be set if EncodedText(355) field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text(58) field in the encoded format specified via the MessageEncoding(347) field.
StandardTrailer	[1..1]	Component	

117 PositionTransferReport

Category: PositionMaintenance

117.1 Message Functionality

The PositionTransferReport(35=DN) is sent by CCPs to clearing firms indicating of positions that are to be transferred to the clearing firm, or to report on status of the transfer to the clearing firms involved in the transfer process.

117.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = DN
TransferInstructionID	[0..1]	String	Conditionally required when sent in response to a PositionTransferInstruction(35=DM).
TransferReportID	[1..1]	String	
TransferID	[1..1]	String	
TransferTransType	[1..1]	CodeSet	
TransferReportType	[1..1]	CodeSet	
TransferStatus	[1..1]	CodeSet	
TransferRejectReason	[0..1]	CodeSet	Conditionally required when TransferStatus(2422) = 1(Rejected by intermediary).
TransferScope	[0..1]	CodeSet	
Parties	[1..*]	Group	Specifies the source of the position transfer, e.g. the transferor.
TargetParties	[1..*]	Group	Specifies the target of the position transfer.
ClearingBusinessDate	[0..1]	LocalMktDate	Business date the transfer would clear.
TradeDate	[0..1]	LocalMktDate	Trade date associated with the position being transferred.
TransactTime	[0..1]	UTCTimestamp	
Instrument	[0..1]	Component	If not specified, indicates the transfer is for all instruments.
UndInstrmtGrp	[0..*]	Group	

Name	Mult.	Type	Description
PositionQty	[0..*]	Group	Position to transfer from the perspective of the source party prior to the transfer. If not specified, indicates transfer of all positions for a specified instrument, if Instrument is specified, or transfer of all positions if Instrument is not specified.
ClearingTradePrice	[0..1]	Price	Price at which the position is transferred.
Currency	[0..1]	Currency	
CurrencyCodeSource	[0..1]	CodeSet	
PriceType	[0..1]	CodeSet	
PositionAmountData	[0..*]	Group	Optionally used to include cash residuals, etc., from the perspective of the source party prior to the transfer.
RejectText	[0..1]	String	
EncodedRejectTextLen	[0..1]	Length	Must be set if EncodedRejectText(1665) field is specified and must immediately precede it.
EncodedRejectText	[0..1]	data	Encoded (non-ASCII characters) representation of the RejectText(1328) field in the encoded format specified via the MessageEncoding(347) field.
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText(355) field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text(58) field in the encoded format specified via the MessageEncoding(347) field.
StandardTrailer	[0..1]	Component	

118 Quote

Category: QuotationNegotiation

118.1 Message Functionality

The Quote message is used as the response to a Quote Request or a Quote Response message in both indicative, tradeable, and restricted tradeable quoting markets.

118.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = S
QuoteReqID	[0..1]	String	Required when quote is in response to a QuoteRequest(35=R) message.
QuoteID	[1..1]	String	
BidID	[0..1]	String	Unique identifier for the bid side of the quote.
OfferID	[0..1]	String	Unique identifier for the ask side of the quote.
SecondaryQuoteID	[0..1]	String	Can be used when modifying an existing quote.
QuoteMsgID	[0..1]	String	Optionally used to supply a message identifier for a quote.
QuoteRespID	[0..1]	String	Required when responding to the QuoteResponse(35=AJ) message. The counterparty specified ID of the QuoteResponse(35=AJ) message.
RefOrderID	[0..1]	String	May be used to refer to a related quote.
RefOrderIDSource	[0..1]	CodeSet	Conditionally required if RefOrderID(1080) is specified.
QuoteType	[0..1]	CodeSet	If not specified, the default is an indicative quote.
QuoteModelType	[0..1]	CodeSet	
PrivateQuote	[0..1]	CodeSet	Used to indicate whether a private negotiation is requested or if the response should be public. Only relevant in markets supporting both Private and Public quotes. If field is not provided in message, the model used must be bilaterally agreed.
SingleQuoteIndicator	[0..1]	CodeSet	
QuotQualGrp	[0..*]	Group	

Name	Mult.	Type	Description
TrdType	[0..1]	CodeSet	
NegotiationMethod	[0..1]	CodeSet	
QuoteResponseLevel	[0..1]	CodeSet	
QuoteAttributeGrp	[0..*]	Group	May be used by the quote provider to indicate pre-trade transparency waiver determination in the context of MiFID II.
ValueChecksGrp	[0..*]	Group	
Parties	[0..*]	Group	
TradingSessionID	[0..1]	CodeSet	
TradingSessionSubID	[0..1]	CodeSet	
Instrument	[1..1]	Component	
FinancingDetails	[0..1]	Component	
UndInstrmtGrp	[0..*]	Group	
Side	[0..1]	CodeSet	Required for 1-sided tradeable or counter quotes of single instruments. Omit for 2-sided tradeable quote.
OrderQtyData	[0..1]	Component	Conditionally required for Tradeable or Counter quotes of single instruments when applicable for the type of instrument.
SettlType	[0..1]	CodeSet	
SettlDate	[0..1]	LocalMktDate	Can be used with forex quotes to specify a specific "value date". For NDFs this is required.
SettlDate2	[0..1]	LocalMktDate	Can be used with OrdType = "Forex - Swap" to specify the "value date" for the future portion of a F/X swap.
OrderQty2	[0..1]	Qty	Can be used with OrdType = "Forex - Swap" to specify the order quantity for the future portion of a F/X swap.
Currency	[0..1]	Currency	Can be used to specify the currency of the quoted prices. May differ from the 'normal' trading currency of the instrument being quoted
CurrencyCodeSource	[0..1]	CodeSet	
SettlCurrency	[0..1]	Currency	Required for NDFs to specify the settlement currency (fixing currency).
SettlCurrencyCodeSource	[0..1]	CodeSet	
RateSource	[0..*]	Group	
Stipulations	[0..*]	Group	

Name	Mult.	Type	Description
Account	[0..1]	String	
AcctIDSource	[0..1]	CodeSet	
AccountType	[0..1]	CodeSet	
OwnerType	[0..1]	CodeSet	
SolicitedFlag	[0..1]	CodeSet	
LegQuotGrp	[0..*]	Group	Required for multileg quotes
BidPx	[0..1]	Price	If F/X quote, should be the "all-in" rate (spot rate adjusted for forward points). Note that either BidPx, OfferPx or both must be specified.
OfferPx	[0..1]	Price	If F/X quote, should be the "all-in" rate (spot rate adjusted for forward points). Note that either BidPx, OfferPx or both must be specified.
MktBidPx	[0..1]	Price	Can be used by markets that require showing the current best bid and offer
MktOfferPx	[0..1]	Price	Can be used by markets that require showing the current best bid and offer
MinBidSize	[0..1]	Qty	Used for markets that use a minimum and maximum bid size.
BidSize	[0..1]	Qty	If MinBidSize(647) is specified, BidSize(134) is interpreted to contain the maximum bid size.
TotalBidSize	[0..1]	Qty	
MinOfferSize	[0..1]	Qty	Used for markets that use a minimum and maximum offer size.
OfferSize	[0..1]	Qty	If MinOfferSize(648) is specified, OfferSize(135) is interpreted to contain the maximum offer size.
TotalOfferSize	[0..1]	Qty	
MinQty	[0..1]	Qty	For use in private/directed quote negotiations.
ExposureDuration	[0..1]	int	
ExposureDurationUnit	[0..1]	CodeSet	
ValidUntilTime	[0..1]	UTCTimestamp	The time when the quote will expire
BidSpotRate	[0..1]	Price	
OfferSpotRate	[0..1]	Price	
BidForwardPoints	[0..1]	PriceOffset	
OfferForwardPoints	[0..1]	PriceOffset	
BidSwapPoints	[0..1]	PriceOffset	
OfferSwapPoints	[0..1]	PriceOffset	
MidPx	[0..1]	Price	

Name	Mult.	Type	Description
BidYield	[0..1]	Percentage	
MidYield	[0..1]	Percentage	
OfferYield	[0..1]	Percentage	
TransactTime	[0..1]	UTCTimestamp	
TrdRegTimestamps	[0..*]	Group	
OrdType	[0..1]	CodeSet	Can be used to specify the type of order the quote is for
BidForwardPoints2	[0..1]	PriceOffset	Bid F/X forward points of the future portion of a F/X swap quote added to spot rate. May be a negative value
OfferForwardPoints2	[0..1]	PriceOffset	Offer F/X forward points of the future portion of a F/X swap quote added to spot rate. May be a negative value
SettlCurrBidFxRate	[0..1]	float	Can be used when the quote is provided in a currency other than the instrument's 'normal' trading currency. Applies to all bid prices contained in this quote message
SettlCurrOfferFxRate	[0..1]	float	Can be used when the quote is provided in a currency other than the instrument's 'normal' trading currency. Applies to all offer prices contained in this quote message
SettlCurrFxRateCalc	[0..1]	CodeSet	Can be used when the quote is provided in a currency other than the instruments trading currency.
CommissionData	[0..1]	Component	Can be used to show the counterparty the commission associated with the transaction.
CustOrderCapacity	[0..1]	CodeSet	
ExDestination	[0..1]	Exchange	Used when routing quotes to multiple markets

PriceType	[0..1]	CodeSet	
PriceQualifierGrp	[0..*]	Group	
BidSpread	[0..1]	float	SpreadOrBenchmarkCurveData component may be used to specify the benchmark.

Name	Mult.	Type	Description
OfferSpread	[0..1]	float	SpreadOrBenchmarkCurveData component may be used to specify the benchmark.
SpreadOrBenchmarkCurveData	[0..1]	Component	Spread(218) may be used for a mid-spread value.
RelativeValueGrp	[0..*]	Group	
YieldData	[0..1]	Component	
RoutingGrp	[0..*]	Group	
TradeContinuation	[0..1]	CodeSet	May be used to indicate the quote/negotiation is for the specified post-execution trade continuation or lifecycle event.
TradeContinuationText	[0..1]	String	Must be set if EncodedTradeContinuationText(2371) field is specified and must immediately precede it.
EncodedTradeContinuationTextLen	[0..1]	Length	
EncodedTradeContinuationText	[0..1]	data	Encoded (non-ASCII characters) representation of the TradeContinuationText(2374) field in the encoded format specified via the MessageEncoding(347) field.
SelfMatchPreventionID	[0..1]	String	
SelfMatchPreventionInstruction	[0..1]	CodeSet	
ThrottleInst	[0..1]	CodeSet	
ComplianceID	[0..1]	String	
ComplianceText	[0..1]	String	
EncodedComplianceTextLen	[0..1]	Length	Must be set if EncodedComplianceText(2352) field is specified and must immediately precede it.
EncodedComplianceText	[0..1]	data	Encoded (non-ASCII characters) representation of the ComplianceText(2404) field in the encoded format specified via the MessageEncoding(347) field.
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.
StrikeTime	[0..1]	UTCTimestamp	Conditionally required when QuoteQual(695) = d (Deferred spot) is specified.
StandardTrailer	[1..1]	Component	

119 QuoteAck

Category: QuotationNegotiation

119.1 Message Functionality

The QuoteAck(35=CW) message is used to acknowledge a Quote(35=S) submittal or request to cancel an individual quote using the QuoteCancel(35=Z) message during a Quote/Negotiation dialog.

119.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	35=CW
QuoteID	[0..1]	String	Contains the QuoteID(117) of a single Quote(35=S).
QuoteMsgID	[0..1]	String	Contains the QuoteMsgID(1166) of a single Quote(35=S) or QuoteCancel(35=Z).
QuoteReqID	[0..1]	String	
QuoteType	[0..1]	CodeSet	
QuoteCancelType	[0..1]	CodeSet	
SecondaryQuoteID	[0..1]	String	
QuoteAckStatus	[1..1]	CodeSet	
QuoteRejectReason	[0..1]	CodeSet	Conditionally required when QuoteAckStatus(1865) = 2(Rejected).
RejectText	[0..1]	String	
EncodedRejectTextLen	[0..1]	Length	
EncodedRejectText	[0..1]	data	
Parties	[0..*]	Group	
QuoteAttributeGrp	[0..*]	Group	May be used by the quote receiver to inform quote provider of pre-trade transparency waiver determination in the context of MiFID II.
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	
EncodedText	[0..1]	data	
StandardTrailer	[1..1]	Component	

120 QuoteCancel

Category: QuotationNegotiation

120.1 Message Functionality

The Quote Cancel message is used by an originator of quotes to cancel quotes.

The Quote Cancel message supports cancellation of:

- All quotes
- Quotes for a specific symbol or security ID
- All quotes for a security type
- All quotes for an underlying

120.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = Z
QuoteReqID	[0..1]	String	Required when quote is in response to a Quote Request message
QuoteID	[0..1]	String	Conditionally required when QuoteCancelType(298) = 5 (Cancel specified single quote) and SecondaryQuoteID(1751) is not specified. Maps to QuoteID(117) of a single Quote(35=S) or QuoteEntryID(299) of a MassQuote(35=i)
SecondaryQuoteID	[0..1]	String	Conditionally required when QuoteCancelType(298) = 5 (Cancel specific single quote) and QuoteID(117) is not specified.
QuoteMsgID	[0..1]	String	Optionally used to supply a message identifier for a quote cancel.
QuoteCancelType	[1..1]	CodeSet	Identifies the type of Quote Cancel request.
QuoteType	[0..1]	CodeSet	Conditionally required when QuoteCancelType(298)=6(Cancel by type of quote).
QuoteResponseLevel	[0..1]	CodeSet	Level of Response requested from receiver of quote messages.

Name	Mult.	Type	Description
Parties	[0..*]	Group	Insert here the set of "Parties" (firm identification) fields defined in "Common Components of Application Messages"
TargetParties	[0..*]	Group	Can be used to specify the parties to whom the Quote Cancel should be applied.
Account	[0..1]	String	
AcctIDSource	[0..1]	CodeSet	
AccountType	[0..1]	CodeSet	Type of account associated with the order (Origin)
TradingSessionID	[0..1]	CodeSet	
TradingSessionSubID	[0..1]	CodeSet	
QuotCxlEntriesGrp	[0..*]	Group	The number of securities (instruments) whose quotes are to be canceled. Not required when cancelling all quotes.
StandardTrailer	[1..1]	Component	

121 QuoteRequest

Category: QuotationNegotiation

121.1 Message Functionality

In some markets it is the practice to request quotes from brokers prior to placement of an order. The quote request message is used for this purpose. This message is commonly referred to as an Request For Quote (RFQ)

121.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = R
QuoteReqID	[1..1]	String	
RFQReqID	[0..1]	String	For tradeable quote model - used to indicate to which RFQ Request this Quote Request is in response.
ClOrdID	[0..1]	String	Required only in two party models when QuoteType(537) = '1' (Tradeable) and the OrdType(40) = '2' (Limit).
BookingType	[0..1]	CodeSet	
OrderCapacity	[0..1]	CodeSet	
OrderRestrictions	[0..1]	CodeSet	
PrivateQuote	[0..1]	CodeSet	Used to indicate whether a private negotiation is requested or if the response should be public. Only relevant in markets supporting both Private and Public quotes. If field is not provided in message, the model used must be bilaterally agreed.
RespondentType	[0..1]	CodeSet	
PreTradeAnonymity	[0..1]	Boolean	
RootParties	[0..*]	Group	Insert here the set of "Root Parties" fields defined in "common components of application messages". Used for acting parties that applies to the whole message, not individual legs, sides, etc.
QuotReqGrp	[1..*]	Group	Number of related symbols (instruments) in Request

Name	Mult.	Type	Description
ComplianceID	[0..1]	String	
ComplianceText	[0..1]	String	
EncodedComplianceTextLen	[0..1]	Length	Must be set if EncodedComplianceText(2352) field is specified and must immediately precede it.
EncodedComplianceText	[0..1]	data	Encoded (non-ASCII characters) representation of the ComplianceText(2404) field in the encoded format specified via the MessageEncoding(347) field.
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.
StandardTrailer	[1..1]	Component	

122 QuoteRequestReject

Category: QuotationNegotiation

122.1 Message Functionality

The Quote Request Reject message is used to reject Quote Request messages for all quoting models.

122.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = AG
QuoteReqID	[1..1]	String	
RFQReqID	[0..1]	String	For tradeable quote model - used to indicate to which RFQ Request this Quote Request is in response.
QuoteRequestRejectReason	[1..1]	CodeSet	Reason Quote was rejected
PrivateQuote	[0..1]	CodeSet	Used to indicate whether a private negotiation is requested or if the response should be public. Only relevant in markets supporting both Private and Public quotes.
RespondentType	[0..1]	CodeSet	
PreTradeAnonymity	[0..1]	Boolean	
RootParties	[0..*]	Group	Insert here the set of "Root Parties" fields defined in "common components of application messages". Used for acting parties that applies to the whole message, not individual legs, sides, etc.
QuotReqRjctGrp	[1..*]	Group	Number of related symbols (instruments) in Request
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.
StandardTrailer	[1..1]	Component	

123 QuoteResponse

Category: QuotationNegotiation

123.1 Message Functionality

The QuoteResponse(35=AJ) message is used for the following purposes:

1. Respond to an IOI(35=6) message
2. Respond to a Quote(35=S) message
3. Counter a Quote
4. End a negotiation dialog
5. Follow-up or end a QuoteRequest(35=R) dialog that did not receive a response.

123.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = AJ
QuoteRespID	[1..1]	String	Unique ID as assigned by the Initiator
QuoteID	[0..1]	String	Required only when responding to a Quote.
QuoteMsgID	[0..1]	String	Optionally used when responding to a Quote.
QuoteReqID	[0..1]	String	Contains the QuoteReqID(131) of the QuoteRequest(35=R).
QuoteRespType	[1..1]	CodeSet	
ClOrdID	[0..1]	String	Unique ID as assigned by the Initiator. Required only in two-party models when QuoteRespType(694) = 1 (Hit/Lift) or 2 (Counter quote).
OrderCapacity	[0..1]	CodeSet	
OrderRestrictions	[0..1]	CodeSet	
IOIID	[0..1]	String	Required only when responding to an IOI.
QuoteType	[0..1]	CodeSet	Default is Indicative.
PreTradeAnonymity	[0..1]	Boolean	
QuotQualGrp	[0..*]	Group	
TrdType	[0..1]	CodeSet	May be used by SEFs (Swap Execution Facilities) to indicate a block swap transaction.
RegulatoryTransactionType	[0..1]	CodeSet	

Name	Mult.	Type	Description
NegotiationMethod	[0..1]	CodeSet	
Parties	[0..*]	Group	Insert here the set of "Parties" (firm identification) fields defined in "Common Components of Application Messages"
TradingSessionID	[0..1]	CodeSet	
TradingSessionSubID	[0..1]	CodeSet	
Instrument	[1..1]	Component	Insert here the set of "Instrument" (symbology) fields defined in "Common Components of Application Messages". For multilegs supply minimally a value for Symbol (55).
FinancingDetails	[0..1]	Component	Insert here the set of "FinancingDetails" (symbology) fields defined in "Common Components of Application Messages". For multilegs supply minimally a value for Symbol (55).
UndInstrmtGrp	[0..*]	Group	Number of underlyings
Side	[0..1]	CodeSet	Required when countering a single instrument quote or "hit/lift" an IOI or Quote.
OrderQtyData	[0..1]	Component	Conditionally required when countering a single instrument quote or "hit/lift" an IOI or Quote when applicable for the type of instrument.
MinQty	[0..1]	Qty	
SettlType	[0..1]	CodeSet	
SettlDate	[0..1]	LocalMktDate	Can be used with forex quotes to specify a specific "value date"
TerminationDate	[0..1]	LocalMktDate	
SettlDate2	[0..1]	LocalMktDate	Can be used with OrdType = "Forex - Swap" to specify the "value date" for the future portion of a F/X swap.
OrderQty2	[0..1]	Qty	Can be used with OrdType = "Forex - Swap" to specify the order quantity for the future portion of a F/X swap.
Currency	[0..1]	Currency	Can be used to specify the currency of the quoted prices. May differ from the 'normal' trading currency of the instrument being quoted
CurrencyCodeSource	[0..1]	CodeSet	
Stipulations	[0..*]	Group	Optional
Account	[0..1]	String	
AcctIDSource	[0..1]	CodeSet	Used to identify the source of the Account code.

Name	Mult.	Type	Description
AccountType	[0..1]	CodeSet	Type of account associated with the order (Origin)
LegQuotGrp	[0..*]	Group	Required for multileg quote response
BidPx	[0..1]	Price	If F/X quote, should be the "all-in" rate (spot rate adjusted for forward points). Note that either BidPx, OfferPx or both must be specified.
OfferPx	[0..1]	Price	If F/X quote, should be the "all-in" rate (spot rate adjusted for forward points). Note that either BidPx, OfferPx or both must be specified.
MktBidPx	[0..1]	Price	Can be used by markets that require showing the current best bid and offer
MktOfferPx	[0..1]	Price	Can be used by markets that require showing the current best bid and offer
MinBidSize	[0..1]	Qty	Specifies the minimum bid size. Used for markets that use a minimum and maximum bid size.
BidSize	[0..1]	Qty	Specifies the bid size. If MinBidSize is specified, BidSize is interpreted to contain the maximum bid size.
MinOfferSize	[0..1]	Qty	Specifies the minimum offer size. If MinOfferSize is specified, OfferSize is interpreted to contain the maximum offer size.
OfferSize	[0..1]	Qty	Specified the offer size. If MinOfferSize is specified, OfferSize is interpreted to contain the maximum offer size.
ValidUntilTime	[0..1]	UTCTimestamp	The time when the QuoteResponse(35=AJ) will expire. Required for FI when the QuoteRespType(694) is either 1 (Hit/Lift) or 2 (Counter quote) to indicate to the respondent when the offer is valid until.
BidSpotRate	[0..1]	Price	May be applicable for F/X quotes
OfferSpotRate	[0..1]	Price	May be applicable for F/X quotes
BidForwardPoints	[0..1]	PriceOffset	May be applicable for F/X quotes
OfferForwardPoints	[0..1]	PriceOffset	May be applicable for F/X quotes
MidPx	[0..1]	Price	
BidYield	[0..1]	Percentage	
MidYield	[0..1]	Percentage	
OfferYield	[0..1]	Percentage	
TransactTime	[0..1]	UTCTimestamp	

Name	Mult.	Type	Description
OrdType	[0..1]	CodeSet	Can be used to specify the type of order the quote is for.
BidForwardPoints2	[0..1]	PriceOffset	Bid F/X forward points of the future portion of a F/X swap quote added to spot rate. May be a negative value
OfferForwardPoints2	[0..1]	PriceOffset	Offer F/X forward points of the future portion of a F/X swap quote added to spot rate. May be a negative value
SettlCurrBidFxRate	[0..1]	float	Can be used when the quote is provided in a currency other than the instrument's 'normal' trading currency. Applies to all bid prices contained in this quote message
SettlCurrOfferFxRate	[0..1]	float	Can be used when the quote is provided in a currency other than the instrument's 'normal' trading currency. Applies to all offer prices contained in this quote message
SettlCurrFxRateCalc	[0..1]	CodeSet	Can be used when the quote is provided in a currency other than the instruments trading currency.
CommissionData	[0..1]	Component	Can be used to show the counterparty the commission associated with the transaction.
CustOrderCapacity	[0..1]	CodeSet	For Futures Exchanges
ExDestination	[0..1]	Exchange	Used when routing quotes to multiple markets
ExDestinationIDSource	[0..1]	CodeSet	
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.
Price	[0..1]	Price	
PriceType	[0..1]	CodeSet	
PriceQualifierGrp	[0..*]	Group	
CoverPrice	[0..1]	Price	
SpreadOrBenchmarkCurveData	[0..1]	Component	Insert here the set of "SpreadOrBenchmarkCurveData" fields defined in "Common Components of Application Messages"
YieldData	[0..1]	Component	Insert here the set of "YieldData" fields defined in "Common Components of Application Messages"

Name	Mult.	Type	Description
TradeContinuation	[0..1]	CodeSet	May be used to indicate the quote/negotiation is for the specified post-execution trade continuation or lifecycle event.
TradeContinuationText	[0..1]	String	
EncodedTradeContinuationTextLen	[0..1]	Length	Must be set if EncodedTradeContinuationText(2371) field is specified and must immediately precede it.
EncodedTradeContinuationText	[0..1]	data	Encoded (non-ASCII characters) representation of the TradeContinuationText(2374) field in the encoded format specified via the MessageEncoding(347) field.
StrikeTime	[0..1]	UTCTimestamp	Conditionally required when QuoteQual(695) = d (Deferred spot) is specified.
StandardTrailer	[1..1]	Component	

124 QuoteStatusReport

Category: QuotationNegotiation

124.1 Message Functionality

The quote status report message is used:

- as the response to a Quote Status Request message
- as a response to a Quote Cancel message
- as a response to a Quote Response message in a negotiation dialog (see Volume 7 – PRODUCT: FIXED INCOME and USER GROUP: EXCHANGES AND MARKETS)

124.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = AI
QuoteStatusReqID	[0..1]	String	
QuoteReqID	[0..1]	String	Required when quote is in response to a Quote Request message
QuoteID	[0..1]	String	Contains the QuoteID(117) of a single Quote(MsgType=S) or QuoteEntryID(299) of a MassQuote(MsgType=i).
BidID	[0..1]	String	Contains the BidID(390) of a single Quote(35=S).
OfferID	[0..1]	String	Contains the QuoteID(1867) of a single Quote(35=S).
SecondaryQuoteID	[0..1]	String	
QuoteMsgID	[0..1]	String	Contains the QuoteMsgID(1166) of a single Quote(MsgType=S) or QuoteID(117) of a MassQuote(MsgType=i).
QuoteRespID	[0..1]	String	Required when responding to a QuoteResponse(35=AJ) message.
QuoteType	[0..1]	CodeSet	If not specified, the default is an indicative quote.
QuoteCancelType	[0..1]	CodeSet	
Parties	[0..*]	Group	
TargetParties	[0..*]	Group	Can be populated with the values provided on the associated QuoteStatusRequest(MsgType=A).

Name	Mult.	Type	Description
TradingSessionID	[0..1]	CodeSet	
TradingSessionSubID	[0..1]	CodeSet

125 QuoteStatusRequest

Category: QuotationNegotiation

125.1 Message Functionality

The quote status request message is used for the following purposes in markets that employ tradeable or restricted tradeable quotes:

- For the issuer of a quote in a market to query the status of that quote (using the QuoteID to specify the target quote).
- To subscribe and unsubscribe for Quote Status Report messages for one or more securities.

125.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = a (lowercase)
QuoteStatusReqID	[0..1]	String	
QuoteID	[0..1]	String	Maps to:. - QuoteID(117) of a single Quote. - QuoteEntryID(299) of a Mass Quote.
Instrument	[0..1]	Component	Conditionally required when requesting status of a single security quote.
FinancingDetails	[0..1]	Component	Insert here the set of "FinancingDetails" (symbology) fields defined in "Common Components of Application Messages"
UndInstrmtGrp	[0..*]	Group	Number of underlyings
InstrmtLegGrp	[0..*]	Group	Required for multileg quotes
Parties	[0..*]	Group	Insert here the set of "Parties" (firm identification) fields defined in "Common Components of Application Messages"
TargetParties	[0..*]	Group	Can be used to specify the parties to whom the Quote Status Request should apply.
Account	[0..1]	String	
AcctIDSource	[0..1]	CodeSet	
AccountType	[0..1]	CodeSet	Type of account associated with the order (Origin)
TradingSessionID	[0..1]	CodeSet	
TradingSessionSubID	[0..1]	CodeSet	

Name	Mult.	Type	Description
SubscriptionRequestType	[0..1]	CodeSet	Used to subscribe for Quote Status Report messages
StandardTrailer	[1..1]	Component	

126 RFQRequest

Category: QuotationNegotiation

126.1 Message Functionality

In tradeable and restricted tradeable quoting markets – Quote Requests are issued by counterparties interested in ascertaining the market for an instrument. Quote Requests are then distributed by the market to liquidity providers who make markets in the instrument. The RFQ Request is used by liquidity providers to indicate to the market for which instruments they are interested in receiving Quote Requests. It can be used to register interest in receiving quote requests for a single instrument or for multiple instruments

126.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = AH
RFQReqID	[1..1]	String	
Parties	[0..*]	Group	Insert here the set of Parties (firm identification) fields defined in COMMON COMPONENTS OF APPLICATION MESSAGES
RFQReqGrp	[1..*]	Group	Number of related symbols (instruments) in Request
SubscriptionRequestType	[0..1]	CodeSet	Used to subscribe for Quote Requests that are sent into a market
PrivateQuote	[0..1]	CodeSet	Used to indicate whether a private negotiation is requested or if the response should be public. Only relevant in markets supporting both Private and Public quotes. If field is not provided in message, the model used must be bilaterally agreed.
StandardTrailer	[1..1]	Component	

127 RegistrationInstructions

Category: RegistrationInstruction

127.1 Message Functionality

The Registration Instructions message type may be used by institutions or retail intermediaries wishing to electronically submit registration information to a broker or fund manager (for CIV) for an order or for an allocation.

127.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = o (lowercase O)
RegistID	[1..1]	String	
ClearingBusinessDate	[0..1]	LocalMktDate	
RegistTransType	[1..1]	CodeSet	
RegistRefID	[1..1]	String	Required for Cancel and Replace RegistTransType messages
ClOrdID	[0..1]	String	Unique identifier of the order as assigned by institution or intermediary to which Registration relates
Parties	[0..*]	Group	Insert here the set of "Parties" (firm identification) fields defined in "Common Components of Application Messages"
Account	[0..1]	String	
AcctIDSource	[0..1]	CodeSet	
RegistAcctType	[0..1]	String	
TaxAdvantageType	[0..1]	CodeSet	
OwnershipType	[0..1]	CodeSet	
RgstDtIsGrp	[0..*]	Group	Number of registration details in this message (number of repeating groups to follow)
RgstDistInstGrp	[0..*]	Group	Number of Distribution instructions in this message (number of repeating groups to follow)
StandardTrailer	[1..1]	Component	

128 RegistrationInstructionsResponse

Category: RegistrationInstruction

128.1 Message Functionality

The Registration Instructions Response message type may be used by broker or fund manager (for CIV) in response to a Registration Instructions message submitted by an institution or retail intermediary for an order or for an allocation.

128.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = p (lowercase P)
RegistID	[1..1]	String	Unique identifier of the original Registration Instructions details
RegistTransType	[1..1]	CodeSet	Identifies original Registration Instructions transaction type
RegistRefID	[1..1]	String	Required for Cancel and Replace RegistTransType messages
ClOrdID	[0..1]	String	Unique identifier of the order as assigned by institution or intermediary.
Parties	[0..*]	Group	Insert here the set of "Parties" (firm identification) fields defined in "Common Components of Application Messages"
Account	[0..1]	String	
AcctIDSource	[0..1]	CodeSet	
RegistStatus	[1..1]	CodeSet	
RegistRejReasonCode	[0..1]	CodeSet	
RegistRejReasonText	[0..1]	String	
StandardTrailer	[1..1]	Component	

129 Reject

Category: Session

129.1 Message Functionality

The reject message should be issued when a message is received but cannot be properly processed due to a session-level rule violation. An example of when a reject may be appropriate would be the receipt of a message with invalid basic data which successfully passes de-encryption, CheckSum and BodyLength checks.

129.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = 3
RefSeqNum	[1..1]	SeqNum	MsgSeqNum of rejected message
RefTagID	[0..1]	int	The tag number of the FIX field being referenced.
RefMsgType	[0..1]	CodeSet	The MsgType of the FIX message being referenced.
RefApplVerID	[0..1]	CodeSet	Recommended when rejecting an application message that does not explicitly provide ApplVerID (1128) on the message being rejected. In this case the value from the DefaultApplVerID(1137) or the default value specified in the NoMsgTypes repeating group on the logon message should be provided.
RefApplExtID	[0..1]	int	Recommended when rejecting an application message that does not explicitly provide ApplExtID(1156) on the rejected message. In this case the value from the DefaultApplExtID(1407) or the default value specified in the NoMsgTypes repeating group on the logon message should be provided.
RefCstmApplVerID	[0..1]	String	Recommended when rejecting an application message that does not explicitly provide CstmApplVerID(1129) on the message being rejected. In this case the value from the DefaultCstmApplVerID(1408) or the default value specified in the NoMsgTypes repeating group on the logon message should be provided.

Name	Mult.	Type	Description
SessionRejectReason	[0..1]	CodeSet	Code to identify reason for a session-level Reject message.
Text	[0..1]	String	Where possible, message to explain reason for rejection
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.
StandardTrailer	[1..1]	Component	

130 RequestForPositions

Category: PositionMaintenance

130.1 Message Functionality

The Request For Positions message is used by the owner of a position to request a Position Report from the holder of the position, usually the central counter party or clearing organization. The request can be made at several levels of granularity.

130.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = AN
PosReqID	[1..1]	String	Unique identifier for the Request for Positions as assigned by the submitter
PosReqType	[1..1]	CodeSet	
MatchStatus	[0..1]	CodeSet	
SubscriptionRequestType	[0..1]	CodeSet	Used to subscribe / unsubscribe for trade capture reports. If the field is absent, the value 0 will be the default
SettlCurrency	[0..1]	Currency	
SettlCurrencyCodeSource	[0..1]	CodeSet	
Parties	[1..*]	Group	Position Account
Account	[0..1]	String	
AcctIDSource	[0..1]	CodeSet	
AccountType	[0..1]	CodeSet	Type of account associated with the order (Origin)
Instrument	[0..1]	Component	
Currency	[0..1]	Currency	
CurrencyCodeSource	[0..1]	CodeSet	
InstrmtLegGrp	[0..*]	Group	Specifies the number of legs that make up the Security
UndInstrmtGrp	[0..*]	Group	Specifies the number of underlying legs that make up the Security
ClearingBusinessDate	[1..1]	LocalMktDate	The Clearing Business Date referred to by this request

Name	Mult.	Type	Description
SettlDate	[0..1]	LocalMktDate	
SettlSessID	[0..1]	CodeSet	
SettlSessSubID	[0..1]	String	
TrdgSesGrp	[0..*]	Group	Specifies the number of repeating TradingSessionIDs
TransactTime	[1..1]	UTCTimestamp	Time this order request was initiated/released by the trader, trading system, or intermediary.
ResponseTransportType	[0..1]	CodeSet	Ability to specify whether the response to the request should be delivered inband or via pre-arranged out-of-band transport.
ResponseDestination	[0..1]	String	URI destination name. Used if ResponseTransportType is out-of-band.
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.
StandardTrailer	[1..1]	Component	

131 RequestForPositionsAck

Category: PositionMaintenance

131.1 Message Functionality

The Request for Positions Ack message is returned by the holder of the position in response to a Request for Positions message. The purpose of the message is to acknowledge that a request has been received and is being processed.

131.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = AO
PosMaintRptID	[1..1]	String	Unique identifier for this position report
PosReqID	[0..1]	String	Unique identifier for the Request for Position associated with this report. This field should not be provided if the report was sent unsolicited.
TotalNumPosReports	[0..1]	int	Total number of Position Reports being returned
TotNumReports	[0..1]	int	
UnsolicitedIndicator	[0..1]	CodeSet	Set to 'Y' if message is sent as a result of a subscription request or out of band configuration as opposed to a Position Request.
PosReqResult	[1..1]	CodeSet	
PosReqStatus	[1..1]	CodeSet	
PosReqType	[0..1]	CodeSet	
MatchStatus	[0..1]	CodeSet

UndInstrmtGrp	[0..*]	Group	Specifies the number of underlying legs that make up the Security
ResponseTransportType	[0..1]	CodeSet	Ability to specify whether the response to the request should be delivered inband or via pre-arranged out-of-band transport.
ResponseDestination	[0..1]	String	URI destination name. Used if ResponseTransportType is out-of-band.
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.
StandardTrailer	[1..1]	Component	

132 ResendRequest

Category: Session

132.1 Message Functionality

The resend request is sent by the receiving application to initiate the retransmission of messages. This function is utilized if a sequence number gap is detected, if the receiving application lost a message, or as a function of the initialization process.

132.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = 2
BeginSeqNo	[1..1]	SeqNum	
EndSeqNo	[1..1]	SeqNum	
StandardTrailer	[1..1]	Component	

133 SecurityDefinition

Category: SecuritiesReferenceData

133.1 Message Functionality

The SecurityDefinition(35=d) message is used for the following:

1. Accept the security defined in a SecurityDefinition(35=d) message.
2. Accept the security defined in a SecurityDefinition(35=d) message with changes to the definition and/or identity of the security.
3. Reject the security requested in a SecurityDefinition(35=d) message.
4. Respond to a request for securities within a specified market segment.
5. Convey comprehensive security definition for all market segments that the security participates in.
6. Convey the security's trading rules that differ from default rules for the market segment.

133.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = d (lowercase)

134 SecurityDefinitionRequest

Category: SecuritiesReferenceData

134.1 Message Functionality

The SecurityDefinitionRequest(35=c) message is used for the following:

1. Request a specific security to be traded with the second party. The requested security can be defined as a multileg security made up of one or more instrument legs.
2. Request a set of individual securities for a single market segment.
3. Request all securities, independent of market segment.

134.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = c (lowercase)
SecurityReqID	[1..1]	String	
SecurityRequestType	[1..1]	CodeSet	
MarketID	[0..1]	Exchange	Identifies the market for which the security definition request is being made.
MarketSegmentID	[0..1]	String	Identifies the segment of the market for which the security definition request is being made.

136 SecurityList

Category: SecuritiesReferenceData

136.1 Message Functionality

The Security List message is used to return a list of securities that matches the criteria specified in a Security List Request.

136.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = y (lowercase Y)
ApplicationSequenceControl	[0..1]	Component	
SecurityReportID	[0..1]	int	
ClearingBusinessDate	[0..1]	LocalMktDate	
SecurityListID	[0..1]	String	Identifies a specific Security List Entry
SecurityListRefID	[0..1]	String	Provides a reference to another Security List
SecurityListDesc	[0..1]	String	
EncodedSecurityListDescLen	[0..1]	Length	
EncodedSecurityListDesc	[0..1]	data	
SecurityListType	[0..1]	CodeSet	Identifies a list type
SecurityListTypeSource	[0..1]	CodeSet	Identifies the source of a list type
SecurityReqID	[0..1]	String	
SecurityResponseID	[0..1]	String	Identifier for the Security List message
SecurityRequestResult	[0..1]	CodeSet	Result of the Security Request identified by the SecurityReqID
SecurityRejectReason	[0..1]	CodeSet	Used to specify a rejection reason when SecurityResponseType (323) is equal to 1 (Invalid or unsupported request) or 5 (Request for instrument data not supported).
TransactTime	[0..1]	UTCTimestamp	
TotNoRelatedSym	[0..1]	int	Used to indicate the total number of securities being returned for this request. Used in the event that message fragmentation is required.
MarketID	[0..1]	Exchange	Identifies the market which lists and trades the instrument.

Name	Mult.	Type	Description
MarketSegmentID	[0..1]	String	Identifies the segment of the market to which the specify trading rules and listing rules apply. The segment may indicate the venue, whether retail or wholesale, or even segregation by nationality.
LastFragment	[0..1]	CodeSet	Indicates whether this is the last fragment in a sequence of message fragments. Only required where message has been fragmented.
SecListGrp	[0..*]	Group	Specifies the number of repeating symbols (instruments) specified
StandardTrailer	[1..1]	Component	

137 SecurityListRequest

Category: SecuritiesReferenceData

137.1 Message Functionality

The Security List Request message is used to return a list of securities from the counterparty that match criteria provided on the request

137.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = x (lowercase X)
SecurityReqID	[1..1]	String	
SecurityListRequestType	[1..1]	CodeSet	Type of Security List Request being made
SecurityListID	[0..1]	String	Identifies a specific list
SecurityListType	[0..1]	CodeSet	Identifies a list type.
SecurityListTypeSource	[0..1]	CodeSet	Identifies the source a list type
MarketID	[0..1]	Exchange	Identifies the market which lists and trades the instrument.
MarketSegmentID	[0..1]	String	Identifies the segment of the market to which the specify trading rules and listing rules apply. The segment may indicate the venue, whether retail or wholesale, or even segregation by nationality.
Instrument	[0..1]	Component	Insert here the set of "Instrument" (symbology) fields defined in "Common Components of Application Messages". of the requested Security
InstrumentExtension	[0..1]	Component	Insert here the set of "InstrumentExtension" fields defined in "Common Components of Application Messages"
FinancingDetails	[0..1]	Component	Insert here the set of "FinancingDetails" fields defined in "Common Components of Application Messages"
UndInstrmtGrp	[0..*]	Group	Number of underlyings
InstrmtLegGrp	[0..*]	Group	Number of legs that make up the Security

141 SecurityRiskMetricsReport

Category: SecuritiesReferenceData

141.1 Message Functionality

SecurityRiskMetricsReport(35=EG) is used for publishing the risk metrics, valuation metrics or analytics of one or more securities, or for an option series.

141.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType(35)=EG
SecurityRiskMetricsReportID	[1..1]	String	
RiskMetricsSecurityGroup	[0..1]	String	May be used to identify the group of related instruments provided in SecurityRiskMetricGrp. Conditionally required when RiskMetricsSecuritySubGroup(2990) is present.
RiskMetricsSecuritySubGroup	[0..1]	String	May be used with RiskMetricsSecurityGroup(2989) to provide a more granular group identification.
TransactTime	[0..1]	UTCTimestamp	
UnderlyingInstrument	[0..1]	Component	UnderlyingPx(810) within the component may be used when valuation calculation uses a single reference price.
UnderlyingBidPx	[0..1]	Price	May be used to specify the (best) bid of the underlying instrument when valuation calculation uses real-time prices.
UnderlyingOfferPx	[0..1]	Price	May be used to specify the (best) offer of the underlying instrument when valuation calculation uses real-time prices.
MetricsCalculationPriceSource	[0..1]	CodeSet	
RiskFreeRate	[0..1]	float	May be used to identify the risk free rate used in the pricing model specified.
AssetValuationModel	[0..1]	CodeSet	
LastFragment	[0..1]	CodeSet	
SecurityRiskMetricGrp	[0..*]	Group	
StandardTrailer	[1..1]	Component	

142 SecurityStatus

Category: SecuritiesReferenceData

142.1 Message Functionality

The Security Status message provides for the ability to report changes in status to a security. The Security Status message contains fields to indicate trading status, corporate actions, financial status of the company. The Security Status message is used by one trading entity (for instance an exchange) to report changes in the state of a security.

142.2 Structure

Name	Mult.	Type	Description

144 SecurityTypeRequest

Category: SecuritiesReferenceData

144.1 Message Functionality

The Security Type Request message is used to return a list of security types available from a counterparty or market.

144.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = v (lowercase V)
SecurityReqID	[1..1]	String	
Text	[0..1]	String	Comment, instructions, or other identifying information.
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.
MarketID	[0..1]	Exchange	Optional MarketID to specify a particular trading session for which you want to obtain a list of securities that are tradeable.
MarketSegmentID	[0..1]	String	Optional Market Segment Identifier to specify a particular trading session for which you want to obtain a list of securities that are tradeable.
TradingSessionID	[0..1]	CodeSet	Optional Trading Session Identifier to specify a particular trading session for which you want to obtain a list of securities that are tradeable.
TradingSessionSubID	[0..1]	CodeSet	
Product	[0..1]	CodeSet	Used to qualify which security types are returned
SecurityType	[0..1]	CodeSet	Used to qualify which security type is returned
SecuritySubType	[0..1]	String	Used to qualify which security types are returned
StandardTrailer	[1..1]	Component	

145 SecurityTypes

Category: SecuritiesReferenceData

145.1 Message Functionality

The Security Type Request message is used to return a list of security types available from a counterparty or market.

145.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = w (lowercase W)
ApplicationSequenceControl	[0..1]	Component	
SecurityReqID	[1..1]	String	
SecurityResponseID	[1..1]	String	Identifier for the security response message
SecurityResponseType	[1..1]	CodeSet	The result of the security request identified by SecurityReqID
TotNoSecurityTypes	[0..1]	int	Indicates total number of security types in the event that multiple Security Type messages are used to return results
LastFragment	[0..1]	CodeSet	Indicates whether this is the last fragment in a sequence of message fragments. Only required where message has been fragmented.
SecTypesGrp	[0..*]	Group	
Text	[0..1]	String	Comment, instructions, or other identifying information.
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.
MarketID	[0..1]	Exchange	Optional MarketID to specify a particular trading session for which you want to obtain a list of securities that are tradeable.
MarketSegmentID	[0..1]	String	Optional Market Segment Identifier to specify a particular trading session for which you want to obtain a list of securities that are tradeable.

Name	Mult.	Type	Description
TradingSessionID	[0..1]	CodeSet	Optional Trading Session Identifier to specify a particular trading session for which you want to obtain a list of securities that are tradeable.
TradingSessionSubID	[0..1]	CodeSet	
SubscriptionRequestType	[0..1]	CodeSet	Subscribe or unsubscribe for security status to security specified in request.
StandardTrailer	[1..1]	Component	

146 SequenceReset

Category: Session

146.1 Message Functionality

The sequence reset message is used by the sending application to reset the incoming sequence number on the opposing side.

148 SettlementInstructions

Category: SettlementInstruction

148.1 Message Functionality

The Settlement Instructions message provides the broker's, the institution's, or the intermediary's instructions for trade settlement. This message has been designed so that it can be sent from the broker to the institution, from the institution to the broker, or from either to an independent "standing instructions" database or matching system or, for CIV, from an intermediary to a fund manager.

148.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = T
SettlInstMsgID	[1..1]	String	Unique identifier for this message
SettlInstReqID	[0..1]	String	Only used when this message is used to respond to a settlement instruction request (to which this ID refers)
SettlInstMode	[1..1]	CodeSet	1=Standing Instructions, 2=Specific Allocation Account Overriding, 3=Specific Allocation Account Standing, 4=Specific Order, 5=Reject SSI request
SettlInstReqRejCode	[0..1]	CodeSet	Required for SettlInstMode = 5. Used to provide reason for rejecting a Settlement Instruction Request message.
Text	[0..1]	String	Can be used to provide any additional rejection text where rejecting a Settlement Instruction Request message.
EncodedTextLen	[0..1]	Length	
EncodedText	[0..1]	data	
ClOrdID	[0..1]	String	Required for SettlInstMode(160) = 4 and when referring to orders that were electronically submitted over FIX or otherwise assigned a ClOrdID.
TransactTime	[1..1]	UTCTimestamp	Date/time this message was generated
SettlInstGrp	[0..*]	Group	Required except where SettlInstMode is 5=Reject SSI request
StandardTrailer	[1..1]	Component	

149 SettlementObligationReport

Category: SettlementInstruction

149.1 Message Functionality

The Settlement Obligation Report message provides a central counterparty, institution, or individual counterparty with a capacity for reporting the final details of a currency settlement obligation.

149.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = BQ
ApplicationSequenceControl	[0..1]	Component	
ClearingBusinessDate	[0..1]	LocalMktDate	
SettlementCycleNo	[0..1]	int	Settlement cycle in which the settlement obligation was generated
SettlObligMsgID	[1..1]	String	Unique identifier for this message
SettlObligMode	[1..1]	CodeSet	Used to identify the reporting mode of the settlement obligation which is either preliminary or final
Text	[0..1]	String	Can be used to provide any additional rejection text where rejecting a Settlement Instruction Request message.
EncodedTextLen	[0..1]	Length	
EncodedText	[0..1]	data	
TransactTime	[0..1]	UTCTimestamp	Time when the Settlement Obligation Report was created.
SettlementObligationInstructions	[1..*]	Group	
StandardTrailer	[1..1]	Component	

150 SettlementStatusReport

Category: SettlementStatusManagement

150.1 Message Functionality

SettlementStatusReport(35=EE) is a response to the SettlementStatusRequest(35=EC) to provide settlement status for the requested trade. It may also be sent unsolicited without an explicit request message by the party able to provide the settlement status for the trade identified in the report message.

150.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType(35)=EE
SettlStatusReportID	[1..1]	String	Unique identifier assigned by sender of this message.
SettlStatusRequestID	[0..1]	String	Identifier of SettlementStatusRequest(35=EC) message being responded to.
SettlStatus	[1..1]	String	
SettlStatusReason	[0..1]	String	May be used when additional settlement status reason is available.
SettlStatusReasonText	[0..1]	String	May be used to provide additional textual status reason accompanying SettlStatusReason(2969).
EncodedSettlStatusReasonTextLen	[0..1]	Length	Must be set if EncodedSettlStatusReasonText(2972) is specified and must immediately precede it.
EncodedSettlStatusReasonText	[0..1]	data	Encoded (non-ASCII characters) representation of SettlStatusReasonText(2970) field in the encoded format specified via the MessageEncoding(347) field.
Parties	[0..*]	Group	
RegulatoryTradeIDGrp	[0..*]	Group	May be used to specify the UTI (ISO 23897) of the trade this status report is for. Either RegulatoryTradeIDGrp or SettleTradeDetails must be present.
SettleTradeDetails	[0..1]	Component	May be used to provide trade details this status report is for. Either RegulatoryTradeIDGrp or SettleTradeDetails must be present.

Name	Mult.	Type	Description
TransactTime	[1..1]	UTCTimestamp	
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText(355) field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text(58) field in the encoded format specified via the MessageEncoding(347) field.
StandardTrailer	[1..1]	Component	

151 SettlementStatusReportAck

Category: SettlementStatusManagement

151.1 Message Functionality

SettlementStatusReportAck(35=EF) is used to respond to the SettlementStatusReport(35=EE) to acknowledge or reject the report.

151.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType(35)=EF
SettlStatusReportID	[1..1]	String	Identifier of SettlementStatusReport(35=EE) message being responded to.
SettlStatusReportStatus	[1..1]	CodeSet	
RejectText	[0..1]	String	
EncodedRejectTextLen	[0..1]	Length	Must be set if EncodedRejectText(1665) field is specified and must immediately precede it.
EncodedRejectText	[0..1]	data	Encoded (non-ASCII characters) representation of the RejectText(1328) field in the encoded format specified via the MessageEncoding(347) field.
StandardTrailer	[0..1]	Component	

152 SettlementStatusRequest

Category: SettlementStatusManagement

152.1 Message Functionality

SettlementStatusRequest(35=EC) is used to request for the settlement status of a trade.

152.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType(35)=EC
SettlStatusRequestID	[1..1]	String	Unique identifier assigned by sender of this message.
SubscriptionRequestType	[1..1]	CodeSet	
Parties	[0..*]	Group	
RegulatoryTradeIDGrp	[0..*]	Group	May be used to specify the UTI (ISO 23897) of the trade this status request is for. Either RegulatoryTradeIDGrp or SettlTradeDetails must be present.
SettlTradeDetails	[0..1]	Component	May be used to provide trade details to look-up the trade this status request is for. Either RegulatoryTradeIDGrp or SettlTradeDetails must be present.
TransactTime	[1..1]	UTCTimestamp	
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText(355) field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text(58) field in the encoded format specified via the MessageEncoding(347) field.
StandardTrailer	[1..1]	Component	

153 SettlementStatusRequestAck

Category: SettlementStatusManagement

153.1 Message Functionality

SettlementStatusRequestAck(35=ED) is used to respond to the SettlementStatusRequest(35=EC) to acknowledge the request and provide status for the request message.

153.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType(35)=ED
SettlStatusRequestID	[1..1]	String	Identifier of SettlementStatusRequest(35=EC) message being responded to.
SettlStatusRequestStatus	[1..1]	CodeSet	
RejectText	[0..1]	String	
EncodedRejectTextLen	[0..1]	Length	Must be set if EncodedRejectText(1665) field is specified and must immediately precede it.
EncodedRejectText	[0..1]	data	Encoded (non-ASCII characters) representation of the RejectText(1328) field in the encoded format specified via the MessageEncoding(347) field.
StandardTrailer	[1..1]	Component	

154 StreamAssignmentReport

Category: MarketData

154.1 Message Functionality

The StreamAssignmentReport(35=CD) message is in response to the StreamAssignmentRequest(35=CC) message. It provides information back to the aggregator as to which clients to assign to receive which price stream based on requested CCY pair. This message can be sent unsolicited to the Aggregator from the Price Maker.

154.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = CD
StreamAsgnRptID	[1..1]	String	Unique identifier of the Stream Assignment Report.
StreamAsgnReqType	[0..1]	CodeSet	Required if report is being sent in response to a StreamAssignmentRequest. The value should be the same as the value in the corresponding request.
StreamAsgnReqID	[0..1]	String	Conditionally required if Stream Assignment Report is being sent in response to a StreamAssignmentRequest(MsgType=CC). Not required for unsolicited stream assignments.
StrmAsgnRptGrp	[0..*]	Group	Stream assignments
StandardTrailer	[1..1]	Component	

155 StreamAssignmentReportACK

Category: MarketData

155.1 Message Functionality

This message is used to respond to the Stream Assignment Report, to either accept or reject an unsolicited assignment.

155.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = CE
StreamAsgnAckType	[1..1]	CodeSet	
StreamAsgnRptID	[1..1]	String	
StreamAsgnRejReason	[0..1]	CodeSet	
Text	[0..1]	String	Can be used to provide additional information regarding the assignment report, such as reject description.
EncodedTextLen	[0..1]	Length	
EncodedText	[0..1]	data	
StandardTrailer	[1..1]	Component	

156 StreamAssignmentRequest

Category: MarketData

156.1 Message Functionality

In certain markets where market data aggregators fan out to end clients the pricing streams provided by the price makers, the price maker may assign the clients to certain pricing streams that the price maker publishes via the aggregator. An example of this use is in the FX markets where clients may be assigned to different pricing streams based on volume bands and currency pairs.

156.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = CC
StreamAsgnReqID	[1..1]	String	Unique identifier of the request.
StreamAsgnReqType	[1..1]	CodeSet	Type of assignment being requested.
StrmAsgnReqGrp	[1..*]	Group	Assignment requests
StandardTrailer	[1..1]	Component	

157 TestActionReport

Category: Testing

157.1 Message Functionality

TestActionReport(35=EP) is used to report the testing results of the identified test suite that has been executed with TestActionRequest(35=EN). In the context of algorithmic trading, the results may be used to create a certificate for the algorithm upon meeting the success criteria.

157.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType=EP
TestActionReportID	[1..1]	String	Identifier of report assigned by report initiator.
TestSuiteRequestID	[1..1]	String	Use to identify the test suite.
StrategyParametersGrp	[0..*]	Group	
AlgoSystemModuleGrp	[0..*]	Group	
TestScenarioGrp	[0..*]	Group	Must contain all scenarios of the test suite identified by TestSuiteRequestID(3062). Set TestScenarioStatus(3030) to 0=Undefined for test scenarios that have not been executed yet, e.g. because the TestActionRequest(35=EN) message used the TestScenarioGrp to limit the test scenarios to be executed.
TestSuiteStatus	[0..1]	CodeSet	Overall status across all individual test scenarios defined in TestScenarioGrp.
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText(355) field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text(58) field in the encoded format specified via the MessageEncoding(347) field.
StandardTrailer	[1..1]	Component	

158 TestActionRequest

Category: Testing

158.1 Message Functionality

TestActionRequest(35=EN) is used to manage test executions or request for testing activity state of the identified test suite.

158.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType=EN
TestActionRequestID	[1..1]	String	Unique identifier assigned by request initiator.
TestActionType	[1..1]	CodeSet	
TestSuiteRequestID	[1..1]	String	Use to identify the test suite the TestActionType(3067) applies to.
Parties	[0..*]	Group	May be used to specify the algorithm related to the test suite.
TestScenarioGrp	[0..*]	Group	May be used to provide a list of references to test scenarios of the test suite identified by TestSuiteRequestID(3062) to be executed, using TestScenarioID(3029) with TestScenarioStatus(3030)=0 (Undefined).
TransactTime	[1..1]	UTCTimestamp	
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText(355) field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text(58) field in the encoded format specified via the MessageEncoding(347) field.
StandardTrailer	[1..1]	Component	

159 TestActionRequestAck

Category: Testing

159.1 Message Functionality

TestActionRequestAck(35=EO) is used to respond to the TestActionRequest(35=EN) to acknowledge the request and provide status for the request message.

159.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType=EO
TestActionRequestID	[1..1]	String	Identifier of request assigned by request initiator.
TestSuiteRequestID	[1..1]	String	
TestSuiteActivityState	[1..1]	CodeSet	
TestActionRequestStatus	[1..1]	CodeSet	
RejectText	[0..1]	String	
EncodedRejectTextLen	[0..1]	Length	Must be set if EncodedRejectText(1665) field is specified and must immediately precede it.
EncodedRejectText	[0..1]	data	Encoded (non-ASCII characters) representation of the RejectText(1328) field in the encoded format specified via the MessageEncoding(347) field.
StandardTrailer	[1..1]	Component	

160 TestRequest

Category: Session

160.1 Message Functionality

The test request message forces a heartbeat from the opposing application. The test request message checks sequence numbers or verifies communication line status. The opposite application responds to the Test Request with a Heartbeat containing the TestReqID.

160.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = 1
TestReqID	[1..1]	String	
StandardTrailer	[1..1]	Component	

161 TestSuiteDefinitionRequest

Category: Testing

161.1 Message Functionality

TestSuiteDefinitionRequest(35=EL) is used to convey to the test system the suite of test scenarios to perform.

161.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType=EL
TestSuiteRequestID	[1..1]	String	Unique identifier assigned by request initiator.
TestSuiteRequestTransType	[1..1]	CodeSet	
TestSuiteRequestRefID	[0..1]	String	Required for TestSuiteRequestTransType(3064)=1 (Cancel).
Parties	[0..*]	Group	May be used to specify the algorithm related to the test schedule.
StrategyParametersGrp	[0..*]	Group	
AlgoSystemModuleGrp	[0..*]	Group	May be used with test suites related to the testing of algorithms.
TestScenarioGroupID	[0..1]	String	May be used to define a shortcut for TestScenarioGrp. The shortcut always references all test scenarios of the test suite. It must not be used to define shortcuts for a subset of test scenarios of a test suite.
TestScenarioGrp	[1..*]	Group	
TransactTime	[1..1]	UTCTimestamp	
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText(355) field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text(58) field in the encoded format specified via the MessageEncoding(347) field.
StandardTrailer	[1..1]	Component	

162 TestSuiteDefinitionRequestAck

Category: Testing

162.1 Message Functionality

TestSuiteDefinitionRequestAck(35=EM) is used to respond to the TestSuiteDefinitionRequest(35= EL) to acknowledge the request and provide status for the request message.

162.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType=EM
TestSuiteRequestID	[1..1]	String	Identifier of request assigned by request initiator.
TestSuiteRequestStatus	[1..1]	CodeSet	
TestGatewayDetailGrp	[0..*]	Group	May be used to return information about market data and order entry gateways for execution venues.
RejectText	[0..1]	String	
EncodedRejectTextLen	[0..1]	Length	Must be set if EncodedRejectText(1665) field is specified and must immediately precede it.
EncodedRejectText	[0..1]	data	Encoded (non-ASCII characters) representation of the RejectText(1328) field in the encoded format specified via the MessageEncoding(347) field.
StandardTrailer	[1..1]	Component	

163 TradeAggregationReport

Category: TradeManagement

163.1 Message Functionality

TradeAggregationReport(35=DX) is used to respond to the TradeAggregationRequest(35=DW) message. It provides the status of the request (e.g. accepted or rejected) and may also provide additional information supplied by the respondent.

163.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType=DX
TradeAggregationReportID	[1..1]	String	Unique identifier for the report message.
TradeAggregationRequestID	[0..1]	String	Unique identifier for the TradeAggregationRequest(35=DW) message being responded to.
TradeAggregationRequestStatus	[1..1]	CodeSet	
TradeID	[0..1]	String	Conditionally required when TradeAggregationRequestStatus(2790)=0 (Accepted). The trade identifier for the group of aggregated trades.
TradeAggregationRejectReason	[0..1]	CodeSet	
AggregatedQty	[0..1]	Qty	Conditionally required when TradeAggregationRequestStatus(2790)=0 (Accepted).
AvgPx	[0..1]	Price	
AvgSpotRate	[0..1]	Price	
AvgForwardPoints	[0..1]	PriceOffset	
SettlDate	[0..1]	LocalMktDate	
Instrument	[0..1]	Component	Conditionally required when TradeAggregationRequestStatus(2790)=0 (Accepted).
Side	[0..1]	CodeSet	Conditionally required when TradeAggregationRequestStatus(2790)=0 (Accepted).
RejectText	[0..1]	String	

Name	Mult.	Type	Description
EncodedRejectTextLen	[0..1]	Length	Must be set if EncodedRejectText(1665) field is specified and must immediately precede it.
EncodedRejectText	[0..1]	data	Encoded (non-ASCII characters) representation of the RejectText(1328) field in the encoded format specified via the MessageEncoding(347) field.
StandardTrailer	[1..1]	Component	

164 TradeAggregationRequest

Category: TradeManagement

164.1 Message Functionality

TradeAggregationRequest(35=DW) is used to request that the identified trades between the initiator and respondent be aggregated together for further processing.

164.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType=DW
TradeAggregationRequestID	[1..1]	String	Unique identifier for the message.
TradeAggregationRequestRefID	[0..1]	String	Required when TradeAggregationTransType(2788)=1 (Cancel) or 2 (Replace)
TradeAggregationTransType	[1..1]	CodeSet	
AggregatedQty	[0..1]	Qty	
Currency	[0..1]	Currency	
CurrencyCodeSource	[0..1]	CodeSet	
AvgPx	[0..1]	Price	
Side	[1..1]	CodeSet	
PricePrecision	[0..1]	int	
OrderAggregationGrp	[0..*]	Group	Maybe used to specify the IDs of the orders being aggregated together.
ExecutionAggregationGrp	[0..*]	Group	Maybe used to specify the IDs of the execution fills being aggregated together.
Account	[0..1]	String	
Instrument	[1..1]	Component	
Parties	[0..*]	Group	
StandardTrailer	[1..1]	Component	

165 TradeCaptureReport

Category: TradeCapture

165.1 Message Functionality

The Trade Capture Report message can be:

- Used to report trades between counterparties.
- Used to report trades to a trade matching system.
- Sent unsolicited between counterparties.
- Sent as a reply to a Trade Capture Report Request.
- Used to report unmatched and matched trades.

165.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = AE
ApplicationSequenceControl	[0..1]	Component	
TradeReportID	[0..1]	String	TradeReportID(571) is conditionally required in a message-chaining model in which a subsequent message may refer to a prior message via TradeReportRefID(572). The alternative to a message-chain model is an entity-based model in which TradeID(1003) is used to identify a trade. In this case, TradeID(1003) is required and TradeReportID(571) can be optionally specified.
TradeID	[0..1]	String	
SecondaryTradeID	[0..1]	String	
FirmTradeID	[0..1]	String	
SecondaryFirmTradeID	[0..1]	String	
PackageID	[0..1]	String	
TradeNumber	[0..1]	int	
TradeReportTransType	[0..1]	CodeSet	
TradeReportType	[0..1]	CodeSet	

Name	Mult.	Type	Description
TrdRptStatus	[0..1]	CodeSet	Status of the trade report. In 3-party listed derivatives model, this is used to convey status of a trade to a counterparty. Used specifically in a "give-up" (also known as "claim") model.
TradeRequestID	[0..1]	String	Identifier for the trade capture report request associated with this trade capture report.
TrdType	[0..1]	CodeSet	For optional use in reporting trades.
TrdSubType	[0..1]	CodeSet	For optional use in reporting trades.
SecondaryTrdType	[0..1]	CodeSet	For optional use in reporting trades. Conditionally requires presence of TrdType(828).
TertiaryTrdType	[0..1]	CodeSet	For optional use in reporting trades. Conditionally requires presence of SecondaryTrdType(855).
TradeTypeGrp	[0..*]	Group	For optional use in reporting trades as alternative to the use of individual fields.
AnonymousTradeIndicator	[0..1]	Boolean	
AlgorithmicTradeIndicator	[0..1]	CodeSet	
OffsetInstruction	[0..1]	CodeSet	
TradePriceConditionGrp	[0..*]	Group

OrigTradeHandlingInstr	[0..1]	CodeSet	
OrigTradeDate	[0..1]	LocalMktDate	
OrigTradeID	[0..1]	String	
OrigSecondaryTradeID	[0..1]	String	
TransferReason	[0..1]	String	
ExecType	[0..1]	CodeSet	Type of execution being reported. Uses subset of ExecType(150) for trade capture reports.
TotNumTradeReports	[0..1]	int	
LastRptRequested	[0..1]	CodeSet	
ManualOrderIndicator	[0..1]	Boolean	May be used to indicate manual reporting of the trade.
UnsolicitedIndicator	[0..1]	CodeSet	Set to 'Y' if message is sent as a result of a subscription request or out of band configuration.
SubscriptionRequestType	[0..1]	CodeSet	If the field is absent, SubscriptionRequestType(263)=0(Snapshot) will be the default.
TradeReportRefID	[0..1]	String	The TradeReportID(571) that is being referenced for trade correction or cancelation.

Name	Mult.	Type	Description
SecondaryTradeReportRefID	[0..1]	String	
SecondaryTradeReportID	[0..1]	String	
TradeLinkID	[0..1]	String	
TrdMatchID	[0..1]	String	
ExecID	[0..1]	String	Market (exchange) assigned execution identifier as provided in the ExecutionReport(35=8) message. Conditionally required if ExecRefID(19) is present and refers to the new execution identifier assigned by the market (exchange).
ExecRefID	[0..1]	String	Reference to an execution identifier previously assigned by the market (exchange). If specified, ExecID(17) is required.
SecondaryExecID	[0..1]	String	
ExecRestatementReason	[0..1]	CodeSet	
RegulatoryTransactionType	[0..1]	CodeSet	
RegulatoryTradeIDGrp	[0..*]	Group	
PreviouslyReported	[0..1]	CodeSet	
PriceType	[0..1]	CodeSet	Can be used to indicate cabinet trade pricing.
PriceQualifierGrp	[0..*]	Group	
CrossType	[0..1]	CodeSet	
RootParties	[0..*]	Group	Used for acting parties that applies to the whole message, not individual legs, sides, etc.

RateSource	[0..*]	Group	
TransactionAttributeGrp	[0..*]	Group	
UnderlyingTradingSessionID	[0..1]	String	
UnderlyingTradingSessionSubID	[0..1]	String	
LastQty	[0..1]	Qty	Conditionally required except when reporting trades to parties who will derive trade level quantity from the leg level information for multi-legged trades
LastQtyVariance	[0..1]	Qty	
LastQtyChanged	[0..1]	Qty	
LastMultipliedQty	[0..1]	Qty	
TotalTradeQty	[0..1]	Qty	
TotalTradeMultipliedQty	[0..1]	Qty	
LastPx	[0..1]	Price	Conditionally required except when reporting trades to parties who will derive trade level price from the leg level information for multi-legged trades
MidPx	[0..1]	Price	
DifferentialPrice	[0..1]	PriceOffset	Used to specify the differential price when reporting the individual leg of a spread trade.
CalculatedCcyLastQty	[0..1]	Qty	
PriceMarkup	[0..1]	PriceOffset	Dealer's markup of market price to LastPx(31).
AveragePriceDetail	[0..1]	Component	
Currency	[0..1]	Currency	Primary currency of the specified currency pair. Used to qualify LastQty(32) and GrossTradeAmt(381).
CurrencyCodeSource	[0..1]	CodeSet	
SettlCurrency	[0..1]	Currency	Contra currency of the deal. Used to qualify CalculatedCcyLastQty(1056).
SettlCurrencyCodeSource	[0..1]	CodeSet	
SettlPriceFxRateCalc	[0..1]	CodeSet	For FX trades expresses whether to multiply or divide LastPx(31) to arrive at GrossTradeAmt(381).
LastParPx	[0..1]	Price	
LastSpotRate	[0..1]	Price	Applicable for F/X orders

Name	Mult.	Type	Description
LastForwardPoints	[0..1]	PriceOffset	Applicable for F/X orders
LastSwapPoints	[0..1]	PriceOffset	
PricePrecision	[0..1]	int	
LastMkt	[0..1]	Exchange	
ClearingTradePrice	[0..1]	Price	Used when clearing price differs from execution price.
TradePriceNegotiationMethod	[0..1]	CodeSet	
LastUpfrontPrice	[0..1]	Price	Upfront Price for CDS transactions. Conditionally required if TradePriceNegotiationMethod(1740) = 4(Percent of par and upfront amount), 5(Deal spread and upfront amount) or 6(Upfront points and upfront amount).
UpfrontPriceType	[0..1]	CodeSet	
TradeDate	[0..1]	LocalMktDate	Used when reporting other than current day trades.
ClearingBusinessDate	[0..1]	LocalMktDate	
ClearingPortfolioID	[0..1]	String	
AvgPx	[0..1]	Price	If used then the LastPx(31) will contain the original price on the execution.
SpreadOrBenchmarkCurveData	[0..1]	Component	
AvgPxGroupID	[0..1]	String	
AvgPxIndicator	[0..1]	CodeSet	
ValuationDate	[0..1]	LocalMktDate	
ValuationTime	[0..1]	LocalMktTime	
ValuationBusinessCenter	[0..1]	String	
PositionAmountData	[0..*]	Group	
MultiLegReportingType	[0..1]	CodeSet	Type of report if multileg instrument. Provided to support a scenario for trades of multileg instruments between two parties.
TradeLegRefID	[0..1]	String	Reference to the leg of a multileg instrument to which this trade refers. Used when MultiLegReportingType(442) = 2 (Individual leg of a multileg security).
TrdInstrmtLegGrp	[0..*]	Group	Identifies a multileg execution if present and non-zero.

Name	Mult.	Type	Description
TransactTime	[0..1]	UTCTimestamp	Time the transaction represented by when this TradeCaptureReport(35=AE) occurred. Execution time of trade. Also describes the time of block trades.
TrdRegTimestamps	[0..*]	Group	
SettlType	[0..1]	CodeSet	
SettlDate	[0..1]	LocalMktDate	Takes precedence over SettlType(63) value and conditionally required/omitted for specific SettlType(63) values.
TerminationDate	[0..1]	LocalMktDate	
UnderlyingSettlementDate	[0..1]	LocalMktDate	The settlement date for the underlying instrument of a derivatives security.
MatchStatus	[0..1]	CodeSet	
ExecMethod	[0..1]	CodeSet	
MatchType	[0..1]	CodeSet	
TradeQtyGrp	[0..*]	Group	
TrdCapRptSideGrp	[1..*]	Group	
Volatility	[0..1]	float

167 TradeCaptureReportRequest

Category: TradeCapture

167.1 Message Functionality

The Trade Capture Report Request can be used to:

- Request one or more trade capture reports based upon selection criteria provided on the trade capture report request
- Subscribe for trade capture reports based upon selection criteria provided on the trade capture report request.

167.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = AD
TradeRequestID	[1..1]	String	Unique identifier for the trade request.
TradeID	[0..1]	String	
SecondaryTradeID	[0..1]	String	
FirmTradeID	[0..1]	String	
SecondaryFirmTradeID	[0..1]	String	
TradeRequestType	[1..1]	CodeSet	
SubscriptionRequestType	[0..1]	CodeSet	If the field is absent, SubscriptionRequestType(263)=0(Snapshot) will be the default.
TradeReportID	[0..1]	String	Can be used to request a specific trade report.
SecondaryTradeReportID	[0..1]	String	To request a specific trade report
SecondaryExecID	[0..1]	String	To request all trades based on secondary execution identifier
ExecID	[0..1]	String	
ExecType	[0..1]	CodeSet	Can be used to request all trades of a specific execution type.
OrderID	[0..1]	String	
ClOrdID	[0..1]	String	
MatchStatus	[0..1]	CodeSet	

Name	Mult.	Type	Description
TrdType	[0..1]	CodeSet	Can be used to request all trades of a specific trade type.
TrdSubType	[0..1]	CodeSet	Can be used to request all trades of a specific trade sub type.
OffsetInstruction	[0..1]	CodeSet	
TradeHandlingInstr	[0..1]	CodeSet	
TransferReason	[0..1]	String	Can be used to request all trades for a specific transfer reason.
SecondaryTrdType	[0..1]	CodeSet	Can be used to request all trades of a specific secondary trade type.
TradeLinkID	[0..1]	String	Can be used to request all trades of a specific trade link identifier.
TrdMatchID	[0..1]	String	Can be used to request a trade matching a specific TrdMatchID(880).
Parties	[0..*]	Group	Used to specify the parties for the trades to be returned (clearing firm, execution broker, trader id, etc.). ExecutingBroker. ClearingFirm. ContraBroker. ContraClearingFirm. SettlementLocation - depository, CSD, or other settlement party. ExecutingTrader. InitiatingTrader. OrderOriginator

168 TradeCaptureReportRequestAck

Category: TradeCapture

168.1 Message Functionality

The Trade Capture Request Ack message is used to:

- Provide an acknowledgement to a Trade Capture Report Request in the case where the Trade Capture Report Request is used to specify a subscription or delivery of reports via an out-of-band ResponseTransmissionMethod.
- Provide an acknowledgement to a Trade Capture Report Request in the case when the return of the Trade Capture Reports matching that request will be delayed or delivered asynchronously. This is useful in distributed trading system environments.
- Indicate that no trades were found that matched the selection criteria specified on the Trade Capture Report Request or the Trade Capture Request was invalid for some business reason, such as request is not authorized, invalid or unknown instrument, party, trading session, etc.

168.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = AQ
TradeRequestID	[1..1]	String	Identifier for the trade request
TradeID	[0..1]	String	
SecondaryTradeID	[0..1]	String	
FirmTradeID	[0..1]	String	
SecondaryFirmTradeID	[0..1]	String	
TradeRequestType	[1..1]	CodeSet	
SubscriptionRequestType	[0..1]	CodeSet	Used to subscribe / unsubscribe for trade capture reports. If the field is absent, the value 0 will be the default
TotNumTradeReports	[0..1]	int	Number of trade reports returned
TradeRequestResult	[1..1]	CodeSet	Result of Trade Request
TradeRequestStatus	[1..1]	CodeSet	Status of Trade Request

Name	Mult.	Type	Description
Instrument	[0..1]	Component	Insert here the set of "Instrument" (symbology) fields defined in "Common Components of Application Messages"
InstrumentExtension	[0..1]	Component	
UndInstrmtGrp	[0..*]	Group	
InstrmtLegGrp	[0..*]	Group	Number of legs. NoLegs > 0 identifies a Multi-leg Execution
MultiLegReportingType	[0..1]	CodeSet	Specify type of multileg reporting to be returned.
ResponseTransportType	[0..1]	CodeSet	Ability to specify whether the response to the request should be delivered inband or via pre-arranged out-of-band transport.
ResponseDestination	[0..1]	String	URI destination name. Used if ResponseTransportType is out-of-band.
Text	[0..1]	String	May be used by the executing market to record any execution Details that are particular to that market
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.
MessageEventSource	[0..1]	String	Used to identify the event or source which gave rise to a message
StandardTrailer	[1..1]	Component	

169 TradeMatchReport

Category: TradeCapture

169.1 Message Functionality

The TradeMatchReport(35=DC) message is used by exchanges and ECN's to report matched trades to central counterparties (CCPs) as an atomic event. The message is used to express the one-to-one, one-to-many and many-to-many matches as well as implied matches in which more complex instruments can match with simpler instruments.

169.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType=DC
ApplicationSequenceControl	[0..1]	Component	
TrdMatchID	[1..1]	String	Unique identifier common for all trades included in a match event.
MatchType	[0..1]	CodeSet	
TradeReportType	[0..1]	CodeSet	
ClearingBusinessDate	[0..1]	LocalMktDate	
TrdType	[0..1]	CodeSet	
TrdSubType	[0..1]	CodeSet	
TradeDate	[0..1]	LocalMktDate	Used when reporting other than current day trades.
MarketID	[0..1]	Exchange	
MarketSegmentID	[0..1]	String	
TradingSessionID	[0..1]	CodeSet	
TradingSessionSubID	[0..1]	CodeSet	
VenueType	[0..1]	CodeSet	
TradeMatchTimestamp	[0..1]	UTCTimestamp	
TransactTime	[0..1]	UTCTimestamp	Time of the match event or transaction that resulted in this match report.

Name	Mult.	Type	Description
MultiLegReportingType	[0..1]	CodeSet	Differentiates match events involving complex instruments (MultiLegReportingType(442)=3(multileg security)) from those only involving simple instruments (MultiLegReportingType(442)=1(single security)). MultiLegReportingType(442)=2(individual leg of multileg security) should not be used.
InstrmtMatchSideGrp	[0..*]	Group	Conditionally required when TradeReportType(856) = Submit(0).
StandardTrailer	[1..1]	Component	

170 TradeMatchReportAck

Category: TradeCapture

170.1 Message Functionality

The TradeMatchReportAck(35=DD) is used to respond to the TradeMatchReport(35=DC) message. It may be used to report on the status of the request (e.g. accepting the request or rejecting the request).

170.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType=DD
ApplicationSequenceControl	[0..1]	Component	
TrdMatchID	[1..1]	String	Identifier of the TradeMatchReport(35=DC) being acknowledged.
TradeMatchAckStatus	[1..1]	CodeSet	
TradeMatchRejectReason	[0..1]	CodeSet	Conditionally required when TradeMatchAckStatus(1896) = Rejected(2).
RejectText	[0..1]	String	
EncodedRejectTextLen	[0..1]	Length	
EncodedRejectText	[0..1]	data	
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	
EncodedText	[0..1]	data	
StandardTrailer	[1..1]	Component	

171 TradingSessionList

Category: MarketStructureReferenceData

171.1 Message Functionality

The Trading Session List message is sent as a response to a Trading Session List Request. The Trading Session List should contain the characteristics of the trading session and the current state of the trading session.

171.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = BJ
ApplicationSequenceControl	[0..1]	Component	
TradSesReqID	[0..1]	String	Provided for a response to a specific Trading Session List Request message (snapshot).
TrdSessLstGrp	[1..*]	Group	
StandardTrailer	[1..1]	Component	

172 TradingSessionListRequest

Category: MarketStructureReferenceData

172.1 Message Functionality

The Trading Session List Request is used to request a list of trading sessions available in a market place and the state of those trading sessions. A successful request will result in a response from the counterparty of a Trading Session List (MsgType=BJ) message that contains a list of zero or more trading sessions.

172.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = BI
TradSesReqID	[1..1]	String	Must be unique, or the ID of previous Trading Session List Request to disable if SubscriptionRequestType(263) = 2 (Disable previous Snapshot + Update Request).
MarketID	[0..1]	Exchange	Market for which Trading Session applies
MarketSegmentID	[0..1]	String	Market Segment for which Trading Session applies
TradingSessionID	[0..1]	CodeSet	Trading Session for which status is being requested
TradingSessionSubID	[0..1]	CodeSet	
SecurityExchange	[0..1]	Exchange	
TradSesMethod	[0..1]	CodeSet	Method of Trading
TradSesMode	[0..1]	CodeSet	Trading Session Mode
SubscriptionRequestType	[1..1]	CodeSet	
StandardTrailer	[1..1]	Component	

173 TradingSessionListUpdateReport

Category: MarketStructureReferenceData

173.1 Message Functionality

The Trading Session List Update Report is used by marketplaces to provide intra-day updates of trading sessions when there are changes to one or more trading sessions.

173.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = BS
ApplicationSequenceControl	[0..1]	Component	
TradSesReqID	[0..1]	String	Provided for a response to a specific Trading Session List Request message (snapshot).
TrdSessLstGrp	[1..*]	Group	
StandardTrailer	[1..1]	Component	

174 TradingSessionStatus

Category: MarketStructureReferenceData

174.1 Message Functionality

The Trading Session Status provides information on the status of a market. For markets multiple trading sessions on multiple-markets occurring (morning and evening sessions for instance), this message is able to provide information on what products are trading on what market during what trading session.

174.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = h (lowercase)
ApplicationSequenceControl	[0..1]	Component	
TradSesReqID	[0..1]	String	Conditionally required when responding to a specific TradingSessionStatusRequest(35=g)
MarketID	[0..1]	Exchange	Market for which trading session applies
MarketSegmentID	[0..1]	String	Market Segment for which trading session applies
TradeDate	[0..1]	LocalMktDate	Business day for which trading session applies to.
TradingSessionID	[1..1]	CodeSet	Identifier for trading session
TradingSessionSubID	[0..1]	CodeSet	
TradSesMethod	[0..1]	CodeSet	
TradSesMode	[0..1]	CodeSet	
UnsolicitedIndicator	[0..1]	CodeSet	Set to 'Y' if message is sent unsolicited as a result of a previous subscription request.
TradSesStatus	[1..1]	CodeSet	
TradSesEvent	[0..1]	CodeSet	Identifies an event related to the trading status of a trading session
FastMarketIndicator	[0..1]	Boolean	Indicates if trading session is in fast market.
TradSesStatusRejReason	[0..1]	CodeSet	Use with TradSesStatus(340) = 6(Request Rejected).
TradSesStartTime	[0..1]	UTCTimestamp	Starting time of the trading session
TradSesOpenTime	[0..1]	UTCTimestamp	Time of the opening of the trading session
TradSesPreCloseTime	[0..1]	UTCTimestamp	Time of the pre-close of the trading session

Name	Mult.	Type	Description
TradSesCloseTime	[0..1]	UTCTimestamp	Closing time of the trading session
TradSesEndTime	[0..1]	UTCTimestamp	End time of the trading session
TradSesControl	[0..1]	CodeSet	Indicates how control of trading session and subsession transitions are performed
TotalVolumeTraded	[0..1]	Qty	
TransactTime	[0..1]	UTCTimestamp	
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText(355) field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text(58) field in the encoded format specified via the MessageEncoding(347) field.
Instrument	[0..1]	Component	Use if status information applies only to a subset of all instruments. Use SecurityStatus(35=f) message instead for status on a single instrument.
StandardTrailer	[1..1]	Component	

175 TradingSessionStatusRequest

Category: MarketStructureReferenceData

175.1 Message Functionality

The Trading Session Status Request is used to request information on the status of a market. With the move to multiple sessions occurring for a given trading party (morning and evening sessions for instance) there is a need to be able to provide information on what product is trading on what market.

175.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = g (lowercase)
TradSesReqID	[1..1]	String	Must be unique, or the ID of previous Trading Session Status Request to disable if SubscriptionRequestType = Disable previous Snapshot + Updates Request (2).
MarketID	[0..1]	Exchange	Market for which Trading Session applies
MarketSegmentID	[0..1]	String	Market Segment for which Trading Session applies
TradingSessionID	[0..1]	CodeSet	Trading Session for which status is being requested
TradingSessionSubID	[0..1]	CodeSet	
TradSesMethod	[0..1]	CodeSet	Method of trading
TradSesMode	[0..1]	CodeSet	Trading Session Mode
SubscriptionRequestType	[1..1]	CodeSet	
SecurityExchange	[0..1]	Exchange	
StandardTrailer	[1..1]	Component	

176 UserNotification

Category: UserManagement

176.1 Message Functionality

The User Notification message is used to notify one or more users of an event or information from the sender of the message. This message is usually sent unsolicited from a marketplace (e.g. Exchange, ECN) to a market participant.

176.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = CB
UsernameGrp	[0..*]	Group	List of users to which the notification is directed
UserStatus	[1..1]	CodeSet	Reason for notification - when possible provide an explanation.
ThrottleParamsGrp	[0..*]	Group	
Text	[0..1]	String	Explanation for user notification.
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.
StandardTrailer	[1..1]	Component	

177 UserRequest

Category: UserManagement

177.1 Message Functionality

This message is used to initiate a user action, logon, logout or password change. It can also be used to request a report on a user's status.

177.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = "BE"
UserRequestID	[1..1]	String	
UserRequestType	[1..1]	CodeSet	
Username	[1..1]	String	
Password	[0..1]	String	
NewPassword	[0..1]	String	
EncryptedPasswordMethod	[0..1]	int	
EncryptedPasswordLen	[0..1]	Length	
EncryptedPassword	[0..1]	data	
EncryptedNewPasswordLen	[0..1]	Length	
EncryptedNewPassword	[0..1]	data	
RawDataLength	[0..1]	Length	
RawData	[0..1]	data	Can be used to hand structures etc to other API's etc
StandardTrailer	[1..1]	Component	

178 UserResponse

Category: UserManagement

178.1 Message Functionality

This message is used to respond to a user request message, it reports the status of the user after the completion of any action requested in the user request message.

178.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	MsgType = "BF"
UserRequestID	[1..1]	String	
Username	[1..1]	String	
UserStatus	[0..1]	CodeSet	
ThrottleParamsGrp	[0..*]	Group	
UserStatusText	[0..1]	String	Reason a request was not carried out
StandardTrailer	[1..1]	Component	

179 XMLnonFIX

Category: Session

179.1 Message Functionality

179.2 Structure

Name	Mult.	Type	Description
StandardHeader	[1..1]	Component	
AttachmentGrp	[0..*]	Group	
StandardTrailer	[1..1]	Component	

180 Message Elements

180.1 Data Types

Data type	Base type	Description
Amt	float	float field typically representing a Price times a Qty
Boolean	char	char field containing one of two values: 'Y' = True/Yes. 'N' = False/No
char		Single character value, can include any alphanumeric character or punctuation except the delimiter. All char fields are case sensitive (i.e. m != M).
Country	String	string field representing a country using ISO 3166 Country code (2 character) values (see Appendix 6-B).
Currency	String	string field representing a currency type using ISO 4217 Currency code (3 character) values (see Appendix 6-A).
data		string field containing opaque or non-ASCII data with no format or content restrictions. Data fields are always immediately preceded by a length field. The length field should specify the number of bytes of the value of the data field (up to but not including the terminating SOH). The number of bytes does not equal the number of characters when multibyte character sets are used. Caution: The value of these fields may contain the delimiter (SOH) character. Note that the value specified for these fields must be followed by the delimiter (SOH) character as all tag-value fields are terminated with an SOH.
Exchange	String	string field representing a market or exchange using ISO 10383 Market Identifier Code (MIC) values (see Appendix 6-C).
float		Sequence of digits with optional decimal point and sign character (ASCII characters "-", "0" - "9" and "."); the absence of the decimal point within the string will be interpreted as the float representation of an integer value. All float fields must accommodate up to fifteen significant digits. The number of decimal places used should be a factor of business/market needs and mutual agreement between counterparties. Note that float values may contain leading zeros (e.g. "00023.23" = "23.23") and may contain or omit trailing zeros after the decimal point (e.g. "23.0" = "23.0000" = "23" = "23."). Note that fields which are derived from float may contain negative values unless explicitly specified otherwise.
int		Sequence of digits without commas or decimals and optional sign character (ASCII characters "-" and "0" - "9"). The sign character utilizes one byte (i.e. positive int is "99999" while negative int is "-99999"). Note that int values may contain leading zeros (e.g. "00023" = "23").
Language	String	Identifier for a national language - uses ISO 639-1 standard
Length	int	int field representing the length in bytes. Value must be positive.

Data type	Base type	Description
LocalMktDate	String	string field representing a Date of Local Market (as opposed to UTC) in YYYYMMDD format. This is the "normal" date field used by the FIX Protocol. Valid values: YY = 0000-9999, MM = 01-12, DD = 01-31
LocalMktTime	String	string field representing the time local to a particular market center. Used where offset to UTC varies throughout the year and the defining market center is identified in a corresponding field. Format is HH:MM:SS where HH = 00-23 hours, MM = 00-59 minutes, SS = 00-59 seconds. In general only the hour token is non-zero.
MonthYear	String	string field representing month of a year. An optional day of the month can be appended or an optional week code. Valid formats: YYYYMM. YYYYMMDD. YYYYMMWW. Valid values: YY = 0000-9999; MM = 01-12; DD = 01-31; WW = w1, w2, w3, w4, w5.
MultipleCharValue	String	string field containing one or more space delimited single character values (e.g.
MultipleStringValue	String	string field containing one or more space delimited multiple character values (e.g.
NumInGroup	int	int field representing the number of entries in a repeating group. Value must be positive.
Percentage	float	float field representing a percentage (e.g. 0.05 represents 5% and 0.9525 represents 95.25%). Note the number of decimal places may vary.
Price	float	float field representing a price. Note the number of decimal places may vary. For certain asset classes prices may be negative values. For example, prices for options strategies can be negative under certain market conditions. Refer to Volume 7: FIX Usage by Product for asset classes that support negative price values.
PriceOffset	float	float field representing a price offset, which can be mathematically added to a "Price". Note the number of decimal places may vary and some fields such as LastForwardPoints may be negative.
Qty	float	float field capable of storing either a whole number (no decimal places) of "shares" (securities denominated in whole units) or a decimal value containing decimal places for non-share quantity asset classes (securities denominated in fractional units).
SeqNum	int	int field representing a message sequence number. Value must be positive.
String		Alpha-numeric free format strings, can include any character or punctuation except the delimiter. All String fields are case sensitive (i.e. morstatt != Morstatt).
TagNum	int	int field representing a field's tag number when using FIX "Tag=Value" syntax. Value must be positive and may not contain leading zeros.

Data type	Base type	Description
TZTimeOnly	String	string field representing the time represented based on ISO 8601. This is the time with a UTC offset to allow identification of local time and timezone of that time. Format is HH:MM[:SS][Z]
TZTimestamp	String	string field representing a time/date combination representing local time with an offset to UTC to allow identification of local time and timezone offset of that time. The representation is based on ISO 8601. Format is YYYYMMDD-HH:MM:SS.sss*[Z]
UTCDateOnly	String	string field representing Date represented in UTC (Universal Time Coordinated, also known as "GMT") in YYYYMMDD format. This special-purpose field is paired with UTCTimeOnly to form a proper UTCTimestamp for bandwidth-sensitive messages. Valid values: YYYY = 0000-9999, MM = 01-12, DD = 01-31.
UTCTimeOnly	String	string field representing time-only represented in UTC (Universal Time Coordinated, also known as "GMT") in either HH:MM:SS (whole seconds) or HH:MM:SS.sss* (milliseconds) format, colons, and period required. This special-purpose field is paired with UTCDateOnly to form a proper UTCTimestamp for bandwidth-sensitive messages. Valid values: HH = 00-23, MM = 00-59, SS = 00-60 (60 only if UTC leap second), sss* fractions of seconds. The fractions of seconds may be empty when no fractions of seconds are conveyed (in such a case the period is not conveyed), it may include 3 digits to convey milliseconds, 6 digits to convey microseconds, 9 digits to convey nanoseconds, 12 digits to convey picoseconds; Other number of digits may be used with bilateral agreement.
UTCTimestamp	String	string field representing time/date combination represented in UTC (Universal Time Coordinated, also known as "GMT") in either YYYYMMDD-HH:MM:SS (whole seconds) or YYYYMMDD-HH:MM:SS.sss* format, colons, dash, and period required. Valid values: YYYY = 0000-9999, MM = 01-12, DD = 01-31, HH = 00-23, MM = 00-59, SS = 00-60 (60 only if UTC leap second), sss* fractions of seconds. The fractions of seconds may be empty when no fractions of seconds are conveyed (in such a case the period is not conveyed), it may include 3 digits to convey milliseconds, 6 digits to convey microseconds, 9 digits to convey nanoseconds, 12 digits to convey picoseconds; Other number of digits may be used with bilateral agreement. Leap Seconds: Note that UTC includes corrections for leap seconds, which are inserted to account for slowing of the rotation of the earth. Leap second insertion is declared by the International Earth Rotation Service (IERS) and has, since 1972, only occurred on the night of Dec. 31 or Jun 30. The IERS considers March 31 and September 30 as secondary dates for leap second insertion, but has never utilized these dates. During a leap second insertion, a UTCTimestamp field may read "19981231-23:59:59", "19981231-23:59:60", "19990101-00:00:00". (see http://tycho.usno.navy.mil/leapsec.html)

Data type	Base type	Description
XID	String	The purpose of the XID datatype is to define a unique identifier that is global to a FIX message. An identifier defined using this datatype uniquely identifies its containing element, whatever its type and name is. The constraint added by this datatype is that the values of all the fields that have an XID datatype in a FIX message must be unique.
XIDREF	String	The XIDREF datatype defines a reference to an identifier defined by the XID datatype.
XMLData	String	Contains an XML document raw data with no format or content restrictions. XMLData fields are always immediately preceded by a length field. The length field should specify the number of bytes of the value of the data field (up to but not including the terminating SOH).

180.2 Data Dictionary

180.2.1 Account

Account mnemonic as agreed between buy and sell sides, e.g. broker and institution or investor/intermediary and fund manager.

Type: **String**

Used in groups: **BidCompReqGrp, ListOrdGrp, QuotReqGrp, QuotReqRjctGrp, SideCrossOrdModGrp, TrdCapRptAckSideGrp, TrdCapRptSideGrp**

Used in messages: **AssignmentReport, CollateralAssignment, CollateralInquiry, CollateralInquiryAck, CollateralReport, CollateralRequest, CollateralResponse, ExecutionReport, MassOrder, MassOrderAck, MassQuote, MassQuoteAck, MultilegOrderCancelReplace, NewOrderMultileg, NewOrderSingle, OrderCancelReject, OrderCancelReplaceRequest, OrderCancelRequest, OrderMassStatusRequest, OrderStatusRequest, PositionMaintenanceReport, PositionMaintenanceRequest, PositionReport, Quote, QuoteCancel, QuoteResponse, QuoteStatusReport, QuoteStatusRequest, RegistrationInstructions, RegistrationInstructionsResponse, RequestForPositions, RequestForPositionsAck, TradeAggregationRequest**

180.2.2 AccountSummaryReportID

Unique identifier for the AccountSummaryReport(35=CQ).

Type: **String**

Used in messages: **AccountSummaryReport**

180.2.3 AccountType

Type of account associated with an order

Type: **int**

Allowed values in AccountTypeCodeSet:

Code	Name	Description
1	CarriedCustomerSide	Account is carried on customer side of the books
2	CarriedNonCustomerSide	Account is carried on non-customer side of books
3	HouseTrader	House Trader
4	FloorTrader	Floor Trader
6	CarriedNonCustomerSideCross-Margined	Account is carried on non-customer side of books and is cross margined
7	HouseTraderCrossMargined	Account is house trader and is cross margined
8	JointBackOfficeAccount	Joint back office account (JBO)
9	EquitiesSpecialist	Equities specialist
10	OptionsMarketMaker	Options market maker
11	OptionsFirmAccount	Options firm account
12	AccountCustomerNonCustomerOrders	Account for customer and non-customer orders. Account aggregates orders from customers and non-customers. In the context of IROC UMIR this account type can be used for bundled orders (BU), i.e. orders including client, non-client and principal orders.
13	AccountOrdersMultipleCustomers	Account for orders from multiple customers. Account aggregates orders from multiple customers. In the context of IROC UMIR this account type can be used for multiple client orders (MC), i.e. orders including orders from more than one client but no principal or non-client orders.

Used in groups: **ListOrdGrp**, **QuotReqGrp**, **QuotReqRjctGrp**, **SideCrossOrdModGrp**, **TrdCapRptAckSideGrp**, **TrdCapRptSideGrp**

Used in messages: **AssignmentReport**, **CollateralAssignment**, **CollateralInquiry**, **CollateralInquiryAck**, **CollateralReport**, **CollateralRequest**, **CollateralResponse**, **ExecutionReport**, **MassOrder**, **MassOrderAck**, **MassQuote**, **MassQuoteAck**, **MultilegOrderCancelReplace**, **NewOrderMultileg**, **NewOrderSingle**, **OrderCancelReject**, **OrderCancelReplaceRequest**, **OrderCancelRequest**, **PositionMaintenanceReport**, **PositionMaintenanceRequest**, **PositionReport**, **Quote**, **QuoteCancel**, **QuoteResponse**, **QuoteStatusReport**, **QuoteStatusRequest**, **RequestForPositions**, **RequestForPositionsAck**

180.2.4 AccruedInterestAmt

Amount of Accrued Interest for convertible bonds and fixed income

Type: **Amt**

Used in groups: **TrdCapRptAckSideGrp**, **TrdCapRptSideGrp**

Used in messages: **AllocationInstruction**, **AllocationInstructionAlert**, **AllocationReport**, **CollateralAssignment**, **CollateralInquiry**, **CollateralReport**, **CollateralRequest**, **CollateralResponse**, **Confirmation**, **ExecutionReport**

180.2.5 AccruedInterestRate

The amount the buyer compensates the seller for the portion of the next coupon interest payment the seller has earned but will not receive from the issuer because the issuer will send the next coupon payment to the buyer. Accrued Interest Rate is the annualized Accrued Interest amount divided by the purchase price of the bond.

Type: **Percentage**

Used in groups: **TrdCapRptAckSideGrp**, **TrdCapRptSideGrp**

Used in messages: **AllocationInstruction**, **AllocationInstructionAlert**, **AllocationReport**, **Confirmation**, **ExecutionReport**

180.2.6 AcctIDSource

Used to identify the source of the Account (1) code. This is especially useful if the account is a new account that the Respondent may not have setup yet in their system.

Type: **int**

Allowed values in AcctIDSourceCodeSet:

Code	Name	Description
1	BIC	BIC
2	SIDCode	SID Code
3	TFM	TFM (GSPTA)
4	OMGEO	OMGEO (Alert ID)
5	DTCCCode	DTCC Code

Code	Name	Description
6	SPSAID	Special Segregated Account ID. Also referred to as SPSA ID. The Special Segregated Account identifier issued by Hong Kong Exchanges and Clearing.
99	Other	Other (custom or proprietary)

Used in groups: [BidCompReqGrp](#), [ListOrdGrp](#), [QuotReqGrp](#), [QuotReqRjctGrp](#), [SideCrossOrdModGrp](#), [TrdCapRptAckSideGrp](#), [TrdCapRptSideGrp](#)

Used in messages: [ExecutionReport](#), [MassOrder](#), [MassOrderAck](#), [MassQuote](#), [MassQuoteAck](#), [MultilegOrderCancelReplace](#), [NewOrderMultileg](#), [NewOrderSingle](#), [OrderCancelReject](#), [OrderCancelReplaceRequest](#), [OrderCancelRequest](#), [OrderMassStatusRequest](#), [OrderStatusRequest](#), [PositionMaintenanceReport](#), [PositionMaintenanceRequest](#), [PositionReport](#), [Quote](#), [QuoteCancel](#), [QuoteResponse](#), [QuoteStatusReport](#), [QuoteStatusRequest](#), [RegistrationInstructions](#), [RegistrationInstructionsResponse](#), [RequestForPositions](#), [RequestForPositionsAck](#)

180.2.7 AccumulatedReturnModifiedVariationMargin

The economic cost of the variation margin from one trading day to the next.

Type: [float](#)

Used in groups: [ClearingPriceParametersGrp](#)

180.2.8 AdditionalDividendsIndicator

Indicates whether additional dividends are applicable.

Type: [Boolean](#)

Used in components: [DividendConditions](#)

180.2.9 AdditionalTermBondCouponFrequencyPeriod

Time unit multiplier for the frequency of the bond's coupon payment.

Type: [int](#)

Used in groups: [AdditionalTermBondRefGrp](#)

180.2.10 AdditionalTermBondCouponFrequencyUnit

Time unit associated with the frequency of the bond's coupon payment.

Type: **String**

Allowed values in CouponFrequencyUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year
H	Hour	Hour
Min	Minute	Minute
S	Second	Second
T	Term	Term

Used in groups: **AdditionalTermBondRefGrp**

180.2.11 AdditionalTermBondCouponRate

Coupon rate of the bond. See also CouponRate(223).

Type: **Percentage**

Used in groups: **AdditionalTermBondRefGrp**

180.2.12 AdditionalTermBondCouponType

Coupon type of the bond.

Type: **int**

Allowed values in CouponTypeCodeSet:

Code	Name	Description
0	Zero	Zero
1	FixedRate	Fixed rate

Code	Name	Description
2	FloatingRate	Floating rate
3	Structured	Structured

Used in groups: [AdditionalTermBondRefGrp](#)

180.2.13 AdditionalTermBondCurrency

Specifies the currency the bond value is denominated in. Uses ISO 4217 currency codes.

Type: [Currency](#)

Used in groups: [AdditionalTermBondRefGrp](#)

180.2.14 AdditionalTermBondCurrentTotalIssuedAmount

Total issued amount of the bond.

Type: [Amt](#)

Used in groups: [AdditionalTermBondRefGrp](#)

180.2.15 AdditionalTermBondDayCount

The day count convention used in interest calculations for a bond or an interest bearing security.

Type: [int](#)

Allowed values in CouponDayCountCodeSet:

Code	Name	Description
0	OneOne	1/1. If parties specify the Day Count Fraction to be 1/1 then in calculating the applicable amount, 1 is simply input into the calculation as the relevant Day Count Fraction. See also 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (a).
1	ThirtyThreeSixtyUS	30/360 (30U/360 or Bond Basis). See also ISO 15022 MICO code 'A001'.

Code	Name	Description
2	ThirtyThreeSixtySIA	30/360 (SIA). A variant of "30/360" - when Date1 and Date2 are both Feb. 28th or 29th convert them to 30th using the same logic in the conversion of 31st to 30th.
3	ThirtyThreeSixtyM	30/360M. Commonly used day count convention for US mortgage backed securities. Feb 28th (or 29th in a leap year) is always considered as a 30th for a start date. As a comparison, in the regular 30/360 day count as used by most US agency and corporate bonds, a start date of Feb 28th (or 29th in a leap year) is still considered as the 28th (or 29th) day of a month of 30 days.
4	ThirtyEThreeSixty	30E/360 (Eurobond Basis). See also ISO 15022 MICO code 'A007'.
5	ThirtyEThreeSixtyISDA	30E/360 (ISDA). Date adjustment rules are: (1) if Date1 is the last day of the month, then change Date1 to 30; (2) if D2 is the last day of the month (unless Date2 is the maturity date and Date2 is in February), then change Date2 to 30. See also 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (h).
6	ActThreeSixty	Act/360. See also ISO 15022 MICO code 'A004'.
7	ActThreeSixtyFiveFixed	Act/365 (FIXED). See also ISO 15022 MICO code 'A005'.
8	ActActAFB	Act/Act (AFB). See also ISO 15022 MICO code 'A010'.
9	ActActICMA	Act/Act (ICMA). See also ISO 15022 MICO code 'A006'.
10	ActActISMAUltimo	Act/Act (ICMA Ultimo). The Act/Act (ICMA Ultimo) differs from Act/Act (ICMA) method only that it assumes that regular coupons always fall on the last day of the month.
11	ActActISDA	Act/Act (ISDA). See also ISO 15022 MICO code 'A008'.
12	BusTwoFiftyTwo	BUS/252. Used for Brazilian Real swaps, which is based on business days instead of calendar days. The number of business days divided by 252.
13	ThirtyEPlusThreeSixty	30E+/360. Variation on 30E/360. Date adjustment rules: (1) If Date1 falls on the 31st, then change it to the 30th; (2) If Date2 falls on the 31st, then change it to 1 and increase Month2 by one, i.e. next month.
14	ActThreeSixtyFiveL	Act/365L. See also ISO 15022 MICO code 'A009'.
15	NLThreeSixtyFive	NL365. See also ISO 15022 MICO code 'A014'.
16	NLThreeSixty	NL360. This is the same as Act/360, with the exception of leap days (29th February) which are ignored.
17	Act364	Act/364. The actual number of days between Date1 and Date2, divided by 364.

Code	Name	Description
18	ThirtyThreeSixtyFive	30/365. Interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and a 365-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31 is assumed to be a 30 and the 28 February (or 29 February for a leap year) is assumed to be a 28 (or 29). See also ISO 15022 MICO code 'A002'.
19	ThirtyActual	30/Actual. Interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and the assumed number of days in a year in a way similar to the Actual/Actual (ICMA). Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31 is assumed to be a 30 and the 28 February (or 29 February for a leap year) is assumed to be a 28 (or 29). The assumed number of days in a year is computed as the actual number of days in the coupon period multiplied by the number of interest payments in the year. See also ISO 15022 MICO code 'A003'.
20	ThirtyThreeSixtyICMA	30/360 (ICMA or basis rule). Interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30 calendar day of the same month, except for February. This means that a 31 is assumed to be a 30 and the 28 February (or 29 February for a leap year) is assumed to be a 28 (or 29). It is the most commonly used 30/360 method for non-US straight and convertible bonds issued before 1 January 1999. See also ISO 15022 MICO code 'A011'.

Code	Name	Description
21	ThirtyETwoThreeSixty	30E2/360 (Eurobond basis model two). Interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for the last day of February whose day of the month value shall be adapted to the value of the first day of the interest period if the latter is higher and if the period is one of a regular schedule. This means that a 31 is assumed to be a 30 and the 28 February of a non-leap year is assumed to be equivalent to a 29 February when the first day of the interest period is a 29, or to a 30 February when the first day of the interest period is a 30 or a 31. The 29 February of a leap year is assumed to be equivalent to a 30 February when the first day of the interest period is a 30 or a 31. Similarly, if the coupon period starts on the last day of February, it is assumed to produce only one day of interest in February as if it was starting on a 30 February when the end of the period is a 30 or a 31, or two days of interest in February when the end of the period is a 29, or three days of interest in February when it is the 28 February of a non-leap year and the end of the period is before the 29. See also ISO 15022 MICO code 'A012'.
22	ThirtyEThreeThreeSixty	30E3/360 (Eurobond basis model three). Interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that a 31 is assumed to be a 30 and the 28 February (or 29 February for a leap year) is assumed to be equivalent to a 30 February. It is a variation of the 30E/360 (or Eurobond basis) method where the last day of February is always assumed to be a 30, even if it is the last day of the maturity coupon period. See also ISO 15022 MICO code 'A013'.
99	Other	Other. For other day count method. See also ISO 15022 MICO code 'OTHR'.

Used in groups: **AdditionalTermBondRefGrp**

180.2.16 AdditionalTermBondDesc

Description of the bond.

Type: **String**

Used in groups: **AdditionalTermBondRefGrp**

180.2.17 AdditionalTermBondIssuer

Issuer of the bond.

Type: **String**

Used in groups: **AdditionalTermBondRefGrp**

180.2.18 AdditionalTermBondMaturityDate

The maturity date of the bond.

Type: **LocalMktDate**

Used in groups: **AdditionalTermBondRefGrp**

180.2.19 AdditionalTermBondParValue

The par value of the bond.

Type: **Amt**

Used in groups: **AdditionalTermBondRefGrp**

180.2.20 AdditionalTermBondRefGrp

The AdditionalTermBondRefGrp is a repeating group subcomponent of the AdditionalTermGrp component used to identify an underlying reference bond for a swap.

Name	Mult.	Type	Description
NoAdditionalTermBondRefs	[1..1]	NumInGroup	
AdditionalTermBondSecurityID	[0..1]	String	Required if NoAdditionalTermBondRefs(40000) > 0.
AdditionalTermBondSecurityIDSource	[0..1]	CodeSet	Conditionally required when AdditionalTermBondSecurityID(40001) is specified.
AdditionalTermBondDesc	[0..1]	String	
EncodedAdditionalTermBondDescLen	[0..1]	Length	Must be set if EncodedAdditionalTermBondDesc(40005) field is specified and must immediately precede it.

Name	Mult.	Type	Description
EncodedAdditionalTermBondDesc	[0..1]	data	Encoded (non-ASCII characters) representation of the AdditionalTermBondDesc(40003) field in the encoded format specified via the MessageEncoding(347) field.
AdditionalTermBondCurrency	[0..1]	Currency	
AdditionalTermBondIssuer	[0..1]	String	
EncodedAdditionalTermBondIssuerLen	[0..1]	Length	Must be set if EncodedAdditionalTermBondIssuer(40009) field is specified and must immediately precede it.
EncodedAdditionalTermBondIssuer	[0..1]	data	Encoded (non-ASCII characters) representation of the AdditionalTermBondIssuer(40007) field in the encoded format specified via the MessageEncoding(347) field.
AdditionalTermBondSeniority	[0..1]	CodeSet	
AdditionalTermBondCouponType	[0..1]	CodeSet	
AdditionalTermBondCouponRate	[0..1]	Percentage	
AdditionalTermBondMaturityDate	[0..1]	LocalMktDate	
AdditionalTermBondParValue	[0..1]	Amt	
AdditionalTermBondCurrentTotals-suedAmount	[0..1]	Amt	
AdditionalTermBondCouponFrequencyPeriod	[0..1]	int	Conditionally required when AdditionalTermBondCouponFrequencyUnit(40017) is specified.
AdditionalTermBondCouponFrequencyUnit	[0..1]	CodeSet	Conditionally required when AdditionalTermBondCouponFrequencyPeriod(40016) is specified.
AdditionalTermBondDayCount	[0..1]	CodeSet	

Used in groups: **AdditionalTermGrp**

180.2.21 AdditionalTermBondSecurityID

Security identifier of the bond.

Type: **String**

Used in groups: **AdditionalTermBondRefGrp**

180.2.22 AdditionalTermBondSecurityIDSource

Identifies the source scheme of the AdditionalTermBondSecurityID(40001) value.

Type: **String**

Allowed values in SecurityIDSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
3	QUIK	QUIK
4	ISINNumber	ISIN
5	RICCode	RIC
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
7	ISOCountryCode	ISO Country Code
8	ExchangeSymbol	Exchange symbol
9	ConsolidatedTapeAssociation	Consolidated Tape Association (CTA) Symbol (SIAC CTS/CQS line format)
A	BloombergSymbol	Bloomberg Symbol
B	Wertpapier	Wertpapier
C	Dutch	Dutch
D	Valoren	Valoren
E	Sicovam	Sicovam
F	Belgian	Belgian
G	Common	"Common" (Clearstream and Euroclear)
H	ClearingHouse	Clearing house / Clearing organization
I	ISDAFpMLSpecification	ISDA/FpML product specification (XML in SecurityXML(1185))
J	OptionPriceReportingAuthority	Option Price Reporting Authority
K	ISDAFpMLURL	ISDA/FpML product URL (URL in SecurityID(48))
L	LetterOfCredit	Letter of credit
M	MarketplaceAssignedIdentifier	Marketplace-assigned Identifier
N	MarkitREDEntityCLIP	Markit RED entity CLIP
P	MarkitREDPairCLIP	Markit RED pair CLIP
Q	CFTCCommodityCode	CFTC commodity code
R	ISDACommodityReferencePrice	ISDA Commodity Reference Price

Code	Name	Description
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
T	LegalEntityIdentifier	Legal entity identifier
U	Synthetic	Synthetic. Used to specify that the security identifier is synthetic for linking nested underliers when there is no market identifier for the collection.
V	FidessaInstrumentMnemonic	Fidessa Instrument Mnemonic (FIM)
W	IndexName	Index name. Standard name of the index or rate index, e.g. "LIBOR" or "iTraxx Australia".
X	UniformSymbol	Uniform Symbol (UMTF Symbol)
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in groups: **AdditionalTermBondRefGrp**

180.2.23 AdditionalTermBondSeniority

Specifies the bond's payment priority in the event of a default.

Type: **String**

Allowed values in SeniorityCodeSet:

Code	Name	Description
SD	SeniorSecured	Senior Secured
SR	Senior	Senior
SB	Subordinated	Subordinated
JR	Junior	Junior. In the context of MiFID II this value is used as identified in RTS 23 Annex I Table 3 Field 23 "Seniority of the bond".
MZ	Mezzanine	Mezzanine. In the context of MiFID II this value is used as identified in RTS 23 Annex I Table 3 Field 23 "Seniority of the bond".
SN	SeniorNonPreferred	Senior Non-Preferred. For CDS reference obligations of non-preferred senior debt issued by European Financials that constitute a layer of debt ranking between the bank's normal senior debt but above the bank's normal tier 2 subordinated debt (reference: ISDA Credit Market Infrastructure Group).

Used in groups: **AdditionalTermBondRefGrp**

180.2.24 AdditionalTermConditionPrecedentBondIndicator

Indicates whether the condition precedent bond is applicable. The swap contract is only valid if the bond is issued and if there is any dispute over the terms of fixed stream then the bond terms would be used.

Type: **Boolean**

Used in groups: **AdditionalTermGrp**

180.2.25 AdditionalTermDiscrepancyClauseIndicator

Indicates whether the discrepancy clause is applicable.

Type: **Boolean**

Used in groups: **AdditionalTermGrp**

180.2.26 AdditionalTermGrp

The AdditionalTermGrp is a repeating subcomponent of the Instrument component used to report additional contract terms.

Name	Mult.	Type	Description
NoAdditionalTerms	[1..1]	NumInGroup	
AdditionalTermConditionPrecedent-BondIndicator	[0..1]	Boolean	Required if NoAdditionalTerms(40019) > 0.
AdditionalTermDiscrepancyClauseIndicator	[0..1]	Boolean	
AdditionalTermBondRefGrp	[0..*]	Group	

Used in components: **Instrument**

180.2.27 Adjustment

Identifies the type of adjustment.

Type: **int**

Allowed values in AdjustmentCodeSet:

Code	Name	Description
1	Cancel	Cancel
2	Error	Error
3	Correction	Correction

Used in messages: [SecurityMassStatus](#), [SecurityStatus](#)

180.2.28 AdjustmentType

Type of adjustment to be applied. Used for Position Change Submission (PCS), Position Adjustment (PAJ), and Customer Gross Margin (CGM).

Type: [int](#)

Allowed values in AdjustmentTypeCodeSet:

Code	Name	Description
0	ProcessRequestAsMarginDisposition	Process request as margin disposition
1	DeltaPlus	Delta plus
2	DeltaMinus	Delta minus
3	Final	Final
4	CustomerSpecificPosition	Customer specific position

Used in messages: [PositionMaintenanceReport](#), [PositionMaintenanceRequest](#)

180.2.29 AdvId

Unique identifier of advertisement message.

(Prior to FIX 4.1 this field was of type int)

Type: [String](#)

Used in messages: [Advertisement](#)

180.2.30 AdvRefID

Reference identifier used with CANCEL and REPLACE transaction types.

(Prior to FIX 4.1 this field was of type int)

Type: **String**

Used in messages: **Advertisement**

180.2.31 AdvSide

Broker's side of advertised trade

Type: **char**

Allowed values in AdvSideCodeSet:

Code	Name	Description
B	Buy	Buy
S	Sell	Sell
T	Trade	Trade
X	Cross	Cross

Used in messages: **Advertisement**

180.2.32 AdvTransType

Identifies advertisement message transaction type

Type: **String**

Allowed values in AdvTransTypeCodeSet:

Code	Name	Description
N	New	New
C	Cancel	Cancel
R	Replace	Replace

Used in messages: **Advertisement**

180.2.33 AffectedMarketSegmentGrp

List of market segments that have been affected by a mass action.

Name	Mult.	Type	Description
NoAffectedMarketSegments	[1..1]	NumInGroup	
AffectedMarketSegmentID	[0..1]	String	Required when NoAffectedMarketSegments(1791) > 0.

Used in messages: **OrderMassActionReport**

180.2.34 AffectedMarketSegmentID

Market segment within an affected market repeating segment group.

Type: **String**

Used in groups: **AffectedMarketSegmentGrp**

180.2.35 AffectedOrderID

OrderID(37) of an order affected by a mass cancel or mass action request.

Type: **String**

Used in groups: **AffectedOrdGrp**

180.2.36 AffectedOrdGrp

Name	Mult.	Type	Description
NoAffectedOrders	[1..1]	NumInGroup	
AffectedOrigCLOrdID	[0..1]	String	Required if NoAffectedOrders(534) > 0. Indicates the client order id of an order affected by this request. If order(s) were manually delivered (or otherwise not delivered over FIX and not assigned a CLOrdID(11)) this field should contain string "MANUAL".

Name	Mult.	Type	Description
AffectedOrderID	[0..1]	String	Contains the OrderID(37) assigned by the counterparty of an affected order. Conditionally required when AffectedOrigClOrdID(1824) = "MANUAL".
AffectedSecondaryOrderID	[0..1]	String	Contains the SecondaryOrderID(198) assigned by the counterparty of an affected order.

Used in messages: [OrderMassActionReport](#), [OrderMassCancelReport](#)

180.2.37 AffectedOrigClOrdID

OrigClOrdID(41) of an order affected by a mass cancel or mass action request.

Type: [String](#)

Used in groups: [AffectedOrdGrp](#)

180.2.38 AffectedSecondaryOrderID

SecondaryOrderID(198) of an order affected by a mass cancel or mass action request.

Type: [String](#)

Used in groups: [AffectedOrdGrp](#)

180.2.39 AffiliatedFirmsTradeIndicator

Indicates whether the transaction or position was entered into between two affiliated firms. I.e. one counterparty has an ownership interest in the other counterparty but less than the majority interest.

Type: [Boolean](#)

Used in messages: [ExecutionReport](#), [NewOrderSingle](#), [TradeCaptureReport](#)

180.2.40 AffirmStatus

Specifies the affirmation status of the confirmation.

Type: [int](#)

Allowed values in AffirmStatusCodeSet:

Code	Name	Description
1	Received	Received
2	ConfirmRejected	Confirm rejected, i.e. not affirmed
3	Affirmed	Affirmed

Used in messages: **Confirmation**, **ConfirmationAck**

180.2.41 AggregatedBook

Specifies whether or not book entries should be aggregated. (Not specified) = broker option

Type: **Boolean**

Allowed values in AggregatedBookCodeSet:

Code	Name	Description
Y	BookEntriesToBeAggregated	book entries to be aggregated
N	BookEntriesShouldNotBeAggregated	book entries should not be aggregated

Used in messages: **MarketDataRequest**

180.2.42 AggregatedQty

Total quantity of orders or fills quantity aggregated.

Type: **Qty**

Used in messages: **TradeAggregationReport**, **TradeAggregationRequest**

180.2.43 AggressorIndicator

Used to identify whether the order initiator is an aggressor or not in the trade.

Type: **Boolean**

Allowed values in AggressorIndicatorCodeSet:

Code	Name	Description
Y	OrderInitiatorIsAggressor	Order initiator is aggressor
N	OrderInitiatorIsPassive	Order initiator is passive

Used in components: [MDStatisticParameters](#)

Used in groups: [TrdCapRptAckSideGrp](#), [TrdCapRptSideGrp](#), [TrdMatchSideGrp](#)

Used in messages: [ExecutionReport](#)

180.2.44 AggressorSide

Side of aggressive order or quote resulting in match event.

Type: [char](#)

Allowed values in SideCodeSet:

Code	Name	Description
1	Buy	Buy. For Securities Financing indicates the receipt of securities or collateral.
2	Sell	Sell. For Securities Financing indicates the delivery of securities or collateral.
3	BuyMinus	Buy minus
4	SellPlus	Sell plus
5	SellShort	Sell short
6	SellShortExempt	Sell short exempt
7	Undisclosed	Undisclosed
8	Cross	Cross (orders where counterparty is an exchange, valid for all messages except IOIs)
9	CrossShort	Cross short
A	CrossShortExempt	Cross short exempt
B	AsDefined	"As Defined" (for use with multileg instruments)
C	Opposite	"Opposite" (for use with multileg instruments)
D	Subscribe	Subscribe (e.g. CIV)
E	Redeem	Redeem (e.g. CIV)
F	Lend	Lend (FINANCING - identifies direction of collateral)
G	Borrow	Borrow (FINANCING - identifies direction of collateral)

Code	Name	Description
H	SellUndisclosed	Sell undisclosed. In the context of ESMA RTS 22, this allows for reporting of transactions where the investment firm (broker) is not able to determine whether the sell is a short sale transaction. Corresponds to RTS 22 "short selling indicator" value of 'UNDI'.

Used in groups: [MDFullGrp](#), [MDIncGrp](#)

180.2.45 AggressorTime

Timestamp of aggressive order or quote resulting in match event.

Type: [UTCTimestamp](#)

Used in groups: [MDFullGrp](#), [MDIncGrp](#)

180.2.46 AgreementCurrency

Contractual currency forming the basis of a financing agreement and associated transactions. Usually, but not always, the same as the trade currency.

Type: [Currency](#)

Used in components: [FinancingDetails](#)

180.2.47 AgreementCurrencyCodeSource

Identifies class or source of the AgreementCurrency(918) value.

Type: [String](#)

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)

Code	Name	Description
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in components: [FinancingDetails](#)

180.2.48 AgreementDate

A reference to the date the underlying agreement specified by AgreementID and AgreementDesc was executed.

Type: [LocalMktDate](#)

Used in components: [FinancingDetails](#)

180.2.49 AgreementDesc

The full name of the base standard agreement, annexes and amendments in place between the principals applicable to a financing transaction. See <http://www.fpml.org/coding-scheme/master-agreement-type> for derivative values.

Type: [String](#)

Used in components: [FinancingDetails](#)

180.2.50 AgreementID

A common reference to the applicable standing agreement between the counterparties to a financing transaction.

Type: [String](#)

Used in components: [FinancingDetails](#)

180.2.51 AgreementVersion

The version of the master agreement

Type: **String**

Used in components: **FinancingDetails**

180.2.52 AlgoCertificateDesc

Description of a certificate issued by an algorithmic trading firm.

Type: **String**

Used in messages: **AlgoCertificateReport**, **AlgoCertificateRequest**

180.2.53 AlgoCertificateID

Unique identifier for a certificate issued by an algorithmic trading firm.

Type: **String**

Used in messages: **AlgoCertificateReport**, **AlgoCertificateRequest**, **ExecutionReport**

180.2.54 AlgoCertificateReportID

Unique identifier of the AlgoCertificateReport(35=EJ).

Type: **String**

Used in messages: **AlgoCertificateReport**, **AlgoCertificateReportAck**

180.2.55 AlgoCertificateReportRefID

Reference identifier of the AlgoCertificateReport(35=EJ).

Type: **String**

Used in messages: **AlgoCertificateReport**

180.2.56 AlgoCertificateReportStatus

Status of the report being responded to.

Type: **int**

Allowed values in AlgoCertificateReportStatusCodeSet:

Code	Name	Description
0	Received	Received, not yet processed
1	Accepted	Accepted
2	Rejected	Rejected. Rejection reason provided in RejectText(1328).

Used in messages: [AlgoCertificateReportAck](#)

180.2.57 AlgoCertificateReportTransType

Identifies the message transaction type.

Type: [int](#)

Allowed values in AlgoCertificateReportTransTypeCodeSet:

Code	Name	Description
0	New	New
1	Cancel	Cancel
2	Replace	Replace

Used in messages: [AlgoCertificateReport](#)

180.2.58 AlgoCertificateReportType

Specifies the type of business event related to an algo certification report.

Type: [int](#)

Allowed values in AlgoCertificateReportTypeCodeSet:

Code	Name	Description
0	CertificateInformation	Certificate information. The recipient of the report is informed about a certificate.
1	CertificateStateChanged	Certificate state changed. The recipient of the report is informed that the status of a certificate has changed. The new state is provided with AlgoCertificateStatus(3022).

Used in messages: [AlgoCertificateReport](#), [AlgoCertificateReportAck](#)

180.2.59 AlgoCertificateRequestID

Unique identifier of the AlgoCertificateRequest(35=EH).

Type: **String**

Used in messages: **AlgoCertificateReport**, **AlgoCertificateRequest**, **AlgoCertificateRequestAck**

180.2.60 AlgoCertificateRequestRefID

Reference identifier of the AlgoCertificateRequest(35=EH).

Type: **String**

Used in messages: **AlgoCertificateRequest**

180.2.61 AlgoCertificateRequestStatus

Status of the AlgoCertificateRequest(35=EH) message being responded to.

Type: **int**

Allowed values in AlgoCertificateRequestStatusCodeSet:

Code	Name	Description
0	Received	Received, not yet processed
1	Accepted	Accepted
2	Rejected	Rejected. Rejection reason provided in RejectText(1328).

Used in messages: **AlgoCertificateRequestAck**

180.2.62 AlgoCertificateRequestTransType

Identifies the message transaction type.

Type: **int**

Allowed values in AlgoCertificateRequestTransTypeCodeSet:

Code	Name	Description
0	New	New
1	Cancel	Cancel
2	Replace	Replace

Used in messages: [AlgoCertificateRequest](#)

180.2.63 AlgoCertificateRequestType

Specifies the type of business event related to an algo certification request.

Type: [int](#)

Allowed values in AlgoCertificateRequestTypeCodeSet:

Code	Name	Description
0	CertificateInformation	Certificate information. The recipient of the request is asked to provide certificates based on the criteria defined as part of the request.
1	GenerateCertificate	Generate certificate. The recipient of the request is asked to generate a new certificate based on the information defined or referenced in the request.
2	ChangeCertificateStatus	Change certificate status. The recipient of the request is asked to update the status of the certificate referenced in the request. The requested status is provided with AlgoCertificateStatus(3022) .
3	ForwardCertificate	Forward certificate. The recipient of the request is asked to submit the certificate referenced in the request to the venue identified in the TargetParties component.

Used in messages: [AlgoCertificateRequest](#), [AlgoCertificateRequestAck](#)

180.2.64 AlgoCertificateStatus

Status of the certification as provided by the regulatory authority.

Type: [int](#)

Allowed values in AlgoCertificateStatusCodeSet:

Code	Name	Description
0	Draft	Draft. Algo certificate created.
1	Approved	Approved. Algo certificate approved by authorized person.
2	Submitted	Submitted. Algo certificate sent to venue.
3	Registered	Registered. Algo certificate accepted and registered by venue.

Used in messages: [AlgoCertificateReport](#), [AlgoCertificateRequest](#)

180.2.65 AlgorithmicTradeIndicator

Indicates that the order or trade originates from a computer program or algorithm requiring little-to-no human intervention.

Type: [int](#)

Allowed values in AlgorithmicTradeIndicatorCodeSet:

Code	Name	Description
0	NonAlgorithmicTrade	Non-algorithmic trade
1	AlgorithmicTrade	Algorithmic trade. In the context of ESMA MiFID II, a trade has to be flagged as "algorithmic" if at least one of the matched orders was submitted by a trading algorithm. See Directive 2014/65/EU Article 4(1)(39).

Used in groups: [MDFullGrp](#), [MDIncGrp](#)

Used in messages: [ExecutionReport](#), [TradeCaptureReport](#)

180.2.66 AlgoSystemModuleGrp

AlgoSystemModuleGrp is a repeating group used to provide information regarding the modules of a system for algorithmic trading.

Name	Mult.	Type	Description
NoAlgoSystemModules	[1..1]	NumInGroup	
AlgoSystemModuleName	[0..1]	String	Required if NoAlgoSystemModules(3025)>0.
AlgoSystemModuleVersion	[0..1]	String	Required if NoAlgoSystemModules(3025)>0.

Name	Mult.	Type	Description
AlgoSystemModuleLastUpdateTime	[0..1]	UTCTimestamp	

Used in messages: [AlgoCertificateReport](#), [TestActionReport](#), [TestSuiteDefinitionRequest](#)

180.2.67 AlgoSystemModuleLastUpdateTime

Support Timestamp of last update to Algo System Module.

Type: [UTCTimestamp](#)

Used in groups: [AlgoSystemModuleGrp](#)

180.2.68 AlgoSystemModuleName

Name of the component of a system for algorithmic trading.

Type: [String](#)

Used in groups: [AlgoSystemModuleGrp](#)

180.2.69 AlgoSystemModuleVersion

Version (e.g. build or commit number) of the component of a system for algorithmic trading.

Type: [String](#)

Used in groups: [AlgoSystemModuleGrp](#)

180.2.70 AlgoTestDesc

Description of means of testing for an algorithm.

Type: [String](#)

Used in messages: [AlgoCertificateReport](#)

180.2.71 AlgoTrialID

Identifies the behaviour or configuration that has been selected by the executing party for this order.

Type: **String**

Used in messages: **ExecutionReport**

180.2.72 AllDividendsIndicator

Represents the European Master Confirmation value of 'All Dividends' which, when applicable, signifies that, for a given Ex-Date, the daily observed share price for that day is adjusted (reduced) by the cash dividend and/or the cash value of any non-cash dividend per share (including extraordinary dividends) declared by the issuer.

Type: **Boolean**

Used in components: **DividendConditions**

180.2.73 AllocAccount

Sub-account mnemonic

Type: **String**

Used in components: **SettlTradeDetails**

Used in groups: **AllocAckGrp, AllocGrp, PreAllocGrp, PreAllocMlegGrp, TrdAllocGrp**

Used in messages: **Confirmation, ConfirmationRequest, SettlementInstructionRequest**

180.2.74 AllocAccountType

Type of account associated with a confirmation or other trade-level message

Type: **int**

Allowed values in AllocAccountTypeCodeSet:

Code	Name	Description
1	CarriedCustomerSide	Account is carried on customer side of books
2	CarriedNonCustomerSide	Account is carried on non-customer side of books
3	HouseTrader	House trader

Code	Name	Description
4	FloorTrader	Floor trader
6	CarriedNonCustomerSideCross-Margined	Account is carried on non-customer side of books and is cross margined
7	HouseTraderCrossMargined	Account is house trader and is cross margined
8	JointBackOfficeAccount	Joint back office account (JBO)

Used in messages: [Confirmation](#), [ConfirmationRequest](#)

180.2.75 AllocAccruedInterestAmt

Amount of Accrued Interest for convertible bonds and fixed income at the allocation-level.

Type: [Amt](#)

Used in groups: [AllocGrp](#)

180.2.76 AllocAcctIDSource

Used to identify the source of the AllocAccount (79) code.

See AcctIDSource (660) for valid values.

Type: [int](#)

Allowed values in AcctIDSourceCodeSet:

Code	Name	Description
1	BIC	BIC
2	SIDCode	SID Code
3	TFM	TFM (GSPTA)
4	OMGEO	OMGEO (Alert ID)
5	DTCCCode	DTCC Code
6	SPSAID	Special Segregated Account ID. Also referred to as SPSA ID. The Special Segregated Account identifier issued by Hong Kong Exchanges and Clearing.
99	Other	Other (custom or proprietary)

Used in groups: [AllocAckGrp](#), [AllocGrp](#), [PreAllocGrp](#), [PreAllocMlegGrp](#), [TrdAllocGrp](#)

Used in messages: [Confirmation](#), [ConfirmationRequest](#), [SettlementInstructionRequest](#)

180.2.77 AllocAckGrp

This repeating group is optionally used for messages with AllocStatus(87) = 2 (Account level reject), to provide details of the individual accounts that were accepted or rejected. In the case of a reject, the reasons for the rejection should be specified.

Name	Mult.	Type	Description
NoAllocs	[1..1]	NumInGroup	Indicates number of allocation groups to follow.
AllocAccount	[0..1]	String	Required if NoAllocs(78) > 0. Must be first field in repeating group.
AllocAcctIDSource	[0..1]	CodeSet	
AllocPrice	[0..1]	Price	Used when performing "executed price" vs. "average price" allocations (e.g. Japan). AllocAccount(79) plus AllocPrice(366) form a unique Allocs entry. Used in lieu of AllocAvgPx(153).
AllocPositionEffect	[0..1]	CodeSet	
IndividualAllocID	[0..1]	String	
ParentAllocID	[0..1]	String	
FirmMnemonic	[0..1]	String	
ClearedIndicator	[0..1]	CodeSet	Used to communicate the status of central clearing workflow.
AllocLegRefID	[0..1]	String	The field may not be used in any message where there are no legs.
AllocRegulatoryTradeIDGrp	[0..*]	Group	
IndividualAllocRejCode	[0..1]	CodeSet	Required if NoAllocs(78) > 0 and AllocStatus(87) = 2 (Account level reject).
NestedParties	[0..*]	Group	
AllocHandlInst	[0..1]	CodeSet	
AllocText	[0..1]	String	Can be used here to hold text relating to the rejection of this AllocAccount(366)
EncodedAllocTextLen	[0..1]	Length	Must be set if EncodedAllocText(361) field is specified and must immediately precede it.
EncodedAllocText	[0..1]	data	Encoded (non-ASCII characters) representation of the AllocText(161) field in the encoded format specified via the MessageEncoding(347) field.
FirmAllocText	[0..1]	String	

Name	Mult.	Type	Description
EncodedFirmAllocTextLen	[0..1]	Length	Must be set if EncodedFirmAllocText(1734) field is specified and must immediately precede it.
EncodedFirmAllocText	[0..1]	data	Encoded (non-ASCII characters) representation of the FirmAllocText(1732) field in the encoded format specified via the MessageEncoding(347) field.
SecondaryIndividualAllocID	[0..1]	String	
AllocCustomerCapacity	[0..1]	String	
IndividualAllocType	[0..1]	CodeSet	
AllocQty	[0..1]	Qty	
AllocCalculatedCcyQty	[0..1]	Qty	
CustodialLotID	[0..1]	String	Only used for specific lot trades.
VersusPurchaseDate	[0..1]	LocalMktDate	Only used for specific lot trades. If this field is used, either VersusPurchasePrice(1754) or CurrentCostBasis(1755) should be specified.
VersusPurchasePrice	[0..1]	Price	Only used for specific lot trades. If this field is used, VersusPurchaseDate(1753) should be specified.
CurrentCostBasis	[0..1]	Amt	Only used for specific lot trades. If this field is used, VersusPurchaseDate(1753) should be specified
AllocAvgPxGroupID	[0..1]	String	
AllocAvgPxIndicator	[0..1]	CodeSet	

Used in messages: [AllocationInstructionAck](#), [AllocationReportAck](#)

180.2.78 AllocationRollupInstruction

An indicator to override the normal procedure to roll up allocations for the same take-up firm.

Type: [int](#)

Allowed values in AllocationRollupInstructionCodeSet:

Code	Name	Description
0	Rollup	Roll up
1	DoNotRollUp	Do not roll up

Used in groups: [AllocGrp](#), [TrdAllocGrp](#)

180.2.79 AllocAvgPx

AvgPx (6) for a specific AllocAccount (79)

For Fixed Income this is always expressed as "percent of par" price type.

Type: [Price](#)

Used in groups: [AllocGrp](#)

180.2.80 AllocAvgPxGroupID

Used by submitting firm to group trades being sub-allocated into an average price group. The trades in the average price group will be used to calculate an average price for the group.

Type: [String](#)

Used in groups: [AllocAckGrp](#), [AllocGrp](#)

180.2.81 AllocAvgPxIndicator

Average pricing indicator at the allocation level.

Type: [int](#)

Allowed values in AvgPxIndicatorCodeSet:

Code	Name	Description
0	NoAveragePricing	No average pricing
1	Trade	Trade is part of an average price group identified by the AvgPxGroupID(1731)
2	LastTrade	Last trade of the average price group identified by the AvgPxGroupID(1731)
3	NotionalValueAveragePxGroupTrade	Trade is part of a notional value average price group. A notional value average price (NVAP) group is effectively closed and available for allocation as long as the NVAP of the group is non-zero.
4	AveragePricedTrade	Trade is average priced

Used in groups: [AllocAckGrp](#), [AllocGrp](#)

180.2.82 AllocCalculatedCcyQty

Used for the calculated quantity of the other side of the currency trade applicable to the allocation instance.

Type: Qty

Used in groups: AllocAckGrp, AllocGrp, TrdAllocGrp

180.2.83 AllocCancReplaceReason

Reason for cancelling or replacing an Allocation Instruction or Allocation Report message

Type: int

Allowed values in AllocCancReplaceReasonCodeSet:

Code	Name	Description
1	OriginalDetailsIncomplete	Original details incomplete/incorrect
2	ChangeInUnderlyingOrderDetails	Change in underlying order details
3	CancelledByGiveupFirm	Cancelled by give-up firm
99	Other	Other

Used in messages: AllocationInstruction, AllocationInstructionAlert, AllocationReport

180.2.84 AllocClearingFeeIndicator

ClearingFeeIndicator(635) for Allocation, see ClearingFeeIndicator(635) for permitted values.

Type: String

Used in groups: TrdAllocGrp

180.2.85 AllocCommissionAmount

The commission amount.

Type: Amt

Used in groups: AllocCommissionDataGrp

180.2.86 AllocCommissionAmountShared

Commission amount to be shared with a third party, e.g. as part of a directed brokerage commission sharing arrangement. If specified, this amount should not exceed the amount in AllocCommissionAmount(2654).

Type: **Amt**

Used in groups: **AllocCommissionDataGrp**

180.2.87 AllocCommissionAmountSubType

Further sub classification of the AllocCommissionAmountType(2655).

Type: **int**

Allowed values in CommissionAmountSubTypeCodeSet:

Code	Name	Description
0	ResearchPaymentAccount	Research payment account (RPA)
1	CommissionSharingAgreement	Commission sharing agreement (CSA)
2	OtherTypeResearchPayment	Other type of research payment. A type of research payment other than RPA or CSA.

Used in groups: **AllocCommissionDataGrp**

180.2.88 AllocCommissionAmountType

Indicates what type of commission is being expressed in AllocCommissionAmount(2654).

Type: **int**

Allowed values in CommissionAmountTypeCodeSet:

Code	Name	Description
0	Unspecified	Unspecified
1	Acceptance	Acceptance. The bank's charge for issuing a Letter of Credit.
2	Broker	Broker. The executing broker's commission.
3	ClearingBroker	Clearing broker. The clearing broker's commission.
4	Retail	Retail. Commission charged by or related to retail sales.

Code	Name	Description
5	SalesCommission	Sales commission. The commission charged by the sales desk.
6	LocalCommission	Local commission. Commission paid to local broker in a cross-border transaction.
7	ResearchPayment	Research payment

Used in groups: [AllocCommissionDataGrp](#)

180.2.89 AllocCommissionBasis

Specifies the basis or unit used to calculate the commission.

Type: [char](#)

Allowed values in CommTypeCodeSet:

Code	Name	Description
1	PerUnit	Amount per unit. Implying shares, par, currency, physical unit etc. Use CommissionUnitOfMeasure(1238) to clarify for commodities.
2	Percent	Percent
3	Absolute	Absolute. Total monetary amount.
4	PercentageWaivedCashDiscount	Percentage waived, cash discount basis. For use with CIV buy orders.
5	PercentageWaivedEnhancedUnits	Percentage waived, enhanced units basis. For use with CIV buy orders.
6	PointsPerBondOrContract	Points per bond or contract. Specify ContractMultiplier(231) in the Instrument component if the security is denominated in a size other than the market convention, e.g. 1000 par for bonds.
7	BasisPoints	Basis points. The commission is expressed in basis points in reference to the gross price of the reference asset.
8	AmountPerContract	Amount per contract. Specify ContractMultiplier(231) in the Instrument component if the security is denominated in a size other than the market convention.

Used in groups: [AllocCommissionDataGrp](#)

180.2.90 AllocCommissionCurrency

Specifies the currency denomination of the commission amount if different from the trade's currency.

AllocCommissionCurrencyCodeSource(2925) may be used to disambiguate the code source scheme used, and ISO 4217 is the default scheme if absent.

Type: **Currency**

Used in groups: **AllocCommissionDataGrp**

180.2.91 AllocCommissionCurrencyCodeSource

Identifies class or source of the AllocCommissionCurrency(2657) value.

Type: **String**

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in groups: **AllocCommissionDataGrp**

180.2.92 AllocCommissionDataGrp

The AllocCommissionDataGrp component block is used to carry commission information such as the type of commission and the rate at the allocation level. It provides a means to express commission applicable for the specified allocation account.

Name	Mult.	Type	Description
NoAllocCommissions	[1..1]	NumInGroup	

Name	Mult.	Type	Description
AllocCommissionAmount	[0..1]	Amt	Required if NoAllocCommissions(2653) > 0. If the commission is based on a percentage of trade quantity or a factor of "unit of measure", AllocCommissionRate(2660) and AllocCommissionUnitOfMeasure(2658) may also be specified as appropriate.
AllocCommissionAmountType	[0..1]	CodeSet	Required if NoAllocCommissions(2653) > 0.
AllocCommissionAmountSubType	[0..1]	CodeSet	
AllocCommissionBasis	[0..1]	CodeSet	Required if NoAllocCommissions(2653) > 0.
AllocCommissionCurrency	[0..1]	Currency	
AllocCommissionCurrencyCodeSource	[0..1]	CodeSet	
AllocCommissionUnitOfMeasure	[0..1]	CodeSet	
AllocCommissionUnitOfMeasureCurrency	[0..1]	Currency	
AllocCommissionUnitOfMeasureCurrencyCodeSource	[0..1]	CodeSet	
AllocCommissionRate	[0..1]	float	
AllocCommissionSharedIndicator	[0..1]	Boolean	
AllocCommissionAmountShared	[0..1]	Amt	If specified, AllocCommissionSharedIndicator(2661) must be set to "Y".
AllocCommissionLegRefID	[0..1]	String	This field may be used for multi-leg trades sent as a single message to indicate that the entry applies only to a specific leg.
AllocCommissionDesc	[0..1]	String	
EncodedAllocCommissionDescLen	[0..1]	Length	Must be set if EncodedAllocCommissionDesc(2666) is specified and must immediately precede it.
EncodedAllocCommissionDesc	[0..1]	data	Encoded (non-ASCII characters) representation of the AllocCommissionDesc(2664) field in the encoded format specified via the MessageEncoding(347) field.

Used in groups: [AllocGrp](#), [TrdAllocGrp](#)

180.2.93 AllocCommissionDesc

Description of the commission.

Type: **String**

Used in groups: **AllocCommissionDataGrp**

180.2.94 AllocCommissionLegRefID

Identifies the leg of the trade the entry applies to by referencing the leg's LegID(1788).

Type: **String**

Used in groups: **AllocCommissionDataGrp**

180.2.95 AllocCommissionRate

The commission rate when AllocCommissionAmount(2654) is based on a percentage of quantity, amount per unit or a factor of "unit of measure". If the rate is a percentage or expressed in basis points, use the decimalized form, e.g. "0.05" for a 5% commission or "0.005" for 50 basis points.

Type: **float**

Used in groups: **AllocCommissionDataGrp**

180.2.96 AllocCommissionSharedIndicator

Indicates whether the amount in AllocCommissionAmount(2654) is to be shared with a third party, e.g. as part of a directed brokerage commission sharing arrangement.

Type: **Boolean**

Used in groups: **AllocCommissionDataGrp**

180.2.97 AllocCommissionUnitOfMeasure

The commission rate unit of measure.

Type: **String**

Allowed values in UnitOfMeasureCodeSet:

Code	Name	Description
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet

Code	Name	Description
Bbl	Barrels	Barrels. Equal to 42 US gallons
CBM	CubicMeters	Cubic Meters
BDFT	BoardFeet	Board feet. Equal to 144 cubic inches
GJ	Gigajoules	gigajoules
Bu	Bushels	Bushels
kHR	HeatRate	Heat rate. The number of BTUs required to produce one kilowatt hour of electricity, typically 3,412.14 BTUs per 1 kWh.
Ccy	Currency	Amount of currency
kWh	KilowattHours	Kilowatt hours
CDD	CoolingDegreeDay	Cooling degree day
MHR	MegaHeatRate	Mega heat rate. The number of million BTUs required to produce one megawatt hour of electricity, typically 3.41214 million BTUs per 1 MWh.
CER	CertifiedEmissionsReduction	Certified emissions reduction
MMBtu	OneMillionBTU	One Million BTU
CPD	CriticalPrecipDay	Critical precipitation day
MWh	MegawattHours	Megawatt hours
CRT	ClimateReserveTonnes	Climate reserve tonnes
thm	Therms	therms. Equal to 100,000 BTU
cwt	Hundredweight	Hundredweight(US). Equal to 100 lbs
tnCO2	TonsOfCarbonDioxide	Tons of carbon dioxide
day	Day	Days
dt	DryMetricTons	Dry metric tons
EnvAllwnc	EnvAllwncCert	Environmental allowance certificates
EnvCrd	EnvironmentalCredit	Environmental credit
EnvOfst	EnvironmentalOffset	Environmental Offset
g	Grams	Grams
Gal	Gallons	Gallons
GT	GrossTons	Gross tons. Also known as long tons or imperial tons, equal to 2240 lbs
HDD	HeatingDegreeDay	Heating degree day
IPNT	IndexPoint	Index point
kg	Kilograms	Kilograms
kL	Kiloliters	kiloliters
kW-a	KilowattYear	Kilowatt year (electrical capacity)

Code	Name	Description
kW-d	KilowattDay	Kilowatt day (electrical capacity)
kW-h	KilowattHour	Kilowatt hour (electrical capacity)
kW-M	KilowattMonth	Kilowatt month (electrical capacity)
kW-min	KilowattMinute	Kilowatt-Minute (electrical capacity)
L	Liters	liters
lbs	Pounds	pounds
MW-a	MegawattYear	Megawatt year (electrical capacity)
MW-d	MegawattDay	Megawatt day (electrical capacity)
MW-h	MegawattHour	Megawatt hour (electrical capacity)
MW-M	MegawattMonth	Megawatt month (electrical capacity)
MW-min	MegawattMinute	Megawatt minute (electrical capacity)
oz_tr	TroyOunces	Troy ounces
PRINC	PrincipalWithRelationToDebtInstrument	Principal with relation to debt instrument
t	MetricTons	Metric tons. Also known as Tonnes, equal to 1000 kg
tn	Tons	Tons (US). Equal to 2000 lbs
a	Are	Are
ac	Acre	Acre
cL	Centiliter	Centiliter
cM	Centimeter	Centimeter
DGE	DieselGallonEquivalent	Diesel gallon equivalent
ft	Foot	Foot
Gal_gb	GBGallon	GB Gallon
GGE	GasolineGallonEquivalent	Gasonline gallon equivalent
ha	Hectare	Hectare
in	Inch	Inch
kM	Kilometer	Kilometer
M	Meter	Meter
mi	Mile	Mile
mL	Milliliter	Milliliter
mM	Millimeter	Millimeter
oz	USOunce	US ounce
pc	Piece	Piece
pt	USPint	US Pint

Code	Name	Description
pt_gb	GBPint	GB pint
qt	USQuart	US Quart
qt_gb	GBQuart	GB Quart
Sqcm	SquareCentimeter	Square centimeter
Sqft	SquareFoot	Square foot
Sqin	SquareInch	Square inch
Sqkm	SquareKilometer	Square kilometer
Sqm	SquareMeter	Square meter
Sqmi	SquareMile	Square mile
Sqmm	SquareMillimeter	Square millimeter
Sqyd	SquareYard	Square yard
yd	Yard	Yard
MMbbl	MillionBarrels	Million Barrels
USD	USDollars	US Dollars

Used in groups: [AllocCommissionDataGrp](#)

180.2.98 AllocCommissionUnitOfMeasureCurrency

Indicates the currency of the unit of measure. Conditionally required when AllocCommissionUnitOfMeasure(2658) = Ccy (Currency).

Type: [Currency](#)

Used in groups: [AllocCommissionDataGrp](#)

180.2.99 AllocCommissionUnitOfMeasureCurrencyCodeSource

Identifies class or source of the AllocCommissionUnitOfMeasureCurrency(2659) value.

Type: [String](#)

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP

Code	Name	Description
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in groups: [AllocCommissionDataGrp](#)

180.2.100 AllocCustomerCapacity

Capacity of customer in the allocation block.

Type: [String](#)

Used in groups: [AllocAckGrp](#), [AllocGrp](#), [TrdAllocGrp](#)

180.2.101 AllocGrossTradeAmt

Total amount traded for this account (i.e. quantity * price) expressed in units of currency.

Type: [Amt](#)

Used in groups: [AllocGrp](#)

180.2.102 AllocGroupAmount

Indicates the notional units or amount being allocated.

Type: [Amt](#)

Used in groups: [AllocGrp](#)

180.2.103 AllocGroupID

Intended to be used by a central counterparty to assign an identifier to allocations of trades for the same instrument traded at the same price.

Type: **String**

Used in groups: **TrdCapRptAckSideGrp**, **TrdCapRptSideGrp**

Used in messages: **AllocationInstruction**, **AllocationInstructionAck**, **AllocationInstructionAlert**, **AllocationInstructionAlertRequest**, **AllocationReport**, **AllocationReportAck**

180.2.104 AllocGroupQuantity

Indicates the total quantity of an allocation group. Includes any allocated quantity.

Type: **Qty**

Used in messages: **AllocationInstructionAlert**, **AllocationReport**

180.2.105 AllocGroupRemainingQuantity

Indicates the remaining quantity of an allocation group that has not yet been allocated.

Type: **Qty**

Used in messages: **AllocationInstructionAlert**, **AllocationReport**

180.2.106 AllocGroupRemainingSubQty

Remaining quantity in the subgroup of an allocation group.

Type: **Qty**

Used in groups: **AllocGroupSubQtyGrp**

180.2.107 AllocGroupStatus

Status of the trade give-up relative to the group identified in AllocGroupID(1730).

Type: **int**

Allowed values in AllocGroupStatusCodeSet:

Code	Name	Description
0	Added	Added. This trade has been associated with the group for the first time.
1	Canceled	Canceled. This trade has been removed from the group.

Code	Name	Description
2	Replaced	Replaced. This trade already in the group has been updated.
3	Changed	Changed. An allocated trade or give-up has moved from one allocation group to another.
4	Pending	Pending. A request to assign or change an allocation group is pending.

Used in groups: [TrdCapRptAckSideGrp](#), [TrdCapRptSideGrp](#)

Used in messages: [AllocationReport](#)

180.2.108 AllocGroupSubQty

Total quantity in the subgroup of an allocation group.

Type: [Qty](#)

Used in groups: [AllocGroupSubQtyGrp](#)

180.2.109 AllocGroupSubQtyAttributeGrp

This repeating group is used to identify attributes of trades in subgroups of an average pricing group.

Name	Mult.	Type	Description
NoAllocGroupSubQtyAttributes	[1..1]	NumInGroup	
AllocGroupSubQtyType	[0..1]	CodeSet	Required if NoAllocGroupSubQtyAttributes (2979) > 0.
AllocGroupSubQtyValue	[0..1]	String	Required if NoAllocGroupSubQtyAttributes (2979) > 0.

Used in groups: [AllocGroupSubQtyGrp](#)

180.2.110 AllocGroupSubQtyGrp

This repeating group is used to identify subgroups of an average pricing group. The total and remaining quantities of the average pricing group are split into sub-quantities based on trade attributes.

Name	Mult.	Type	Description
NoAllocGroupSubQtys	[1..1]	NumInGroup	
AllocGroupSubQty	[0..1]	Qty	Required if NoAllocGroupSubQtys(2975) > 0.
AllocGroupSubQtyOffset	[0..1]	Qty	
AllocGroupRemainingSubQty	[0..1]	Qty	
AllocGroupSubQtyID	[0..1]	String	Conditionally required if AllocGroupSubQtyAttributeGrp is not present.
AllocGroupSubQtyAttributeGrp	[0..*]	Group	Conditionally required if AllocGroupSubQtyID(2974) is not present.

Used in messages: **AllocationInstructionAlert**

180.2.111 AllocGroupSubQtyID

Identifier for quantity subgroup assigned by the clearinghouse.

Type: **String**

Used in groups: **AllocGroupSubQtyGrp**

Used in messages: **AllocationInstruction**

180.2.112 AllocGroupSubQtyOffset

Change in quantity in the subgroup of an allocation group.

Type: **Qty**

Used in groups: **AllocGroupSubQtyGrp**

180.2.113 AllocGroupSubQtyType

Type of trade attribute defining a subgroup in an allocation group.

Type: **int**

Allowed values in AllocGroupSubQtyTypeCodeSet:

Code	Name	Description
1	TradeType	Trade type
2	TradePublicationIndicator	Trade publication indicator
3	OrderHandlingInstruction	Order handling instruction

Used in groups: [AllocGroupSubQtyAttributeGrp](#)

180.2.114 AllocGroupSubQtyValue

Value of the trade attribute defining a subgroup in an allocation group.

Type: [String](#)

Used in groups: [AllocGroupSubQtyAttributeGrp](#)

180.2.115 AllocGrp

The AllocGrp component conveys the details of each account when a trade (or block trade) is allocated into one or more accounts.

Name	Mult.	Type	Description
NoAllocs	[1..1]	NumInGroup	
AllocAccount	[0..1]	String	Required if NoAllocs(78) > 0. May specify the broker of credit if ProcessCode(81) is step-out or soft-dollar step-out and Institution does not wish to disclose individual account breakdowns to the executing broker.
AllocAcctIDSource	[0..1]	CodeSet	
MatchStatus	[0..1]	CodeSet	
AllocPrice	[0..1]	Price	Used when performing "executed price" vs. "average price" allocations (e.g. Japan). AllocAccount(79) plus AllocPrice(366) form a unique Allocs entry. Used in lieu of AllocAvgPx(153).
AllocQty	[0..1]	Qty	Conditionally required except when for AllocTransType="Cancel", or when AllocType="Ready-To-Book" or "Warehouse instruction".
AllocCalculatedCcyQty	[0..1]	Qty	

Name	Mult.	Type	Description
CustodialLotID	[0..1]	String	Only used for specific lot trades.
VersusPurchaseDate	[0..1]	LocalMktDate	Only used for specific lot trades. If this field is used, either VersusPurchasePrice(1754) or CurrentCostBasis(1755) should be specified.
VersusPurchasePrice	[0..1]	Price	Only used for specific lot trades. If this field is used, VersusPurchaseDate(1753) should be specified.
CurrentCostBasis	[0..1]	Amt	Only used for specific lot trades. If this field is used, VersusPurchaseDate(1753) should be specified
IndividualAllocID	[0..1]	String	
IndividualAllocSubQtyAttributeGrp	[0..*]	Group	
FirmMnemonic	[0..1]	String	Allocation identifier assigned by the Firm submitting the allocation for an individual allocation instruction (as opposed to the overall message level identifier).
ParentAllocID	[0..1]	String	
AllocLegRefID	[0..1]	String	The field may not be used in any message where there are no legs.
AllocRegulatoryTradeIDGrp	[0..*]	Group	
AllocTrdRegTimestamps	[0..*]	Group	
ProcessCode	[0..1]	CodeSet	
SecondaryIndividualAllocID	[0..1]	String	Can be used by an intermediary to specify an allocation ID assigned by the intermediary's system.
AllocMethod	[0..1]	CodeSet	Specifies the method under which a trade quantity was allocated.
AllocationRollupInstruction	[0..1]	CodeSet	An indicator to override the normal procedure to roll up allocations for the same Carry Firm.
AllocCustomerCapacity	[0..1]	String	Can be used for granular reporting of separate allocation detail within a single trade report or allocation message.
AllocPositionEffect	[0..1]	CodeSet	
IndividualAllocType	[0..1]	CodeSet	

Name	Mult.	Type	Description
NestedParties	[0..*]	Group	Insert here the set of "Nested Parties" (firm identification "nested" within additional repeating group) fields defined in "Common Components of Application Messages". Used for NestedPartyRole=BrokerOfCredit, ClientID, Settlement location (PSET), etc. Note: this field can be used for settlement location (PSET) information.
NotifyBrokerOfCredit	[0..1]	CodeSet	
AllocHandlInst	[0..1]	CodeSet	
AllocText	[0..1]	String	Free format text field related to this AllocAccount
EncodedAllocTextLen	[0..1]	Length	Must be set if EncodedAllocText field is specified and must immediately precede it.
EncodedAllocText	[0..1]	data	Encoded (non-ASCII characters) representation of the AllocText field in the encoded format specified via the MessageEncoding field.
FirmAllocText	[0..1]	String	
EncodedFirmAllocTextLen	[0..1]	Length	
EncodedFirmAllocText	[0..1]	data	
CommissionData	[0..1]	Component	
AllocCommissionDataGrp	[0..*]	Group	Use as an alternative to CommissionData component if multiple commissions or enhanced attributes are needed.
AllocAvgPx	[0..1]	Price	AvgPx for this AllocAccount. For F/X orders, should be the "all-in" rate (spot rate adjusted for forward points) for this allocation, expressed in terms of Currency(15). For Fixed Income always express value as "percent of par".
AllocNetMoney	[0..1]	Amt	NetMoney for this AllocAccount. ((AllocQty * AllocAvgPx) - Commission - sum of MiscFeeAmt + AccruedInterestAmt) if a Sell. ((AllocQty * AllocAvgPx) + Commission + sum of MiscFeeAmt + AccruedInterestAmt) if a Buy. For FX, if specified, expressed in terms of Currency(15).
SettlCurrAmt	[0..1]	Amt	Replaced by AllocSettlCurrAmt
AllocGrossTradeAmt	[0..1]	Amt	
AllocSettlCurrAmt	[0..1]	Amt	AllocNetMoney in AllocSettlCurrency for this AllocAccount if AllocSettlCurrency is different from "overall" Currency

Name	Mult.	Type	Description
SettlCurrency	[0..1]	Currency	Replaced by AllocSettlCurrency. SettlCurrency for this AllocAccount if different from "overall" Currency. Required if SettlCurrAmt is specified.
AllocSettlCurrency	[0..1]	Currency	AllocSettlCurrency for this AllocAccount if different from "overall" Currency. Required if AllocSettlCurrAmt is specified. Required for NDFs.
AllocSettlCurrencyCodeSource	[0..1]	CodeSet	
SettlCurrFxRate	[0..1]	float	Foreign exchange rate used to compute AllocSettlCurrAmt from Currency to AllocSettlCurrency
SettlCurrFxRateCalc	[0..1]	CodeSet	Specifies whether the SettlCurrFxRate should be multiplied or divided
AllocAccruedInterestAmt	[0..1]	Amt	Applicable for Convertible Bonds and fixed income
AllocInterestAtMaturity	[0..1]	Amt	Applicable for securities that pay interest in lump-sum at maturity
MiscFeesGrp	[0..*]	Group	
ClrInstGrp	[0..*]	Group	
ClearingFeeIndicator	[0..1]	CodeSet	
AllocSettlInstType	[0..1]	CodeSet	Used to indicate whether settlement instructions are provided on this message, and if not, how they are to be derived. Absence of this field implies use of default instructions.
SettlInstructionsData	[0..1]	Component	Insert here the set of "SettlInstructionsData" fields defined in "Common Components of Application Messages". Used to communicate settlement instructions for this AllocAccount detail. Required if AllocSettlInstType = 2 or 3.
AllocRefRiskLimitCheckID	[0..1]	String	Conditionally required when AllocRefRiskLimitCheckIDType(2393) is specified.
AllocRefRiskLimitCheckIDType	[0..1]	CodeSet	Conditionally required when AllocRefRiskLimitCheckID(2392) is specified.
AllocRiskLimitCheckStatus	[0..1]	CodeSet	
AllocGroupAmount	[0..1]	Amt	
AllocAvgPxGroupID	[0..1]	String	
AllocAvgPxIndicator	[0..1]	CodeSet	
TradeAllocAmtGrp	[0..*]	Group	

Used in messages: **AllocationInstruction**, **AllocationInstructionAlert**, **AllocationReport**

180.2.116 AllocHandlInst

Indicates how the receiver (i.e. third party) of allocation information should handle/process the account details.

Type: **int**

Allowed values in AllocHandlInstCodeSet:

Code	Name	Description
1	Match	Match
2	Forward	Forward
3	ForwardAndMatch	Forward and Match
4	AutoClaimGiveUp	Auto claim give-up. Indicates that the give-up and take-up party are the same and that trade give-up is to be claimed automatically.

Used in groups: **AllocAckGrp**, **AllocGrp**, **PreAllocGrp**, **TrdAllocGrp**

180.2.117 AllocID

Unique identifier for allocation message.

(Prior to FIX 4.1 this field was of type int)

Type: **String**

Used in components: **SettlTradeDetails**

Used in groups: **ListOrdGrp**, **SideCrossOrdModGrp**, **TrdCapRptAckSideGrp**, **TrdCapRptSideGrp**, **TrdMatchSideGrp**

Used in messages: **AllocationInstruction**, **AllocationInstructionAck**, **AllocationInstructionAlert**, **AllocationReport**, **AllocationReportAck**, **Confirmation**, **ConfirmationRequest**, **ExecutionReport**, **MultilegOrderCancelReplace**, **NewOrderMultileg**, **NewOrderSingle**, **OrderCancelReplaceRequest**

180.2.118 AllocInterestAtMaturity

Amount of interest (i.e. lump-sum) at maturity at the account-level.

Type: **Amt**

Used in groups: **AllocGrp**

180.2.119 AllocIntermedReqType

Response to allocation to be communicated to a counterparty through an intermediary, i.e. clearing house. Used in conjunction with AllocType = "Request to Intermediary" and AllocReportType = "Request to Intermediary"

Type: **int**

Allowed values in AllocIntermedReqTypeCodeSet:

Code	Name	Description
1	PendingAccept	Pending Accept
2	PendingRelease	Pending Release
3	PendingReversal	Pending Reversal
4	Accept	Accept
5	BlockLevelReject	Block Level Reject
6	AccountLevelReject	Account Level Reject

Used in messages: **AllocationInstruction**, **AllocationInstructionAck**, **AllocationInstructionAlert**, **AllocationReport**, **AllocationReportAck**

180.2.120 AllocLegRefID

Unique identifier for a specific leg (uniqueness not defined as part of the FIX specification). AllocLegRefID(2727) references the value from LegID(1788) in the current multileg order or trade message specifying to which leg the allocation instance applies.

Type: **String**

Used in groups: **AllocAckGrp**, **AllocGrp**, **PreAllocGrp**, **PreAllocMlegGrp**, **TrdAllocGrp**

180.2.121 AllocLinkID

Can be used to link two different Allocation messages (each with unique AllocID (70)) together, i.e. for F/X "Netting" or "Swaps". Should be unique.

Type: **String**

Used in messages: **AllocationInstruction**, **AllocationInstructionAlert**, **AllocationReport**

180.2.122 AllocLinkType

Identifies the type of Allocation linkage when AllocLinkID(196) is used.

Type: **int**

Allowed values in AllocLinkTypeCodeSet:

Code	Name	Description
0	FXNetting	FX Netting
1	FXSwap	FX Swap

Used in messages: **AllocationInstruction**, **AllocationInstructionAlert**, **AllocationReport**

180.2.123 AllocMethod

Specifies the method under which a trade quantity was allocated.

Type: **int**

Allowed values in AllocMethodCodeSet:

Code	Name	Description
1	Automatic	Automatic
2	Guarantor	Guarantor
3	Manual	Manual
4	BrokerAssigned	Broker assigned

Used in groups: **AllocGrp**, **TrdAllocGrp**

180.2.124 AllocNetMoney

NetMoney(118) for a specific AllocAccount(79).

Type: **Amt**

Used in groups: **AllocGrp**

180.2.125 AllocNoOrdersType

Indicates how the orders being booked and allocated by an AllocationInstruction or AllocationReport message are identified, e.g. by explicit definition in the OrdAllocGrp or ExecAllocGrp components, or not identified explicitly.

Type: **int**

Allowed values in AllocNoOrdersTypeCodeSet:

Code	Name	Description
0	NotSpecified	Not specified
1	ExplicitListProvided	Explicit list provided

Used in messages: **AllocationInstruction**, **AllocationInstructionAlert**, **AllocationReport**

180.2.126 AllocPositionEffect

Indicates whether the resulting position after a trade should be an opening position or closing position. Used for omnibus accounting - where accounts are held on a gross basis instead of being netted together.

Type: **char**

Allowed values in AllocPositionEffectCodeSet:

Code	Name	Description
O	Open	Open
C	Close	Close
R	Rolled	Rolled
F	FIFO	FIFO

Used in groups: **AllocAckGrp**, **AllocGrp**

180.2.127 AllocPrice

Executed price for an AllocAccount (79) entry used when using "executed price" vs. "average price" allocations (e.g. Japan).

Type: **Price**

Used in groups: **AllocAckGrp**, **AllocGrp**

180.2.128 AllocQty

Quantity to be allocated to specific sub-account

(Prior to FIX 4.2 this field was of type int)

Type: **Qty**

Used in components: **SettlTradeDetails**

Used in groups: **AllocAckGrp**, **AllocGrp**, **PreAllocGrp**, **PreAllocMlegGrp**, **TrdAllocGrp**

Used in messages: **Confirmation**

180.2.129 AllocRefRiskLimitCheckID

The reference identifier to the PartyRiskLimitCheckRequest(35=DF), or a similar out of band message, message that contained the approval or rejection for risk/credit limit check for this allocation.

Type: **String**

Used in groups: **AllocGrp**, **TrdAllocGrp**

180.2.130 AllocRefRiskLimitCheckIDType

Specifies which type of identifier is specified in AllocRefRiskLimitCheckID(2392) field.

Type: **int**

Allowed values in RefRiskLimitCheckIDTypeCodeSet:

Code	Name	Description
0	RiskLimitRequestID	RiskLimitRequestID(1666)
1	RiskLimitCheckID	RiskLimitCheckID(2319)
3	OutOfBandID	Out of band identifier

Used in groups: **AllocGrp**, **TrdAllocGrp**

180.2.131 AllocRegulatoryLegRefID

Identifies the leg of the trade the entry applies to by referencing the leg's LegID(1788).

Type: **String**

Used in groups: **AllocRegulatoryTradeIDGrp**

180.2.132 AllocRegulatoryTradeID

Trade identifier required by government regulators or other regulatory organizations for regulatory reporting purposes. For example, unique swap identifier (USI) as required by the U.S. Commodity Futures Trading Commission.

Type: **String**

Used in groups: **AllocRegulatoryTradeIDGrp**

180.2.133 AllocRegulatoryTradeIDEvent

Identifies the event which caused the origination of the identifier in AllocRegulatoryTradeID(1909). When more than one event is the cause, use the higher enumeration value. For example, if the identifier is originated due to an allocated trade which was cleared and reported, use the enumeration value 2(Clearing).

Type: **int**

Allowed values in RegulatoryTradeIDEventCodeSet:

Code	Name	Description
0	InitialBlockTrade	Initial block trade.
1	Allocation	Allocation. Determination that the block trade will not be further allocated.
2	Clearing	Clearing
3	Compression	Compression
4	Novation	Novation
5	Termination	Termination
6	PostTrdVal	Post-trade valuation

Used in groups: **AllocRegulatoryTradeIDGrp**

180.2.134 AllocRegulatoryTradeIDGrp

The AllocRegulatoryTradeIDGrp is a repeating component within the TrdAllocGrp component used to report the source, value and relationship of multiple trade identifiers for the same trade allocation instance.

This component can be used to meet regulatory trade reporting requirements where identifiers such as the Unique Swaps Identifier (USI) are required to be reported, showing the chaining of these identifiers as needed.

Name	Mult.	Type	Description
NoAllocRegulatoryTradeIDs	[1..1]	NumInGroup	
AllocRegulatoryTradeID	[0..1]	String	Required if NoAllocRegulatoryTradeIDs(1908) > 0.
AllocRegulatoryTradeIDSource	[0..1]	CodeSet	
AllocRegulatoryTradeIDEvent	[0..1]	CodeSet	
AllocRegulatoryTradeIDType	[0..1]	CodeSet	
AllocRegulatoryLegRefID	[0..1]	String	This field may be used for multi-leg trades sent as a single message to indicate that the entry applies only to a specific leg.
AllocRegulatoryTradeIDScope	[0..1]	CodeSet	

Used in groups: [AllocAckGrp](#), [AllocGrp](#), [TrdAllocGrp](#)

180.2.135 AllocRegulatoryTradeIDScope

Specifies the scope to which the AllocRegulatoryTradeID(1909) applies. Used when a trade must be assigned more than one identifier, e.g. one for the clearing member and another for the client on a cleared trade as with the principal model in Europe.

Type: [int](#)

Allowed values in RegulatoryTradeIDScopeCodeSet:

Code	Name	Description
1	ClearingMember	Clearing member
2	Client	Client

Used in groups: [AllocRegulatoryTradeIDGrp](#)

180.2.136 AllocRegulatoryTradeIDSource

Identifies the reporting entity that originated the value in RegulatoryTradeID(1903). The reporting entity identifier may be assigned by a regulator or from a supported standard identifier source scheme.

Type: **String**

Allowed values in RegulatoryTradeIDSourceCodeSet:

Code	Name	Description
1	UniqueTransactionIdentifier	Unique Transaction Identifier (ISO 23897)

Used in groups: **AllocRegulatoryTradeIDGrp**

180.2.137 AllocRegulatoryTradeIDType

Specifies the type of trade identifier provided in AllocRegulatoryTradeID(1909), within the context of the hierarchy of trade events.

Type: **int**

Allowed values in RegulatoryTradeIDTypeCodeSet:

Code	Name	Description
0	Current	Current. The default if not specified.
1	Previous	Previous. The previous trade's identifier when reporting a cleared trade or novation of a previous trade.
2	Block	Block. The block trade's identifier when reporting an allocated subtrade.
3	Related	Related. The related trade identifier when reporting a mixed swap.
4	ClearedBlockTrade	Cleared block trade. Assigned by the CCP to a bunched order/trade when it needs to be cleared with the standby clearing firm prior to post-trade allocation.

Code	Name	Description
5	TradingVenueTransactionIdentifier	Trading venue transaction identifier. Assigned by the trading venue to a transaction. In the context of ESMA RTS 22 and RTS 24, this is a unique transaction identification "number generated by trading venues and disseminated to both the buying and selling parties in accordance with Article 12 of [RTS 24 on the maintenance of relevant data relating to orders in financial instruments under Article 25 of Regulation 600/2014 EU]." (quoted text from RTS 22). "Uniqueness" may be defined per relevant regulations.
6	ReportTrackingNumber	Report tracking number. In the context of EMIR Refit this is a "unique code assigned to the execution of an order and common for a group of reports related to the same execution" (see Q28 in https://www.esma.europa.eu/sites/default/files/library/esma74-362-2281_final_report_guidelines_emir_refit.pdf). Also referred to as the RTN.

Used in groups: **AllocRegulatoryTradeIDGrp**

180.2.138 AllocRejCode

Identifies reason for rejection.

Type: **int**

Allowed values in AllocRejCodeCodeSet:

Code	Name	Description
0	UnknownAccount	Unknown or missing account(s)
1	IncorrectQuantity	Incorrect or missing block quantity
2	IncorrectAveragePrice	Incorrect or missing average price
3	UnknownExecutingBrokerMnemonic	Unknown executing broker mnemonic
4	CommissionDifference	Incorrect or missing commission
5	UnknownOrderID	Unknown OrderID(37)
6	UnknownListID	Unknown ListID(66)
7	OtherSeeText	Other (further in Text (58))
8	IncorrectAllocatedQuantity	Incorrect or missing allocated quantity
9	CalculationDifference	Calculation difference

Code	Name	Description
10	UnknownOrStaleExecID	Unknown or Stale ExecID(17)
11	MismatchedData	Mismatched data
12	UnknownCLOrdID	Unknown CLOrdID(11)
13	WarehouseRequestRejected	Warehouse request rejected
14	DuplicateOrMissingIndividualAllocID	Duplicate or missing IndividualAllocID(467)
15	TradeNotRecognized	Trade not recognized
16	DuplicateTrade	Trade previously allocated
17	IncorrectOrMissingInstrument	Incorrect or missing instrument
18	IncorrectOrMissingSettlDate	Incorrect or missing settlement date
19	IncorrectOrMissingFundIDOrFund- Name	Incorrect or missing fund ID or fund name
20	IncorrectOrMissingSettlInstructions	Incorrect or missing settlement instructions
21	IncorrectOrMissingFees	Incorrect or missing fees
22	IncorrectOrMissingTax	Incorrect or missing tax
23	UnknownOrMissingParty	Unknown or missing party
24	IncorrectOrMissingSide	Incorrect or missing side
25	IncorrectOrMissingNetMoney	Incorrect or missing net-money
26	IncorrectOrMissingTradeDate	Incorrect or missing trade date
27	IncorrectOrMissingSettlCcyInstruc- tions	Incorrect or missing settlement currency instructions
28	IncorrectOrMissingProcessCode	Incorrect or missing ProcessCode(81)
99	Other	Other. Use RejectText(1328) for further reject reasons.

Used in messages: [AllocationInstructionAck](#), [AllocationReport](#), [AllocationReportAck](#)

180.2.139 AllocReportID

Unique identifier for Allocation Report message.

Type: [String](#)

Used in messages: [AllocationReport](#), [AllocationReportAck](#)

180.2.140 AllocReportRefID

Reference identifier to be used with AllocTransType (7) = Replace or Cancel

Type: **String**

Used in messages: **AllocationReport**

180.2.141 AllocReportType

Describes the specific type or purpose of an Allocation Report message

Type: **int**

Allowed values in AllocReportTypeCodeSet:

Code	Name	Description
2	PreliminaryRequestToIntermediary	Preliminary request to intermediary
3	SellsideCalculatedUsingPreliminary	Sellside calculated using preliminary (includes MiscFees and NetMoney)
4	SellsideCalculatedWithoutPreliminary	Sellside calculated without preliminary (sent unsolicited by sellside, includes MiscFees and NetMoney)
5	WarehouseRecap	Warehouse recap
8	RequestToIntermediary	Request to intermediary
9	Accept	Accept
10	Reject	Reject
11	AcceptPending	Accept Pending
12	Complete	Complete
14	ReversePending	Reverse Pending
15	Giveup	Give-up
16	Takeup	Take-up
17	Reversal	Reversal
18	Alleged	Alleged reversal
19	SubAllocationGiveup	Sub-allocation give-up

Used in messages: **AllocationReport**, **AllocationReportAck**

180.2.142 AllocRequestID

Unique identifier for the request message.

Type: **String**

Used in messages: [AllocationInstruction](#), [AllocationInstructionAck](#), [AllocationInstructionAlert](#), [AllocationInstructionAlertRequest](#), [AllocationInstructionAlertRequestAck](#), [AllocationReport](#), [AllocationReportAck](#)

180.2.143 AllocRequestStatus

Status of the [AllocationInstructionAlertRequest](#)(35=DU).

Type: [int](#)

Allowed values in [AllocRequestStatusCodeSet](#):

Code	Name	Description
0	Accepted	Accepted
1	Rejected	Rejected

Used in messages: [AllocationInstructionAlertRequestAck](#)

180.2.144 AllocReversalStatus

Identifies the status of a reversal transaction.

Type: [int](#)

Allowed values in [AllocReversalStatusCodeSet](#):

Code	Name	Description
0	Completed	Completed
1	Refused	Refused
2	Cancelled	Cancelled

Used in messages: [AllocationReport](#)

180.2.145 AllocRiskLimitCheckStatus

Indicates the status of the risk limit check performed on a trade for this allocation instance.

Type: [int](#)

Allowed values in RiskLimitCheckStatusCodeSet:

Code	Name	Description
0	Accepted	Accepted. For use when none of the more specific status enumerations apply.
1	Rejected	Rejected. For use when none of the more specific status enumerations apply.
2	ClaimRequired	Claim required. Indicates that the clearing firm is required to accept or decline the trade.
3	PreDefinedLimitCheckSucceeded	Pre-defined limit check succeeded. Indicates a check enforced automatically by the clearing house.
4	PreDefinedLimitCheckFailed	Pre-defined limit check failed. Indicates a check enforced automatically by the clearing house.
5	PreDefinedAutoAcceptRuleInvoked	Pre-defined auto-accept rule invoked. Indicates that the clearing firm is required to accept or decline the trade because no limit or rule applies.
6	PreDefinedAutoRejectRuleInvoked	Pre-defined auto-reject rule invoked. Indicates a check enforced automatically by the clearing house. Note that clearing house rules of engagement may still require a clearing firm accept or reject the trade.
7	AcceptedByClearingFirm	Accepted by clearing firm. Indicates that explicit action by the clearing firm, and not an automatic check by the clearing house, was the basis for accepting the trade.
8	RejectedByClearingFirm	Rejected by clearing firm. Indicates that explicit action by the clearing firm, and not an automatic check by the clearing house, was the basis for rejecting the trade.
9	Pending	Pending. Indicates that one or more side level risk checks are in progress.
10	AcceptedByCreditHub	Accepted by credit hub. Indicates that a credit hub accepted the trade. An identifier assigned by the credit hub may appear in the appropriate RefRiskLimitCheckID(2334) field.
11	RejectedByCreditHub	Rejected by credit hub. Indicates that a credit hub rejected the trade.
12	PendingCreditHubCheck	Pending credit hub check. Indicates that a check is pending at a credit hub.
13	AcceptedByExecVenue	Accepted by execution venue. Indicates acceptance by an execution venue, such as a SEF.
14	RejectedByExecVenue	Rejected by execution venue. Indicates that the trade was rejected by an execution venue, such as a SEF.

Used in groups: **AllocGrp**

180.2.146 AllocSettlCurrAmt

Total amount due expressed in settlement currency (includes the effect of the forex transaction) for a specific AllocAccount (79).

Type: **Amt**

Used in groups: **AllocGrp**

180.2.147 AllocSettlCurrency

Currency code of settlement denomination for a specific AllocAccount (79).

Type: **Currency**

Used in groups: **AllocGrp, PreAllocGrp, PreAllocMlegGrp, TrdAllocGrp**

180.2.148 AllocSettlCurrencyCodeSource

Identifies class or source of the AllocSettlCurrency(736) value.

Type: **String**

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in groups: **AllocGrp, PreAllocGrp, PreAllocMlegGrp, TrdAllocGrp**

180.2.149 AllocSettlInstType

Used to indicate whether settlement instructions are provided on an allocation instruction message, and if not, how they are to be derived.

Type: **int**

Allowed values in AllocSettInstTypeCodeSet:

Code	Name	Description
0	UseDefaultInstructions	Use default instructions
1	DeriveFromParametersProvided	Derive from parameters provided
2	FullDetailsProvided	Full details provided
3	SSIDBIDsProvided	SSI DB IDs provided
4	PhoneForInstructions	Phone for instructions

Used in groups: **AllocGrp**

180.2.150 AllocStatus

Identifies status of allocation.

Type: **int**

Allowed values in AllocStatusCodeSet:

Code	Name	Description
0	Accepted	Accepted (successfully processed)
1	BlockLevelReject	Block level reject
2	AccountLevelReject	Account level reject
3	Received	Received (received not yet processed)
4	Incomplete	Incomplete
5	RejectedByIntermediary	Rejected by intermediary
6	AllocationPending	Allocation pending
7	Reversed	Reversed
8	CancelledByIntermediary	Cancelled by intermediary.
9	Claimed	Claimed
10	Refused	Refused
11	PendingGiveUpApproval	Pending give-up approval
12	Cancelled	Cancelled
13	PendingTakeUpApproval	Pending take-up approval
14	ReversalPending	Reversal pending

Used in messages: [AllocationInstructionAck](#), [AllocationInstructionAlert](#), [AllocationReport](#), [AllocationReportAck](#)

180.2.151 AllocText

Free format text related to a specific AllocAccount (79).

Type: [String](#)

Used in groups: [AllocAckGrp](#), [AllocGrp](#), [TrdAllocGrp](#)

180.2.152 AllocTransType

Identifies allocation transaction type *** SOME VALUES HAVE BEEN REPLACED - See "Replaced Features and Supported Approach" ***

Type: [char](#)

Allowed values in AllocTransTypeCodeSet:

Code	Name	Description
0	New	New
1	Replace	Replace
2	Cancel	Cancel
6	Reversal	Reversal

Used in messages: [AllocationInstruction](#), [AllocationInstructionAlert](#), [AllocationReport](#), [AllocationReportAck](#)

180.2.153 AllocTrdRegTimestamp

Same as TrdRegTimestamp(769). Used to provide relevant timestamp for the allocation account.

Type: [UTCTimestamp](#)

Used in groups: [AllocTrdRegTimestamps](#)

180.2.154 AllocTrdRegTimestamps

The AllocTrdRegTimestamps component block is used to convey trading or regulatory timestamps associated with an allocation for one account.

Name	Mult.	Type	Description
NoAllocTrdRegTimestamps	[1..1]	NumInGroup	
AllocTrdRegTimestamp	[0..1]	UTCTimestamp	Required if NoAllocTrdRegTimestamps(3008) > 0.
AllocTrdRegTimestampType	[0..1]	CodeSet	Required if NoAllocTrdRegTimestamps(3008) > 0.
AllocTrdRegTimestampSrc	[0..1]	String	

Used in groups: [AllocGrp](#)

180.2.155 AllocTrdRegTimestampSrc

Same as TrdRegTimestampOrigin(771). Used to indicate the "origin" or source of the timestamp relevant for the allocation account.

Type: [String](#)

Used in groups: [AllocTrdRegTimestamps](#)

180.2.156 AllocTrdRegTimestampType

Same as TrdRegTimestampType(770). Used to indicate the timestamp type relevant for the allocation account.

Type: [int](#)

Allowed values in TrdRegTimestampTypeCodeSet:

Code	Name	Description
1	ExecutionTime	Execution time. Timestamp for the order execution. In the context of US futures markets (CFTC regulated) this is the non-qualified reporting time of order execution.
2	TimeIn	Time in. Timestamp for receiving an order, quote or trade. In the context of US futures markets (CFTC) this is the timestamp of when the order was received on the trading floor (booth).

Code	Name	Description
3	TimeOut	Time out. Timestamp for sending an order, quote or trade. In the context of US futures markets (CFTC) this is the timestamp when the trade was received from the pit.
4	BrokerReceipt	Broker receipt. Timestamp for a broker receiving an order, quote or trade. In the context of US futures markets (CFTC) this is the time at which the broker received the order.
5	BrokerExecution	Broker execution. Timestamp for the broker executing an order. In the context of US futures markets (CFTC regulated) this is the time at which a broker executed the order for another broker.
6	DeskReceipt	Desk receipt. Timestamp for the transmission of an order to an internal desk or department on the same day the firm received the order.
7	SubmissionToClearing	Submission to clearing. The timestamp when the trade was officially acknowledged by the Clearing House.
8	TimePriority	Time priority. A timestamp (manually or electronically) assigned by a market to specify time priority for an order or quote.
9	OrderbookEntryTime	Orderbook entry time. Timestamp for an order representing the time it was entered in the orderbook of the execution venue. The orderbook entry time cannot change during the lifetime of the order.
10	OrderSubmissionTime	Order submission time. Time the order was sent by the submitter.
11	PubliclyReported	Publicly reported. In the context of MiFID II, this is used to identify the time at which the transaction was first published to the market.
12	PublicReportUpdated	Public report updated. In the context of MiFID II, this is used to identify the time at which the transaction's publication to the market was last updated
13	NonPubliclyReported	Non-publicly reported
14	NonPublicReportUpdated	Non-public report updated
15	SubmittedForConfirmation	Submitted for confirmation
16	UpdatedForConfirmation	Updated for confirmation
17	Confirmed	Confirmed
18	UpdatedForClearing	Updated for clearing
19	Cleared	Cleared
20	AllocationsSubmitted	Allocations submitted
21	AllocationsUpdated	Allocations updated
22	AllocationsCompleted	Allocations completed

Code	Name	Description
23	SubmittedToRepository	Submitted to repository
24	PostTrdContntnEvnt	Post-trade continuation event
25	PostTradeValuation	Post-trade valuation
26	PreviousTimePriority	Previous time priority. Can be used in conjunction with TrdRegTimestampType(770) = 8 (Time priority) to provide the current and last priority timestamp in a single message.
27	IdentifierAssigned	Identifier assigned. Timestamp for the assignment of a (unique) identifier to an entity (e.g. order, quote, trade).
28	PreviousIdentifierAssigned	Previous identifier assigned. Timestamp of previous assignment of a (unique) identifier to an entity (e.g. order, quote, trade).
29	OrderCancellationTime	Order cancellation time. Timestamp for the cancellation of an order or quote.
30	OrderModificationTime	Order modification time. Timestamp for the modification of an order or quote.
31	OrderRoutingTime	Order routing time. Timestamp for the routing of an order to another broker or electronic execution venue.
32	TradeCancellationTime	Trade cancellation time. Timestamp for the cancellation of an execution (ExecType(150) = H (Trade Cancel)) or trade (TradeReportType(856) = 6 (Trade Report Cancel)).
33	TradeModificationTime	Trade modification time. Timestamp for the modification of an execution (ExecType(150) = G (Trade Correct)) or trade (TradeReportType(856) = 5 (No/Was)).
34	ReferenceTimeForNBBO	Reference time for NBBO. Timestamp for an NBBO reference price.
35	Affirmed	Affirmed

Used in groups: **AllocTrdRegTimestamps**

180.2.157 AllocType

Describes the specific type or purpose of an Allocation message (i.e. "Buyside Calculated")

(see Volume : "Glossary" for value definitions)

*** SOME VALUES HAVE BEEN REPLACED - See "Replaced Features and Supported Approach" ***

Type: **int**

Allowed values in AllocTypeCodeSet:

Code	Name	Description
1	Calculated	Calculated (includes MiscFees and NetMoney)
2	Preliminary	Preliminary (without MiscFees and NetMoney)
5	ReadyToBook	Ready-To-Book
7	WarehouseInstruction	Warehouse instruction
8	RequestToIntermediary	Request to intermediary
9	Accept	Accept
10	Reject	Reject
11	AcceptPending	Accept Pending
12	IncompleteGroup	Incomplete group
13	CompleteGroup	Complete group
14	ReversalPending	Reversal Pending
15	ReopenGroup	Reopen group
16	CancelGroup	Cancel group
17	Giveup	Give-up
18	Takeup	Take-up
19	RefuseTakeup	Refuse take-up
20	InitiateReversal	Initiate reversal
21	Reverse	Reverse
22	RefuseReversal	Refuse reversal
23	SubAllocationGiveup	Sub-allocation give-up
24	ApproveGiveup	Approve give-up
25	ApproveTakeup	Approve take-up
26	NotionalValueAveragePxGroupAlloc	Notional value average price group allocation. Used when conducting notional value average price (NVAP) group allocation with a clearinghouse.

Used in messages: [AllocationInstruction](#), [AllocationInstructionAck](#), [AllocationInstructionAlert](#)

180.2.158 AllowableOneSidednessCurr

The currency that AllowableOneSidednessValue (766) is expressed in if AllowableOneSidednessValue is used.

Type: [Currency](#)

Used in messages: [NewOrderList](#)

180.2.159 AllowableOneSidednessPct

The maximum percentage that execution of one side of a program trade can exceed execution of the other.

Type: **Percentage**

Used in messages: **NewOrderList**

180.2.160 AllowableOneSidednessValue

The maximum amount that execution of one side of a program trade can exceed execution of the other.

Type: **Amt**

Used in messages: **NewOrderList**

180.2.161 AltMDSourceID

Session layer source for market data

(For the standard FIX session layer, this would be the TargetCompID (56) where market data can be obtained).

Type: **String**

Used in groups: **MDRjctGrp**

180.2.162 AnnualTradingBusinessDays

Number of trading business days in a year.

Type: **int**

Used in components: **MDStatisticParameters**

Used in groups: **ClearingPriceParametersGrp**

180.2.163 AnonymousTradeIndicator

Indicates whether the trade or transaction was executed anonymously.

Type: **Boolean**

Used in groups: [MDFullGrp](#), [MDIncGrp](#)

Used in messages: [ExecutionReport](#), [TradeCaptureReport](#)

180.2.164 ApplBegSeqNum

Beginning range of application sequence numbers

Type: [SeqNum](#)

Used in groups: [ApplIDRequestAckGrp](#), [ApplIDRequestGrp](#)

180.2.165 ApplEndSeqNum

Ending range of application sequence numbers

Type: [SeqNum](#)

Used in groups: [ApplIDRequestAckGrp](#), [ApplIDRequestGrp](#)

180.2.166 ApplExtID

The extension pack number associated with an application message.

Type: [int](#)

Used in components: [StandardHeader](#)

180.2.167 ApplicationSequenceControl

The ApplicationSequenceControl is used for application sequencing and recovery. Consisting of ApplSeqNum (1181), ApplID (1180), ApplLastSeqNum (1350), and ApplResendFlag (1352), FIX application messages that carries this component block will be able to use application level sequencing. ApplID, ApplSeqNum and ApplLastSeqNum fields identify the application id, application sequence number and the previous application sequence number (in case of intentional gaps) on each application message that carries this block.

Name	Mult.	Type	Description
ApplID	[0..1]	String	Identifies the application with which a message is associated. Used only if application sequencing is in effect.

Name	Mult.	Type	Description
ApplSeqNum	[0..1]	SeqNum	Application sequence number assigned to the message by the application generating the message. Used only if application sequencing is in effect. Conditionally required if ApplID has been specified.
ApplLastSeqNum	[0..1]	SeqNum	The previous sequence number in the application sequence stream. Permits an application to publish messages with sequence gaps where it cannot be avoided. Used only if application sequencing is in effect. Conditionally required if ApplID has been specified
ApplResendFlag	[0..1]	Boolean	Used to indicate that a message is being sent in response to an Application Message Request. Used only if application sequencing is in effect. It is possible for both ApplResendFlag and PossDupFlag to be set on the same message if the Sender's cache size is greater than zero and the message is being resent due to a session level resend request.

Used in messages: AccountSummaryReport, AssignmentReport, ContraryIntentionReport, DerivativeSecurityList, DerivativeSecurityListUpdateReport, ExecutionReport, IOI, MarginRequirementReport, MarketDataIncrementalRefresh, MarketDataReport, MarketDataSnapshotFullRefresh, MarketDataStatisticsReport, MarketDefinition, MarketDefinitionUpdateReport, MassOrderAck, News, PartyDetailsListReport, PartyDetailsListUpdateReport, PartyEntitlementsReport, PartyEntitlementsUpdateReport, PartyRiskLimitsReport, PartyRiskLimitsUpdateReport, PositionReport, SecurityDefinition, SecurityDefinitionUpdateReport, SecurityList, SecurityListUpdateReport, SecurityMassStatus, SecurityStatus, SecurityTypes, SettlementObligationReport, TradeCaptureReport, TradeMatchReport, TradeMatchReportAck, TradingSessionList, TradingSessionListUpdateReport, TradingSessionStatus

180.2.168 ApplID

Identifies the application with which a message is associated. Used only if application sequencing is in effect.

Type: String

Used in components: ApplicationSequenceControl

180.2.169 ApplIDReportGrp

Name	Mult.	Type	Description
NoApplIDs	[1..1]	NumInGroup	Number of applications
RefApplID	[0..1]	String	
ApplNewSeqNum	[0..1]	SeqNum	
RefApplLastSeqNum	[0..1]	SeqNum	

Used in messages: [ApplicationMessageReport](#)

180.2.170 ApplIDRequestAckGrp

Name	Mult.	Type	Description
NoApplIDs	[1..1]	NumInGroup	Number of applications
RefApplID	[0..1]	String	
RefApplReqID	[0..1]	String	
ApplBegSeqNum	[0..1]	SeqNum	
ApplEndSeqNum	[0..1]	SeqNum	
RefApplLastSeqNum	[0..1]	SeqNum	
ApplResponseError	[0..1]	CodeSet	
NestedParties	[0..*]	Group	

Used in messages: [ApplicationMessageRequestAck](#)

180.2.171 ApplIDRequestGrp

Name	Mult.	Type	Description
NoApplIDs	[1..1]	NumInGroup	Specifies number of application id occurrences
RefApplID	[0..1]	String	
RefApplReqID	[0..1]	String	
ApplBegSeqNum	[0..1]	SeqNum	Message sequence number of first message in range to be resent

Name	Mult.	Type	Description
ApplEndSeqNum	[0..1]	SeqNum	Message sequence number of last message in range to be resent. If request is for a single message ApplBeginSeqNo = ApplEndSeqNo. If request is for all messages subsequent to a particular message, ApplEndSeqNo = "0" (representing infinity).
NestedParties	[0..*]	Group	

Used in messages: [ApplicationMessageRequest](#)

180.2.172 ApplLastSeqNum

Application sequence number of last message in transmission

Type: [SeqNum](#)

Used in components: [ApplicationSequenceControl](#)

180.2.173 ApplNewSeqNum

Used to specify a new application sequence number.

Type: [SeqNum](#)

Used in groups: [ApplIDReportGrp](#)

180.2.174 ApplQueueAction

Action to take to resolve an application message queue (backlog).

Type: [int](#)

Allowed values in ApplQueueActionCodeSet:

Code	Name	Description
0	NoActionTaken	No Action Taken
1	QueueFlushed	Queue Flushed
2	OverlayLast	Overlay Last
3	EndSession	End Session

Used in messages: [MarketDataRequest](#)

180.2.175 ApplQueueDepth

Current number of application messages that were queued at the time that the message was created by the counterparty.

Type: [int](#)

Used in messages: [MarketDataIncrementalRefresh](#), [MarketDataSnapshotFullRefresh](#)

180.2.176 ApplQueueMax

Used to specify the maximum number of application messages that can be queued before a corrective action needs to take place to resolve the queuing issue.

Type: [int](#)

Used in messages: [MarketDataRequest](#)

180.2.177 ApplQueueResolution

Resolution taken when ApplQueueDepth (813) exceeds ApplQueueMax (812) or system specified maximum queue size.

Type: [int](#)

Allowed values in ApplQueueResolutionCodeSet:

Code	Name	Description
0	NoActionTaken	No Action Taken
1	QueueFlushed	Queue Flushed
2	OverlayLast	Overlay Last
3	EndSession	End Session

Used in messages: [MarketDataIncrementalRefresh](#), [MarketDataSnapshotFullRefresh](#)

180.2.178 ApplReportID

Identifier for the Application Sequence Reset

Type: **String**

Used in messages: **ApplicationMessageReport**

180.2.179 ApplReportType

Type of report

Type: **int**

Allowed values in ApplReportTypeCodeSet:

Code	Name	Description
0	ApplSeqNumReset	Reset ApplSeqNum to new value specified in ApplNewSeqNum(1399)
1	LastMessageSent	Reports that the last message has been sent for the ApplIDs Refer to RefApplLastSeqNum(1357) for the application sequence number of the last message.
2	ApplicationAlive	Heartbeat message indicating that Application identified by RefApplID(1355) is still alive. Refer to RefApplLastSeqNum(1357) for the application sequence number of the previous message.
3	ResendComplete	Application message re-send completed.

Used in messages: **ApplicationMessageReport**

180.2.180 ApplReqID

Unique identifier for request

Type: **String**

Used in messages: **ApplicationMessageReport**, **ApplicationMessageRequest**, **ApplicationMessageRequestAck**

180.2.181 ApplReqType

Type of Application Message Request being made.

Type: **int**

Allowed values in ApplReqTypeCodeSet:

Code	Name	Description
0	Retransmission	Retransmission of application messages for the specified Applications
1	Subscription	Subscription to the specified Applications
2	RequestLastSeqNum	Request for the last ApplLastSeqNum published for the specified Applications
3	RequestApplications	Request valid set of Applications
4	Unsubscribe	Unsubscribe to the specified Applications
5	CancelRetransmission	Cancel retransmission
6	CancelRetransmissionUnsubscribe	Cancel retransmission and unsubscribe to the specified applications

Used in messages: **ApplicationMessageRequest**, **ApplicationMessageRequestAck**

180.2.182 ApplResendFlag

Used to indicate that a message is being sent in response to an Application Message Request. It is possible for both ApplResendFlag and PossDupFlag to be set on the same message if the Sender's cache size is greater than zero and the message is being resent due to a session level resend request

Type: **Boolean**

Used in components: **ApplicationSequenceControl**

180.2.183 ApplResponseError

Used to return an error code or text associated with a response to an Application Request.

Type: **int**

Allowed values in ApplResponseErrorCodeSet:

Code	Name	Description
0	ApplicationDoesNotExist	Application does not exist
1	MessagesRequestedAreNotAvailable	Messages requested are not available
2	UserNotAuthorizedForApplication	User not authorized for application

Used in groups: [ApplIDRequestAckGrp](#)

180.2.184 ApplResponseID

Identifier for the Applicaton Message Request Ack

Type: [String](#)

Used in messages: [ApplicationMessageRequestAck](#)

180.2.185 ApplResponseType

Used to indicate the type of acknowledgement being sent.

Type: [int](#)

Allowed values in ApplResponseTypeCodeSet:

Code	Name	Description
0	RequestSuccessfullyProcessed	Request successfully processed
1	ApplicationDoesNotExist	Application does not exist
2	MessagesNotAvailable	Messages not available

Used in messages: [ApplicationMessageRequestAck](#)

180.2.186 ApplSeqNum

Data sequence number to be used when FIX session is not in effect

Type: [SeqNum](#)

Used in components: [ApplicationSequenceControl](#)

180.2.187 ApplTestMessageIndicator

Used to indicate whether the message being sent is to test the receiving application's availability to process the message. When set to "Y" the message is a test message. If not specified, the message is by default not a test message.

Type: **Boolean**

Used in messages: **PartyActionReport**, **PartyActionRequest**

180.2.188 ApplTotalMessageCount

Total number of messages included in transmission.

Type: **int**

Used in messages: **ApplicationMessageRequestAck**

180.2.189 ApplVerID

Specifies the application layer version being applied at the message level.

Type: **String**

Allowed values in ApplVerIDCodeSet:

Code	Name	Description
0	FIX27	FIX27
1	FIX30	FIX30
2	FIX40	FIX40
3	FIX41	FIX41
4	FIX42	FIX42
5	FIX43	FIX43
6	FIX44	FIX44
7	FIX50	FIX50
8	FIX50SP1	FIX50SP1
9	FIX50SP2	FIX50SP2
10	FIXLatest	FIXLatest

Used in components: **StandardHeader**

180.2.190 ApprovalTime

Date and time the details within the message have been approved.

Type: **UTCTimestamp**

Used in messages: **AlgoCertificateReport**, **AlgoCertificateRequest**

180.2.191 AsgnRptID

Unique identifier for the Assignment Report

Type: **String**

Used in messages: **AssignmentReport**

180.2.192 AsOfIndicator

A trade that is being submitted for a trade date prior to the current trade or clearing date, e.g. in an open outcry market an out trade being submitted for the previous trading session or trading day.

Type: **char**

Allowed values in AsOfIndicatorCodeSet:

Code	Name	Description
0	False	false - trade is not an AsOf trade
1	True	true - trade is an AsOf trade

Used in messages: **TradeCaptureReport**, **TradeCaptureReportAck**

180.2.193 AssetAttributeGrp

The AssetAttributeGrp is a repeating subcomponent of the Instrument component used to detail attributes of the instrument asset.

Name	Mult.	Type	Description
NoAssetAttributes	[1..1]	NumInGroup	
AssetAttributeType	[0..1]	String	Required if NoAssetAttributes(2304) > 0.
AssetAttributeValue	[0..1]	String	

Name	Mult.	Type	Description
AssetAttributeLimit	[0..1]	String	

Used in components: [Instrument](#)

180.2.194 AssetAttributeLimit

Limit or lower acceptable value of the attribute.

Type: [String](#)

Used in groups: [AssetAttributeGrp](#)

180.2.195 AssetAttributeType

Specifies the name of the attribute.

See http://www.fixtradingcommunity.org/codelists#Asset_Attribute_Types for code list of applicable asset attribute types.

Type: [String](#)

Used in groups: [AssetAttributeGrp](#)

180.2.196 AssetAttributeValue

Specifies the value of the asset attribute.

Type: [String](#)

Used in groups: [AssetAttributeGrp](#)

180.2.197 AssetClass

The broad asset category for assessing risk exposure.

Type: [int](#)

Allowed values in AssetClassCodeSet:

Code	Name	Description
1	InterestRate	Interest rate
2	Currency	Currency
3	Credit	Credit
4	Equity	Equity
5	Commodity	Commodity
6	Other	Other
7	Cash	Cash
8	Debt	Debt
9	Fund	Fund. Such as mutual fund, collective investment vehicle, investment program, specialized account program.
10	LoanFacility	Loan facility
11	Index	Index. A main index identified as a security type, for example under EU SFTR reporting.

Used in components: **Instrument**

180.2.198 AssetGroup

Indicates the broad product or asset classification. May be used to provide grouping for the product taxonomy (Product(460), SecurityType(167), etc.) and/or the risk taxonomy (AssetClass(1938), AssetSubClass(1939), AssetType(1940), etc.).

Type: **int**

Allowed values in AssetGroupCodeSet:

Code	Name	Description
1	Financials	Financials. A categorization which usually includes rates, foreign exchange, credit, bonds and equity products or assets.
2	Commodities	Commodities. A categorization which usually includes hard commodities such as agricultural, metals, freight, energy products or assets.
3	AlternativeInvestments	Alternative investments. A categorization which usually includes weather, housing, and commodity indices products or assets.

Used in components: **Instrument**

180.2.199 AssetSubClass

The subcategory description of the asset class.

Type: **int**

Allowed values in AssetSubClassCodeSet:

Code	Name	Description
1	SingleCurrency	Single currency
2	CrossCurrency	Cross currency
3	Basket	Basket [for multi-currency]
4	SingleName	Single name
5	CreditIndex	Credit index
6	IndexTranche	Index tranche
7	CreditBasket	Credit basket
8	Exotic	Exotic
9	Common	Common
10	Preferred	Preferred
11	EquityIndex	Equity index
12	EquityBasket	Equity basket
13	Metals	Metals
14	Bullion	Bullion
15	Energy	Energy
16	CommodityIndex	Commodity index
17	Agricultural	Agricultural
18	Environmental	Environmental
19	Freight	Freight
20	Government	Government
21	Agency	Agency
22	Corporate	Corporate
23	Financing	Financing
24	MoneyMarket	Money market
25	Mortgage	Mortgage
26	Municipal	Municipal
27	MutualFund	Mutual fund
28	CollectiveInvestmentVehicle	Collective investment vehicle

Code	Name	Description
29	InvestmentProgram	Investment program. A generalized fund for major investors.
30	SpecializedAccountProgram	Specialized account program. A specialized fund setup for a particular account or group of accounts.
31	TermLoan	Term loan
32	BridgeLoan	Bridge loan
33	LetterOfCredit	Letter of credit
34	DividendIndex	Dividend index
35	StockDividend	Stock dividend
36	ExchangeTradedFund	Exchange traded fund
37	VolatilityIndex	Volatility index
38	FXCrossRates	FX cross rates
39	FXEmergingMarkets	FX emerging markets
40	FXMajors	FX Majors
41	Fertilizer	Fertilizer
42	IndustrialProduct	Industrial product
43	Inflation	Inflation
44	Paper	Paper
45	Polypropylene	Polypropylene
46	OfficialEconomicStatistics	Official economic statistics
47	OtherC10	Other C10. Defined under MiFID II (Directive 2014/65/EU) Section C(10) of Annex I and paraphrased in ESMA RTS 2 Annex III Section 10, "Other C10" is a financial instrument "which is not a 'Freight derivative', any of the following interest rate derivatives sub-asset classes: 'Inflation multi-currency swap or cross-currency swap', a 'Future/forward on inflation multi-currency swaps or cross-currency swaps', an 'Inflation single currency swap', a 'Future/forward on inflation single currency swap' and any of the following equity derivatives sub-asset classes: a 'Volatility index option', a 'Volatility index future/forward', a swap with parameter return variance, a swap with parameter return volatility, a portfolio swap with parameter return variance, a portfolio swap with parameter return volatility".
48	Other	Other. May be used with any AssetClass(1938) values.

Used in components: **Instrument**

180.2.200 AssetSubType

Used to provide a more specific description of the asset specified in AssetType(1940).

See <https://www.fixtrading.org/codelists/AssetSubType> for code list of applicable values.

Type: **String**

Used in components: **Instrument**

180.2.201 AssetType

Used to provide more specific description of the asset specified in AssetSubClass(1939).

See <https://www.fixtrading.org/codelists/AssetType> for code list of applicable values. ISO 4721 Currency Code values are to be used when specific currency as an asset type is to be expressed.

Other values may be used by mutual agreement of the counterparties.

Type: **String**

Used in components: **Instrument**

180.2.202 AssetValuationModel

Identifies the model used for asset valuation or pricing calculations.

Type: **int**

Allowed values in AssetValuationModelCodeSet:

Code	Name	Description
1	BlackScholes	Black-Scholes
2	Whaley	Whaley
3	Bachelier	Bachelier
4	Kirk	Kirk
5	Curran	Curran
6	Black76	Black-76
7	Binomial	Binomial
99	OtherModel	Other model

Used in messages: **SecurityRiskMetricsReport**

180.2.203 AssignmentMethod

Method by which short positions are assigned to an exercise notice during exercise and assignment processing

Type: **char**

Allowed values in AssignmentMethodCodeSet:

Code	Name	Description
P	ProRata	Pro rata
R	Random	Random

Used in messages: **AssignmentReport**

180.2.204 AssignmentUnit

Quantity Increment used in performing assignment.

Type: **Qty**

Used in messages: **AssignmentReport**

180.2.205 AttachmentClassification

Specifies semantically the type of the attached document from a business perspective. The default classification scheme reuses the FIX standard classification scheme of a high level section (pretrade, trade, posttrade, etc.) and a category, then a specific application or document type. The expression follows {"section/category/application type"}.

The goal here is to map the attachment into the sections and categories of the FIX business messages if possible. The classification scheme can be expanded or replaced by counterparty agreement. This approach permits the introduction and reference to other business ontologies.

Example:

posttrade/confirmation/confirm

pretrade//termsheet

Type: **String**

Used in groups: **AttachmentGrp**

180.2.206 AttachmentEncodingType

The encoding type of the content provided in EncodedAttachment(2112).

Type: **int**

Allowed values in AttachmentEncodingTypeCodeSet:

Code	Name	Description
0	Base64	Base64 encoding.
1	RawBinary	Raw binary. Unencoded binary content.

Used in groups: **AttachmentGrp**

180.2.207 AttachmentExternalURL

Used to specify an external URL where the attachment can be obtained.

Type: **String**

Used in groups: **AttachmentGrp**

180.2.208 AttachmentGrp

The AttachmentGrp component provides the ability to attach other media type documents to a FIX message for transmission. The media type can be any of the media types (previously referred to as MIME types) that are listed by IANA (www.iana.org) [RFC2046].

The AttachmentGrp is intended to be used to attach documents in other formats, such as PDF, TIFF, and Microsoft Word, for example to a FIX message.

Note when the AttachmentGrp is used within a business message, such as the TradeCaptureReport(35=AE), the attachment should supplement the data already contained in the business message. It is not intended to replace the content of the business message. The standard fields within the business message should be populated, even if they duplicate data expressed within the attachment(s).

Name	Mult.	Type	Description
NoAttachments	[1..1]	NumInGroup	
AttachmentName	[0..1]	String	Required if NoAttachments(2104) > 0.
AttachmentMediaType	[0..1]	String	Required if EncodedAttachment(2112) is present.

Name	Mult.	Type	Description
AttachmentClassification	[0..1]	String	
AttachmentExternalURL	[0..1]	String	Either AttachmentExternalURL(2108) or EncodedAttachment(2112) must be specified if NoAttachments(2104) > 0.
AttachmentEncodingType	[0..1]	CodeSet	Required if EncodedAttachment(2112) is present.
UnencodedAttachmentLen	[0..1]	int	
EncodedAttachmentLen	[0..1]	Length	Must be set if EncodedAttachment(2112) is specified and must immediately precede it.
EncodedAttachment	[0..1]	data	Either AttachmentExternalURL(2108) or EncodedAttachment(2112) must be specified if NoAttachments(2104) > 0.
AttachmentKeywordGrp	[0..*]	Group	

Used in messages: [Email](#), [TradeCaptureReport](#), [XMLnonFIX](#)

180.2.209 AttachmentKeyword

Can be used to provide data or keyword tagging of the content of the attachment.

Type: [String](#)

Used in groups: [AttachmentKeywordGrp](#)

180.2.210 AttachmentKeywordGrp

The AttachmentKeywordGrp component provides a place to associate keywords with an attachment document to support the current approach of tagging to support metadata.

Name	Mult.	Type	Description
NoAttachmentKeywords	[1..1]	NumInGroup	
AttachmentKeyword	[0..1]	String	Required if NoAttachmentKeywords(2113) > 0.

Used in groups: [AttachmentGrp](#)

180.2.211 AttachmentMediaType

The MIME media type (and optional subtype) of the attachment. The values used are those assigned, listed and maintained by IANA (www.iana.org) [RFC2046]. See <http://www.iana.org/assignments/media-types/index.html> for available types.

Examples values (RFC number provided for reference here only):

"application/pdf" (see [RFC3778])

"application/msword" (for .doc files)

"multipart/signed" (see [RFC1847])

"application/vnd.openxmlformats-officedocument.wordprocessingml.document" (for .docx files)

Type: **String**

Used in groups: **AttachmentGrp**

180.2.212 AttachmentName

Specifies the file name of the attachment.

Type: **String**

Used in groups: **AttachmentGrp**

180.2.213 AttachmentPoint

Lower bound percentage of the loss that the tranche can endure.

Type: **Percentage**

Used in components: **Instrument**

180.2.214 AttribGrp

Name	Mult.	Type	Description
NoInstrAttrib	[1..1]	NumInGroup	
InstrAttribType	[0..1]	CodeSet	
InstrAttribValue	[0..1]	String	

Used in components: **InstrumentExtension**

180.2.215 AuctionAllocationPct

Percentage of matched quantity to be allocated to the submitter of the response to an auction order.

Type: **Percentage**

Used in messages: **ExecutionReport**, **MultilegOrderCancelReplace**, **NewOrderMultileg**, **NewOrderSingle**, **OrderCancelReplaceRequest**

180.2.216 AuctionInstruction

Instruction related to system generated auctions, e.g. flash order auctions.

Type: **int**

Allowed values in AuctionInstructionCodeSet:

Code	Name	Description
0	AutomatedAuctionPermitted	Automatic auction permitted (default)
1	AutomatedAuctionNotPermitted	Automatic auction not permitted

Used in messages: **ExecutionReport**, **MultilegOrderCancelReplace**, **NewOrderMultileg**, **NewOrderSingle**, **OrderCancelReplaceRequest**

180.2.217 AuctionType

Type of auction order.

Type: **int**

Allowed values in AuctionTypeCodeSet:

Code	Name	Description
0	None	None
1	BlockOrderAuction	Block order auction
2	DirectedOrderAuction	Directed order auction
3	ExposureOrderAuction	Exposure order auction
4	FlashOrderAuction	Flash order auction
5	FacilitationOrderAuction	Facilitation order auction
6	SolicitationOrderAuction	Solicitation order auction

Code	Name	Description
7	PriceImprovementMechanism	Price improvement mechanism (PIM)
8	DirectedOrderPriceImprovement-Mechanism	Directed Order price improvement mechanism (PIM)

Used in groups: [AuctionTypeRuleGrp](#)

Used in messages: [ExecutionReport](#), [MultilegOrderCancelReplace](#), [NewOrderMultileg](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#)

180.2.218 AuctionTypeProductComplex

Identifies an entire suite of products for which the auction order type rule applies.

Type: [String](#)

Used in groups: [AuctionTypeRuleGrp](#)

180.2.219 AuctionTypeRuleGrp

The AuctionTypeRuleGrp component is used to specify the auction rule applicable for a given product group or complex, for example.

Name	Mult.	Type	Description
NoAuctionTypeRules	[1..1]	NumInGroup	
AuctionType	[0..1]	CodeSet	Required if NoAuctionTypeRules(2548) > 0. AuctionType(1803) = 0 (None) can be used to invalidate all auction types on the instrument level that are defined on a market segment level.
AuctionTypeProductComplex	[0..1]	String	Can be used to limit auction order type to specific product suite. Use multiple entries with the same AuctionType(1803) if multiple but not all product suites are supported.

Used in components: [TradingSessionRules](#)

Used in messages: [MarketDefinition](#), [MarketDefinitionUpdateReport](#)

180.2.220 AutoAcceptIndicator

Identifies whether or not an allocation has been automatically accepted on behalf of the Carry Firm by the Clearing House.

Type: **Boolean**

Used in messages: **AllocationInstruction**, **AllocationInstructionAlert**, **AllocationReport**

180.2.221 AutomaticExerciseIndicator

Indicates (when 'Y') that exercise is automatic when the strike price is crossed or the underlying trade is in the money.

Type: **Boolean**

Used in components: **OptionExercise**

180.2.222 AutomaticExerciseThresholdRate

The threshold rate for triggering automatic exercise.

Type: **float**

Used in components: **OptionExercise**

180.2.223 AveragePriceDetail

The AveragePriceDetail component provides average pricing details in a trade report, including the average pricing model and the start and end times of averaging period.

Name	Mult.	Type	Description
AveragePriceType	[0..1]	CodeSet	
AveragePriceStartTime	[0..1]	UTCTimestamp	Required if AveragePriceType(2763)=2 (Percent of volume average price) or 0 (Time weighted average price).
AveragePriceEndTime	[0..1]	UTCTimestamp	Required if AveragePriceType(2763)=2 (Percent of volume average price) or 0 (Time weighted average price).

Used in messages: **TradeCaptureReport**, **TradeCaptureReportAck**

180.2.224 AveragePriceEndTime

End of the time period during which price averaging occurred.

Type: **UTCTimestamp**

Used in components: **AveragePriceDetail**

180.2.225 AveragePriceStartTime

Start of the time period during which price averaging occurred.

Type: **UTCTimestamp**

Used in components: **AveragePriceDetail**

180.2.226 AveragePriceType

The average pricing model used for block trades.

Type: **int**

Allowed values in AveragePriceTypeCodeSet:

Code	Name	Description
0	TimeWeightedAveragePrice	Time weighted average price. TWAP is the simple average price of a security over a specified time without regard to the volume traded.
1	VolumeWeightedAveragePrice	Volume weighted average price. VWAP is the sum of the currency amount traded for all trades in the averaging group (price times quantity) divided by the total quantity.
2	PercentOfVolumeAveragePrice	Percent of volume average price. POV is the sum of the currency amount traded for all trades executed as part of an order intended to purchase a specified percentage of the total volume of an instrument, divided by the total quantity.
3	LimitOrderAveragePrice	Limit order average price. The limit order average price is the currency amount of all trades executed to fill a limit order, divided by the total quantity.

Used in components: **AveragePriceDetail**

180.2.227 AvgForwardPoints

The average forward points. May be a negative value.

Type: **PriceOffset**

Used in messages: **TradeAggregationReport**

180.2.228 AvgParPx

Used to express average price as percent of par (used where AvgPx field is expressed in some other way)

Type: **Price**

Used in components: **SettlTradeDetails**

Used in messages: **AllocationInstruction, AllocationInstructionAlert, AllocationReport, Confirmation**

180.2.229 AvgPx

Calculated average price of all fills on this order.

For Fixed Income trades AvgPx is always expressed as percent-of-par, regardless of the PriceType (423) of LastPx (31). I.e., AvgPx will contain an average of percent-of-par values (see LastParPx (669)) for issues traded in Yield, Spread or Discount.

Type: **Price**

Used in components: **SettlTradeDetails**

Used in groups: **OrdListStatGrp**

Used in messages: **AllocationInstruction, AllocationInstructionAlert, AllocationReport, Confirmation, ExecutionAck, ExecutionReport, TradeAggregationReport, TradeAggregationRequest, TradeCaptureReport, TradeCaptureReportAck**

180.2.230 AvgPxGroupID

Used by submitting firm to group trades being allocated into an average price group. The trades in average price group will be used to calculate an average price for the group.

Type: **String**

Used in groups: **TrdMatchSideGrp**

Used in messages: [AllocationInstruction](#), [AllocationInstructionAck](#), [AllocationInstructionAlert](#), [AllocationInstructionAlertRequest](#), [AllocationReport](#), [AllocationReportAck](#), [TradeCaptureReport](#), [TradeCaptureReportAck](#)

180.2.231 AvgPxIndicator

Average pricing indicator.

Type: [int](#)

Allowed values in AvgPxIndicatorCodeSet:

Code	Name	Description
0	NoAveragePricing	No average pricing
1	Trade	Trade is part of an average price group identified by the AvgPxGroupID(1731)
2	LastTrade	Last trade of the average price group identified by the AvgPxGroupID(1731)
3	NotionalValueAveragePxGroupTrade	Trade is part of a notional value average price group. A notional value average price (NVAP) group is effectively closed and available for allocation as long as the NVAP of the group is non-zero.
4	AveragePricedTrade	Trade is average priced

Used in groups: [MDFullGrp](#), [MDIncGrp](#), [TrdMatchSideGrp](#)

Used in messages: [AllocationInstruction](#), [AllocationInstructionAlert](#), [AllocationReport](#), [AllocationReportAck](#), [TradeCaptureReport](#), [TradeCaptureReportAck](#)

180.2.232 AvgPxPrecision

Indicates number of decimal places to be used for average pricing. Absence of this field indicates that default precision arranged by the broker/institution is to be used.

Type: [int](#)

Used in messages: [AllocationInstruction](#), [AllocationInstructionAlert](#), [AllocationReport](#), [Confirmation](#)

180.2.233 AvgSpotRate

The average FX spot rate.

Type: **Price**

Used in messages: **TradeAggregationReport**

180.2.234 BackloadedTradeIndicator

Indicates that the trade being reported occurred in the past and is still in effect or active.

Type: **Boolean**

Used in messages: **TradeCaptureReport**

180.2.235 BaseTradingRules

Trading rules that are applicable to a market, market segment or individual security independent of a trading session.

Name	Mult.	Type	Description
TickRules	[0..*]	Group	Specifies price tick rules for the security.
LotTypeRules	[0..*]	Group	Specifies the lot types that are valid for trading.
PriceLimits	[0..1]	Component	Specifies the price limits that are valid for trading.
PriceRangeRuleGrp	[0..*]	Group	Specifies the valid price range tables for trading.
QuoteSizeRuleGrp	[0..*]	Group	Specifies the valid quote sizes for trading.
ExpirationCycle	[0..1]	CodeSet	
TradeVolType	[0..1]	CodeSet	
MinTradeVol	[0..1]	Qty	
MaxTradeVol	[0..1]	Qty	For listed derivatives this indicates the minimum quantity necessary for an order or trade to qualify as a block trade.
MaxPriceVariation	[0..1]	float	
ImpliedMarketIndicator	[0..1]	CodeSet	
TradingCurrency	[0..1]	Currency	
TradingCurrencyCodeSource	[0..1]	CodeSet	
RoundLot	[0..1]	Qty	
MultilegModel	[0..1]	CodeSet	Used for multileg security only.

Name	Mult.	Type	Description
MultilegPriceMethod	[0..1]	CodeSet	Used for multileg security only.
PriceType	[0..1]	CodeSet	Defines the default price type used for trading.
FastMarketPercentage	[0..1]	Percentage	Can be used as a factor to be applied to other base trading rules during a fast market, e.g. to widen price or size ranges by the specified percentage factor.
QuoteSideIndicator	[0..1]	CodeSet	

Used in components: [SecurityTradingRules](#)

Used in messages: [MarketDefinition](#), [MarketDefinitionUpdateReport](#)

180.2.236 BasisFeatureDate

BasisFeatureDate allows requesting firms within fixed income the ability to request an alternative yield-to-worst, -maturity, -extended or other call. This flows through the confirm process.

(Note tag # was reserved in FIX 4.1, added in FIX 4.3)

(prior to FIX 4.4 field was of type UTCDate)

Type: [LocalMktDate](#)

Used in messages: [ExecutionReport](#)

180.2.237 BasisFeaturePrice

Price for BasisFeatureDate.

See BasisFeatureDate (259)

(Note tag # was reserved in FIX 4.1, added in FIX 4.3)

Type: [Price](#)

Used in messages: [ExecutionReport](#)

180.2.238 BasisPxType

Code to represent the basis price type.

Type: [char](#)

Allowed values in BasisPxTypeCodeSet:

Code	Name	Description
2	ClosingPriceAtMorningSession	Closing price at morning session
3	ClosingPrice	Closing price
4	CurrentPrice	Current price
5	SQ	SQ
6	VWAPThroughADay	VWAP through a day
7	VWAPThroughAMorningSession	VWAP through a morning session
8	VWAPThroughAnAfternoonSession	VWAP through an afternoon session
9	VWAPThroughADayExcept	VWAP through a day except "YORI" (an opening auction)
A	VWAPThroughAMorningSessionExcept	VWAP through a morning session except "YORI" (an opening auction)
B	VWAPThroughAnAfternoonSessionExcept	VWAP through an afternoon session except "YORI" (an opening auction)
C	Strike	Strike
D	Open	Open
Z	Others	Others

Used in messages: **BidRequest**

180.2.239 BeginSeqNo

Message sequence number of first message in range to be resent

Type: **SeqNum**

Used in messages: **ResendRequest**

180.2.240 BeginString

Identifies beginning of new message and session protocol version by means of a session profile identifier (see FIX Session Layer for details). ALWAYS FIRST FIELD IN MESSAGE. (Always unencrypted).

Type: **String**

Allowed values in BeginStringCodeSet:

Code	Name	Description
FIX.4.2	FIX42	Session profile FIX.4.2
FIX.4.4	FIX44	Session profile FIX4
FIXT.1.1	FIXT11	Session profile FIXT or LFIXT. The choice between FIXT and LFIXT is subject to counterparty agreement.

Used in components: [StandardHeader](#)

180.2.241 BenchmarkCurveCurrency

Specifies currency used for benchmark curve.

BenchmarkCurveCurrencyCodeSource(2950) may be used to disambiguate the code source scheme used, and ISO 4217 is the default scheme if absent.

Type: [Currency](#)

Used in components: [SpreadOrBenchmarkCurveData](#)

180.2.242 BenchmarkCurveCurrencyCodeSource

Identifies class or source of the BenchmarkCurveCurrency(220) value.

Type: [String](#)

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbolology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in components: [SpreadOrBenchmarkCurveData](#)

180.2.243 BenchmarkCurveName

Name of benchmark curve.

(Note tag # was reserved in FIX 4.1, added in FIX 4.3)

Type: **String**

Allowed values in BenchmarkCurveNameCodeSet:

Code	Name	Description
EONIA	EONIA	EONIA
EUREPO	EUREPO	EUREPO
Euribor	Euribor	EURIBOR (deprecated use enum EURIBOR instead). Deprecated use of EURIBOR for the enumeration.
FutureSWAP	FutureSWAP	FutureSWAP
LIBID	LIBID	LIBID
LIBOR	LIBOR	LIBOR (London Inter-Bank Offer)
MuniAAA	MuniAAA	MuniAAA
OTHER	OTHER	OTHER
Pfandbriefe	Pfandbriefe	Pfandbriefe
SONIA	SONIA	SONIA
SWAP	SWAP	SWAP
Treasury	Treasury	Treasury
FEDEFF	FedFundRateEffective	US Federal Reserve fed funds effective rate. US Federal Reserve fed funds effective rate or the weighted average of the actual negotiated rates banks pay each other to to borrow funds.
FEDOPEN	FedOpen	US fed funds target rate. Fed funds target rate as determined by the US Federal Reserve Federal Open Market Committee.
EURIBOR	EURIBOR	Euro interbank offer rate
AUBSW	AUBSW	Australian Bank Bill Swap Rate
BUBOR	BUBOR	Budapest Bank Offered Rate
CDOR	CDOR	Canadian Dollar Offered Rate
CIBOR	CIBOR	Copenhagen Interbank Offered Rate
EONIASWAP	EONIASWAP	Euro Overnight Index Average Swap Rate
ESTR	ESTR	Euro Short Term Rate. Replaces EONIA.
EURODOLLAR	EURODOLLAR	Euro Dollar Rate
EUROSWISS	EUROSWISS	Euro Swiss Franc Rate

Code	Name	Description
GCFREPO	GCFREPO	DTCC General Collateral Finance Repo Index
ISDAFIX	ISDAFIX	ICE Swap Rate
JIBAR	JIBAR	Johannesburg Interbank Agreed Rate
MOSPRIM	MOSPRIM	Moscow Prime Offered Rate
NIBOR	NIBOR	Nigeria Three Month Interbank Rate
PRIBOR	PRIBOR	Czech Republic Interbank Offered Rate
SOFR	SOFR	Secured Overnight Financing Rate. Replaces LIBOR.
STIBOR	STIBOR	Stockholm Interbank Offered Rate
TELBOR	TELBOR	Bank of Israel Interbank Offered Rate
TIBOR	TIBOR	Tokyo Interbank Offered Rate
WIBOR	WIBOR	Warsaw Interbank Offered Rate
AONIA	AONIA	Reserve Bank of Australia Interbank Overnight Cash Rate. Also known as AUD Overnight Index Average.
AONIA-R	AONIA-R	Realised AONIA. "Realised AONIA applies a compounding formula to the daily AONIA rate, to determine the compounded average rate over the prior 1 to 6 month period." (source https://www.asx.com.au/documents/products/realised-aonia-explained.pdf).
BKBM	BKBM	New Zealand Bank Bill Market Rate
CD91D	CD91D	Republic of Korea 90-Day Certificate of Deposit Rate
CORRA	CORRA	Canadian Overnight Repo Rate Average
DIRR-TN	DIRR-TN	Danish Interbank Interest Rate-Tomorrow or Next
EIBOR	EIBOR	Emirates Interbank Offered Rate
FixingRepoRate	FixingRepoRate	China Interbank Overnight Repo Rate
HIBOR	HIBOR	Hong Kong Interbank Offered Rate
IBR	IBR	Colombia Overnight Interbank Reference Rate
KLIBOR	KLIBOR	Kuala Lumpur Interbank Offered Rate
MIBOR	MIBOR	Mumbai Interbank Offered Rate
NZONIA	NZONIA	New Zealand Overnight Indexed Swaps (OIS)
PHIREF	PHIREF	Philippines Interbank Reference Rate
REIBOR	REIBOR	Reykjavik Interbank Offered Rate
SAIBOR	SAIBOR	Saudi Arabian Interbank Offered Rate
SARON	SARON	Swiss Average Rate Overnight
SORA	SORA	Singapore Swap Offer Rate
TLREF	TLREF	Turkish Lira Overnight Reference Rate

Code	Name	Description
TIIE	TIIE	Mexico Interbank Equilibrium Interest Rate
THBFIX	THBFIX	Thai Baht Interest Rate Fixing
TONAR	TONAR	Tokyo Overnight Average Rate

Used in components: [SpreadOrBenchmarkCurveData](#)

180.2.244 BenchmarkCurvePoint

Point on benchmark curve. Free form values: e.g. "Y", "7Y", "INTERPOLATED".

Sample values:

M = combination of a number between 1-12 and a "M" for month

Y = combination of number between 1-100 and a "Y" for year}

10Y-OLD = see above, then add "-OLD" when appropriate

INTERPOLATED = the point is mathematically derived

2/2031 5 3/8 = the point is stated via a combination of maturity month / year and coupon

See Fixed Income-specific documentation at <http://www.fixtradingcommunity.org> for additional values.

(Note tag # was reserved in FIX 4.1, added in FIX 4.3)

Type: [String](#)

Used in components: [SpreadOrBenchmarkCurveData](#)

180.2.245 BenchmarkPrice

Specifies the price of the benchmark.

Type: [Price](#)

Used in components: [SpreadOrBenchmarkCurveData](#)

180.2.246 BenchmarkPriceType

Identifies type of BenchmarkPrice (662).

See PriceType (423) for valid values.

Type: **int**

Allowed values in PriceTypeCodeSet:

Code	Name	Description
1	Percentage	Percentage (i.e. percent of par) (often called "dollar price" for fixed income)
2	PerUnit	Per unit (i.e. per share or contract)
3	FixedAmount	Fixed amount (absolute value)
4	Discount	Discount - percentage points below par
5	Premium	Premium - percentage points over par
6	Spread	Spread (basis points spread). Usually the difference in yield between two switched bonds or a corporate bond traded spread-to-benchmark.
7	TEDPrice	TED Price
8	TEDYield	TED Yield
9	Yield	Yield
10	FixedCabinetTradePrice	Fixed cabinet trade price (primarily for listed futures and options)
11	VariableCabinetTradePrice	Variable cabinet trade price (primarily for listed futures and options)
12	PriceSpread	Price spread. Price spread is expressed based on market convention for the asset being priced or traded. For example, the difference between the prices of a multileg switch or strategy expressed in basis points for a CDS or TBA roll; a price value to be added to a reference price, such as a "pay up" for specified pools
13	ProductTicksInHalves	Product ticks in halves
14	ProductTicksInFourths	Product ticks in fourths
15	ProductTicksInEighths	Product ticks in eighths
16	ProductTicksInSixteenths	Product ticks in sixteenths
17	ProductTicksInThirtySeconds	Product ticks in thirty-seconds
18	ProductTicksInSixtyFourths	Product ticks in sixty-fourths
19	ProductTicksInOneTwentyEighths	Product ticks in one-twenty-eighths
20	NormalRateRepresentation	Normal rate representation (e.g. FX rate)
21	InverseRateRepresentation	Inverse rate representation (e.g. FX rate)
22	BasisPoints	Basis points. When the price is not spread based.

Code	Name	Description
23	UpfrontPoints	Up front points. Used specifically for CDS pricing.
24	InterestRate	Interest rate. When the price is an interest rate. For example, used with benchmark reference rate.
25	PercentageNotional	Percentage of notional

Used in components: [SpreadOrBenchmarkCurveData](#)

180.2.247 BenchmarkSecurityID

The identifier of the benchmark security, e.g. Treasury against Corporate bond.

See SecurityID (tag 48) for description and valid values.

Type: [String](#)

Used in components: [SpreadOrBenchmarkCurveData](#)

180.2.248 BenchmarkSecurityIDSource

Identifies class or source of the BenchmarkSecurityID(699) value.

Required if BenchmarkSecurityID is specified.

Type: [String](#)

Allowed values in SecurityIDSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
3	QUIK	QUIK
4	ISINNumber	ISIN
5	RICCode	RIC
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
7	ISOCountryCode	ISO Country Code
8	ExchangeSymbol	Exchange symbol
9	ConsolidatedTapeAssociation	Consolidated Tape Association (CTA) Symbol (SIAC CTS/CQS line format)

Code	Name	Description
A	BloombergSymbol	Bloomberg Symbol
B	Wertpapier	Wertpapier
C	Dutch	Dutch
D	Valoren	Valoren
E	Sicovam	Sicovam
F	Belgian	Belgian
G	Common	"Common" (Clearstream and Euroclear)
H	ClearingHouse	Clearing house / Clearing organization
I	ISDAFpMLSpecification	ISDA/FpML product specification (XML in SecurityXML(1185))
J	OptionPriceReportingAuthority	Option Price Reporting Authority
K	ISDAFpMLURL	ISDA/FpML product URL (URL in SecurityID(48))
L	LetterOfCredit	Letter of credit
M	MarketplaceAssignedIdentifier	Marketplace-assigned Identifier
N	MarkitREDEntityCLIP	Markit RED entity CLIP
P	MarkitREDPairCLIP	Markit RED pair CLIP
Q	CFTCCommodityCode	CFTC commodity code
R	ISDACommodityReferencePrice	ISDA Commodity Reference Price
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbolology BBGID".
T	LegalEntityIdentifier	Legal entity identifier
U	Synthetic	Synthetic. Used to specify that the security identifier is synthetic for linking nested underliers when there is no market identifier for the collection.
V	FidessaInstrumentMnemonic	Fidessa Instrument Mnemonic (FIM)
W	IndexName	Index name. Standard name of the index or rate index, e.g. "LIBOR" or "iTraxx Australia".
X	UniformSymbol	Uniform Symbol (UMTF Symbol)
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in components: [SpreadOrBenchmarkCurveData](#)

180.2.249 BidCompReqGrp

Name	Mult.	Type	Description
NoBidComponents	[1..1]	NumInGroup	Used if BidType="Disclosed"
ListID	[0..1]	String	Required if NoBidComponents > 0. Must be first field in repeating group.
Side	[0..1]	CodeSet	When used in request for a "Disclosed" bid indicates that bid is required on assumption that SideValue1 is Buy or Sell. SideValue2 can be derived by inference.
TradingSessionID	[0..1]	CodeSet	Indicates off-exchange type activities for Detail.
TradingSessionSubID	[0..1]	CodeSet	
NetGrossInd	[0..1]	CodeSet	Indicates Net or Gross for selling Detail.
SettlType	[0..1]	CodeSet	
SettlDate	[0..1]	LocalMktDate	Takes precedence over SettlType value and conditionally required/omitted for specific SettlType values.
Account	[0..1]	String	
AcctIDSource	[0..1]	CodeSet	

Used in messages: **BidRequest**

180.2.250 BidCompRspGrp

Name	Mult.	Type	Description
NoBidComponents	[1..1]	NumInGroup	Number of bid repeating groups
CommissionData	[1..1]	Component	First element Commission required if NoBidComponents > 0.
ListID	[0..1]	String	
Country	[0..1]	Country	ISO Country Code
Side	[0..1]	CodeSet	When used in response to a "Disclosed" request indicates whether SideValue1 is Buy or Sell. SideValue2 can be derived by inference.
Price	[0..1]	Price	Second element of price
PriceType	[0..1]	CodeSet	
FairValue	[0..1]	Amt	The difference between the value of a future and the value of the underlying equities after allowing for the discounted cash flows associated with the underlying stocks (E.g. Dividends etc).

Name	Mult.	Type	Description
NetGrossInd	[0..1]	CodeSet	Net/Gross
SettlType	[0..1]	CodeSet	
SettlDate	[0..1]	LocalMktDate	Takes precedence over SettlType value and conditionally required/omitted for specific SettlType values.
TradingSessionID	[0..1]	CodeSet	
TradingSessionSubID	[0..1]	CodeSet	
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.

Used in messages: **BidResponse**

180.2.251 BidDescReqGrp

Name	Mult.	Type	Description
NoBidDescriptors	[1..1]	NumInGroup	Used if BidType="Non Disclosed"
BidDescriptorType	[0..1]	CodeSet	Required if NoBidDescriptors > 0. Must be first field in repeating group.
BidDescriptor	[0..1]	String	
SideValueInd	[0..1]	CodeSet	Refers to the SideValue1 or SideValue2. These are used as opposed to Buy or Sell so that the basket can be quoted either way as Buy or Sell.
LiquidityValue	[0..1]	Amt	Value between LiquidityPctLow and LiquidityPctHigh in Currency
LiquidityNumSecurities	[0..1]	int	Number of Securites between LiquidityPctLow and LiquidityPctHigh in Currency
LiquidityPctLow	[0..1]	Percentage	Liquidity indicator or lower limit if LiquidityNumSecurities > 1
LiquidityPctHigh	[0..1]	Percentage	Upper liquidity indicator if LiquidityNumSecurities > 1
EFPTackingError	[0..1]	Percentage	Eg Used in EFP (Exchange For Physical) trades 12%
FairValue	[0..1]	Amt	Used in EFP trades

Name	Mult.	Type	Description
OutsideIndexPct	[0..1]	Percentage	Used in EFP trades
ValueOfFutures	[0..1]	Amt	Used in EFP trades

Used in messages: **BidRequest**

180.2.252 BidDescriptor

BidDescriptor value. Usage depends upon BidDescriptorTyp (399).

If BidDescriptorType = 1

Industrials etc - Free text

If BidDescriptorType = 2

"FR" etc - ISO Country Codes

If BidDescriptorType = 3

FT00, FT250, STOXX - Free text

Type: **String**

Used in groups: **BidDescReqGrp**

180.2.253 BidDescriptorType

Code to identify the type of BidDescriptor (400).

Type: **int**

Allowed values in BidDescriptorTypeCodeSet:

Code	Name	Description
1	Sector	Sector
2	Country	Country
3	Index	Index

Used in groups: **BidDescReqGrp**

180.2.254 BidForwardPoints

Bid F/X forward points added to spot rate. May be a negative value.

Type: **PriceOffset**

Used in groups: **QuotEntryAckGrp, QuotEntryGrp**

Used in messages: **Quote, QuoteResponse, QuoteStatusReport**

180.2.255 BidForwardPoints2

Bid F/X forward points of the future portion of a F/X swap quote added to spot rate. May be a negative value.

Type: **PriceOffset**

Used in groups: **QuotEntryAckGrp, QuotEntryGrp**

Used in messages: **Quote, QuoteResponse, QuoteStatusReport**

180.2.256 BidID

For bid lists, unique identifier for BidResponse(35=I) as assigned by sell-side (broker, exchange, ECN). Uniqueness must be guaranteed within a single trading day.

For quotes, unique identifier for the bid side of the quote assigned by the quote issuer.

Type: **String**

Used in messages: **BidRequest, BidResponse, ListExecute, NewOrderList, Quote, QuoteStatusReport**

180.2.257 BidMDEntryID

The market data entry identifier of the bid side of a quote

Type: **String**

Used in messages: **QuoteStatusReport**

180.2.258 BidPx

Bid price/rate

Type: **Price**

Used in groups: [QuotEntryAckGrp](#), [QuotEntryGrp](#), [SecurityRiskMetricGrp](#)

Used in messages: [Quote](#), [QuoteResponse](#), [QuoteStatusReport](#)

180.2.259 BidQuoteID

Marketplace assigned quote identifier for the bid side. Can be used to indicate priority.

Type: [String](#)

Used in messages: [QuoteStatusReport](#)

180.2.260 BidRequestTransType

Identifies the Bid Request message type.

Type: [char](#)

Allowed values in BidRequestTransTypeCodeSet:

Code	Name	Description
C	Cancel	Cancel
N	New	New

Used in messages: [BidRequest](#)

180.2.261 BidSize

Quantity of bid

(Prior to FIX 4.2 this field was of type int)

Type: [Qty](#)

Used in groups: [QuotEntryAckGrp](#), [QuotEntryGrp](#)

Used in messages: [Quote](#), [QuoteResponse](#), [QuoteStatusReport](#)

180.2.262 BidSpotRate

Bid F/X spot rate.

Type: **Price**

Used in groups: **QuotEntryAckGrp**, **QuotEntryGrp**

Used in messages: **Quote**, **QuoteResponse**, **QuoteStatusReport**

180.2.263 BidSpread

Basis points relative to a benchmark curve on the bid side, such as LIBOR, or a known security, such as 10Y US Treasury bond. The benchmark security or curve name is specified in the SpreadOrBenchmarkCurveData component.

Type: **float**

Used in messages: **Quote**

180.2.264 BidSwapPoints

The bid FX Swap points for an FX Swap. It is the "far bid forward points - near offer forward point". Value can be negative. Expressed in decimal form. For example, 61.99 points is expressed and sent as 0.006199

Type: **PriceOffset**

Used in messages: **Quote**

180.2.265 BidTradeType

Code to represent the type of trade.

(Prior to FIX 4.4 this field was named "TradeType")

Type: **char**

Allowed values in BidTradeTypeCodeSet:

Code	Name	Description
A	Agency	Agency
G	VWAPGuarantee	VWAP Guarantee

Code	Name	Description
J	GuaranteedClose	Guaranteed Close
R	RiskTrade	Risk Trade

Used in messages: [BidRequest](#)

180.2.266 BidType

Code to identify the type of Bid Request.

Type: [int](#)

Allowed values in BidTypeCodeSet:

Code	Name	Description
1	NonDisclosed	"Non Disclosed" style (e.g. US/European)
2	Disclosed	"Disclosed" style (e.g. Japanese)
3	NoBiddingProcess	No bidding process

Used in messages: [BidRequest](#), [NewOrderList](#)

180.2.267 BidVolatility

Volatility based on bid prices.

Type: [float](#)

Used in groups: [SecurityRiskMetricGrp](#)

180.2.268 BidYield

Bid yield

Type: [Percentage](#)

Used in groups: [QuotEntryAckGrp](#), [QuotEntryGrp](#)

Used in messages: [Quote](#), [QuoteResponse](#), [QuoteStatusReport](#)

180.2.269 BlockTradeEligibilityIndicator

Indicates if a given instrument is eligible for block trading.

Type: **Boolean**

Used in components: **Instrument**

180.2.270 BlockTrdAllocIndicator

Indication that a block trade will be allocated.

Type: **int**

Allowed values in BlockTrdAllocIndicatorCodeSet:

Code	Name	Description
0	BlockToBeAllocated	Block to be allocated
1	BlockNotToBeAllocated	Block not to be allocated
2	AllocatedTrade	Allocated trade. A sub-trade of a block trade.

Used in groups: **TrdCapRptSideGrp**

180.2.271 BodyLength

Message length, in bytes, forward to the CheckSum field. ALWAYS SECOND FIELD IN MESSAGE. (Always unencrypted)

Type: **Length**

Used in components: **StandardHeader**

180.2.272 BookingRefID

Common reference passed to a post-trade booking process (e.g. industry matching utility).

Type: **String**

Used in messages: **AllocationInstruction, AllocationInstructionAlert, AllocationReport**

180.2.273 BookingType

Method for booking out this order. Used when notifying a broker that an order to be settled by that broker is to be booked out as an OTC derivative (e.g. CFD or similar).

Type: **int**

Allowed values in BookingTypeCodeSet:

Code	Name	Description
0	RegularBooking	Regular booking
1	CFD	CFD (Contract for difference)
2	TotalReturnSwap	Total Return Swap

Used in components: **TradeReportOrderDetail**

Used in groups: **ListOrdGrp**, **QuotEntryAckGrp**, **QuotEntryGrp**, **SideCrossOrdModGrp**

Used in messages: **AllocationInstruction**, **AllocationInstructionAlert**, **AllocationReport**, **ExecutionReport**, **MultilegOrderCancelReplace**, **NewOrderMultileg**, **NewOrderSingle**, **OrderCancelReplaceRequest**, **Quote**, **QuoteRequest**, **QuoteStatusReport**

180.2.274 BookingUnit

Indicates what constitutes a bookable unit.

Type: **char**

Allowed values in BookingUnitCodeSet:

Code	Name	Description
0	EachPartialExecutionIsABookableUnit	Each partial execution is a bookable unit
1	AggregatePartialExecutionsOn-ThisOrder	Aggregate partial executions on this order, and book one trade per order
2	AggregateExecutionsForThisSymbol	Aggregate executions for this symbol, side, and settlement date

Used in groups: **ListOrdGrp**, **SideCrossOrdModGrp**

Used in messages: **ExecutionReport**, **MultilegOrderCancelReplace**, **NewOrderMultileg**, **NewOrderSingle**, **OrderCancelReplaceRequest**

180.2.275 BrokerConfirmationDesc

Describes the type of broker confirmation executed between the parties. Can be used as an alternative to MasterConfirmationDesc(1962). See <http://www.fpml.org/coding-scheme/broker-confirmation-type> for values.

Type: **String**

Used in components: **FinancingDetails**

180.2.276 BusinessCenter

A business center whose calendar is used for date adjustment, e.g. "GBLO". See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **BusinessCenterGrp**

180.2.277 BusinessCenterGrp

BusinessCenterGrp is a repeating subcomponent within the DateAdjustment component. It is used to specify the set of business centers whose calendars drive the date adjustment. The business centers defined here apply to all adjustable dates in the instrument unless specifically overridden in the respective specified components elsewhere.

Name	Mult.	Type	Description
NoBusinessCenters	[1..1]	NumInGroup	
BusinessCenter	[0..1]	String	Required if NoBusinessCenters(40278) > 0.

Used in components: **DateAdjustment**

180.2.278 BusinessDayConvention

The business day convention used for adjusting dates. The value defined here applies to all adjustable dates in the instrument unless specifically overridden.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [DateAdjustment](#)

180.2.279 BusinessDayType

Relative identification of a business day.

Type: [int](#)

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in groups: [ClearingPriceParametersGrp](#)

180.2.280 BusinessRejectReason

Code to identify reason for a Business Message Reject message.

Type: [int](#)

Allowed values in BusinessRejectReasonCodeSet:

Code	Name	Description
0	Other	Other
1	UnknownID	Unknown ID
2	UnknownSecurity	Unknown Security
3	UnsupportedMessageType	Unsupported Message Type
4	ApplicationNotAvailable	Application not available
5	ConditionallyRequiredFieldMissing	Conditionally required field missing
6	NotAuthorized	Not Authorized
7	DeliverToFirmNotAvailableAtThis-Time	DeliverTo firm not available at this time
8	ThrottleLimitExceeded	Throttle limit exceeded
9	ThrottleLimitExceededSessionDis-connected	Throttle limit exceeded, session will be disconnected
10	ThrottledMessagesRejectedOnRe-quest	Throttled messages rejected on request
18	InvalidPriceIncrement	Invalid price increment

Used in messages: **BusinessMessageReject**

180.2.281 BusinessRejectRefID

The value of the business-level "ID" field on the message being referenced.

Type: **String**

Used in messages: **BusinessMessageReject**

180.2.282 BuyVolume

Quantity bought.

Type: **Qty**

Used in messages: **SecurityStatus**

180.2.283 CalculatedCcyLastQty

Used for the calculated quantity of the other side of the currency trade. Can be derived from LastQty and LastPx.

Type: Qty

Used in messages: ExecutionReport, TradeCaptureReport, TradeCaptureReportAck

180.2.284 CalculationMethod

Specifies how the calculation will be made.

Type: int

Allowed values in CalculationMethodCodeSet:

Code	Name	Description
0	Automatic	Automatic (default).
1	Manual	Manual.

Used in groups: ClearingPriceParametersGrp

180.2.285 CancellationRights

For CIV - A one character code identifying whether Cancellation rights/Cooling off period applies.

Type: char

Allowed values in CancellationRightsCodeSet:

Code	Name	Description
Y	Yes	Yes
N	NoExecutionOnly	No - Execution Only
M	NoWaiverAgreement	No - Waiver agreement
O	NoInstitutional	No - Institutional

Used in messages: CrossOrderCancelReplaceRequest, ExecutionReport, MultilegOrderCancelReplace, NewOrderCross, NewOrderList, NewOrderMultileg, NewOrderSingle, OrderCancelReplaceRequest

180.2.286 CancelText

Identifies the reason for cancelation.

Type: **String**

Used in messages: **PayManagementRequest**

180.2.287 CapPrice

Used to express the ceiling price of a capped call

Type: **Price**

Used in components: **Instrument**

180.2.288 CardExpDate

The expiry date of the payment card as specified on the card being used for payment.

Type: **LocalMktDate**

Used in groups: **SettlInstGrp**

180.2.289 CardHolderName

The name of the payment card holder as specified on the card being used for payment.

Type: **String**

Used in groups: **SettlInstGrp**

180.2.290 CardIssNum

The issue number of the payment card as specified on the card being used for payment. This is only applicable to certain types of card.

Type: **String**

Used in groups: **SettlInstGrp**

180.2.291 CardNumber

The number of the payment card as specified on the card being used for payment.

Type: **String**

Used in groups: **SettlInstGrp**

180.2.292 CardStartDate

The start date of the card as specified on the card being used for payment.

Type: **LocalMktDate**

Used in groups: **SettlInstGrp**

180.2.293 CashDistribAgentAcctName

Name of account at agent bank for distributions.

Type: **String**

Used in groups: **RgstDistInstGrp**

180.2.294 CashDistribAgentAcctNumber

Account number at agent bank for distributions.

Type: **String**

Used in groups: **RgstDistInstGrp**

180.2.295 CashDistribAgentCode

BIC (Bank Identification Code–Swift managed) code of agent bank for cash distributions

Type: **String**

Used in groups: **RgstDistInstGrp**

180.2.296 CashDistribAgentName

Name of local agent bank if for cash distributions

Type: **String**

Used in groups: **RgstDistInstGrp**

180.2.297 CashDistribCurr

Specifies currency to be used for Cash Distributions see "Appendix 6-A Valid Currency Codes".

Type: **Currency**

Used in groups: **RgstDistInstGrp**

180.2.298 CashDistribPayRef

Free format Payment reference to assist with reconciliation of distributions.

Type: **String**

Used in groups: **RgstDistInstGrp**

180.2.299 CashMargin

Identifies whether an order is a margin order or a non-margin order. This is primarily used when sending orders to Japanese exchanges to indicate sell margin or buy to cover. The same tag could be assigned also by buy-side to indicate the intent to sell or buy margin and the sell-side to accept or reject (base on some validation criteria) the margin request.

Type: **char**

Allowed values in CashMarginCodeSet:

Code	Name	Description
1	Cash	Cash
2	MarginOpen	Margin Open
3	MarginClose	Margin Close

Used in groups: **ListOrdGrp**, **SideCrossOrdModGrp**

Used in messages: [ExecutionReport](#), [MultilegOrderCancelReplace](#), [NewOrderMultileg](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#)

180.2.300 CashOrderQty

Specifies the approximate order quantity desired in total monetary units vs. as tradeable units (e.g. number of shares). The broker or fund manager (for CIV orders) would be responsible for converting and calculating a tradeable unit (e.g. share) quantity (OrderQty (38)) based upon this amount to be used for the actual order and subsequent messages.

Type: [Qty](#)

Used in components: [OrderQtyData](#)

180.2.301 CashOutstanding

Starting consideration less repayments

Type: [Amt](#)

Used in messages: [CollateralAssignment](#), [CollateralInquiry](#), [CollateralReport](#), [CollateralRequest](#), [CollateralResponse](#)

180.2.302 CashSettlAccruedInterestIndicator

Indicates whether accrued interest is included or not in the value provided in CashSettlAmount(40034). For cash settlement this specifies whether quotations should be obtained inclusive or not of accrued interest.

For physical settlement this specifies whether the buyer should deliver the obligation with an outstanding principal balance that includes or excludes accrued interest.

Type: [Boolean](#)

Used in groups: [CashSettlTermGrp](#)

180.2.303 CashSettlAmount

The amount paid between the trade parties, seller to the buyer, for cash settlement on the cash settlement date.

Type: [Amt](#)

Used in groups: [CashSettlTermGrp](#)

180.2.304 CashSettlBusinessCenter

Identifies the business center calendar used at valuation time for cash settlement purposes e.g. "GBLO". See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **CashSettlTermGrp**

180.2.305 CashSettlBusinessDays

The number of business days used in the determination of the cash settlement payment date.

Type: **int**

Used in groups: **CashSettlTermGrp**

180.2.306 CashSettlCurrency

Specifies the currency the CashSettlAmount(40034) is denominated in. Uses ISO 4217 currency codes.

Type: **Currency**

Used in groups: **CashSettlTermGrp**

180.2.307 CashSettlDateAdjusted

The adjusted cash settlement date.

Type: **LocalMktDate**

Used in components: **CashSettlDate**

180.2.308 CashSettlDateBusinessCenter

The business center calendar used for date adjustment of the cash settlement unadjusted or relative date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **CashSettlDateBusinessCenterGrp**

180.2.309 CashSettlDateBusinessCenterGrp

CashSettlDateBusinessCenterGrp is a repeating subcomponent within the CashSettlDate component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the DateAdjustment component within the Instrument component.

Name	Mult.	Type	Description
NoCashSettlDateBusinessCenters	[1..1]	NumInGroup	
CashSettlDateBusinessCenter	[0..1]	String	Required if NoCashSettlDateBusinessCenters(42214) > 0.

Used in components: [CashSettlDate](#)

180.2.310 CashSettlDateBusinessDayConvention

The business day convention used to adjust the cash settlement provision's date. Used only to override the business day convention defined in the Instrument component.

Type: [int](#)

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [CashSettlDate](#)

180.2.311 CashSettlDate

The CashSettlDate component is a subcomponent within the CashSettlTermGrp component used to report the cash settlement date defined in the settlement provision.

Name	Mult.	Type	Description
CashSettlDateUnadjusted	[0..1]	LocalMktDate	
CashSettlDateBusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the DateAdjustment component in the Instrument component. The specified value would be specific to this instance of the cash settlement provision.
CashSettlDateBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the DateAdjustment component in the Instrument component. The specified values would be specific to this instance of the cash settlement provision.
CashSettlDateRelativeTo	[0..1]	int	
CashSettlDateOffsetPeriod	[0..1]	int	Conditionally required when CashSettlDateOffsetUnit(42211) is specified.
CashSettlDateOffsetUnit	[0..1]	CodeSet	Conditionally required when CashSettlDateOffsetPeriod(42210) is specified.
CashSettlDateOffsetDayType	[0..1]	CodeSet	
CashSettlDateAdjusted	[0..1]	LocalMktDate	

Used in groups: **CashSettlTermGrp**

180.2.312 CashSettlDateOffsetDayType

Specifies the day type of the relative cash settlement date offset.

Type: **int**

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business

Code	Name	Description
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: **CashSettlDate**

180.2.313 CashSettlDateOffsetPeriod

Time unit multiplier for the relative cash settlement date offset.

Type: **int**

Used in components: **CashSettlDate**

180.2.314 CashSettlDateOffsetUnit

Time unit associated with the relative cash settlement date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: **CashSettlDate**

180.2.315 CashSettlDateRelativeTo

Specifies the anchor date when the cash settlement date is relative to an anchor date.

See http://www.fixtradingcommunity.org/codelists#Relative_To_Date for values.

Type: **int**

Used in components: **CashSettlDate**

180.2.316 CashSettlDateUnadjusted

The unadjusted cash settlement date.

Type: **LocalMktDate**

Used in components: **CashSettlDate**

180.2.317 CashSettlDealer

Identifies the dealer from whom price quotations for the reference obligation are obtained for the purpose of cash settlement valuation calculation.

Type: **String**

Used in groups: **CashSettlDealerGrp**

180.2.318 CashSettlDealerGrp

CashSettlDealerGrp is a repeating subcomponent within the CashSettlTermGrp component. It is used to specify the dealers from whom price quotations for the reference obligation are obtained for the purpose of cash settlement valuation.

Name	Mult.	Type	Description
NoCashSettlDealers	[1..1]	NumInGroup	
CashSettlDealer	[0..1]	String	Required if NoCashSettlDealers(40277) > 0.

Used in groups: **CashSettlTermGrp**

180.2.319 CashSettlFixedTermIndicator

Indicates whether fixed settlement is applicable or not applicable in a recovery lock.

Type: **Boolean**

Used in groups: **CashSettlTermGrp**

180.2.320 CashSettlMinimumQuoteAmount

When determining the cash settlement amount, if weighted average price quotes are to be obtained for the reference obligation, this is the minimum intended threshold amount of outstanding principal balance of the reference obligation for which the quote should be obtained. If not specified, the ISDA definitions provide for a fallback amount of the lower of either USD1,000,000 (or its equivalent in the relevant obligation currency) or the (minimum) quoted amount.

Type: **Amt**

Used in groups: **CashSettlTermGrp**

180.2.321 CashSettlMinimumQuoteCurrency

Specifies the currency the CashSettlMinimumQuoteAmount(40030) is denominated in. Uses ISO 4217 Currency Code.

Type: **Currency**

Used in groups: **CashSettlTermGrp**

180.2.322 CashSettlNumOfValuationDates

Where multiple valuation dates are specified as being applicable for cash settlement, this specifies the number of applicable valuation dates.

Type: **int**

Used in groups: **CashSettlTermGrp**

180.2.323 CashSettlPriceDefault

The default election for determining settlement price.

Type: **int**

Allowed values in CashSettlPriceDefaultCodeSet:

Code	Name	Description
0	Close	Close. Official closing price.
1	Hedge	Hedge. Determined by the hedging party.

Used in groups: **CashSettlTermGrp**

180.2.324 CashSettlPriceSource

The source from which the settlement price is to be obtained.

See <http://www.fpml.org/coding-scheme/settlement-price-source> for values.

Type: **String**

Used in groups: **CashSettlTermGrp**

180.2.325 CashSettlQuoteAmount

When determining the cash settlement amount, if weighted average price quotes are to be obtained for the reference obligation, this is the upper limit to the outstanding principal balance of the reference obligation for which the quote should be obtained. If not specified, the ISDA definitions provide for a fallback amount equal to floating rate payer calculation amount.

Type: **Amt**

Used in groups: **CashSettlTermGrp**

180.2.326 CashSettlQuoteCurrency

Specifies the currency the CashSettlQuoteAmount(40028) is denominated in. Uses ISO 4217 Currency Code.

Type: **Currency**

Used in groups: **CashSettlTermGrp**

180.2.327 CashSettlQuoteMethod

The type of quote used to determine the cash settlement price.

Type: **int**

Allowed values in CashSettlQuoteMethodCodeSet:

Code	Name	Description
0	Bid	Bid
1	Mid	Mid
2	Offer	Offer

Used in groups: [CashSettlTermGrp](#)

180.2.328 CashSettlRecoveryFactor

Used for fixed recovery, this specifies the recovery level as determined at contract inception, to be applied in the event of a default. The factor is used to calculate the amount paid by the seller to the buyer for cash settlement on the cash settlement date. The amount calculated is $(1 - \text{CashSettlRecoveryFactor}(40035)) \times \text{floating rate payer calculation amount}$. The currency is derived from the floating rate payer calculation amount.

Type: [float](#)

Used in groups: [CashSettlTermGrp](#)

180.2.329 CashSettlTermGrp

The CashSettlTermGrp is a repeating component within the Instrument component used to report cash settlement terms referenced from UnderlyingInstruments.

Name	Mult.	Type	Description
NoCashSettlTerms	[1..1]	NumInGroup	
CashSettlCurrency	[0..1]	Currency	Required if NoCashSettlTerms (40022) > 0.
CashSettlValuationFirstBusinessDay-Offset	[0..1]	int	
CashSettlValuationSubsequentBusinessDaysOffset	[0..1]	int	
CashSettlNumOfValuationDates	[0..1]	int	
CashSettlValuationTime	[0..1]	LocalMktTime	
CashSettlBusinessCenter	[0..1]	String	
CashSettlQuoteMethod	[0..1]	CodeSet	
CashSettlQuoteAmount	[0..1]	Amt	
CashSettlQuoteCurrency	[0..1]	Currency	
CashSettlMinimumQuoteAmount	[0..1]	Amt	
CashSettlMinimumQuoteCurrency	[0..1]	Currency	
CashSettlDealerGrp	[0..*]	Group	
CashSettlPriceSource	[0..1]	String	
CashSettlPriceDefault	[0..1]	CodeSet	
CashSettlBusinessDays	[0..1]	int	

Name	Mult.	Type	Description
CashSettlAmount	[0..1]	Amt	
CashSettlDate	[0..1]	Component	
CashSettlRecoveryFactor	[0..1]	float	
CashSettlFixedTermIndicator	[0..1]	Boolean	
CashSettlAccruedInterestIndicator	[0..1]	Boolean	
CashSettlValuationMethod	[0..1]	CodeSet	
CashSettlTermXID	[0..1]	XID	

Used in components: **Instrument**

180.2.330 CashSettlTermXID

A named string value referenced by UnderlyingSettlTermXIDRef(41315).

Type: **XID**

Used in groups: **CashSettlTermGrp**

180.2.331 CashSettlValuationFirstBusinessDayOffset

The number of business days after settlement conditions have been satisfied, when the calculation agent is to obtain a price quotation on the reference obligation for the purpose of cash settlement.

Type: **int**

Used in groups: **CashSettlTermGrp**

180.2.332 CashSettlValuationMethod

The ISDA defined methodology for determining the final price of the reference obligation for purposes of cash settlement.

Type: **int**

Allowed values in CashSettlValuationMethodCodeSet:

Code	Name	Description
0	Market	Market
1	Highest	Highest
2	AverageMarket	Average market
3	AverageHighest	Average highest
4	BlendedMarket	Blended market
5	BlendedHighest	Blended highest
6	AverageBlendedMarket	Average blended market
7	AverageBlendedHighest	Average blended highest

Used in groups: **CashSettlTermGrp**

180.2.333 CashSettlValuationSubsequentBusinessDaysOffset

The number of business days between successive valuation dates when multiple valuation dates are applicable for cash settlement.

Type: **int**

Used in groups: **CashSettlTermGrp**

180.2.334 CashSettlValuationTime

The time of valuation.

Type: **LocalMktTime**

Used in groups: **CashSettlTermGrp**

180.2.335 CcyAmt

Net flow of Currency 1

Type: **Amt**

Used in groups: **SettlObligationInstructions**

180.2.336 CFICode

Indicates the type of security using ISO 10962 standard, Classification of Financial Instruments (CFI code) values. ISO 10962 is maintained by ANNA (Association of National Numbering Agencies) acting as Registration Authority. See "Appendix 6-B FIX Fields Based Upon Other Standards". See also the Product (460) and SecurityType (167) fields. It is recommended that CFICode be used instead of SecurityType (167) for non-Fixed Income instruments.

A subset of possible values applicable to FIX usage are identified in "Appendix 6-D CFICode Usage - ISO 10962 Classification of Financial Instruments (CFI code)"

Type: **String**

Used in components: **Instrument**

Used in groups: **SecTypesGrp**, **SettlInstGrp**

Used in messages: **SettlementInstructionRequest**

180.2.337 CheckSum

Three byte, simple checksum (see Volume 2: "Checksum Calculation" for description). ALWAYS LAST FIELD IN MESSAGE; i.e. serves, with the trailing <SOH>, as the end-of-message delimiter. Always defined as three characters. (Always unencrypted)

Type: **String**

Used in components: **StandardTrailer**

180.2.338 ClearedIndicator

Indicates whether the trade or position being reported was cleared through a clearing organization.

Type: **int**

Allowed values in ClearedIndicatorCodeSet:

Code	Name	Description
0	NotCleared	Not cleared. Trade or position has not yet been submitted for clearing.
1	Cleared	Cleared. Trade or position has been successfully cleared.
2	Submitted	Submitted. Trade or position has been submitted for clearing.
3	Rejected	Rejected. Trade or position was rejected by clearing.

Used in groups: [AllocAckGrp](#)

Used in messages: [Confirmation](#), [PositionMaintenanceReport](#), [PositionReport](#), [TradeCaptureReport](#)

180.2.339 ClearingAccountType

Designates the account type to be used for the order when submitted to clearing.

Type: [int](#)

Allowed values in ClearingAccountTypeCodeSet:

Code	Name	Description
1	Customer	Customer
2	Firm	Firm
3	MarketMaker	Market maker

Used in groups: [ClearingAccountTypeGrp](#), [SideCrossOrdModGrp](#)

Used in messages: [ExecutionReport](#), [MassOrder](#), [MassOrderAck](#), [MultilegOrderCancelReplace](#), [NewOrderMultileg](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#)

180.2.340 ClearingAccountTypeGrp

The ClearingAccountTypeGrp component is used specify the type of clearing account types.

Name	Mult.	Type	Description
NoClearingAccountTypes	[1..1]	NumInGroup	
ClearingAccountType	[0..1]	CodeSet	Required if NoClearingAccountTypes(1918) > 0.

Used in groups: [PriceMovementGrp](#)

180.2.341 ClearingBusinessDate

The business date for which the trade is expected to be cleared.

Type: [LocalMktDate](#)

Used in messages: [AccountSummaryReport](#), [AdjustedPositionReport](#), [AllocationInstruction](#), [AllocationInstructionAlert](#), [AllocationReport](#), [AllocationReportAck](#), [AssignmentReport](#), [CollateralAssignment](#), [CollateralInquiry](#), [CollateralInquiryAck](#), [CollateralReport](#), [CollateralRequest](#), [CollateralResponse](#), [ContraryIntentionReport](#), [DerivativeSecurityList](#), [MarginRequirementInquiry](#), [MarginRequirementInquiryAck](#), [MarginRequirementReport](#), [MarketDataSnapshotFullRefresh](#), [PayManagementReport](#), [PayManagementRequest](#), [PositionMaintenanceReport](#), [PositionMaintenanceRequest](#), [PositionReport](#), [PositionTransferInstruction](#), [PositionTransferReport](#), [RegistrationInstructions](#), [RequestForPositions](#), [RequestForPositionsAck](#), [SecurityDefinition](#), [SecurityDefinitionUpdateReport](#), [SecurityList](#), [SecurityListUpdateReport](#), [SettlementObligationReport](#), [TradeCaptureReport](#), [TradeCaptureReportAck](#), [TradeCaptureReportRequest](#), [TradeMatchReport](#)

180.2.342 ClearingFeeIndicator

Indicates type of fee being assessed of the customer for trade executions at an exchange. Applicable for futures markets only at this time.

(Values source CBOT, CME, NYBOT, and NYMEX):

Type: [String](#)

Allowed values in ClearingFeeIndicatorCodeSet:

Code	Name	Description
1	FirstYearDelegate	1st year delegate trading for own account
2	SecondYearDelegate	2nd year delegate trading for own account
3	ThirdYearDelegate	3rd year delegate trading for own account
4	FourthYearDelegate	4th year delegate trading for own account
5	FifthYearDelegate	5th year delegate trading for own account
9	SixthYearDelegate	6th year delegate trading for own account
B	CBOEMember	CBOE Member
C	NonMemberAndCustomer	Non-member and Customer
E	EquityMemberAndClearingMember	Equity Member and Clearing Member
F	FullAndAssociateMember	Full and Associate Member trading for own account and as floor brokers
H	Firms106HAnd106J	106.H and 106.J firms
I	GIM	GIM, IDEM and COM Membership Interest Holders
L	Lessee106FEmployees	Lessee 106.F Employees
M	AllOtherOwnershipTypes	All other ownership types

Used in groups: [AllocGrp](#), [ListOrdGrp](#), [SideCrossOrdModGrp](#), [TrdCapRptSideGrp](#), [TrdMatchSideGrp](#)

Used in messages: [ExecutionReport](#), [MultilegOrderCancelReplace](#), [NewOrderMultileg](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#), [TradeCaptureReportAck](#)

180.2.343 ClearingInstruction

Eligibility of this trade for clearing and central counterparty processing.

Type: [int](#)

Allowed values in ClearingInstructionCodeSet:

Code	Name	Description
0	ProcessNormally	Process normally
1	ExcludeFromAllNetting	Exclude from all netting
2	BilateralNettingOnly	Bilateral netting only
3	ExClearing	Ex clearing
4	SpecialTrade	Special trade
5	MultilateralNetting	Multilateral netting
6	ClearAgainstCentralCounterparty	Clear against central counterparty
7	ExcludeFromCentralCounterparty	Exclude from central counterparty
8	ManualMode	Manual mode (pre-posting and/or pre-giveup)
9	AutomaticPostingMode	Automatic posting mode (trade posting to the position account number specified)
10	AutomaticGiveUpMode	Automatic give-up mode (trade give-up to the give-up destination number specified)
11	QualifiedServiceRepresentativeQSR	Qualified Service Representative QSR
12	CustomerTrade	Customer trade
13	SelfClearing	Self clearing
14	BuyIn	Buy-in

Used in groups: [ClrInstGrp](#)

180.2.344 ClearingIntention

Specifies the party's or parties' intention to clear the trade.

Type: [int](#)

Allowed values in ClearingIntentionCodeSet:

Code	Name	Description
0	DoNotIntendToClear	Do not intend to clear
1	IntendToClear	Intend to clear

Used in messages: [TradeCaptureReport](#)

180.2.345 ClearingPortfolioID

When the transaction is cleared and included in a portfolio of transactions this identifies the portfolio by its unique identifier.

Type: [String](#)

Used in messages: [MarginRequirementReport](#), [PositionReport](#), [TradeCaptureReport](#)

180.2.346 ClearingPriceOffset

Constant value required for the calculation of the clearing price, e.g. for variance futures.

Type: [PriceOffset](#)

Used in groups: [ClearingPriceParametersGrp](#)

180.2.347 ClearingPriceParametersGrp

This component is used convey parameters that are relevant for the calculation of clearing prices that are different from the trading prices due to the nature of the product, e.g. variance futures.

Name	Mult.	Type	Description
NoClearingPriceParameters	[1..1]	NumInGroup	Number of parameter sets.
BusinessDayType	[0..1]	CodeSet	Required if NoClearingPriceParameters (2580) > 0. Use to identify the relative business day to which the parameters apply.
ClearingPriceOffset	[0..1]	PriceOffset	
VegaMultiplier	[0..1]	float	
AnnualTradingBusinessDays	[0..1]	int	

Name	Mult.	Type	Description
TotalTradingBusinessDays	[0..1]	int	
TradingBusinessDays	[0..1]	int	
StandardVariance	[0..1]	float	
RealizedVariance	[0..1]	float	
RelatedClosePrice	[0..1]	Price	
RiskFreeRate	[0..1]	float	Interest rate until the instrument expires and used to calculate DiscountFactor(1592).
OvernightInterestRate	[0..1]	float	Used to calculate AccumulatedReturnModified-VariationMargin(2591).
AccumulatedReturnModifiedVariation-Margin	[0..1]	float	
DiscountFactor	[0..1]	float	
Volatility	[0..1]	float	
ClearingSettlPrice	[0..1]	Price	
CalculationMethod	[0..1]	CodeSet	

Used in messages: **SecurityStatus**

180.2.348 ClearingRequirementException

Specifies whether a party to a swap is using an exception to a clearing requirement. In the US, one such clearing requirement is CFTC's rule pursuant to CEA Section 2(h)(1).

Type: **int**

Allowed values in ClearingRequirementExceptionCodeSet:

Code	Name	Description
0	NoException	No exception
1	Exception	Exception. Used to indicate an exception to a clearing requirement without elaborating on the type of exception.
2	EndUserException	End-user exception. In the US, see CFTC Final Rule on End-User Exception to Clearing Requirements for Swaps Fact Sheet http://www.cftc.gov/ucm/groups/public/@newsroom/documents/file/eue_factsheet.pdf

Code	Name	Description
3	InterAffiliateException	Inter-affiliate exception. In the US, see CFTC Final Rule - Clearing Exemption for Swaps Between Certain Affiliated Entities http://www.cftc.gov//ucm/groups/public/@lrfederalregister/documents/file/2013-07970a.pdf
4	TreasuryAffiliateException	Treasury affiliate exception. In the US, see CFTC No Action Letter 13-22 No Action Relief from the Clearing Requirement for Swaps Entered into by Eligible Treasury Affiliates http://www.cftc.gov//ucm/groups/public/@lrlattergeneral/documents/letter/13-22.pdf
5	CooperativeException	Cooperative exception. Clearing exception for certain swaps entered into by cooperatives. In the US, see Regulation 50.51(a) Definition of Exempt Cooperative: https://www.federalregister.gov/articles/2013/08/22/2013-19945/clearing-exemption-for-certain-swaps-entered-into-by-cooperatives

Used in messages: [TradeCaptureReport](#)

180.2.349 ClearingSettlPrice

Clearing settlement price.

Type: [Price](#)

Used in groups: [ClearingPriceParametersGrp](#)

180.2.350 ClearingTradePrice

Alternate clearing price

Type: [Price](#)

Used in messages: [PositionTransferInstruction](#), [PositionTransferReport](#), [TradeCaptureReport](#)

180.2.351 ClientBidID

Unique identifier for a Bid Request as assigned by institution. Uniqueness must be guaranteed within a single trading day.

Type: [String](#)

Used in messages: [BidRequest](#), [BidResponse](#), [ListExecute](#), [NewOrderList](#)

180.2.352 ClOrdID

Unique identifier for Order as assigned by the buy-side (institution, broker, intermediary etc.) (identified by SenderCompID(49) or OnBehalfOfCompID(115) as appropriate). Uniqueness must be guaranteed within a single trading day. Firms, particularly those which electronically submit multi-day orders, trade globally or throughout market close periods, should ensure uniqueness across days, for example by embedding a date within the ClOrdID(11) field.

Type: **String**

Used in components: **TradeReportOrderDetail**

Used in groups: **InstrmtStrkPxGrp, ListOrdGrp, OrdAllocGrp, OrdListStatGrp, OrderAggregationGrp, OrderEntryAckGrp, OrderEntryGrp, SideCrossOrdCxlGrp, SideCrossOrdModGrp**

Used in messages: **CollateralAssignment, CollateralInquiry, CollateralInquiryAck, CollateralReport, CollateralRequest, CollateralResponse, Email, ExecutionAck, ExecutionReport, MultilegOrderCancelReplace, NewOrderMultileg, NewOrderSingle, OrderCancelReject, OrderCancelReplaceRequest, OrderCancelRequest, OrderMassActionReport, OrderMassActionRequest, OrderMassCancelReport, OrderMassCancelRequest, OrderStatusRequest, QuoteRequest, QuoteResponse, RegistrationInstructions, RegistrationInstructionsResponse, SettlementInstructions, TradeCaptureReportRequest**

180.2.353 ClOrdLinkID

Permits order originators to tie together groups of orders in which trades resulting from orders are associated for a specific purpose, for example the calculation of average execution price for a customer or to associate lists submitted to a broker as waves of a larger program trade.

Type: **String**

Used in groups: **ListOrdGrp, SideCrossOrdCxlGrp, SideCrossOrdModGrp**

Used in messages: **ExecutionReport, MultilegOrderCancelReplace, NewOrderMultileg, NewOrderSingle, OrderCancelReject, OrderCancelReplaceRequest, OrderCancelRequest, OrderStatusRequest**

180.2.354 ClrInstGrp

Name	Mult.	Type	Description
NoClearingInstructions	[1..1]	NumInGroup	
ClearingInstruction	[0..1]	CodeSet	Required if NoClearingInstructions > 0

Used in groups: [AllocGrp](#), [TrdCapRptAckSideGrp](#), [TrdCapRptSideGrp](#)

180.2.355 CollAction

Action proposed for an Underlying Instrument instance.

Type: [int](#)

Allowed values in CollActionCodeSet:

Code	Name	Description
0	Retain	Retain
1	Add	Add
2	Remove	Remove

Used in groups: [UndInstrmtCollGrp](#)

180.2.356 CollApplType

conveys how the collateral should be/has been applied

Type: [int](#)

Allowed values in CollApplTypeCodeSet:

Code	Name	Description
0	SpecificDeposit	Specific Deposit
1	General	General

Used in messages: [CollateralReport](#), [CollateralResponse](#)

180.2.357 CollAsgnID

Collateral Assignment Identifier

Type: [String](#)

Used in messages: [CollateralAssignment](#), [CollateralResponse](#)

180.2.358 CollAsgnReason

Reason for Collateral Assignment

Type: **int**

Allowed values in CollAsgnReasonCodeSet:

Code	Name	Description
0	Initial	Initial
1	Scheduled	Scheduled
2	TimeWarning	Time Warning
3	MarginDeficiency	Margin Deficiency. In a CollateralRequest(35=AX), this indicates there is a margin deficiency. In a CollateralAssignment(35=AY), this indicates that the assignment is a deposit to meet margin deficiency.
4	MarginExcess	Margin Excess. In a CollateralRequest(35=AX), this indicates there is excess margin. In a CollateralAssignment(35=AY), this indicates that the assignment is a withdrawal of the margin excess.
5	ForwardCollateralDemand	Forward Collateral Demand
6	EventOfDefault	Event of default
7	AdverseTaxEvent	Adverse tax event
8	TransferDeposit	Transfer deposit. Collateral deposit in which the asset is to be transferred from an undesignated holding into collateral. I.e. there is no intermediate conversion to cash.
9	TransferWithdrawal	Transfer withdrawal. Collateral withdrawal in which the asset is to be transferred from collateral into an undesignated holding. I.e. there is no intermediate conversion to cash.
10	Pledge	Pledge. The purpose of the collateral assignment is to pledge or "lock up" a value of a basket of securities, individual security or fund as collateral.

Used in messages: **CollateralAssignment**, **CollateralRequest**, **CollateralResponse**

180.2.359 CollAsgnRefID

Collateral Assignment Identifier to which a transaction refers

Type: **String**

Used in messages: **CollateralAssignment**

180.2.360 CollAsgnRejectReason

Collateral Assignment Reject Reason

Type: **int**

Allowed values in CollAsgnRejectReasonCodeSet:

Code	Name	Description
0	UnknownDeal	Unknown deal (order / trade)
1	UnknownOrInvalidInstrument	Unknown or invalid instrument
2	UnauthorizedTransaction	Unauthorized transaction
3	InsufficientCollateral	Insufficient collateral
4	InvalidTypeOfCollateral	Invalid type of collateral
5	ExcessiveSubstitution	Excessive substitution
99	Other	Other

Used in messages: **CollateralResponse**

180.2.361 CollAsgnRespType

Type of collateral assignment response.

Type: **int**

Allowed values in CollAsgnRespTypeCodeSet:

Code	Name	Description
0	Received	Received
1	Accepted	Accepted
2	Declined	Declined
3	Rejected	Rejected
4	TransactionPending	Transaction pending. The collateral assignment transaction is pending at the recipient.
5	TransactionCompletedWithWarning	Transaction completed with warning - see Text(58) for further information. The collateral assignment transaction was accepted and completed but with warnings.

Used in messages: **CollateralResponse**

180.2.362 CollAsgnTransType

Collateral Assignment Transaction Type

Type: **int**

Allowed values in CollAsgnTransTypeCodeSet:

Code	Name	Description
0	New	New
1	Replace	Replace
2	Cancel	Cancel
3	Release	Release
4	Reverse	Reverse

Used in messages: **CollateralAssignment**, **CollateralResponse**

180.2.363 CollateralAmountGrp

The Collateral Amount Group component block is a repeating group that provides the current value of the collateral type on deposit. The currency of the collateral value may be optionally included.

Name	Mult.	Type	Description
NoCollateralAmounts	[1..1]	NumInGroup	
CurrentCollateralAmount	[0..1]	Amt	Required if NoCollateralAmounts(1703) > 0.
CollateralCurrency	[0..1]	Currency	Can be used to specify the currency of CollateralAmount(1704) if Currency(15) is not specified or is not the same.
CollateralCurrencyCodeSource	[0..1]	CodeSet	
CollateralAmountType	[0..1]	CodeSet	
CollateralFXRate	[0..1]	float	
CollateralFXRateCalc	[0..1]	CodeSet	
CollateralType	[0..1]	String	
CollateralAmountMarketSegmentID	[0..1]	String	
CollateralAmountMarketID	[0..1]	String	
HaircutIndicator	[0..1]	Boolean	
CollateralPortfolioID	[0..1]	String	

Name	Mult.	Type	Description
CollateralPercentOverage	[0..1]	Percentage	
CollateralMarketPrice	[0..1]	Price	
CollateralReinvestmentRate	[0..1]	Percentage	May be used to specify the average reinvestment rate when there are multiple instances of the CollateralReinvestmentGrp.
CollateralReinvestmentGrp	[0..*]	Group	
UnderlyingRefID	[0..1]	String	May be used to indicate that this entry applies to the underlying collateral instrument being referenced by the value in UnderlyingID(2874).

Used in messages: [AccountSummaryReport](#), [CollateralReport](#), [CollateralResponse](#), [PositionReport](#), [TradeCaptureReport](#)

180.2.364 CollateralAmountMarketID

Market associated with the collateral amount.

Type: [String](#)

Used in groups: [CollateralAmountGrp](#)

180.2.365 CollateralAmountMarketSegmentID

Market segment associated with the collateral amount.

Type: [String](#)

Used in groups: [CollateralAmountGrp](#)

180.2.366 CollateralAmountType

The type of value in CurrentCollateralAmount(1704).

Type: [int](#)

Allowed values in CollateralAmountTypeCodeSet:

Code	Name	Description
0	MarketValuation	Market valuation (the default)
1	PortfolioValue	Portfolio value before processing pledge request
2	ValueConfirmed	Value confirmed as "locked-up" for processing a pledge request
3	CollateralCreditValue	Credit value of collateral at CCP processing a pledge request
4	AdditionalCollateralValue	Additional collateral value. Additional collateral deposited by the collateral provider at trade or post-trade. CollateralPercentOverage(2690) gives the overage percent
5	EstimatedMarketValuation	Estimated market valuation. Estimated market valuation of collateral. In the context of EU SFTR this may be used for value of re-use of collateral.

Used in groups: **CollateralAmountGrp**

180.2.367 CollateralCurrency

Currency of the collateral; optional, defaults to the Settlement Currency if not specified.

Type: **Currency**

Used in groups: **CollateralAmountGrp**

180.2.368 CollateralCurrencyCodeSource

Identifies class or source of the CollateralCurrency(1705) value.

Type: **String**

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbolology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Code	Name	Description
------	------	-------------

Used in groups: [CollateralAmountGrp](#)

180.2.369 CollateralFXRate

Foreign exchange rate used to compute the CurrentCollateralAmount(1704) from the CollateralCurrency(1646) and the Currency(15).

Type: [float](#)

Used in groups: [CollateralAmountGrp](#)

180.2.370 CollateralFXRateCalc

Specifies whether or not CollateralFXRate(2090) should be multiplied or divided.

Type: [char](#)

Allowed values in UnderlyingFXRateCalcCodeSet:

Code	Name	Description
D	Divide	Divide
M	Multiply	Multiply

Used in groups: [CollateralAmountGrp](#)

180.2.371 CollateralizationValueDate

Date when the collateral is to be assessed or assigned.

Type: [LocalMktDate](#)

Used in messages: [CollateralReport](#), [PositionReport](#), [TradeCaptureReport](#)

180.2.372 CollateralMarketPrice

Market price of the collateral, either from market sources or pre-agreed by the counterparties.

Type: **Price**

Used in groups: **CollateralAmountGrp**

180.2.373 CollateralPercentOverage

Percentage of over-collateralization particularly when CollateralAmountType(2632) = 4 (Additional collateral value)

Type: **Percentage**

Used in groups: **CollateralAmountGrp**

180.2.374 CollateralPortfolioID

Identifier of the collateral portfolio when reporting on a portfolio basis.

Type: **String**

Used in groups: **CollateralAmountGrp**

180.2.375 CollateralReinvestmentAmount

The cash amount of the specified re-investment type.

Type: **Amt**

Used in groups: **CollateralReinvestmentGrp**

180.2.376 CollateralReinvestmentCurrency

The currency denomination of the re-invested cash amount.

CollateralReinvestmentCurrencyCodeSource(2931) may be used to disambiguate the code source scheme used, and ISO 4217 is the default scheme if absent.

Type: **Currency**

Used in groups: **CollateralReinvestmentGrp**

180.2.377 CollateralReinvestmentCurrencyCodeSource

Identifies class or source of the CollateralReinvestmentCurrency(2843) value.

Type: **String**

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in groups: **CollateralReinvestmentGrp**

180.2.378 CollateralReinvestmentGrp

The CollateralReinvestmentGrp component block is a repeating group that may be used to provide a breakdown of the cash collateral's reinvestment types and amounts (e.g. Collateral-Type(1704)="CASH").

Name	Mult.	Type	Description
NoCollateralReinvestments	[1..1]	NumInGroup	
CollateralReinvestmentType	[0..1]	CodeSet	Required if NoCollateralReinvestments(2845) > 0.
CollateralReinvestmentAmount	[0..1]	Amt	
CollateralReinvestmentCurrency	[0..1]	Currency	
CollateralReinvestmentCurrency-CodeSource	[0..1]	CodeSet	

Used in groups: **CollateralAmountGrp**

180.2.379 CollateralReinvestmentRate

Interest rate received for collateral reinvestment.

Type: **Percentage**

Used in groups: **CollateralAmountGrp**

180.2.380 CollateralReinvestmentType

Indicates the type of investment the cash collateral is re-invested in.

Type: **int**

Allowed values in CollateralReinvestmentTypeCodeSet:

Code	Name	Description
0	MoneyMarketFund	Money market fund. Registered money market fund. In the context of EU SFTR reporting this corresponds to code "MMFT".
1	OtherComingledPool	Other comingled pool. Any commingled pool other than money market fund. In the context of EU SFTR reporting this corresponds to code "OCMP".
2	RepoMarket	Repo market. The repurchase agreement market. In the context of EU SFTR reporting this corresponds to code "REPM".
3	DirectPurchaseOfSecurities	Direct purchase of securities. In the context of EU SFTR reporting this corresponds to code "SDPU".
4	OtherInvestments	Other investments. In the context of EU SFTR reporting this corresponds to code "OTHR".

Used in groups: **CollateralReinvestmentGrp**

180.2.381 CollateralRequestInstruction

An encoded collateral request processing instruction to the receiver.

Type: **String**

Used in messages: **CollateralAssignment**, **CollateralResponse**

180.2.382 CollateralRequestLinkID

A unique identifier to link together a set or group of requests.

Type: **String**

Used in messages: **CollateralAssignment**, **CollateralResponse**

180.2.383 CollateralRequestNumber

Ordinal number of the request within a set or group of requests.

Type: **int**

Used in messages: **CollateralAssignment**, **CollateralResponse**

180.2.384 CollateralType

Type of collateral on deposit being reported.

Type: **String**

Used in groups: **CollateralAmountGrp**

180.2.385 CollectAmount

Amount to be collected by the clearinghouse from the clearing firm.

Type: **Amt**

Used in groups: **PayCollectGrp**

180.2.386 CollInqQualGrp

Name	Mult.	Type	Description
NoCollInquiryQualifier	[1..1]	NumInGroup	Number of qualifiers to inquiry
CollInquiryQualifier	[0..1]	CodeSet	Required if NoCollInquiryQualifier > 0. Type of collateral inquiry

Used in messages: **CollateralInquiry**, **CollateralInquiryAck**

180.2.387 CollInquiryID

Collateral Inquiry Identifier

Type: **String**

Used in messages: **CollateralInquiry**, **CollateralInquiryAck**, **CollateralReport**

180.2.388 CollInquiryQualifier

Collateral inquiry qualifiers:

Type: **int**

Allowed values in CollInquiryQualifierCodeSet:

Code	Name	Description
0	TradeDate	Trade Date
1	GCInstrument	GC Instrument
2	CollateralInstrument	Collateral Instrument
3	SubstitutionEligible	Substitution Eligible
4	NotAssigned	Not Assigned
5	PartiallyAssigned	Partially Assigned
6	FullyAssigned	Fully Assigned
7	OutstandingTrades	Outstanding Trades (Today < end date)

Used in groups: **CollInqQualGrp**

180.2.389 CollInquiryResult

Result returned in response to Collateral Inquiry

4000+ Reserved and available for bi-laterally agreed upon user-defined values

Type: **int**

Allowed values in CollInquiryResultCodeSet:

Code	Name	Description
0	Successful	Successful (default)

Code	Name	Description
1	InvalidOrUnknownInstrument	Invalid or unknown instrument
2	InvalidOrUnknownCollateralType	Invalid or unknown collateral type
3	InvalidParties	Invalid Parties
4	InvalidTransportTypeRequested	Invalid Transport Type requested
5	InvalidDestinationRequested	Invalid Destination requested
6	NoCollateralFoundForTheTrade-Specified	No collateral found for the trade specified
7	NoCollateralFoundForTheOrder-Specified	No collateral found for the order specified
8	CollateralInquiryTypeNotSupported	Collateral inquiry type not supported
9	UnauthorizedForCollateralInquiry	Unauthorized for collateral inquiry
99	Other	Other (further information in Text (58) field)

Used in messages: **CollateralInquiryAck**

180.2.390 CollInquiryStatus

Status of Collateral Inquiry

Type: **int**

Allowed values in CollInquiryStatusCodeSet:

Code	Name	Description
0	Accepted	Accepted
1	AcceptedWithWarnings	Accepted With Warnings
2	Completed	Completed
3	CompletedWithWarnings	Completed With Warnings
4	Rejected	Rejected

Used in messages: **CollateralInquiryAck**

180.2.391 CollReqID

Collateral Request Identifier

Type: **String**

Used in messages: **CollateralAssignment**, **CollateralRequest**, **CollateralResponse**

180.2.392 CollRespID

Collateral Response Identifier

Type: **String**

Used in messages: **CollateralResponse**

180.2.393 CollRptID

Collateral Report Identifier

Type: **String**

Used in messages: **CollateralReport**, **CollateralReportAck**

180.2.394 CollRptRejectReason

Reject reason code for rejecting the collateral report.

Type: **int**

Allowed values in CollRptRejectReasonCodeSet:

Code	Name	Description
0	UnknownTrade	Unknown trade or transaction
1	UnknownInstrument	Unknown or invalid instrument
2	UnknownCounterparty	Unknown or invalid counterparty
3	UnknownPosition	Unknown or invalid position
4	UnacceptableCollateral	Unacceptable or invalid type of collateral
99	Other	Other

Used in messages: **CollateralReportAck**

180.2.395 CollRptStatus

The status of the collateral report.

Type: **int**

Allowed values in CollRptStatusCodeSet:

Code	Name	Description
0	Accepted	Accepted (successfully processed)
1	Received	Received (not yet processed)
2	Rejected	Rejected

Used in messages: **CollateralReportAck**

180.2.396 CollStatus

Collateral Status

Type: **int**

Allowed values in CollStatusCodeSet:

Code	Name	Description
0	Unassigned	Unassigned
1	PartiallyAssigned	Partially Assigned
2	AssignmentProposed	Assignment Proposed
3	Assigned	Assigned (Accepted)
4	Challenged	Challenged
5	Reused	Reused. A modification of the details of the collateral re-use. In the context of EU SFTR reporting, to be used with RegulatoryReportType(1934)=31 (Collateral update).

Used in messages: **CollateralReport**

180.2.397 CommCurrency

Specifies currency to be used for Commission(12) if the commission currency is different from the deal currency.

CommCurrencyCodeSource(2922) may be used to disambiguate the code source scheme used, and ISO 4217 is the default scheme if absent.

Type: **Currency**

Used in components: **CommissionData**

180.2.398 CommCurrencyCodeSource

Identifies class or source of the CommCurrency(479) value.

Type: **String**

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in components: **CommissionData**

180.2.399 Commission

Commission. Note if CommType (13) is percentage, Commission of 5% should be represented as .05.

Type: **Amt**

Used in components: **CommissionData**

180.2.400 CommissionAmount

The commission amount.

Type: **Amt**

Used in groups: **CommissionDataGrp**

180.2.401 CommissionAmountShared

Commission amount to be shared with a third party, e.g. as part of a directed brokerage commission sharing arrangement. If specified, this amount should not exceed the amount in CommissionAmount(2640).

Type: **Amt**

Used in groups: **CommissionDataGrp**

180.2.402 CommissionAmountSubType

Further sub classification of the CommissionAmountType(2641).

Type: **int**

Allowed values in CommissionAmountSubTypeCodeSet:

Code	Name	Description
0	ResearchPaymentAccount	Research payment account (RPA)
1	CommissionSharingAgreement	Commission sharing agreement (CSA)
2	OtherTypeResearchPayment	Other type of research payment. A type of research payment other than RPA or CSA.

Used in groups: **CommissionDataGrp**

180.2.403 CommissionAmountType

Indicates what type of commission is being expressed in CommissionAmount(2640).

Type: **int**

Allowed values in CommissionAmountTypeCodeSet:

Code	Name	Description
0	Unspecified	Unspecified
1	Acceptance	Acceptance. The bank's charge for issuing a Letter of Credit.
2	Broker	Broker. The executing broker's commission.
3	ClearingBroker	Clearing broker. The clearing broker's commission.
4	Retail	Retail. Commission charged by or related to retail sales.

Code	Name	Description
5	SalesCommission	Sales commission. The commission charged by the sales desk.
6	LocalCommission	Local commission. Commission paid to local broker in a cross-border transaction.
7	ResearchPayment	Research payment

Used in groups: **CommissionDataGrp**

180.2.404 CommissionBasis

Specifies the basis or unit used to calculate the commission.

Type: **char**

Allowed values in CommTypeCodeSet:

Code	Name	Description
1	PerUnit	Amount per unit. Implying shares, par, currency, physical unit etc. Use CommissionUnitOfMeasure(1238) to clarify for commodities.
2	Percent	Percent
3	Absolute	Absolute. Total monetary amount.
4	PercentageWaivedCashDiscount	Percentage waived, cash discount basis. For use with CIV buy orders.
5	PercentageWaivedEnhancedUnits	Percentage waived, enhanced units basis. For use with CIV buy orders.
6	PointsPerBondOrContract	Points per bond or contract. Specify ContractMultiplier(231) in the Instrument component if the security is denominated in a size other than the market convention, e.g. 1000 par for bonds.
7	BasisPoints	Basis points. The commission is expressed in basis points in reference to the gross price of the reference asset.
8	AmountPerContract	Amount per contract. Specify ContractMultiplier(231) in the Instrument component if the security is denominated in a size other than the market convention.

Used in groups: **CommissionDataGrp**

180.2.405 CommissionCurrency

Specifies the currency denomination of the commission amount if different from the trade's currency.

CommissionCurrencyCodeSource(2923) may be used to disambiguate the code source scheme used, and ISO 4217 is the default scheme if absent.

Type: **Currency**

Used in groups: **CommissionDataGrp**

180.2.406 CommissionCurrencyCodeSource

Identifies class or source of the CommissionCurrency(2643) value.

Type: **String**

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in groups: **CommissionDataGrp**

180.2.407 CommissionData

The CommissionData component block is used to carry commission information such as the type of commission and the rate. Use the CommissionDataGrp component as an alternative if multiple commissions or enhanced attributes are needed.

Name	Mult.	Type	Description
Commission	[0..1]	Amt	

Name	Mult.	Type	Description
CommType	[0..1]	CodeSet	
CommCurrency	[0..1]	Currency	
CommCurrencyCodeSource	[0..1]	CodeSet	
CommRate	[0..1]	float	
CommUnitOfMeasure	[0..1]	CodeSet	
FundRenewWaiv	[0..1]	CodeSet	

Used in groups: AllocGrp, BidCompRspGrp, ListOrdGrp, SideCrossOrdModGrp, TrdCapRptAckSideGrp, TrdCapRptSideGrp

Used in messages: Confirmation, ExecutionReport, MultilegOrderCancelReplace, NewOrderMultileg, NewOrderSingle, OrderCancelReplaceRequest, Quote, QuoteResponse, QuoteStatusReport

180.2.408 CommissionDataGrp

The CommissionDataGrp component block is used to carry commission information such as the type of commission and the rate. It provides an alternative to the CommissionData component if multiple commissions or enhanced attributes are needed.

Name	Mult.	Type	Description
NoCommissions	[1..1]	NumInGroup	
CommissionAmount	[0..1]	Amt	Required if NoCommissions(2639) > 0. If the commission is based on a percentage of trade quantity or a factor of "unit of measure", CommissionRate(2646) and CommissionUnitOfMeasure(2644) may also be specified as appropriate.
CommissionAmountType	[0..1]	CodeSet	Required if NoCommissions(2639) > 0.
CommissionAmountSubType	[0..1]	CodeSet	
CommissionBasis	[0..1]	CodeSet	Required if NoCommissions(2639) > 0.
CommissionCurrency	[0..1]	Currency	
CommissionCurrencyCodeSource	[0..1]	CodeSet	
CommissionUnitOfMeasure	[0..1]	CodeSet	
CommissionUnitOfMeasureCurrency	[0..1]	Currency	
CommissionUnitOfMeasureCurrency-CodeSource	[0..1]	CodeSet	

Name	Mult.	Type	Description
CommissionRate	[0..1]	float	
CommissionSharedIndicator	[0..1]	Boolean	
CommissionAmountShared	[0..1]	Amt	If specified, CommissionSharedIndicator(2647) must be set to "Y".
CommissionLegRefID	[0..1]	String	This field may be used for multi-leg trades sent as a single message to indicate that the entry applies only to a specific leg.
CommissionDesc	[0..1]	String	
EncodedCommissionDescLen	[0..1]	Length	Must be set if EncodedCommissionDesc(2652) is specified and must immediately precede it.
EncodedCommissionDesc	[0..1]	data	Encoded (non-ASCII characters) representation of the CommissionDesc(2650) field in the encoded format specified via the MessageEncoding(347) field.

Used in groups: [ListOrdGrp](#), [SideCrossOrdModGrp](#), [TrdCapRptAckSideGrp](#), [TrdCapRptSideGrp](#)

Used in messages: [Confirmation](#), [ExecutionReport](#), [MultilegOrderCancelReplace](#), [NewOrderMultileg](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#)

180.2.409 CommissionDesc

Description of the commission.

Type: [String](#)

Used in groups: [CommissionDataGrp](#)

180.2.410 CommissionLegRefID

Identifies the leg of the trade the entry applies to by referencing the leg's LegID(1788).

Type: [String](#)

Used in groups: [CommissionDataGrp](#)

180.2.411 CommissionRate

The commission rate when CommissionAmount(2640) is based on a percentage of quantity, amount per unit or a factor of "unit of measure". If the rate is a percentage or expressed in basis points, use the

decimalized form, e.g. "0.05" for a 5% commission or "0.005" for 50 basis points.

Type: **float**

Used in groups: **CommissionDataGrp**

180.2.412 CommissionSharedIndicator

Indicates whether the amount in CommissionAmount(2640) is to be shared with a third party, e.g. as part of a directed brokerage commission sharing arrangement.

Type: **Boolean**

Used in groups: **CommissionDataGrp**

180.2.413 CommissionUnitOfMeasure

The commission rate unit of measure.

Type: **String**

Allowed values in UnitOfMeasureCodeSet:

Code	Name	Description
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet
Bbl	Barrels	Barrels. Equal to 42 US gallons
CBM	CubicMeters	Cubic Meters
BDFT	BoardFeet	Board feet. Equal to 144 cubic inches
GJ	Gigajoules	gigajoules
Bu	Bushels	Bushels
kHR	HeatRate	Heat rate. The number of BTUs required to produce one kilowatt hour of electricity, typically 3,412.14 BTUs per 1 kWh.
Ccy	Currency	Amount of currency
kWh	KilowattHours	Kilowatt hours
CDD	CoolingDegreeDay	Cooling degree day
MHR	MegaHeatRate	Mega heat rate. The number of million BTUs required to produce one megawatt hour of electricity, typically 3.41214 million BTUs per 1 MWh.
CER	CertifiedEmissionsReduction	Certified emissions reduction
MMBtu	OneMillionBTU	One Million BTU

Code	Name	Description
CPD	CriticalPrecipDay	Critical precipitation day
MWh	MegawattHours	Megawatt hours
CRT	ClimateReserveTonnes	Climate reserve tonnes
thm	Therms	therms. Equal to 100,000 BTU
cwt	Hundredweight	Hundredweight(US). Equal to 100 lbs
tnCO2	TonsOfCarbonDioxide	Tons of carbon dioxide
day	Day	Days
dt	DryMetricTons	Dry metric tons
EnvAllwnc	EnvAllwncCert	Environmental allowance certificates
EnvCrd	EnvironmentalCredit	Environmental credit
EnvOfst	EnvironmentalOffset	Environmental Offset
g	Grams	Grams
Gal	Gallons	Gallons
GT	GrossTons	Gross tons. Also known as long tons or imperial tons, equal to 2240 lbs
HDD	HeatingDegreeDay	Heating degree day
IPNT	IndexPoint	Index point
kg	Kilograms	Kilograms
kL	Kiloliters	kiloliters
kW-a	KilowattYear	Kilowatt year (electrical capacity)
kW-d	KilowattDay	Kilowatt day (electrical capacity)
kW-h	KilowattHour	Kilowatt hour (electrical capacity)
kW-M	KilowattMonth	Kilowatt month (electrical capacity)
kW-min	KilowattMinute	Kilowatt-Minute (electrical capacity)
L	Liters	liters
lbs	Pounds	pounds
MW-a	MegawattYear	Megawatt year (electrical capacity)
MW-d	MegawattDay	Megawatt day (electrical capacity)
MW-h	MegawattHour	Megawatt hour (electrical capacity)
MW-M	MegawattMonth	Megawatt month (electrical capacity)
MW-min	MegawattMinute	Megawatt minute (electrical capacity)
oz_tr	TroyOunces	Troy ounces
PRINC	PrincipalWithRelationToDebtInstrument	Principal with relation to debt instrument
t	MetricTons	Metric tons. Also known as Tonnes, equal to 1000 kg

Code	Name	Description
tn	Tons	Tons (US). Equal to 2000 lbs
a	Are	Are
ac	Acre	Acre
cL	Centiliter	Centiliter
cM	Centimeter	Centimeter
DGE	DieselGallonEquivalent	Diesel gallon equivalent
ft	Foot	Foot
Gal_gb	GBGallon	GB Gallon
GGE	GasolineGallonEquivalent	Gasonline gallon equivalent
ha	Hectare	Hectare
in	Inch	Inch
kM	Kilometer	Kilometer
M	Meter	Meter
mi	Mile	Mile
mL	Milliliter	Milliliter
mM	Millimeter	Millimeter
oz	USOunce	US ounce
pc	Piece	Piece
pt	USPint	US Pint
pt_gb	GBPint	GB pint
qt	USQuart	US Quart
qt_gb	GBQuart	GB Quart
SqcM	SquareCentimeter	Square centimeter
Sqft	SquareFoot	Square foot
Sqin	SquareInch	Square inch
SqkM	SquareKilometer	Square kilometer
SqM	SquareMeter	Square meter
Sqmi	SquareMile	Square mile
SqmM	SquareMillimeter	Square millimeter
Sqyd	SquareYard	Square yard
yd	Yard	Yard
MMbbl	MillionBarrels	Million Barrels
USD	USDollars	US Dollars

Used in groups: **CommissionDataGrp**

180.2.414 CommissionUnitOfMeasureCurrency

Indicates the currency of the unit of measure. Conditionally required when CommissionUnitOfMeasure(2644) = Ccy (Amount of currency).

Type: **Currency**

Used in groups: **CommissionDataGrp**

180.2.415 CommissionUnitOfMeasureCurrencyCodeSource

Identifies class or source of the CommissionUnitOfMeasureCurrency(2645) value.

Type: **String**

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in groups: **CommissionDataGrp**

180.2.416 CommodityFinalPriceType

Final price type of the commodity as specified by the trading venue.

Type: **int**

Allowed values in CommodityFinalPriceTypeCodeSet:

Code	Name	Description
0	ArgusMcCloskey	Argus McCloskey
1	Baltic	Baltic
2	Exchange	Exchange
3	GlobalCoal	Global Coal
4	IHSMcCloskey	IHS McCloskey
5	Platts	Platts
99	Other	Other

Used in components: **InstrumentExtension**

180.2.417 CommonPricingIndicator

When this element is specified and set to 'Y', it indicates that common pricing applies. Common pricing may be relevant for a transaction that references more than one commodity reference price.

Type: **Boolean**

Used in components: **Instrument**

180.2.418 CommRate

The commission rate when Commission(12) is based on a percentage of quantity, amount per unit or a factor of "unit of measure". If the rate is a percentage, use the decimalized form, e.g. "0.05" for a 5% commission or "0.005" for 50 basis points.

Type: **float**

Used in components: **CommissionData**

180.2.419 CommType

Specifies the basis or unit used to calculate the total commission based on the rate.

Type: **char**

Allowed values in CommTypeCodeSet:

Code	Name	Description
1	PerUnit	Amount per unit. Implying shares, par, currency, physical unit etc. Use CommissionUnitOfMeasure(1238) to clarify for commodities.
2	Percent	Percent
3	Absolute	Absolute. Total monetary amount.
4	PercentageWaivedCashDiscount	Percentage waived, cash discount basis. For use with CIV buy orders.
5	PercentageWaivedEnhancedUnits	Percentage waived, enhanced units basis. For use with CIV buy orders.
6	PointsPerBondOrContract	Points per bond or contract. Specify ContractMultiplier(231) in the Instrument component if the security is denominated in a size other than the market convention, e.g. 1000 par for bonds.
7	BasisPoints	Basis points. The commission is expressed in basis points in reference to the gross price of the reference asset.
8	AmountPerContract	Amount per contract. Specify ContractMultiplier(231) in the Instrument component if the security is denominated in a size other than the market convention.

Used in components: **CommissionData**

180.2.420 CommUnitOfMeasure

The commission rate unit of measure.

Type: **String**

Allowed values in UnitOfMeasureCodeSet:

Code	Name	Description
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet
Bbl	Barrels	Barrels. Equal to 42 US gallons
CBM	CubicMeters	Cubic Meters
BDFT	BoardFeet	Board feet. Equal to 144 cubic inches
GJ	Gigajoules	gigajoules
Bu	Bushels	Bushels

Code	Name	Description
kHR	HeatRate	Heat rate. The number of BTUs required to produce one kilowatt hour of electricity, typically 3,412.14 BTUs per 1 kWh.
Ccy	Currency	Amount of currency
kWh	KilowattHours	Kilowatt hours
CDD	CoolingDegreeDay	Cooling degree day
MHR	MegaHeatRate	Mega heat rate. The number of million BTUs required to produce one megawatt hour of electricity, typically 3.41214 million BTUs per 1 MWh.
CER	CertifiedEmissionsReduction	Certified emissions reduction
MMBtu	OneMillionBTU	One Million BTU
CPD	CriticalPrecipDay	Critical precipitation day
MWh	MegawattHours	Megawatt hours
CRT	ClimateReserveTonnes	Climate reserve tonnes
thm	Therms	therms. Equal to 100,000 BTU
cwt	Hundredweight	Hundredweight(US). Equal to 100 lbs
tnCO2	TonsOfCarbonDioxide	Tons of carbon dioxide
day	Day	Days
dt	DryMetricTons	Dry metric tons
EnvAllwnc	EnvAllwncCert	Environmental allowance certificates
EnvCrd	EnvironmentalCredit	Environmental credit
EnvOfst	EnvironmentalOffset	Environmental Offset
g	Grams	Grams
Gal	Gallons	Gallons
GT	GrossTons	Gross tons. Also known as long tons or imperial tons, equal to 2240 lbs
HDD	HeatingDegreeDay	Heating degree day
IPNT	IndexPoint	Index point
kg	Kilograms	Kilograms
kL	Kiloliters	kiloliters
kW-a	KilowattYear	Kilowatt year (electrical capacity)
kW-d	KilowattDay	Kilowatt day (electrical capacity)
kW-h	KilowattHour	Kilowatt hour (electrical capacity)
kW-M	KilowattMonth	Kilowatt month (electrical capacity)
kW-min	KilowattMinute	Kilowatt-Minute (electrical capacity)
L	Liters	liters

Code	Name	Description
lbs	Pounds	pounds
MW-a	MegawattYear	Megawatt year (electrical capacity)
MW-d	MegawattDay	Megawatt day (electrical capacity)
MW-h	MegawattHour	Megawatt hour (electrical capacity)
MW-M	MegawattMonth	Megawatt month (electrical capacity)
MW-min	MegawattMinute	Megawatt minute (electrical capacity)
oz_tr	TroyOunces	Troy ounces
PRINC	PrincipalWithRelationToDebtInstrument	Principal with relation to debt instrument
t	MetricTons	Metric tons. Also known as Tonnes, equal to 1000 kg
tn	Tons	Tons (US). Equal to 2000 lbs
a	Are	Are
ac	Acre	Acre
cL	Centiliter	Centiliter
cM	Centimeter	Centimeter
DGE	DieselGallonEquivalent	Diesel gallon equivalent
ft	Foot	Foot
Gal_gb	GBGallon	GB Gallon
GGE	GasolineGallonEquivalent	Gasonline gallon equivalent
ha	Hectare	Hectare

Used in components: [CommissionData](#)

180.2.421 CompIDReqGrp

Name	Mult.	Type	Description
NoCompIDs	[1..1]	NumInGroup	Used to restrict updates/request to a list of specific CompID/SubID/LocationID/DeskID combinations. If not present request applies to all applicable available counterparties. EG Unless one sell side broker was a customer of another you would not expect to see information about other brokers, similarly one fund manager etc.
RefCompID	[0..1]	String	Used to restrict updates/request to specific CompID
RefSubID	[0..1]	String	Used to restrict updates/request to specific SubID
LocationID	[0..1]	String	Used to restrict updates/request to specific LocationID
DeskID	[0..1]	String	Used to restrict updates/request to specific DeskID

Used in messages: [NetworkCounterpartySystemStatusRequest](#)

180.2.422 CompIDStatGrp

Name	Mult.	Type	Description
NoComplDs	[1..1]	NumInGroup	Specifies the number of repeating Compld's
RefComplID	[1..1]	String	ComplID that status is being report for. Required if NoComplDs > 0,
RefSubID	[0..1]	String	SubID that status is being report for.
LocationID	[0..1]	String	LocationID that status is being report for.
DeskID	[0..1]	String	DeskID that status is being report for.
StatusValue	[1..1]	CodeSet	
StatusText	[0..1]	String	Additional Information, i.e. "National Holiday"

Used in messages: [NetworkCounterpartySystemStatusResponse](#)

180.2.423 ComplexEventAveragingObservationGrp

The ComplexEventAveragingObservationGrp is an optional subcomponent of ComplexEventPeriodGrp for specifying the weight of each of the dated observations.

Name	Mult.	Type	Description
NoComplexEventAveragingObservations	[1..1]	NumInGroup	
ComplexEventAveragingObservation-Number	[0..1]	int	Required if NoComplexEventAveragingObservations(40994) > 0.
ComplexEventAveragingWeight	[0..1]	float	

Used in groups: [ComplexEventPeriodGrp](#)

180.2.424 ComplexEventAveragingObservationNumber

Cross reference to the ordinal observation as specified either in the ComplexEventScheduleGrp or ComplexEventPeriodDateGrp components.

Type: [int](#)

Used in groups: [ComplexEventAveragingObservationGrp](#)

180.2.425 ComplexEventAveragingWeight

The weight factor to be applied to the observation.

Type: **float**

Used in groups: **ComplexEventAveragingObservationGrp**

180.2.426 ComplexEventBusinessCenter

The business center used to determine dates and times in the schedule or date-time group.

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **ComplexEventPeriodGrp**

180.2.427 ComplexEventCalculationAgent

Used to identify the calculation agent.

Type: **int**

Allowed values in ProvisionCalculationAgentCodeSet:

Code	Name	Description
0	ExercisingParty	Exercising party
1	NonExercisingParty	Non-exercising party
2	MasterAgreeent	As specified in the master agreement
3	Supplement	As specified in the standard terms supplement

Used in groups: **ComplexEvents**

180.2.428 ComplexEventCondition

Specifies the condition between complex events when more than one event is specified.

Multiple barrier events would use an "or" condition since only one can be effective at a given time. A set of digital range events would use an "and" condition since both conditions must be in effect for a payout to result.

Type: **int**

Allowed values in ComplexEventConditionCodeSet:

Code	Name	Description
1	And	And
2	Or	Or

Used in groups: **ComplexEvents**

180.2.429 ComplexEventCreditEventBusinessCenter

The local business center for which the credit event is to be determined. The inclusion of this business center implies that Greenwich Mean Time in Section 3.3 of the 2003 ISDA Credit Derivatives Definitions is replaced by the local time of the specified business center.

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **ComplexEvents**

180.2.430 ComplexEventCreditEventCurrency

Specifies the applicable currency when ComplexEventCreditEventValue(40999) is an amount. Uses ISO 4217 currency codes.

Type: **Currency**

Used in groups: **ComplexEventCreditEventGrp**

180.2.431 ComplexEventCreditEventDayType

Specifies the day type for the complex credit events.

Type: **int**

Allowed values in ComplexEventDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in groups: [ComplexEventCreditEventGrp](#)

180.2.432 ComplexEventCreditEventGrp

The ComplexEventCreditEventGrp is a repeating component within the ComplexEventGrp component used to report applicable option credit events.

Name	Mult.	Type	Description
NoComplexEventCreditEvents	[1..1]	NumInGroup	
ComplexEventCreditEventType	[0..1]	String	Required if NoComplexEventCreditEvents(40996) > 0.
ComplexEventCreditEventValue	[0..1]	String	
ComplexEventCreditEventCurrency	[0..1]	Currency	
ComplexEventCreditEventPeriod	[0..1]	int	Conditionally required when ComplexEventCreditEventUnit(41002) is specified.
ComplexEventCreditEventUnit	[0..1]	CodeSet	Conditionally required when ComplexEventCreditEventPeriod(41001) is specified.
ComplexEventCreditEventDayType	[0..1]	CodeSet	
ComplexEventCreditEventRateSource	[0..1]	int	
ComplexEventCreditEventQualifierGrp	[0..*]	Group	

Used in groups: [ComplexEvents](#)

180.2.433 ComplexEventCreditEventMinimumSources

The minimum number of the specified public information sources that must publish information that reasonably confirms that a credit event has occurred. The market convention is two.

Type: **int**

Used in groups: **ComplexEvents**

180.2.434 ComplexEventCreditEventNotifyingParty

The notifying party is the party that notifies the other party when a credit event has occurred by means of a credit event notice. If more than one party is referenced as being the notifying party then either party may notify the other of a credit event occurring.

Type: **int**

Allowed values in ComplexEventCreditEventNotifyingPartyCodeSet:

Code	Name	Description
0	SellerNotifies	Seller notifies
1	BuyerNotifies	Buyer notifies
2	SellerOrBuyerNotifies	Seller or buyer notifies

Used in groups: **ComplexEvents**

180.2.435 ComplexEventCreditEventPeriod

Time unit multiplier for complex credit events.

Type: **int**

Used in groups: **ComplexEventCreditEventGrp**

180.2.436 ComplexEventCreditEventQualifier

Specifies a complex event qualifier. Used to further qualify ComplexEventCreditEventType(40998).

Type: **char**

Allowed values in ProtectionTermEventQualifierCodeSet:

Code	Name	Description
H	RestructuringMultipleHoldingObligations	Restructuring - multiple holding obligations. In relation to a restructuring credit event, unless multiple holder obligation is not specified restructurings are limited to multiple holder obligations. A multiple holder obligation means an obligation that is held by more than three holders that are not affiliates of each other and where at least two thirds of the holders must agree to the event that constitutes the restructuring credit event. ISDA 2003 Term: Multiple Holder Obligation.
E	RestructuringMultipleCreditEventNotices	Restructuring - multiple credit event notices. Presence of this element and value set to 'true' indicates that Section 3.9 of the 2003 Credit Derivatives Definitions shall apply. Absence of this element indicates that Section 3.9 shall not apply. NOTE: Not allowed under ISDA Credit 1999.
C	FloatingRateInterestShortfall	Floating rate interest shortfall. Indicates compounding.

Used in groups: [ComplexEventCreditEventQualifierGrp](#)

180.2.437 ComplexEventCreditEventQualifierGrp

The ComplexEventCreditEventQualifierGrp is a repeating component within the ComplexEventCreditEventGrp component used to specify qualifying attributes to an event.

Name	Mult.	Type	Description
NoComplexEventCreditEventQualifiers	[1..1]	NumInGroup	
ComplexEventCreditEventQualifier	[0..1]	CodeSet	Required if NoComplexEventCreditEventQualifiers(41005) > 0.

Used in groups: [ComplexEventCreditEventGrp](#)

180.2.438 ComplexEventCreditEventRateSource

Identifies the source of rate information used for credit events.

See http://www.fixtradingcommunity.org/codelists#Credit_Event_Rate_Source for code list of applicable sources.

Type: [int](#)

Used in groups: [ComplexEventCreditEventGrp](#)

180.2.439 ComplexEventCreditEventSource

A newspaper or electronic news service that may publish relevant information used in the determination of whether or not a credit event has occurred.

Type: **String**

Used in groups: **ComplexEventCreditEventSourceGrp**

180.2.440 ComplexEventCreditEventSourceGrp

The ComplexEventCreditEventSourceGrp is a repeating subcomponent of the ComplexEvents component used to specify the particular newspapers or electronic news services that may publish relevant information used in the determination of whether or not a credit event has occurred.

Name	Mult.	Type	Description
NoComplexEventCreditEventSources	[1..1]	NumInGroup	
ComplexEventCreditEventSource	[0..1]	String	Required if NoComplexEventCreditEventSources(41029) > 0.

Used in groups: **ComplexEvents**

180.2.441 ComplexEventCreditEventStandardSources

When this element is specified and set to 'Y', indicates that ISDA defined Standard Public Sources are applicable.

Type: **Boolean**

Used in groups: **ComplexEvents**

180.2.442 ComplexEventCreditEventsXIDRef

Reference to credit event table elsewhere in the message.

Type: **XIDREF**

Used in groups: **ComplexEvents**

180.2.443 ComplexEventCreditEventType

Specifies the type of credit event.

See http://www.fixtradingcommunity.org/codelists#Credit_Event_Types for code list of applicable event types.

Type: **String**

Used in groups: **ComplexEventCreditEventGrp**

180.2.444 ComplexEventCreditEventUnit

Time unit associated with complex credit events.

Type: **String**

Allowed values in ProtectionTermEventUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in groups: **ComplexEventCreditEventGrp**

180.2.445 ComplexEventCreditEventValue

The credit event value appropriate to ComplexEventCreditEventType(40998).

See http://www.fixtradingcommunity.org/codelists#Credit_Event_Types for applicable event type values.

Type: **String**

Used in groups: **ComplexEventCreditEventGrp**

180.2.446 ComplexEventCurrencyOne

Specifies the first or only reference currency of the trade.

ComplexEventCurrencyOneCodeSource(2942) may be used to disambiguate the code source scheme used, and ISO 4217 is the default scheme if absent.

Type: **Currency**

Used in groups: **ComplexEvents**

180.2.447 ComplexEventCurrencyOneCodeSource

Identifies class or source of the ComplexEventCurrencyOne(2124) value.

Type: **String**

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbolology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in groups: **ComplexEvents**

180.2.448 ComplexEventCurrencyTwo

Specifies the second reference currency of the trade.

ComplexEventCurrencyTwoCodeSource(2943) may be used to disambiguate the code source scheme used, and ISO 4217 is the default scheme if absent.

Type: **Currency**

Used in groups: **ComplexEvents**

180.2.449 ComplexEventCurrencyTwoCodeSource

Identifies class or source of the ComplexEventCurrencyTwo(2125) value.

Type: **String**

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbolology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in groups: **ComplexEvents**

180.2.450 ComplexEventDateAdjusted

The adjusted complex event date.

Type: **LocalMktDate**

Used in components: **ComplexEventRelativeDate**

180.2.451 ComplexEventDateBusinessCenter

The business center calendar used to adjust the complex event date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **ComplexEventDateBusinessCenterGrp**

180.2.452 ComplexEventDateBusinessCenterGrp

The ComplexEventDateBusinessCenterGrp is a repeating subcomponent of the ComplexEventRelativeDate component used to specify the set of business centers whose calendars drive date adjustment. Used only to override the business centers defined in the DateAdjustment component in Instrument.

Name	Mult.	Type	Description
NoComplexEventDateBusinessCenters	[1..1]	NumInGroup	
ComplexEventDateBusinessCenter	[0..1]	String	Required if NoComplexEventDateBuisnessCenters(41018) > 0.

Used in components: [ComplexEventRelativeDate](#)

180.2.453 ComplexEventDateBusinessDayConvention

The business day convention used to adjust the complex event date. Used only to override the business day convention specified in the DateAdjustment component within the Instrument component.

Type: [int](#)

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [ComplexEventRelativeDate](#)

180.2.454 ComplexEventDateOffsetDayType

Specifies the day type of the relative date offset.

Type: [int](#)

Allowed values in ComplexEventDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: [ComplexEventRelativeDate](#)

180.2.455 ComplexEventDateOffsetPeriod

Time unit multiplier for the relative date offset.

Type: [int](#)

Used in components: [ComplexEventRelativeDate](#)

180.2.456 ComplexEventDateOffsetUnit

Time unit associated with the relative date offset.

Type: [String](#)

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: [ComplexEventRelativeDate](#)

180.2.457 ComplexEventDateRelativeTo

Specifies the anchor date when the complex event date is relative to an anchor date.

See http://www.fixtradingcommunity.org/codelists#Relative_To_Date for values.

Type: **int**

Used in components: **ComplexEventRelativeDate**

180.2.458 ComplexEventDates

The ComplexEventDate and ComplexEventTime components are used to constrain a complex event to a specific date range or time range. If specified the event is only effective on or within the specified dates and times.

Name	Mult.	Type	Description
NoComplexEventDates	[1..1]	NumInGroup	
ComplexEventStartDate	[0..1]	UTCDateOnly	Required if NoComplexEventDates(1491) > 0.
ComplexEventEndDate	[0..1]	UTCDateOnly	Required if NoComplexEventDates(1491) > 0.
ComplexEventTimes	[0..*]	Group	

Used in groups: **ComplexEvents**

180.2.459 ComplexEventDateUnadjusted

The unadjusted complex event date.

Type: **LocalMktDate**

Used in components: **ComplexEventRelativeDate**

180.2.460 ComplexEventDeterminationMethod

Specifies the method according to which an amount or a date is determined.

See <http://www.fpml.org/coding-scheme/determination-method> for values.

Type: **String**

Used in groups: **ComplexEvents**

180.2.461 ComplexEventEndDate

Specifies the end date of the date range on which a complex event is effective. The start date will be set equal to the end date for single day events such as Bermuda options

ComplexEventEndDate must always be greater than or equal to ComplexEventStartDate.

Type: **UTCDateOnly**

Used in groups: **ComplexEventDates**

180.2.462 ComplexEventEndTime

Specifies the end time of the time range on which a complex event date is effective.

ComplexEventEndTime must always be greater than or equal to ComplexEventStartTime.

Type: **UTCTimeOnly**

Used in groups: **ComplexEventTimes**

180.2.463 ComplexEventFixedFXRate

Specifies the fixed FX rate alternative for FX Quanto options.

Type: **float**

Used in groups: **ComplexEvents**

180.2.464 ComplexEventFixingTime

The local market fixing time.

Type: **LocalMktTime**

Used in components: **ComplexEventRelativeDate**

180.2.465 ComplexEventFixingTimeBusinessCenter

The business center calendar used to determine the actual fixing times.

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in components: **ComplexEventRelativeDate**

180.2.466 ComplexEventForwardPoints

FX forward points added to spot rate. May be a negative value.

Type: **PriceOffset**

Used in groups: **ComplexEvents**

180.2.467 ComplexEventFuturesPriceValuation

Indicates whether the official settlement price as announced by the related exchange is applicable, in accordance with the ISDA 2002 definitions. Applicable only to futures contracts.

Type: **Boolean**

Used in groups: **ComplexEvents**

180.2.468 ComplexEventOptionsPriceValuation

Indicates whether the official settlement price as announced by the related exchange is applicable, in accordance with the ISDA 2002 definitions. Applicable only to options contracts.

Type: **Boolean**

Used in groups: **ComplexEvents**

180.2.469 ComplexEventPeriodDate

The averaging date for an Asian option.

The trigger date for a Barrier or Knock option.

Type: **LocalMktDate**

Used in groups: **ComplexEventPeriodDateGrp**

180.2.470 ComplexEventPeriodDateGrp

The ComplexEventPeriodDateGrp is a subcomponent of ComplexEventPeriodGrp for specifying fixed period dates and times for an Asian or Strike Schedule option or trigger dates for a Barrier or Knock option.

Name	Mult.	Type	Description
NoComplexEventPeriodDateTimes	[1..1]	NumInGroup	
ComplexEventPeriodDate	[0..1]	LocalMktDate	Required if NoComplexEventPeriodDateTimes(41007) > 0.
ComplexEventPeriodTime	[0..1]	LocalMktTime	

Used in groups: [ComplexEventPeriodGrp](#)

180.2.471 ComplexEventPeriodGrp

The ComplexEventPeriodGrp is a subcomponent of ComplexEvents for specifying the periods for an Asian, Barrier, Knock or Strike Schedule option feature.

Name	Mult.	Type	Description
NoComplexEventPeriods	[1..1]	NumInGroup	
ComplexEventPeriodType	[0..1]	CodeSet	Required if NoComplexEventPeriods(41010) > 0.
ComplexEventBusinessCenter	[0..1]	String	
ComplexEventScheduleGrp	[0..*]	Group	
ComplexEventPeriodDateGrp	[0..*]	Group	
ComplexEventAveragingObservation-Grp	[0..*]	Group	

Used in groups: [ComplexEvents](#)

180.2.472 ComplexEventPeriodTime

The averaging time for an Asian option.

Type: [LocalMktTime](#)

Used in groups: [ComplexEventPeriodDateGrp](#)

180.2.473 ComplexEventPeriodType

Specifies the period type.

Type: [int](#)

Allowed values in ComplexEventPeriodTypeCodeSet:

Code	Name	Description
0	AsianOut	Asian Out
1	AsianIn	Asian In
2	BarrierCap	Barrier Cap
3	BarrierFloor	Barrier Floor
4	KnockOut	Knock Out
5	KnockIn	Knock In

Used in groups: **ComplexEventPeriodGrp**

180.2.474 ComplexEventPrice

Specifies the price at which the complex event takes effect. Impact of the event price is determined by the ComplexEventType(1484).

Type: **Price**

Used in groups: **ComplexEvents**

180.2.475 ComplexEventPriceBoundaryMethod

Specifies the boundary condition to be used for the event price relative to the underlying price at the point the complex event outcome takes effect as determined by the ComplexEventPriceTimeType.

Type: **int**

Allowed values in ComplexEventPriceBoundaryMethodCodeSet:

Code	Name	Description
1	LessThanComplexEventPrice	Less than ComplexEventPrice(1486)
2	LessThanOrEqualToComplexEvent-Price	Less than or equal to ComplexEventPrice(1486)
3	EqualToComplexEventPrice	Equal to ComplexEventPrice(1486)
4	GreaterThanOrEqualToComplex-EventPrice	Greater than or equal to ComplexEventPrice(1486)
5	GreaterThanComplexEventPrice	Greater than ComplexEventPrice(1486)

Used in groups: **ComplexEvents**

180.2.476 ComplexEventPriceBoundaryPrecision

Used in combination with ComplexEventPriceBoundaryMethod to specify the percentage of the strike price in relation to the underlying price. The percentage is generally 100 or greater for puts and 100 or less for calls.

Type: **Percentage**

Used in groups: **ComplexEvents**

180.2.477 ComplexEventPricePercentage

Specifies the price percentage at which the complex event takes effect. Impact of the event price is determined by the ComplexEventType(1484).

Type: **Percentage**

Used in groups: **ComplexEvents**

180.2.478 ComplexEventPriceTimeType

Specifies when the complex event outcome takes effect. The outcome of a complex event is a payout or barrier action as specified by the ComplexEventType(1484).

Type: **int**

Allowed values in ComplexEventPriceTimeTypeCodeSet:

Code	Name	Description
1	Expiration	Expiration
2	Immediate	Immediate (At Any Time)
3	SpecifiedDate	Specified Date/Time
4	Close	Close. Official closing time of the exchange on valuation date.
5	Open	Open. Official opening time of the exchange on valuation date.
6	OfficialSettlPrice	Official settlement price. Official settlement price determination time.
7	DerivativesClose	Derivatives close. Official closing time of the derivatives exchange.

Code	Name	Description
8	AsSpecifiedMasterConfirmation	As specified in Master Confirmation

Used in groups: **ComplexEvents**

180.2.479 ComplexEventPVFinalPriceElectionFallback

Specifies the fallback provisions for the hedging party in the determination of the final settlement price.

Type: **int**

Allowed values in ComplexEventPVFinalPriceElectionFallbackCodeSet:

Code	Name	Description
0	Close	Close. In respect of the "early final valuation date", the provisions for "future present value close" shall apply.
1	HedgeElection	Hedge election. In respect of the "early final valuation date", the provisions for "future present value hedge execution" shall apply.

Used in groups: **ComplexEvents**

180.2.480 ComplexEventQuoteBasis

For foreign exchange Quanto option feature.

Type: **int**

Allowed values in ComplexEventQuoteBasisCodeSet:

Code	Name	Description
0	Currency1PerCurrency2	Currency 1 per currency 2
1	Currency2PerCurrency1	Currency 2 per currency 1

Used in groups: **ComplexEvents**

180.2.481 ComplexEventRateSource

Identifies the source of rate information.

Type: **int**

Allowed values in RateSourceCodeSet:

Code	Name	Description
0	Bloomberg	Bloomberg
1	Reuters	Reuters
2	Telerate	Telerate
3	ISDARateOption	ISDA Settlement Rate Option. The source of the currency conversion as specified by the ISDA terms in Annex A to the 1998 FX and Currency Option Definitions. See http://www.fpml.org/coding-scheme/settlement-rate-option
99	Other	Other

Used in groups: **ComplexEventRateSourceGrp**

180.2.482 ComplexEventRateSourceGrp

The ComplexEventRateSourceGrp is a subcomponent of ComplexEvents for specifying primary and secondary rate sources.

Name	Mult.	Type	Description
NoComplexEventRateSources	[1..1]	NumInGroup	
ComplexEventRateSource	[0..1]	CodeSet	Required if NoComplexEventRateSources(41013) > 0.
ComplexEventRateSourceType	[0..1]	CodeSet	Required if NoComplexEventRateSources(41013) > 0.
ComplexEventReferencePage	[0..1]	String	Conditionally required when ComplexEventRateSource(41014) = 99 (Other).
ComplexEventReferencePageHeading	[0..1]	String	

Used in groups: **ComplexEvents**

180.2.483 ComplexEventRateSourceType

Indicates whether the rate source specified is a primary or secondary source.

Type: **int**

Allowed values in RateSourceTypeCodeSet:

Code	Name	Description
0	Primary	Primary
1	Secondary	Secondary

Used in groups: **ComplexEventRateSourceGrp**

180.2.484 ComplexEventReferencePage

Identifies the reference page from the rate source.

For FX, the reference page to the spot rate is to be used for the reference FX spot rate.

When ComplexEventRateSource(41014) = 3 (ISDA Settlement Rate Option) this contains the value from the scheme that reflects the terms of the Annex A to the ISDA 1998 FX and Currency Option Definitions. See: <http://www.fpml.org/coding-scheme/settlement-rate-option>.

Type: **String**

Used in groups: **ComplexEventRateSourceGrp**

180.2.485 ComplexEventReferencePageHeading

Identifies the reference page heading from the rate source.

Type: **String**

Used in groups: **ComplexEventRateSourceGrp**

180.2.486 ComplexEventRelativeDate

The ComplexEventRelativeDate is a subcomponent of ComplexEvents for specifying the event date and time for an FX or Calendar Spread option or the payout date for a Barrier or Knock option.

Name	Mult.	Type	Description
ComplexEventDateUnadjusted	[0..1]	LocalMktDate	
ComplexEventDateRelativeTo	[0..1]	int	
ComplexEventDateOffsetPeriod	[0..1]	int	Conditionally required when ComplexEventDateOffsetUnit(41023) is specified.
ComplexEventDateOffsetUnit	[0..1]	CodeSet	Conditionally required when ComplexEventDateOffsetPeriod(41022) is specified.
ComplexEventDateOffsetDayType	[0..1]	CodeSet	
ComplexEventDateBusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the DateAdjustment component in Instrument. The specified value would be specific to this instance of the instrument provisions.
ComplexEventDateBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the DateAdjustment component in Instrument. The specified values would be specific to this instance of the instrument provisions.
ComplexEventDateAdjusted	[0..1]	LocalMktDate	
ComplexEventFixingTime	[0..1]	LocalMktTime	
ComplexEventFixingTimeBusinessCenter	[0..1]	String	

Used in groups: **ComplexEvents**

180.2.487 ComplexEventScheduleEndDate

The end date of the schedule.

Type: **LocalMktDate**

Used in groups: **ComplexEventScheduleGrp**

180.2.488 ComplexEventScheduleFrequencyPeriod

Time unit multiplier for the schedule date frequency.

Type: **int**

Used in groups: **ComplexEventScheduleGrp**

180.2.489 ComplexEventScheduleFrequencyUnit

Time unit associated with the schedule date frequency.

Type: **String**

Allowed values in ProtectionTermEventUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in groups: **ComplexEventScheduleGrp**

180.2.490 ComplexEventScheduleGrp

The ComplexEventScheduleGrp is a subcomponent of ComplexEventPeriodGrp for specifying a periodic schedule for an Asian, Barrier or Strike Schedule option feature.

Name	Mult.	Type	Description
NoComplexEventSchedules	[1..1]	NumInGroup	
ComplexEventScheduleStartDate	[0..1]	LocalMktDate	Required if NoComplexEventSchedules(41031) > 0.
ComplexEventScheduleEndDate	[0..1]	LocalMktDate	
ComplexEventScheduleFrequencyPeriod	[0..1]	int	Conditionally required when ComplexEventScheduleFrequencyUnit(41035) is specified.
ComplexEventScheduleFrequencyUnit	[0..1]	CodeSet	Conditionally required when ComplexEventScheduleFrequencyPeriod(41034) is specified.
ComplexEventScheduleRollConvention	[0..1]	CodeSet	When specified, this overrides the date roll convention defined in the DateAdjustment component in Instrument. The specified values would be specific to this instance of the schedule.

Used in groups: **ComplexEventPeriodGrp**

180.2.491 ComplexEventScheduleRollConvention

The convention for determining the sequence of dates. It is used in conjunction with a specified frequency. Used only to override the roll convention defined in the DateAdjustment component in Instrument.

Type: **String**

Allowed values in DateRollConventionCodeSet:

Code	Name	Description
1	FirstDay	1st day of the month
2	SecondDay	2nd day of the month
3	ThirdDay	3rd day of the month
4	FourthDay	4th day of the month
5	FifthDay	5th day of the month
6	SixthDay	6thd day of the month
7	SeventhDay	7th day of the month
8	EighthDay	8th day of the month
9	NinthDay	9th day of the month
10	TenthDay	10th day of the month
11	EleventhDay	11th day of the month
12	TwelvthDay	12th day of the month
13	ThirteenthDay	13th day of the month
14	ForteenthDay	14th day of the month
15	FifteenthDay	15th day of the month
16	SixteenthDay	16th day of the month
17	SeventeenthDay	17th day of the month
18	EighteenthDay	18th day of the month
19	NineteenthDay	19th day of the month
20	TwentiethDay	20th day of the month
21	TwentyFirstDay	21st day of the month
22	TwentySecondDay	22nd day of the month
23	TwentyThirdDay	23rd day of the month
24	TwentyFourthDay	24th day of the month
25	TwentyFifthDay	25th day of the month
26	TwentySixthDay	26th day of the month
27	TwentySeventhDay	27th day of the month

Code	Name	Description
28	TwentyEighthDa28y	28th day of the month
29	TwentyNinthDay	29th day of the month
30	ThirtiethDay	30th day of the month
EOM	EOM	The end of the month. Use EOM for 31st day of the month.
FRN	FRN	The floating rate note convention or Eurodollar convention.
IMM	IMM	The International Money Market settlement date, i.e. the 3rd Wednesday of the month.
IMMCAD	IMMCAD	The last trading day/expiration day of the Canadian Derivatives Exchange.
IMMAUD	IMMAUD	The last trading day of the Sydney Futures Exchange Australian 90-day bank accepted bill futures contract.
IMMNZD	IMMNZD	The last trading day of the Sydney Futures Exchange New Zealand 90-day bank bill futures contract.
SFE	SFE	The Sydney Futures Exchange 90-day bank accepted bill futures settlement dates.
NONE	NONE	No adjustment
TBILL	TBILL	The 13-week and 26-week U.S. Treasury Bill auction dates.
MON	MON	Monday
TUE	TUE	Tuesday
WED	WED	Wednesday
THU	THU	Thursday
FRI	FRI	Friday
SAT	SAT	Saturday
SUN	SUN	Sunday

Used in groups: [ComplexEventScheduleGrp](#)

180.2.492 ComplexEventScheduleStartDate

The start date of the schedule.

Type: [LocalMktDate](#)

Used in groups: [ComplexEventScheduleGrp](#)

180.2.493 ComplexEvents

The ComplexEvent Group is a repeating block which allows specifying an unlimited number and types of advanced events, such as observation and pricing over the lifetime of an option, futures, commodities or equity swap contract. Use EvntGrp to specify more straightforward events.

Name	Mult.	Type	Description
NoComplexEvents	[1..1]	NumInGroup	
ComplexEventType	[0..1]	CodeSet	Required if NoComplexEvents(1483) > 0.
ComplexOptPayoutPaySide	[0..1]	CodeSet	
ComplexOptPayoutReceiveSide	[0..1]	CodeSet	
ComplexOptPayoutUnderlier	[0..1]	String	
ComplexOptPayoutAmount	[0..1]	Amt	
ComplexOptPayoutPercentage	[0..1]	Percentage	
ComplexOptPayoutTime	[0..1]	CodeSet	
ComplexOptPayoutCurrency	[0..1]	Currency	
ComplexOptPayoutCurrencyCodeSource	[0..1]	CodeSet	
ComplexEventPrice	[0..1]	Price	
ComplexEventPricePercentage	[0..1]	Percentage	
ComplexEventPriceBoundaryMethod	[0..1]	CodeSet	
ComplexEventPriceBoundaryPrecision	[0..1]	Percentage	
ComplexEventPriceTimeType	[0..1]	CodeSet	
ComplexEventCondition	[0..1]	CodeSet	Conditionally required when there are more than one ComplexEvents occurrences. A chain of ComplexEvents must be linked together through use of the ComplexEventCondition(1490) in which the relationship between any two events is described. For any two ComplexEvents the first occurrence will specify the ComplexEventCondition(1490) which links it with the second event.
ComplexEventDates	[0..*]	Group	
ComplexEventCurrencyOne	[0..1]	Currency	
ComplexEventCurrencyOneCodeSource	[0..1]	CodeSet	
ComplexEventCurrencyTwo	[0..1]	Currency	
ComplexEventCurrencyTwoCodeSource	[0..1]	CodeSet	

Name	Mult.	Type	Description
ComplexEventQuoteBasis	[0..1]	CodeSet	
ComplexEventFixedFXRate	[0..1]	float	
ComplexEventSpotRate	[0..1]	Price	
ComplexEventForwardPoints	[0..1]	PriceOffset	
ComplexEventDeterminationMethod	[0..1]	String	
ComplexEventCalculationAgent	[0..1]	CodeSet	
ComplexEventStrikePrice	[0..1]	Price	
ComplexEventStrikeFactor	[0..1]	float	
ComplexEventStrikeNumberOfOptions	[0..1]	int	
ComplexEventRateSourceGrp	[0..*]	Group	
ComplexEventRelativeDate	[0..1]	Component	
ComplexEventPeriodGrp	[0..*]	Group	
ComplexEventCreditEventsXIDRef	[0..1]	XIDREF	
ComplexEventCreditEventNotifying-Party	[0..1]	CodeSet	
ComplexEventCreditEventBusiness-Center	[0..1]	String	
ComplexEventCreditEventStandard-Sources	[0..1]	Boolean	
ComplexEventCreditEventMinimum-Sources	[0..1]	int	
ComplexEventCreditEventSourceGrp	[0..*]	Group	
ComplexEventCreditEventGrp	[0..*]	Group	
ComplexEventFuturesPriceValuation	[0..1]	Boolean	
ComplexEventOptionsPriceValuation	[0..1]	Boolean	
ComplexEventPVFinalPriceElection-Fallback	[0..1]	CodeSet	
ComplexEventXID	[0..1]	XID	
ComplexEventXIDRef	[0..1]	XIDREF	

Used in components: **Instrument**

180.2.494 ComplexEventSpotRate

FX spot rate.

Type: **Price**

Used in groups: **ComplexEvents**

180.2.495 ComplexEventStartDate

Specifies the start date of the date range on which a complex event is effective. The start date will be set equal to the end date for single day events such as Bermuda options

ComplexEventStartDate must always be less than or equal to ComplexEventEndDate.

Type: **UTCDateOnly**

Used in groups: **ComplexEventDates**

180.2.496 ComplexEventStartTime

Specifies the start time of the time range on which a complex event date is effective.

ComplexEventStartTime must always be less than or equal to ComplexEventEndTime.

Type: **UTCTimeOnly**

Used in groups: **ComplexEventTimes**

180.2.497 ComplexEventStrikeFactor

Strike factor for Asian option feature. Upper strike percentage for a Strike Spread.

Type: **float**

Used in groups: **ComplexEvents**

180.2.498 ComplexEventStrikeNumberOfOptions

Upper string number of options for a Strike Spread.

Type: **int**

Used in groups: **ComplexEvents**

180.2.499 ComplexEventStrikePrice

Upper strike price for Asian option feature. Strike percentage for a Strike Spread.

Type: **Price**

Used in groups: **ComplexEvents**

180.2.500 ComplexEventTimes

The ComplexEventTime component is nested within the ComplexEventDate in order to further qualify any dates placed on the event and is used to specify time ranges for which a complex event is effective. It is always provided within the context of start and end dates. The time range is assumed to be in effect for the entirety of the date or date range specified.

Name	Mult.	Type	Description
NoComplexEventTimes	[1..1]	NumInGroup	
ComplexEventStartTime	[0..1]	UTCTimeOnly	Required if NoComplexEventTimes(1494) > 0.
ComplexEventEndTime	[0..1]	UTCTimeOnly	Required if NoComplexEventTimes(1494) > 0.

Used in groups: **ComplexEventDates**

180.2.501 ComplexEventType

Identifies the type of complex event.

Type: **int**

Allowed values in ComplexEventTypeCodeSet:

Code	Name	Description
1	Capped	Capped
2	Trigger	Trigger
3	KnockInUp	Knock-in up
4	KnockInDown	Knock-in down
5	KnockOutUp	Knock-out up
6	KnockOutDown	Knock-out down
7	Underlying	Underlying

Code	Name	Description
8	ResetBarrier	Reset Barrier
9	RollingBarrier	Rolling Barrier
10	OneTouch	One-touch
11	NoTouch	No-touch
12	DblOneTouch	Double one-touch
13	DblNoTouch	Double no-touch
14	FXComposite	Foreign exchange composite
15	FXQuanto	Foreign exchange Quanto
16	FXCrssCcy	Foreign exchange cross currency
17	StrkSpread	Strike spread
18	ClndrSpread	Calendar spread
19	PxObsvtn	Price observation (Asian or Lookback)
20	PassThrough	Pass-through
21	StrkSched	Strike schedule
22	EquityValuation	Equity valuation
23	DividendValuation	Dividend valuation

Used in groups: **ComplexEvents**

180.2.502 ComplexEventXID

Identifier of this complex event for cross referencing elsewhere in the message.

Type: **XID**

Used in groups: **ComplexEvents**

180.2.503 ComplexEventXIDRef

Reference to a complex event elsewhere in the message.

Type: **XIDREF**

Used in groups: **ComplexEvents**

180.2.504 ComplexOptPayoutAmount

Cash amount indicating the pay out associated with an event. For binary options this is a fixed amount.

Type: **Amt**

Used in groups: **ComplexEvents**

180.2.505 ComplexOptPayoutCurrency

Specifies the currency of the payout amount.

ComplexOptPayoutCurrencyCodeSource(2941) may be used to disambiguate the code source scheme used, and ISO 4217 is the default scheme if absent.

Type: **Currency**

Used in groups: **ComplexEvents**

180.2.506 ComplexOptPayoutCurrencyCodeSource

Identifies class or source of the ComplexOptPayoutCurrency(2122) value.

Type: **String**

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in groups: **ComplexEvents**

180.2.507 ComplexOptPayoutPaySide

Trade side of payout payer.

Type: **int**

Allowed values in PaymentPaySideCodeSet:

Code	Name	Description
1	Buy	Buy
2	Sell	Sell

Used in groups: **ComplexEvents**

180.2.508 ComplexOptPayoutPercentage

Percentage of observed price for calculating the payout associated with the event.

Type: **Percentage**

Used in groups: **ComplexEvents**

180.2.509 ComplexOptPayoutReceiveSide

Trade side of payout receiver.

Type: **int**

Allowed values in PaymentPaySideCodeSet:

Code	Name	Description
1	Buy	Buy
2	Sell	Sell

Used in groups: **ComplexEvents**

180.2.510 ComplexOptPayoutTime

Specifies when the payout is to occur.

Type: **int**

Allowed values in ComplexOptPayoutTimeCodeSet:

Code	Name	Description
0	Close	Close
1	Open	Open
2	OfficialSettl	Official settlement
3	ValuationTime	Valuation time
4	ExchagneSettlTime	Exchange settlement time
5	DerivativesClose	Derivatives close
6	AsSpecified	As specified in master confirmation

Used in groups: **ComplexEvents**

180.2.511 ComplexOptPayoutUnderlier

Reference to the underlier whose payments are being passed through.

Type: **String**

Used in groups: **ComplexEvents**

180.2.512 ComplianceID

ID used to represent this transaction for compliance purposes (e.g. OATS reporting).

Type: **String**

Used in groups: **ListOrdGrp**, **SideCrossOrdCxlGrp**, **TrdCapRptAckSideGrp**, **TrdCapRptSideGrp**, **TrdMatchSideGrp**

Used in messages: **CrossOrderCancelReplaceRequest**, **CrossRequest**, **CrossRequestAck**, **ExecutionReport**, **MassQuote**, **MassQuoteAck**, **MultilegOrderCancelReplace**, **NewOrderCross**, **NewOrderMultileg**, **NewOrderSingle**, **OrderCancelReplaceRequest**, **OrderCancelRequest**, **OrderMassActionReport**, **OrderMassActionRequest**, **Quote**, **QuoteRequest**, **SecurityDefinitionRequest**

180.2.513 ComplianceText

Free text for compliance information required for regulatory reporting.

Type: **String**

Used in groups: **ListOrdGrp**, **SideCrossOrdCxlGrp**, **TrdCapRptAckSideGrp**, **TrdCapRptSideGrp**, **TrdMatchSideGrp**

Used in messages: **CrossRequest**, **CrossRequestAck**, **ExecutionReport**, **MassQuote**, **MassQuoteAck**, **MultilegOrderCancelReplace**, **NewOrderMultileg**, **NewOrderSingle**, **OrderCancelReplaceRequest**, **OrderCancelRequest**, **OrderMassActionReport**, **OrderMassActionRequest**, **Quote**, **QuoteRequest**, **SecurityDefinitionRequest**

180.2.514 CompressionGroupID

Use to identify a netting or compression group where trades in the group were netted or compressed. This includes both terminating trades and any remnant trades that result from the operation.

Type: **String**

Used in groups: **TrdCapRptSideGrp**

180.2.515 Concession

Provides the reduction in price for the secondary market in Municipals.

(Note tag # was reserved in FIX 4.1, added in FIX 4.3)

Type: **Amt**

Used in groups: **TrdCapRptAckSideGrp**, **TrdCapRptSideGrp**

Used in messages: **AllocationInstruction**, **AllocationInstructionAlert**, **AllocationReport**, **Confirmation**, **ExecutionReport**

180.2.516 ConfirmationMethod

Specifies how a trade was confirmed.

Type: **int**

Allowed values in ConfirmationMethodCodeSet:

Code	Name	Description
0	NonElectronic	Non-electronic
1	Electronic	Electronic
2	Unconfirmed	Unconfirmed

Used in messages: **TradeCaptureReport**

180.2.517 ConfirmID

Message reference for Confirmation

Type: **String**

Used in components: **SettlTradeDetails**

Used in messages: **Confirmation, ConfirmationAck**

180.2.518 ConfirmRefID

Reference identifier to be used with ConfirmTransType (666) = Replace or Cancel

Type: **String**

Used in messages: **Confirmation**

180.2.519 ConfirmRejReason

Identifies the reason for rejecting a Confirmation.

Type: **int**

Allowed values in ConfirmRejReasonCodeSet:

Code	Name	Description
1	MismatchedAccount	Incorrect or missing account
2	MissingSettlementInstructions	Incorrect or missing settlement instructions
3	UnknownOrMissingIndividualAllocId	Unknown or missing IndividualAllocId(467)
4	TransactionNotRecognized	Transaction not recognized
5	DuplicateTransaction	Duplicate transaction

Code	Name	Description
6	IncorrectOrMissingInstrument	Incorrect or missing instrument
7	IncorrectOrMissingPrice	Incorrect or missing price
8	IncorrectOrMissingCommission	Incorrect or missing commission
9	IncorrectOrMissingSettlDate	Incorrect or missing settlement date
10	IncorrectOrMissingFundIDOrFund- Name	Incorrect or missing fund ID or fund name
11	IncorrectOrMissingQuantity	Incorrect or missing quantity
12	IncorrectOrMissingFees	Incorrect or missing fees
13	IncorrectOrMissingTax	Incorrect or missing tax
14	IncorrectOrMissingParty	Incorrect or missing party
15	IncorrectOrMissingSide	Incorrect or missing side
16	IncorrectOrMissingNetMoney	Incorrect or missing net-money
17	IncorrectOrMissingTradeDate	Incorrect or missing trade date
18	IncorrectOrMissingSettlCcyInstruc- tions	Incorrect or missing settlement currency instructions
19	IncorrectOrMissingCapacity	Incorrect or missing capacity
99	Other	Other. Use Text(58) for further reject reasons.

Used in messages: [ConfirmationAck](#)

180.2.520 ConfirmReqID

Unique identifier for a Confirmation Request message

Type: [String](#)

Used in messages: [Confirmation](#), [ConfirmationRequest](#)

180.2.521 ConfirmStatus

Identifies the status of the Confirmation.

Type: [int](#)

Allowed values in ConfirmStatusCodeSet:

Code	Name	Description
1	Received	Received
2	MismatchedAccount	Mismatched Account
3	MissingSettlementInstructions	Missing Settlement Instructions
4	Confirmed	Confirmed
5	RequestRejected	Request Rejected

Used in messages: **Confirmation**

180.2.522 ConfirmTransType

Identifies the Confirmation transaction type.

Type: **int**

Allowed values in ConfirmTransTypeCodeSet:

Code	Name	Description
0	New	New
1	Replace	Replace
2	Cancel	Cancel

Used in messages: **Confirmation**

180.2.523 ConfirmType

Identifies the type of Confirmation message being sent.

Type: **int**

Allowed values in ConfirmTypeCodeSet:

Code	Name	Description
1	Status	Status
2	Confirmation	Confirmation
3	ConfirmationRequestRejected	Confirmation Request Rejected (reason can be stated in Text (58) field)

Used in messages: [Confirmation](#), [ConfirmationRequest](#)

180.2.524 ContAmtCurr

Specifies currency for the Contract amount if different from the Deal Currency - see "Appendix 6-A; Valid Currency Codes".

Type: [Currency](#)

Used in groups: [ContAmtGrp](#)

180.2.525 ContAmtGrp

Name	Mult.	Type	Description
NoContAmts	[1..1]	NumInGroup	Number of contract details in this message (number of repeating groups to follow)
ContAmtType	[0..1]	CodeSet	Must be first field in the repeating group.
ContAmtValue	[0..1]	float	
ContAmtCurr	[0..1]	Currency	

Used in groups: [TrdCapRptAckSideGrp](#), [TrdCapRptSideGrp](#)

Used in messages: [ExecutionReport](#)

180.2.526 ContAmtType

Type of ContAmtValue (520).

NOTE That Commission Amount / % in Contract Amounts is the commission actually charged, rather than the commission instructions given in Fields 2/3.

Type: [int](#)

Allowed values in ContAmtTypeCodeSet:

Code	Name	Description
1	CommissionAmount	Commission amount (actual)
2	CommissionPercent	Commission percent (actual)
3	InitialChargeAmount	Initial Charge Amount

Code	Name	Description
4	InitialChargePercent	Initial Charge Percent
5	DiscountAmount	Discount Amount
6	DiscountPercent	Discount Percent
7	DilutionLevyAmount	Dilution Levy Amount
8	DilutionLevyPercent	Dilution Levy Percent
9	ExitChargeAmount	Exit Charge Amount
10	ExitChargePercent	Exit Charge Percent
11	FundBasedRenewalCommissionPercent	Fund-Based Renewal Commission Percent (a.k.a. Trail commission)
12	ProjectedFundValue	Projected Fund Value (i.e. for investments intended to realise or exceed a specific future value)
13	FundBasedRenewalCommissionOnOrder	Fund-Based Renewal Commission Amount (based on Order value)
14	FundBasedRenewalCommissionOnFund	Fund-Based Renewal Commission Amount (based on Projected Fund value)
15	NetSettlementAmount	Net Settlement Amount

Used in groups: **ContAmtGrp**

180.2.527 ContAmtValue

Value of Contract Amount, e.g. a financial amount or percentage as indicated by ContAmtType (519).

Type: **float**

Used in groups: **ContAmtGrp**

180.2.528 ContingencyType

Defines the type of contingency.

Type: **int**

Allowed values in ContingencyTypeCodeSet:

Code	Name	Description
1	OneCancelsTheOther	One Cancels the Other (OCO)

Code	Name	Description
2	OneTriggersTheOther	One Triggers the Other (OTO)
3	OneUpdatesTheOtherAbsolute	One Updates the Other (OUO) - Absolute Quantity Reduction
4	OneUpdatesTheOtherProportional	One Updates the Other (OUO) - Proportional Quantity Reduction
5	BidAndOffer	Bid and Offer
6	BidAndOfferOCO	Bid and Offer OCO

Used in messages: [ExecutionReport](#), [ListStatus](#), [NewOrderList](#)

180.2.529 ContIntRptID

Unique identifier for the Contrary Intention report

Type: [String](#)

Used in messages: [ContraryIntentionReport](#)

180.2.530 ContraBroker

Identifies contra broker. Standard NASD market-maker mnemonic is preferred.

Type: [String](#)

Used in groups: [ContraGrp](#)

180.2.531 ContractMultiplier

Specifies the ratio or multiply factor to convert from "nominal" units (e.g. contracts) to total units (e.g. shares) (e.g. 1.0, 100, 1000, etc). Applicable For Fixed Income, Convertible Bonds, Derivatives, etc.

Type: [float](#)

Used in components: [Instrument](#)

180.2.532 ContractMultiplierUnit

Indicates the type of multiplier being applied to the contract. Can be optionally used to further define what unit ContractMultiplier(tag 231) is expressed in.

Type: **int**

Allowed values in ContractMultiplierUnitCodeSet:

Code	Name	Description
0	Shares	Shares
1	Hours	Hours
2	Days	Days

Used in components: **Instrument**

180.2.533 ContractPriceRefMonth

Reference month if there is no applicable MaturityMonthYear(200) value for the contract or security.

Type: **MonthYear**

Used in components: **Instrument**

180.2.534 ContractRefPosType

Additional information related to the pricing of a commodity swaps position, specifically an indicator referring to the position type.

Type: **int**

Allowed values in ContractRefPosTypeCodeSet:

Code	Name	Description
0	TwoComponentIntercommoditySpread	Two component intercommodity spread
1	IndexOrBasket	Index or basket
2	TwoComponentLocationBasis	Two component locational basis
99	Other	Other

Used in messages: **PositionMaintenanceReport**, **PositionReport**

180.2.535 ContractSettlMonth

Specifies when the contract (i.e. MBS/TBA) will settle.

Type: **MonthYear**

Used in components: **Instrument**

180.2.536 ContractualDefinition

Specifies which contract definition, such as those published by ISDA, will apply for the terms of the trade. See <http://www.fpml.org/coding-scheme/contractual-definitions> for values.

Type: **String**

Used in groups: **FinancingContractualDefinitionGrp**

180.2.537 ContractualMatrixDate

The publication date of the applicable version of the contract matrix. If not specified, the ISDA Standard Terms Supplement defines rules for which version of the matrix is applicable.

Type: **LocalMktDate**

Used in groups: **FinancingContractualMatrixGrp**

180.2.538 ContractualMatrixSource

Identifies the applicable contract matrix. See <http://www.fpml.org/coding-scheme/matrix-type-1-0.xml> for values.

Type: **String**

Used in groups: **FinancingContractualMatrixGrp**

180.2.539 ContractualMatrixTerm

Specifies the applicable key into the relevant contract matrix. In the case of 2000 ISDA Definitions Settlement Matrix for Early Termination and Swaptions, the ContractualMatrixTerm(40045) is not applicable and is to be omitted.

See <http://www.fpml.org/coding-scheme/credit-matrix-transaction-type> for values.

Type: **String**

Used in groups: **FinancingContractualMatrixGrp**

180.2.540 ContraGrp

Name	Mult.	Type	Description
NoContraBrokers	[1..1]	NumInGroup	Number of ContraBrokers repeating group instances.
ContraBroker	[0..1]	String	First field in repeating group. Required if NoContraBrokers > 0.
ContraTrader	[0..1]	String	
ContraTradeQty	[0..1]	Qty	
ContraTradeTime	[0..1]	UTCTimestamp	
ContraLegRefID	[0..1]	String	

Used in messages: **ExecutionReport**

180.2.541 ContraLegRefID

Unique indicator for a specific leg for the ContraBroker (375).

Type: **String**

Used in groups: **ContraGrp**

180.2.542 ContraOrderOrigination

Identifies the origin of the order from the counterparty of the execution or trade.

Type: **int**

Allowed values in OrderOriginationCodeSet:

Code	Name	Description
1	OrderReceivedFromCustomer	Order received from a customer
2	OrderReceivedFromWithinFirm	Order received from within the firm

Code	Name	Description
3	OrderReceivedFromAnotherBrokerDealer	Order received from another broker-dealer
4	OrderReceivedFromCustomerOrWithFirm	Order received from a customer or originated from within the firm
5	OrderReceivedFromDirectAccessCustomer	Order received from a direct access or sponsored access customer
6	OrderReceivedFromForeignDealerEquivalent	Order received from a foreign dealer equivalent. A foreign dealer equivalent is a person in the business of trading securities in a foreign jurisdiction in a manner analogous to an investment dealer and that is subject to the regulatory jurisdiction of a signatory to the International Organization of Securities Commissions' (IOSCO) Multilateral Memorandum of Understanding in that foreign jurisdiction.
7	OrderReceivedFromExecutionOnlyService	Order received from an execution-only service. The acceptance and execution of orders from customers for trades that the broker-dealer has not recommended and for which the broker-dealer takes no responsibility as to the appropriateness or suitability of orders accepted or account positions held.

Used in messages: [ExecutionReport](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#)

180.2.543 ContraRoutingArrangementIndicator

Indicates whether a routing arrangement is in place, e.g. between two brokers. May be used together with [ContraOrderOrigination\(2882\)](#) to further describe the origin of an order.

Type: [int](#)

Allowed values in [RoutingArrangementIndicatorCodeSet](#):

Code	Name	Description
0	NoRoutingArrangementInPlace	No routing arrangement in place
1	RoutingArrangementInPlace	Routing arrangement in place

Used in messages: [ExecutionReport](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#)

180.2.544 ContraryInstructionEligibilityIndicator

Identifies whether the option instrument is eligible for contrary instructions at the time of exercise. The contrariness of an instruction will be determined in the context of InTheMoneyCondition(2681). When not specified, the eligibility is undefined or not applicable.

Type: **Boolean**

Used in components: **Instrument**

180.2.545 ContraryInstructionIndicator

Used to indicate when a contrary instruction for exercise or abandonment is being submitted

Type: **Boolean**

Used in messages: **PositionMaintenanceReport**, **PositionMaintenanceRequest**

180.2.546 ContraTradeQty

Quantity traded with the ContraBroker (375).

Type: **Qty**

Used in groups: **ContraGrp**

180.2.547 ContraTrader

Identifies the trader (e.g. "badge number") of the ContraBroker.

Type: **String**

Used in groups: **ContraGrp**

180.2.548 ContraTradeTime

Identifies the time of the trade with the ContraBroker (375). (always expressed in UTC (Universal Time Coordinated, also known as "GMT"))

Type: **UTCTimestamp**

Used in groups: **ContraGrp**

180.2.549 ConvertibleBondEquityID

Identifies the equity in which a convertible bond can be converted to.

Type: **String**

Used in components: **Instrument**

180.2.550 ConvertibleBondEquityIDSource

Identifies class or source of the ConvertibleBondEquityID(1951) value.

100+ are reserved for private security.

Type: **String**

Allowed values in SecurityIDSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
3	QUIK	QUIK
4	ISINNumber	ISIN
5	RICCode	RIC
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
7	ISOCountryCode	ISO Country Code
8	ExchangeSymbol	Exchange symbol
9	ConsolidatedTapeAssociation	Consolidated Tape Association (CTA) Symbol (SIAC CTS/CQS line format)
A	BloombergSymbol	Bloomberg Symbol
B	Wertpapier	Wertpapier
C	Dutch	Dutch
D	Valoren	Valoren
E	Sicovam	Sicovam
F	Belgian	Belgian
G	Common	"Common" (Clearstream and Euroclear)
H	ClearingHouse	Clearing house / Clearing organization
I	ISDAFpMLSpecification	ISDA/FpML product specification (XML in SecurityXML(1185))
J	OptionPriceReportingAuthority	Option Price Reporting Authority
K	ISDAFpMLURL	ISDA/FpML product URL (URL in SecurityID(48))

Code	Name	Description
L	LetterOfCredit	Letter of credit
M	MarketplaceAssignedIdentifier	Marketplace-assigned Identifier
N	MarkitREDEntityCLIP	Markit RED entity CLIP
P	MarkitREDPairCLIP	Markit RED pair CLIP
Q	CFTCCommodityCode	CFTC commodity code
R	ISDASCommodityReferencePrice	ISDA Commodity Reference Price
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
T	LegalEntityIdentifier	Legal entity identifier
U	Synthetic	Synthetic. Used to specify that the security identifier is synthetic for linking nested underliers when there is no market identifier for the collection.
V	FidessaInstrumentMnemonic	Fidessa Instrument Mnemonic (FIM)
W	IndexName	Index name. Standard name of the index or rate index, e.g. "LIBOR" or "iTraxx Australia".
X	UniformSymbol	Uniform Symbol (UMTF Symbol)
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in components: **Instrument**

180.2.551 CopyMsgIndicator

Indicates whether or not this message is a drop copy of another message.

Type: **Boolean**

Used in messages: **Confirmation**, **ExecutionReport**, **MassOrderAck**, **NewOrderSingle**, **PartyActionReport**, **TradeCaptureReport**, **TradeCaptureReportAck**

180.2.552 CorporateAction

Identifies the type of Corporate Action.

Type: **MultipleCharValue**

Allowed values in CorporateActionCodeSet:

Code	Name	Description
A	ExDividend	Ex-Dividend
B	ExDistribution	Ex-Distribution
C	ExRights	Ex-Rights
D	New	New
E	ExInterest	Ex-Interest
F	CashDividend	Cash Dividend
G	StockDividend	Stock Dividend
H	NonIntegerStockSplit	Non-Integer Stock Split
I	ReverseStockSplit	Reverse Stock Split
J	StandardIntegerStockSplit	Standard-Integer Stock Split
K	PositionConsolidation	Position Consolidation
L	LiquidationReorganization	Liquidation Reorganization
M	MergerReorganization	Merger Reorganization
N	RightsOffering	Rights Offering
O	ShareholderMeeting	Shareholder Meeting
P	Spinoff	Spinoff
Q	TenderOffer	Tender Offer
R	Warrant	Warrant
S	SpecialAction	Special Action
T	SymbolConversion	Symbol Conversion
U	CUSIP	CUSIP / Name Change
V	LeapRollover	Leap Rollover
W	SuccessionEvent	Succession Event

Used in groups: [MDIncGrp](#), [RelSymDerivSecGrp](#), [RelSymDerivSecUpdGrp](#), [SecMassStatGrp](#)

Used in messages: [MarketDataSnapshotFullRefresh](#), [SecurityDefinition](#), [SecurityDefinitionUpdateReport](#), [SecurityListUpdateReport](#), [SecurityStatus](#)

180.2.553 Country

ISO Country Code in field

Type: [Country](#)

Used in groups: [BidCompRspGrp](#)

180.2.554 CountryOfIssue

ISO Country code of instrument issue (e.g. the country portion typically used in ISIN). Can be used in conjunction with non-ISIN SecurityID (48) (e.g. CUSIP for Municipal Bonds without ISIN) to provide uniqueness.

Type: **Country**

Used in components: **Instrument**

180.2.555 CouponDayCount

The day count convention used in interest calculations for a bond or an interest bearing security. Absence of this field for a bond or an interest bearing security transaction implies a "flat" trade, i.e. no accrued interest determined at time of the transaction.

Type: **int**

Allowed values in CouponDayCountCodeSet:

Code	Name	Description
0	OneOne	1/1. If parties specify the Day Count Fraction to be 1/1 then in calculating the applicable amount, 1 is simply input into the calculation as the relevant Day Count Fraction. See also 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (a).
1	ThirtyThreeSixtyUS	30/360 (30U/360 or Bond Basis). See also ISO 15022 MICO code 'A001'.
2	ThirtyThreeSixtySIA	30/360 (SIA). A variant of "30/360" - when Date1 and Date2 are both Feb. 28th or 29th convert them to 30th using the same logic in the conversion of 31st to 30th.
3	ThirtyThreeSixtyM	30/360M. Commonly used day count convention for US mortgage backed securities. Feb 28th (or 29th in a leap year) is always considered as a 30th for a start date. As a comparison, in the regular 30/360 day count as used by most US agency and corporate bonds, a start date of Feb 28th (or 29th in a leap year) is still considered as the 28th (or 29th) day of a month of 30 days.
4	ThirtyEThreeSixty	30E/360 (Eurobond Basis). See also ISO 15022 MICO code 'A007'.

Code	Name	Description
5	ThirtyEThreeSixtyISDA	30E/360 (ISDA). Date adjustment rules are: (1) if Date1 is the last day of the month, then change Date1 to 30; (2) if D2 is the last day of the month (unless Date2 is the maturity date and Date2 is in February), then change Date2 to 30. See also 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (h).
6	ActThreeSixty	Act/360. See also ISO 15022 MICO code 'A004'.
7	ActThreeSixtyFiveFixed	Act/365 (FIXED). See also ISO 15022 MICO code 'A005'.
8	ActActAFB	Act/Act (AFB). See also ISO 15022 MICO code 'A010'.
9	ActActICMA	Act/Act (ICMA). See also ISO 15022 MICO code 'A006'.
10	ActActISMAUltimo	Act/Act (ICMA Ultimo). The Act/Act (ICMA Ultimo) differs from Act/Act (ICMA) method only that it assumes that regular coupons always fall on the last day of the month.
11	ActActISDA	Act/Act (ISDA). See also ISO 15022 MICO code 'A008'.
12	BusTwoFiftyTwo	BUS/252. Used for Brazilian Real swaps, which is based on business days instead of calendar days. The number of business days divided by 252.
13	ThirtyEPlusThreeSixty	30E+/360. Variation on 30E/360. Date adjustment rules: (1) If Date1 falls on the 31st, then change it to the 30th; (2) If Date2 falls on the 31st, then change it to 1 and increase Month2 by one, i.e. next month.
14	ActThreeSixtyFiveL	Act/365L. See also ISO 15022 MICO code 'A009'.
15	NLThreeSixtyFive	NL365. See also ISO 15022 MICO code 'A014'.
16	NLThreeSixty	NL360. This is the same as Act/360, with the exception of leap days (29th February) which are ignored.
17	Act364	Act/364. The actual number of days between Date1 and Date2, divided by 364.
18	ThirtyThreeSixtyFive	30/365. Interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and a 365-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31 is assumed to be a 30 and the 28 February (or 29 February for a leap year) is assumed to be a 28 (or 29). See also ISO 15022 MICO code 'A002'.

Code	Name	Description
19	ThirtyActual	30/Actual. Interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and the assumed number of days in a year in a way similar to the Actual/Actual (ICMA). Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31 is assumed to be a 30 and the 28 February (or 29 February for a leap year) is assumed to be a 28 (or 29). The assumed number of days in a year is computed as the actual number of days in the coupon period multiplied by the number of interest payments in the year. See also ISO 15022 MICO code 'A003'.
20	ThirtyThreeSixtyICMA	30/360 (ICMA or basis rule). Interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30 calendar day of the same month, except for February. This means that a 31 is assumed to be a 30 and the 28 February (or 29 February for a leap year) is assumed to be a 28 (or 29). It is the most commonly used 30/360 method for non-US straight and convertible bonds issued before 1 January 1999. See also ISO 15022 MICO code 'A011'.
21	ThirtyETwoThreeSixty	30E2/360 (Eurobond basis model two). Interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for the last day of February whose day of the month value shall be adapted to the value of the first day of the interest period if the latter is higher and if the period is one of a regular schedule. This means that a 31 is assumed to be a 30 and the 28 February of a non-leap year is assumed to be equivalent to a 29 February when the first day of the interest period is a 29, or to a 30 February when the first day of the interest period is a 30 or a 31. The 29 February of a leap year is assumed to be equivalent to a 30 February when the first day of the interest period is a 30 or a 31. Similarly, if the coupon period starts on the last day of February, it is assumed to produce only one day of interest in February as if it was starting on a 30 February when the end of the period is a 30 or a 31, or two days of interest in February when the end of the period is a 29, or three days of interest in February when it is the 28 February of a non-leap year and the end of the period is before the 29. See also ISO 15022 MICO code 'A012'.

Code	Name	Description
22	ThirtyEThreeThreeSixty	30E3/360 (Eurobond basis model three). Interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that a 31 is assumed to be a 30 and the 28 February (or 29 February for a leap year) is assumed to be equivalent to a 30 February. It is a variation of the 30E/360 (or Eurobond basis) method where the last day of February is always assumed to be a 30, even if it is the last day of the maturity coupon period. See also ISO 15022 MICO code 'A013'.
99	Other	Other. For other day count method. See also ISO 15022 MICO code 'OTHR'.

Used in components: **Instrument**

180.2.556 CouponFrequencyPeriod

Time unit multiplier for the frequency of the bond's coupon payment.

Type: **int**

Used in components: **Instrument**

180.2.557 CouponFrequencyUnit

Time unit associated with the frequency of the bond's coupon payment.

Type: **String**

Allowed values in CouponFrequencyUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year
H	Hour	Hour
Min	Minute	Minute
S	Second	Second

Code	Name	Description
T	Term	Term

Used in components: [Instrument](#)

180.2.558 CouponOtherDayCount

The industry name of the day count convention not listed in CouponDayCount(1950).

Type: [String](#)

Used in components: [Instrument](#)

180.2.559 CouponPaymentDate

Date interest is to be paid. Used in identifying Corporate Bond issues.

(Note tag # was reserved in FIX 4.1, added in FIX 4.3)

(prior to FIX 4.4 field was of type UTCDate)

Type: [LocalMktDate](#)

Used in components: [Instrument](#)

180.2.560 CouponRate

The rate of interest that, when multiplied by the principal, par value, or face value of a bond, provides the currency amount of the periodic interest payment. The coupon is always cited, along with maturity, in any quotation of a bond's price.

Type: [Percentage](#)

Used in components: [Instrument](#)

180.2.561 CouponType

Coupon type of the bond.

Type: [int](#)

Allowed values in CouponTypeCodeSet:

Code	Name	Description
0	Zero	Zero
1	FixedRate	Fixed rate
2	FloatingRate	Floating rate
3	Structured	Structured

Used in components: **Instrument**

180.2.562 CoveredOrUncovered

Used for derivative products, such as options

Type: **int**

Allowed values in CoveredOrUncoveredCodeSet:

Code	Name	Description
0	Covered	Covered
1	Uncovered	Uncovered

Used in groups: **ListOrdGrp**, **SideCrossOrdModGrp**

Used in messages: **MultilegOrderCancelReplace**, **NewOrderMultileg**, **NewOrderSingle**, **OrderCancelReplaceRequest**

180.2.563 CoveredQty

Used to specify the portion of the short contract quantity that is considered covered (e.g. used for short option position).

Type: **Qty**

Used in groups: **PositionQty**, **TradePositionQty**

180.2.564 CoverPrice

The best quoted price received among those not traded.

Type: **Price**

Used in messages: **ExecutionReport**, **QuoteResponse**

180.2.565 CpctyConfGrp

Name	Mult.	Type	Description
NoCapacities	[1..1]	NumInGroup	
OrderCapacity	[1..1]	CodeSet	Specifies the capacity of the firm executing the order(s)
OrderRestrictions	[0..1]	CodeSet	
OrderCapacityQty	[0..1]	Qty	The quantity that was executed under this capacity (e.g. quantity executed as agent, as principal etc.). If any are specified, all entries in the component must have OrderCapacityQty specified and the sum of OrderCapacityQty values must equal this message's AllocQty.

Used in messages: **Confirmation**

180.2.566 CPProgram

The program under which a commercial paper offering is exempt from SEC registration identified by the paragraph number(s) within the US Securities Act of 1933 or as identified below.

Type: **int**

Allowed values in CPProgramCodeSet:

Code	Name	Description
1	Program3a3	3(a)(3). Arising out of a current transaction with a maturity less than 9 months.
2	Program42	4(2). Issued not involving any public offering.
3	Program3a2	3(a)(2). Issued or guaranteed by the US, state or territorial government.
4	Program3a3And3c7	3(a)(3) & 3(c)(7). Combination of 3(a)(3) and 3(c)(7).
5	Program3a4	3(a)(4). Religious, education, benevolent, fraternal, charitable or reformatory purposes.
6	Program3a5	3(a)(5). Issued by an institution supervised by state or federal authority or by an exempt farmer's cooperative.
7	Program3a7	3(a)(7). Issued by a receiver or trustee in bankruptcy.
8	Program3c7	3(c)(7). Qualified hedge-fund under the Investment Company Act of 1940.

Code	Name	Description
99	Other	Other

Used in components: **Instrument**

180.2.567 CPRegType

The description of commercial paper registration or rule under which exempt commercial paper is offered. For example "144a", "Tax Exempt" or "REG. S".

Type: **String**

Used in components: **Instrument**

180.2.568 CreditRating

An evaluation of a company's ability to repay obligations or its likelihood of not defaulting. These evaluation are provided by Credit Rating Agencies, i.e. S&P, Moody's.

(Note tag # was reserved in FIX 4.1, added in FIX 4.3)

Type: **String**

Used in components: **Instrument**

180.2.569 CreditSupportAgreementDate

The date of the ISDA Credit Support Agreement executed between the parties and intended to govern collateral arrangements for all OTC derivatives transactions between those parties.

Type: **LocalMktDate**

Used in components: **FinancingDetails**

180.2.570 CreditSupportAgreementDesc

The type of ISDA Credit Support Agreement. See <http://www.fpml.org/coding-scheme/credit-support-agreement-type> for values.

Type: **String**

Used in components: **FinancingDetails**

180.2.571 CreditSupportAgreementID

A common reference or unique identifier to identify the ISDA Credit Support Agreement executed between the parties.

Type: **String**

Used in components: **FinancingDetails**

180.2.572 CrossedIndicator

Indicates whether the order or quote was crossed with another order or quote having the same context, e.g. having accounts with a common ownership.

Type: **int**

Allowed values in CrossedIndicatorCodeSet:

Code	Name	Description
0	NoCross	No cross. Crossing did not occur.
1	CrossRejected	Cross rejected. Crossing occurred but execution was prevented, e.g. due to self-match prevention.
2	CrossAccepted	Cross accepted. Crossing occurred but execution was permitted.

Used in messages: **ExecutionReport**

180.2.573 CrossID

Identifier for a cross order. Must be unique during a given trading day. Recommend that firms use the order date as part of the CrossID for Good Till Cancel (GT) orders.

Type: **String**

Used in messages: **CrossOrderCancelReplaceRequest**, **CrossOrderCancelRequest**, **ExecutionReport**, **NewOrderCross**

180.2.574 CrossPercent

Percentage of program that crosses in Currency. Represented as a percentage.

Type: **Percentage**

Used in messages: **BidRequest**

180.2.575 CrossPrioritization

Indicates if one side or the other of a cross order should be prioritized.

The definition of prioritization is left to the market. In some markets prioritization means which side of the cross order is applied to the market first. In other markets - prioritization may mean that the prioritized side is fully executed (sometimes referred to as the side being protected).

Type: **int**

Allowed values in CrossPrioritizationCodeSet:

Code	Name	Description
0	None	None
1	BuySidsPrioritized	Buy side is prioritized
2	SellSidsPrioritized	Sell side is prioritized

Used in messages: **CrossOrderCancelReplaceRequest**, **CrossOrderCancelRequest**, **NewOrderCross**

180.2.576 CrossRequestID

Unique message identifier for a cross request as assigned by the submitter of the request.

Type: **String**

Used in messages: **CrossRequest**, **CrossRequestAck**

180.2.577 CrossType

Type of cross being submitted to a market

Type: **int**

Allowed values in CrossTypeCodeSet:

Code	Name	Description
1	CrossAON	All-or-none cross. A cross order which is executed completely or not at all. Both sides of the cross are treated in the same manner.
2	CrossIOC	Immediate-or-cancel cross. A cross order which is immediately executed with any unfilled quantity cancelled. CrossPrioritization(550) may be used to indicate whether one side should have execution priority and any remaining quantity of the partially executed side be cancelled. Using CrossPrioritization(550)="Y" and CrossType(549)=2(Immediate-or-cancel cross) is equivalent to non-prioritized leg having a TimeInForce(59)=3(IOC) Immediate-or-cancel.
3	CrossOneSide	One sided cross. A cross order which is executed on one side with any unfilled quantity remaining active. CrossPrioritization(550) may be used to indicate which side should have execution priority.
4	CrossSamePrice	Cross executed against book. A cross order which is executed against existing orders in the order book. The quantity on one side of the cross is executed against existing orders and quotes with the same price, and any remaining quantity of the cross is executed against the other side of the cross. The two sides of the cross may have different quantities.
5	BasisCross	Basis cross. A cross order where a basket of securities or an index participation unit is transacted at prices achieved through the execution of related exchange-traded derivative instruments in an amount that will correspond to an equivalent market exposure.
6	ContingentCross	Contingent cross. A cross order resulting from a paired order placed by a participant to execute an order on a security that is contingent on the execution of a second order for an offsetting volume of a related security.
7	VWAPCross	Volume-weighted-average-price (VWAP) cross. A cross order for the purpose of executing a trade at a volume-weighted-average-price (VWAP) of a security traded for a continuous period on or during a trading day.
8	STSCross	Special trading session cross. A closing price cross resulting from an order placed by a participant for execution in a special trading session at the last sale price.
9	CustomerToCustomer	Customer to customer cross. Cross order where both sides of the cross represent agency orders.

Used in messages: [CrossOrderCancelReplaceRequest](#), [CrossOrderCancelRequest](#), [ExecutionReport](#), [NewOrderCross](#), [TradeCaptureReport](#), [TradeCaptureReportAck](#)

180.2.578 CstmAppVerID

Specifies a custom extension to a message being applied at the message level. Enumerated field

Type: [String](#)

Used in components: [StandardHeader](#)

180.2.579 CumQty

Total quantity (e.g. number of shares) filled.

(Prior to FIX 4.2 this field was of type int)

Type: [Qty](#)

Used in components: [TradeReportOrderDetail](#)

Used in groups: [OrdListStatGrp](#), [OrderEntryAckGrp](#)

Used in messages: [ExecutionAck](#), [ExecutionReport](#)

180.2.580 Currency

Identifies currency used for price or quantity fields, depending on the asset class being traded. [CurrencyCodeSource\(2897\)](#) may be used to disambiguate the code source scheme used, and ISO 4217 is the default scheme if absent.

Absence of this field is interpreted as the default currency for the security as defined by the respective reference data. It is recommended that systems provide the currency value whenever possible.

Type: [Currency](#)

Used in components: [SettlTradeDetails](#)

Used in groups: [InstrmtMDReqGrp](#), [InstrmtMatchSideGrp](#), [InstrmtStrkPxGrp](#), [ListOrdGrp](#), [MDFullGrp](#), [MDIncGrp](#), [QuotEntryAckGrp](#), [QuotEntryGrp](#), [QuotReqGrp](#), [QuotReqRjctGrp](#), [RelSymDerivSecGrp](#), [RelSymDerivSecUpdGrp](#), [SecListGrp](#), [SecLstUpdRelSymGrp](#), [SettlObligationInstructions](#)

Used in messages: [AccountSummaryReport](#), [Advertisement](#), [AllocationInstruction](#), [AllocationInstructionAlert](#), [AllocationReport](#), [AssignmentReport](#), [BidRequest](#), [CollateralAssignment](#), [CollateralInquiry](#),

CollateralInquiryAck, CollateralReport, CollateralRequest, CollateralResponse, Confirmation, CrossOrderCancelReplaceRequest, DerivativeSecurityListRequest, ExecutionReport, IOI, MarginRequirementReport, MarketDataStatisticsReport, MarketDefinition, MarketDefinitionUpdateReport, MultilegOrderCancelReplace, NewOrderCross, NewOrderMultileg, NewOrderSingle, OrderCancelReplaceRequest, PartyRiskLimitCheckRequest, PartyRiskLimitCheckRequestAck, PositionMaintenanceReport, PositionMaintenanceRequest, PositionReport, PositionTransferInstruction, PositionTransferReport, Quote, QuoteResponse, QuoteStatusReport, RequestForPositions, RequestForPositionsAck, SecurityDefinition, SecurityDefinitionRequest, SecurityDefinitionUpdateReport, SecurityListRequest, SecurityStatus, SecurityStatusRequest, TradeAggregationRequest, TradeCaptureReport, TradeCaptureReportAck

180.2.581 CurrencyCodeSource

Identifies class or source of the Currency(15) value.

Type: **String**

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbolology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in components: **SettlTradeDetails**

Used in groups: **InstrmtMDReqGrp, InstrmtMatchSideGrp, InstrmtStrkPxGrp, ListOrdGrp, MDFullGrp, MDIncGrp, QuotEntryAckGrp, QuotEntryGrp, QuotReqGrp, QuotReqRjctGrp, RelSymDerivSecGrp, RelSymDerivSecUpdGrp, SecListGrp, SecLstUpdRelSymGrp, SettlObligationInstructions**

Used in messages: **Advertisement, AllocationInstruction, AllocationInstructionAlert, AllocationReport, AssignmentReport, BidRequest, CollateralAssignment, CollateralInquiry, CollateralInquiryAck, CollateralReport, CollateralRequest, CollateralResponse, Confirmation, CrossOrderCancelReplaceRequest, DerivativeSecurityListRequest, ExecutionReport, IOI, MarginRequirementReport, MarketDataStatisticsReport, MarketDefinition, MarketDefinitionUpdateReport, MultilegOrderCancelReplace, NewOrderCross, NewOrderMultileg, NewOrderSingle, OrderCancelReplaceRequest, PartyRiskLimitCheckRequest,**

PartyRiskLimitCheckRequestAck, PositionMaintenanceReport, PositionMaintenanceRequest, PositionReport, PositionTransferInstruction, PositionTransferReport, Quote, QuoteResponse, QuoteStatusReport, RequestForPositions, RequestForPositionsAck, SecurityDefinition, SecurityDefinitionRequest, SecurityDefinitionUpdateReport, SecurityListRequest, SecurityStatus, SecurityStatusRequest, TradeAggregationRequest, TradeCaptureReport, TradeCaptureReportAck

180.2.582 CurrencyRatio

Specifies the currency ratio between the currency used for a multileg price and the currency used by the outright book defined by the leg. Example: Multileg quoted in EUR, outright leg in USD and 1 EUR = 0,7 USD then CurrencyRatio = 0.7

Type: **float**

Used in messages: **TradeCaptureReport**

180.2.583 CurrentCollateralAmount

Currency value currently attributed to the collateral.

Type: **Amt**

Used in groups: **CollateralAmountGrp**

180.2.584 CurrentCostBasis

The amount that the current shares are worth. If this lot was liquidated, the total gain/loss for a trade is equal to the trade amount minus the current cost basis.

Type: **Amt**

Used in groups: **AllocAckGrp, AllocGrp, PreAllocGrp, PreAllocMlegGrp, TrdAllocGrp**

180.2.585 CurrentDisplayPrice

Price at which the order is currently displayed to the market. Can be used on order messages, e.g. NewOrderSingle(35=D), to provide the current displayed price of a parent order when splitting it into smaller child orders.

Type: **Price**

Used in components: **DisplayInstruction**

180.2.586 CurrentWorkingPrice

Current working price of the order relative to the state of the order.

Type: **Price**

Used in messages: **ExecutionReport**, **NewOrderSingle**, **OrderCancelReplaceRequest**

180.2.587 CustDirectedOrder

Indicates if the customer directed this order to a specific execution venue "Y" or not "N".

A default of "N" customer did not direct this order should be used in the case where the information is both missing and essential.

Type: **Boolean**

Used in messages: **ExecutionReport**, **NewOrderSingle**, **OrderCancelReplaceRequest**

180.2.588 CustodialLotID

An opaque identifier used to communicate the custodian's identifier for the lot. It is expected that this information would be provided by the custodian as part of a reconciliation process that occurs before trading.

Type: **String**

Used in groups: **AllocAckGrp**, **AllocGrp**, **PreAllocGrp**, **PreAllocMlegGrp**, **TrdAllocGrp**

180.2.589 CustomerPriority

Specifies the kind of priority given to customers.

Type: **int**

Allowed values in CustomerPriorityCodeSet:

Code	Name	Description
0	NoPriority	No priority.
1	UnconditionalPriority	Unconditional priority.

Used in groups: **MatchRules**

180.2.590 CustOrderCapacity

Capacity of customer placing the order.

Type: **int**

Allowed values in CustOrderCapacityCodeSet:

Code	Name	Description
1	MemberTradingForTheirOwnAccount	Member trading for their own account
2	ClearingFirmTradingForItsProprietaryAccount	Clearing firm trading for its proprietary account
3	MemberTradingForAnotherMember	Member trading for another member
4	AllOther	All other
5	RetailCustomer	Retail customer. An order that originated from a retail customer (a natural person). In the context of the US Securities and Exchange Commission, this also means an order originated from a natural person where, prior to submission, no change was made to the terms of the order with respect to price or side of market and the order does not originate from an algorithm or other computerized trading method.

Used in groups: **ListOrdGrp**, **SideCrossOrdModGrp**, **TrdCapRptAckSideGrp**, **TrdCapRptSideGrp**, **TrdMatchSideGrp**

Used in messages: **AllocationInstruction**, **AllocationInstructionAlert**, **AllocationReport**, **ExecutionReport**, **MarketDataStatisticsReport**, **MassOrder**, **MassOrderAck**, **MultilegOrderCancelReplace**, **NewOrderMultileg**, **NewOrderSingle**, **OrderCancelReplaceRequest**, **Quote**, **QuoteResponse**, **QuoteStatusReport**

180.2.591 CustOrderHandlingInst

Codes that apply special information that the Broker / Dealer needs to report, as specified by the customer.

NOTE: This field and its values have no bearing on the ExecInst and TimeInForce fields. These values should not be used instead of ExecInst or TimeInForce. This field and its values are intended for compliance reporting and/or billing purposes only.

For OrderHandlingInstSrc(1032) = 1 (FINRA OATS), valid values are (as of OATS Phase 3 as provided by FINRA. See also <http://www.finra.org/Industry/Compliance/MarketTransparency/OATS/PhaseIII/index.htm> for a complete list.

For OrderHandlingInstSrc(1032) = 2 (FIA Execution Source Code), only one enumeration value may be specified.

Type: **MultipleStringValue**

Allowed values in CustOrderHandlingInstCodeSet:

Code	Name	Description
A	PhoneSimple	Phone simple
G	GOrderAndFCMAPlorFIX	G Order(FINRA OATS), FCM API or FIX(FIA Execution Source)
ADD	AddOnOrder	Add-on order
B	PhoneComplex	Phone complex
AON	AllOrNone	All or none
C	FCMProvidedScreen	FCM provided screen
CND	ConditionalOrder	Conditional order
D	OtherProvidedScreen	Other provided screen
CNH	CashNotHeld	Cash not held
E	ClientProvidedPlatformControlled-ByFCM	Client provided platform controlled by FCM
CSH	DeliveryInstructionsCash	Delivery instructions - cash
F	ClientProvidedPlatformDirectToExchange	Client provided platform direct to exchange
DIR	DirectedOrder	Directed order
DLO	DiscretionaryLimitOrder	Discretionary limit order
H	AlgoEngine	Algo engine
E.W	ExchangeForPhysicalTransaction	Exchange for physical transaction
J	PriceAtExecution	Price at execution (price added at initial order entry, trading, middle office or time of give-up)
FOK	FillOrKill	Fill or kill
W	DeskElectronic	Desk - electronic
X	DeskPit	Desk - pit
IDX	IntraDayCross	Intraday cross
Y	ClientElectronic	Client - electronic
IO	ImbalanceOnly	Imbalance only
Z	ClientPit	Client - pit
IOC	ImmediateOrCancel	Immediate or cancel
ISO	IntermarketSweepOrder	Intermarket sweep order
LOO	LimitOnOpen	Limit on open

Code	Name	Description
LOC	LimitOnClose	Limit on Close
MAO	MarketAtOpen	Market at Open
MAC	MarketAtClose	Market at close
MOO	MarketOnOpen	Market on open
MOC	MarketOnClose	Market on close
MPT	MergerRelatedTransferPosition	Merger related transfer position
MQT	MinimumQuantity	Minimum quantity
MTL	MarketToLimit	Market to limit
ND	DeliveryInstructionsNextDay	Delivery instructions - next day
NH	NotHeld	Not held
OPT	OptionsRelatedTransaction	Options related transaction
OVD	OverTheDay	Over the day
PEG	Pegged	Pegged
RSV	ReserveSizeOrder	Reserve size order
S.W	StopStockTransaction	Stop stock transaction
SCL	Scale	Scale
SLR	DeliveryInstructionsSellersOption	Delivery instructions - sellers option
TMO	TimeOrder	Time order
TS	TrailingStop	Trailing stop
WRK	Work	Work
F0	StayOnOfferside	Stay on offerside
F3	GoAlong	Go along
F6	ParticipateDoNotInitiate	Participate do not initiate
F7	StrictScale	Strict scale
F8	TryToScale	Try to scale
F9	StayOnBidside	Stay on bidside
FA	NoCross	No cross
FB	OKToCross	OK to cross
FC	CallFirst	Call first
FD	PercentOfVolume	Percent of volume
FH	ReinstateOnSystemFailure	Reinstate on system failure
FI	InstitutionOnly	Institution only
FJ	ReinstateOnTradingHalt	Reinstate on trading halt
FK	CancelOnTradingHalf	Cancel on trading half

Code	Name	Description
FL	LastPeg	Last peg
FM	MidPricePeg	Mid-price peg
FN	NonNegotiable	Non-negotiable
FO	OpeningPeg	Opening peg
FP	MarketPeg	Market peg
FQ	CancelOnSystemFailure	Cancel on system failure
FR	PrimaryPeg	Primary peg
FS	Suspend	Suspend
FT	FixedPegToLocalBBO	Fixed peg to local best bid or offer at time of order
FW	PegToVWAP	Peg to VWAP
FX	TradeAlong	Trade along
FY	TryToStop	Try to stop
FZ	CancelIfNotBest	Cancel if not best
Fb	StrictLimit	Strict limit
Fc	IgnorePriceValidityChecks	Ignore price validity checks
Fd	PegToLimitPrice	Peg to Limit Price
Fe	WorkToTargetStrategy	Work to target strategy

Used in groups: [TrdCapRptAckSideGrp](#), [TrdCapRptSideGrp](#), [TrdMatchSideGrp](#)

Used in messages: [AllocationInstruction](#), [AllocationInstructionAlert](#), [AllocationReport](#), [AllocationReportAck](#), [ExecutionReport](#), [MassOrder](#), [MassOrderAck](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#)

180.2.592 CxlQty

Total quantity canceled for this order.

(Prior to FIX 4.2 this field was of type int)

Type: [Qty](#)

Used in groups: [OrdListStatGrp](#), [OrderEntryAckGrp](#)

Used in messages: [ExecutionReport](#)

180.2.593 CxlRejReason

Code to identify reason for cancel rejection.

Type: **int**

Allowed values in CxlRejReasonCodeSet:

Code	Name	Description
0	TooLateToCancel	Too late to cancel
1	UnknownOrder	Unknown order
2	BrokerCredit	Broker / Exchange Option
3	OrderAlreadyInPendingStatus	Order already in Pending Cancel or Pending Replace status
4	UnableToProcessOrderMassCancel-Request	Unable to process Order Mass Cancel Request
5	OrigOrdModTime	OrigOrdModTime (586) did not match last TransactTime (60) of order
6	DuplicateCLOrdID	Duplicate CLOrdID (11) received
7	PriceExceedsCurrentPrice	Price exceeds current price
8	PriceExceedsCurrentPriceBand	Price exceeds current price band
18	InvalidPriceIncrement	Invalid price increment
99	Other	Other

Used in messages: **OrderCancelReject**

180.2.594 CxlRejResponseTo

Identifies the type of request that a Cancel Reject is in response to.

Type: **char**

Allowed values in CxlRejResponseToCodeSet:

Code	Name	Description
1	OrderCancelRequest	Order cancel request
2	OrderCancelReplaceRequest	Order cancel/replace request

Used in messages: **OrderCancelReject**

180.2.595 DateAdjustment

DateAdjustment is a subcomponent in the Instrument component. It is used to specify date adjustment parameters and rules. The date adjustments specified here applies to all adjustable dates for the instrument, unless specifically overridden in the respective specified components elsewhere.

Name	Mult.	Type	Description
BusinessDayConvention	[0..1]	CodeSet	
BusinessCenterGrp	[0..*]	Group	
DateRollConvention	[0..1]	CodeSet	

Used in components: **Instrument**

180.2.596 DatedDate

The effective date of a new securities issue determined by its underwriters. Often but not always the same as the Issue Date and the Interest Accrual Date

Type: **LocalMktDate**

Used in components: **Instrument**

180.2.597 DateOfBirth

The date of birth applicable to the individual, e.g. required to open some types of tax-exempt account.

Type: **LocalMktDate**

Used in groups: **RgstDtIsGrp**

180.2.598 DateRollConvention

The convention for determining a sequence of dates. It is used in conjunction with a specified frequency. The value defined here applies to all adjustable dates in the instrument unless specifically overridden. Additional values may be used by mutual agreement of the counterparties.

Type: **String**

Allowed values in DateRollConventionCodeSet:

Code	Name	Description
1	FirstDay	1st day of the month
2	SecondDay	2nd day of the month
3	ThirdDay	3rd day of the month
4	FourthDay	4th day of the month
5	FifthDay	5th day of the month
6	SixthDay	6thd day of the month
7	SeventhDay	7th day of the month
8	EighthDay	8th day of the month
9	NinthDay	9th day of the month
10	TenthDay	10th day of the month
11	EleventhDay	11th day of the month
12	TwelvthDay	12th day of the month
13	ThirteenthDay	13th day of the month
14	ForteenthDay	14th day of the month
15	FifteenthDay	15th day of the month
16	SixteenthDay	16th day of the month
17	SeventeenthDay	17th day of the month
18	EighteenthDay	18th day of the month
19	NineteenthDay	19th day of the month
20	TwentiethDay	20th day of the month
21	TwentyFirstDay	21st day of the month
22	TwentySecondDay	22nd day of the month
23	TwentyThirdDay	23rd day of the month
24	TwentyFourthDay	24th day of the month
25	TwentyFifthDay	25th day of the month
26	TwentySixthDay	26th day of the month
27	TwentySeventhDay	27th day of the month
28	TwentyEigthDa28y	28th day of the month
29	TwentyNinthDay	29th day of the month
30	ThirtiethDay	30th day of the month
EOM	EOM	The end of the month. Use EOM for 31st day of the month.
FRN	FRN	The floating rate note convention or Eurodollar convention.
IMM	IMM	The International Money Market settlement date, i.e. the 3rd Wednesday of the month.

Code	Name	Description
IMMCAD	IMMCAD	The last trading day/expiration day of the Canadian Derivatives Exchange.
IMMAUD	IMMAUD	The last trading day of the Sydney Futures Exchange Australian 90-day bank accepted bill futures contract.
IMMNZD	IMMNZD	The last trading day of the Sydney Futures Exchange New Zealand 90-day bank bill futures contract.
SFE	SFE	The Sydney Futures Exchange 90-day bank accepted bill futures settlement dates.
NONE	NONE	No adjustment
TBILL	TBILL	The 13-week and 26-week U.S. Treasury Bill auction dates.
MON	MON	Monday
TUE	TUE	Tuesday
WED	WED	Wednesday
THU	THU	Thursday
FRI	FRI	Friday
SAT	SAT	Saturday
SUN	SUN	Sunday

Used in components: **DateAdjustment**

180.2.599 DayAvgPx

The average price for quantity on a GT order that has traded today.

Type: **Price**

Used in messages: **ExecutionReport**

180.2.600 DayBookingInst

Indicates whether or not automatic booking can occur.

Type: **char**

Allowed values in DayBookingInstCodeSet:

Code	Name	Description
0	Auto	Can trigger booking without reference to the order initiator ("auto")
1	SpeakWithOrderInitiatorBeforeBooking	Speak with order initiator before booking ("speak first")
2	Accumulate	Accumulate

Used in groups: [ListOrdGrp](#), [SideCrossOrdModGrp](#)

Used in messages: [ExecutionReport](#), [MultilegOrderCancelReplace](#), [NewOrderMultileg](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#)

180.2.601 DayCumQty

Quantity on a GT order that has traded today.

Type: [Qty](#)

Used in messages: [ExecutionReport](#)

180.2.602 DayOrderQty

For GT orders, the OrderQty (38) less all quantity (adjusted for stock splits) that traded on previous days. $\text{DayOrderQty (424)} = \text{OrderQty} - (\text{CumQty (14)} - \text{DayCumQty (425)})$

Type: [Qty](#)

Used in messages: [ExecutionReport](#)

180.2.603 DealingCapacity

Identifies role of dealer; Agent, Principal, RisklessPrincipal

Type: [char](#)

Allowed values in DealingCapacityCodeSet:

Code	Name	Description
A	Agent	Agent
P	Principal	Principal

Code	Name	Description
R	RisklessPrincipal	Riskless Principal

Used in groups: [MDFullGrp](#), [MDIncGrp](#)

180.2.604 DefaultApplExtID

The extension pack number that is the default for a FIX session.

Type: [int](#)

Used in messages: [Logon](#)

180.2.605 DefaultApplVerID

Specifies the service pack release being applied, by default, to message at the session level. Enumerated field with values assigned at time of service pack release. Uses same values as ApplVerID

Type: [String](#)

Allowed values in ApplVerIDCodeSet:

Code	Name	Description
0	FIX27	FIX27
1	FIX30	FIX30
2	FIX40	FIX40
3	FIX41	FIX41
4	FIX42	FIX42
5	FIX43	FIX43
6	FIX44	FIX44
7	FIX50	FIX50
8	FIX50SP1	FIX50SP1
9	FIX50SP2	FIX50SP2
10	FIXLatest	FIXLatest

Used in messages: [Logon](#)

180.2.606 DefaultCstmApplVerID

The default custom application version ID that is the default for a session.

Type: **String**

Used in messages: **Logon**

180.2.607 DefaultVerIndicator

Indicates that the application version identified in the fields RefApplVerID(1130), RefApplExtID(1406), and RefCstmApplVerID(1131) is the default for the message type identified in RefMsgType(372) field.

Type: **Boolean**

Used in groups: **MsgTypeGrp**

180.2.608 DefBidSize

Default Bid Size.

Type: **Qty**

Used in messages: **MassQuote**

180.2.609 DefOfferSize

Default Offer Size.

Type: **Qty**

Used in messages: **MassQuote**

180.2.610 DeleteReason

Reason for deletion.

Type: **char**

Allowed values in DeleteReasonCodeSet:

Code	Name	Description
0	Cancellation	Cancellation / Trade Bust

Code	Name	Description
1	Error	Error

Used in groups: [MDIncGrp](#)

180.2.611 DeliverToCompID

Assigned value used to identify the firm targeted to receive the message if the message is delivered by a third party i.e. the third party firm identifier would be delivered in the TargetCompID (56) field and the ultimate receiver firm ID in this field.

Type: [String](#)

Used in components: [StandardHeader](#)

180.2.612 DeliverToLocationID

Assigned value used to identify specific message recipient's location (i.e. geographic location and/or desk, trader) if the message was delivered by a third party

Type: [String](#)

Used in components: [StandardHeader](#)

180.2.613 DeliverToSubID

Assigned value used to identify specific message recipient (i.e. trader) if the message is delivered by a third party

Type: [String](#)

Used in components: [StandardHeader](#)

180.2.614 DeliveryDate

Date of delivery.

Type: [LocalMktDate](#)

Used in messages: [PositionReport](#)

180.2.615 DeliveryForm

Identifies the form of delivery.

Type: **int**

Allowed values in DeliveryFormCodeSet:

Code	Name	Description
1	BookEntry	Book Entry (default)
2	Bearer	Bearer

Used in components: **InstrumentExtension**

180.2.616 DeliveryRouteOrCharter

Specific delivery route or time charter average. Applicable to commodity freight contracts.

Type: **String**

Used in components: **Instrument**

180.2.617 DeliveryScheduleGrp

The DeliveryScheduleGrp is a repeating subcomponent of the Stream component used to detail step schedules associated with a delivery stream.

Name	Mult.	Type	Description
NoDeliverySchedules	[1..1]	NumInGroup	
DeliveryScheduleType	[0..1]	CodeSet	Required if NoDeliverySchedules(41037) > 0.
DeliveryScheduleXID	[0..1]	XID	
DeliveryScheduleNotional	[0..1]	Qty	
DeliveryScheduleNotionalUnitOfMeasure	[0..1]	CodeSet	
DeliveryScheduleNotionalCommodityFrequency	[0..1]	CodeSet	
DeliveryScheduleNegativeTolerance	[0..1]	float	
DeliverySchedulePositiveTolerance	[0..1]	float	

Name	Mult.	Type	Description
DeliveryScheduleToleranceUnitOfMeasure	[0..1]	CodeSet	
DeliveryScheduleToleranceType	[0..1]	CodeSet	Conditionally required when DeliveryScheduleNegativeTolerance(41043) or DeliverySchedulePositiveTolerance(41044) is specified.
DeliveryScheduleSettlCountry	[0..1]	Country	
DeliveryScheduleSettlTimeZone	[0..1]	String	
DeliveryScheduleSettlFlowType	[0..1]	CodeSet	
DeliveryScheduleSettlHolidaysProcessingInstruction	[0..1]	CodeSet	
DeliveryScheduleSettlDayGrp	[0..*]	Group	

Used in groups: **StreamGrp**

180.2.618 DeliveryScheduleNegativeTolerance

Specifies the negative tolerance value. The value may be an absolute quantity or a percentage, as specified in DeliveryScheduleToleranceType(41046). Percentage value is to be expressed relative to "1.0" representing 100% (e.g. a value of "0.0575" represents 5.75%).

Type: **float**

Used in groups: **DeliveryScheduleGrp**

180.2.619 DeliveryScheduleNotional

Physical delivery quantity.

Type: **Qty**

Used in groups: **DeliveryScheduleGrp**

180.2.620 DeliveryScheduleNotionalCommodityFrequency

The frequency of notional delivery.

Type: **int**

Allowed values in StreamNotionalCommodityFrequencyCodeSet:

Code	Name	Description
0	Term	Term
1	PerBusinessDay	Per business day
2	PerCalculationPeriod	Per calculation period
3	PerSettlPeriod	Per settlement period
4	PerCalendarDay	Per calendar day
5	PerHour	Per hour
6	PerMonth	Per month

Used in groups: [DeliveryScheduleGrp](#)

180.2.621 DeliveryScheduleNotionalUnitOfMeasure

Specifies the delivery quantity unit of measure (UOM).

Type: [String](#)

Allowed values in UnitOfMeasureCodeSet:

Code	Name	Description
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet
Bbl	Barrels	Barrels. Equal to 42 US gallons
CBM	CubicMeters	Cubic Meters
BDFT	BoardFeet	Board feet. Equal to 144 cubic inches
GJ	Gigajoules	gigajoules
Bu	Bushels	Bushels
kHR	HeatRate	Heat rate. The number of BTUs required to produce one kilowatt hour of electricity, typically 3,412.14 BTUs per 1 kWh.
Ccy	Currency	Amount of currency
kWh	KilowattHours	Kilowatt hours
CDD	CoolingDegreeDay	Cooling degree day
MHR	MegaHeatRate	Mega heat rate. The number of million BTUs required to produce one megawatt hour of electricity, typically 3.41214 million BTUs per 1 MWh.

Code	Name	Description
CER	CertifiedEmissionsReduction	Certified emissions reduction
MMBtu	OneMillionBTU	One Million BTU
CPD	CriticalPrecipDay	Critical precipitation day
MWh	MegawattHours	Megawatt hours
CRT	ClimateReserveTonnes	Climate reserve tonnes
thm	Therms	therms. Equal to 100,000 BTU
cwt	Hundredweight	Hundredweight(US). Equal to 100 lbs
tnCO2	TonsOfCarbonDioxide	Tons of carbon dioxide
day	Day	Days
dt	DryMetricTons	Dry metric tons
EnvAllwnc	EnvAllwncCert	Environmental allowance certificates
EnvCrd	EnvironmentalCredit	Environmental credit
EnvOfst	EnvironmentalOffset	Environmental Offset
g	Grams	Grams
Gal	Gallons	Gallons
GT	GrossTons	Gross tons. Also known as long tons or imperial tons, equal to 2240 lbs
HDD	HeatingDegreeDay	Heating degree day
IPNT	IndexPoint	Index point
kg	Kilograms	Kilograms
kL	Kiloliters	kiloliters
kW-a	KilowattYear	Kilowatt year (electrical capacity)
kW-d	KilowattDay	Kilowatt day (electrical capacity)
kW-h	KilowattHour	Kilowatt hour (electrical capacity)
kW-M	KilowattMonth	Kilowatt month (electrical capacity)
kW-min	KilowattMinute	Kilowatt-Minute (electrical capacity)
L	Liters	liters
lbs	Pounds	pounds
MW-a	MegawattYear	Megawatt year (electrical capacity)
MW-d	MegawattDay	Megawatt day (electrical capacity)
MW-h	MegawattHour	Megawatt hour (electrical capacity)
MW-M	MegawattMonth	Megawatt month (electrical capacity)
MW-min	MegawattMinute	Megawatt minute (electrical capacity)
oz_tr	TroyOunces	Troy ounces

Code	Name	Description
PRINC	PrincipalWithRelationToDebtInstrument	Principal with relation to debt instrument
t	MetricTons	Metric tons. Also known as Tonnes, equal to 1000 kg
tn	Tons	Tons (US). Equal to 2000 lbs
a	Are	Are
ac	Acre	Acre
cL	Centiliter	Centiliter
cM	Centimeter	Centimeter
DGE	DieselGallonEquivalent	Diesel gallon equivalent
ft	Foot	Foot
Gal_gb	GBGallon	GB Gallon
GGE	GasolineGallonEquivalent	Gasonline gallon equivalent
ha	Hectare	Hectare
in	Inch	Inch
kM	Kilometer	Kilometer
M	Meter	Meter
mi	Mile	Mile
mL	Milliliter	Milliliter
mM	Millimeter	Millimeter
oz	USOunce	US ounce
pc	Piece	Piece
pt	USPint	US Pint
pt_gb	GBPint	GB pint
qt	USQuart	US Quart
qt_gb	GBQuart	GB Quart
SqcM	SquareCentimeter	Square centimeter
Sqft	SquareFoot	Square foot
Sqin	SquareInch	Square inch
SqkM	SquareKilometer	Square kilometer
SqM	SquareMeter	Square meter
Sqmi	SquareMile	Square mile
SqmM	SquareMillimeter	Square millimeter
Sqyd	SquareYard	Square yard
yd	Yard	Yard

Code	Name	Description
MMbbl	MillionBarrels	Million Barrels
USD	USDollars	US Dollars

Used in groups: [DeliveryScheduleGrp](#)

180.2.622 DeliverySchedulePositiveTolerance

Specifies the positive tolerance value. The value may be an absolute quantity or a percentage, as specified in [DeliveryScheduleToleranceType\(41046\)](#). Value may exceed agreed upon value. Percentage value is to be expressed relative to "1.0" representing 100% (e.g. a value of "0.0575" represents 5.75%).

Type: [float](#)

Used in groups: [DeliveryScheduleGrp](#)

180.2.623 DeliveryScheduleSettlCountry

Specifies the country where delivery takes place. Uses ISO 3166 2-character country code.

Type: [Country](#)

Used in groups: [DeliveryScheduleGrp](#)

180.2.624 DeliveryScheduleSettlDay

Specifies the day or group of days for delivery.

Type: [int](#)

Allowed values in [DeliveryScheduleSettlDayCodeSet](#):

Code	Name	Description
1	Monday	Monday
2	Tuesday	Tuesday
3	Wednesday	Wednesday
4	Thursday	Thursday
5	Friday	Friday
6	Saturday	Saturday

Code	Name	Description
7	Sunday	Sunday
8	AllWeekdays	All weekdays
9	AllDays	All days
10	AllWeekends	All weekends

Used in groups: [DeliveryScheduleSettlDayGrp](#)

180.2.625 DeliveryScheduleSettlDayGrp

The DeliveryScheduleSettlDayGrp is a repeating subcomponent of the DeliveryScheduleGrp component used to detail commodity delivery days.

Name	Mult.	Type	Description
NoDeliveryScheduleSettlDays	[1..1]	NumInGroup	
DeliveryScheduleSettlDay	[0..1]	CodeSet	Required if NoDeliveryScheduleSettlDays(41051) > 0.
DeliveryScheduleSettlTotalHours	[0..1]	int	
DeliveryScheduleSettlTimeGrp	[0..*]	Group	

Used in groups: [DeliveryScheduleGrp](#)

180.2.626 DeliveryScheduleSettlEnd

The scheduled end time for the delivery of the commodity where delivery occurs over specified times. The format of the time value is specified in DeliveryScheduleSettlTimeType(41057).

Type: [String](#)

Used in groups: [DeliveryScheduleSettlTimeGrp](#)

180.2.627 DeliveryScheduleSettlFlowType

Specifies the commodity delivery flow type.

Type: [int](#)

Allowed values in DeliveryScheduleSettlFlowTypeCodeSet:

Code	Name	Description
0	AllTimes	All times
1	OnPeak	On peak
2	OffPeak	Off peak
3	Base	Base
4	BlockHours	Block hours
5	Other	Other

Used in groups: [DeliveryScheduleGrp](#)

180.2.628 DeliveryScheduleSettlHolidaysProcessingInstruction

Indicates whether holidays are included in the settlement periods. Required for electricity contracts.

Type: [int](#)

Allowed values in DeliveryScheduleSettlHolidaysProcessingInstructionCodeSet:

Code	Name	Description
0	DoNotIncludeHolidays	Do not include holidays
1	IncludeHolidays	Include holidays

Used in groups: [DeliveryScheduleGrp](#)

180.2.629 DeliveryScheduleSettlStart

The scheduled start time for the delivery of the commodity where delivery occurs over specified times. The format of the time value is specified in DeliveryScheduleSettlTimeType(41057).

Type: [String](#)

Used in groups: [DeliveryScheduleSettlTimeGrp](#)

180.2.630 DeliveryScheduleSettlTimeGrp

The DeliveryScheduleSettlTimeGrp is a repeating subcomponent of the DeliveryScheduleSettlDayGrp component used to detail commodity delivery time period.

Name	Mult.	Type	Description
NoDeliveryScheduleSettlTimes	[1..1]	NumInGroup	
DeliveryScheduleSettlStart	[0..1]	String	Required if NoDeliveryScheduleSettlTimes(41054) > 0.
DeliveryScheduleSettlEnd	[0..1]	String	Required if NoDeliveryScheduleSettlTimes(41054) > 0.
DeliveryScheduleSettlTimeType	[0..1]	CodeSet	May be defaulted to market convention or bilaterally agreed if not specified.

Used in groups: [DeliveryScheduleSettlDayGrp](#)

180.2.631 DeliveryScheduleSettlTimeType

Specifies the format of the delivery start and end time values.

Type: [int](#)

Allowed values in DeliveryScheduleSettlTimeTypeCodeSet:

Code	Name	Description
0	Hour	Hour of the day. Applicable for electricity contracts. Time value is expressed as an integer hour of the day (1-24). The delivery start/end hour is specified as the end of the included hour. For example, a start hour of "4" begins at 3 a.m.; an end hour of "20" ends at 8 p.m.; a start hour of "1" and end hour of "24" indicates midnight to midnight delivery.
1	Timestamp	HH:MM time format. Applicable for gas contracts. Time value is expressed using a 24-hour time format. For example, a time value of "13:30" is 1:30 p.m.

Used in groups: [DeliveryScheduleSettlTimeGrp](#)

180.2.632 DeliveryScheduleSettlTimeZone

Delivery timezone specified as "prevailing" rather than "standard" or "daylight".

See http://www.fixtradingcommunity.org/codelists#Prevailing_Timezones for code list of applicable prevailing timezones.

Type: **String**

Used in groups: **DeliveryScheduleGrp**

180.2.633 DeliveryScheduleSettlTotalHours

The sum of the total hours specified in the DeliveryScheduleSettlTimeGrp component.

Type: **int**

Used in groups: **DeliveryScheduleSettlDayGrp**

180.2.634 DeliveryScheduleToleranceType

Specifies the tolerance value type.

Type: **int**

Allowed values in DeliveryScheduleToleranceTypeCodeSet:

Code	Name	Description
0	Absolute	Absolute
1	Percentage	Percentage

Used in groups: **DeliveryScheduleGrp**

180.2.635 DeliveryScheduleToleranceUnitOfMeasure

Specifies the tolerance value's unit of measure (UOM).

Type: **String**

Allowed values in UnitOfMeasureCodeSet:

Code	Name	Description
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet
Bbl	Barrels	Barrels. Equal to 42 US gallons
CBM	CubicMeters	Cubic Meters
BDFT	BoardFeet	Board feet. Equal to 144 cubic inches
GJ	Gigajoules	gigajoules
Bu	Bushels	Bushels
kHR	HeatRate	Heat rate. The number of BTUs required to produce one kilowatt hour of electricity, typically 3,412.14 BTUs per 1 kWh.
Ccy	Currency	Amount of currency
kWh	KilowattHours	Kilowatt hours
CDD	CoolingDegreeDay	Cooling degree day
MHR	MegaHeatRate	Mega heat rate. The number of million BTUs required to produce one megawatt hour of electricity, typically 3.41214 million BTUs per 1 MWh.
CER	CertifiedEmissionsReduction	Certified emissions reduction
MMBtu	OneMillionBTU	One Million BTU
CPD	CriticalPrecipDay	Critical precipitation day
MWh	MegawattHours	Megawatt hours
CRT	ClimateReserveTonnes	Climate reserve tonnes
thm	Therms	therms. Equal to 100,000 BTU
cwt	Hundredweight	Hundredweight(US). Equal to 100 lbs
tnCO2	TonsOfCarbonDioxide	Tons of carbon dioxide
day	Day	Days
dt	DryMetricTons	Dry metric tons
EnvAllwnc	EnvAllwncCert	Environmental allowance certificates
EnvCrd	EnvironmentalCredit	Environmental credit
EnvOfst	EnvironmentalOffset	Environmental Offset
g	Grams	Grams
Gal	Gallons	Gallons
GT	GrossTons	Gross tons. Also known as long tons or imperial tons, equal to 2240 lbs
HDD	HeatingDegreeDay	Heating degree day
IPNT	IndexPoint	Index point
kg	Kilograms	Kilograms

Code	Name	Description
kL	Kiloliters	kiloliters
kW-a	KilowattYear	Kilowatt year (electrical capacity)
kW-d	KilowattDay	Kilowatt day (electrical capacity)
kW-h	KilowattHour	Kilowatt hour (electrical capacity)
kW-M	KilowattMonth	Kilowatt month (electrical capacity)
kW-min	KilowattMinute	Kilowatt-Minute (electrical capacity)
L	Liters	liters
lbs	Pounds	pounds
MW-a	MegawattYear	Megawatt year (electrical capacity)
MW-d	MegawattDay	Megawatt day (electrical capacity)
MW-h	MegawattHour	Megawatt hour (electrical capacity)
MW-M	MegawattMonth	Megawatt month (electrical capacity)
MW-min	MegawattMinute	Megawatt minute (electrical capacity)
oz_tr	TroyOunces	Troy ounces
PRINC	PrincipalWithRelationToDebtInstrument	Principal with relation to debt instrument
t	MetricTons	Metric tons. Also known as Tonnes, equal to 1000 kg
tn	Tons	Tons (US). Equal to 2000 lbs
a	Are	Are
ac	Acre	Acre
cL	Centiliter	Centiliter
cM	Centimeter	Centimeter

Used in groups: **DeliveryScheduleGrp**

180.2.636 DeliveryScheduleType

Specifies the type of delivery schedule.

Type: **int**

Allowed values in DeliveryScheduleTypeCodeSet:

Code	Name	Description
0	Notional	Notional
1	Delivery	Delivery
2	PhysicalSettlPeriods	Physical settlement period

Used in groups: **DeliveryScheduleGrp**

180.2.637 DeliveryScheduleXID

Identifier for this instance of delivery schedule for cross referencing elsewhere in the message.

Type: **XID**

Used in groups: **DeliveryScheduleGrp**

180.2.638 DeliveryStreamCommoditySource

The SCoTA coal cargo origin, mining region, mine(s), mining complex(es), loadout(s) or river dock(s) or other point(s) of origin that seller and buyer agree are acceptable origins for the coal product. For international coal transactions, this is the origin of the coal product.

See <http://www.fpml.org/coding-scheme/commodity-coal-product-source> for values.

Type: **String**

Used in groups: **DeliveryStreamCommoditySourceGrp**

180.2.639 DeliveryStreamCommoditySourceGrp

The DeliveryStreamCommoditySourceGrp is a repeating subcomponent of the DeliveryStream component used to detail the origins or sources of the commodity.

Name	Mult.	Type	Description
NoDeliveryStreamCommoditySources	[1..1]	NumInGroup	
DeliveryStreamCommoditySource	[0..1]	String	Required if NoDeliveryStreamCommoditySources(41085) > 0.

Used in components: **DeliveryStream**

180.2.640 DeliveryStream

The DeliveryStream component is used to optionally specify the attributes of a physical delivery stream in a swap.

Name	Mult.	Type	Description
DeliveryStreamType	[0..1]	CodeSet	

Name	Mult.	Type	Description
DeliveryStreamCommoditySourceGrp	[0..*]	Group	
DeliveryStreamPipeline	[0..1]	String	
DeliveryStreamEntryPoint	[0..1]	String	
DeliveryStreamWithdrawalPoint	[0..1]	String	
DeliveryStreamDeliveryPoint	[0..1]	String	
DeliveryStreamDeliveryPointSource	[0..1]	CodeSet	
DeliveryStreamDeliveryPointDesc	[0..1]	String	
DeliveryStreamDeliveryRestriction	[0..1]	CodeSet	
DeliveryStreamDeliveryContingency	[0..1]	String	
DeliveryStreamDeliveryContingentPartySide	[0..1]	CodeSet	
DeliveryStreamDeliverAtSourceIndicator	[0..1]	Boolean	
DeliveryStreamRiskApportionment	[0..1]	String	
DeliveryStreamRiskApportionmentSource	[0..1]	String	
DeliveryStreamCycleGrp	[0..*]	Group	
DeliveryStreamTitleTransferLocation	[0..1]	String	
DeliveryStreamTitleTransferCondition	[0..1]	CodeSet	
DeliveryStreamImporterOfRecord	[0..1]	String	
DeliveryStreamNegativeTolerance	[0..1]	float	
DeliveryStreamPositiveTolerance	[0..1]	float	
DeliveryStreamToleranceUnitOfMeasure	[0..1]	CodeSet	
DeliveryStreamToleranceType	[0..1]	CodeSet	
DeliveryStreamToleranceOptionSide	[0..1]	CodeSet	
DeliveryStreamTotalPositiveTolerance	[0..1]	Percentage	
DeliveryStreamTotalNegativeTolerance	[0..1]	Percentage	
DeliveryStreamNotionalConversionFactor	[0..1]	float	
DeliveryStreamTransportEquipment	[0..1]	String	
DeliveryStreamElectingPartySide	[0..1]	CodeSet	
DeliveryStreamRouteOrCharter	[0..1]	String	

Used in groups: **StreamGrp**

180.2.641 DeliveryStreamCycleDesc

The delivery cycles during which the oil product will be transported in the pipeline.

Type: **String**

Used in groups: **DeliveryStreamCycleGrp**

180.2.642 DeliveryStreamCycleGrp

The DeliveryStreamCycleGrp is a repeating subcomponent of the DeliveryStream component used to detail delivery cycles during which the oil product will be transported in the pipeline.

Name	Mult.	Type	Description
NoDeliveryStreamCycles	[1..1]	NumInGroup	
DeliveryStreamCycleDesc	[0..1]	String	Required if NoDeliveryStreamCycles(41081) > 0.
EncodedDeliveryStreamCycleDescLen	[0..1]	Length	Must be set if EncodedDeliveryStreamCycleDesc(41084) field is specified and must immediately precede it.
EncodedDeliveryStreamCycleDesc	[0..1]	data	Encoded (non-ASCII characters) representation of the DeliveryStreamCycleDesc(41082) field in the encoded format specified via the MessageEncoding(347) field.

Used in components: **DeliveryStream**

180.2.643 DeliveryStreamDeliverAtSourceIndicator

When this element is specified and set to 'Y', delivery of the coal product is to be at its source.

Type: **Boolean**

Used in components: **DeliveryStream**

180.2.644 DeliveryStreamDeliveryContingency

Specifies the electricity delivery contingency.

See <http://www.fpml.org/coding-scheme/electricity-transmission-contingency> for values.

Type: **String**

Used in components: **DeliveryStream**

180.2.645 DeliveryStreamDeliveryContingentPartySide

The trade side value of the party responsible for electricity delivery contingency.

Type: **int**

Allowed values in DeliveryStreamElectingPartySideCodeSet:

Code	Name	Description
0	Buyer	Buyer
1	Seller	Seller

Used in components: **DeliveryStream**

180.2.646 DeliveryStreamDeliveryPoint

The point at which the commodity product will be delivered and received. Value specified should follow market convention appropriate for the commodity product.

For bullion, see <http://www.fpml.org/coding-scheme/bullion-delivery-location> for values.

Type: **String**

Used in components: **DeliveryStream**

180.2.647 DeliveryStreamDeliveryPointDesc

Description of the delivery point identified in DeliveryStreamDeliveryPoint(41062).

Type: **String**

Used in components: **DeliveryStream**

180.2.648 DeliveryStreamDeliveryPointSource

Identifies the class or source of DeliveryStreamDeliveryPoint(41062).

Type: **int**

Allowed values in DeliveryStreamDeliveryPointSourceCodeSet:

Code	Name	Description
0	Proprietary	Proprietary
1	EIC	Energy Identification Code (EIC). Energy Identification Code specifies the location or connection point codes of energy delivery. See http://www.entsog.eu/eic-codes/eic-location-codes-v or http://www.eiccodes.eu for more information and allocated values to use in DeliveryStreamDeliveryPoint(41062).

Used in components: **DeliveryStream**

180.2.649 DeliveryStreamDeliveryRestriction

Specifies under what conditions the buyer and seller should be excused of their delivery obligations.

Type: **int**

Allowed values in DeliveryStreamDeliveryRestrictionCodeSet:

Code	Name	Description
1	Firm	Firm. Never excused of delivery obligations.
2	NonFirm	Interruptable or non-firm. Excused when interrupted for any reason or for no reason without liability.
3	ForceMajeure	Force majeure. Excused when prevented by force majeure.
4	SystemFirm	System firm. Must be supplied from the owned or controlled generation of pre-existing purchased power assets of the system specified.
5	UnitFirm	Unit firm. Must be supplied from the generation asset specified.

Used in components: **DeliveryStream**

180.2.650 DeliveryStreamElectingPartySide

A reference to the party able to choose whether the gas is delivered for a particular period as found in a swing or interruptible contract.

Type: **int**

Allowed values in DeliveryStreamElectingPartySideCodeSet:

Code	Name	Description
0	Buyer	Buyer
1	Seller	Seller

Used in components: [DeliveryStream](#)

180.2.651 DeliveryStreamEntryPoint

The point at which the commodity will enter the delivery mechanism or pipeline.

Type: [String](#)

Used in components: [DeliveryStream](#)

180.2.652 DeliveryStreamImporterOfRecord

A party, not necessarily of the trade, who is the Importer of Record for the purposes of paying customs duties and applicable taxes or costs related to importation.

Type: [String](#)

Used in components: [DeliveryStream](#)

180.2.653 DeliveryStreamNegativeTolerance

Specifies the negative tolerance value. The value may be an absolute quantity or a percentage, as specified in DeliveryStreamToleranceType(41074). Percentage value is to be expressed relative to "1.0" representing 100% (e.g. a value of "0.0575" represents 5.75%).

Type: [float](#)

Used in components: [DeliveryStream](#)

180.2.654 DeliveryStreamNotionalConversionFactor

If the notional quantity is specified in a unit that does not match the unit in which the commodity reference price is quoted, the scaling or conversion factor used to convert the commodity reference

price unit into the notional quantity unit should be stated here. If there is no conversion, this field is not intended to be used.

Type: **float**

Used in components: **DeliveryStream**

180.2.655 DeliveryStreamPipeline

The name of the oil delivery pipeline.

Type: **String**

Used in components: **DeliveryStream**

180.2.656 DeliveryStreamPositiveTolerance

Specifies the positive tolerance value. The value may be an absolute quantity or a percentage, as specified in **DeliveryStreamToleranceType**(41074). Value may exceed agreed upon value. Percentage value is to be expressed relative to "1.0" representing 100% (e.g. a value of "0.0575" represents 5.75%).

Type: **float**

Used in components: **DeliveryStream**

180.2.657 DeliveryStreamRiskApportionment

Specifies how the parties to the trade apportion responsibility for the delivery of the commodity product.

See http://www.fixtradingcommunity.org/codelists#Risk_Apportionment for the details of the external code list.

Type: **String**

Used in components: **DeliveryStream**

180.2.658 DeliveryStreamRiskApportionmentSource

Specifies the source or legal framework for the risk apportionment.

See http://www.fixtradingcommunity.org/codelists#Risk_Apportionment_Source for the details of the external code list.

Type: **String**

Used in components: **DeliveryStream**

180.2.659 DeliveryStreamRouteOrCharter

Specific delivery route or time charter average. Applicable to commodity freight swaps.

Type: **String**

Used in components: **DeliveryStream**

180.2.660 DeliveryStreamTitleTransferCondition

Specifies the condition of title transfer.

Type: **int**

Allowed values in DeliveryStreamTitleTransferConditionCodeSet:

Code	Name	Description
0	Transfers	Transfers with risk of loss
1	DoesNotTransfer	Does not transfer with risk of loss

Used in components: **DeliveryStream**

180.2.661 DeliveryStreamTitleTransferLocation

Specifies the title transfer location.

Type: **String**

Used in components: **DeliveryStream**

180.2.662 DeliveryStreamToleranceOptionSide

Indicates whether the tolerance is at the seller's or buyer's option.

Type: **int**

Allowed values in DeliveryStreamToleranceOptionSideCodeSet:

Code	Name	Description
1	Buyer	Buyer
2	Seller	Seller

Used in components: [DeliveryStream](#)

180.2.663 DeliveryStreamToleranceType

Specifies the tolerance value type.

Type: [int](#)

Allowed values in DeliveryScheduleToleranceTypeCodeSet:

Code	Name	Description
0	Absolute	Absolute
1	Percentage	Percentage

Used in components: [DeliveryStream](#)

180.2.664 DeliveryStreamToleranceUnitOfMeasure

Specifies the tolerance value's unit of measure (UOM).

Type: [String](#)

Allowed values in UnitOfMeasureCodeSet:

Code	Name	Description
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet
Bbl	Barrels	Barrels. Equal to 42 US gallons
CBM	CubicMeters	Cubic Meters
BDFT	BoardFeet	Board feet. Equal to 144 cubic inches
GJ	Gigajoules	gigajoules
Bu	Bushels	Bushels

Code	Name	Description
kHR	HeatRate	Heat rate. The number of BTUs required to produce one kilowatt hour of electricity, typically 3,412.14 BTUs per 1 kWh.
Ccy	Currency	Amount of currency
kWh	KilowattHours	Kilowatt hours
CDD	CoolingDegreeDay	Cooling degree day
MHR	MegaHeatRate	Mega heat rate. The number of million BTUs required to produce one megawatt hour of electricity, typically 3.41214 million BTUs per 1 MWh.
CER	CertifiedEmissionsReduction	Certified emissions reduction
MMBtu	OneMillionBTU	One Million BTU
CPD	CriticalPrecipDay	Critical precipitation day
MWh	MegawattHours	Megawatt hours
CRT	ClimateReserveTonnes	Climate reserve tonnes
thm	Therms	therms. Equal to 100,000 BTU
cwt	Hundredweight	Hundredweight(US). Equal to 100 lbs
tnCO2	TonsOfCarbonDioxide	Tons of carbon dioxide
day	Day	Days
dt	DryMetricTons	Dry metric tons
EnvAllwnc	EnvAllwncCert	Environmental allowance certificates
EnvCrd	EnvironmentalCredit	Environmental credit
EnvOfst	EnvironmentalOffset	Environmental Offset
g	Grams	Grams
Gal	Gallons	Gallons
GT	GrossTons	Gross tons. Also known as long tons or imperial tons, equal to 2240 lbs
HDD	HeatingDegreeDay	Heating degree day
IPNT	IndexPoint	Index point
kg	Kilograms	Kilograms
kL	Kiloliters	kiloliters
kW-a	KilowattYear	Kilowatt year (electrical capacity)
kW-d	KilowattDay	Kilowatt day (electrical capacity)
kW-h	KilowattHour	Kilowatt hour (electrical capacity)
kW-M	KilowattMonth	Kilowatt month (electrical capacity)
kW-min	KilowattMinute	Kilowatt-Minute (electrical capacity)
L	Liters	liters

Code	Name	Description
lbs	Pounds	pounds
MW-a	MegawattYear	Megawatt year (electrical capacity)
MW-d	MegawattDay	Megawatt day (electrical capacity)
MW-h	MegawattHour	Megawatt hour (electrical capacity)
MW-M	MegawattMonth	Megawatt month (electrical capacity)
MW-min	MegawattMinute	Megawatt minute (electrical capacity)
oz_tr	TroyOunces	Troy ounces
PRINC	PrincipalWithRelationToDebtInstrument	Principal with relation to debt instrument
t	MetricTons	Metric tons. Also known as Tonnes, equal to 1000 kg
tn	Tons	Tons (US). Equal to 2000 lbs
a	Are	Are
ac	Acre	Acre
cL	Centiliter	Centiliter
cM	Centimeter	Centimeter
DGE	DieselGallonEquivalent	Diesel gallon equivalent
ft	Foot	Foot
Gal_gb	GBGallon	GB Gallon
GGE	GasolineGallonEquivalent	Gasonline gallon equivalent
ha	Hectare	Hectare
in	Inch	Inch
kM	Kilometer	Kilometer
M	Meter	Meter
mi	Mile	Mile
mL	Milliliter	Milliliter
mM	Millimeter	Millimeter
oz	USOunce	US ounce
pc	Piece	Piece
pt	USPint	US Pint
pt_gb	GBPint	GB pint
qt	USQuart	US Quart
qt_gb	GBQuart	GB Quart
SqcM	SquareCentimeter	Square centimeter
Sqft	SquareFoot	Square foot

Code	Name	Description
Sqin	SquareInch	Square inch
SqkM	SquareKilometer	Square kilometer
SqM	SquareMeter	Square meter
Sqmi	SquareMile	Square mile
SqmM	SquareMillimeter	Square millimeter
Sqyd	SquareYard	Square yard
yd	Yard	Yard
MMbbl	MillionBarrels	Million Barrels
USD	USDollars	US Dollars

Used in components: **DeliveryStream**

180.2.665 DeliveryStreamTotalNegativeTolerance

The negative percent tolerance which applies to the total quantity delivered over all shipment periods.

Percentage value is to be expressed relative to "1.0" representing 100% (e.g. a value of "0.0575" represents 5.75%).

Type: **Percentage**

Used in components: **DeliveryStream**

180.2.666 DeliveryStreamTotalPositiveTolerance

The positive percent tolerance which applies to the total quantity delivered over all shipment periods.

Percentage value is to be expressed relative to "1.0" representing 100% (e.g. a value of "0.0575" represents 5.75%).

Type: **Percentage**

Used in components: **DeliveryStream**

180.2.667 DeliveryStreamTransportEquipment

The transportation equipment with which the commodity product will be delivered and received.

Type: **String**

Used in components: **DeliveryStream**

180.2.668 DeliveryStreamType

Specifies the type of delivery stream.

Type: **int**

Allowed values in DeliveryStreamTypeCodeSet:

Code	Name	Description
0	Periodic	Periodic (default if not specified)
1	Initial	Initial
2	Single	Single

Used in components: **DeliveryStream**

180.2.669 DeliveryStreamWithdrawalPoint

The point at which the commodity product will be withdrawn prior to delivery.

Type: **String**

Used in components: **DeliveryStream**

180.2.670 DeliveryType

Identifies type of settlement

Type: **int**

Allowed values in DeliveryTypeCodeSet:

Code	Name	Description
0	VersusPayment	"Versus Payment": Deliver (if sell) or Receive (if buy) vs. (against) Payment
1	Free	"Free": Deliver (if sell) or Receive (if buy) Free
2	TriParty	Tri-Party

Code	Name	Description
3	HoldInCustody	Hold In Custody
4	DeliverByValue	Deliver-by-Value. In the context of EU SFTR reporting, indicates that the transaction is to be or was settled using the DBV mechanism.

Used in components: [FinancingDetails](#)

180.2.671 DeltaCrossed

Indicates that the party has taken a position on both a put and a call on the same underlying asset.

Type: [Boolean](#)

Used in messages: [TradeCaptureReport](#)

180.2.672 DerivativeCapPrice

Used to express the ceiling price of a capped call.

See CapPrice(1199) for complete definition.

Type: [Price](#)

Used in components: [DerivativeInstrument](#)

180.2.673 DerivativeCFIcode

The type of security using ISO 10962 standard, Classification of Financial Instruments (CFI code) values.

See CFIcode(461) for complete definition.

Type: [String](#)

Used in components: [DerivativeInstrument](#)

180.2.674 DerivativeContractMultiplier

Specifies the ratio or multiply factor to convert from nominal units (e.g. contracts) to total units (e.g. shares) (e.g. 1.0, 100, 1000, etc.).

See ContractMultiplier(231) for complete definition.

Type: **float**

Used in components: **DerivativeInstrument**

180.2.675 DerivativeContractMultiplierUnit

Indicates the type of multiplier being applied to the contract. Can be optionally used to further define what unit DerivativeContractMultiplier(1266) is expressed in.

See ContractMultiplierUnit(1435) for complete definition.

Type: **int**

Allowed values in ContractMultiplierUnitCodeSet:

Code	Name	Description
0	Shares	Shares
1	Hours	Hours
2	Days	Days

Used in components: **DerivativeInstrument**

180.2.676 DerivativeContractSettlMonth

Specifies when the contract (i.e. MBS/TBA) will settle.

See ContractSettlMonth(667) for complete definition.

Type: **MonthYear**

Used in components: **DerivativeInstrument**

180.2.677 DerivativeContraryInstructionEligibilityIndicator

Identifies whether the option instrument is eligible for contrary instructions at the time of exercise. The contrariness of an instruction will be determined in the context of DerivativeInTheMoneyCondition(2684). When not specified, the eligibility is undefined or not applicable.

See ContraryInstructionEligibilityIndicator(2685) for complete definition.

Type: **Boolean**

Used in components: **DerivativeInstrument**

180.2.678 DerivativeCountryOfIssue

ISO Country code of instrument issue (e.g. the country portion typically used in ISIN).

See CountryOfIssue(470) for complete definition.

Type: **Country**

Used in components: **DerivativeInstrument**

180.2.679 DerivativeEncodedIssuer

Encoded (non-ASCII characters) representation of the DerivativeIssuer(1275) field in the encoded format specified via the MessageEncoding (347) field. If used, the ASCII (English) representation should also be specified in the DerivativeIssuer(1275) field.

See EncodedIssuer(349) for complete definition.

Type: **data**

Used in components: **DerivativeInstrument**

180.2.680 DerivativeEncodedIssuerLen

Byte length of encoded (non-ASCII characters) DerivativeEncodedSecurityDesc (1281) field.

See EncodedIssuerLen(348) for complete definition.

Type: **Length**

Used in components: **DerivativeInstrument**

180.2.681 DerivativeEncodedSecurityDesc

Encoded (non-ASCII characters) representation of the DerivativeSecurityDesc(1279) field in the encoded format specified via the MessageEncoding (347) field. If used, the ASCII (English) representation should also be specified in the DerivativeSecurityDesc(1279) field.

See EncodedSecurityDesc(351) for complete definition.

Type: **data**

Used in components: **DerivativeInstrument**

180.2.682 DerivativeEncodedSecurityDescLen

Byte length of encoded (non-ASCII characters) DerivativeEncodedSecurityDesc (1281) field.

See EncodedSecurityDescLen(350) for complete definition.

Type: **Length**

Used in components: **DerivativeInstrument**

180.2.683 DerivativeEventDate

Date of event.

See EventDate(866) for complete definition.

Type: **LocalMktDate**

Used in groups: **DerivativeEventsGrp**

180.2.684 DerivativeEventPx

Predetermined price of issue at event.

See EventPx(867) for complete definition.

Type: **Price**

Used in groups: **DerivativeEventsGrp**

180.2.685 DerivativeEventsGrp

Name	Mult.	Type	Description
NoDerivativeEvents	[1..1]	NumInGroup	
DerivativeEventType	[0..1]	CodeSet	
DerivativeEventDate	[0..1]	LocalMktDate	
DerivativeEventTime	[0..1]	UTCTimestamp	
DerivativeEventPx	[0..1]	Price	
DerivativeEventText	[0..1]	String	

Used in components: **DerivativeInstrument**

180.2.686 DerivativeEventText

Comments related to the event.

See EventText(868) for complete definition.

Type: **String**

Used in groups: **DerivativeEventsGrp**

180.2.687 DerivativeEventTime

Specific time of event. To be used in combination with DerivativeEventDate(1288).

See EventTime(1145) for complete definition.

Type: **UTCTimestamp**

Used in groups: **DerivativeEventsGrp**

180.2.688 DerivativeEventType

Code to represent the type of event.

See EventType(865) for complete definition.

Type: **int**

Allowed values in EventTypeCodeSet:

Code	Name	Description
1	Put	Put
2	Call	Call
3	Tender	Tender
4	SinkingFundCall	Sinking fund call
5	Activation	Activation
6	Inactivation	Inactivation
7	LastEligibleTradeDate	Last eligible trade date
8	SwapStartDate	Swap start date
9	SwapEndDate	Swap end date
10	SwapRollDate	Swap roll date
11	SwapNextStartDate	Swap next start date

Code	Name	Description
12	SwapNextRollDate	Swap next roll date
13	FirstDeliveryDate	First delivery date
14	LastDeliveryDate	Last delivery date
15	InitialInventoryDueDate	Initial inventory due date
16	FinalInventoryDueDate	Final inventory due date
17	FirstIntentDate	First intent date
18	LastIntentDate	Last intent date
19	PositionRemovalDate	Position removal date
20	MinimumNotice	Minimum notice
21	DeliveryStartTime	Delivery start time
22	DeliveryEndTime	Delivery end time
23	FirstNoticeDate	First notice date. The first day that a notice of intent to deliver a commodity can be made by a clearing house to a buyer in fulfillment of a given month's futures contract.
24	LastNoticeDate	Last notice date. The last day on which a clearing house may inform an investor that a seller intends to make delivery of a commodity that the investor previously bought in a futures contract. The date is governed by the rules of different exchanges and clearing houses, but may also be stated in the futures contract itself.
25	FirstExerciseDate	First exercise date
26	RedemptionDate	Redemption date
27	TrdCntntnEfctvDt	Trade continuation effective date
99	Other	Other

Used in groups: **DerivativeEventsGrp**

180.2.689 DerivativeExerciseStyle

Type of exercise.

See ExerciseStyle(1194) for complete definition.

Type: **int**

Allowed values in ExerciseStyleCodeSet:

Code	Name	Description
0	European	European
1	American	American
2	Bermuda	Bermuda
99	Other	Other

Used in components: [DerivativeInstrument](#)

180.2.690 DerivativeFloorPrice

Used to express the floor price of a capped put.

See FloorPrice(1200) for complete definition.

Type: [Price](#)

Used in components: [DerivativeInstrument](#)

180.2.691 DerivativeFlowScheduleType

The industry standard flow schedule by which electricity or natural gas is traded. Schedules exist by regions and on-peak and off-peak status, such as "Western Peak".

See FlowScheduleType(1439) for complete definition.

Type: [int](#)

Allowed values in FlowScheduleTypeCodeSet:

Code	Name	Description
0	NERCEasternOffPeak	NERC Eastern Off-Peak
1	NERCWesternOffPeak	NERC Western Off-Peak
2	NERCCalendarAllDaysInMonth	NERC Calendar-All Days in month
3	NERCEasternPeak	NERC Eastern Peak
4	NERCWesternPeak	NERC Western Peak
5	AllTimes	All times
6	OnPeak	On peak
7	OffPeak	Off peak
8	Base	Base

Code	Name	Description
9	Block	Block
99	Other	Other

Used in components: [DerivativeInstrument](#)

180.2.692 DerivativeInstrAttribType

Type of instrument attribute.

See InstrAttribType(871) for complete definition.

Type: [int](#)

Allowed values in InstrAttribTypeCodeSet:

Code	Name	Description
1	Flat	Flat (securities pay interest on a current basis but are traded without interest)
2	ZeroCoupon	Zero coupon
3	InterestBearing	Interest bearing (for Euro commercial paper when not issued at discount)
4	NoPeriodicPayments	No periodic payments
5	VariableRate	Variable rate
6	LessFeeForPut	Less fee for put
7	SteppedCoupon	Stepped coupon
8	CouponPeriod	Coupon period (if not semi-annual). Supply redemption date in the InstrAttribValue(872) field.
9	When	When [and if] issued
10	OriginalIssueDiscount	Original issue discount
11	Callable	Callable, puttable
12	EscrowedToMaturity	Escrowed to Maturity
13	EscrowedToRedemptionDate	Escrowed to redemption date - callable. Supply redemption date in the InstrAttribValue(872) field.
14	PreRefunded	Pre-refunded
15	InDefault	In default
16	Unrated	Unrated
17	Taxable	Taxable

Code	Name	Description
18	Indexed	Indexed
19	SubjectToAlternativeMinimumTax	Subject To Alternative Minimum Tax
20	OriginalIssueDiscountPrice	Original issue discount price. Supply price in the InstrAttribValue(872) field.
21	CallableBelowMaturityValue	Callable below maturity value
22	CallableWithoutNotice	Callable without notice by mail to holder unless registered
23	PriceTickRulesForSecurity	Price tick rules for security
24	TradeTypeEligibilityDetailsForSecurity	Trade type eligibility details for security
25	InstrumentDenominator	Instrument denominator
26	InstrumentNumerator	Instrument numerator
27	InstrumentPricePrecision	Instrument price precision
28	InstrumentStrikePrice	Instrument strike price
29	TradeableIndicator	Tradeable indicator
30	InstrumentEligibleAnonOrders	Instrument is eligible to accept anonymous orders
31	MinGuaranteedFillVolume	Minimum guaranteed fill volume
32	MinGuaranteedFillStatus	Minimum guaranteed fill status
33	TradeAtSettlementEligibility	Trade at settlement (TAS) eligibility
34	TestInstrument	Test instrument. Instrument that is tradable but has no effect on the positions, exchange turnover etc.
35	DummyInstrument	Dummy instrument. Instrument that is normally halted and is only activated for trading under very special conditions (e.g. temporarily assigned for newly listed instrument). Use of a dummy instrument generally applies to systems that are unable to add reference data for new instruments intraday.
36	NegativeSettlementPriceEligibility	Negative settlement price eligibility
37	NegativeStrikePriceEligibility	Negative strike price eligibility
38	USStdContractInd	US standard contract indicator. Indicates through InstrAttribValue(872) - values Y or N - whether the underlying asset in the trade references or is economically related to a contract listed in Appendix B of CFTC Part 43 regulation. See http://www.ecfr.gov/cgi-bin/text-idx?SID=4b2d1078ad68f6564a89d7ff6c52ec43&node=17:2.0.1.1.3.0.1.8.2&rgn=div or refer to Appendix B to Part 43 in the final rule at http://www.cftc.gov/ucm/groups/public/@lrfederalregister/documents/file/2013-12133a.pdf
39	AdmittedToTradingOnTradingVenue	Admitted to trading on a trading venue
40	AverageDailyNotionalAmount	Average daily notional amount

Code	Name	Description
41	AverageDailyNumberTrades	Average daily number of trades
99	Text	Text. Supply the text value in InstrAttribValue(872).

Used in groups: [DerivativeInstrumentAttribute](#)

180.2.693 DerivativeInstrAttribValue

Attribute value appropriate to the DerivativeInstrAttribValue(1313) field.

See InstrAttribValue(872) for complete definition.

Type: [String](#)

Used in groups: [DerivativeInstrumentAttribute](#)

180.2.694 DerivativeInstrmtAssignmentMethod

Method under which assignment was conducted.

See InstrmtAssignmentMethod(1049) for complete definition.

Type: [char](#)

Allowed values in InstrmtAssignmentMethodCodeSet:

Code	Name	Description
P	ProRata	Pro rata
R	Random	Random

Used in components: [DerivativeInstrument](#)

180.2.695 DerivativeInstrRegistry

Values may include BIC for the depository or custodian who maintain ownership records, the ISO country code for the location of the record, or the value ZZ to specify physical ownership of the security (e.g. stock certificate).

See InstrRegistry(543) for complete definition.

Type: **String**

Used in components: **DerivativeInstrument**

180.2.696 DerivativeInstrumentAttribute

Name	Mult.	Type	Description
NoDerivativeInstrAttrib	[1..1]	NumInGroup	
DerivativeInstrAttribType	[0..1]	CodeSet	
DerivativeInstrAttribValue	[0..1]	String	

Used in components: **DerivativeSecurityDefinition**

180.2.697 DerivativeInstrument

Name	Mult.	Type	Description
DerivativeSymbol	[0..1]	String	Common, "human understood" representation of the security. SecurityID value can be specified if no symbol exists (e.g. non-exchange traded Collective Investment Vehicles). Use "[N/A]" for products which do not have a symbol. Required if DerivativeInstrument component is marked as required where the component is used.
DerivativeSymbolSfx	[0..1]	CodeSet	
DerivativeSecurityID	[0..1]	String	Takes precedence in identifying security to counterparty over SecurityAltID block
DerivativeSecurityIDSource	[0..1]	CodeSet	
DerivativeSecurityAltIDGrp	[0..*]	Group	
DerivativeProduct	[0..1]	CodeSet	
DerivativeProductComplex	[0..1]	String	Identifies an entire suite of products for a given market. In Futures this may be "interest rates", "agricultural", "equity indexes", etc
DerivFlexProductEligibilityIndicator	[0..1]	Boolean	Used to indicate if a product or group of product supports the creation of flexible securities
DerivativeSecurityGroup	[0..1]	String	
DerivativeCFIcode	[0..1]	String	It is recommended that CFIcode be used instead of SecurityType for non-Fixed Income instruments.

Name	Mult.	Type	Description
DerivativeUPICode	[0..1]	String	
DerivativeSecurityType	[0..1]	CodeSet	It is recommended that CFICode be used instead of SecurityType for non-Fixed Income instruments. Required for Fixed Income. Refer to Volume 7 - Fixed Income. Futures and Options should be specified using the CFICode[461] field instead of SecurityType[167] (Refer to Volume 7 - Recommendations and Guidelines for Futures and Options Markets.)
DerivativeSecuritySubType	[0..1]	String	
DerivativeMaturityMonthYear	[0..1]	MonthYear	Applicable for standardized derivatives which are typically only referenced by month and year (e.g. S and P futures). Note MaturityDate (a full date) can also be specified.
DerivativeMaturityDate	[0..1]	LocalMktDate	Note that standardized derivatives which are typically only referenced by month and year (e.g. S and P futures).may use MaturityMonthYear and or this field. When using MaturityMonthYear, it is recommended that markets and sell sides report the MaturityDate on all outbound messages as a means of data enrichment.
DerivativeMaturityTime	[0..1]	TZTimeOnly	
DerivativeSettleOnOpenFlag	[0..1]	String	
DerivativeInstrmtAssignmentMethod	[0..1]	CodeSet	
DerivativeSecurityStatus	[0..1]	CodeSet	
DerivativeIssueDate	[0..1]	LocalMktDate	Date instrument was issued. For Fixed Income IOIs for new issues, specifies the issue date.
DerivativeInstrRegistry	[0..1]	String	Can be used in conjunction with ISIN to address ISIN uniqueness issues.
DerivativeCountryOfIssue	[0..1]	Country	Can be used in conjunction with non-ISIN SecurityID (e.g. CUSIP for Municipal Bonds without ISIN) to provide uniqueness.
DerivativeStateOrProvinceOfIssue	[0..1]	String	
DerivativeLocaleOfIssue	[0..1]	String	
DerivativeStrikePrice	[0..1]	Price	
DerivativeStrikeCurrency	[0..1]	Currency	
DerivativeStrikeCurrencyCodeSource	[0..1]	CodeSet	
DerivativeStrikeMultiplier	[0..1]	float	
DerivativeStrikeValue	[0..1]	float	

Name	Mult.	Type	Description
DerivativeOptAttribute	[0..1]	char	
DerivativeContractMultiplier	[0..1]	float	
DerivativeContractMultiplierUnit	[0..1]	CodeSet	
DerivativeFlowScheduleType	[0..1]	CodeSet	
DerivativeMinPriceIncrement	[0..1]	float	
DerivativeMinPriceIncrementAmount	[0..1]	Amt	
DerivativeUnitOfMeasure	[0..1]	CodeSet	
DerivativeUnitOfMeasureQty	[0..1]	Qty	
DerivativeUnitOfMeasureCurrency	[0..1]	Currency	
DerivativeUnitOfMeasureCurrency-CodeSource	[0..1]	CodeSet	
DerivativePriceUnitOfMeasure	[0..1]	CodeSet	
DerivativePriceUnitOfMeasureQty	[0..1]	Qty	
DerivativePriceUnitOfMeasureCurrency	[0..1]	Currency	
DerivativePriceUnitOfMeasureCurrencyCodeSource	[0..1]	CodeSet	
DerivativeSettlMethod	[0..1]	CodeSet	
DerivativePriceQuoteMethod	[0..1]	CodeSet	
DerivativeValuationMethod	[0..1]	CodeSet	
DerivativePriceQuoteCurrency	[0..1]	Currency	
DerivativePriceQuoteCurrencyCodeSource	[0..1]	CodeSet	
DerivativeListMethod	[0..1]	CodeSet	
DerivativeCapPrice	[0..1]	Price	
DerivativeFloorPrice	[0..1]	Price	
DerivativePutOrCall	[0..1]	CodeSet	
DerivativeInTheMoneyCondition	[0..1]	CodeSet	Used to express in-the-moneyness behavior in general terms for the option without the use of DerivativeStrikePrice(1261) and DerivativePutOrCall(1323).
DerivativeContraryInstructionEligibilityIndicator	[0..1]	Boolean	
DerivativeExerciseStyle	[0..1]	CodeSet	
DerivativeOptPayoutAmount	[0..1]	Amt	
DerivativeTimeUnit	[0..1]	CodeSet	

Name	Mult.	Type	Description
DerivativeSecurityExchange	[0..1]	Exchange	Can be used to identify the security.
DerivativePositionLimit	[0..1]	int	
DerivativeNTPositionLimit	[0..1]	int	
DerivativeIssuer	[0..1]	String	
DerivativeEncodedIssuerLen	[0..1]	Length	Must be set if DerivativeEncodedIssuer(1278) field is specified and must immediately precede it.
DerivativeEncodedIssuer	[0..1]	data	
DerivativeSecurityDesc	[0..1]	String	
DerivativeEncodedSecurityDescLen	[0..1]	Length	Must be set if DerivativeEncodedSecurityDesc(1280) field is specified and must immediately precede it.
DerivativeEncodedSecurityDesc	[0..1]	data	
DerivativeSecurityXML	[0..1]	Component	Embedded XML document describing security.
DerivativeContractSettlMonth	[0..1]	MonthYear	Must be present for MBS or TBA
DerivativeEventsGrp	[0..*]	Group	
DerivativeInstrumentParties	[0..*]	Group	

Used in components: [DerivativeSecurityDefinition](#)

Used in messages: [DerivativeSecurityListRequest](#)

180.2.698 DerivativeInstrumentParties

Name	Mult.	Type	Description
NoDerivativeInstrumentParties	[1..1]	NumInGroup	Should contain unique combinations of DerivativeInstrumentPartyID, DerivativeInstrumentPartyIDSource, and DerivativeInstrumentPartyRole
DerivativeInstrumentPartyID	[0..1]	String	Used to identify party id related to instrument series
DerivativeInstrumentPartyIDSource	[0..1]	CodeSet	Used to identify source of instrument series party id
DerivativeInstrumentPartyRole	[0..1]	CodeSet	Used to identify the role of instrument series party id
DerivativeInstrumentPartyRoleQualifier	[0..1]	CodeSet	

Name	Mult.	Type	Description
DerivativeInstrumentPartySubIDsGrp	[0..*]	Group	

Used in components: [DerivativeInstrument](#)

180.2.699 DerivativeInstrumentPartyID

Party identifier/code.

See PartyID(448) for complete definition.

Type: [String](#)

Used in groups: [DerivativeInstrumentParties](#)

180.2.700 DerivativeInstrumentPartyIDSource

Identifies class or source of the DerivativeInstrumentPartyID (1293) value.

Required if DerivativeInstrumentPartyID(1293) is specified.

See PartyIDSource(447) for complete definition.

Type: [char](#)

Allowed values in PartyIDSourceCodeSet:

Code	Name	Description
1	KoreanInvestorID	Korean Investor ID. Also known as the Investor Registration Certificate (IRC) issued by Korea's Financial Supervisory Service (FSS), an identifier tied into the depository for settlement and record keeping.
6	UKNationalInsuranceOrPension-Number	UK National Insurance or Pension Number
B	BIC	BIC (Bank Identification Code - SWIFT managed) code (ISO9362 - See "Appendix 6-B")
I	ISITCAcronym	Directed broker three character acronym as defined in ISITC "ETC Best Practice" guidelines document
2	TaiwaneseForeignInvestorID	Taiwanese Qualified Foreign Investor ID QFII/FID
7	USSocialSecurityNumber	US Social Security Number

Code	Name	Description
C	GeneralIdentifier	Generally accepted market participant identifier (e.g. NASD mnemonic)
3	TaiwaneseTradingAcct	Taiwanese Trading Acct
8	USEmployerOrTaxIDNumber	US Employer or Tax ID Number
D	Proprietary	Proprietary / Custom code. Custom ID schema used between counterparties, trading platforms and repositories.
4	MalaysianCentralDepository	Malaysian Central Depository (MCD) number
9	AustralianBusinessNumber	Australian Business Number
E	ISOCountryCode	ISO Country Code
5	ChineseInvestorID	Chinese Investor ID
A	AustralianTaxFileNumber	Australian Tax File Number
F	SettlementEntityLocation	Settlement Entity Location (note if Local Market Settlement use "E=ISO Country Code") (see "Appendix 6-G" for valid values)
G	MIC	Market Identifier Code (ISO 10383) MIC
J	TaxID	Tax ID
H	CSDParticipant	CSD participant/member code (e.g. Euroclear, DTC, CREST or Kassenverein number)
K	AustralianCompanyNumber	Australian Company Number
L	AustralianRegisteredBodyNumber	Australian Registered Body Number
M	CFTCReportingFirmIdentifier	CFTC reporting firm identifier
N	LegalEntityIdentifier	Legal Entity Identifier (ISO 17442) LEI
O	InterimIdentifier	Interim identifier. An interim entity identifier assigned by a regulatory agency prior to an LEI (ISO 17442) being assigned.
P	ShortCodeIdentifier	Short code identifier. A generic means for trading venues, brokers, investment managers to convey a bilaterally agreed upon "short hand" code for an identifier that is a reference to a mapping between the parties.
Q	NationalIDNaturalPerson	National ID of natural person. An identification number generally assigned by a government authority or agency to a natural person which is unique to the person it is assigned to. Examples include, but not limited to, "social security number", "pension number".
R	IndiaPermanentAccountNumber	India Permanent Account Number. Also referred to as PAN ID. An identifier issued by the Income Tax Department of India.
S	FDID	Firm designated identifier. Also referred to as FDID. A unique identifier required by the SEC for each trading account designated by Industry Members for purposes of reporting to CAT (Consolidated Audit Trail).

Code	Name	Description
T	SPSAID	Special Segregated Account ID. Also referred to as SPSA ID. The Special Segregated Account identifier issued by Hong Kong Exchanges and Clearing.
U	MasterSPSAID	Master Special Segregated Account ID. Also referred to as Master SPSA ID. The master identifier issued by Hong Kong Exchanges and Clearing for the aggregation of SPSA IDs.
V	KoreaShortSellingRegistrationNumber	Korea Short Selling Registration Number. Short selling registration number assigned by Korea's Financial Supervisory Service (FSS) for institutions placing eligible orders under Korea's Financial Services Commission's "Short Sale Reform Measures".

Used in groups: [DerivativeInstrumentParties](#)

180.2.701 DerivativeInstrumentPartyRole

Identifies the type or role of the DerivativeInstrumentPartyID (1293) specified.

See PartyRole(452) for complete definition.

Type: [int](#)

Allowed values in PartyRoleCodeSet:

Code	Name	Description
1	ExecutingFirm	Executing Firm (formerly FIX 4.2 ExecBroker)
2	BrokerOfCredit	Broker of Credit (formerly FIX 4.2 BrokerOfCredit)
3	ClientID	Client ID (formerly FIX 4.2 ClientID)
4	ClearingFirm	Clearing Firm (formerly FIX 4.2 ClearingFirm)
5	InvestorID	Investor ID
6	IntroducingFirm	Introducing Firm
7	EnteringFirm	Entering Firm
8	Locate	Locate / Lending Firm (for short-sales)
9	FundManagerClientID	Fund Manager Client ID (for CIV)
10	SettlementLocation	Settlement Location (formerly FIX 4.2 SettlLocation)
11	OrderOriginationTrader	Order Origination Trader (associated with Order Origination Firm - i.e. trader who initiates/submits the order)

Code	Name	Description
12	ExecutingTrader	Executing Trader (associated with Executing Firm - actually executes)
13	OrderOriginationFirm	Order Origination Firm (e.g. buy-side firm)
14	GiveupClearingFirmDepr	Giveup Clearing Firm (firm to which trade is given up)
15	CorrespondantClearingFirm	Correspondant Clearing Firm
16	ExecutingSystem	Executing System
17	ContraFirm	Contra Firm
18	ContraClearingFirm	Contra Clearing Firm
19	SponsoringFirm	Sponsoring Firm
20	UnderlyingContraFirm	Underlying Contra Firm
21	ClearingOrganization	Clearing Organization
22	Exchange	Exchange. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
24	CustomerAccount	Customer Account
25	CorrespondentClearingOrganization	Correspondent Clearing Organization
26	CorrespondentBroker	Correspondent Broker
27	Buyer	Buyer/Seller (Receiver/Deliverer)
28	Custodian	Custodian
29	Intermediary	Intermediary
30	Agent	Agent
31	SubCustodian	Sub-custodian
32	Beneficiary	Beneficiary
33	InterestedParty	Interested party
34	RegulatoryBody	Regulatory body. In the context of regulatory reporting, this identifies the regulator the trade is being reported to.
35	LiquidityProvider	Liquidity provider
36	EnteringTrader	Entering trader
37	ContraTrader	Contra trader
38	PositionAccount	Position account. The account which positions are maintained. Typically represents the aggregation of one or more customer accounts.
39	ContraInvestorID	Contra Investor ID
40	TransferToFirm	Transfer to Firm
41	ContraPositionAccount	Contra Position Account
42	ContraExchange	Contra Exchange

Code	Name	Description
43	InternalCarryAccount	Internal Carry Account
44	OrderEntryOperatorID	Order Entry Operator ID
45	SecondaryAccountNumber	Secondary Account Number
46	ForeignFirm	Foreign Firm
47	ThirdPartyAllocationFirm	Third Party Allocation Firm
48	ClaimingAccount	Claiming Account
49	AssetManager	Asset Manager
50	PledgorAccount	Pledgor Account
51	PledgeeAccount	Pledgee Account
52	LargeTraderReportableAccount	Large Trader Reportable Account
53	TraderMnemonic	Trader mnemonic
54	SenderLocation	Sender Location
55	SessionID	Session ID
56	AcceptableCounterparty	Acceptable Counterparty
57	UnacceptableCounterparty	Unacceptable Counterparty
58	EnteringUnit	Entering Unit
59	ExecutingUnit	Executing Unit
60	IntroducingBroker	Introducing Broker
61	QuoteOriginator	Quote originator
62	ReportOriginator	Report originator
63	SystematicInternaliser	Systematic internaliser (SI)
64	MultilateralTradingFacility	Multilateral Trading Facility (MTF). Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
65	RegulatedMarket	Regulated Market (RM). Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
66	MarketMaker	Market Maker
67	InvestmentFirm	Investment Firm
68	HostCompetentAuthority	Host Competent Authority (Host CA)
69	HomeCompetentAuthority	Home Competent Authority (Home CA)
70	CompetentAuthorityLiquidity	Competent Authority of the most relevant market in terms of liquidity (CAL)
71	CompetentAuthorityTransactionVenue	Competent Authority of the Transaction (Execution) Venue (CATV)
72	ReportingIntermediary	Reporting intermediary. The medium or vendor used to report to a regulator, non-regulatory agency or data repository.

Code	Name	Description
73	ExecutionVenue	Execution Venue. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
74	MarketDataEntryOriginator	Market data entry originator
75	LocationID	Location ID
76	DeskID	Desk ID
77	MarketDataMarket	Market data market
78	AllocationEntity	Allocation Entity
79	PrimeBroker	Prime Broker providing General Trade Services
80	StepOutFirm	Step-Out Firm (Prime Broker)
81	BrokerClearingID	Broker clearing identifier
82	CentralRegistrationDepository	Central Registration Depository (CRD)
83	ClearingAccount	Clearing Account
84	AcceptableSettlingCounterparty	Acceptable Settling Counterparty
85	UnacceptableSettlingCounterparty	Unacceptable Settling Counterparty
86	CLSMemberBank	CLS Member Bank
87	InConcertGroup	In Concert Group
88	InConcertControllingEntity	In Concert Controlling Entity
89	LargePositionsReportingAccount	Large Positions Reporting Account
90	SettlementFirm	Settlement Firm
91	SettlementAccount	Settlement account. The account to which individual payment obligations are aggregated for netting and funds movement. Typically represents the aggregation of many margin (performance bond) accounts.
92	ReportingMarketCenter	Reporting Market Center
93	RelatedReportingMarketCenter	Related Reporting Market Center
94	AwayMarket	Away Market. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
95	GiveupTradingFirm	Give-up (trading) firm
96	TakeupTradingFirm	Take-up (trading) firm
97	GiveupClearingFirm	Give-up clearing firm
98	TakeupClearingFirm	Take-up clearing firm
99	OriginatingMarket	Originating Market. Identifies the Market using PartyIDSource(tag 447) = G (Market Identifier Code) where an order originated in the event that the order is sent to an alternative market for execution. Serves as an inverse of an away market.

Code	Name	Description
100	MarginAccount	Margin account. Also referred to as "performance bond account". The margin account is the calculated margin requirements. Typically represents the aggregation of one or more position accounts.
101	CollateralAssetAccount	Collateral asset account. The account at which individual collateral assets are maintained. Typically, although not always, one-for-one with the settlement account.
102	DataRepository	Data repository. Multiple instances of this PartyRole may appear for reporting purposes.
103	CalculationAgent	Calculation agent
104	ExerciseNoticeSender	Sender of exercise notice
105	ExerciseNoticeReceiver	Receiver of exercise notice
106	RateReferenceBank	Rate reference bank. The bank providing the reference rate. Multiple instance of this PartyRole may appear.
107	Correspondent	Correspondent
109	BeneficiaryBank	Beneficiary's bank or depository institution. The institution in which the beneficiary, a person or an entity, has their account with. The institution may be a bank or non-bank institution.
110	Borrower	Borrower
111	PrimaryObligator	Primary obligator
112	Guarantor	Guarantor
113	ExcludedReferenceEntity	Excluded reference entity
114	DeterminingParty	Determining party
115	HedgingParty	Hedging party
116	ReportingEntity	Reporting entity. The entity that is reporting the information.
117	SalesPerson	Sales person. The person who is involved in the sales activities for their firm.
118	Operator	Operator. The person who has the capabilities and authorization to take certain actions; for example, setting entitlements, etc.
119	CSD	Central Securities Depository (CSD)
120	ICSD	International Central Securities Depository (ICSD)
121	TradingSubAccount	Trading sub-account. Example of sub-accounts include a clearing account that has multiple trading sub-accounts, a trading account that has multiple trading sub-accounts belonging to different trading firms.

Code	Name	Description
122	InvestmentDecisionMaker	Investment decision maker. In the context of ESMA RTS reporting, this is used to specify party responsible for the investment decision. See RTS 24, Annex, Table 2, Field 4.
123	PublishingIntermediary	Publishing intermediary. The medium or vendor used to publish to the market.
124	CSDParticipant	Central Securities Depository (CSD) Participant. In the context of EU SFTR reporting the identifier of the CSD participant or indirect participant of the reporting counterparty. Where both the CSD participant and indirect participant are involved in the transaction this should identify the indirect participant.
125	Issuer	Issuer. The issuer of the security.
126	ContraCustomerAccount	Contra Customer Account. Same as PartyRole(452) = 24 (Customer Account) but for the counterparty. Can be used whenever the parties component is not nested in a repeating group representing both sides.
127	ContraInvestmentDecisionMaker	Contra Investment Decision Maker. Same as PartyRole(452) = 122 (Investment Decision Maker) but for the counterparty. Can be used whenever the parties component is not nested in a repeating group representing both sides.
128	AuthorizingPerson	Authorizing person. In the context of MiFIR, this value is used to identify the person authorizing algorithms within a trading firm.

Used in groups: **DerivativeInstrumentParties**

180.2.702 DerivativeInstrumentPartyRoleQualifier

Used to further qualify the value of DerivativeInstrumentPartyRole(1295).

Type: **int**

Allowed values in PartyDetailRoleQualifierCodeSet:

Code	Name	Description
0	Agency	Agency
1	Principal	Principal
2	RisklessPrincipal	Riskless principal
3	GeneralClearingMember	General clearing member

Code	Name	Description
30	ExchangeOrderSubmitter	Exchange order submitter. Used to identify original or initial exchange order submitting broker when party role "1" (Executing Firm) appears more than once.
4	IndividualClearingMember	Individual clearing member
5	PreferredMarketMaker	Preferred market maker. Market maker getting a part of the matched quantity before primary or default market maker.
6	DirectedMarketMaker	Directed market maker. Single market maker to handle the order provided.
7	Bank	Bank
8	Hub	Hub. Indicates that the Intermediary party is a hub system or service provider.
9	PrimaryTrdRepository	Primary trade repository. Used to differentiate the principal trade repository from the Original or Additional trade repositories when there are multiple trade repositories being reported.
10	OrigTrdRepository	Original trade repository. Used to identify the trade repository to which the trade was originally reported if different from the current repository to which the trade is being reported.
11	AddnlIntlTrdRepository	Additional international trade repository. Used with InternationalSwapIndicator(2526) to identify the trade repository that is in addition to the local swaps data repository as required by U.S. law.
12	AddnlDomesticTrdRepository	Additional domestic trade repository. Used with MixedSwapIndicator(1929) to identify the trade repository that is in addition to the current trade repository when the assets in the swap are subject to two different domestic regulators.
13	RelatedExchange	Related exchange
14	OptionsExchange	Options exchange
15	SpecifiedExchange	Specified exchange
16	ConstituentExchange	Constituent exchange.
17	ExemptFromTradeReporting	Exempt from trade reporting. In the context of FINRA TRACE reporting requirements, this is used to indicate the ATS has been granted a regulatory exemption from reporting.
18	Current	Current. Can be used to convey an existing party identifier for the same party role in a single message.
19	New	New. Can be used to convey a future party identifier for the same party role in a single message.
20	DesignatedSponsor	Designated sponsor. Market maker jointly providing liquidity for the same security with other market makers.

Code	Name	Description
21	Specialist	Specialist. Market maker being the only one providing liquidity for a security.
22	Algorithm	Algorithm
23	FirmOrLegalEntity	Firm or legal entity
24	NaturalPerson	Natural person
25	RegularTrader	Regular trader. Standard trader profile.
26	HeadTrader	Head trader. Senior trader leading a group of regular traders.
27	Supervisor	Supervisor. Administrative user that has only limited rights for normal trading but possibly special rights for emergency actions.
28	TriParty	Tri-party. In the context of EU SFTR reporting, identifies the third party, not necessarily the custodian, to which the reporting counterparty has outsourced the post-trade processing of an SFT (if applicable).
29	Lender	Lender. In the context of EU SFTR reporting, identifies the agent lender involved in the securities lending transaction.

180.2.705 DerivativeInstrumentPartySubIDType

Type of party sub-identifier.

See PartySubIDType(803) for complete definition.

Type: **int**

Allowed values in PartySubIDTypeCodeSet:

Code	Name	Description
1	Firm	Firm
2	Person	Person
3	System	System
4	Application	Application
5	FullLegalNameOfFirm	Full legal name of firm
6	PostalAddress	Postal address
7	PhoneNumber	Phone number
8	EmailAddress	Email address
9	ContactName	Contact name
10	SecuritiesAccountNumber	Securities account number (for settlement instructions)
11	RegistrationNumber	Registration number (for settlement instructions and confirmations)
12	RegisteredAddressForConfirmation	Registered address (for confirmation purposes)
13	RegulatoryStatus	Regulatory status (for confirmation purposes)
14	RegistrationName	Registration name (for settlement instructions)
15	CashAccountNumber	Cash account number (for settlement instructions)
16	BIC	BIC
17	CSDParticipantMemberCode	CSD participant member code
18	RegisteredAddress	Registered address
19	FundAccountName	Fund account name
20	TelexNumber	Telex number
21	FaxNumber	Fax number
22	SecuritiesAccountName	Securities account name
23	CashAccountName	Cash account name
24	Department	Department
25	LocationDesk	Location desk
26	PositionAccountType	Position account type

Code	Name	Description
27	SecurityLocateID	Security locate ID
28	MarketMaker	Market maker
29	EligibleCounterparty	Eligible counterparty
30	ProfessionalClient	Professional client
31	Location	Location
32	ExecutionVenue	Execution venue
33	CurrencyDeliveryIdentifier	Currency delivery identifier
34	AddressCity	Address City
35	AddressStateOrProvince	Address State/Province
36	AddressPostalCode	Address Postal Code
37	AddressStreet	Address Street
38	AddressISOCountryCode	Address Country (ISO country code)
39	ISOCountryCode	ISO country code
40	MarketSegment	Market segment
41	CustomerAccountType	Customer account type
42	OmnibusAccount	Omnibus account
43	FundsSegregationType	Funds segregation type
44	GuaranteeFund	Guarantee fund. Identifies a guarantee fund related to an account. Used when one account has multiple funds of collateral, each guaranteeing different positions. Can be used for PartyRole(452) = Customer Account(24).
45	SwapDealer	Swap dealer. The US regulator's defined term for identifying the trade counterparty as "any person who holds itself out as a dealer in swaps, makes a market in swaps, regularly enters into swaps with counterparties as an ordinary course of business for its own account, or engages in activity causing itself to be commonly known in the trade as a dealer or market maker in swaps".
46	MajorParticipant	Major participant. When PartySubID(523)=Y the counterparty is not the swap dealer but is a major swap participant as defined in the regulations.
47	FinancialEntity	Financial entity. When PartySubID(523)=Y the counterparty is neither a swap dealer nor a major swap participant but is a financial entity as defined in the regulations.
48	USPerson	U.S. person. A legal term referring to any U.S. person or legal entity anywhere in the world that should be taxed under U.S. law.

Code	Name	Description
49	ReportingEntityIndicator	Reporting entity indicator. Indicates the entity obligated or delegated to report to their regulator, a non-regulatory agency or data repository. Set PartySubID(523)=Y if true.
50	ElectedClearingRequirementException	Elected clearing requirement exception
51	BusinessCenter	Business center.
52	ReferenceText	Reference text
53	ShortMarkingExemptAccount	Short-marking exempt account
54	ParentFirmIdentifier	Parent firm identifier. Implementation-specific identifier of this party's parent entity.
55	ParentFirmName	Parent firm name. Full name of this party's parent entity.
56	DealIdentifier	Deal identifier. The internal identifier assigned to the trade by this party, particularly by a Clearing Organization.
57	SystemTradeID	System trade identifier
58	SystemTradeSubID	System trade sub-identifier
59	FCMCode	Futures Commission Merchant (FCM) code. The FCM's code or identifier in relation to the PartyRole(452). For example, if PartyRole(452) is the exchange or clearinghouse, the FCM code/ID specified in PartySubID(523) is the FCM's identifier at the exchange or clearinghouse.
60	DlvryTrmlCode	Delivery terminal customer account/code. Usually used for gas delivery to identify whose account the gas is allocated to at the delivery terminal. Often referred to as "HUB" code.
61	VolntyRptEntity	Voluntary reporting entity. The entity voluntarily reporting the trade to the regulator. Set PartySubID(523)=Y if true.
62	RptObligJursdctn	Reporting obligation jurisdiction. For a trade that falls under multiple jurisdictions this may be used to identify, through PartySubID(523), the reporting jurisdiction to which the party is obligated to report.
63	VolntyRptJursdctn	Voluntary reporting jurisdiction. For a trade that falls under multiple jurisdictions this may be used to identify, through PartySubID(523), the regulatory jurisdiction to which the party is submitting a voluntary report.

Code	Name	Description
64	CompanyActivities	Company activities. For regulatory reporting. ID values include: A = Assurance undertaking authorized in accordance with Directive 2002/83/EC C = Credit institution authorized in accordance with Directive 2006/48/EC F = Investment firm in accordance with Directive 2004/39/EC I = Insurance undertaking authorized in accordance with Directive 73/239/EC L = Alternative investment fund managed by AIFMs authorized or registered in accordance with Directive 2011/61/EC O = Institution for occupational retirement provision within the meaning of Article 6(a) of Directive 2003/41/EC R = Reinsurance undertaking authorized in accordance with Directive 2005/68/EC U = UCITS and its management company, authorized in accordance with Directive 2009/65/EC or blank in case of coverage by LEI or in case of non-financial counterparties. In the context of EU SFTR reporting use the appropriate 4- or 1-character code noted in the regulations. See SFTR ITS "Commission Implementing Regulation (EU) 2019/363" Annexes 1 and 2 for values.
65	EEAreaDomiciled	European Economic Area domiciled. ID values: Y or N
66	ContractLinked	Contract linked to commercial or treasury financing for this counterparty. ID values: Y or N
67	ContractAbove	Contract above clearing threshold for this counterparty. ID values: Y or N
68	VolntyRptPty	Voluntary reporting party. When PartySubID(523)=Y, identifies that the trading party is reporting voluntarily when VoluntaryRegulatoryReport(1935)=Y.
69	EndUser	End user. When PartySubID(523)=Y, the counterparty is neither the swap dealer, major swap participant nor financial entity as defined in the regulations.
70	LocationOrJurisdiction	Location or jurisdiction. One or more instances may be used in combination with PartySubIDType(803) = 49 (Reporting entity indicator) or 102 (Data repository) to identify the jurisdiction, countries, regions or provinces for which the party is a reporting entity or data repository when that characteristic is ambiguous or where there are multiple locations. The party sub-ID value is either a jurisdiction acronym, a 2-character ISO 3166 country code, or a hyphenated combination of the country code and the standard post-office abbreviation for province, state or region if necessary. E.g. "US" for United States or "CA-QC" for Quebec Canada.

Code	Name	Description
71	DerivativesDealer	Derivatives dealer. Indicates whether the party is a derivatives dealer or not (Y/N). The Canadian regulator's defined term for identifying the trade counterparty as "a person or company engaging in or holding himself, herself or itself out as engaging in the business of trading in derivatives in Ontario as principal or agent".
72	Domicile	Domicile. Country and optionally province, state or region of domicile. The party sub-ID value is either a 2-character ISO 3166 country code or a hyphenated combination of the country code and the standard post-office abbreviation of province, state or region if necessary. E.g. "US" for United States or "CA-QC" for Quebec Canada.
73	ExemptFromRecognition	Exempt from recognition. Used with party role 21 "Clearing Organization" to indicate exemption (Y/N). Identifies a clearing agency as exempt from oversight in Ontario, i.e. one that 1) only provides limited services and does not present significant risks or 2) is foreign-based, intends to operate in Ontario but is subject to regulatory oversight in another jurisdiction.
74	Payer	Payer. Identifies the party as the payer of a particular payment stream or bullet payment by quoting the stream's StreamDesc(40051) (or LegStreamDesc(40243) or UnderlyingStreamDesc(40542)) or payment's PaymentDesc(43087) in the associated party sub-identifier field.
75	Receiver	Receiver. Identifies the party as the receiver of a particular payment stream or bullet payment by quoting the stream's StreamDesc(40051) (or LegStreamDesc(40243) or UnderlyingStreamDesc(40542)) or payment's PaymentDesc(43087) in the associated party sub-identifier field.
76	SystematicInternaliser	Systematic Internaliser (SI). In the context of ESMA reporting, this is used to indicate whether the specified party is a Systematic Internaliser or not for the security defined in the Instrument component (Y/N).
77	PublishingEntityIndicator	Publishing entity indicator. Indicates the entity obligated or delegated to publish to the market. Set PartySubID(523)=Y if true.
78	FirstName	First name. The first name(s) of a natural person. If multiple names, separate entries by a comma.
79	Surname	Surname. The surname(s) or lastname(s) of a natural person. If multiple names, separate entries by a comma.

Code	Name	Description
80	DateOfBirth	Date of birth. The date of birth of a natural person in the format YYYYMMDD.
81	OrderTransmittingFirm	Order transmitting firm. Identifies whether the party specified in PartyID(448) is the firm that transmitted the order. In the context of RTS 22 Article 4, when "true" the PartySubID(523)=Y shall be set "by the transmitting firm within the transmitting firm's report where conditions for transmission specified in Article 4 were not satisfied."
82	OrderTransmittingFirmBuyer	Order transmitting firm for buyer. Identifies the firm that transmitted the order for the buyer. In the context of ESMA RTS 22, PartySubID(523)=Y is used to indicate the firm identified in PartyID(448) is the firm that transmitted the order for the buyer. "This shall be populated by the receiving firm within the receiving firm's report with the identification code provided by the transmitting firm."
83	OrderTransmitterSeller	Order transmitter for seller. Identifies the order transmitting firm for the seller. In the context of ESMA RTS 22, PartySubID(523)=Y is used to indicate the firm identified in PartyID(448) is the firm that transmitted the order for the seller. "This shall be populated by the receiving firm within the receiving firm's report with the identification code provided by the transmitting firm."
84	LegalEntityIdentifier	Legal Entity Identifier (ISO 17442) LEI
85	SubSectorClassification	Sub-sector classification. Supplemental to party sub-ID type "64" (Company activities) for regulatory reporting. For EU SFTR reporting use the appropriate 4-character code noted in the regulations applying the conditional association rules. See SFTR ITS "Commission Implementing Regulation (EU) 2019/363" Annexes 1 and 2 for values.
86	PartySide	Party side. May be used, when appropriate, to explicitly indicate the transaction side of the party, e.g. Buyer, Seller, Lender, Borrower, Maker, Taker, etc. in the ID. In the context of EU SFTR reporting, use values as required by SFTR, "GIVE" and "TAKE" in the ID, to identify collateral giver and taker.
87	LegalRegistrationCountry	Legal registration country. ISO Country Code where the registered office of the party is located as specified in the LEI reference data.

Used in groups: **DerivativeInstrumentPartySubIDsGrp**

180.2.706 DerivativeInTheMoneyCondition

Specifies an option instrument's "in the money" condition in general terms.

See InTheMoneyCondition(2681) for complete definition.

Type: **int**

Allowed values in InTheMoneyConditionCodeSet:

Code	Name	Description
0	StandardITM	Standard in-the-money. The option's strike price is less than the underlying settlement price for a call or greater than the underlying settlement price for a put.
1	ATMITM	At-the-money is in-the-money. The option's strike price of either the put or call is equal to the underlying settlement price in addition to standard in-the-money behavior.
2	ATMCallITM	At-the-money call is in-the-money. The call option's strike price is equal to the underlying settlement price in addition to standard in-the-money behavior.
3	ATMPutITM	At-the-money put is in-the-money. The put option's strike price is equal to the underlying settlement price in addition to standard in-the-money behavior.

Used in components: **DerivativeInstrument**

180.2.707 DerivativeIssueDate

The date on which the security is issued.

See IssueDate(225) for complete definition.

Type: **LocalMktDate**

Used in components: **DerivativeInstrument**

180.2.708 DerivativeIssuer

Name of security issuer.

See Issuer(106) for complete definition.

Type: **String**

Used in components: **DerivativeInstrument**

180.2.709 DerivativeListMethod

Indicates whether instruments are pre-listed only or can also be defined via user request.

See ListMethod(1198) for complete definition.

Type: **int**

Allowed values in ListMethodCodeSet:

Code	Name	Description
0	PreListedOnly	pre-listed only
1	UserRequested	user requested

Used in components: **DerivativeInstrument**

180.2.710 DerivativeLocaleOfIssue

Identifies the locale or region of issue.

See LocaleOfIssue(472) for complete definition.

Type: **String**

Used in components: **DerivativeInstrument**

180.2.711 DerivativeMaturityDate

Date of maturity.

See MaturityDate(541) for complete definition.

Type: **LocalMktDate**

Used in components: **DerivativeInstrument**

180.2.712 DerivativeMaturityMonthYear

Month and Year of the maturity (used for standardized futures and options).

See MaturityMonthYear(200) for complete definition.

Type: **MonthYear**

Used in components: **DerivativeInstrument**

180.2.713 DerivativeMaturityTime

Time of security's maturity expressed in local time with offset to UTC specified.

See MaturityTime(1079) for complete definition.

Type: **TZTimeOnly**

Used in components: **DerivativeInstrument**

180.2.714 DerivativeMinPriceIncrement

Minimum price increase for a given exchange-traded Instrument.

See MinPriceIncrement(969) for complete definition.

Type: **float**

Used in components: **DerivativeInstrument**

180.2.715 DerivativeMinPriceIncrementAmount

Minimum price increment amount associated with the minimum price increment.

See MinPriceIncrementAmount(1146) for complete definition.

Type: **Amt**

Used in components: **DerivativeInstrument**

180.2.716 DerivativeNTPositionLimit

Position limit in the near-term contract for a given exchange-traded product.

See NTPositionLimit(971) for complete definition.

Type: **int**

Used in components: **DerivativeInstrument**

180.2.717 DerivativeOptAttribute

Provided to support versioning of option contracts as a result of corporate actions or events. Use of this field is defined by counterparty agreement or market conventions.

See OptAttribute(206) for complete definition.

Type: **char**

Used in components: **DerivativeInstrument**

180.2.718 DerivativeOptPayoutAmount

Cash amount indicating the pay out associated with an option. For binary options this is a fixed amount.

See OptPayoutAmount(1195) for complete definition.

Type: **Amt**

Used in components: **DerivativeInstrument**

180.2.719 DerivativePositionLimit

Position limit for a given exchange-traded product.

See PositionLimit(970) for complete definition.

Type: **int**

Used in components: **DerivativeInstrument**

180.2.720 DerivativePriceQuoteCurrency

Default currency in which the price is quoted. Defined at the instrument level. Used in place of Currency(tag 15) to express the currency of a product when the former is implemented as the FX dealt currency.

See PriceQuoteCurrency(1524) for complete definition.

Type: **Currency**

Used in components: **DerivativeInstrument**

180.2.721 DerivativePriceQuoteCurrencyCodeSource

Identifies class or source of the DerivativePriceQuoteCurrency(1576) value.

Type: **String**

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbolology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in components: [DerivativeInstrument](#)

180.2.722 DerivativePriceQuoteMethod

Specifies the method for price quotation.

See PriceQuoteMethod(1196) for complete definition.

Type: [String](#)

Allowed values in PriceQuoteMethodCodeSet:

Code	Name	Description
STD	Standard	Standard, money per unit of a physical
INX	Index	Index
INT	InterestRateIndex	Interest rate Index
PCTPAR	PercentOfPar	Percent of Par

Used in components: [DerivativeInstrument](#)

180.2.723 DerivativePriceUnitOfMeasure

Used to express the UOM of the price if different from the contract.

See PriceUnitOfMeasureQty(1191) for complete definition.

Type: [String](#)

Allowed values in UnitOfMeasureCodeSet:

Code	Name	Description
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet
Bbl	Barrels	Barrels. Equal to 42 US gallons
CBM	CubicMeters	Cubic Meters
BDFT	BoardFeet	Board feet. Equal to 144 cubic inches
GJ	Gigajoules	gigajoules
Bu	Bushels	Bushels
kHR	HeatRate	Heat rate. The number of BTUs required to produce one kilowatt hour of electricity, typically 3,412.14 BTUs per 1 kWh.
Ccy	Currency	Amount of currency
kWh	KilowattHours	Kilowatt hours
CDD	CoolingDegreeDay	Cooling degree day
MHR	MegaHeatRate	Mega heat rate. The number of million BTUs required to produce one megawatt hour of electricity, typically 3.41214 million BTUs per 1 MWh.
CER	CertifiedEmissionsReduction	Certified emissions reduction
MMBtu	OneMillionBTU	One Million BTU
CPD	CriticalPrecipDay	Critical precipitation day
MWh	MegawattHours	Megawatt hours
CRT	ClimateReserveTonnes	Climate reserve tonnes
thm	Therms	therms. Equal to 100,000 BTU
cwt	Hundredweight	Hundredweight(US). Equal to 100 lbs
tnCO2	TonsOfCarbonDioxide	Tons of carbon dioxide
day	Day	Days
dt	DryMetricTons	Dry metric tons
EnvAllwnc	EnvAllwncCert	Environmental allowance certificates
EnvCrd	EnvironmentalCredit	Environmental credit
EnvOfst	EnvironmentalOffset	Environmental Offset
g	Grams	Grams
Gal	Gallons	Gallons
GT	GrossTons	Gross tons. Also known as long tons or imperial tons, equal to 2240 lbs
HDD	HeatingDegreeDay	Heating degree day
IPNT	IndexPoint	Index point

Code	Name	Description
kg	Kilograms	Kilograms
kL	Kiloliters	kiloliters
kW-a	KilowattYear	Kilowatt year (electrical capacity)
kW-d	KilowattDay	Kilowatt day (electrical capacity)
kW-h	KilowattHour	Kilowatt hour (electrical capacity)
kW-M	KilowattMonth	Kilowatt month (electrical capacity)
kW-min	KilowattMinute	Kilowatt-Minute (electrical capacity)
L	Liters	liters
lbs	Pounds	pounds
MW-a	MegawattYear	Megawatt year (electrical capacity)
MW-d	MegawattDay	Megawatt day (electrical capacity)
MW-h	MegawattHour	Megawatt hour (electrical capacity)
MW-M	MegawattMonth	Megawatt month (electrical capacity)
MW-min	MegawattMinute	Megawatt minute (electrical capacity)
oz_tr	TroyOunces	Troy ounces
PRINC	PrincipalWithRelationToDebtInstrument	Principal with relation to debt instrument
t	MetricTons	Metric tons. Also known as Tonnes, equal to 1000 kg
tn	Tons	Tons (US). Equal to 2000 lbs
a	Are	Are
ac	Acre	Acre
cL	Centiliter	Centiliter
cM	Centimeter	Centimeter
DGE	DieselGallonEquivalent	Diesel gallon equivalent
ft	Foot	Foot
Gal_gb	GBGallon	GB Gallon
GGE	GasolineGallonEquivalent	Gasonline gallon equivalent
ha	Hectare	Hectare
in	Inch	Inch
kM	Kilometer	Kilometer
M	Meter	Meter
mi	Mile	Mile
mL	Milliliter	Milliliter
mM	Millimeter	Millimeter

Code	Name	Description
oz	USOunce	US ounce
pc	Piece	Piece
pt	USPint	US Pint
pt_gb	GBPint	GB pint
qt	USQuart	US Quart
qt_gb	GBQuart	GB Quart
SqcM	SquareCentimeter	Square centimeter
Sqft	SquareFoot	Square foot
Sqin	SquareInch	Square inch
SqkM	SquareKilometer	Square kilometer
SqM	SquareMeter	Square meter
Sqmi	SquareMile	Square mile
SqmM	SquareMillimeter	Square millimeter
Sqyd	SquareYard	Square yard
yd	Yard	Yard
MMbbl	MillionBarrels	Million Barrels
USD	USDollars	US Dollars

Used in components: [DerivativeInstrument](#)

180.2.724 DerivativePriceUnitOfMeasureCurrency

Indicates the currency of the price unit of measure.

Conditionally required when DerivativePriceUnitOfMeasure(1315) = Ccy.

See PriceUnitOfMeasureCurrency(1717) for complete definition.

Type: [Currency](#)

Used in components: [DerivativeInstrument](#)

180.2.725 DerivativePriceUnitOfMeasureCurrencyCodeSource

Identifies class or source of the DerivativePriceUnitOfMeasureCurrency(1723) value.

Type: [String](#)

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbolology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in components: [DerivativeInstrument](#)

180.2.726 DerivativePriceUnitOfMeasureQty

Used to express the UOM Quantity of the price if different from the contract.

See PriceUnitOfMeasureQty(1192) for complete definition.

Type: [Qty](#)

Used in components: [DerivativeInstrument](#)

180.2.727 DerivativeProduct

The type of product the security is associated with.

See Product(460) for complete definition.

Type: [int](#)

Allowed values in ProductCodeSet:

Code	Name	Description
1	AGENCY	AGENCY
2	COMMODITY	COMMODITY
3	CORPORATE	CORPORATE
4	CURRENCY	CURRENCY
5	EQUITY	EQUITY

Code	Name	Description
6	GOVERNMENT	GOVERNMENT
7	INDEX	INDEX
8	LOAN	LOAN
9	MONEYMARKET	MONEYMARKET
10	MORTGAGE	MORTGAGE
11	MUNICIPAL	MUNICIPAL
12	OTHER	OTHER
13	FINANCING	FINANCING

Used in components: [DerivativeInstrument](#)

180.2.728 DerivativeProductComplex

Identifies an entire suite of products for a given market.

See ProductComplex(1227) for complete definition.

Type: [String](#)

Used in components: [DerivativeInstrument](#)

180.2.729 DerivativePutOrCall

Indicates whether an option contract is a put, call, chooser or undetermined.

See PutOrCall(201) for complete definition.

Type: [int](#)

Allowed values in PutOrCallCodeSet:

Code	Name	Description
0	Put	Put. Also used for the case in which the buyer of a Swaption has the right to enter into an IRS contract as a fixed-rate receiver or into a CDS contract as a seller of protection or for the case of a Floor.

Code	Name	Description
1	Call	Call. Also used for the case in which the buyer of a Swaption has the right to enter into an IRS contract as a fixed-rate payer or into a CDS contract as a buyer of protection or for the case of a Cap.
2	Other	Other. In the context of ESMA RTS 22 reporting, this value may be used when, at the time of execution, the option right cannot be determined.
3	Chooser	Chooser. Indicates that the option buyer may choose to buy or sell the underlying security on exercise or if a Swaption to pay or receive the underlying IRS cash flow stream or to buy or sell CDS protection.

Used in components: [DerivativeInstrument](#)

180.2.730 DerivativeSecurityAltID

Alternate derivative security identifier value of DerivativeSecurityAltIDSource(1220) type.

Requires DerivativeSecurityAltIDSource(1220).

Type: [String](#)

Used in groups: [DerivativeSecurityAltIDGrp](#)

180.2.731 DerivativeSecurityAltIDGrp

Name	Mult.	Type	Description
NoDerivativeSecurityAltID	[1..1]	NumInGroup	
DerivativeSecurityAltID	[0..1]	String	
DerivativeSecurityAltIDSource	[0..1]	CodeSet	

Used in components: [DerivativeInstrument](#)

180.2.732 DerivativeSecurityAltIDSource

Identifies class or source of the DerivativeSecurityAltID(1219) value.

Type: **String**

Allowed values in SecurityIDSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
3	QUIK	QUIK
4	ISINNumber	ISIN
5	RICCode	RIC
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
7	ISOCountryCode	ISO Country Code
8	ExchangeSymbol	Exchange symbol
9	ConsolidatedTapeAssociation	Consolidated Tape Association (CTA) Symbol (SIAC CTS/CQS line format)
A	BloombergSymbol	Bloomberg Symbol
B	Wertpapier	Wertpapier
C	Dutch	Dutch
D	Valoren	Valoren
E	Sicovam	Sicovam
F	Belgian	Belgian
G	Common	"Common" (Clearstream and Euroclear)
H	ClearingHouse	Clearing house / Clearing organization
I	ISDAFpMLSpecification	ISDA/FpML product specification (XML in SecurityXML(1185))
J	OptionPriceReportingAuthority	Option Price Reporting Authority
K	ISDAFpMLURL	ISDA/FpML product URL (URL in SecurityID(48))
L	LetterOfCredit	Letter of credit
M	MarketplaceAssignedIdentifier	Marketplace-assigned Identifier
N	MarkitREDEntityCLIP	Markit RED entity CLIP
P	MarkitREDPairCLIP	Markit RED pair CLIP
Q	CFTCCommodityCode	CFTC commodity code
R	ISDACommodityReferencePrice	ISDA Commodity Reference Price
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbolology BBGID".
T	LegalEntityIdentifier	Legal entity identifier

Code	Name	Description
U	Synthetic	Synthetic. Used to specify that the security identifier is synthetic for linking nested underliers when there is no market identifier for the collection.
V	FidessaInstrumentMnemonic	Fidessa Instrument Mnemonic (FIM)
W	IndexName	Index name. Standard name of the index or rate index, e.g. "LIBOR" or "iTraxx Australia".
X	UniformSymbol	Uniform Symbol (UMTF Symbol)
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in groups: [DerivativeSecurityAltIDGrp](#)

180.2.733 DerivativeSecurityDefinition

Name	Mult.	Type	Description
DerivativeInstrument	[0..1]	Component	Optional block which can be used to summarize common attributes shared across a set of option instruments which belong to the same series.
DerivativeInstrumentAttribute	[0..*]	Group	Additional attribution for the instrument series
MarketSegmentGrp	[0..*]	Group	Security trading and listing attributes for the series level
SecurityClassificationGrp	[0..*]	Group	Used to specify forms of product classifications

Used in messages: [DerivativeSecurityList](#), [DerivativeSecurityListUpdateReport](#)

180.2.734 DerivativeSecurityDesc

Can be used by the venue or one of the trading parties to provide a non-normative textual description for the financial instrument.

See SecurityDesc(107) for complete definition.

Type: [String](#)

Used in components: [DerivativeInstrument](#)

180.2.735 DerivativeSecurityExchange

Market used to help identify a security.

See SecurityExchange(207) for complete definition.

Type: **Exchange**

Used in components: **DerivativeInstrument**

180.2.736 DerivativeSecurityGroup

An exchange specific name assigned to a group of related securities which may be concurrently affected by market events and actions.

See SecurityGroup(1151) for complete definition.

Type: **String**

Used in components: **DerivativeInstrument**

180.2.737 DerivativeSecurityID

Security identifier value (e.g. CUSIP, SEDOL, ISIN, etc).

Requires DerivativeSecurityIDSource(1217).

See SecurityID(48) for complete definition.

Type: **String**

Used in components: **DerivativeInstrument**

180.2.738 DerivativeSecurityIDSource

Identifies class or source of the DerivativeSecurityID(1217) value.

See SecurityIDSource(22) for complete definition.

Type: **String**

Allowed values in SecurityIDSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP

Code	Name	Description
2	SEDOL	SEDOL
3	QUIK	QUIK
4	ISINNumber	ISIN
5	RICCode	RIC
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
7	ISOCountryCode	ISO Country Code
8	ExchangeSymbol	Exchange symbol
9	ConsolidatedTapeAssociation	Consolidated Tape Association (CTA) Symbol (SIAC CTS/CQS line format)
A	BloombergSymbol	Bloomberg Symbol
B	Wertpapier	Wertpapier
C	Dutch	Dutch
D	Valoren	Valoren
E	Sicovam	Sicovam
F	Belgian	Belgian
G	Common	"Common" (Clearstream and Euroclear)
H	ClearingHouse	Clearing house / Clearing organization
I	ISDAFpMLSpecification	ISDA/FpML product specification (XML in SecurityXML(1185))
J	OptionPriceReportingAuthority	Option Price Reporting Authority
K	ISDAFpMLURL	ISDA/FpML product URL (URL in SecurityID(48))
L	LetterOfCredit	Letter of credit
M	MarketplaceAssignedIdentifier	Marketplace-assigned Identifier
N	MarkitREDEntityCLIP	Markit RED entity CLIP
P	MarkitREDPairCLIP	Markit RED pair CLIP
Q	CFTCCommodityCode	CFTC commodity code
R	ISDACommodityReferencePrice	ISDA Commodity Reference Price
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbolology BBGID".
T	LegalEntityIdentifier	Legal entity identifier
U	Synthetic	Synthetic. Used to specify that the security identifier is synthetic for linking nested underliers when there is no market identifier for the collection.
V	FidessaInstrumentMnemonic	Fidessa Instrument Mnemonic (FIM)
W	IndexName	Index name. Standard name of the index or rate index, e.g. "LIBOR" or "iTraxx Australia".

Code	Name	Description
X	UniformSymbol	Uniform Symbol (UMTF Symbol)
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in components: **DerivativeInstrument**

180.2.739 DerivativeSecurityStatus

Indicates the current state of the derivative instrument.

See SecurityStatus(965) for complete definition.

Type: **String**

Allowed values in SecurityStatusCodeSet:

Code	Name	Description
1	Active	Active. Instrument is active, i.e. trading is possible.
2	Inactive	Inactive. Instrument has previously been active and is now no longer traded but has not expired yet. The instrument may become active again.
3	ActiveClosingOrdersOnly	Active, closing orders only. Instrument is active but only orders closing positions (reducing risk) are allowed.
4	Expired	Expired. Instrument has expired. E.g. An instrument may expire due to reaching maturity or expired based on contract definitions or exchange rules.
5	Delisted	Delisted. Instrument has been removed from securities reference data. Delisting rules varies from exchange to exchange, which may include non-compliance of capitalization, revenue, consecutive minimum closing price. The instrument may become listed again once the instrument is back in compliance. A delisted instrument would not trade on the exchange but it may still be traded over-the-counter (e.g. OTCBB) or on Pink Sheets, or other similar trading service.
6	KnockedOut	Knocked-out. Instrument has breached a pre-defined price threshold.
7	KnockOutRevoked	Knock-out revoked. Instrument reinstated, i.e. threshold has not been breached.

Code	Name	Description
8	PendingExpiry	Pending Expiry. Instrument is currently still active but will expire after the current business day. For example, a contract that expires intra-day (e.g. at noon time) and is no longer tradeable but will still show up in the current day's order book with related statistics.
9	Suspended	Suspended. Instrument has been temporarily disabled for trading (i.e. halted).
10	Published	Published. Instrument information is provided prior to its first activation.
11	PendingDeletion	Pending Deletion. Instrument is awaiting deletion from security reference data.

Used in components: [DerivativeInstrument](#)

180.2.740 DerivativeSecuritySubType

Sub-type qualification/identification of the security type.

See SecuritySubType(762) for complete definition.

Type: [String](#)

Used in components: [DerivativeInstrument](#)

180.2.741 DerivativeSecurityType

The type of security.

See SecurityType(167) for complete definition.

Type: [String](#)

Allowed values in SecurityTypeCodeSet:

Code	Name	Description
ABS	AssetBackedSecurities	Asset-backed Securities
AN	OtherAnticipationNotes	Other Anticipation Notes (BAN, GAN, etc.)
BA	BankersAcceptance	Bankers Acceptance
BRADY	BradyBond	Brady Bond

Code	Name	Description
CORP	CorporateBond	Corporate Bond
CS	CommonStock	Common Stock
EUSUPRA	EuroSupranationalCoupons	Euro Supranational Coupons. Identify the issuer name in Issuer(106).
FOR	ForeignExchangeContract	Foreign Exchange Contract
MF	MutualFund	Mutual Fund
REPO	Repurchase	Repurchase
TERM	TermLoan	Term Loan
BDN	BankDepositoryNote	Bank Depository Note
CAN	CanadianTreasuryNotes	Canadian Treasury Notes
CAP	Cap	Cap. In an interest rate cap, the buyer receives payments at the end of each period in which the rate indec exceeds the agreed strike rate.
CMB	CanadianMortgageBonds	Canadian Mortgage Bonds
COFO	CertificateOfObligation	Certificate Of Obligation
CPP	CorporatePrivatePlacement	Corporate Private Placement
FAC	FederalAgencyCoupon	Federal Agency Coupon
FORWARD	Forward	Forward
FXNDF	NonDeliverableForward	Non-deliverable forward
MLEG	MultilegInstrument	Multileg Instrument
PS	PreferredStock	Preferred Stock
RVLV	RevolverLoan	Revolver Loan
BN	BankNotes	Bank Notes
BUYSELL	BuySellback	Buy Sellback
CB	ConvertibleBond	Convertible Bond
CDS	CreditDefaultSwap	Credit Default Swap
CMBS	Corp	Corp. Mortgage-backed Securities
COFP	CertificateOfParticipation	Certificate Of Participation
CTB	CanadianTreasuryBills	Canadian Treasury Bills
DR	DepositoryReceipts	Depository Receipts
FADN	FederalAgencyDiscountNote	Federal Agency Discount Note
FXSPOT	FXSpot	FX Spot
NONE	NoSecurityType	No Security Type
RVLVTRM	Revolver	Revolver/Term Loan
BOX	BillofExchanges	Bill Of Exchanges

Code	Name	Description
BRIDGE	BridgeLoan	Bridge Loan
CLLR	Collar	Collar. In an interest rate collar, this is a combination of a cap and a floor.
CMO	CollateralizedMortgageObligation	Collateralized Mortgage Obligation
DUAL	DualCurrency	Dual Currency
EUSOV	EuroSovereigns	Euro Sovereigns. Identify the issuer name in Issuer(106).
FXFWD	FXForward	FX Forward
GO	GeneralObligationBonds	General Obligation Bonds
PEF	PrivateExportFunding	Private Export Funding. Identify the issuer name in Issuer(106).
SECLOAN	SecuritiesLoan	Securities Loan
UST	USTreasuryNoteOld	US Treasury Note (Deprecated Value Use TNOTE)
CAMM	CanadianMoneyMarkets	Canadian Money Markets
CMDTYSWAP	CommoditySwap	Commodity swap
EUCORP	EuroCorporateBond	Euro Corporate Bond
FXSWAP	FXSwap	FX Swap
IET	IOETTEMortgage	IOETTE Mortgage
LOFC	LetterOfCredit	Letter Of Credit
MT	MandatoryTender	Mandatory Tender
PROV	CanadianProvincialBonds	Canadian Provincial Bonds
SECPLEDGE	SecuritiesPledge	Securities Pledge
SUPRA	USDSupranationalCoupons	USD Supranational Coupons. Identify the issuer name in Issuer(106).
USTB	USTreasuryBillOld	US Treasury Bill (Deprecated Value Use TBILL)
?	Wildcard	Wildcard entry for use on Security Definition Request
CD	CertificateOfDeposit	Certificate Of Deposit
DVPLDG	DeliveryVersusPledge	Delivery versus pledge
EUFRN	EuroCorporateFloatingRateNotes	Euro Corporate Floating Rate Notes
EXOTIC	Exotic	Exotic
FXNDS	NonDeliverableSwap	Non-deliverable Swap
MBS	MortgageBackedSecurities	Mortgage-backed Securities
RAN	RevenueAnticipationNote	Revenue Anticipation Note
SWING	SwingLineFacility	Swing Line Facility
TB	TreasuryBill	Treasury Bill - non US
CASH	Cash	Cash
CL	CallLoans	Call Loans

Code	Name	Description
COLLBSKT	CollateralBasket	Collateral basket. A collection of securities held as collateral in the customer's collateral fund. The collateral fund is usually managed by a custodian.
DINP	DebtorInPossession	Debtor In Possession
FLR	Floor	Floor. In an interest rate floor, the buyer receives payments at the end of each period in which the rate index is below the agreed strike rate.
FRN	USCorporateFloatingRateNotes	US Corporate Floating Rate Notes
FXBN	FXBankNote	FX Bank Note
MIO	MortgageInterestOnly	Mortgage Interest Only
OOC	OptionsOnCombo	Options on Combo
REV	RevenueBonds	Revenue Bonds
TBOND	USTreasuryBond	US Treasury Bond
CP	CommercialPaper	Commercial Paper
DEFLTED	Defaulted	Defaulted
FRA	FRA	Forward Rate Agreement
FXDN	ForeignCurrencyDiscountNote	Foreign Currency Discount Note. Discount notes issued in foreign currency by Fannie Mae.
MPO	MortgagePrincipalOnly	Mortgage Principal Only
Other	Other	Other
SFP	StructuredFinanceProduct	Structured finance product
SPCLA	SpecialAssessment	Special Assessment
TINT	InterestStripFromAnyBondOrNote	Interest Strip From Any Bond Or Note
XLINKD	IndexedLinked	Indexed Linked
DN	DepositNotes	Deposit Notes
ETN	ExchangeTradedNote	Exchange traded note
FUT	Future	Future
MPP	MortgagePrivatePlacement	Mortgage Private Placement
SPCLO	SpecialObligation	Special Obligation
STRUCT	StructuredNotes	Structured Notes
TBILL	USTreasuryBill	US Treasury Bill
TIPS	TreasuryInflationProtectedSecurities	Treasury Inflation Protected Securities
WITHDRN	Withdrawn	Withdrawn
EUCD	EuroCertificateOfDeposit	Euro Certificate Of Deposit
FWD	DerivativeForward	Derivative forward

Code	Name	Description
MPT	MiscellaneousPassThrough	Miscellaneous Pass-through
MGRNLOAN	MarginLoan	Margin loan
REPLACD	Replaced	Replaced
SPCLT	SpecialTax	Special Tax
TCAL	PrincipalStripOfACallableBondOrNote	Principal Strip Of A Callable Bond Or Note
YANK	YankeeCorporateBond	Yankee Corporate Bond
DIMSUMCORP	OffshoreIssuedChineseYuanCorporateBond	Offshore issued Chinese Yuan (CNY) denominated corporate bond
EUCP	EuroCommercialPaper	Euro Commercial Paper
IRS	InterestRateSwap	Interest Rate Swap
MATURED	Matured	Matured
PFAND	Pfandbrief	Pfandbrief. Identify the issuer name in Issuer(106).
SECDERIV	SecuritizedDerivative	Securitized derivative
TAN	TaxAnticipationNote	Tax Anticipation Note
TPRN	PrincipalStripFromANonCallableBondOrNote	Principal Strip From A Non-Callable Bond Or Note
TRS	TotalReturnSwap	Total return swap
AMENDED	Amended	Amended and restated
ETF	ExchangeTradedFund	Exchange Traded Fund
LOANLEASE	LoanLease	Loan/lease
LQN	LiquidityNote	Liquidity Note
PRCORP	PreferredCorporateBond	Preferred Corporate Bond
TAXA	TaxAllocation	Tax Allocation
TBA	ToBeAnnounced	To Be Announced
TNOTE	USTreasuryNote	US Treasury Note
DIGITAL	DigitalAsset	Digital Asset. Asset that exists only in digital form or which is the digital representation of another asset (Source: ISO 24165 - Terms and Definitions).
DIMSUMSOV	OffshoreIssuedChineseYuanSovereignBond	Offshore issued Chinese Yuan (CNY) denominated sovereign bond
MTN	MediumTermNotes	Medium Term Notes
RETIRED	Retired	Retired
TECP	TaxExemptCommercialPaper	Tax Exempt Commercial Paper
ONITE	Overnight	Overnight
OOF	OptionsOnFutures	Options on Futures

Code	Name	Description
SOV	SovereignBond	Sovereign Bond. Sovereign or government bond other than Euro and US issuer. Specify sovereign issuer in Issuer(106).
TMCP	TaxableMunicipalCP	Taxable Municipal CP
OOP	OptionsOnPhysical	Options on Physical - use not recommended
PN	PromissoryNote	Promissory Note
STN	ShortTermLoanNote	Short Term Loan Note
TFRN	USTreasuryFloatingRateNote	US Treasury Floating Rate Note
TRAN	TaxRevenueAnticipationNote	Tax Revenue Anticipation Note
OPT	Option	Option
PZFI	PlazosFijos	Plazos Fijos
VRDN	VariableRateDemandNote	Variable Rate Demand Note
SLQN	SecuredLiquidityNote	Secured Liquidity Note
SPOTFWD	SpotForward	Spot forward
WAR	Warrant	Warrant
MCPIB	MunicipalInterestBearingCommercialPaper	Municipal Interest Bearing Commercial Paper
SWAPTION	SwapOption	Swap option
TD	TimeDeposit	Time Deposit
TMB	TaxableMunicipalBond	Taxable Municipal Bond
XMISSION	Transmission	Transmission
INDEX	Index	General type for a contract based on an established index
TLQN	TermLiquidityNote	Term Liquidity Note
VRDO	VariableRateDemandObligation	Variable Rate Demand Obligation
BDBSKT	BondBasket	Bond basket
XCN	ExtendedCommNote	Extended Comm Note
CFD	ContractForDifference	Contract for difference
YCD	YankeeCertificateOfDeposit	Yankee Certificate Of Deposit
BAB	BankAcceptedBill	Bank Accepted Bill. Also known as Bank Bill.
CRLTNSWAP	CorrelationSwap	Correlation swap
BNST	ShortTermBankNote	Short Term Bank Note
DVDNSWAP	DividendSwap	Dividend swap
CLCP	CallableCommercialPaper	Callable Commercial Paper
EQBASKT	EquityBasket	Equity basket
CN	CommercialNote	Commercial Note
EQFWD	EquityForward	Equity forward

Code	Name	Description
CPIB	InterestBearingCommercialPaper	Interest Bearing Commercial Paper
RTRNSWAP	ReturnSwap	Return swap
EUMTN	EuroMediumTermNote	Euro Medium Term Note
VARSWAP	VarianceSwap	Variance swap
EUNCP	EuroNegotiableCommercialPaper	Euro Negotiable Commercial Paper
PRTFLIOSWAP	PortfolioSwaps	Portfolio swap
EUSTLQN	EuroStructuredLiquidityNote	Euro Structured Liquidity Note
FUTSWAP	FuturesOnASwap	Futures on a Swap
EUTD	EuroTimeDeposit	Euro Time Deposit
FWDSWAP	ForwardsOnASwap	Forwards on a Swap
FWDFRTAGMT	ForwardFreightAgreement	Forward Freight Agreement
JCD	JumboCertificateOfDeposit	Jumbo Certificate of Deposit
MMF	MoneyMarketFund	Money Market Fund
SPREADBET	SpreadBetting	Spread Betting
ETC	ExchangeTradedCommodity	Exchange traded commodity
MN	MasterNote	Master Note. Short term notes issued by Federal Farm Credit Banks Funding Corporation to provide loans and funding under Federal Farm Credit System (FFCS).
NCD	NegotiableCertificateOfDeposit	Negotiable Certificate of Deposit
NCP	NegotiableCommercialPaper	Negotiable Commercial Paper
RCD	RetailCertificateOfDeposit	Retail Certificate of Deposit
TDR	TermDepositReceipt	Term Deposit Receipt

Used in components: [DerivativeInstrument](#)

180.2.742 DerivativeSecurityXML

XML definition for the security.

See SecurityXML(1185) for complete definition.

Type: [XMLData](#)

Used in components: [DerivativeSecurityXML](#)

180.2.743 DerivativeSecurityXML

Name	Mult.	Type	Description
DerivativeSecurityXMLLen	[0..1]	Length	Must be set if DerivativeSecurityXML(1283) field is specified and must immediately precede it.
DerivativeSecurityXML	[0..1]	XMLData	
DerivativeSecurityXMLSchema	[0..1]	String	

Used in components: [DerivativeInstrument](#)

180.2.744 DerivativeSecurityXMLLen

The length of the DerivativeSecurityXML(1283) data block.

See SecurityXMLLen(1184) for complete definition.

Type: [Length](#)

Used in components: [DerivativeSecurityXML](#)

180.2.745 DerivativeSecurityXMLSchema

The schema used to validate the contents of DerivativeSecurityXML(1283).

See SecurityXMLSchema(1186) for complete definition.

Type: [String](#)

Used in components: [DerivativeSecurityXML](#)

180.2.746 DerivativeSettleOnOpenFlag

Indicator to determine if instrument is settle on open.

See SettleOnOpenFlag(966) for complete definition.

Type: [String](#)

Used in components: [DerivativeInstrument](#)

180.2.747 DerivativeSettlMethod

Settlement method for a contract or instrument.

See SettlMethod(1193) for complete definition.

Type: **String**

Allowed values in SettlMethodCodeSet:

Code	Name	Description
C	CashSettlementRequired	Cash settlement required
P	PhysicalSettlementRequired	Physical settlement required
E	Election	Election at exercise. The settlement method will be elected at the time of contract exercise.

Used in components: **DerivativeInstrument**

180.2.748 DerivativeStateOrProvinceOfIssue

A two-character state or province abbreviation.

See StateOrProvinceOfIssue(471) for complete definition.

Type: **String**

Used in components: **DerivativeInstrument**

180.2.749 DerivativeStrikeCurrency

Currency in which the strike price is denominated.

See StrikeCurrency(947) for complete definition.

Type: **Currency**

Used in components: **DerivativeInstrument**

180.2.750 DerivativeStrikeCurrencyCodeSource

Identifies class or source of the DerivativeStrikeCurrency(1262) value.

Type: **String**

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbolology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in components: [DerivativeInstrument](#)

180.2.751 DerivativeStrikeMultiplier

Multiplier applied to the strike price for the purpose of calculating the settlement value.

See StrikeMultiplier(967) for complete definition.

Type: [float](#)

Used in components: [DerivativeInstrument](#)

180.2.752 DerivativeStrikePrice

Strike price for an option.

See StrikePrice(202) for complete definition.

Type: [Price](#)

Used in components: [DerivativeInstrument](#)

180.2.753 DerivativeStrikeValue

The number of shares/units for the financial instrument involved in the option trade.

See StrikeValue(968) for complete definition.

Type: [float](#)

Used in components: [DerivativeInstrument](#)

180.2.754 DerivativeSymbol

Ticker symbol. Common, human understood representation of the security.

See Symbol(55) for complete definition.

Type: **String**

Used in components: **DerivativeInstrument**

180.2.755 DerivativeSymbolSfx

Additional information about the security (e.g. preferred, warrants, etc.).

See SymbolSfx(65) for complete definition.

Type: **String**

Allowed values in SymbolSfxCodeSet:

Code	Name	Description
CD	EUCPWithLumpSumInterest	EUCP with lump-sum interest rather than discount price
WI	WhenIssued	"When Issued" for a security to be reissued under an old CUSIP or ISIN

Used in components: **DerivativeInstrument**

180.2.756 DerivativeTimeUnit

Unit of time associated with the contract.

NOTE: Additional values may be used by mutual agreement of the counterparties.

See TimeUnit(997) for complete definition.

Type: **String**

Allowed values in TimeUnitCodeSet:

Code	Name	Description
H	Hour	Hour
Min	Minute	Minute
S	Second	Second

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year
Q	Quarter	Quarter
EOM	EndOfMonth	End of Month. End of Month identifies a relative time unit, e.g. until the third Friday of each month.
F	Flexible	Flexible. A flexible time unit indicates that a specific time unit for the contract is currently undetermined.

Used in components: [DerivativeInstrument](#)

180.2.757 DerivativeUnitOfMeasure

The unit of measure of the underlying commodity upon which the contract is based.

See UnitOfMeasure(996) for complete definition.

Type: [String](#)

Allowed values in UnitOfMeasureCodeSet:

Code	Name	Description
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet
Bbl	Barrels	Barrels. Equal to 42 US gallons
CBM	CubicMeters	Cubic Meters
BDFT	BoardFeet	Board feet. Equal to 144 cubic inches
GJ	Gigajoules	gigajoules
Bu	Bushels	Bushels
kHR	HeatRate	Heat rate. The number of BTUs required to produce one kilowatt hour of electricity, typically 3,412.14 BTUs per 1 kWh.
Ccy	Currency	Amount of currency
kWh	KilowattHours	Kilowatt hours
CDD	CoolingDegreeDay	Cooling degree day

Code	Name	Description
MHR	MegaHeatRate	Mega heat rate. The number of million BTUs required to produce one megawatt hour of electricity, typically 3.41214 million BTUs per 1 MWh.
CER	CertifiedEmissionsReduction	Certified emissions reduction
MMBtu	OneMillionBTU	One Million BTU
CPD	CriticalPrecipDay	Critical precipitation day
MWh	MegawattHours	Megawatt hours
CRT	ClimateReserveTonnes	Climate reserve tonnes
thm	Therms	therms. Equal to 100,000 BTU
cwt	Hundredweight	Hundredweight(US). Equal to 100 lbs
tnCO2	TonsOfCarbonDioxide	Tons of carbon dioxide
day	Day	Days
dt	DryMetricTons	Dry metric tons
EnvAllwnc	EnvAllwncCert	Environmental allowance certificates
EnvCrd	EnvironmentalCredit	Environmental credit
EnvOfst	EnvironmentalOffset	Environmental Offset
g	Grams	Grams
Gal	Gallons	Gallons
GT	GrossTons	Gross tons. Also known as long tons or imperial tons, equal to 2240 lbs
HDD	HeatingDegreeDay	Heating degree day
IPNT	IndexPoint	Index point
kg	Kilograms	Kilograms
kL	Kiloliters	kiloliters
kW-a	KilowattYear	Kilowatt year (electrical capacity)
kW-d	KilowattDay	Kilowatt day (electrical capacity)
kW-h	KilowattHour	Kilowatt hour (electrical capacity)
kW-M	KilowattMonth	Kilowatt month (electrical capacity)
kW-min	KilowattMinute	Kilowatt-Minute (electrical capacity)
L	Liters	liters
lbs	Pounds	pounds
MW-a	MegawattYear	Megawatt year (electrical capacity)
MW-d	MegawattDay	Megawatt day (electrical capacity)
MW-h	MegawattHour	Megawatt hour (electrical capacity)
MW-M	MegawattMonth	Megawatt month (electrical capacity)

Code	Name	Description
MW-min	MegawattMinute	Megawatt minute (electrical capacity)
oz_tr	TroyOunces	Troy ounces
PRINC	PrincipalWithRelationToDebtInstrument	Principal with relation to debt instrument
t	MetricTons	Metric tons. Also known as Tonnes, equal to 1000 kg
tn	Tons	Tons (US). Equal to 2000 lbs
a	Are	Are
ac	Acre	Acre
cL	Centiliter	Centiliter
cM	Centimeter	Centimeter
DGE	DieselGallonEquivalent	Diesel gallon equivalent
ft	Foot	Foot
Gal_gb	GBGallon	GB Gallon
GGE	GasolineGallonEquivalent	Gasonline gallon equivalent
ha	Hectare	Hectare
in	Inch	Inch
kM	Kilometer	Kilometer
M	Meter	Meter
mi	Mile	Mile
mL	Milliliter	Milliliter
mM	Millimeter	Millimeter
oz	USOunce	US ounce
pc	Piece	Piece
pt	USPint	US Pint
pt_gb	GBPint	GB pint
qt	USQuart	US Quart
qt_gb	GBQuart	GB Quart
SqcM	SquareCentimeter	Square centimeter
Sqft	SquareFoot	Square foot
Sqin	SquareInch	Square inch
SqkM	SquareKilometer	Square kilometer
SqM	SquareMeter	Square meter
Sqmi	SquareMile	Square mile
SqmM	SquareMillimeter	Square millimeter

Code	Name	Description
Sqyd	SquareYard	Square yard
yd	Yard	Yard
MMbbl	MillionBarrels	Million Barrels
USD	USDollars	US Dollars

Used in components: [DerivativeInstrument](#)

180.2.758 DerivativeUnitOfMeasureCurrency

Indicates the currency of the unit of measure.

Conditionally required when DerivativeUnitOfMeasure(1269) = Ccy.

See UnitOfMeasureCurrency(1716) for complete definition.

Type: [Currency](#)

Used in components: [DerivativeInstrument](#)

180.2.759 DerivativeUnitOfMeasureCurrencyCodeSource

Identifies class or source of the DerivativeUnitOfMeasureCurrency(1722) value.

Type: [String](#)

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in components: [DerivativeInstrument](#)

180.2.760 DerivativeUnitOfMeasureQty

Used to indicate the quantity of the underlying commodity unit of measure on which the contract is based.

See UnitOfMeasureQty(1147) for complete definition.

Type: **Qty**

Used in components: **DerivativeInstrument**

180.2.761 DerivativeUPICode

Uniquely identifies the product of a derivative instrument using ISO 4914. See UPICode(2891) for complete definition.

Type: **String**

Used in components: **DerivativeInstrument**

180.2.762 DerivativeValuationMethod

Specifies the method for price quotation.

See ValuationMethod(1197) for complete definition.

Type: **String**

Allowed values in ValuationMethodCodeSet:

Code	Name	Description
EQTY	PremiumStyle	premium style
FUT	FuturesStyleMarkToMarket	futures style mark-to-market
FUTDA	FuturesStyleWithAnAttachedCashAdjustment	futures style with an attached cash adjustment
CDS	CDSStyleCollateralization	CDS style collateralization of market to market and coupon
CDSD	CDSInDeliveryUseRecoveryRateToCalculate	CDS in delivery - use recovery rate to calculate obligation

Used in components: **DerivativeInstrument**

180.2.763 DerivFlexProductEligibilityIndicator

Used to indicate if a product or group of product supports the creation of flexible securities.

See FlexProductEligibilityIndicator(1242) for complete definition.

Type: **Boolean**

Used in components: **DerivativeInstrument**

180.2.764 Designation

Free format text defining the designation to be associated with a holding on the register. Used to identify assets of a specific underlying investor using a common registration, e.g. a broker's nominee or street name.

Type: **String**

Used in groups: **ListOrdGrp**

Used in messages: **CrossOrderCancelReplaceRequest**, **ExecutionReport**, **MultilegOrderCancelReplace**, **NewOrderCross**, **NewOrderMultileg**, **NewOrderSingle**, **OrderCancelReplaceRequest**

180.2.765 DeskID

Identification of a Market Maker's desk

Type: **String**

Used in groups: **CompIDReqGrp**, **CompIDStatGrp**, **MDFullGrp**, **MDIncGrp**

180.2.766 DeskOrderHandlingInst

Codes that apply special information that the broker-dealer needs to report.

Type: **MultipleStringValue**

Allowed values in CustOrderHandlingInstCodeSet:

Code	Name	Description
A	PhoneSimple	Phone simple
G	GOrderAndFCMAPlorFIX	G Order(FINRA OATS), FCM API or FIX(FIA Execution Source)
ADD	AddOnOrder	Add-on order

Code	Name	Description
B	PhoneComplex	Phone complex
AON	AllOrNone	All or none
C	FCMProvidedScreen	FCM provided screen
CND	ConditionalOrder	Conditional order
D	OtherProvidedScreen	Other provided screen
CNH	CashNotHeld	Cash not held
E	ClientProvidedPlatformControlled-ByFCM	Client provided platform controlled by FCM
CSH	DeliveryInstructionsCash	Delivery instructions - cash
F	ClientProvidedPlatformDirectToExchange	Client provided platform direct to exchange
DIR	DirectedOrder	Directed order
DLO	DiscretionaryLimitOrder	Discretionary limit order
H	AlgoEngine	Algo engine
E.W	ExchangeForPhysicalTransaction	Exchange for physical transaction
J	PriceAtExecution	Price at execution (price added at initial order entry, trading, middle office or time of give-up)
FOK	FillOrKill	Fill or kill
W	DeskElectronic	Desk - electronic
X	DeskPit	Desk - pit
IDX	IntraDayCross	Intraday cross
Y	ClientElectronic	Client - electronic
IO	ImbalanceOnly	Imbalance only
Z	ClientPit	Client - pit
IOC	ImmediateOrCancel	Immediate or cancel
ISO	IntermarketSweepOrder	Intermarket sweep order
LOO	LimitOnOpen	Limit on open
LOC	LimitOnClose	Limit on Close
MAO	MarketAtOpen	Market at Open
MAC	MarketAtClose	Market at close
MOO	MarketOnOpen	Market on open
MOC	MarketOnClose	Market on close
MPT	MergerRelatedTransferPosition	Merger related transfer position
MQT	MinimumQuantity	Minimum quantity
MTL	MarketToLimit	Market to limit

Code	Name	Description
ND	DeliveryInstructionsNextDay	Delivery instructions - next day
NH	NotHeld	Not held
OPT	OptionsRelatedTransaction	Options related transaction
OVD	OverTheDay	Over the day
PEG	Pegged	Pegged
RSV	ReserveSizeOrder	Reserve size order
S.W	StopStockTransaction	Stop stock transaction
SCL	Scale	Scale
SLR	DeliveryInstructionsSellersOption	Delivery instructions - sellers option
TMO	TimeOrder	Time order
TS	TrailingStop	Trailing stop
WRK	Work	Work
F0	StayOnOfferside	Stay on offerside
F3	GoAlong	Go along
F6	ParticipateDoNotInitiate	Participate do not initiate
F7	StrictScale	Strict scale
F8	TryToScale	Try to scale
F9	StayOnBidside	Stay on bidside
FA	NoCross	No cross
FB	OKToCross	OK to cross
FC	CallFirst	Call first
FD	PercentOfVolume	Percent of volume
FH	ReinstateOnSystemFailure	Reinstate on system failure
FI	InstitutionOnly	Institution only
FJ	ReinstateOnTradingHalt	Reinstate on trading halt
FK	CancelOnTradingHalf	Cancel on trading half
FL	LastPeg	Last peg
FM	MidPricePeg	Mid-price peg
FN	NonNegotiable	Non-negotiable
FO	OpeningPeg	Opening peg
FP	MarketPeg	Market peg
FQ	CancelOnSystemFailure	Cancel on system failure
FR	PrimaryPeg	Primary peg
FS	Suspend	Suspend

Code	Name	Description
FT	FixedPegToLocalBBO	Fixed peg to local best bid or offer at time of order
FW	PegToVWAP	Peg to VWAP
FX	TradeAlong	Trade along
FY	TryToStop	Try to stop
FZ	CancelIfNotBest	Cancel if not best
Fb	StrictLimit	Strict limit
Fc	IgnorePriceValidityChecks	Ignore price validity checks
Fd	PegToLimitPrice	Peg to Limit Price
Fe	WorkToTargetStrategy	Work to target strategy

Used in groups: **TrdRegTimestamps**

180.2.767 DeskType

Identifies the type of Trading Desk.

Conditionally required when InformationBarrierID(1727) is specified for OATS.

Type: **String**

Allowed values in DeskTypeCodeSet:

Code	Name	Description
A	Agency	Agency
AR	Arbitrage	Arbitrage
B	BlockTrading	Block trading
C	ConvertibleDesk	Convertible desk
CR	CentralRiskBooks	Central risk books
D	Derivatives	Derivatives
EC	EquityCapitalMarkets	Equity capital markets
IN	International	International
IS	Institutional	Institutional
O	Other	Other
PF	PreferredTrading	Preferred trading
PR	Proprietary	Proprietary
PT	ProgramTrading	Program trading

Code	Name	Description
S	Sales	Sales
SW	Swaps	Swaps
T	TradingDeskSystem	Trading desk or system non-market maker
TR	Treasury	Treasury
FB	FloorBroker	Floor Broker

Used in groups: **TrdRegTimestamps**

180.2.768 DeskTypeSource

Identifies the class or source of DeskType(1033) values. Conditionally required when DeskType(1033) is specified.

Type: **int**

Allowed values in DeskTypeSourceCodeSet:

Code	Name	Description
1	FINRAOATS	FINRA OATS

Used in groups: **TrdRegTimestamps**

180.2.769 DetachmentPoint

Upper bound percentage of the loss the tranche can endure.

Type: **Percentage**

Used in components: **Instrument**

180.2.770 DifferentialPrice

Used to specify the differential price when reporting the individual leg of a spread trade. Both leg price and differential price may be provided on such a report. Note that MultiLegReportingType(442) will be set to 2 (Individual leg of a multi-leg security) in this case.

Also used in pricing Trade at Settlement (TAS) and Trade At Marker (TAM) contracts for which the value is the negotiated currency offset either at settlement (TAS) or at time specified in the product definition (TAM). The final contract price is specified in LastPx(31).

Type: **PriceOffset**

Used in messages: **TradeCaptureReport**

180.2.771 DisclosureInstruction

Instruction to disclose information or to use default value of the receiver.

Type: **int**

Allowed values in DisclosureInstructionCodeSet:

Code	Name	Description
0	No	No
1	Yes	Yes
2	UseDefaultSetting	Use default setting

Used in groups: **DisclosureInstructionGrp**

180.2.772 DisclosureInstructionGrp

Repeating group of instructions, each of which relates to one or more elements of an order. The instruction itself conveys whether the information should be disclosed, e.g. in market data, or not.

Name	Mult.	Type	Description
NoDisclosureInstructions	[1..1]	NumInGroup	
DisclosureType	[0..1]	CodeSet	Required when NoDisclosureInstructions(1812) > 0.
DisclosureInstruction	[0..1]	CodeSet	

Used in messages: **ExecutionReport**, **MultilegOrderCancelReplace**, **NewOrderMultileg**, **NewOrderSingle**, **OrderCancelReplaceRequest**

180.2.773 DisclosureType

Information subject to disclosure.

Type: **int**

Allowed values in DisclosureTypeCodeSet:

Code	Name	Description
1	Volume	Volume
2	Price	Price
3	Side	Side
4	AON	AON
5	General	General. General is used for bilateral agreed disclosure information type(s).
6	ClearingAccount	Clearing account
7	CMTAAccount	CMTA account

Used in groups: **DisclosureInstructionGrp**

180.2.774 DiscountFactor

Used to calculate the present value of an amount to be paid in the future.

Type: **float**

Used in groups: **ClearingPriceParametersGrp**, **MDFullGrp**, **MDIncGrp**

Used in messages: **PositionMaintenanceReport**, **PositionReport**

180.2.775 DiscretionInst

Code to identify the price a DiscretionOffsetValue (389) is related to and should be mathematically added to.

Type: **char**

Allowed values in DiscretionInstCodeSet:

Code	Name	Description
0	RelatedToDisplayedPrice	Related to displayed price
1	RelatedToMarketPrice	Related to market price
2	RelatedToPrimaryPrice	Related to primary price
3	RelatedToLocalPrimaryPrice	Related to local primary price
4	RelatedToMidpointPrice	Related to midpoint price
5	RelatedToLastTradePrice	Related to last trade price
6	RelatedToVWAP	Related to VWAP
7	AveragePriceGuarantee	Average Price Guarantee

Used in components: [DiscretionInstructions](#)

180.2.776 DiscretionInstructions

The presence of DiscretionInstructions component block on an order indicates that the trader wishes to display one price but will accept trades at another price.

Name	Mult.	Type	Description
DiscretionInst	[0..1]	CodeSet	What the discretionary price is related to (e.g. primary price, display price etc)
DiscretionOffsetValue	[0..1]	float	Amount (signed) added to the "related to" price specified via DiscretionInst, in the context of DiscretionOffsetType
DiscretionMoveType	[0..1]	CodeSet	Describes whether discretion price is static/fixed or floats
DiscretionOffsetType	[0..1]	CodeSet	Type of Discretion Offset (e.g. price offset, tick offset etc)
DiscretionLimitType	[0..1]	CodeSet	Specifies the nature of the resulting discretion price (e.g. or better limit, strict limit etc)
DiscretionRoundDirection	[0..1]	CodeSet	If the calculated discretion price is not a valid tick price, specifies how to round the price (e.g. to be more or less aggressive)
DiscretionScope	[0..1]	CodeSet	The scope of "related to" price of the discretion (e.g. local, global etc)

Used in groups: [ListOrdGrp](#)

Used in messages: [CrossOrderCancelReplaceRequest](#), [ExecutionReport](#), [MultilegOrderCancelReplace](#), [NewOrderCross](#), [NewOrderMultileg](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#)

180.2.777 DiscretionLimitType

Type of Discretion Limit

Type: [int](#)

Allowed values in DiscretionLimitTypeCodeSet:

Code	Name	Description
0	OrBetter	Or better (default) - price improvement allowed
1	Strict	Strict - limit is a strict limit
2	OrWorse	Or worse - for a buy the discretion price is a minimum and for a sell the discretion price is a maximum (for use for orders which have a price range)

Used in components: [DiscretionInstructions](#)

180.2.778 DiscretionMoveType

Describes whether discretionary price is static or floats

Type: [int](#)

Allowed values in DiscretionMoveTypeCodeSet:

Code	Name	Description
0	Floating	Floating (default)
1	Fixed	Fixed

Used in components: [DiscretionInstructions](#)

180.2.779 DiscretionOffsetType

Type of Discretion Offset value

Type: [int](#)

Allowed values in DiscretionOffsetTypeCodeSet:

Code	Name	Description
0	Price	Price (default)
1	BasisPoints	Basis Points
2	Ticks	Ticks
3	PriceTier	Price Tier / Level

Used in components: [DiscretionInstructions](#)

180.2.780 DiscretionOffsetValue

Amount (signed) added to the "related to" price specified via DiscretionInst (388), in the context of DiscretionOffsetType (842)

(Prior to FIX 4.4 this field was of type PriceOffset)

Type: [float](#)

Used in components: [DiscretionInstructions](#)

180.2.781 DiscretionPrice

The current discretionary price of the order

Type: [Price](#)

Used in messages: [ExecutionReport](#)

180.2.782 DiscretionRoundDirection

If the calculated discretionary price is not a valid tick price, specifies whether to round the price to be more or less aggressive

Type: [int](#)

Allowed values in DiscretionRoundDirectionCodeSet:

Code	Name	Description
1	MoreAggressive	More aggressive - on a buy order round the price up to the nearest tick; on a sell round down to the nearest tick
2	MorePassive	More passive - on a buy order round down to the nearest tick; on a sell order round up to the nearest tick

Used in components: [DiscretionInstructions](#)

180.2.783 DiscretionScope

The scope of the discretion

Type: [int](#)

Allowed values in DiscretionScopeCodeSet:

Code	Name	Description
1	Local	Local (Exchange, ECN, ATS)
2	National	National
3	Global	Global
4	NationalExcludingLocal	National excluding local

Used in components: [DiscretionInstructions](#)

180.2.784 DisplayHighQty

Defines the upper quantity limit to a randomized refresh of DisplayQty.

Type: [Qty](#)

Used in components: [DisplayInstruction](#)

180.2.785 DisplayInstruction

The DisplayInstruction component block is used to convey instructions on how a reserved order is to be handled in terms of when and how much of the order quantity is to be displayed to the market.

Name	Mult.	Type	Description
DisplayQty	[0..1]	Qty	
SecondaryDisplayQty	[0..1]	Qty	
InitialDisplayQty	[0..1]	Qty	Only to be used in the ExecutionReport
CurrentDisplayPrice	[0..1]	Price	
DisplayWhen	[0..1]	CodeSet	
DisplayMethod	[0..1]	CodeSet	
DisplayLowQty	[0..1]	Qty	Required when DisplayMethod = 3
DisplayHighQty	[0..1]	Qty	Required when DisplayMethod = 3
DisplayMinIncr	[0..1]	Qty	Can be used to specify larger increments than the standard increment provided by the market. Optionally used when DisplayMethod = 3
RefreshQty	[0..1]	Qty	Required when DisplayMethod = 2

Used in components: [TradeReportOrderDetail](#)

Used in groups: [ListOrdGrp](#)

Used in messages: [CrossOrderCancelReplaceRequest](#), [ExecutionReport](#), [MultilegOrderCancelReplace](#), [NewOrderCross](#), [NewOrderMultileg](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#)

180.2.786 DisplayLowQty

Defines the lower quantity limit to a randomized refresh of DisplayQty.

Type: [Qty](#)

Used in components: [DisplayInstruction](#)

180.2.787 DisplayMethod

Defines what value to use in DisplayQty (1138). If not specified the default DisplayMethod is "1"

Type: [char](#)

Allowed values in DisplayMethodCodeSet:

Code	Name	Description
1	Initial	Initial (use original DisplayQty)

Code	Name	Description
2	New	New (use RefreshQty)
3	Random	Random (randomize value)
4	Undisclosed	Undisclosed (invisible order)

Used in components: **DisplayInstruction**

180.2.788 DisplayMinIncr

Defines the minimum increment to be used when calculating a random refresh of DisplayQty. A user specifies this when he wants a larger increment than the standard provided by the market (e.g. the round lot size).

Type: **Qty**

Used in components: **DisplayInstruction**

180.2.789 DisplayQty

The quantity to be displayed . Required for reserve orders. On orders specifies the qty to be displayed, on execution reports the currently displayed quantity.

Type: **Qty**

Used in components: **DisplayInstruction**

180.2.790 DisplayWhen

Instructs when to refresh DisplayQty (1138).

Type: **char**

Allowed values in DisplayWhenCodeSet:

Code	Name	Description
1	Immediate	Immediate (after each fill)
2	Exhaust	Exhaust (when DisplayQty = 0)

Used in components: **DisplayInstruction**

180.2.791 DistribPaymentMethod

Identifies the payment method for a (fractional) distribution. Used for CIV.

Type: **int**

Allowed values in DistribPaymentMethodCodeSet:

Code	Name	Description
1	CREST	CREST
2	NSCC	NSCC
3	Euroclear	Euroclear
4	Clearstream	Clearstream
5	Cheque	Cheque
6	TelegraphicTransfer	Telegraphic Transfer
7	FedWire	Fed Wire
8	DirectCredit	Direct Credit (BECS, BACS)
9	ACHCredit	ACH Credit
10	BPAY	BPAY
11	HighValueClearingSystemHVACS	High Value Clearing System HVACS
12	ReinvestInFund	Reinvest In Fund
999	Other	Other

Used in groups: **RgstDistInstGrp**

180.2.792 DistribPercentage

The amount of each distribution to go to this beneficiary, expressed as a percentage

Type: **Percentage**

Used in groups: **RgstDistInstGrp**

180.2.793 DividendAccrualFixedRate

The dividend accrual fixed rate per annum expressed as a decimal.

A value of 5% would be represented as "0.05".

Type: **Percentage**

Used in components: **DividendConditions**

180.2.794 DividendAccrualFloatingRate

The DividendAccrualFloatingRate component is a subcomponent of DividendConditions used to define the dividend accrual floating rate attributes of dividend payment conditions.

Name	Mult.	Type	Description
DividendFloatingRateIndex	[0..1]	String	
DividendFloatingRateIndexCurvePeriod	[0..1]	int	Conditionally required when DividendFloatingRateIndexCurveUnit(42220) is specified.
DividendFloatingRateIndexCurveUnit	[0..1]	CodeSet	Conditionally required when DividendFloatingRateIndexCurvePeriod(42219) is specified.
DividendFloatingRateMultiplier	[0..1]	float	
DividendFloatingRateSpread	[0..1]	PriceOffset	
DividendFloatingRateSpreadPosition-Type	[0..1]	CodeSet	
DividendFloatingRateTreatment	[0..1]	CodeSet	
DividendCapRate	[0..1]	Percentage	
DividendCapRateBuySide	[0..1]	CodeSet	
DividendCapRateSellSide	[0..1]	CodeSet	
DividendFloorRate	[0..1]	Percentage	
DividendFloorRateBuySide	[0..1]	CodeSet	
DividendFloorRateSellSide	[0..1]	CodeSet	
DividendInitialRate	[0..1]	Percentage	
DividendFinalRateRoundingDirection	[0..1]	CodeSet	
DividendFinalRatePrecision	[0..1]	int	
DividendAveragingMethod	[0..1]	CodeSet	
DividendNegativeRateTreatment	[0..1]	CodeSet	

Used in components: **DividendConditions**

180.2.795 DividendAccrualPaymeentDateBusinessDayConvention

Accrual payment date adjustment business day convention.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: **DividendAccrualPaymentDate**

180.2.796 DividendAccrualPaymentDateAdjusted

The adjusted accrual payment date.

Type: **LocalMktDate**

Used in components: **DividendAccrualPaymentDate**

180.2.797 DividendAccrualPaymentDateBusinessCenter

The business center calendar used for date adjustment of the instrument's dividend accrual payment date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **DividendAccrualPaymentDateBusinessCenterGrp**

180.2.798 DividendAccrualPaymentDateBusinessCenterGrp

DividendAccrualPaymentDateBusinessCenterGrp is a repeating subcomponent within the DividendAccrualPaymentDate component. It is used to specify the set of business centers whose calendars drive the date adjustment.

Name	Mult.	Type	Description
NoDividendAccrualPaymentDateBusinessCenters	[1..1]	NumInGroup	
DividendAccrualPaymentDateBusinessCenter	[0..1]	String	Required if NoDividendAccrualPaymentDateBusinessCenters(42236) > 0.

Used in components: [DividendAccrualPaymentDate](#)

180.2.799 DividendAccrualPaymentDate

The DividendAccrualPaymentDate component is a subcomponent of DividendConditions used to report the dividend accrual payment date.

Name	Mult.	Type	Description
DividendAccrualPaymentDateRelativeTo	[0..1]	int	
DividendAccrualPaymentDateOffsetPeriod	[0..1]	int	Conditionally required when DividendAccrualPaymentDateOffsetUnit(42240) is specified.
DividendAccrualPaymentDateOffsetUnit	[0..1]	CodeSet	Conditionally required when DividendAccrualPaymentDateOffsetPeriod(42239) is specified.
DividendAccrualPaymentDateOffsetDayType	[0..1]	CodeSet	
DividendAccrualPaymentDateUnadjusted	[0..1]	LocalMktDate	
DividendAccrualPaymentDateBusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the DateAdjustment component in Instrument. The value would be specific to this instance of DividendAccrualPaymentDate.
DividendAccrualPaymentDateBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the DateAdjustment component in Instrument. The values would be specific to this instance of DividendAccrualPaymentDate.
DividendAccrualPaymentDateAdjusted	[0..1]	LocalMktDate	

Used in components: [DividendConditions](#)

180.2.800 DividendAccrualPaymentDateOffsetDayType

Specifies the day type of the relative accrual payment date offset.

Type: **int**

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: **DividendAccrualPaymentDate**

180.2.801 DividendAccrualPaymentDateOffsetPeriod

Time unit multiplier for the relative accrual payment date offset.

Type: **int**

Used in components: **DividendAccrualPaymentDate**

180.2.802 DividendAccrualPaymentDateOffsetUnit

Time unit associated with the relative accrual payment date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: **DividendAccrualPaymentDate**

180.2.803 DividendAccrualPaymentDateRelativeTo

Specifies the anchor date when the accrual payment date is relative to an anchor date.

See http://www.fixtradingcommunity.org/codelists#Relative_To_Date for values.

Type: **int**

Used in components: **DividendAccrualPaymentDate**

180.2.804 DividendAccrualPaymentDateUnadjusted

The unadjusted accrual payment date.

Type: **LocalMktDate**

Used in components: **DividendAccrualPaymentDate**

180.2.805 DividendAmountType

Indicates how the gross cash dividend amount per share is determined.

Type: **int**

Allowed values in DividendAmountTypeCodeSet:

Code	Name	Description
0	RecordAmount	Record amount. 100% of the gross cash dividend per share paid over record date during relevant dividend period.
1	ExAmount	Ex amount. 100% of gross cash dividend per share paid after the ex-dividend date during relevant dividend period.
2	PaidAmount	Paid amount. 100% of gross cash dividend per share paid during relevant dividend period.
3	PerMasterConfirm	As specified in master confirmation. The amount is determined as provided in the relevant master confirmation.

Used in components: **DividendConditions**

180.2.806 DividendAveragingMethod

When averaging is applicable, used to specify whether a weighted or unweighted average method of calculation is to be used.

Type: **int**

Allowed values in PaymentStreamAveragingMethodCodeSet:

Code	Name	Description
0	Unweighted	Unweighted
1	Weighted	Weighted

Used in components: **DividendAccrualFloatingRate**

180.2.807 DividendCapRate

The cap rate, if any, which applies to the floating rate. It is only required where the floating rate is capped at a certain level. The cap rate is assumed to be exclusive of any spread and is a per annum rate, expressed as a decimal. A cap rate of 5% would be represented as "0.05".

Type: **Percentage**

Used in components: **DividendAccrualFloatingRate**

180.2.808 DividendCapRateBuySide

Reference to the buyer of the cap rate option through its trade side.

Type: **int**

Allowed values in PaymentStreamCapRateBuySideCodeSet:

Code	Name	Description
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

Used in components: **DividendAccrualFloatingRate**

180.2.809 DividendCapRateSellSide

Reference to the seller of the cap rate option through its trade side.

Type: **int**

Allowed values in PaymentStreamCapRateBuySideCodeSet:

Code	Name	Description
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

Used in components: [DividendAccrualFloatingRate](#)

180.2.810 DividendCashEquivalentPercentage

Declared cash-equivalent dividend percentage.

A value of 5% would be represented as "0.05".

Type: [Percentage](#)

Used in components: [DividendConditions](#)

180.2.811 DividendCashPercentage

Declared cash dividend percentage.

A value of 5% would be represented as "0.05".

Type: [Percentage](#)

Used in components: [DividendConditions](#)

180.2.812 DividendComposition

Defines how the composition of dividends is to be determined.

Type: [int](#)

Allowed values in DividendCompositionCodeSet:

Code	Name	Description
0	EquityAmountReceiver	Equity amount receiver election. The equity amount receiver determines the composition of dividends (subject to conditions).

Code	Name	Description
1	CalculationAgent	Calculation agent election. The calculation agent determines the composition of dividends (subject to conditions).

Used in components: [DividendConditions](#)

180.2.813 DividendCompoundingMethod

The compounding method to be used when more than one dividend period contributes to a single payment.

Type: [int](#)

Allowed values in PaymentStreamCompoundingMethodCodeSet:

Code	Name	Description
0	None	None
1	Flat	Flat
2	Straight	Straight
3	SpreadExclusive	Spread exclusive

Used in components: [DividendConditions](#)

180.2.814 DividendConditions

The DividendConditions component is a subcomponent of PaymentStream used to specify the conditions' valuations and dates governing the payment of dividends.

Name	Mult.	Type	Description
DividendReinvestmentIndicator	[0..1]	Boolean	
DividendEntitlementEvent	[0..1]	CodeSet	
DividendAmountType	[0..1]	CodeSet	
DividendUnderlierRefID	[0..1]	String	
DividendPeriodGrp	[0..*]	Group	
ExtraordinaryDividendPartySide	[0..1]	CodeSet	
ExtraordinaryDividendAmountType	[0..1]	CodeSet	

Name	Mult.	Type	Description
ExtraordinaryDividendCurrency	[0..1]	Currency	
ExtraordinaryDividendDetermination-Method	[0..1]	String	
DividendFXTriggerDate	[0..1]	Component	
DividendAccrualFloatingRate	[0..1]	Component	
DividendAccrualFixedRate	[0..1]	Percentage	
DividendAccrualPaymentDate	[0..1]	Component	
DividendCompoundingMethod	[0..1]	CodeSet	
DividendNumOfIndexUnits	[0..1]	int	
DividendCashPercentage	[0..1]	Percentage	
DividendCashEquivalentPercentage	[0..1]	Percentage	
NonCashDividendTreatment	[0..1]	CodeSet	
DividendComposition	[0..1]	CodeSet	
SpecialDividendsIndicator	[0..1]	Boolean	
MaterialDividendsIndicator	[0..1]	Boolean	
OptionsExchangeDividendsIndicator	[0..1]	Boolean	
AdditionalDividendsIndicator	[0..1]	Boolean	
AllDividendsIndicator	[0..1]	Boolean	

Used in components: [PaymentStreamFloatingRate](#)

180.2.815 DividendEntitlementEvent

Defines the contract event which the receiver of the derivative is entitled to the dividend.

Type: [int](#)

Allowed values in DividendEntitlementEventCodeSet:

Code	Name	Description
0	ExDate	Ex-date. Dividend entitlement is on the dividend ex-date.
1	RecordDate	Record date. Dividend entitlement is on the dividend record date.

Used in components: [DividendConditions](#)

180.2.816 DividendFinalRatePrecision

Specifies the rounding precision of the final rate in terms of a number of decimal places. Note how a percentage rate rounding of 5 decimal places is expressed as a rounding precision of 7.

Type: **int**

Used in components: **DividendAccrualFloatingRate**

180.2.817 DividendFinalRateRoundingDirection

Specifies the rounding direction of the final rate.

Type: **char**

Allowed values in RoundingDirectionCodeSet:

Code	Name	Description
0	RoundToNearest	Round to nearest
1	RoundDown	Round down
2	RoundUp	Round up

Used in components: **DividendAccrualFloatingRate**

180.2.818 DividendFloatingRateIndex

The dividend accrual floating rate index.

Type: **String**

Used in components: **DividendAccrualFloatingRate**

180.2.819 DividendFloatingRateIndexCurvePeriod

Time unit multiplier for the dividend accrual floating rate index curve.

Type: **int**

Used in components: **DividendAccrualFloatingRate**

180.2.820 DividendFloatingRateIndexCurveUnit

Time unit associated with the dividend accrual floating rate index curve period.

Type: **String**

Allowed values in PaymentStreamRateIndexCurveUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: **DividendAccrualFloatingRate**

180.2.821 DividendFloatingRateMultiplier

A rate multiplier to apply to the floating rate. The multiplier can be less than or greater than 1 (one). This should only be included if the multiplier is not equal to 1 (one) for the term of the contract.

Type: **float**

Used in components: **DividendAccrualFloatingRate**

180.2.822 DividendFloatingRateSpread

The basis points spread from the index specified in DividendFloatingRateIndex(42218).

Type: **PriceOffset**

Used in components: **DividendAccrualFloatingRate**

180.2.823 DividendFloatingRateSpreadPositionType

Identifies whether the rate spread is applied to a long or short position.

Type: **int**

Allowed values in PaymentStreamRateSpreadPositionTypeCodeSet:

Code	Name	Description
0	Short	Short
1	Long	Long

Used in components: [DividendAccrualFloatingRate](#)

180.2.824 DividendFloatingRateTreatment

Specifies the yield calculation treatment for the index.

Type: [int](#)

Allowed values in PaymentStreamRateTreatmentCodeSet:

Code	Name	Description
0	BondEquivalentYield	Bond equivalent yield
1	MoneyMarketYield	Money market yield

Used in components: [DividendAccrualFloatingRate](#)

180.2.825 DividendFloorRate

The floor rate, if any, which applies to the floating rate. The floor rate (strike) is only required where the floating rate is floored at a certain strike level. The floor rate is assumed to be exclusive of any spread and is a per annum rate. The rate is expressed as a decimal, e.g. 5% is represented as "0.05".

Type: [Percentage](#)

Used in components: [DividendAccrualFloatingRate](#)

180.2.826 DividendFloorRateBuySide

Reference to the buyer of the floor rate option through its trade side.

Type: [int](#)

Allowed values in PaymentStreamFloorRateBuySideCodeSet:

Code	Name	Description
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

Used in components: [DividendAccrualFloatingRate](#)

180.2.827 DividendFloorRateSellSide

Reference to the seller of the floor rate option through its trade side.

Type: [int](#)

Allowed values in PaymentStreamFloorRateBuySideCodeSet:

Code	Name	Description
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

Used in components: [DividendAccrualFloatingRate](#)

180.2.828 DividendFXTriggerDateAdjusted

The adjusted FX trigger date.

Type: [LocalMktDate](#)

Used in components: [DividendFXTriggerDate](#)

180.2.829 DividendFXTriggerDateBusinessCenter

The business center calendar used for date adjustment of the instrument's FX trigger date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in groups: [DividendFXTriggerDateBusinessCenterGrp](#)

180.2.830 DividendFXTriggerDateBusinessCenterGrp

DividendFXTriggerDateBusinessCenterGrp is a repeating subcomponent within the DividendFXTriggerDate component. It is used to specify the set of business centers whose calendars drive the date adjustment.

Name	Mult.	Type	Description
NoDividendFXTriggerDateBusinessCenters	[1..1]	NumInGroup	
DividendFXTriggerDateBusinessCenter	[0..1]	String	Required if NoDividendFXTriggerDateBusinessCenters(42272) > 0.

Used in components: [DividendFXTriggerDate](#)

180.2.831 DividendFXTriggerDateBusinessDayConvention

The business day convention used for the FX trigger date adjustment.

Type: [int](#)

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [DividendFXTriggerDate](#)

180.2.832 DividendFXTriggerDate

The DividendFXTriggerDate component is a subcomponent of DividendConditions used to report the dividend date when a foreign exchange trade is triggered.

Name	Mult.	Type	Description
DividendFXTriggerDateRelativeTo	[0..1]	int	
DividendFXTriggerDateOffsetPeriod	[0..1]	int	Conditionally required when DividendFXTriggerDateOffsetUnit(42267) is specified.
DividendFXTriggerDateOffsetUnit	[0..1]	CodeSet	Conditionally required when DividendFXTriggerDateOffsetPeriod(42266) is specified.
DividendFXTriggerDateOffsetDayType	[0..1]	CodeSet	
DividendFXTriggerDateUnadjusted	[0..1]	LocalMktDate	
DividendFXTriggerDateBusinessDay-Convention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the DateAdjustment component in Instrument. The value would be specific to this instance of DividendFXTriggerDate.
DividendFXTriggerDateBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the DateAdjustment component in Instrument. The values would be specific to this instance of DividendFXTriggerDate.
DividendFXTriggerDateAdjusted	[0..1]	LocalMktDate	

Used in components: [DividendConditions](#)

180.2.833 DividendFXTriggerDateOffsetDayType

Specifies the day type of the relative FX trigger date offset.

Type: [int](#)

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: [DividendFXTriggerDate](#)

180.2.834 DividendFXTriggerDateOffsetPeriod

Time unit multiplier for the relative FX trigger date offset.

Type: **int**

Used in components: **DividendFXTriggerDate**

180.2.835 DividendFXTriggerDateOffsetUnit

Time unit associated with the relative FX trigger date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: **DividendFXTriggerDate**

180.2.836 DividendFXTriggerDateRelativeTo

Specifies the anchor date when the FX trigger date is relative to an anchor date.

See http://www.fixtradingcommunity.org/codelists#Relative_To_Date for values.

Type: **int**

Used in components: **DividendFXTriggerDate**

180.2.837 DividendFXTriggerDateUnadjusted

The unadjusted FX trigger date.

Type: **LocalMktDate**

Used in components: **DividendFXTriggerDate**

180.2.838 DividendInitialRate

The initial floating rate reset agreed between the principal parties involved in the trade. This is assumed to be the first required reset rate for the first regular calculation period. It should only be included when the rate is not equal to the rate published on the source implied by the floating rate index. The initial rate is expressed in decimal form, e.g. 5% is represented as "0.05".

Type: **Percentage**

Used in components: **DividendAccrualFloatingRate**

180.2.839 DividendNegativeRateTreatment

The specification of any provisions for calculating payment obligations when a floating rate is negative (either due to a quoted negative floating rate or by operation of a spread that is subtracted from the floating rate).

Type: **int**

Allowed values in PaymentStreamNegativeRateTreatmentCodeSet:

Code	Name	Description
0	ZeroInterestRateMethod	Zero interest rate method
1	NegativeInterestRateMethod	Negative interest rate method

Used in components: **DividendAccrualFloatingRate**

180.2.840 DividendNumOfIndexUnits

The number of index units applicable to dividends.

Type: **int**

Used in components: **DividendConditions**

180.2.841 DividendPeriodBusinessCenter

The business center calendar used for date adjustment of the instrument's dividend period date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **DividendPeriodBusinessCenterGrp**

180.2.842 DividendPeriodBusinessCenterGrp

DividendPeriodBusinessCenterGrp is a repeating subcomponent within the DividendPeriodGrp component. It is used to specify the set of business centers whose calendars drive the date adjustment.

Name	Mult.	Type	Description
NoDividendPeriodBusinessCenters	[1..1]	NumInGroup	
DividendPeriodBusinessCenter	[0..1]	String	Required if NoDividendPeriodBusinessCenters(42294) > 0.

Used in groups: **DividendPeriodGrp**

180.2.843 DividendPeriodBusinessDayConvention

The dividend period dates business day convention.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in groups: **DividendPeriodGrp**

180.2.844 DividendPeriodEndDateUnadjusted

The unadjusted date on which the dividend period will end.

Type: **LocalMktDate**

Used in groups: **DividendPeriodGrp**

180.2.845 DividendPeriodGrp

DividendPeriodGrp is a repeating subcomponent within the DividendConditions component. It is used to specify the valuation and payments dates of the dividend leg of a dividend swap.

Name	Mult.	Type	Description
NoDividendPeriods	[1..1]	NumInGroup	
DividendPeriodSequence	[0..1]	int	Required if NoDividendPeriods(42274) > 0.
DividendPeriodStartDateUnadjusted	[0..1]	LocalMktDate	
DividendPeriodEndDateUnadjusted	[0..1]	LocalMktDate	
DividendPeriodUnderlierRefID	[0..1]	String	When specified, this overrides DividendUnderlierRefID(42248). The specified value would be specific to this dividend period instance.
DividendPeriodStrikePrice	[0..1]	Price	
DividendPeriodBusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the DateAdjustment component in Instrument. The specified value would be specific to this dividend period instance.
DividendPeriodBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the DateAdjustment component in Instrument. The specified values would be specific to this dividend period instance.
DividendPeriodValuationDateUnadjusted	[0..1]	LocalMktDate	
DividendPeriodValuationDateRelativeTo	[0..1]	int	
DividendPeriodValuationDateOffsetPeriod	[0..1]	int	Conditionally required when DividendPeriodValuationDateOffsetUnit(42284) is specified.
DividendPeriodValuationDateOffsetUnit	[0..1]	CodeSet	Conditionally required when DividendPeriodValuationDateOffsetPeriod(42283) is specified.

Name	Mult.	Type	Description
DividendPeriodValuationDateOffset-DayType	[0..1]	CodeSet	
DividendPeriodValuationDateAdjusted	[0..1]	LocalMktDate	
DividendPeriodPaymentDateUnadjusted	[0..1]	LocalMktDate	
DividendPeriodPaymentDateRelativeTo	[0..1]	int	
DividendPeriodPaymentDateOffsetPeriod	[0..1]	int	Conditionally required when DividendPeriodPaymentDateOffsetUnit(42290) is specified.
DividendPeriodPaymentDateOffsetUnit	[0..1]	CodeSet	Conditionally required when DividendPeriodPaymentDateOffsetPeriod(42289) is specified.
DividendPeriodPaymentDateOffset-DayType	[0..1]	CodeSet	
DividendPeriodPaymentDateAdjusted	[0..1]	LocalMktDate	
DividendPeriodXID	[0..1]	XID	

Used in components: [DividendConditions](#)

180.2.846 DividendPeriodPaymentDateAdjusted

The adjusted dividend period payment date.

Type: [LocalMktDate](#)

Used in groups: [DividendPeriodGrp](#)

180.2.847 DividendPeriodPaymentDateOffsetDayType

Specifies the day type of the relative dividend period payment date offset.

Type: [int](#)

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business

Code	Name	Description
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in groups: **DividendPeriodGrp**

180.2.848 DividendPeriodPaymentDateOffsetPeriod

Time unit multiplier for the relative dividend period payment date offset.

Type: **int**

Used in groups: **DividendPeriodGrp**

180.2.849 DividendPeriodPaymentDateOffsetUnit

Time unit associated with the relative dividend period payment date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in groups: **DividendPeriodGrp**

180.2.850 DividendPeriodPaymentDateRelativeTo

Specifies the anchor date when the dividend period payment date is relative to an anchor date.

See http://www.fixtradingcommunity.org/codelists#Relative_To_Date for values.

Type: **int**

Used in groups: **DividendPeriodGrp**

180.2.851 DividendPeriodPaymentDateUnadjusted

The unadjusted dividend period payment date.

Type: **LocalMktDate**

Used in groups: **DividendPeriodGrp**

180.2.852 DividendPeriodSequence

Defines the ordinal dividend period. E.g. 1 = First period, 2 = Second period, etc.

Type: **int**

Used in groups: **DividendPeriodGrp**

180.2.853 DividendPeriodStartDateUnadjusted

The unadjusted date on which the dividend period will begin.

Type: **LocalMktDate**

Used in groups: **DividendPeriodGrp**

180.2.854 DividendPeriodStrikePrice

Specifies the fixed strike price of the dividend period.

Type: **Price**

Used in groups: **DividendPeriodGrp**

180.2.855 DividendPeriodUnderlierRefID

References the dividend underlier through the instrument's UnderlyingSecurityID(309) which must be fully specified in an instance of the UnderlyingInstrument component.

Type: **String**

Used in groups: **DividendPeriodGrp**

180.2.856 DividendPeriodValuationDateAdjusted

The adjusted dividend period valuation date.

Type: **LocalMktDate**

Used in groups: **DividendPeriodGrp**

180.2.857 DividendPeriodValuationDateOffsetDayType

Specifies the day type of the relative dividend period valuation date offset.

Type: **int**

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in groups: **DividendPeriodGrp**

180.2.858 DividendPeriodValuationDateOffsetPeriod

Time unit multiplier for the relative dividend period valuation date offset.

Type: **int**

Used in groups: **DividendPeriodGrp**

180.2.859 DividendPeriodValuationDateOffsetUnit

Time unit associated with the relative dividend period valuation date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in groups: [DividendPeriodGrp](#)

180.2.860 DividendPeriodValuationDateRelativeTo

Specifies the anchor date when the dividend period valuation date is relative to an anchor date.

See http://www.fixtradingcommunity.org/codelists#Relative_To_Date for values.

Type: [int](#)

Used in groups: [DividendPeriodGrp](#)

180.2.861 DividendPeriodValuationDateUnadjusted

The unadjusted dividend period valuation date.

Type: [LocalMktDate](#)

Used in groups: [DividendPeriodGrp](#)

180.2.862 DividendPeriodXID

Identifier for linking this stream dividend period to an underlier through an instance of RelatedInstrumentGrp.

Type: [XID](#)

Used in groups: [DividendPeriodGrp](#)

180.2.863 DividendReinvestmentIndicator

Indicates whether the dividend will be reinvested.

Type: [Boolean](#)

Used in components: [DividendConditions](#)

180.2.864 DividendUnderlierRefID

References the dividend underlier through the instrument's UnderlyingSecurityID(309) which must be fully specified in an instance of the UnderlyingInstrument component.

Type: **String**

Used in components: **DividendConditions**

180.2.865 DividendYield

The continuously-compounded annualized dividend yield of the underlying(s) of an option. Used as a parameter to theoretical option pricing models.

Type: **Percentage**

Used in messages: **ExecutionReport**, **TradeCaptureReport**

180.2.866 DKReason

Reason for execution rejection.

Type: **char**

Allowed values in DKReasonCodeSet:

Code	Name	Description
A	UnknownSymbol	Unknown security
B	WrongSide	Wrong side
C	QuantityExceedsOrder	Quantity exceeds order
D	NoMatchingOrder	No matching order
E	PriceExceedsLimit	Price exceeds limit
F	CalculationDifference	Calculation difference
G	NoMatchingExecutionReport	No matching ExecutionReport(35=8)
Z	Other	Other

Used in messages: **DontKnowTrade**, **ExecutionAck**

180.2.867 DlvlyInstGrp

Name	Mult.	Type	Description
NoDlvlyInst	[1..1]	NumInGroup	
SettlInstSource	[0..1]	CodeSet	
DlvlyInstType	[0..1]	CodeSet	
SettlParties	[0..*]	Group	

Used in components: [SettlInstructionsData](#)

180.2.868 DlvlyInstType

Used to indicate whether a delivery instruction is used for securities or cash settlement.

Type: [char](#)

Allowed values in DlvlyInstTypeCodeSet:

Code	Name	Description
C	Cash	Cash
S	Securities	Securities

Used in groups: [DlvlyInstGrp](#)

180.2.869 DocumentationText

A sentence or phrase pertinent to the trade, not a reference to an external document. E.g. "To be registered with the U.S. Environmental Protection Agency, Acid Rain Division, SO2 Allowance Tracking System"

Type: [String](#)

Used in components: [FinancingDetails](#)

180.2.870 DueToRelated

Indicates whether or not the halt was due to the Related Security being halted.

Type: **Boolean**

Allowed values in DueToRelatedCodeSet:

Code	Name	Description
N	NotRelatedToSecurityHalt	Halt was not related to a halt of the related security
Y	RelatedToSecurityHalt	Halt was due to related security being halted

Used in messages: **SecurityStatus**

180.2.871 DuplicateCLOrdIDIndicator

Used to indicate that a CLOrdID(11) value is an intentional duplicate of a previously sent value. Allows to avoid the rejection of an order with OrdRejReason(103) = 6 (Duplicate Order).

Type: **Boolean**

Allowed values in DuplicateCLOrdIDIndicatorCodeSet:

Code	Name	Description
N	UniqueCLOrdID	Unique CLOrdID(11)
Y	DuplicateCLOrdID	Duplicate CLOrdID(11)

Used in messages: **NewOrderSingle**, **OrderCancelReplaceRequest**

180.2.872 EffectiveBusinessDate

Specifies an explicit business date for associated reference data or transaction. Used when an implicit date is not sufficiently specific.

Type: **LocalMktDate**

Used in messages: **MarketDefinition**, **MarketDefinitionUpdateReport**, **PartyActionReport**, **SecurityDefinition**, **SecurityDefinitionUpdateReport**

180.2.873 EffectiveTime

Time the details within the message should take effect (always expressed in UTC (Universal Time Coordinated, also known as "GMT"))

Type: **UTCTimestamp**

Used in groups: **ListOrdGrp**, **SettlInstGrp**, **SettlObligationInstructions**

Used in messages: **AlgoCertificateReport**, **AlgoCertificateRequest**, **CrossOrderCancelReplaceRequest**, **ExecutionReport**, **MultilegOrderCancelReplace**, **NewOrderCross**, **NewOrderMultileg**, **NewOrderSingle**, **OrderCancelReplaceRequest**, **SettlementInstructionRequest**

180.2.874 EFPTrackingError

Eg Used in EFP trades 2% (EFP - Exchange for Physical). Represented as a percentage.

Type: **Percentage**

Used in groups: **BidDescReqGrp**

180.2.875 EmailThreadID

Unique identifier for an email thread (new and chain of replies)

Type: **String**

Used in messages: **Email**

180.2.876 EmailType

Email message type.

Type: **char**

Allowed values in EmailTypeCodeSet:

Code	Name	Description
0	New	New
1	Reply	Reply
2	AdminReply	Admin Reply

Used in messages: **Email**

180.2.877 EncodedAdditionalTermBondDesc

Encoded (non-ASCII characters) representation of the AdditionalTermBondDesc(40003) field in the encoded format specified via the MessageEncoding (347) field. If used, the ASCII (English) representation should also be specified in the AdditionalTermBondDesc(40003) field.

Type: **data**

Used in groups: **AdditionalTermBondRefGrp**

180.2.878 EncodedAdditionalTermBondDescLen

Byte length of encoded (non-ASCII characters) EncodedAdditionalTermBondDesc(40005) field.

Type: **Length**

Used in groups: **AdditionalTermBondRefGrp**

180.2.879 EncodedAdditionalTermBondIssuer

Encoded (non-ASCII characters) representation of the AdditionalTermBondIssuer(40007) field in the encoded format specified via the MessageEncoding (347) field. If used, the ASCII (English) representation should also be specified in the AdditionalTermBondIssuer(40007) field.

Type: **data**

Used in groups: **AdditionalTermBondRefGrp**

180.2.880 EncodedAdditionalTermBondIssuerLen

Byte length of encoded (non-ASCII characters) EncodedAdditionalTermBondIssuer(40009) field.

Type: **Length**

Used in groups: **AdditionalTermBondRefGrp**

180.2.881 EncodedAllocCommissionDesc

Encoded (non-ASCII characters) representation of the AllocCommissionDesc(2664) field in the encoded format specified via the MessageEncoding(347) field. If used, the ASCII (English) representation should also be specified in the AllocCommissionDesc(2664) field.

Type: **data**

Used in groups: [AllocCommissionDataGrp](#)

180.2.882 EncodedAllocCommissionDescLen

Byte length of the encoded (non-ASCII characters) EncodedAllocCommissionDesc(2666) field.

Type: [Length](#)

Used in groups: [AllocCommissionDataGrp](#)

180.2.883 EncodedAllocText

Encoded (non-ASCII characters) representation of the AllocText (161) field in the encoded format specified via the MessageEncoding (347) field. If used, the ASCII (English) representation should also be specified in the AllocText field.

Type: [data](#)

Used in groups: [AllocAckGrp](#), [AllocGrp](#), [TrdAllocGrp](#)

180.2.884 EncodedAllocTextLen

Byte length of encoded (non-ASCII characters) EncodedAllocText (361) field.

Type: [Length](#)

Used in groups: [AllocAckGrp](#), [AllocGrp](#), [TrdAllocGrp](#)

180.2.885 EncodedAttachment

The content of the attachment in the encoding format specified in the AttachmentEncodingType(2109) field.

Type: [data](#)

Used in groups: [AttachmentGrp](#)

180.2.886 EncodedAttachmentLen

Byte length of encoded the EncodedAttachment(2112) field.

Type: [Length](#)

Used in groups: [AttachmentGrp](#)

180.2.887 EncodedCancelText

Encoded (non-ASCII characters) representation of the CancelText(2807) field in the encoded format specified via the MessageEncoding(347) field. If used, the ASCII (English) representation should also be specified in the CancelText(2807) field.

Type: **data**

Used in messages: **PayManagementRequest**

180.2.888 EncodedCancelTextLen

Byte length of encoded (non-ASCII characters) EncodedCancelText(2808) field.

Type: **Length**

Used in messages: **PayManagementRequest**

180.2.889 EncodedCommissionDesc

Encoded (non-ASCII characters) representation of the CommissionDesc(2650) field in the encoded format specified via the MessageEncoding(347) field. If used, the ASCII (English) representation should also be specified in the CommissionDesc(2650) field.

Type: **data**

Used in groups: **CommissionDataGrp**

180.2.890 EncodedCommissionDescLen

Byte length of the encoded (non-ASCII characters) EncodedCommissionDesc(2652) field.

Type: **Length**

Used in groups: **CommissionDataGrp**

180.2.891 EncodedComplianceText

Encoded (non-ASCII characters) representation of the ComplianceText(2404) field in the encoded format specified via the MessageEncoding (347) field. If used, the ASCII (English) representation should also be specified in the ComplianceText(2404) field.

Type: **data**

Used in groups: [ListOrdGrp](#), [SideCrossOrdCxlGrp](#), [TrdCapRptAckSideGrp](#), [TrdCapRptSideGrp](#), [TrdMatchSideGrp](#)

Used in messages: [ExecutionReport](#), [MassQuote](#), [MassQuoteAck](#), [MultilegOrderCancelReplace](#), [NewOrderMultileg](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#), [OrderCancelRequest](#), [OrderMassActionReport](#), [OrderMassActionRequest](#), [Quote](#), [QuoteRequest](#), [SecurityDefinitionRequest](#)

180.2.892 EncodedComplianceTextLen

Byte length of encoded (non-ASCII characters) [EncodedComplianceText\(2352\)](#) field.

Type: [Length](#)

Used in groups: [ListOrdGrp](#), [SideCrossOrdCxlGrp](#), [TrdCapRptAckSideGrp](#), [TrdCapRptSideGrp](#), [TrdMatchSideGrp](#)

Used in messages: [ExecutionReport](#), [MassQuote](#), [MassQuoteAck](#), [MultilegOrderCancelReplace](#), [NewOrderMultileg](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#), [OrderCancelRequest](#), [OrderMassActionReport](#), [OrderMassActionRequest](#), [Quote](#), [QuoteRequest](#), [SecurityDefinitionRequest](#)

180.2.893 EncodedDeliveryStreamCycleDesc

Encoded (non-ASCII characters) representation of the [DeliveryStreamCycleDesc\(41082\)](#) field in the encoded format specified via the [MessageEncoding\(347\)](#) field. If used, the ASCII (English) representation should also be specified in the [DeliveryStreamCycleDesc\(41082\)](#) field.

Type: [data](#)

Used in groups: [DeliveryStreamCycleGrp](#)

180.2.894 EncodedDeliveryStreamCycleDescLen

Byte length of encoded (non-ASCII characters) [EncodedDeliveryStreamCycleDesc\(41084\)](#) field.

Type: [Length](#)

Used in groups: [DeliveryStreamCycleGrp](#)

180.2.895 EncodedDocumentationText

Encoded (non-ASCII characters) representation of the [DocumentationText\(1513\)](#) field in the encoded format specified via the [MessageEncoding\(347\)](#) field. If used, the ASCII (English) representation should also be specified in the [DocumentationText\(1513\)](#) field.

Type: **data**

Used in components: **FinancingDetails**

180.2.896 EncodedDocumentationTextLen

Byte length of encoded (non-ASCII characters) EncodedDocumentationText(1527) field.

Type: **Length**

Used in components: **FinancingDetails**

180.2.897 EncodedEventText

Encoded (non-ASCII characters) representation of the EventText(868) field in the encoded format specified via the MessageEncoding (347) field. If used, the ASCII (English) representation should also be specified in the EventText(868) field.

Type: **data**

Used in groups: **EvntGrp**

180.2.898 EncodedEventTextLen

Byte length of encoded (non-ASCII characters) EncodedEventText(868) field.

Type: **Length**

Used in groups: **EvntGrp**

180.2.899 EncodedExerciseDesc

Encoded (non-ASCII characters) representation of the ExerciseDesc(41106) field in the encoded format specified via the MessageEncoding (347) field. If used, the ASCII (English) representation should also be specified in the ExerciseDesc(41106) field.

Type: **data**

Used in components: **OptionExercise**

180.2.900 EncodedExerciseDescLen

Byte length of encoded (non-ASCII characters) EncodedExerciseDesc(41102) field.

Type: **Length**

Used in components: **OptionExercise**

180.2.901 EncodedFinancialInstrumentFullName

Encoded (non-ASCII characters) representation of the FinancialInstrumentFullName(2714) field in the encoded format specified via the MessageEncoding(347) field. If used, the ASCII (English) representation should also be specified in the FinancialInstrumentFullName(2714) field.

Type: **data**

Used in components: **Instrument**

180.2.902 EncodedFinancialInstrumentFullNameLen

Byte length of encoded (non-ASCII characters) EncodedFinancialInstrumentFullName(2716) field.

Type: **Length**

Used in components: **Instrument**

180.2.903 EncodedFirmAllocText

Encoded (non-ASCII characters) representation of the FirmAllocText(1732) field in the encoded format specified via the MessageEncoding(347) field. If used, the ASCII (English) representation should also be specified in FirmAllocText(1732) field.

Type: **data**

Used in groups: **AllocAckGrp, AllocGrp, TrdAllocGrp**

180.2.904 EncodedFirmAllocTextLen

Byte length of encoded (non-ASCII characters) EncodedFirmAllocText(1734) field.

Type: **Length**

Used in groups: **AllocAckGrp, AllocGrp, TrdAllocGrp**

180.2.905 EncodedHeadline

Encoded (non-ASCII characters) representation of the Headline (148) field in the encoded format specified via the MessageEncoding (347) field. If used, the ASCII (English) representation should also be specified in the Headline field.

Type: **data**

Used in messages: **News**

180.2.906 EncodedHeadlineLen

Byte length of encoded (non-ASCII characters) EncodedHeadline (359) field.

Type: **Length**

Used in messages: **News**

180.2.907 EncodedIssuer

Encoded (non-ASCII characters) representation of the Issuer field in the encoded format specified via the MessageEncoding (347) field. If used, the ASCII (English) representation should also be specified in the Issuer field.

Type: **data**

Used in components: **Instrument**

180.2.908 EncodedIssuerLen

Byte length of encoded (non-ASCII characters) EncodedIssuer (349) field.

Type: **Length**

Used in components: **Instrument**

180.2.909 EncodedLegAdditionalTermBondDesc

Encoded (non-ASCII characters) representation of the LegAdditionalTermBondDesc(41319) field in the encoded format specified via the MessageEncoding (347) field. If used, the ASCII (English) representation should also be specified in the LegAdditionalTermBondDesc(41319) field.

Type: **data**

Used in groups: [LegAdditionalTermBondRefGrp](#)

180.2.910 EncodedLegAdditionalTermBondDescLen

Byte length of encoded (non-ASCII characters) EncodedLegAdditionalTermBondDesc(41321) field.

Type: [Length](#)

Used in groups: [LegAdditionalTermBondRefGrp](#)

180.2.911 EncodedLegAdditionalTermBondIssuer

Encoded (non-ASCII characters) representation of the LegAdditionalTermBondIssuer(41323) field in the encoded format specified via the MessageEncoding (347) field. If used, the ASCII (English) representation should also be specified in the LegAdditionalTermBondIssuer(41323) field.

Type: [data](#)

Used in groups: [LegAdditionalTermBondRefGrp](#)

180.2.912 EncodedLegAdditionalTermBondIssuerLen

Byte length of encoded (non-ASCII characters) EncodedLegAdditionalTermBondIssuer(41325) field.

Type: [Length](#)

Used in groups: [LegAdditionalTermBondRefGrp](#)

180.2.913 EncodedLegDeliveryStreamCycleDesc

Encoded (non-ASCII characters) representation of the LegDeliveryStreamCycleDesc(41457) field in the encoded format specified via the MessageEncoding (347) field. If used, the ASCII (English) representation should also be specified in the LegLeg DeliveryStream(41457) field.

Type: [data](#)

Used in groups: [LegDeliveryStreamCycleGrp](#)

180.2.914 EncodedLegDeliveryStreamCycleDescLen

Byte length of encoded (non-ASCII characters) EncodedLegDeliveryStreamCycleDesc(41459) field.

Type: **Length**

Used in groups: **LegDeliveryStreamCycleGrp**

180.2.915 EncodedLegDocumentationText

Encoded (non-ASCII characters) representation of the LegDocumentationText(2505) field in the encoded format specified via the MessageEncoding(347) field. If used, the ASCII (English) representation should also be specified in the LegDocumentationText(2505) field.

Type: **data**

Used in components: **LegFinancingDetails**

180.2.916 EncodedLegDocumentationTextLen

Byte length of encoded (non-ASCII characters) EncodedLegDocumentationText(2493) field.

Type: **Length**

Used in components: **LegFinancingDetails**

180.2.917 EncodedLegEventText

Encoded (non-ASCII characters) representation of the LegEventText(2066) field in the encoded format specified via the MessageEncoding (347) field. If used, the ASCII (English) representation should also be specified in the LegEventText(2066) field.

Type: **data**

Used in groups: **LegEvntGrp**

180.2.918 EncodedLegEventTextLen

Byte length of encoded (non-ASCII characters) EncodedLegEventText(2075) field.

Type: **Length**

Used in groups: **LegEvntGrp**

180.2.919 EncodedLegExerciseDesc

Encoded (non-ASCII characters) representation of the LegExerciseDesc(41481) field in the encoded format specified via the MessageEncoding (347) field. If used, the ASCII (English) representation should also be specified in the LegExerciseDesc(41481) field.

Type: **data**

Used in components: **LegOptionExercise**

180.2.920 EncodedLegExerciseDescLen

Byte length of encoded (non-ASCII characters) EncodedLegExerciseDesc(41483) field.

Type: **Length**

Used in components: **LegOptionExercise**

180.2.921 EncodedLegFinancialInstrumentFullName

Encoded (non-ASCII characters) representation of the LegFinancialInstrumentFullName(2717) field in the encoded format specified via the MessageEncoding(347) field. If used, the ASCII (English) representation should also be specified in the LegFinancialInstrumentFullName(2717) field.

Type: **data**

Used in components: **InstrumentLeg**

180.2.922 EncodedLegFinancialInstrumentFullNameLen

Byte length of encoded (non-ASCII characters) individual multileg instrument's EncodedLegFinancialInstrumentFullName(2719).

Type: **Length**

Used in components: **InstrumentLeg**

180.2.923 EncodedLegIssuer

Multileg instrument's individual security's EncodedIssuer.

See EncodedIssuer (349) field for description

Type: **data**

Used in components: **InstrumentLeg**

180.2.924 EncodedLegIssuerLen

Multileg instrument's individual security's EncodedIssuerLen.

See EncodedIssuerLen (348) field for description

Type: **Length**

Used in components: **InstrumentLeg**

180.2.925 EncodedLegMarketDisruptionFallbackUnderlierSecurityDesc

Encoded (non-ASCII characters) representation of the LegMarketDisruptionFallbackUnderlierSecurityDesc(41475) field in the encoded format specified via the MessageEncoding (347) field. If used, the ASCII (English) representation should also be specified in the LegMarketDisruptionFallbackUnderlierSecurityDesc(41475) field.

Type: **data**

Used in groups: **LegMarketDisruptionFallbackReferencePriceGrp**

180.2.926 EncodedLegMarketDisruptionFallbackUnderlierSecurityDescLen

Byte length of encoded (non-ASCII characters) EncodedLegMarketDisruptionFallbackUnderlierSecurityDesc (41477) field.

Type: **Length**

Used in groups: **LegMarketDisruptionFallbackReferencePriceGrp**

180.2.927 EncodedLegOptionExpirationDesc

Encoded (non-ASCII characters) representation of the LegOptionExpirationDesc(2178) field in the encoded format specified via the MessageEncoding (347) field. If used, the ASCII (English) representation should also be specified in the LegOptionExpirationDesc(2178).

Type: **data**

Used in components: **InstrumentLeg**

180.2.928 EncodedLegOptionExpirationDescLen

Byte length of encoded (non-ASCII characters) EncodedLegOptionExpirationDesc(2180) field.

Type: **Length**

Used in components: **InstrumentLeg**

180.2.929 EncodedLegProvisionText

Encoded (non-ASCII characters) representation of the LegProvisionText(40472) field in the encoded format specified via the MessageEncoding (347) field. If used, the ASCII (English) representation should also be specified in the LegProvisionText(40472) field.

Type: **data**

Used in groups: **LegProvisionGrp**

180.2.930 EncodedLegProvisionTextLen

Byte length of encoded (non-ASCII characters) EncodedLegProvisionText(40472) field.

Type: **Length**

Used in groups: **LegProvisionGrp**

180.2.931 EncodedLegSecurityDesc

Multileg instrument's individual security's EncodedSecurityDesc.

See EncodedSecurityDesc (35) field for description

Type: **data**

Used in components: **InstrumentLeg**

180.2.932 EncodedLegSecurityDescLen

Multileg instrument's individual security's EncodedSecurityDescLen.

See EncodedSecurityDescLen (350) field for description

Type: **Length**

Used in components: **InstrumentLeg**

180.2.933 EncodedLegStreamCommodityDesc

Encoded (non-ASCII characters) representation of the LegStreamCommodityDesc(41652) field in the encoded format specified via the MessageEncoding (347) field. If used, the ASCII (English) representation should also be specified in the LegStreamCommodityDesc(41652) field.

Type: **data**

Used in components: **LegStreamCommodity**

180.2.934 EncodedLegStreamCommodityDescLen

Byte length of encoded (non-ASCII characters) EncodedLegStreamCommodityDesc(41654) field.

Type: **Length**

Used in components: **LegStreamCommodity**

180.2.935 EncodedLegStreamText

Encoded (non-ASCII characters) representation of the LegStreamText(40248) field in the encoded format specified via the MessageEncoding (347) field. If used, the ASCII (English) representation should also be specified in the LegStreamText(40248) field.

Type: **data**

Used in groups: **LegStreamGrp**

180.2.936 EncodedLegStreamTextLen

Byte length of encoded (non-ASCII characters) EncodedLegStreamText(40979) field.

Type: **Length**

Used in groups: **LegStreamGrp**

180.2.937 EncodedListExecInst

Encoded (non-ASCII characters) representation of the ListExecInst (69) field in the encoded format specified via the MessageEncoding (347) field. If used, the ASCII (English) representation should also be specified in the ListExecInst field.

Type: **data**

Used in messages: [NewOrderList](#)

180.2.938 EncodedListExecInstLen

Byte length of encoded (non-ASCII characters) EncodedListExecInst (353) field.

Type: [Length](#)

Used in messages: [NewOrderList](#)

180.2.939 EncodedListStatusText

Encoded (non-ASCII characters) representation of the ListStatusText (444) field in the encoded format specified via the MessageEncoding (347) field. If used, the ASCII (English) representation should also be specified in the ListStatusText field.

Type: [data](#)

Used in messages: [ListStatus](#)

180.2.940 EncodedListStatusTextLen

Byte length of encoded (non-ASCII characters) EncodedListStatusText (446) field.

Type: [Length](#)

Used in messages: [ListStatus](#)

180.2.941 EncodedMarketDisruptionFallbackUnderlierSecurityDesc

Encoded (non-ASCII characters) representation of the MarketDisruptionFallbackUnderlierSecurityDesc(41100) field in the encoded format specified via the MessageEncoding (347) field. If used, the ASCII (English) representation should also be specified in the MarketDisruptionFallbackUnderlierSecurityDesc(41100) field.

Type: [data](#)

Used in groups: [MarketDisruptionFallbackReferencePriceGrp](#)

180.2.942 EncodedMarketDisruptionFallbackUnderlierSecurityDescLen

Byte length of encoded (non-ASCII characters) EncodedMarketDisruptionFallbackUnderlierSecurityDesc(41102) field.

Type: **Length**

Used in groups: **MarketDisruptionFallbackReferencePriceGrp**

180.2.943 EncodedMatchExceptionText

Encoded (non-ASCII characters) representation of the MatchExceptionText(2780) field in the encoded format specified via the MessageEncoding(347) field.

If used, the ASCII (English) representation should also be specified in the MatchExceptionText(2780) field.

Type: **data**

Used in groups: **MatchExceptionGrp**

180.2.944 EncodedMatchExceptionTextLen

Byte length of encoded (non-ASCII characters) EncodedMatchExceptionText(2798) field.

Type: **Length**

Used in groups: **MatchExceptionGrp**

180.2.945 EncodedMDStatisticDesc

Encoded (non-ASCII characters) representation of the MDStatisticDesc(2455) field in the encoded format specified via the MessageEncoding (347) field. If used, the ASCII (English) representation should also be specified in the MDStatisticDesc(2455) field.

Type: **data**

Used in components: **MDStatisticParameters**

180.2.946 EncodedMDStatisticDescLen

Byte length of encoded (non-ASCII characters) EncodedMDStatisticDesc(2482) field.

Type: **Length**

Used in components: **MDStatisticParameters**

180.2.947 EncodedMiscFeeSubTypeDesc

Encoded (non-ASCII characters) representation of the MiscFeeSubTypeDesc(2636) field in the encoded format specified via the MessageEncoding (347) field. If used, the ASCII (English) representation should also be specified in the MiscFeeSubTypeDesc(2636) field.

Type: **data**

Used in groups: **MiscFeesSubGrp**

180.2.948 EncodedMiscFeeSubTypeDescLen

Byte length of encoded (non-ASCII characters) EncodedMiscFeeSubTypeDesc(2638) field.

Type: **Length**

Used in groups: **MiscFeesSubGrp**

180.2.949 EncodedMktSegmDesc

Encoded (non-ASCII characters) representation of the MarketSegmDesc(1396) field in the encoded format specified via the MessageEncoding(347) field. If used, the ASCII (English) representation should also be specified in the MarketSegmDesc field.

Type: **data**

Used in messages: **MarketDataStatisticsReport**, **MarketDataStatisticsRequest**, **MarketDefinition**, **MarketDefinitionUpdateReport**

180.2.950 EncodedMktSegmDescLen

Byte length of encoded (non-ASCII characters) EncodedMktSegmDesc(1324) field.

Type: **Length**

Used in messages: **MarketDataStatisticsReport**, **MarketDataStatisticsRequest**, **MarketDefinition**, **MarketDefinitionUpdateReport**

180.2.951 EncodedOptionExpirationDesc

Encoded (non-ASCII characters) representation of the OptionExpirationDesc(1581) field in the encoded format specified via the MessageEncoding (347) field. If used, the ASCII (English) representation should also be specified in the OptionExpirationDesc(1581).

Type: **data**

Used in components: **Instrument**

180.2.952 EncodedOptionExpirationDescLen

Byte length of encoded (non-ASCII characters) EncodedOptionExpirationDesc(1697) field.

Type: **Length**

Used in components: **Instrument**

180.2.953 EncodedPaymentText

Encoded (non-ASCII characters) representation of the PaymentText(40229) field in the encoded format specified via the MessageEncoding (347) field. If used, the ASCII (English) representation should also be specified in the PaymentText(40229) field.

Type: **data**

Used in groups: **PaymentGrp**

180.2.954 EncodedPaymentTextLen

Byte length of encoded (non-ASCII characters) EncodedPaymentText(40985) field.

Type: **Length**

Used in groups: **PaymentGrp**

180.2.955 EncodedPostTradePaymentDesc

Encoded (non-ASCII characters) representation of the PostTradePaymentDesc(2820) field in the encoded format specified via the MessageEncoding(347) field. If used, the ASCII (English) representation should also be specified in the PostTradePaymentDesc(2820) field.

Type: **data**

Used in components: [PostTradePayment](#)

180.2.956 EncodedPostTradePaymentDescLen

Byte length of encoded (non-ASCII characters) EncodedPostTradePaymentDesc(2814) field.

Type: [Length](#)

Used in components: [PostTradePayment](#)

180.2.957 EncodedProvisionText

Encoded (non-ASCII characters) representation of the ProvisionText(40113) field in the encoded format specified via the MessageEncoding (347) field. If used, the ASCII (English) representation should also be specified in the ProvisionText(40113) field.

Type: [data](#)

Used in groups: [ProvisionGrp](#)

180.2.958 EncodedProvisionTextLen

Byte length of encoded (non-ASCII characters) EncodedProvisionText(40987) field.

Type: [Length](#)

Used in groups: [ProvisionGrp](#)

180.2.959 EncodedRejectText

Encoded (non-ASCII characters) representation of the RejectText(1328) field in the encoded format specified via the MessageEncoding(347) field. If used, the ASCII (English) representation should also be specified in the RejectText(1328) field.

Type: [data](#)

Used in groups: [PartyDetailAckGrp](#), [PartyEntitlementAckGrp](#), [PartyRiskLimitsAckGrp](#)

Used in messages: [AlgoCertificateReportAck](#), [AlgoCertificateRequestAck](#), [AllocationInstructionAck](#), [AllocationInstructionAlertRequestAck](#), [AllocationReport](#), [AllocationReportAck](#), [CollateralReportAck](#),

CollateralResponse, ExecutionReport, MassOrderAck, OrderCancelReject, PartyActionReport, PartyDetailsListReport, PartyEntitlementsReport, PartyRiskLimitCheckRequestAck, PartyRiskLimitsReport, PartyRiskLimitsReportAck, PayManagementReport, PayManagementReportAck, PositionMaintenanceReport, PositionTransferInstructionAck, PositionTransferReport, QuoteAck, QuoteStatusReport, SettlementStatusReportAck, SettlementStatusRequestAck, TestActionRequestAck, TestSuiteDefinitionRequestAck, TradeAggregationReport, TradeCaptureReport, TradeCaptureReportAck, TradeMatchReportAck

180.2.960 EncodedRejectTextLen

Byte length of encoded (non-ASCII characters) EncodedRejectText(1665) field.

Type: **Length**

Used in groups: **PartyDetailAckGrp, PartyEntitlementAckGrp, PartyRiskLimitsAckGrp**

Used in messages: **AlgoCertificateReportAck, AlgoCertificateRequestAck, AllocationInstructionAck, AllocationInstructionAlertRequestAck, AllocationReport, AllocationReportAck, CollateralReportAck, CollateralResponse, ExecutionReport, MassOrderAck, OrderCancelReject, PartyActionReport, PartyDetailsListReport, PartyEntitlementsReport, PartyRiskLimitCheckRequestAck, PartyRiskLimitsReport, PartyRiskLimitsReportAck, PayManagementReport, PayManagementReportAck, PositionMaintenanceReport, PositionTransferInstructionAck, PositionTransferReport, QuoteAck, QuoteStatusReport, SettlementStatusReportAck, SettlementStatusRequestAck, TestActionRequestAck, TestSuiteDefinitionRequestAck, TradeAggregationReport, TradeCaptureReport, TradeCaptureReportAck, TradeMatchReportAck**

180.2.961 EncodedReplaceText

Encoded (non-ASCII characters) representation of the ReplaceText(2805) field in the encoded format specified via the MessageEncoding(347) field. If used, the ASCII (English) representation should also be specified in the ReplaceText(2805) field.

Type: **data**

Used in messages: **PayManagementReport**

180.2.962 EncodedReplaceTextLen

Byte length of encoded (non-ASCII characters) EncodedReplaceText(2801) field.

Type: **Length**

Used in messages: **PayManagementReport**

180.2.963 EncodedSecurityDesc

Encoded (non-ASCII characters) representation of the SecurityDesc (107) field in the encoded format specified via the MessageEncoding (347) field. If used, the ASCII (English) representation should also be specified in the SecurityDesc field.

Type: **data**

Used in components: **Instrument**

180.2.964 EncodedSecurityDescLen

Byte length of encoded (non-ASCII characters) EncodedSecurityDesc (351) field.

Type: **Length**

Used in components: **Instrument**

180.2.965 EncodedSecurityListDesc

Encoded (non-ASCII characters) representation of the SecurityListDesc(1467) field in the encoded format specified via the MessageEncoding(347) field. If used, the ASCII (English) representation should also be specified in the SecurityListDesc(1467) field.

Type: **data**

Used in messages: **SecurityList**, **SecurityListUpdateReport**

180.2.966 EncodedSecurityListDescLen

Byte length of encoded (non-ASCII characters) EncodedSecurityListDesc(1469) field.

Type: **Length**

Used in messages: **SecurityList**, **SecurityListUpdateReport**

180.2.967 EncodedSettlStatusReasonText

Encoded (non-ASCII characters) representation of the SettlStatusReasonText(2970) field in the encoded format specified via the MessageEncoding(347) field. If used, the ASCII (English) representation should also be specified in the SettlStatusReasonText(2970) field.

Type: **data**

Used in messages: **SettlementStatusReport**

180.2.968 EncodedSettlStatusReasonTextLen

Byte length of encoded (non-ASCII characters) EncodedSettlStatusReasonText(2972) field.

Type: **Length**

Used in messages: **SettlementStatusReport**

180.2.969 EncodedStreamCommodityDesc

Encoded (non-ASCII characters) representation of the StreamCommodityDesc(41255) field in the encoded format specified via the MessageEncoding (347) field. If used, the ASCII (English) representation should also be specified in the StreamCommodityDesc(41255) field.

Type: **data**

Used in components: **StreamCommodity**

180.2.970 EncodedStreamCommodityDescLen

Byte length of encoded (non-ASCII characters) EncodedStreamCommodityDesc(41257) field.

Type: **Length**

Used in components: **StreamCommodity**

180.2.971 EncodedStreamText

Encoded (non-ASCII characters) representation of the StreamText(40056) field in the encoded format specified via the MessageEncoding (347) field. If used, the ASCII (English) representation should also be specified in the StreamText(40056) field.

Type: **data**

Used in groups: [StreamGrp](#)

180.2.972 EncodedStreamTextLen

Byte length of encoded (non-ASCII characters) EncodedStreamText(40983) field.

Type: [Length](#)

Used in groups: [StreamGrp](#)

180.2.973 EncodedSubject

Encoded (non-ASCII characters) representation of the Subject (147) field in the encoded format specified via the MessageEncoding (347) field. If used, the ASCII (English) representation should also be specified in the Subject field.

Type: [data](#)

Used in messages: [Email](#)

180.2.974 EncodedSubjectLen

Byte length of encoded (non-ASCII characters) EncodedSubject (357) field.

Type: [Length](#)

Used in messages: [Email](#)

180.2.975 EncodedText

Encoded (non-ASCII characters) representation of the Text (58) field in the encoded format specified via the MessageEncoding (347) field. If used, the ASCII (English) representation should also be specified in the Text(58) field.

Type: [data](#)

Used in groups: [BidCompRspGrp](#), [InstrmtStrkPxGrp](#), [LinesOfTextGrp](#), [ListOrdGrp](#), [MDFullGrp](#), [MDIncGrp](#), [OrdListStatGrp](#), [RelSymDerivSecGrp](#), [RelSymDerivSecUpdGrp](#), [SecListGrp](#), [SecLstUpdRelSymGrp](#), [SecMassStatGrp](#), [SideCrossOrdCxlGrp](#), [SideCrossOrdModGrp](#), [StrmAsgnRptInstrmtGrp](#), [TrdCapRptSideGrp](#), [TrdMatchSideGrp](#), [TrdSessLstGrp](#)

Used in messages: Advertisement, AlgoCertificateReport, AlgoCertificateRequest, AllocationInstruction, AllocationInstructionAck, AllocationInstructionAlert, AllocationReport, AllocationReportAck, ApplicationMessageReport, ApplicationMessageRequest, ApplicationMessageRequestAck, AssignmentReport, BidRequest, BusinessMessageReject, CollateralAssignment, CollateralInquiry, CollateralInquiryAck, CollateralReport, CollateralReportAck, CollateralRequest, CollateralResponse, Confirmation, ConfirmationAck, ConfirmationRequest, ContraryIntentionReport, DerivativeSecurityListRequest, DontKnowTrade, ExecutionAck, ExecutionReport, IOI, ListCancelRequest, ListExecute, ListStatusRequest, Logon, Logout, MarginRequirementInquiry, MarginRequirementInquiryAck, MarginRequirementReport, MarketDataRequestReject, MarketDataStatisticsReport, MarketDataStatisticsRequest, MarketDefinition, MarketDefinitionUpdateReport, MassOrder, MassOrderAck, MassQuoteAck, MultilegOrderCancelReplace, NewOrderMultileg, NewOrderSingle, OrderCancelReject, OrderCancelReplaceRequest, OrderCancelRequest, OrderMassActionReport, OrderMassActionRequest, OrderMassCancelReport, OrderMassCancelRequest, PartyActionReport, PartyActionRequest, PartyDetailsDefinitionRequest, PartyDetailsDefinitionRequestAck, PartyDetailsListReport, PartyDetailsListRequest, PartyDetailsListUpdateReport, PartyEntitlementsDefinitionRequest, PartyEntitlementsDefinitionRequestAck, PartyEntitlementsReport, PartyEntitlementsRequest, PartyEntitlementsUpdateReport, PartyRiskLimitCheckRequest, PartyRiskLimitCheckRequestAck, PartyRiskLimitsDefinitionRequest, PartyRiskLimitsDefinitionRequestAck, PartyRiskLimitsReport, PartyRiskLimitsReportAck, PartyRiskLimitsRequest, PartyRiskLimitsUpdateReport, PayManagementReport, PayManagementRequest, PositionMaintenanceReport, PositionMaintenanceRequest, PositionReport, PositionTransferInstruction, PositionTransferInstructionAck, PositionTransferReport, Quote, QuoteAck, QuoteRequest, QuoteRequestReject, QuoteResponse, QuoteStatusReport, Reject, RequestForPositions, RequestForPositionsAck, SecurityDefinition, SecurityDefinitionRequest, SecurityDefinitionUpdateReport, SecurityListRequest, SecurityStatus, SecurityTypeRequest, SecurityTypes, SettlementInstructions, SettlementObligationReport, SettlementStatusReport, SettlementStatusRequest, StreamAssignmentReportACK, TestActionReport, TestActionRequest, TestSuiteDefinitionRequest, TradeCaptureReportAck, TradeCaptureReportRequest, TradeCaptureReportRequestAck, TradeMatchReportAck, TradingSessionStatus, UserNotification

180.2.976 EncodedTextLen

Byte length of encoded (non-ASCII characters) EncodedText (355) field.

Type: Length

Used in groups: BidCompRspGrp, InstrmtStrkPxGrp, LinesOfTextGrp, ListOrdGrp, MDFullGrp, MDIncGrp, OrdListStatGrp, RelSymDerivSecGrp, RelSymDerivSecUpdGrp, SecListGrp, SecLstUpdRelSymGrp, SecMassStatGrp, SideCrossOrdCxlGrp, SideCrossOrdModGrp, StrmAsgnRptInstrmtGrp, TrdCapRptSideGrp, TrdMatchSideGrp, TrdSessLstGrp

Used in messages: Advertisement, AlgoCertificateReport, AlgoCertificateRequest, AllocationInstruction,

AllocationInstructionAck, AllocationInstructionAlert, AllocationReport, AllocationReportAck, ApplicationMessageReport, ApplicationMessageRequest, ApplicationMessageRequestAck, AssignmentReport, BidRequest, BusinessMessageReject, CollateralAssignment, CollateralInquiry, CollateralInquiryAck, CollateralReport, CollateralReportAck, CollateralRequest, CollateralResponse, Confirmation, ConfirmationAck, ConfirmationRequest, ContraryIntentionReport, DerivativeSecurityListRequest, DontKnowTrade, ExecutionAck, ExecutionReport, IOI, ListCancelRequest, ListExecute, ListStatusRequest, Logon, Logout, MarginRequirementInquiry, MarginRequirementInquiryAck, MarginRequirementReport, MarketDataRequestReject, MarketDataStatisticsReport, MarketDataStatisticsRequest, MarketDefinition, MarketDefinitionUpdateReport, MassOrder, MassOrderAck, MassQuoteAck, MultilegOrderCancelReplace, NewOrderMultileg, NewOrderSingle, OrderCancelReject, OrderCancelReplaceRequest, OrderCancelRequest, OrderMassActionReport, OrderMassActionRequest, OrderMassCancelReport, OrderMassCancelRequest, PartyActionReport, PartyActionRequest, PartyDetailsDefinitionRequest, PartyDetailsDefinitionRequestAck, PartyDetailsListReport, PartyDetailsListRequest, PartyDetailsListUpdateReport, PartyEntitlementsDefinitionRequest, PartyEntitlementsDefinitionRequestAck, PartyEntitlementsReport, PartyEntitlementsRequest, PartyEntitlementsUpdateReport, PartyRiskLimitCheckRequest, PartyRiskLimitCheckRequestAck, PartyRiskLimitsDefinitionRequest, PartyRiskLimitsDefinitionRequestAck, PartyRiskLimitsReport, PartyRiskLimitsReportAck, PartyRiskLimitsRequest, PartyRiskLimitsUpdateReport, PayManagementReport, PayManagementRequest, PositionMaintenanceReport, PositionMaintenanceRequest, PositionReport, PositionTransferInstruction, PositionTransferInstructionAck, PositionTransferReport, Quote, QuoteAck, QuoteRequest, QuoteRequestReject, QuoteResponse, QuoteStatusReport, Reject, RequestForPositions, RequestForPositionsAck, SecurityDefinition, SecurityDefinitionRequest, SecurityDefinitionUpdateReport, SecurityListRequest, SecurityStatus, SecurityTypeRequest, SecurityTypes, SettlementInstructions, SettlementObligationReport, SettlementStatusReport, SettlementStatusRequest, StreamAssignmentReportACK, TestActionReport, TestActionRequest, TestSuiteDefinitionRequest, TradeCaptureReportAck, TradeCaptureReportRequest, TradeCaptureReportRequestAck, TradeMatchReportAck, TradingSessionStatus, UserNotification

180.2.977 EncodedTradeContinuationText

Encoded (non-ASCII characters) representation of the TradeContinuationText(2374) field in the encoded format specified via the MessageEncoding(347) field. If used, the ASCII (English) representation should also be specified in the TradeContinuationText(2374) field.

Type: **data**

Used in groups: **QuotReqGrp**

Used in messages: **AllocationInstruction, AllocationReport, Confirmation, ExecutionReport, PositionReport, Quote, QuoteResponse, QuoteStatusReport, TradeCaptureReport**

180.2.978 EncodedTradeContinuationTextLen

Byte length of encoded (non-ASCII characters) EncodedTradeContinuationText(2371) field.

Type: **Length**

Used in groups: **QuotReqGrp**

Used in messages: **AllocationInstruction, AllocationReport, Confirmation, ExecutionReport, Position-Report, Quote, QuoteResponse, QuoteStatusReport, TradeCaptureReport**

180.2.979 EncodedUnderlyingAdditionalTermBondDesc

Encoded (non-ASCII characters) representation of the UnderlyingAdditionalTermBondDesc(41709) field in the encoded format specified via the MessageEncoding (347) field. If used, the ASCII (English) representation should also be specified in the UnderlyingAdditionalTermBondDesc(41709) field.

Type: **data**

Used in groups: **UnderlyingAdditionalTermBondRefGrp**

180.2.980 EncodedUnderlyingAdditionalTermBondDescLen

Byte length of encoded (non-ASCII characters) EncodedUnderlyingAdditionalTermBondDesc(41711) field.

Type: **Length**

Used in groups: **UnderlyingAdditionalTermBondRefGrp**

180.2.981 EncodedUnderlyingAdditionalTermBondIssuer

Encoded (non-ASCII characters) representation of the UnderlyingAdditionalTermBondIssuer(42017) field in the encoded format specified via the MessageEncoding (347) field. If used, the ASCII (English) representation should also be specified in the UnderlyingAdditionalTermBondIssuer(42017) field.

Type: **data**

Used in groups: **UnderlyingAdditionalTermBondRefGrp**

180.2.982 EncodedUnderlyingAdditionalTermBondIssuerLen

Byte length of encoded (non-ASCII characters) EncodedUnderlyingAdditionalTermBondIssuer(42026) field.

Type: **Length**

Used in groups: **UnderlyingAdditionalTermBondRefGrp**

180.2.983 EncodedUnderlyingDeliveryStreamCycleDesc

Encoded (non-ASCII characters) representation of the UnderlyingDeliveryStreamCycleDesc(41805) field in the encoded format specified via the MessageEncoding (347) field. If used, the ASCII (English) representation should also be specified in the UnderlyingDeliveryStreamCycleDesc(41805) field.

Type: **data**

Used in groups: **UnderlyingDeliveryStreamCycleGrp**

180.2.984 EncodedUnderlyingDeliveryStreamCycleDescLen

Byte length of encoded (non-ASCII characters) EncodedUnderlyingDeliveryStreamCycleDesc(41807) field.

Type: **Length**

Used in groups: **UnderlyingDeliveryStreamCycleGrp**

180.2.985 EncodedUnderlyingEventText

Encoded (non-ASCII characters) representation of the UnderlyingEventText(2071) field in the encoded format specified via the MessageEncoding (347) field. If used, the ASCII (English) representation should also be specified in the UnderlyingEventText(2071) field.

Type: **data**

Used in groups: **UnderlyingEvntGrp**

180.2.986 EncodedUnderlyingEventTextLen

Byte length of encoded (non-ASCII characters) EncodedUnderlyingEventText(2073) field.

Type: **Length**

Used in groups: [UnderlyingEvntGrp](#)

180.2.987 EncodedUnderlyingExerciseDesc

Encoded (non-ASCII characters) representation of the UnderlyingExerciseDesc(41810) field in the encoded format specified via the MessageEncoding (347) field. If used, the ASCII (English) representation should also be specified in the UnderlyingExerciseDesc(41810) field.

Type: [data](#)

Used in components: [UnderlyingOptionExercise](#)

180.2.988 EncodedUnderlyingExerciseDescLen

Byte length of encoded (non-ASCII characters) EncodedUnderlyingExerciseDesc(41812) field.

Type: [Length](#)

Used in components: [UnderlyingOptionExercise](#)

180.2.989 EncodedUnderlyingFinancialInstrumentFullName

Encoded (non-ASCII characters) representation of the UnderlyingFinancialInstrumentFullName(2720) field in the encoded format specified via the MessageEncoding(347) field. If used, the ASCII (English) representation should also be specified in the UnderlyingFinancialInstrumentFullName(2720) field.

Type: [data](#)

Used in components: [UnderlyingInstrument](#)

180.2.990 EncodedUnderlyingFinancialInstrumentFullNameLen

Byte length of encoded (non-ASCII characters) underlying instrument's EncodedUnderlyingFinancialInstrumentFullName(2722).

Type: [Length](#)

Used in components: [UnderlyingInstrument](#)

180.2.991 EncodedUnderlyingIssuer

Encoded (non-ASCII characters) representation of the UnderlyingIssuer (306) field in the encoded format specified via the MessageEncoding (347) field. If used, the ASCII (English) representation should also be specified in the UnderlyingIssuer field.

Type: **data**

Used in components: **UnderlyingInstrument**

180.2.992 EncodedUnderlyingIssuerLen

Byte length of encoded (non-ASCII characters) EncodedUnderlyingIssuer (363) field.

Type: **Length**

Used in components: **UnderlyingInstrument**

180.2.993 EncodedUnderlyingMarketDisruptionFallbackUnderlierSecDescLen

Byte length of encoded (non-ASCII characters) EncodedUnderlyingMarketDisruptionFallbackUnderlierSecurityDesc(41874) field.

Type: **Length**

Used in groups: **UnderlyingMarketDisruptionFallbackReferencePriceGrp**

180.2.994 EncodedUnderlyingMarketDisruptionFallbackUnderlierSecurityDesc

Encoded (non-ASCII characters) representation of the UnderlyingMarketDisruptionFallbackUnderlierSecurityDesc(41872) field in the encoded format specified via the MessageEncoding (347) field. If used, the ASCII (English) representation should also be specified in the UnderlyingMarketDisruptionFallbackUnderlierSecurityDesc(41872).

Type: **data**

Used in groups: **UnderlyingMarketDisruptionFallbackReferencePriceGrp**

180.2.995 EncodedUnderlyingOptionExpirationDesc

Encoded (non-ASCII characters) representation of the UnderlyingOptionExpirationDesc(2286) field in the encoded format specified via the MessageEncoding (347) field. If used, the ASCII (English) representation should also be specified in the UnderlyingOptionExpirationDesc(2286).

Type: **data**

Used in components: **UnderlyingInstrument**

180.2.996 EncodedUnderlyingOptionExpirationDescLen

Byte length of encoded (non-ASCII characters) EncodedUnderlyingOptionExpirationDesc(2288) field.

Type: **Length**

Used in components: **UnderlyingInstrument**

180.2.997 EncodedUnderlyingProvisionText

Encoded (non-ASCII characters) representation of the UnderlyingProvisionText(42170) field in the encoded format specified via the MessageEncoding (347) field. If used, the ASCII (English) representation should also be specified in the UnderlyingProvisionText(42170) field.

Type: **data**

Used in groups: **UnderlyingProvisionGrp**

180.2.998 EncodedUnderlyingProvisionTextLen

Byte length of encoded (non-ASCII characters) EncodedUnderlyingProvisionText(42712) field.

Type: **Length**

Used in groups: **UnderlyingProvisionGrp**

180.2.999 EncodedUnderlyingSecurityDesc

Encoded (non-ASCII characters) representation of the UnderlyingSecurityDesc (307) field in the encoded format specified via the MessageEncoding (347) field. If used, the ASCII (English) representation should also be specified in the UnderlyingSecurityDesc field.

Type: **data**

Used in components: **UnderlyingInstrument**

180.2.1000 EncodedUnderlyingSecurityDescLen

Byte length of encoded (non-ASCII characters) EncodedUnderlyingSecurityDesc (365) field.

Type: **Length**

Used in components: **UnderlyingInstrument**

180.2.1001 EncodedUnderlyingStreamCommodityDesc

Encoded (non-ASCII characters) representation of the UnderlyingStreamCommodityDesc(41968) field in the encoded format specified via the MessageEncoding (347) field. If used, the ASCII (English) representation should also be specified in the UnderlyingStreamCommodityDesc(41968) field.

Type: **data**

Used in components: **UnderlyingStreamCommodity**

180.2.1002 EncodedUnderlyingStreamCommodityDescLen

Byte length of encoded (non-ASCII characters) EncodedUnderlyingStreamCommodityDesc(41970) field.

Type: **Length**

Used in components: **UnderlyingStreamCommodity**

180.2.1003 EncodedUnderlyingStreamText

Encoded (non-ASCII characters) representation of the UnderlyingStreamText(40547) field in the encoded format specified via the MessageEncoding (347) field. If used, the ASCII (English) representation should also be specified in the UnderlyingStreamText(40547) field.

Type: **data**

Used in groups: **UnderlyingStreamGrp**

180.2.1004 EncodedUnderlyingStreamTextLen

Byte length of encoded (non-ASCII characters) EncodedUnderlyingStreamText(40989) field.

Type: **Length**

Used in groups: **UnderlyingStreamGrp**

180.2.1005 EncodedWarningText

Encoded (non-ASCII characters) representation of the WarningText(2520) field in the encoded format specified via the MessageEncoding(347) field. If used, the ASCII (English) representation should also be specified in the WarningText(2520) field.

Type: **data**

Used in messages: **CollateralResponse**

180.2.1006 EncodedWarningTextLen

Byte length of encoded (non-ASCII characters) EncodedWarningText(2521) field.

Type: **Length**

Used in messages: **CollateralResponse**

180.2.1007 EncryptedNewPassword

Encrypted new password - encrypted via the method specified in the field EncryptedPassword-Method(1400)

Type: **data**

Used in messages: **Logon, UserRequest**

180.2.1008 EncryptedNewPasswordLen

Length of the EncryptedNewPassword(1404) field

Type: **Length**

Used in messages: **Logon, UserRequest**

180.2.1009 EncryptedPassword

Encrypted password - encrypted via the method specified in the field EncryptedPassword-Method(1400)

Type: **data**

Used in messages: **Logon, UserRequest**

180.2.1010 EncryptedPasswordLen

Length of the EncryptedPassword(1402) field

Type: **Length**

Used in messages: **Logon**, **UserRequest**

180.2.1011 EncryptedPasswordMethod

Enumeration defining the encryption method used to encrypt password fields.

At this time there are no encryption methods defined by FPL.

Type: **int**

Used in messages: **Logon**, **UserRequest**

180.2.1012 EncryptMethod

Method of encryption.

Type: **int**

Allowed values in EncryptMethodCodeSet:

Code	Name	Description
0	None	None / Other
1	PKCS	PKCS (Proprietary)
2	DES	DES (ECB Mode)
3	PKCSDES	PKCS / DES (Proprietary)
4	PGPDES	PGP / DES (Defunct)
5	PGPDESMD5	PGP / DES-MD5 (See app note on FIX web site)
6	PEM	PEM / DES-MD5 (see app note on FIX web site)

Used in messages: **Logon**

180.2.1013 EndAccruedInterestAmt

Accrued Interest Amount applicable to a financing transaction on the End Date.

Type: **Amt**

Used in groups: **TrdCapRptAckSideGrp**, **TrdCapRptSideGrp**

Used in messages: **AllocationInstruction**, **AllocationInstructionAlert**, **AllocationReport**, **CollateralAssignment**, **CollateralInquiry**, **CollateralReport**, **CollateralRequest**, **CollateralResponse**, **Confirmation**, **ExecutionReport**

180.2.1014 EndCash

Ending dirty cash consideration of a financing deal. i.e. reimbursed to the buyer on the End Date.

Type: **Amt**

Used in groups: **TrdCapRptAckSideGrp**, **TrdCapRptSideGrp**

Used in messages: **AllocationInstruction**, **AllocationInstructionAlert**, **AllocationReport**, **CollateralAssignment**, **CollateralInquiry**, **CollateralReport**, **CollateralRequest**, **CollateralResponse**, **Confirmation**, **ExecutionReport**

180.2.1015 EndDate

End date of a financing deal, i.e. the date the seller reimburses the buyer and takes back control of the collateral

Type: **LocalMktDate**

Used in components: **FinancingDetails**

180.2.1016 EndMaturityMonthYear

Ending maturity month year for an option class

Type: **MonthYear**

Used in groups: **MaturityRules**

180.2.1017 EndPriceRange

Upper boundary for price range.

Type: **Price**

Used in groups: **PriceRangeRuleGrp**

180.2.1018 EndSeqNo

Message sequence number of last message in range to be resent. If request is for a single message BeginSeqNo (7) = EndSeqNo. If request is for all messages subsequent to a particular message, EndSeqNo = "0" (representing infinity).

Type: **SeqNum**

Used in messages: **ResendRequest**

180.2.1019 EndStrikePxRange

Ending price of the range to which the StrikeIncrement applies. Price refers to the price of the underlying

Type: **Price**

Used in groups: **StrikeRules**

180.2.1020 EndTickPriceRange

Ending price range for the specified tick increment

Type: **Price**

Used in groups: **TickRules**

180.2.1021 EntitlementAttribCurrency

Currency for EntitlementAttribValue(1780). Can be used if these fields represent a price, price offset, or amount.

Type: **Currency**

Used in groups: **EntitlementAttribGrp**

180.2.1022 EntitlementAttribCurrencyCodeSource

Identifies class or source of the EntitlementAttribCurrency(1781) value.

Type: **String**

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
5	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in groups: **EntitlementAttribGrp**

180.2.1023 EntitlementAttribDatatype

Datatype of the entitlement attribute.

Type: **int**

Allowed values in EntitlementAttribDatatypeCodeSet:

Code	Name	Description
1	Int	int
2	Length	Length
3	NumInGroup	NumInGroup
4	SeqNum	SeqNum
5	TagNum	TagNum
6	Float	float
7	Qty	Qty
8	Price	Price
9	PriceOffset	PriceOffset
10	Amt	Amt
11	Percentage	Percentage
12	Char	char
13	Boolean	Boolean
14	String	String
15	MultipleCharValue	MultipleCharValue

Code	Name	Description
16	Currency	Currency
17	Exchange	Exchange
18	MonthYear	MonthYear
19	UTCTimestamp	UTCTimestamp
20	UTCTimeOnly	UTCTimeOnly
21	LocalMktDate	LocalMktDate
22	UTCDateOnly	UTCDateOnly
23	Data	data
24	MultipleStringValue	MultipleStringValue
25	Country	Country
26	Language	Language
27	TZTimeOnly	TZTimeOnly
28	TZTimestamp	TZTimestamp
29	Tenor	Tenor
30	DayOfMonth	DayOfMonth
31	XMLData	XMLData
32	Pattern	Pattern
33	Reserved100Plus	Reserved100Plus
34	Reserved1000Plus	Reserved1000Plus
35	Reserved4000Plus	Reserved4000Plus

Used in groups: **EntitlementAttribGrp**

180.2.1024 EntitlementAttribGrp

conveys a list of one or more attributes related to an entitlement. An entitlement may contain an EntitlementType, which states what can be done at a gross level, e.g. that a party can make markets. It may be limited further within EntitlementGrp, e.g. that such market making is allowed only for a list of stocks. The EntitlementAttribGrp contains fine details clarifying or limiting the EntitlementType, e.g. that such market making must be conducted with a specific minimum quote size and a specific maximum spread.

Name	Mult.	Type	Description
NoEntitlementAttrib	[1..1]	NumInGroup	
EntitlementAttribType	[0..1]	int	Required if NoEntitlementAttrib(1777) > 0.
EntitlementAttribDatatype	[0..1]	CodeSet	If specified, and this is an attribute published by FPL in the external code list, this must agree with the published datatype.
EntitlementAttribValue	[0..1]	String	Required if NoEntitlementAttrib(1777) > 0.
EntitlementAttribCurrency	[0..1]	Currency	
EntitlementAttribCurrencyCodeSource	[0..1]	CodeSet	

Used in groups: **EntitlementGrp**

180.2.1025 EntitlementAttribType

Name of the entitlement attribute type. A code list of allowed values will be maintained on the FIX Protocol website.

Values "4000" and above are reserved for bilaterally agreed upon user defined enumerations.

Type: **int**

Used in groups: **EntitlementAttribGrp**

180.2.1026 EntitlementAttribValue

Value of the entitlement attribute.

Type: **String**

Used in groups: **EntitlementAttribGrp**

180.2.1027 EntitlementEndDate

Indicates the ending date of the entitlement.

Type: **LocalMktDate**

Used in groups: **EntitlementGrp**

180.2.1028 EntitlementGrp

Conveys a list of entitlements for one specific party, or relationship between two parties. Each entitlement may be further limited or clarified using optional fields and components.

Name	Mult.	Type	Description
NoEntitlements	[1..1]	NumInGroup	
EntitlementIndicator	[0..1]	Boolean	Required if NoEntitlements(1773) > 0.
EntitlementType	[0..1]	CodeSet	Absence of this field indicates the meaning of the entitlement is implicit.
EntitlementSubType	[0..1]	CodeSet	
EntitlementAttribGrp	[0..*]	Group	
EntitlementID	[0..1]	String	
EntitlementPlatform	[0..1]	String	
InstrumentScopeGrp	[0..*]	Group	
MarketSegmentScopeGrp	[0..*]	Group	
EntitlementStartDate	[0..1]	LocalMktDate	
EntitlementEndDate	[0..1]	LocalMktDate	

Used in groups: **PartyEntitlementAckGrp**, **PartyEntitlementGrp**, **PartyEntitlementUpdateGrp**

180.2.1029 EntitlementID

Unique identifier for a specific NoEntitlements(1773) repeating group instance.

Type: **String**

Used in groups: **EntitlementGrp**

180.2.1030 EntitlementIndicator

Used to indicate if a party is entitled to an entitlement type specified in the EntitlementType(1775) field.

Type: **Boolean**

Used in groups: **EntitlementGrp**

180.2.1031 EntitlementPlatform

The area to which the entitlement is applicable. This can be a trading platform or an offering.

Type: **String**

Used in groups: **EntitlementGrp**

Used in messages: **PartyEntitlementsRequest**

180.2.1032 EntitlementRefID

Reference to an EntitlementID(1776). Used for modification or deletion of an entitlement.

Type: **String**

Used in groups: **PartyEntitlementAckGrp, PartyEntitlementUpdateGrp**

180.2.1033 EntitlementReportID

Identifier for the PartyEntitlementsReport(35=CV).

Type: **String**

Used in messages: **PartyEntitlementsReport, PartyEntitlementsUpdateReport**

180.2.1034 EntitlementRequestID

Unique identifier for PartyEntitlementsRequest(35=CU).

Type: **String**

Used in messages: **PartyEntitlementsDefinitionRequest, PartyEntitlementsDefinitionRequestAck, PartyEntitlementsReport, PartyEntitlementsRequest, PartyEntitlementsUpdateReport**

180.2.1035 EntitlementRequestResult

Result of risk limit definition request.

Type: **int**

Allowed values in EntitlementRequestResultCodeSet:

Code	Name	Description
0	Successful	Successful (default)
1	InvalidParty	Invalid party(-ies)
2	InvalidRelatedParty	Invalid related party(-ies)
3	InvalidEntitlementType	Invalid entitlement type(s)
4	InvalidEntitlementID	Invalid entitlement ID(s) / ref ID(s)
5	InvalidEntitlementAttribute	Invalid entitlement attribute(s)
6	InvalidInstrumentScope	Invalid instrument scope(s)
7	InvalidMarketSegmentScope	Invalid market segment scope(s)
8	InvalidStartDate	Invalid start date
9	InvalidEndDate	Invalid end date
10	InstrumentScopeNotSupported	Instrument scope not supported
11	MarketSegmentScopeNotSupported	Market segment scope not supported
12	EntitlementNotApprovedForParty	Entitlement not approved for party(-ies)
13	EntitlementAlreadyDefinedForParty	Entitlement already defined for party(-ies)
14	InstrumentNotApprovedForParty	Instrument not approved for party(-ies)
98	NotAuthorized	Not authorized
99	Other	Other

Used in messages: [PartyEntitlementsDefinitionRequestAck](#)

180.2.1036 EntitlementRequestStatus

Status of party entitlements definition request.

Type: [int](#)

Allowed values in PartyDetailRequestStatusCodeSet:

Code	Name	Description
0	Accepted	Accepted
1	AcceptedWithChanges	Accepted with changes
2	Rejected	Rejected
3	AcceptancePending	Acceptance pending

Used in messages: [PartyEntitlementsDefinitionRequestAck](#)

180.2.1037 EntitlementResult

Result of entitlement definition for one party.

Type: **int**

Allowed values in EntitlementRequestResultCodeSet:

Code	Name	Description
0	Successful	Successful (default)
1	InvalidParty	Invalid party(-ies)
2	InvalidRelatedParty	Invalid related party(-ies)
3	InvalidEntitlementType	Invalid entitlement type(s)
4	InvalidEntitlementID	Invalid entitlement ID(s) / ref ID(s)
5	InvalidEntitlementAttribute	Invalid entitlement attribute(s)
6	InvalidInstrumentScope	Invalid instrument scope(s)
7	InvalidMarketSegmentScope	Invalid market segment scope(s)
8	InvalidStartDate	Invalid start date
9	InvalidEndDate	Invalid end date
10	InstrumentScopeNotSupported	Instrument scope not supported
11	MarketSegmentScopeNotSupported	Market segment scope not supported
12	EntitlementNotApprovedForParty	Entitlement not approved for party(-ies)
13	EntitlementAlreadyDefinedForParty	Entitlement already defined for party(-ies)
14	InstrumentNotApprovedForParty	Instrument not approved for party(-ies)
98	NotAuthorized	Not authorized
99	Other	Other

Used in groups: **PartyEntitlementAckGrp**

180.2.1038 EntitlementStartDate

Indicates the starting date of the entitlement.

Type: **LocalMktDate**

Used in groups: **EntitlementGrp**

180.2.1039 EntitlementStatus

Status of entitlement definition for one party.

Type: **int**

Allowed values in EntitlementStatusCodeSet:

Code	Name	Description
0	Accepted	Accepted
1	AcceptedWithChanges	Accepted with changes
2	Rejected	Rejected
3	Pending	Pending. Entitlement definition request submitted that still requires an action to be taken (e.g. approval or setting up).
4	Requested	Requested. Entitlement definition has been requested.
5	Deferred	Deferred. Entitlement definition request is being postponed or delayed.

Used in groups: **PartyEntitlementAckGrp**, **PartyEntitlementGrp**, **PartyEntitlementUpdateGrp**

Used in messages: **PartyEntitlementsRequest**

180.2.1040 EntitlementSubType

Subtype of an entitlement specified in EntitlementType(1775).

Type: **int**

Allowed values in EntitlementSubTypeCodeSet:

Code	Name	Description
1	OrderEntry	Order entry. Entitle to enter new orders
2	HitLift	Hit/Lift. Entitle to Hit/Lift
3	ViewIndicativePx	View indicative prices. Entitle to subscribe to indicative prices
4	ViewExecutablePx	View executable prices. Entitle to subscribe to executable prices
5	SingleQuote	Single quote. Entitle to submit quote request for a single quote
6	StreamingQuotes	Streaming quotes. Entitle to submit quote request for streaming quotes
7	SingleBroker	Single broker. Entitle to submit quote request for a single broker

Code	Name	Description
8	MultiBrokers	Multi brokers. Entitle to submit quote request for multiple brokers

Used in groups: [EntitlementGrp](#), [EntitlementTypeGrp](#)

180.2.1041 EntitlementType

Type of entitlement.

Type: [int](#)

Allowed values in EntitlementTypeCodeSet:

Code	Name	Description
0	Trade	Trade
1	MakeMarkets	Make markets
2	HoldPositions	Hold positions
3	PerformGiveUps	Perform give-ups
4	SubmitIOIs	Submit Indications of Interest (IOIs)
5	SubscribeMarketData	Subscribe to market data
6	ShortWithPreBorrow	Short with pre-borrow. Short sell order is allowed with pre-borrowing.
7	SubmitQuoteRequests	Submit quote requests. Entitled to submit quote requests into the market in order to receive quotes from the market.
8	RespondToQuoteRequests	Respond to quote requests. Entitled to respond to quote requests from the market.

Used in groups: [EntitlementGrp](#), [EntitlementTypeGrp](#)

180.2.1042 EntitlementTypeGrp

The EntitlementTypeGrp conveys a list of entitlement types.

Name	Mult.	Type	Description
NoEntitlementTypes	[1..1]	NumInGroup	Number of Entitlement Types.

Name	Mult.	Type	Description
EntitlementType	[0..1]	CodeSet	Required if NoEntitlementTypes(2345) > 0.
EntitlementSubType	[0..1]	CodeSet	

Used in messages: **PartyEntitlementsRequest**

180.2.1043 EventDate

Date of event

Type: **LocalMktDate**

Used in groups: **EvntGrp**

180.2.1044 EventInitiatorType

Indicates the type of entity who initiated an event, e.g. modification or cancellation of an order or quote.

Type: **char**

Allowed values in EventInitiatorTypeCodeSet:

Code	Name	Description
C	CustomerOrClient	Customer or client
E	ExchangeOrExecutionVenue	Exchange or execution venue
F	FirmOrBroker	Firm or broker

Used in messages: **ExecutionReport**, **QuoteStatusReport**

180.2.1045 EventMonthYear

Used with derivatives when an event is express as a month-year with optional day or month or week of month.

Format:

YYYYMM (e.g. 199903)

YYYYMMDD (e.g. 20030323)

YYYYMMwN (e.g. 200303w2) for week

A specific date can be appended to the month-year. For instance, if multiple event types exist in the same Year and Month, but actually at a different time, a value can be appended, such as "w" or "w2" to indicate week. Likewise, the day of month (0-31) can be appended to indicate a specific event date.

Type: **MonthYear**

Used in groups: **EvntGrp**

180.2.1046 EventPx

Predetermined price of issue at event, if applicable

Type: **Price**

Used in groups: **EvntGrp**

180.2.1047 EventText

Comments related to the event.

Type: **String**

Used in groups: **EvntGrp**

180.2.1048 EventTime

Specific time of event. To be used in combination with EventDate [866]

Type: **UTCTimestamp**

Used in groups: **EvntGrp**

180.2.1049 EventTimePeriod

Time unit multiplier for the event.

Type: **int**

Used in groups: **EvntGrp**

180.2.1050 EventTimeUnit

Time unit associated with the event.

Type: **String**

Allowed values in EventTimeUnitCodeSet:

Code	Name	Description
H	Hour	Hour
Min	Minute	Minute
S	Second	Second
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in groups: **EvntGrp**

180.2.1051 EventType

Code to represent the type of event

Type: **int**

Allowed values in EventTypeCodeSet:

Code	Name	Description
1	Put	Put
2	Call	Call
3	Tender	Tender
4	SinkingFundCall	Sinking fund call
5	Activation	Activation
6	Inactivation	Inactivation
7	LastEligibleTradeDate	Last eligible trade date
8	SwapStartDate	Swap start date
9	SwapEndDate	Swap end date
10	SwapRollDate	Swap roll date

Code	Name	Description
11	SwapNextStartDate	Swap next start date
12	SwapNextRollDate	Swap next roll date
13	FirstDeliveryDate	First delivery date
14	LastDeliveryDate	Last delivery date
15	InitialInventoryDueDate	Initial inventory due date
16	FinalInventoryDueDate	Final inventory due date
17	FirstIntentDate	First intent date
18	LastIntentDate	Last intent date
19	PositionRemovalDate	Position removal date
20	MinimumNotice	Minimum notice
21	DeliveryStartTime	Delivery start time
22	DeliveryEndTime	Delivery end time
23	FirstNoticeDate	First notice date. The first day that a notice of intent to deliver a commodity can be made by a clearing house to a buyer in fulfillment of a given month's futures contract.
24	LastNoticeDate	Last notice date. The last day on which a clearing house may inform an investor that a seller intends to make delivery of a commodity that the investor previously bought in a futures contract. The date is governed by the rules of different exchanges and clearing houses, but may also be stated in the futures contract itself.
25	FirstExerciseDate	First exercise date
26	RedemptionDate	Redemption date
27	TrdCntntnEfctvDt	Trade continuation effective date
99	Other	Other

Used in groups: **EvntGrp**

180.2.1052 EvntGrp

The EvntGrp is a repeating subcomponent of the Instrument component used to specify straightforward events associated with the instrument. Examples include put and call dates for bonds and options; first exercise date for options; inventory and delivery dates for commodities; start, end and roll dates for swaps. Use ComplexEvents for more advanced dates such as option, futures, commodities and equity swap observation and pricing events.

Name	Mult.	Type	Description
NoEvents	[1..1]	NumInGroup	
EventType	[0..1]	CodeSet	Required if NoEvents(864) > 0.
EventDate	[0..1]	LocalMktDate	Conditionally required when EventTime(1145) is specified.
EventTime	[0..1]	UTCTimestamp	
EventTimeUnit	[0..1]	CodeSet	Conditionally required when EventTimePeriod(1826) is specified.
EventTimePeriod	[0..1]	int	Conditionally required when EventTimeUnit(1827) is specified.
EventMonthYear	[0..1]	MonthYear	
EventPx	[0..1]	Price	
EventText	[0..1]	String	
EncodedEventTextLen	[0..1]	Length	Must be set if EncodedEventText(1579) field is specified and must immediately precede it.
EncodedEventText	[0..1]	data	Encoded (non-ASCII characters) representation of the EventText(868) field in the encoded format specified via the MessageEncoding(347) field.

Used in components: **Instrument**

180.2.1053 ExchangeForPhysical

Indicates whether or not to exchange for physical.

Type: **Boolean**

Allowed values in ExchangeForPhysicalCodeSet:

Code	Name	Description
N	False	False
Y	True	True

Used in messages: **BidRequest**

180.2.1054 ExchangeLookAlike

For a share option trade, indicates whether the instrument is to be treated as an 'exchange look-alike'.

Type: **Boolean**

Used in components: **Instrument**

180.2.1055 ExchangeRule

Used to report any exchange rules that apply to this trade.

Primarily intended for US futures markets. Certain trading practices are permitted by the CFTC, such as large lot trading, block trading, all or none trades. If the rules are used, the exchanges are required to indicate these rules on the trade.

Type: **String**

Used in groups: **TrdCapRptAckSideGrp**, **TrdCapRptSideGrp**, **TrdMatchSideGrp**

180.2.1056 ExchangeSpecialInstructions

Free format text string related to exchange.

Type: **String**

Used in groups: **TrdCapRptSideGrp**, **TrdMatchSideGrp**

180.2.1057 ExDate

The date when a distribution of interest is deducted from a securities assets or set aside for payment to bondholders. On the ex-date, the securities price drops by the amount of the distribution (plus or minus any market activity).

(Note tag # was reserved in FIX 4.1, added in FIX 4.3)

(prior to FIX 4.4 field was of type UTCDate)

Type: **LocalMktDate**

Used in groups: **TrdCapRptAckSideGrp**, **TrdCapRptSideGrp**

Used in messages: **Confirmation**, **ExecutionReport**

180.2.1058 ExDestination

Execution destination as defined by institution when order is entered.

Valid values:

See "Appendix 6-C"

Type: **Exchange**

Used in groups: **ListOrdGrp**

Used in messages: **CrossOrderCancelReplaceRequest, ExecutionReport, MultilegOrderCancelReplace, NewOrderCross, NewOrderMultileg, NewOrderSingle, OrderCancelReject, OrderCancelReplaceRequest, OrderCancelRequest, Quote, QuoteResponse, QuoteStatusReport**

180.2.1059 ExDestinationIDSource

The ID source of ExDestination

Type: **char**

Allowed values in ExDestinationIDSourceCodeSet:

Code	Name	Description
B	BIC	BIC (Bank Identification Code) (ISO 9362)
C	GeneralIdentifier	Generally accepted market participant identifier (e.g. NASD mnemonic)
D	Proprietary	Proprietary / Custom code
E	ISOCountryCode	ISO Country Code
G	MIC	MIC (ISO 10383 - Market Identifier Code)

Used in groups: **ListOrdGrp**

Used in messages: **CrossOrderCancelReplaceRequest, ExecutionReport, MultilegOrderCancelReplace, NewOrderCross, NewOrderMultileg, NewOrderSingle, OrderCancelReject, OrderCancelReplaceRequest, OrderCancelRequest, Quote, QuoteResponse, QuoteStatusReport**

180.2.1060 ExDestinationType

Identifies the type of execution destination for the order.

Type: **int**

Allowed values in ExDestinationTypeCodeSet:

Code	Name	Description
0	NoRestriction	No restriction. May be used for MiFID II to indicate no restriction on where the order is executed.
1	TradedOnlyOnTradingVenue	Can be traded only on a trading venue. May be used for MiFID II to indicate the order can only be executed on a trading venue.
2	TradedOnlyOnSI	Can be traded only on a Systematic Internaliser (SI). May be used for MiFID II to indicate the order can only be executed on a Systematic Internaliser.
3	TradedOnTradingVenueOrSI	Can be traded on a trading venue or Systematic internaliser (SI). May be used for MiFID II to indicate the order can be executed on either a trading venue or a Systematic Internaliser.

Used in components: [TradeReportOrderDetail](#)

Used in messages: [ExecutionReport](#), [MultilegOrderCancelReplace](#), [NewOrderMultileg](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#)

180.2.1061 ExecAckStatus

The status of this execution acknowledgement message.

Type: [char](#)

Allowed values in ExecAckStatusCodeSet:

Code	Name	Description
0	Received	Received, not yet processed
1	Accepted	Accepted
2	DontKnow	Don't know / Rejected

Used in messages: [ExecutionAck](#)

180.2.1062 ExecAllocGrp

This repeating group is used to identify individual executions or trades, including key fields such as quantity and price of the execution or trade, that are part of the allocation.

Name	Mult.	Type	Description
NoExecs	[1..1]	NumInGroup	Indicates number of individual execution or trade entries. Absence indicates that no individual execution or trade entries are included. Primarily used to support step-outs.
LastQty	[0..1]	Qty	Amount of quantity (e.g. number of shares) in individual execution. Required if NoExecs > 0
ExecID	[0..1]	String	
SecondaryExecID	[0..1]	String	
LastPx	[0..1]	Price	Price of individual execution. Required if NoExecs > 0. For FX, if specified, expressed in terms of Currency(15).
LastParPx	[0..1]	Price	Last price expressed in percent-of-par. Conditionally required for Fixed Income trades when LastPx is expressed in Yield, Spread, Discount or any other price type
LastCapacity	[0..1]	CodeSet	Used to identify whether the trade was executed on an agency or principal basis.
TradeID	[0..1]	String	
FirmTradeID	[0..1]	String	
TrdMatchID	[0..1]	String	Used to identify the match event resulting in the execution or trade.
ExecutionTimestamp	[0..1]	UTCTimestamp	
TradeReportingIndicator	[0..1]	CodeSet	
TrdRegPublicationGrp	[0..*]	Group	
TradePriceConditionGrp	[0..*]	Group	

Used in messages: [AllocationInstruction](#), [AllocationInstructionAlert](#), [AllocationReport](#), [Confirmation](#)

180.2.1063 ExecCollGrp

Name	Mult.	Type	Description
NoExecs	[1..1]	NumInGroup	Executions for which collateral is required
ExecID	[0..1]	String	Required if NoExecs > 0

Used in messages: [CollateralAssignment](#), [CollateralInquiry](#), [CollateralInquiryAck](#), [CollateralReport](#), [CollateralRequest](#), [CollateralResponse](#)

180.2.1064 ExecID

Unique identifier of execution message as assigned by sell-side (broker, exchange, ECN) (will be 0 (zero) for ExecType (150)=I (Order Status)).

Uniqueness must be guaranteed within a single trading day or the life of a multi-day order. Firms which accept multi-day orders should consider embedding a date within the ExecID field to assure uniqueness across days.

(Prior to FIX 4.1 this field was of type int).

Type: **String**

Used in groups: **ExecAllocGrp, ExecCollGrp, ExecutionAggregationGrp**

Used in messages: **DontKnowTrade, ExecutionAck, ExecutionReport, TradeCaptureReport, TradeCaptureReportAck, TradeCaptureReportRequest**

180.2.1065 ExecInst

Instructions for order handling on exchange trading floor. If more than one instruction is applicable to an order, this field can contain multiple instructions separated by space. *** SOME VALUES HAVE BEEN REPLACED - See "Replaced Features and Supported Approach" *** (see Volume : "Glossary" for value definitions)

Type: **MultipleCharValue**

Allowed values in ExecInstCodeSet:

Code	Name	Description
0	StayOnOfferSide	Stay on offer side
1	NotHeld	Not held
2	Work	Work
3	GoAlong	Go along
4	OverTheDay	Over the day
5	Held	Held
6	ParticipateDoNotInitiate	Participate don't initiate
7	StrictScale	Strict scale
8	TryToScale	Try to scale
9	StayOnBidSide	Stay on bid side
A	NoCross	No cross. Cross is forbidden.

Code	Name	Description
B	OKToCross	OK to cross
C	CallFirst	Call first
D	PercentOfVolume	Percent of volume. Indicates that the sender does not want the order to be all of the volume on the floor vs. a specific percentage.
E	DoNotIncrease	Do not increase - DNI
F	DoNotReduce	Do not reduce - DNR
G	AllOrNone	All or none - AON
H	ReinstateOnSystemFailure	Reinstate on system failure. Mutually exclusive with Q and I (lower case L).
I	InstitutionsOnly	Institutions only
J	ReinstateOnTradingHalt	Reinstate on trading halt. Mutually exclusive with K and m.
K	CancelOnTradingHalt	Cancel on trading halt. Mutually exclusive with J and m.
L	LastPeg	Last peg (last sale)
M	MidPricePeg	Mid-price peg (midprice of inside quote)
N	NonNegotiable	Non-negotiable
O	OpeningPeg	Opening peg
P	MarketPeg	Market peg
Q	CancelOnSystemFailure	Cancel on system failure. Mutually exclusive with H and I(lower case L).
R	PrimaryPeg	Primary peg. Primary market - buy at bid, sell at offer.
S	Suspend	Suspend
T	FixedPegToLocalBestBidOrOfferAt-TimeOfOrder	Fixed peg to local best bid or offer at time of order
U	CustomerDisplayInstruction	Customer display instruction. Used in US Markets for: SEC Rule 11Ac1-1/4.
V	Netting	Netting (for Forex)
W	PegToVWAP	Peg to VWAP
X	TradeAlong	Trade along
Y	TryToStop	Try to stop
Z	CancelIfNotBest	Cancel if not best
a	TrailingStopPeg	Trailing stop peg
b	StrictLimit	Strict limit. No price improvement.
c	IgnorePriceValidityChecks	Ignore price validity checks
d	PegToLimitPrice	Peg to limit price
e	WorkToTargetStrategy	Work to target strategy

Code	Name	Description
f	IntermarketSweep	Intermarket sweep
g	ExternalRoutingAllowed	External routing allowed
h	ExternalRoutingNotAllowed	External routing not allowed
i	ImbalanceOnly	Imbalance only
j	SingleExecutionRequestedForBlock-Trade	Single execution requested for block trade
k	BestExecution	Best execution
l	SuspendOnSystemFailure	Suspend on system failure. Mutually exclusive with H and Q.
m	SuspendOnTradingHalt	Suspend on trading halt. Mutually exclusive with J and K.
n	ReinstateOnConnectionLoss	Reinstate on connection loss. Mutually exclusive with o and p.
o	CancelOnConnectionLoss	Cancel on connection loss. Mutually exclusive with n and p.
p	SuspendOnConnectionLoss	Suspend on connection loss. Mutually exclusive with n and o.
q	Release	Release. Mutually exclusive with S and w.
r	ExecuteAsDeltaNeutral	Execute as delta neutral using volatility provided
s	ExecuteAsDurationNeutral	Execute as duration neutral
t	ExecuteAsFXNeutral	Execute as FX neutral
u	MinGuaranteedFillEligible	Minimum guaranteed fill eligible
v	BypassNonDisplayLiquidity	Bypass non-displayed liquidity
w	Lock	Lock. Mutually exclusive with q.
x	IgnoreNotionalValueChecks	Ignore notional value checks
y	TrdAtRefPx	Trade at reference price. In the context of Reg NMS and the Tick Size Pilot Program, this is intended to indicate the order should Trade At Intermarket Sweep Order (TAISO) price.
z	AllowFacilitation	Allow facilitation. Express explicit consent to receive facilitation services from the counterparty. Facilitation services are when an institutional client allows a broker to assume a risk-taking principal position rather than an agency position, to obtain liquidity or achieve a guaranteed execution price on the client's behalf. Interpretation of absence of this value needs to be bilaterally agreed, if applicable. In the context of Hong Kong's SFC, this can be used to comply with SFC regulations for disclosure of client facilitation.

180.2.1066 ExecInstRules

Name	Mult.	Type	Description
NoExecInstRules	[1..1]	NumInGroup	Number of execution instructions
ExecInstValue	[0..1]	CodeSet	Indicates execution instructions that are valid for the specified market segment

Used in components: [TradingSessionRules](#)

Used in messages: [MarketDefinition](#), [MarketDefinitionUpdateReport](#)

180.2.1067 ExecInstValue

Indicates execution instructions that are valid for the specified market segment

Type: [MultipleCharValue](#)

Allowed values in ExecInstCodeSet:

Code	Name	Description
0	StayOnOfferSide	Stay on offer side
1	NotHeld	Not held
2	Work	Work
3	GoAlong	Go along
4	OverTheDay	Over the day
5	Held	Held
6	ParticipateDoNotInitiate	Participate don't initiate
7	StrictScale	Strict scale
8	TryToScale	Try to scale
9	StayOnBidSide	Stay on bid side
A	NoCross	No cross. Cross is forbidden.
B	OKToCross	OK to cross
C	CallFirst	Call first

Code	Name	Description
D	PercentOfVolume	Percent of volume. Indicates that the sender does not want the order to be all of the volume on the floor vs. a specific percentage.
E	DoNotIncrease	Do not increase - DNI
F	DoNotReduce	Do not reduce - DNR
G	AllOrNone	All or none - AON
H	ReinstateOnSystemFailure	Reinstate on system failure. Mutually exclusive with Q and I (lower case L).
I	InstitutionsOnly	Institutions only
J	ReinstateOnTradingHalt	Reinstate on trading halt. Mutually exclusive with K and m.
K	CancelOnTradingHalt	Cancel on trading halt. Mutually exclusive with J and m.
L	LastPeg	Last peg (last sale)
M	MidPricePeg	Mid-price peg (midprice of inside quote)
N	NonNegotiable	Non-negotiable
O	OpeningPeg	Opening peg

Facilitation services are when an institutional client allows a broker to assume a risk-taking principal position rather than an agency position, to obtain liquidity or achieve a guaranteed execution price on the client's behalf. Interpretation of absence of this value needs to be bilaterally agreed, if applicable. In the context of Hong Kong's SFC, this can be used to comply with SFC regulations for disclosure of client facilitation.

Used in groups: **ExecInstRules**

180.2.1068 ExecMethod

Specifies how the transaction was executed, e.g. via an automated execution platform or other method.

Type: **int**

Allowed values in ExecMethodCodeSet:

Code	Name	Description
0	Unspecified	Undefined/unspecified - (default when not specified). In the context of Market Model Typology (MMT), this value represents an off book non-automated transaction type.
1	Manual	Manual. The transaction was executed in a manual or other non-automated manner, e.g. by voice directly between the counterparties. Also used to identify MTT code M "Off Book Non-Automated".
2	Automated	Automated. The transaction was executed on an automated execution platform such as an automated systematic internaliser system, broker crossing network, broker crossing system, dark pool trading, "direct to capital" systems, broker position unwind mechanisms, etc.
3	VoiceBrokered	Voice brokered. The transaction was negotiated by voice through an intermediary.

Used in groups: **MDFullGrp**, **MDIncGrp**

Used in messages: **TradeCaptureReport**

180.2.1069 ExecPriceAdjustment

For CIV the amount or percentage by which the fund unit/share price was adjusted, as indicated by ExecPriceType (484)

Type: **float**

Used in messages: **ExecutionReport**

180.2.1070 ExecPriceType

For CIV - Identifies how the execution price LastPx (31) was calculated from the fund unit/share price(s) calculated at the fund valuation point.

Type: **char**

Allowed values in ExecPriceTypeCodeSet:

Code	Name	Description
B	BidPrice	Bid price
C	CreationPrice	Creation price
D	CreationPricePlusAdjustmentPercent	Creation price plus adjustment percent
E	CreationPricePlusAdjustmentAmount	Creation price plus adjustment amount
O	OfferPrice	Offer price
P	OfferPriceMinusAdjustmentPercent	Offer price minus adjustment percent
Q	OfferPriceMinusAdjustmentAmount	Offer price minus adjustment amount
S	SinglePrice	Single price

Used in messages: **ExecutionReport**

180.2.1071 ExecRefID

Reference identifier used with Trade, Trade Cancel and Trade Correct execution types.

(Prior to FIX 4.1 this field was of type int)

Type: **String**

Used in messages: **ExecutionReport**, **TradeCaptureReport**

180.2.1072 ExecRestatementReason

The reason for restatement when an ExecutionReport(35=8) or TradeCaptureReport(35=AE) message is sent with ExecType(150) = D (Restated) or used when communicating an unsolicited cancel.

Type: **int**

Allowed values in ExecRestatementReasonCodeSet:

Code	Name	Description
0	GTCorporateAction	GT corporate action
1	GTRenewal	GT renewal / restatement (no corporate action)
2	VerbalChange	Verbal change
3	RepricingOfOrder	Repricing of order
4	BrokerOption	Broker option

Code	Name	Description
5	PartialDeclineOfOrderQty	Partial decline of OrderQty (e.g. exchange initiated partial cancel)
6	CancelOnTradingHalt	Cancel on Trading Halt
7	CancelOnSystemFailure	Cancel on System Failure
8	Market	Market (Exchange) option
9	Canceled	Canceled, not best
10	WarehouseRecap	Warehouse Recap
11	PegRefresh	Peg Refresh
12	CancelOnConnectionLoss	Cancel On Connection Loss
13	CancelOnLogout	Cancel On Logout
14	AssignTimePriority	Assign Time Priority
15	CancelledForTradePriceViolation	Cancelled, Trade Price Violation
16	CancelledForCrossImbalance	Cancelled, Cross Imbalance
17	CxldSMP	Cancelled, self-match prevention. Cancelled order based on standing rules for self-match prevention (i.e. SelfMatchPreventionInstruction(2964) not specified or used).
18	CxldSMPAggressive	Cancelled, self-match prevention aggressive order. Cancelled due to incoming order with the same SelfMatchPreventionID(2362) and SelfMatchPreventionInstruction(2964)=1 (Cancel aggressive).
19	CxldSMPPassive	Cancelled, self-match prevention passive order. Cancelled due to incoming order with the same SelfMatchPreventionID(2362) and SelfMatchPreventionInstruction(2964)=2 (Cancel passive).
20	CxldSMPAggressivePassive	Cancelled, self-match prevention aggressive and passive order. Cancelled due to incoming order with the same SelfMatchPreventionID(2362) and SelfMatchPreventionInstruction(2964)=3 (Cancel aggressive and passive).
99	Other	Other

Used in messages: [ExecutionReport](#), [TradeCaptureReport](#), [TradeCaptureReportAck](#)

180.2.1073 ExecType

Describes the specific ExecutionRpt (e.g. Pending Cancel) while OrdStatus(39) will always identify the current order status (e.g. Partially Filled).

Type: **char**

Allowed values in ExecTypeCodeSet:

Code	Name	Description
0	New	New
3	DoneForDay	Done for day
4	Canceled	Canceled
5	Replaced	Replaced
6	PendingCancel	Pending Cancel (e.g. result of Order Cancel Request)
7	Stopped	Stopped
8	Rejected	Rejected
9	Suspended	Suspended
A	PendingNew	Pending New
B	Calculated	Calculated
C	Expired	Expired
D	Restated	Restated (Execution Report sent unsolicited by sellside, with ExecRestatementReason (378) set)
E	PendingReplace	Pending Replace (e.g. result of Order Cancel/Replace Request)
F	Trade	Trade (partial fill or fill)
G	TradeCorrect	Trade Correct
H	TradeCancel	Trade Cancel
I	OrderStatus	Order Status
J	TradeInAClearingHold	Trade in a Clearing Hold
K	TradeHasBeenReleasedToClearing	Trade has been released to Clearing
L	TriggeredOrActivatedBySystem	Triggered or Activated by System
M	Locked	Locked
N	Released	Released

Used in groups: **OrderEntryAckGrp**

Used in messages: **ExecutionReport**, **TradeCaptureReport**, **TradeCaptureReportAck**, **TradeCaptureReportRequest**

180.2.1074 ExecTypeReason

The initiating event when an ExecutionReport(35=8) is sent.

Type: **int**

Allowed values in ExecTypeReasonCodeSet:

Code	Name	Description
1	OrdAddedOnRequest	Order added upon request
2	OrdReplacedOnRequest	Order replaced upon request
3	OrdCxlOnRequest	Order cancelled upon request
4	UnsolicitedOrdCxl	Unsolicited order cancellation
5	NonRestingOrdAddedOnRequest	Non-resting order added upon request
6	OrdReplacedWithNonRestingOrdOnRequest	Order replaced with non-resting order upon request
7	TriggerOrdReplacedOnRequest	Trigger order replaced upon request
8	SuspendedOrdReplacedOnRequest	Suspended order replaced upon request
9	SuspendedOrdCxlOnRequest	Suspended order canceled upon request
10	OrdCxlPending	Order cancellation pending
11	PendingCxlExecuted	Pending cancellation executed
12	RestingOrdTriggered	Resting order triggered
13	SuspendedOrdActivated	Suspended order activated
14	ActiveOrdSuspended	Active order suspended
15	OrdExpired	Order expired

Used in groups: **OrderEntryAckGrp**

Used in messages: **ExecutionReport**

180.2.1075 ExecutionAggregationGrp

Identifies the fills being aggregated together.

Name	Mult.	Type	Description
NoExecs	[1..1]	NumInGroup	
LastQty	[0..1]	Qty	Required if NoExecs(124) > 0
ExecID	[0..1]	String	Either ExecID(17) or TradeID(1003) must be specified.
TradeID	[0..1]	String	Either ExecID(17) or TradeID(1003) must be specified.

Name	Mult.	Type	Description
LastPx	[0..1]	Price	

Used in messages: [TradeAggregationRequest](#)

180.2.1076 ExecutionTimestamp

Time of the individual execution.

Type: [UTCTimestamp](#)

Used in groups: [ExecAllocGrp](#)

180.2.1077 ExecValuationPoint

For CIV - a date and time stamp to indicate the fund valuation point with respect to which a order was priced by the fund manager.

Type: [UTCTimestamp](#)

Used in messages: [ExecutionReport](#)

180.2.1078 ExerciseConfirmationMethod

Indicates whether follow-up confirmation of exercise (written or electronic) is required following telephonic notice by the buyer to the seller or seller's agent.

Type: [int](#)

Allowed values in ExerciseConfirmationMethodCodeSet:

Code	Name	Description
0	NotRequired	Not required
1	NonElectronic	Non-electronic
2	Electronic	Electronic
3	Unknown	Unknown at time of report

Used in components: [OptionExercise](#)

180.2.1079 ExerciseDesc

A description of the option exercise.

Type: **String**

Used in components: **OptionExercise**

180.2.1080 ExerciseMethod

Exercise Method used to in performing assignment.

Type: **char**

Allowed values in ExerciseMethodCodeSet:

Code	Name	Description
A	Automatic	Automatic
M	Manual	Manual

Used in messages: **AssignmentReport**

180.2.1081 ExerciseSplitTicketIndicator

Indicates in physical settlement of bond and convertible bond options whether the party required to deliver the bonds will divide those to be delivered as notifying party desires to facilitate delivery obligations.

Type: **Boolean**

Used in components: **OptionExercise**

180.2.1082 ExerciseStyle

Type of exercise of a derivatives security

Type: **int**

Allowed values in ExerciseStyleCodeSet:

Code	Name	Description
0	European	European
1	American	American
2	Bermuda	Bermuda
99	Other	Other

Used in components: **Instrument**

180.2.1083 ExpirationCycle

Part of trading cycle when an instrument expires. Field is applicable for derivatives.

Type: **int**

Allowed values in ExpirationCycleCodeSet:

Code	Name	Description
0	ExpireOnTradingSessionClose	Expire on trading session close (default)
1	ExpireOnTradingSessionOpen	Expire on trading session open
2	SpecifiedExpiration	Trading eligibility expiration specified in the date and time fields [EventDate(866) and EventTime(1145)] associated with EventType(865)=7(Last Eligible Trade Date)

Used in components: **BaseTradingRules**

Used in messages: **SecurityDefinitionRequest**

180.2.1084 ExpirationQty

The ExpirationQty component block identified the expiration quantities and type of expiration.

Name	Mult.	Type	Description
NoExpiration	[1..1]	NumInGroup	
ExpirationQtyType	[0..1]	CodeSet	Required if NoExpiration > 1
ExpQty	[0..1]	Qty	

Used in messages: **ContraryIntentionReport**

180.2.1085 ExpirationQtyType

Expiration Quantity type

Type: **int**

Allowed values in ExpirationQtyTypeCodeSet:

Code	Name	Description
1	AutoExercise	Auto Exercise
2	NonAutoExercise	Non Auto Exercise
3	FinalWillBeExercised	Final Will Be Exercised
4	ContraryIntention	Contrary Intention
5	Difference	Difference

Used in groups: **ExpirationQty**

180.2.1086 ExpireDate

Date of order expiration (last day the order can trade), always expressed in terms of the local market date. The time at which the order expires is determined by the local market's business practices

Type: **LocalMktDate**

Used in groups: **ListOrdGrp**, **MDFullGrp**, **MDIncGrp**

Used in messages: **AssignmentReport**, **CrossOrderCancelReplaceRequest**, **ExecutionReport**, **Multi-legOrderCancelReplace**, **NewOrderCross**, **NewOrderMultileg**, **NewOrderSingle**, **OrderCancelReplaceRequest**

180.2.1087 ExpireTime

Time/Date of order expiration (always expressed in UTC (Universal Time Coordinated, also known as "GMT"))

The meaning of expiration is specific to the context where the field is used.

For orders, this is the expiration time of a Good Til Date TimeInForce.

For Quotes - this is the expiration of the quote.

Expiration time is provided across the quote message dialog to control the length of time of the overall quoting process.

For collateral requests, this is the time by which collateral must be assigned.

For collateral assignments, this is the time by which a response to the assignment is expected.

For credit/risk limit checks, this is the time when the reserved credit limit will expire for the requested transaction.

Type: **UTCTimestamp**

Used in components: **TradeReportOrderDetail**

Used in groups: **ListOrdGrp, MDFullGrp, MDIncGrp, QuotReqGrp, QuotReqRjctGrp, SettlInstGrp, SettlementObligationInstructions**

Used in messages: **CollateralAssignment, CollateralRequest, CrossOrderCancelReplaceRequest, ExecutionReport, MultilegOrderCancelReplace, NewOrderCross, NewOrderMultileg, NewOrderSingle, OrderCancelReplaceRequest, PartyRiskLimitCheckRequestAck, QuoteStatusReport, SettlementInstructionRequest**

180.2.1088 ExposureDuration

This is the time in seconds of a "Good for Time" (GFT) TimeInForce.

Positive integer value which represents the time in seconds in which the new order remains active in the market before it is automatically cancelled (e.g. expired).

Bi-lateral agreements will dictate the maximum value of this field. It is assumed that most systems will impose a max limit of 86,400 seconds (i.e. 24 hours).

For Quotes: The period of time a quoted price is tradable (i.e. on-the-wire) before it becomes indicative (i.e. off-the-wire).

Type: **int**

Used in components: **MDStatisticParameters, TradeReportOrderDetail**

Used in groups: **ListOrdGrp, MDFullGrp, MDIncGrp, QuotReqGrp**

Used in messages: **CrossOrderCancelReplaceRequest, ExecutionReport, MultilegOrderCancelReplace, NewOrderCross, NewOrderMultileg, NewOrderSingle, OrderCancelReplaceRequest, Quote**

180.2.1089 ExposureDurationUnit

Time unit in which the ExposureDuration(1629) is expressed.

Type: **int**

Allowed values in OrderDelayUnitCodeSet:

Code	Name	Description
0	Seconds	Seconds (default if not specified)
1	TenthsOfASecond	Tenths of a second
2	HundredthsOfASecond	Hundredths of a second
3	Milliseconds	milliseconds
4	Microseconds	microseconds
5	Nanoseconds	nanoseconds
10	Minutes	minutes
11	Hours	hours
12	Days	days
13	Weeks	weeks
14	Months	months
15	Years	years

Used in components: [MDStatisticParameters](#), [TradeReportOrderDetail](#)

Used in groups: [ListOrdGrp](#), [MDFullGrp](#), [MDIncGrp](#), [QuotReqGrp](#)

Used in messages: [CrossOrderCancelReplaceRequest](#), [ExecutionReport](#), [MultilegOrderCancelReplace](#), [NewOrderCross](#), [NewOrderMultileg](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#), [Quote](#)

180.2.1090 ExpQty

Expiration Quantity associated with the Expiration Type

Type: [Qty](#)

Used in groups: [ExpirationQty](#)

180.2.1091 ExtraordinaryDividendAmountType

Indicates how the extraordinary gross cash dividend per share is determined.

Type: [int](#)

Allowed values in DividendAmountTypeCodeSet:

Code	Name	Description
0	RecordAmount	Record amount. 100% of the gross cash dividend per share paid over record date during relevant dividend period.
1	ExAmount	Ex amount. 100% of gross cash dividend per share paid after the ex-dividend date during relevant dividend period.
2	PaidAmount	Paid amount. 100% of gross cash dividend per share paid during relevant dividend period.
3	PerMasterConfirm	As specified in master confirmation. The amount is determined as provided in the relevant master confirmation.

Used in components: **DividendConditions**

180.2.1092 ExtraordinaryDividendCurrency

The currency in which the excess dividend is denominated. Uses ISO 4217 currency codes.

Type: **Currency**

Used in components: **DividendConditions**

180.2.1093 ExtraordinaryDividendDeterminationMethod

Specifies the method in which the excess amount is determined.

See <http://www.fpml.org/coding-scheme/determination-method> for values.

Type: **String**

Used in components: **DividendConditions**

180.2.1094 ExtraordinaryDividendPartySide

Reference to the party through its side in the trade who makes the determination whether dividends are extraordinary in relation to normal levels.

Type: **int**

Allowed values in PaymentStreamCapRateBuySideCodeSet:

Code	Name	Description
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

Used in components: [DividendConditions](#)

180.2.1095 ExtraordinaryEventAdjustmentMethod

Defines how adjustments will be made to the contract should one or more of the extraordinary events occur.

Type: [int](#)

Allowed values in ExtraordinaryEventAdjustmentMethodCodeSet:

Code	Name	Description
0	CalculationAgent	Calculation agent. The Calculation Agent has the right to adjust the terms of the trade following a corporate action.
1	OptionsExchange	Options exchange. The trade will be adjusted in accordance with any adjustment made by the exchange on which options on the underlying are listed.

Used in components: [Instrument](#)

180.2.1096 ExtraordinaryEventGrp

The ExtraordinaryEventGrp is a repeating component within the Instrument component. It is used to report extraordinary and disruptive events applicable to the reference entity that affects the contract.

Name	Mult.	Type	Description
NoExtraordinaryEvents	[1..1]	NumInGroup	
ExtraordinaryEventType	[0..1]	String	Required if NoExtraordinaryEvents(42296) > 0.
ExtraordinaryEventValue	[0..1]	String	Required if NoExtraordinaryEvents(42296) > 0.

Used in components: [Instrument](#)

180.2.1097 ExtraordinaryEventType

Identifies the type of extraordinary or disruptive event applicable to the reference entity.

See http://www.fixtradingcommunity.org/codelists#Extraordinary_Event_Type for code list of extraordinary event types and values.

Type: **String**

Used in groups: **ExtraordinaryEventGrp**

180.2.1098 ExtraordinaryEventValue

The extraordinary or disruptive event value appropriate to ExtraordinaryEventType(42297).

See http://www.fixtradingcommunity.org/codelists#Extraordinary_Event_Type for code list of extraordinary event types and values.

Type: **String**

Used in groups: **ExtraordinaryEventGrp**

180.2.1099 Factor

For Fixed Income: Amorization Factor for deriving Current face from Original face for ABS or MBS securities, note the fraction may be greater than, equal to or less than . In TIPS securities this is the Inflation index.

$\text{Qty} * \text{Factor} * \text{Price} = \text{Gross Trade Amount}$

For Derivatives: Contract Value Factor by which price must be adjusted to determine the true nominal value of one futures/options contract.

$(\text{Qty} * \text{Price}) * \text{Factor} = \text{Nominal Value}$

(Note tag # was reserved in FIX 4.1, added in FIX 4.3)

Type: **float**

Used in components: **Instrument**

180.2.1100 FairValue

Used in EFP trades

Type: **Amt**

Used in groups: [BidCompRspGrp](#), [BidDescReqGrp](#)

180.2.1101 FallbackExerciseIndicator

Indicates whether the notional amount of the underlying swap, not previously exercised under the option, will be automatically exercised at the expiration time on the expiration date if at such time the buyer is in-the-money, provided that the difference between the settlement rate and the fixed rate under the relevant underlying swap is not less than one tenth of a percentage point (0.10% or 0.001).

Type: [Boolean](#)

Used in components: [OptionExercise](#)

180.2.1102 FastMarketIndicator

Indicates if the instrument is in "fast market" state.

Type: [Boolean](#)

Used in groups: [MDFullGrp](#), [MDIncGrp](#), [QuoteSizeRuleGrp](#)

Used in messages: [MarketDataRequest](#), [SecurityMassStatus](#), [SecurityStatus](#), [TradingSessionStatus](#)

180.2.1103 FastMarketPercentage

The percentage factor to be applied to trading rule parameters (e.g. price ranges, size ranges, etc.) when fast market conditions are applicable.

Type: [Percentage](#)

Used in components: [BaseTradingRules](#)

180.2.1104 FeeMultiplier

This is a multiplier that Clearing (Fee system) will use to calculate fees and will be sent to the firms on their confirms.

Type: [float](#)

Used in messages: [TradeCaptureReport](#), [TradeCaptureReportAck](#)

180.2.1105 FillExecID

Refer to ExecID(17). Used when multiple partial fills are reported in single Execution Report. ExecID and FillExecID should not overlap,

Type: **String**

Used in groups: **FillsGrp**

180.2.1106 FillLiquidityInd

Indicator to identify whether this fill was a result of a liquidity provider providing or liquidity taker taking the liquidity. Applicable only for OrdStatus of Partial or Filled

Type: **int**

Allowed values in LastLiquidityIndCodeSet:

Code	Name	Description
0	NeitherAddedNorRemovedLiquidity	Neither added nor removed liquidity. May be used by venues where market rules do not define "add" or "remove" liquidity. In the context of the SEC amendment of Regulation NMS Rule 606(b), may be used to identify executions that are only reported as part of total shares executed and not as part of shares providing or removing liquidity (see https://www.sec.gov/rules/final/2018/34-84528.pdf for details).
1	AddedLiquidity	Added Liquidity
2	RemovedLiquidity	Removed Liquidity
3	LiquidityRoutedOut	Liquidity Routed Out
4	Auction	Auction execution
5	TriggeredStopOrder	Triggered stop order. Fill was the result of a stop order being triggered and immediately executed.
6	TriggeredContingencyOrder	Triggered contingency order. Fill was the result of a contingency order (OCO, OTO, OUO) becoming active (after cancelling or updating another order) and being immediately executed.
7	TriggeredMarketOrder	Triggered market order. Fill was the result of a market order being triggered due to an executable orderbook situation.
8	RemovedLiquidityAfterFirmOrder-Commitment	Removed liquidity after firm order commitment. An order that was submitted for continuous trading that required a firm order commit prior to execution. "Conditional order" is an alternate term used for such orders.

Code	Name	Description
9	AuctionExecutionAfterFirmOrder-Commitment	Auction execution after firm order commitment. An order that was submitted for auction trading that required a firm order commit prior to execution. "Conditional order" is an alternate term used for such orders.
10	Unknown	Unknown. The liquidity indicator of the execution cannot be determined or was not provided upon execution.
11	Other	Other. None of the existing liquidity indicators are applicable for the execution (e.g. due to a venue's new order type that does not fit existing values).

Used in groups: **FillsGrp**

180.2.1107 FillMatchID

Identifier assigned by a matching system to a match event containing multiple executions.

Type: **String**

Used in groups: **FillsGrp**

180.2.1108 FillMatchSubID

Identifier assigned by a matching system to a price level (e.g. match step, clip) within a match event containing multiple executions.

Type: **String**

Used in groups: **FillsGrp**

180.2.1109 FillPx

Price of Fill. Refer to LastPx(31).

Type: **Price**

Used in groups: **FillsGrp**

180.2.1110 FillQty

Quantity of Fill. Refer to LastQty(32).

Type: Qty

Used in groups: FillsGrp

180.2.1111 FillRefID

A reference to either the value of the FillExecID(1363) or an implicit position of a fills instance in the FillsGrp component.

Type: String

Used in groups: InstrmtLegExecGrp

180.2.1112 FillsGrp

Name	Mult.	Type	Description
NoFills	[1..1]	NumInGroup	Specifies the number of partial fills included in this Execution Report
FillExecID	[0..1]	String	Unique identifier of execution as assigned by sell-side (broker, exchange, ECN). Must not overlap ExecID(17). Required if NoFills(1362) > 0.
FillPx	[0..1]	Price	Price of this partial fill. Required if NoFills(1362) > 0. Refer to LastPx(31).
FillQty	[0..1]	Qty	Quantity (e.g. shares) bought/sold on this partial fill. Required if NoFills(1362) > 0.
FillMatchID	[0..1]	String	Can be used to refer to the related match event.
FillMatchSubID	[0..1]	String	Can be used to refer to a price level (e.g. match step, clip) within the related match event.
FillLiquidityInd	[0..1]	CodeSet	
FillYieldType	[0..1]	String	
FillYield	[0..1]	Percentage	
NestedParties4	[0..*]	Group	Counterparty information

Used in messages: ExecutionReport

180.2.1113 FillYield

Yield Percentage, using same values as Yield (236)

Type: **Percentage**

Used in groups: **FillsGrp**

180.2.1114 FillYieldType

Yield Type, using same values as YieldType (235)

Type: **String**

Used in groups: **FillsGrp**

180.2.1115 FinancialInstrumentFullName

The full normative name of the financial instrument.

Type: **String**

Used in components: **Instrument**

180.2.1116 FinancialInstrumentShortName

Short name of the financial instrument. Uses ISO 18774 (FINS) values.

Type: **String**

Used in components: **Instrument**

180.2.1117 FinancialStatus

Identifies a firm's or a security's financial status

Type: **MultipleCharValue**

Allowed values in FinancialStatusCodeSet:

Code	Name	Description
1	Bankrupt	Bankrupt
2	PendingDelisting	Pending delisting

Code	Name	Description
3	Restricted	Restricted

Used in groups: [MDIncGrp](#), [SecMassStatGrp](#)

Used in messages: [CollateralReport](#), [CollateralResponse](#), [MarketDataSnapshotFullRefresh](#), [SecurityStatus](#)

180.2.1118 FinancingContractualDefinitionGrp

The FinancingContractualDefinitionGrp is a repeating component within the FinancingDetails component used to report the definitions published by ISDA that define the terms of a derivative trade.

Name	Mult.	Type	Description
NoContractualDefinitions	[1..1]	NumInGroup	
ContractualDefinition	[0..1]	String	Required if NoContractualDefinitions(40040) > 0.

Used in components: [FinancingDetails](#)

180.2.1119 FinancingContractualMatrixGrp

The FinancingContractualMatrixGrp is a repeating component within the FinancingDetails component used to report the ISDA Physical Settlement Matrix Transaction Type.

Name	Mult.	Type	Description
NoContractualMatrices	[1..1]	NumInGroup	
ContractualMatrixSource	[0..1]	String	Required if NoContractualMatrices(40042) > 0.
ContractualMatrixDate	[0..1]	LocalMktDate	
ContractualMatrixTerm	[0..1]	String	

Used in components: [FinancingDetails](#)

180.2.1120 FinancingDetails

Component block is optionally used for financial transaction where legal contracts, master agreements or master confirmations is to be referenced. This component identifies the legal agreement under which the deal was made and other unique characteristics of the transaction. For example, the AgreementDesc(913) field refers to base standard documents such as MRA 1996 Repurchase Agreement, GMRA 2000 Bills Transaction (U.K.), MSLA 1993 Securities Loan – Amended 1998, for example.

Name	Mult.	Type	Description
AgreementDesc	[0..1]	String	The full name of the base standard agreement, annexes and amendments in place between the principals and applicable to this deal
AgreementID	[0..1]	String	A common reference to the applicable standing agreement between the principals
AgreementVersion	[0..1]	String	
AgreementDate	[0..1]	LocalMktDate	A reference to the date the underlying agreement was executed.
AgreementCurrency	[0..1]	Currency	Currency of the underlying agreement.
AgreementCurrencyCodeSource	[0..1]	CodeSet	
MasterConfirmationDesc	[0..1]	String	
MasterConfirmationDate	[0..1]	LocalMktDate	
MasterConfirmationAnnexDesc	[0..1]	String	
MasterConfirmationAnnexDate	[0..1]	LocalMktDate	
BrokerConfirmationDesc	[0..1]	String	
FinancingContractualDefinitionGrp	[0..*]	Group	
FinancingTermSupplementGrp	[0..*]	Group	
FinancingContractualMatrixGrp	[0..*]	Group	
CreditSupportAgreementDesc	[0..1]	String	
CreditSupportAgreementDate	[0..1]	LocalMktDate	
CreditSupportAgreementID	[0..1]	String	
GoverningLaw	[0..1]	String	
DocumentationText	[0..1]	String	
EncodedDocumentationTextLen	[0..1]	Length	Must be set if EncodedDocumentationText(1527) field is specified and must immediately precede it.
EncodedDocumentationText	[0..1]	data	Encoded (non-ASCII characters) representation of the DocumentationText(1513) field in the encoded format specified via the MessageEncoding(347) field.

Name	Mult.	Type	Description
TerminationType	[0..1]	CodeSet	For Repos the timing or method for terminating the agreement.
StartDate	[0..1]	LocalMktDate	Settlement date of the beginning of the deal
EndDate	[0..1]	LocalMktDate	Repayment / repurchase date
DeliveryType	[0..1]	CodeSet	Delivery or custody arrangement for the underlying securities
MarginRatio	[0..1]	Percentage	Percentage of cash value that underlying security collateral must meet.

Used in groups: InstrmtGrp, InstrmtMDReqGrp, MDIncGrp, QuotCxlEntriesGrp, QuotReqGrp, QuotReqRjctGrp, SecListGrp, SecLstUpdRelSymGrp, SecMassStatGrp

Used in messages: Advertisement, AllocationInstruction, AllocationInstructionAlert, AllocationReport, CollateralAssignment, CollateralInquiry, CollateralInquiryAck, CollateralReport, CollateralRequest, CollateralResponse, Confirmation, ExecutionReport, IOI, MarketDataSnapshotFullRefresh, MarketDataStatisticsReport, MarketDataStatisticsRequest, NewOrderSingle, OrderCancelReplaceRequest, OrderCancelRequest, OrderStatusRequest, PositionReport, Quote, QuoteResponse, QuoteStatusReport, QuoteStatusRequest, SecurityDefinition, SecurityDefinitionRequest, SecurityDefinitionUpdateReport, SecurityListRequest, SecurityStatus, SecurityStatusRequest, TradeCaptureReport, TradeCaptureReportAck, TradeCaptureReportRequest

180.2.1121 FinancingTermSupplementDate

The publication date of the applicable version of the contractual supplement.

Type: LocalMktDate

Used in groups: FinancingTermSupplementGrp

180.2.1122 FinancingTermSupplementDesc

Identifies the applicable contractual supplement. See <http://www.fpml.org/coding-scheme/contractual-supplement> for values.

Type: String

Used in groups: FinancingTermSupplementGrp

180.2.1123 FinancingTermSupplementGrp

The FinancingTermSupplementGrp is a repeating component within the FinancingDetails component used to report contractual terms supplements of derivative trades.

Name	Mult.	Type	Description
NoFinancingTermSupplements	[1..1]	NumInGroup	
FinancingTermSupplementDesc	[0..1]	String	Required if NoFinancingTermSupplements(40046) > 0.
FinancingTermSupplementDate	[0..1]	LocalMktDate	

Used in components: [FinancingDetails](#)

180.2.1124 FirmAllocText

Firm reference information, usually internal information, that is part of the initial message. The information would not be carried forward (e.g to Take-up Firm) and preserved with the transaction.

Type: [String](#)

Used in groups: [AllocAckGrp](#), [AllocGrp](#), [TrdAllocGrp](#)

180.2.1125 FirmGroupID

Firm assigned group allocation entity identifier.

Type: [String](#)

Used in groups: [TrdCapRptAckSideGrp](#), [TrdCapRptSideGrp](#)

Used in messages: [AllocationInstruction](#), [AllocationInstructionAck](#), [AllocationInstructionAlert](#), [AllocationReport](#), [AllocationReportAck](#)

180.2.1126 FirmMnemonic

Allocation identifier assigned by the Firm submitting the allocation for an individual allocation instruction (as opposed to the overall message level identifier).

Type: [String](#)

Used in groups: [AllocAckGrp](#), [AllocGrp](#), [TrdAllocGrp](#)

180.2.1127 FirmTradeEventID

An identifier created by the trading party for the life cycle event associated with this report.

Type: **String**

Used in groups: **TrdCapRptSideGrp**

180.2.1128 FirmTradeID

The ID assigned to a trade by the Firm to track a trade within the Firm system. This ID can be assigned either before or after submission to the exchange or central counterparty

Type: **String**

Used in groups: **ExecAllocGrp**

Used in messages: **TradeCaptureReport**, **TradeCaptureReportAck**, **TradeCaptureReportRequest**, **TradeCaptureReportRequestAck**

180.2.1129 FirmTransactionID

The unique transaction entity identifier assigned by the firm.

Type: **String**

Used in messages: **CollateralAssignment**, **CollateralReport**, **CollateralResponse**

180.2.1130 FirstPx

Indicates the first trade price of the day/session

Type: **Price**

Used in groups: **MDFullGrp**, **MDIncGrp**

Used in messages: **SecurityStatus**

180.2.1131 FlexibleIndicator

Used to indicate a derivatives security that can be defined using flexible terms. The terms commonly permitted to be defined by market participants are expiration date and strike price. FlexibleIndicator is an alternative CFICode(461) Standard/Non-standard attribute.

Type: **Boolean**

Used in components: **Instrument**

180.2.1132 FlexProductEligibilityComplex

Identifies an entire suite of products which are eligible for the creation of flexible securities.

Type: **String**

Used in groups: **FlexProductEligibilityGrp**

180.2.1133 FlexProductEligibilityGrp

The FlexProductEligibilityGrp component is used to specify whether securities within a product group or complex are eligible for creating flexible securities.

Name	Mult.	Type	Description
NoFlexProductEligibilities	[1..1]	NumInGroup	
FlexProductEligibilityIndicator	[0..1]	Boolean	Required if NoFlexProductEligibilities(2560) > 0.
FlexProductEligibilityComplex	[0..1]	String	Required if NoFlexProductEligibilities(2560) > 0. Used to specify a product suite related to an eligibility indicator.

Used in messages: **MarketDefinition**, **MarketDefinitionUpdateReport**

180.2.1134 FlexProductEligibilityIndicator

Used to indicate if a product or group of product supports the creation of flexible securities

Type: **Boolean**

Used in components: **Instrument**

Used in groups: **FlexProductEligibilityGrp**

180.2.1135 FloatingRateIndex

Used to identify the rate index for a floating rate coupon.

Name	Mult.	Type	Description
FloatingRateIndexID	[0..1]	String	Conditionally required when FloatingRateIndexIDSource(2732) is specified.
FloatingRateIndexIDSource	[0..1]	CodeSet	Conditionally required when FloatingRateIndexID(2731) is specified.
FloatingRateIndexCurveUnit	[0..1]	CodeSet	Conditionally required when FloatingRateIndexCurvePeriod(2728) is specified.
FloatingRateIndexCurvePeriod	[0..1]	int	Conditionally required when FloatingRateIndexCurveUnit(2730) is specified.
FloatingRateIndexCurveSpread	[0..1]	PriceOffset	

Used in components: **InstrumentExtension**

180.2.1136 FloatingRateIndexCurvePeriod

Time unit multiplier for the floating rate index identified in FloatingRateIndexID(2731).

Type: **int**

Used in components: **FloatingRateIndex**

180.2.1137 FloatingRateIndexCurveSpread

Spread from the floating rate index.

Type: **PriceOffset**

Used in components: **FloatingRateIndex**

180.2.1138 FloatingRateIndexCurveUnit

Time unit associated with the floating rate index identified in FloatingRateIndexID(2731).

Type: **String**

Allowed values in PaymentStreamRateIndexCurveUnitCodeSet:

Code	Name	Description
D	Day	Day

Code	Name	Description
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: [FloatingRateIndex](#)

180.2.1139 FloatingRateIndexID

Security identifier of the floating rate index.

Type: [String](#)

Used in components: [FloatingRateIndex](#)

180.2.1140 FloatingRateIndexIDSource

Source for the floating rate index identified in FloatingRateIndexID(2731).

Type: [String](#)

Allowed values in SecurityIDSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
3	QUIK	QUIK
4	ISINNumber	ISIN
5	RICCode	RIC
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
7	ISOCountryCode	ISO Country Code
8	ExchangeSymbol	Exchange symbol
9	ConsolidatedTapeAssociation	Consolidated Tape Association (CTA) Symbol (SIAC CTS/CQS line format)
A	BloombergSymbol	Bloomberg Symbol
B	Wertpapier	Wertpapier
C	Dutch	Dutch

Code	Name	Description
D	Valoren	Valoren
E	Sicovam	Sicovam
F	Belgian	Belgian
G	Common	"Common" (Clearstream and Euroclear)
H	ClearingHouse	Clearing house / Clearing organization
I	ISDAFpMLSpecification	ISDA/FpML product specification (XML in SecurityXML(1185))
J	OptionPriceReportingAuthority	Option Price Reporting Authority
K	ISDAFpMLURL	ISDA/FpML product URL (URL in SecurityID(48))
L	LetterOfCredit	Letter of credit
M	MarketplaceAssignedIdentifier	Marketplace-assigned Identifier
N	MarkitREDEntityCLIP	Markit RED entity CLIP
P	MarkitREDPairCLIP	Markit RED pair CLIP
Q	CFTCCommodityCode	CFTC commodity code
R	ISDACommodityReferencePrice	ISDA Commodity Reference Price
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbolology BBGID".
T	LegalEntityIdentifier	Legal entity identifier
U	Synthetic	Synthetic. Used to specify that the security identifier is synthetic for linking nested underliers when there is no market identifier for the collection.
V	FidessaInstrumentMnemonic	Fidessa Instrument Mnemonic (FIM)
W	IndexName	Index name. Standard name of the index or rate index, e.g. "LIBOR" or "iTraxx Australia".
X	UniformSymbol	Uniform Symbol (UMTF Symbol)
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in components: **FloatingRateIndex**

180.2.1141 FloorPrice

Used to express the floor price of a capped put

Type: **Price**

Used in components: **Instrument**

180.2.1142 FlowScheduleType

The industry standard flow schedule by which electricity or natural gas is traded. Schedules may exist by regions and on-peak and off-peak status, such as "Western Peak".

Type: **int**

Allowed values in FlowScheduleTypeCodeSet:

Code	Name	Description
0	NERCEasternOffPeak	NERC Eastern Off-Peak
1	NERCWesternOffPeak	NERC Western Off-Peak
2	NERCCalendarAllDaysInMonth	NERC Calendar-All Days in month
3	NERCEasternPeak	NERC Eastern Peak
4	NERCWesternPeak	NERC Western Peak
5	AllTimes	All times
6	OnPeak	On peak
7	OffPeak	Off peak
8	Base	Base
9	Block	Block
99	Other	Other

Used in components: **Instrument**

180.2.1143 ForexReq

Indicates request for forex accommodation trade to be executed along with security transaction.

Type: **Boolean**

Allowed values in ForexReqCodeSet:

Code	Name	Description
N	DoNotExecuteForexAfterSecurity-Trade	Do Not Execute Forex After Security Trade
Y	ExecuteForexAfterSecurityTrade	Execute Forex After Security Trade

Used in groups: **ListOrdGrp**, **SideCrossOrdModGrp**

Used in messages: [BidRequest](#), [MultilegOrderCancelReplace](#), [NewOrderMultileg](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#)

180.2.1144 FundingSource

Specifies the funding source used to finance margin or collateralized loan.

Type: [int](#)

Allowed values in FundingSourceCodeSet:

Code	Name	Description
0	Repo	Repurchase agreement. Repurchase agreements or Buy Sellbacks. In the context of EU SFTR reporting this corresponds to code "REPO".
1	Cash	Cash. Cash collateral from securities lending. In the context of EU SFTR reporting this corresponds to code "SECL".
2	FreeCredits	Free credits. In the context of EU SFTR reporting this corresponds to code "FREE".
3	CustomerShortSales	Customer short sales. Proceeds from customer short sales. In the context of EU SFTR reporting this corresponds to code "CSHS".
4	BrokerShortSales	Broker short sales. Proceeds from broker short sales. In the context of EU SFTR reporting this corresponds to code "BSHS".
5	UnsecuredBorrowing	Unsecured borrowing. In the context of EU SFTR reporting this corresponds to code "UBOR".
99	Other	Other. In the context of EU SFTR reporting this corresponds to code "OTHR".

Used in groups: [FundingSourceGrp](#)

180.2.1145 FundingSourceCurrency

Currency denomination of the market value of the funding source.

FundingSourceCurrencyCodeSource(2954) may be used to disambiguate the code source scheme used, and ISO 4217 is the default scheme if absent.

Type: [Currency](#)

Used in groups: [FundingSourceGrp](#)

180.2.1146 FundingSourceCurrencyCodeSource

Identifies class or source of the FundingSourceCurrency(2847) value.

Type: **String**

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in groups: **FundingSourceGrp**

180.2.1147 FundingSourceGrp

This component is used to specify the funding source(s) used to finance a margin loan or collateralized loan.

Name	Mult.	Type	Description
NoFundingSources	[1..1]	NumInGroup	
FundingSource	[0..1]	CodeSet	Required if NoFundingSources(2849) > 0.
FundingSourceMarketValue	[0..1]	Amt	
FundingSourceCurrency	[0..1]	Currency	
FundingSourceCurrencyCodeSource	[0..1]	CodeSet	

Used in messages: **CollateralReport**

180.2.1148 FundingSourceMarketValue

Market value of the funding source.

Type: **Amt**

Used in groups: **FundingSourceGrp**

180.2.1149 FundRenewWaiv

A one character code identifying whether the Fund based renewal commission is to be waived.

Type: **char**

Allowed values in FundRenewWaivCodeSet:

Code	Name	Description
N	No	No
Y	Yes	Yes

Used in components: **CommissionData**

180.2.1150 FXBenchmark

The source of where to obtain the FX benchmark rate to use for fixing the rate.

Type: **int**

Allowed values in FXBenchmarkCodeSet:

Code	Name	Description
1	Bloomberg	Bloomberg. Also referred to as BFIX.
2	CentralBank	Central Bank
3	WMR	WMR
4	MitsubishiUFJ	Mitsubishi-UFJ. Also referred to as the Tokyo Fix.
5	LondonBullionMarketAssociation	London Bullion Market Association. Gold and Silver fixes are LBMA rates generated by ICE; Platinum and palladium fixes are LBMA rates generated by LME.
6	LondonMetalExchange	London Metal Exchange. Base metal prices come from the LME. LBMA should be used for platinum and palladium even though these are LME rates.
99	Other	Other. An appropriate reference page, ReferencePage(1448), at the specified RateSource(1446) needs to be specified.

Used in groups: **RateSource**

180.2.1151 FXBenchmarkBusinessCenter

A business center whose calendar is used for date/time adjustment. See <https://www.fpml.org/coding-scheme/business-center> to download the current (ISDA/FpML) standard 4-character code values for business center identification.

Type: **String**

Used in groups: **RateSource**

180.2.1152 FXBenchmarkDate

The local date of the FX rate fixing. The time applicable on the fixing date is specified in FXBenchmarkTime(3075).

Type: **LocalMktDate**

Used in groups: **RateSource**

180.2.1153 FXBenchmarkRateFix

Specifies the foreign exchange benchmark rate fixing to be used in valuing the transaction. For example "London 4 p.m." or "Tokyo 3 p.m."

Type: **String**

Used in groups: **RateSource**

180.2.1154 FXBenchmarkTime

The local time of the FX rate fixing. The date applicable for the fixing time is specified in FXBenchmarkDate(3074).

Type: **LocalMktTime**

Used in groups: **RateSource**

180.2.1155 Gamma

The rate of change of Delta over time.

Type: **float**

Used in groups: **SecurityRiskMetricGrp**

180.2.1156 GapFillFlag

Indicates that the Sequence Reset message is replacing administrative or application messages which will not be resent.

Type: **Boolean**

Allowed values in GapFillFlagCodeSet:

Code	Name	Description
N	SequenceReset	Sequence Reset, Ignore Msg Seq Num (N/A For FIXML - Not Used)
Y	GapFillMessage	Gap Fill Message, Msg Seq Num Field Valid

Used in messages: **SequenceReset**

180.2.1157 GoverningLaw

Identification of the law governing the transaction. See <http://www.fpml.org/coding-scheme/governing-law> for values.

Type: **String**

Used in components: **FinancingDetails**

180.2.1158 GrossTradeAmt

Total amount traded expressed in units of currency - usually quantity * price. For FX Futures this is used to express the notional value of a fill when quantity fields are expressed in terms of contract size (i.e. quantity * price * contract size).

Type: **Amt**

Used in components: **SettlTradeDetails**

Used in messages: **AllocationInstruction, AllocationInstructionAlert, AllocationReport, Confirmation, ExecutionReport, TradeCaptureReport, TradeCaptureReportAck**

180.2.1159 GroupAmount

Indicates the total notional units or amount of an allocation group. Includes any allocated units or amount.

Type: **Amt**

Used in groups: **TrdCapRptAckSideGrp**, **TrdCapRptSideGrp**

Used in messages: **AllocationInstructionAlert**, **AllocationReport**

180.2.1160 GroupRemainingAmount

Indicates the remaining notional units or amount of an allocation group that has not yet been allocated.

Type: **Amt**

Used in messages: **AllocationInstructionAlert**

180.2.1161 GTBookingInst

Code to identify whether to book out executions on a part-filled GT order on the day of execution or to accumulate.

Type: **int**

Allowed values in GTBookingInstCodeSet:

Code	Name	Description
0	BookOutAllTradesOnDayOfExecution	Book out all trades on day of execution
1	AccumulateUntilFilledOrExpired	Accumulate executions until order is filled or expires
2	AccumulateUntilVerballyNotifiedOtherwise	Accumulate until verbally notified otherwise

Used in groups: **ListOrdGrp**

Used in messages: **CrossOrderCancelReplaceRequest**, **ExecutionReport**, **MultilegOrderCancelReplace**, **NewOrderCross**, **NewOrderMultileg**, **NewOrderSingle**, **OrderCancelReplaceRequest**

180.2.1162 HaircutIndicator

Indicates, if "Y", that a stated valuation includes a haircut, e.g. that the stated value reflects the subtraction of the haircut. Note that a value of "N" does not imply a haircut is not applicable, only that the haircut (if any) is not reflected in the stated valuation.

Type: **Boolean**

Used in groups: [CollateralAmountGrp](#)

180.2.1163 HaltReason

Denotes the reason for the Opening Delay or Trading Halt.

Type: [int](#)

Allowed values in HaltReasonCodeSet:

Code	Name	Description
0	NewsDissemination	News Dissemination
1	OrderInflux	Order Influx
2	OrderImbalance	Order Imbalance
3	AdditionalInformation	Additional Information
4	NewsPending	News Pending
5	EquipmentChangeover	Equipment Changeover

Used in groups: [MDFullGrp](#), [MDIncGrp](#), [SecMassStatGrp](#)

Used in messages: [SecurityStatus](#)

180.2.1164 HandlInst

Instructions for order handling on Broker trading floor

Type: [char](#)

Allowed values in HandlInstCodeSet:

Code	Name	Description
1	AutomatedExecutionNoIntervention	Automated execution order, private, no Broker intervention
2	AutomatedExecutionInterventionOK	Automated execution order, public, Broker intervention OK
3	ManualOrder	Manual order, best execution

Used in groups: [ListOrdGrp](#)

Used in messages: [CrossOrderCancelReplaceRequest](#), [ExecutionReport](#), [MultilegOrderCancelReplace](#), [NewOrderCross](#), [NewOrderMultileg](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#)

180.2.1165 Headline

The headline of a News message

Type: **String**

Used in messages: **News**

180.2.1166 HeartBtInt

Heartbeat interval (seconds)

Type: **int**

Used in messages: **Logon**

180.2.1167 HighLimitPrice

Allowable high limit price for the trading day. A key parameter in validating order price. Used as the upper band for validating order prices. Orders submitted with prices above the upper limit will be rejected

Type: **Price**

Used in components: **PriceLimits**

180.2.1168 HighPx

Represents an indication of the high end of the price range for a security prior to the open or reopen

Type: **Price**

Used in groups: **MDFullGrp**, **MDIncGrp**

Used in messages: **AllocationInstructionAlert**, **SecurityStatus**

180.2.1169 HistoricalReportIndicator

Indicates that the trade or event being reported occurred in the past and the trade is terminated or no longer active.

Type: **Boolean**

Used in messages: **TradeCaptureReport**

180.2.1170 HopCompID

Assigned value used to identify the third party firm which delivered a specific message either from the firm which originated the message or from another third party (if multiple "hops" are performed). It is recommended that this value be the SenderCompID (49) of the third party.

Applicable when messages are communicated/re-distributed via third parties which function as service bureaus or "hubs". Only applicable if OnBehalfOfCompID (115) is being used.

Type: **String**

Used in groups: **HopGrp**

180.2.1171 HopGrp

Name	Mult.	Type	Description
NoHops	[1..1]	NumInGroup	
HopCompID	[0..1]	String	
HopSendingTime	[0..1]	UTCTimestamp	
HopRefID	[0..1]	SeqNum	

Used in components: **StandardHeader**

180.2.1172 HopRefID

Reference identifier assigned by HopCompID (628) associated with the message sent. It is recommended that this value be the MsgSeqNum (34) of the message sent by the third party.

Applicable when messages are communicated/re-distributed via third parties which function as service bureaus or "hubs". Only applicable if OnBehalfOfCompID (115) is being used.

Type: **SeqNum**

Used in groups: **HopGrp**

180.2.1173 HopSendingTime

Time that HopCompID (628) sent the message. It is recommended that this value be the SendingTime (52) of the message sent by the third party.

Applicable when messages are communicated/re-distributed via third parties which function as service bureaus or "hubs". Only applicable if OnBehalfOfCompID (115) is being used.

Type: **UTCTimestamp**

Used in groups: **HopGrp**

180.2.1174 HostCrossID

Host assigned entity ID that can be used to reference all components of a cross; sides + strategy + legs. Used as the primary key with which to refer to the Cross Order for cancellation and replace. The HostCrossID will also be used to link together components of the Cross Order. For example, each individual Execution Report associated with the order will carry HostCrossID in order to tie back to the original cross order.

Type: **String**

Used in messages: **CrossOrderCancelReplaceRequest**, **CrossOrderCancelRequest**, **ExecutionReport**

180.2.1175 ImpliedMarketIndicator

Indicates that an implied market should be created for either the legs of a multi-leg instrument (Implied-in) or for the multi-leg instrument based on the existence of the legs (Implied-out). Determination as to whether implied markets should be created is generally done at the level of the multi-leg instrument. Commonly used in listed derivatives.

Type: **int**

Allowed values in ImpliedMarketIndicatorCodeSet:

Code	Name	Description
0	NotImplied	Not implied
1	ImpliedIn	Implied-in - The existence of a multi-leg instrument is implied by the legs of that instrument
2	ImpliedOut	Implied-out - The existence of the underlying legs are implied by the multi-leg instrument
3	BothImpliedInAndImpliedOut	Both Implied-in and Implied-out

Used in components: **BaseTradingRules**

180.2.1176 IncTaxInd

Code to represent whether value is net (inclusive of tax) or gross.

Type: **int**

Allowed values in IncTaxIndCodeSet:

Code	Name	Description
1	Net	Net
2	Gross	Gross

Used in messages: **BidRequest**

180.2.1177 IndexAnnexDate

The date of a credit default swap index series annex.

Type: **LocalMktDate**

Used in components: **Instrument**

180.2.1178 IndexAnnexSource

The source of a credit default swap series annex.

Type: **String**

Used in components: **Instrument**

180.2.1179 IndexAnnexVersion

The version of a credit default swap index annex.

Type: **int**

Used in components: **Instrument**

180.2.1180 IndexRollMonth

Month identified in the index roll.

Type: **String**

Used in groups: **IndexRollMonthGrp**

180.2.1181 IndexRollMonthGrp

Used for specifying multiple roll months in a given year for an index.

Name	Mult.	Type	Description
NoIndexRollMonths	[1..1]	NumInGroup	
IndexRollMonth	[0..1]	String	Required if NoIndexRollMonths(2734) > 0.

Used in components: **InstrumentExtension**

180.2.1182 IndexSeries

The series identifier of a credit default swap index.

Type: **int**

Used in components: **Instrument**

180.2.1183 IndividualAllocID

Unique identifier for a specific NoAllocs (78) repeating group instance (e.g. for an AllocAccount).

Type: **String**

Used in components: **SettlTradeDetails**

Used in groups: **AllocAckGrp**, **AllocGrp**, **PreAllocGrp**, **PreAllocMlegGrp**, **TrdAllocGrp**

Used in messages: **Confirmation**, **ConfirmationRequest**

180.2.1184 IndividualAllocRejCode

Identified reason for rejecting an individual AllocAccount (79) detail.

Same values as AllocRejCode (88)

Type: **int**

Allowed values in AllocRejCodeCodeSet:

Code	Name	Description
0	UnknownAccount	Unknown or missing account(s)
1	IncorrectQuantity	Incorrect or missing block quantity
2	IncorrectAveragePrice	Incorrect or missing average price
3	UnknownExecutingBrokerMnemonic	Unknown executing broker mnemonic
4	CommissionDifference	Incorrect or missing commission
5	UnknownOrderID	Unknown OrderID(37)
6	UnknownListID	Unknown ListID(66)
7	OtherSeeText	Other (further in Text (58))
8	IncorrectAllocatedQuantity	Incorrect or missing allocated quantity
9	CalculationDifference	Calculation difference
10	UnknownOrStaleExecID	Unknown or Stale ExecID(17)
11	MismatchedData	Mismatched data
12	UnknownCLOrdID	Unknown CLOrdID(11)
13	WarehouseRequestRejected	Warehouse request rejected
14	DuplicateOrMissingIndividualAllocID	Duplicate or missing IndividualAllocID(467)
15	TradeNotRecognized	Trade not recognized
16	DuplicateTrade	Trade previously allocated
17	IncorrectOrMissingInstrument	Incorrect or missing instrument
18	IncorrectOrMissingSettlDate	Incorrect or missing settlement date
19	IncorrectOrMissingFundIDOrFund- Name	Incorrect or missing fund ID or fund name
20	IncorrectOrMissingSettlInstructions	Incorrect or missing settlement instructions
21	IncorrectOrMissingFees	Incorrect or missing fees
22	IncorrectOrMissingTax	Incorrect or missing tax
23	UnknownOrMissingParty	Unknown or missing party
24	IncorrectOrMissingSide	Incorrect or missing side
25	IncorrectOrMissingNetMoney	Incorrect or missing net-money

Code	Name	Description
26	IncorrectOrMissingTradeDate	Incorrect or missing trade date
27	IncorrectOrMissingSettlCcyInstructions	Incorrect or missing settlement currency instructions
28	IncorrectOrMissingProcessCode	Incorrect or missing ProcessCode(81)
99	Other	Other. Use RejectText(1328) for further reject reasons.

Used in groups: [AllocAckGrp](#)

180.2.1185 IndividualAllocSubQtyAttributeGrp

This repeating group is used to specify the trade attributes used to define a subgroup of an average pricing group for an individual allocation.

Name	Mult.	Type	Description
NoIndividualAllocSubQtyAttributes	[1..1]	NumInGroup	
IndividualAllocSubQtyType	[0..1]	CodeSet	Required if NoIndividualAllocSubQtyAttributes (3099) > 0.
IndividualAllocSubQtyValue	[0..1]	String	Required if NoIndividualAllocSubQtyAttributes (3099) > 0.

Used in groups: [AllocGrp](#)

180.2.1186 IndividualAllocSubQtyType

Type of trade attribute defining a subgroup in an allocation group.

Type: [int](#)

Allowed values in [AllocGroupSubQtyTypeCodeSet](#):

Code	Name	Description
1	TradeType	Trade type
2	TradePublicationIndicator	Trade publication indicator
3	OrderHandlingInstruction	Order handling instruction

Used in groups: [IndividualAllocSubQtyAttributeGrp](#)

180.2.1187 IndividualAllocSubQtyValue

Value of the trade attribute defining a subgroup in an allocation group.

Type: **String**

Used in groups: **IndividualAllocSubQtyAttributeGrp**

180.2.1188 IndividualAllocType

Identifies whether the allocation is to be sub-allocated or allocated to a third party

Type: **int**

Allowed values in IndividualAllocTypeCodeSet:

Code	Name	Description
1	SubAllocate	Sub Allocate
2	ThirdPartyAllocation	Third Party Allocation

Used in groups: **AllocAckGrp**, **AllocGrp**

180.2.1189 InformationBarrierID

The identifier of the information barrier in place for a trading unit that will meet the criteria of the "no-knowledge" exception in FINRA Rule 5320.02.

Type: **String**

Used in groups: **TrdRegTimestamps**

180.2.1190 InitialDisplayQty

Used to convey the initially requested display quantity specified in DisplayQty(1138) on order entry and modification messages in ExecutionReport message. Applicable only in ExecutionReport message where DisplayQty(1138) is the currently displayed quantity and the requested display quantity of the order also needs to be conveyed. The values of the two fields are different as soon as the order is partially filled and also after a refresh of the order whenever DisplayMethod(1084) is not 1=Initial.

Type: **Qty**

Used in components: **DisplayInstruction**

180.2.1191 InputSource

Originating source of the request.

Type: **String**

Used in messages: **ContraryIntentionReport**, **PositionMaintenanceReport**

180.2.1192 InstrAttribType

Code to represent the type of instrument attribute

Type: **int**

Allowed values in InstrAttribTypeCodeSet:

Code	Name	Description
1	Flat	Flat (securities pay interest on a current basis but are traded without interest)
2	ZeroCoupon	Zero coupon
3	InterestBearing	Interest bearing (for Euro commercial paper when not issued at discount)
4	NoPeriodicPayments	No periodic payments
5	VariableRate	Variable rate
6	LessFeeForPut	Less fee for put
7	SteppedCoupon	Stepped coupon
8	CouponPeriod	Coupon period (if not semi-annual). Supply redemption date in the InstrAttribValue(872) field.
9	When	When [and if] issued
10	OriginalIssueDiscount	Original issue discount
11	Callable	Callable, puttable
12	EscrowedToMaturity	Escrowed to Maturity
13	EscrowedToRedemptionDate	Escrowed to redemption date - callable. Supply redemption date in the InstrAttribValue(872) field.
14	PreRefunded	Pre-refunded
15	InDefault	In default
16	Unrated	Unrated
17	Taxable	Taxable
18	Indexed	Indexed
19	SubjectToAlternativeMinimumTax	Subject To Alternative Minimum Tax

Code	Name	Description
20	OriginalIssueDiscountPrice	Original issue discount price. Supply price in the InstrAttribValue(872) field.
21	CallableBelowMaturityValue	Callable below maturity value
22	CallableWithoutNotice	Callable without notice by mail to holder unless registered
23	PriceTickRulesForSecurity	Price tick rules for security
24	TradeTypeEligibilityDetailsForSecurity	Trade type eligibility details for security
25	InstrumentDenominator	Instrument denominator
26	InstrumentNumerator	Instrument numerator
27	InstrumentPricePrecision	Instrument price precision
28	InstrumentStrikePrice	Instrument strike price
29	TradeableIndicator	Tradeable indicator
30	InstrumentEligibleAnonOrders	Instrument is eligible to accept anonymous orders
31	MinGuaranteedFillVolume	Minimum guaranteed fill volume
32	MinGuaranteedFillStatus	Minimum guaranteed fill status
33	TradeAtSettlementEligibility	Trade at settlement (TAS) eligibility
34	TestInstrument	Test instrument. Instrument that is tradable but has no effect on the positions, exchange turnover etc.
35	DummyInstrument	Dummy instrument. Instrument that is normally halted and is only activated for trading under very special conditions (e.g. temporarily assigned for newly listed instrument). Use of a dummy instrument generally applies to systems that are unable to add reference data for new instruments intraday.
36	NegativeSettlementPriceEligibility	Negative settlement price eligibility
37	NegativeStrikePriceEligibility	Negative strike price eligibility
38	USStdContractInd	US standard contract indicator. Indicates through InstrAttribValue(872) - values Y or N - whether the underlying asset in the trade references or is economically related to a contract listed in Appendix B of CFTC Part 43 regulation. See http://www.ecfr.gov/cgi-bin/text-idx?SID=4b2d1078ad68f6564a89d7ff6c52ec43&node=17:2.0.1.1.3.0.1.8.2&rgn=div or refer to Appendix B to Part 43 in the final rule at http://www.cftc.gov/ucm/groups/public/@lrfederalregister/documents/file/2013-12133a.pdf
39	AdmittedToTradingOnTradingVenue	Admitted to trading on a trading venue
40	AverageDailyNotionalAmount	Average daily notional amount
41	AverageDailyNumberTrades	Average daily number of trades
99	Text	Text. Supply the text value in InstrAttribValue(872).

Code	Name	Description
------	------	-------------

Used in groups: [AttrbGrp](#)

180.2.1193 InstrAttribValue

Attribute value appropriate to the InstrAttribType (871) field.

Type: [String](#)

Used in groups: [AttrbGrp](#)

180.2.1194 InstrmtAssignmentMethod

Method under which assignment was conducted

Type: [char](#)

Allowed values in InstrmtAssignmentMethodCodeSet:

Code	Name	Description
P	ProRata	Pro rata
R	Random	Random

Used in components: [Instrument](#)

180.2.1195 InstrmtGrp

Name	Mult.	Type	Description
NoRelatedSym	[1..1]	NumInGroup	Specifies the number of repeating symbols (instruments) specified
Instrument	[0..1]	Component	Insert here the set of "Instrument" (symbology) fields defined in "Common Components of Application Messages"
InstrumentExtension	[0..1]	Component	
FinancingDetails	[0..1]	Component	
RelatedInstrumentGrp	[0..*]	Group	

Name	Mult.	Type	Description
------	-------	------	-------------

Used in messages: [AdjustedPositionReport](#), [Email](#), [News](#)

180.2.1196 InstrmtLegExecGrp

Name	Mult.	Type	Description
NoLegs	[1..1]	NumInGroup	Number of leg executions.
InstrumentLeg	[0..1]	Component	Required if NoLegs(555) > 0.
LegOrderQty	[0..1]	Qty	Quantity ordered for this leg as provided during order entry.
LegQty	[0..1]	Qty	The LegQty(687) field is deprecated. The use of LegOrderQty(685) is recommended instead.
LegMidPx	[0..1]	Price	
LegSwapType	[0..1]	CodeSet	Instead of LegOrderQty(685) requests that the sellside calculate LegOrderQty(685) based on opposite Leg.
LegStipulations	[0..*]	Group	
LegAllocID	[0..1]	String	
LegPreAllocGrp	[0..*]	Group	
LegAccount	[0..1]	String	
LegClearingAccountType	[0..1]	CodeSet	Provide if different from the value specified for the overall multileg security in ClearingAccountType(1816) in the Instrument component.
LegPositionEffect	[0..1]	CodeSet	Provide if different from the value specified for the overall multileg security in PositionEffect(77) in the Instrument component.
LegCoveredOrUncovered	[0..1]	CodeSet	Provide if different from the value specified for the overall multileg security in CoveredOrUncovered(203) in the Instrument component.
NestedParties3	[0..*]	Group	
LegRefID	[0..1]	String	Use of LegRefID(654) in this component is deprecated. Recommend the use of LegID(1788) in the InstrumentLeg component.
LegSettlType	[0..1]	CodeSet	

Name	Mult.	Type	Description
LegSettlDate	[0..1]	LocalMktDate	Takes precedence over a calculated LegSettlType(587) when specified regardless of LegSettlType(587) value. Conditionally required when LegSettlType(587) = B(Broken date).
LegLastPx	[0..1]	Price	Used to report the execution price assigned to the leg of the multileg instrument.
LegSettlCurrency	[0..1]	Currency	
LegSettlCurrencyCodeSource	[0..1]	CodeSet	
LegLastForwardPoints	[0..1]	PriceOffset	
LegCalculatedCcyLastQty	[0..1]	Qty	
LegGrossTradeAmt	[0..1]	Amt	For FX Futures can be used to express the notional value of a trade when LegLastQty(1418) and other quantity fields are expressed in terms of number of contracts - LegContractMultiplier(231) is required in this case.
LegShortSaleExemptionReason	[0..1]	CodeSet	Available for optional use when LegSide(624) = 6 (Sell short exempt) in InstrumentLeg component.
LegVolatility	[0..1]	float	
LegDividendYield	[0..1]	Percentage	
LegCurrencyRatio	[0..1]	float	
LegExecInst	[0..1]	CodeSet	
LegLastQty	[0..1]	Qty	Quantity executed for this leg.
FillRefID	[0..1]	String	Use to reference the partial execution of a multi-leg order to which this leg execution belongs.

Used in messages: **ExecutionReport**

180.2.1197 InstrmtLegGrp

Name	Mult.	Type	Description
NoLegs	[1..1]	NumInGroup	Number of legs
InstrumentLeg	[0..1]	Component	Required if NoLegs(555) > 0.
LegFinancingDetails	[0..1]	Component	

Used in groups: InstrmtMDReqGrp, InstrmtMatchSideGrp, MDIncGrp, QuotCxlEntriesGrp, QuotEntryAckGrp, QuotEntryGrp, RFQReqGrp, RelSymDerivSecGrp, RelSymDerivSecUpdGrp, SecMassStatGrp

Used in messages: Advertisement, AllocationInstruction, AllocationInstructionAlert, AllocationReport, AssignmentReport, CollateralAssignment, CollateralInquiry, CollateralInquiryAck, CollateralReport, CollateralRequest, CollateralResponse, Confirmation, CrossOrderCancelReplaceRequest, CrossOrderCancelRequest, DontKnowTrade, Email, ExecutionAck, MarketDataSnapshotFullRefresh, MarketDataStatisticsReport, MarketDataStatisticsRequest, NewOrderCross, News, PositionMaintenanceReport, PositionMaintenanceRequest, PositionReport, QuoteStatusRequest, RequestForPositions, RequestForPositionsAck, SecurityDefinition, SecurityDefinitionRequest, SecurityDefinitionUpdateReport, SecurityListRequest, SecurityStatus, SecurityStatusRequest, TradeCaptureReportRequest, TradeCaptureReportRequestAck

180.2.1198 InstrmtLegIOIGrp

Name	Mult.	Type	Description
NoLegs	[1..1]	NumInGroup	Required for multileg IOIs
InstrumentLeg	[0..1]	Component	Required for multileg IOIs. For Swaps one leg is Buy and other leg is Sell
LegIOIQty	[0..1]	CodeSet	Required for multileg IOIs and for each leg.
LegStipulations	[0..*]	Group	

Used in messages: IOI

180.2.1199 InstrmtLegSecListGrp

Name	Mult.	Type	Description
NoLegs	[1..1]	NumInGroup	Number of legs that make up the Security
InstrumentLeg	[0..1]	Component	Insert here the set of "Instrument Legs" (leg symbology) fields defined in "Common Components of Application Messages". Required if NoLegs > 0
LegSwapType	[0..1]	CodeSet	
LegSettlType	[0..1]	CodeSet	

Name	Mult.	Type	Description
LegStipulations	[0..*]	Group	Insert here the set of "LegStipulations" (leg symbology) fields defined in "Common Components of Application Messages". Required if NoLegs > 0
LegBenchmarkCurveData	[0..1]	Component	Insert here the set of "LegBenchmarkCurveData" (leg symbology) fields defined in "Common Components of Application Messages". Required if NoLegs > 0

Used in groups: [SecListGrp](#)

180.2.1200 InstrmtMatchSideGrp

The InstrmtMatchSideGrp component is used to convey all trades for a given match event reported by instrument and trade side.

Name	Mult.	Type	Description
NoInstrmtMatchSides	[1..1]	NumInGroup	
Instrument	[0..1]	Component	Required if NoInstrmtMatchSides(1889) > 0.
InstrmtLegGrp	[0..*]	Group	LegID(1788) in the InstrmtLegGrp component can be used to reference individual leg executions referenced in the TrdInstrmtLegExecGrp component with LegRefID(654).
UndInstrmtGrp	[0..*]	Group	
TrdMatchSubID	[0..1]	String	
Quantity	[0..1]	Qty	Total quantity for this instrument in this match event. This is the cumulative sum of LastQty(32) for all match steps for this instrument.
Currency	[0..1]	Currency	
CurrencyCodeSource	[0..1]	CodeSet	
SettlCurrency	[0..1]	Currency	
SettlCurrencyCodeSource	[0..1]	CodeSet	
QtyType	[0..1]	CodeSet	

Name	Mult.	Type	Description
LastQty	[0..1]	Qty	Required if NoInstrmtMatchSides(1889) > 0. Trade quantity for this instrument within this match step. The value is the greater of the sum of SideLastQty(1009) of each side (i.e. buy or sell) for each TrdMatchSideGrp instance within the current InstrmtMatchSideGrp instance.
PriceType	[0..1]	CodeSet	
LastPx	[0..1]	Price	Required if NoInstrmtMatchSides(1889) > 0.
LastMkt	[0..1]	Exchange	
TrdMatchSideGrp	[0..*]	Group	Required if NoInstrmtMatchSides(1889) > 0.

Used in messages: TradeMatchReport

180.2.1201 InstrmtMDReqGrp

Name	Mult.	Type	Description
NoRelatedSym	[1..1]	NumInGroup	Number of symbols (instruments) requested.
Instrument	[1..1]	Component	Insert here the set of "Instrument" (symbology) fields defined in "Common Components of Application Messages"
InstrumentExtension	[0..1]	Component	
FinancingDetails	[0..1]	Component	
UndInstrmtGrp	[0..*]	Group	
InstrmtLegGrp	[0..*]	Group	
RelatedInstrumentGrp	[0..*]	Group	
SpreadOrBenchmarkCurveData	[0..1]	Component	
Currency	[0..1]	Currency	
CurrencyCodeSource	[0..1]	CodeSet	
QuoteType	[0..1]	CodeSet	
SettlType	[0..1]	CodeSet	For NDFs either SettlType (specifying the tenor) or SettlDate must be specified.
SettlDate	[0..1]	LocalMktDate	SettlType (specifying the tenor) or SettlDate must be specified.

Name	Mult.	Type	Description
MDEntrySize	[0..1]	Qty	Quantity or volume represented by the Market Data Entry. In the context of the Market Data Request this allows the Initiator to indicate the quantity of the market data request. Specific to FX this field indicates the ceiling amount the customer is seeking prices for.
MStreamID	[0..1]	String	

Used in messages: [MarketDataRequest](#)

180.2.1202 InstrmtStrkPxGrp

Name	Mult.	Type	Description
NoStrikes	[1..1]	NumInGroup	Number of strike price entries
Instrument	[1..1]	Component	Insert here the set of "Instrument" (symbology) fields defined in "Common Components of Application Messages". Required if NoStrikes > 0. Must be first field in repeating group.
UndInstrmtGrp	[0..*]	Group	Underlying Instruments
PrevClosePx	[0..1]	Price	Useful for verifying security identification
ClOrdID	[0..1]	String	Can use client order identifier or the symbol and side to uniquely identify the stock in the list.
SecondaryClOrdID	[0..1]	String	
Side	[0..1]	CodeSet	
Price	[0..1]	Price	
Currency	[0..1]	Currency	
CurrencyCodeSource	[0..1]	CodeSet	
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.

Used in messages: [ListStrikePrice](#)

180.2.1203 InstrRegistry

Values may include BIC for the depository or custodian who maintain ownership records, the ISO country code for the location of the record, or the value "ZZ" to specify physical ownership of the security (e.g. stock certificate).

Type: **String**

Used in components: **Instrument**

180.2.1204 Instrument

The Instrument component block contains all the fields commonly used to describe a security or instrument. Typically the data elements in this component block are considered the static data of a security, data that may be commonly found in a security master database. The Instrument component block can be used to describe any asset type supported by FIX.

Name	Mult.	Type	Description
Symbol	[0..1]	String	Common, "human understood" representation of the security. SecurityID value can be specified if no symbol exists (e.g. non-exchange traded Collective Investment Vehicles). Use "[N/A]" for products which do not have a symbol. Required if the Instrument component is marked as required where the component is used.
Symbolsfx	[0..1]	CodeSet	Used in Fixed Income with a value of "WI" to indicate "When Issued" for a security to be reissued under an old CUSIP or ISIN or with a value of "CD" to indicate a EUCP with lump-sum interest rather than discount price.
SecurityID	[0..1]	String	Takes precedence in identifying security to counterparty over SecurityAltID block. Requires SecurityIDSource if specified.
SecurityIDSource	[0..1]	CodeSet	Conditionally required when SecurityID(48) is specified.
SecAltIDGrp	[0..*]	Group	Number of alternate Security Identifiers
Product	[0..1]	CodeSet	Indicates the type of product the security is associated with (high-level category)
ProductComplex	[0..1]	String	Identifies an entire suite of products for a given market. In Futures this may be "interest rates", "agricultural", "equity indexes", etc

Name	Mult.	Type	Description
SecurityGroup	[0..1]	String	An exchange specific name assigned to a group of related securities which may be concurrently affected by market events and actions.
CFICode	[0..1]	String	Indicates the type of security using ISO 10962 standard, Classification of Financial Instruments (CFI code) values. It is recommended that CFICode be used instead of SecurityType for non-Fixed Income instruments.
UPICode	[0..1]	String	
SecurityType	[0..1]	CodeSet	It is recommended that CFICode be used instead of SecurityType for non-Fixed Income instruments. Required for Fixed Income. Refer to Volume 7 - Fixed Income. Futures and Options should be specified using the CFICode[461] field instead of SecurityType[167] (Refer to Volume 7 - Recommendations and Guidelines for Futures and Options Markets.)
SecuritySubType	[0..1]	String	Sub-type qualification/identification of the SecurityType (e.g. for SecurityType="MLEG"). If specified, SecurityType is required.
MaturityMonthYear	[0..1]	MonthYear	Specifies the month and year of maturity. Applicable for standardized derivatives which are typically only referenced by month and year (e.g. S&P futures). Note MaturityDate (a full date) can also be specified.
MaturityDate	[0..1]	LocalMktDate	Specifies date of maturity (a full date). Note that standardized derivatives which are typically only referenced by month and year (e.g. S&P futures) may use MaturityMonthYear(200) and/or this field. When using MaturityMonthYear(200), it is recommended that markets and sell sides report the MaturityDate(541) on all outbound messages as a means of data enrichment. For NDFs this represents the fixing date of the contract.
MaturityTime	[0..1]	TZTimeOnly	For NDFs this represents the fixing time of the contract. It is optional to specify the fixing time.
MaturityFrequencyUnit	[0..1]	CodeSet	Conditionally required when MaturityFrequencyPeriod(2983) is specified.
MaturityFrequencyPeriod	[0..1]	int	Conditionally required when MaturityFrequencyUnit(2982) is specified and the value is not EOM (End of Month) or F (Flexible).

Name	Mult.	Type	Description
SettleOnOpenFlag	[0..1]	String	Indicator to determine if Instrument is Settle on Open.
InstrmtAssignmentMethod	[0..1]	CodeSet	
SecurityStatus	[0..1]	CodeSet	Gives the current state of the instrument
CouponPaymentDate	[0..1]	LocalMktDate	Date interest is to be paid. Used in identifying Corporate Bond issues.
RestructuringType	[0..1]	CodeSet	
Seniority	[0..1]	CodeSet	
NotionalPercentageOutstanding	[0..1]	Percentage	
OriginalNotionalPercentageOutstanding	[0..1]	Percentage	
AttachmentPoint	[0..1]	Percentage	
DetachmentPoint	[0..1]	Percentage	
ObligationType	[0..1]	CodeSet	
AssetGroup	[0..1]	CodeSet	
AssetClass	[0..1]	CodeSet	Required if AssetSubClass(1939) is specified.
AssetSubClass	[0..1]	CodeSet	Required if AssetType(1940) is specified.
AssetType	[0..1]	String	Required if AssetSubType(2735) is specified.
AssetSubType	[0..1]	String	
SecondaryAssetGrp	[0..*]	Group	
AssetAttributeGrp	[0..*]	Group	
SwapClass	[0..1]	CodeSet	
SwapSubClass	[0..1]	CodeSet	
NthToDefault	[0..1]	int	Conditionally required when MthToDefault(1943) is specified.
MthToDefault	[0..1]	int	
SettledEntityMatrixSource	[0..1]	String	
SettledEntityMatrixPublicationDate	[0..1]	LocalMktDate	
CouponType	[0..1]	CodeSet	
TotalIssuedAmount	[0..1]	Amt	
CouponFrequencyPeriod	[0..1]	int	Conditionally required when CouponFrequencyUnit(1949) is specified.
CouponFrequencyUnit	[0..1]	CodeSet	Conditionally required when CouponFrequencyPeriod(1948) is specified.
CouponDayCount	[0..1]	CodeSet	
CouponOtherDayCount	[0..1]	String	

Name	Mult.	Type	Description
ConvertibleBondEquityID	[0..1]	String	
ConvertibleBondEquityIDSource	[0..1]	CodeSet	Conditionally required when ConvertibleBondEquityID(1951) is specified.
ContractPriceRefMonth	[0..1]	MonthYear	
LienSeniority	[0..1]	CodeSet	
LoanFacility	[0..1]	CodeSet	
ReferenceEntityType	[0..1]	CodeSet	
IndexSeries	[0..1]	int	
IndexAnnexVersion	[0..1]	int	
IndexAnnexDate	[0..1]	LocalMktDate	
IndexAnnexSource	[0..1]	String	
SettlRateIndex	[0..1]	String	
SettlRateIndexLocation	[0..1]	String	
OptionExpirationDesc	[0..1]	String	
EncodedOptionExpirationDescLen	[0..1]	Length	Must be set if EncodedOptionExpirationDesc(1697) field is specified and must immediately precede it.
EncodedOptionExpirationDesc	[0..1]	data	Encoded (non-ASCII characters) representation of the OptionExpirationDesc(1581) field in the encoded format specified via the MessageEncoding(347) field.
IssueDate	[0..1]	LocalMktDate	Date instrument was issued. For Fixed Income IOIs for new issues, specifies the issue date.
RepoCollateralSecurityType	[0..1]	String	
RepurchaseTerm	[0..1]	int	
RepurchaseRate	[0..1]	Percentage	
Factor	[0..1]	float	For Fixed Income: Amortization Factor for deriving Current face from Original face for ABS or MBS securities, note the fraction may be greater than, equal to or less than 1. In TIPS securities this is the Inflation index. $Qty * Factor * Price = \text{Gross Trade Amount}$. For Derivatives: Contract Value Factor by which price must be adjusted to determine the true nominal value of one futures/options contract. $(Qty * Price) * Factor = \text{Nominal Value}$
CreditRating	[0..1]	String	

Name	Mult.	Type	Description
InstrRegistry	[0..1]	String	The location at which records of ownership are maintained for this instrument, and at which ownership changes must be recorded. Can be used in conjunction with ISIN to address ISIN uniqueness issues.
CountryOfIssue	[0..1]	Country	ISO Country code of instrument issue (e.g. the country portion typically used in ISIN). Can be used in conjunction with non-ISIN SecurityID (e.g. CUSIP for Municipal Bonds without ISIN) to provide uniqueness.
StateOrProvinceOfIssue	[0..1]	String	A two-character state or province abbreviation.
LocaleOfIssue	[0..1]	String	The three-character IATA code for a locale (e.g. airport code for Municipal Bonds).
RedemptionDate	[0..1]	LocalMktDate	
StrikePrice	[0..1]	Price	Used for derivatives, such as options and covered warrants
OrigStrikePrice	[0..1]	Price	
StrikePricePrecision	[0..1]	int	
StrikeCurrency	[0..1]	Currency	Used for derivatives
StrikeCurrencyCodeSource	[0..1]	CodeSet	
StrikeMultiplier	[0..1]	float	Used for derivatives. Multiplier applied to the strike price for the purpose of calculating the settlement value.
StrikeValue	[0..1]	float	Used for derivatives. The number of shares/units for the financial instrument involved in the option trade.
StrikeUnitOfMeasure	[0..1]	CodeSet	
StrikeIndex	[0..1]	String	
StrikeIndexCurvePoint	[0..1]	String	
StrikeIndexSpread	[0..1]	PriceOffset	
StrikeIndexQuote	[0..1]	CodeSet	
StrikePriceDeterminationMethod	[0..1]	CodeSet	
StrikePriceBoundaryMethod	[0..1]	CodeSet	When specified, PutOrCall(201), StrikePrice(202), and StrikePriceBoundaryPrecision(1480) must also be specified.
StrikePriceBoundaryPrecision	[0..1]	Percentage	
UnderlyingPriceDeterminationMethod	[0..1]	CodeSet	

Name	Mult.	Type	Description
OptAttribute	[0..1]	char	Used for derivatives, such as options and covered warrants to indicate a versioning of the contract when required due to corporate actions to the underlying. Should not be used to indicate type of option - use the CFICode[461] for this purpose.
ContractMultiplier	[0..1]	float	For Fixed Income, Convertible Bonds, Derivatives, etc. Note: If used, quantities should be expressed in the "nominal" (e.g. contracts vs. shares) amount.
ContractMultiplierUnit	[0..1]	CodeSet	
TradingUnitPeriodMultiplier	[0..1]	int	
FlowScheduleType	[0..1]	CodeSet	
MinPriceIncrement	[0..1]	float	Minimum price increment for the instrument. Could also be used to represent tick value.
MinPriceIncrementAmount	[0..1]	Amt	Minimum price increment amount associated with the MinPriceIncrement [969]. For listed derivatives, the value can be calculated by multiplying MinPriceIncrement by ContractValueFactor [231]
UnitOfMeasure	[0..1]	CodeSet	
UnitOfMeasureQty	[0..1]	Qty	
UnitOfMeasureCurrency	[0..1]	Currency	
UnitOfMeasureCurrencyCodeSource	[0..1]	CodeSet	
PriceUnitOfMeasure	[0..1]	CodeSet	
PriceUnitOfMeasureQty	[0..1]	Qty	
PriceUnitOfMeasureCurrency	[0..1]	Currency	
PriceUnitOfMeasureCurrencyCodeSource	[0..1]	CodeSet	
SettlMethod	[0..1]	CodeSet	Conditionally required if SettlSubMethod(2579) is specified.
SettlSubMethod	[0..1]	CodeSet	
ExerciseStyle	[0..1]	CodeSet	Type of exercise of a derivatives security
OptPayoutType	[0..1]	CodeSet	
OptPayoutAmount	[0..1]	Amt	Conditionally required if OptPayoutType(1482) = 3 (Binary).
ReturnTrigger	[0..1]	CodeSet	
PriceQuoteMethod	[0..1]	CodeSet	Method for price quotation
ValuationMethod	[0..1]	CodeSet	Indicates type of valuation method used.

Name	Mult.	Type	Description
ValuationSource	[0..1]	String	
ValuationReferenceModel	[0..1]	String	
PriceQuoteCurrency	[0..1]	Currency	
PriceQuoteCurrencyCodeSource	[0..1]	CodeSet	
ListMethod	[0..1]	CodeSet	Indicates whether the instruments are pre-listed only or can also be defined via user request
CapPrice	[0..1]	Price	Used to express the ceiling price of a capped call
FloorPrice	[0..1]	Price	Used to express the floor price of a capped put
PutOrCall	[0..1]	CodeSet	Used to express option right
InTheMoneyCondition	[0..1]	CodeSet	Used to express in-the-moneyness behavior in general terms for the option without the use of StrikePrice(202) and PutOrCall(201).
ContraryInstructionEligibilityIndicator	[0..1]	Boolean	
FlexibleIndicator	[0..1]	Boolean	Used to indicate if a security has been defined as flexible according to "non-standard" means. Analog to CFICode Standard/Non-standard indicator
FlexProductEligibilityIndicator	[0..1]	Boolean	Used to indicate if a product or group of product supports the creation of flexible securities
BlockTradeEligibilityIndicator	[0..1]	Boolean	
LowExercisePriceOptionIndicator	[0..1]	Boolean	
TimeUnit	[0..1]	CodeSet	Used to indicate a time unit for the contract (e.g., days, weeks, months, etc.)
CouponRate	[0..1]	Percentage	For Fixed Income.
SecurityExchange	[0..1]	Exchange	Can be used to identify the security.
PositionLimit	[0..1]	int	Position Limit for the instrument.
NTPositionLimit	[0..1]	int	Near-term Position Limit for the instrument.
Issuer	[0..1]	String	
EncodedIssuerLen	[0..1]	Length	Must be set if EncodedIssuer(349) field is specified and must immediately precede it.
EncodedIssuer	[0..1]	data	Encoded (non-ASCII characters) representation of the Issuer(106) field in the encoded format specified via the MessageEncoding(347) field.
FinancialInstrumentShortName	[0..1]	String	
FinancialInstrumentFullName	[0..1]	String	

Name	Mult.	Type	Description
EncodedFinancialInstrumentFull- NameLen	[0..1]	Length	Must be set if EncodedFinancialInstrumentFullName(2716) field is specified and must immediately precede it.
EncodedFinancialInstrumentFullName	[0..1]	data	Encoded (non-ASCII characters) representation of the FinancialInstrumentFullName(2714) field in the encoded format specified via the MessageEncoding(347) field.
SecurityDesc	[0..1]	String	
EncodedSecurityDescLen	[0..1]	Length	Must be set if EncodedSecurityDesc(351) field is specified and must immediately precede it.
EncodedSecurityDesc	[0..1]	data	Encoded (non-ASCII characters) representation of the SecurityDesc(107) field in the encoded format specified via the MessageEncoding(347) field.
SecurityXML	[0..1]	Component	Embedded XML document describing the instrument.
Pool	[0..1]	String	Identifies MBS / ABS pool
ContractSettlMonth	[0..1]	MonthYear	Must be present for MBS/TBA
CPPProgram	[0..1]	CodeSet	The program under which a commercial paper is issued
CPRegType	[0..1]	String	The registration type of a commercial paper issuance
EvntGrp	[0..*]	Group	Number of repeating EventType group entries.
DatedDate	[0..1]	LocalMktDate	If different from IssueDate
InterestAccrualDate	[0..1]	LocalMktDate	If different from IssueDate and DatedDate
InstrumentParties	[0..*]	Group	Used to identify the parties related to a specific instrument.
ShortSaleRestriction	[0..1]	CodeSet	
ComplexEvents	[0..*]	Group	
RefTickTableID	[0..1]	int	Spread table code referred by the security or symbol.
StrategyType	[0..1]	CodeSet	
CommonPricingIndicator	[0..1]	Boolean	
SettlDisruptionProvision	[0..1]	CodeSet	
DeliveryRouteOrCharter	[0..1]	String	
InstrumentRoundingDirection	[0..1]	CodeSet	
InstrumentRoundingPrecision	[0..1]	int	
InstrumentPricePrecision	[0..1]	int	

Name	Mult.	Type	Description
SecurityReferenceDataSupplement	[0..1]	String	
DateAdjustment	[0..1]	Component	
PricingDateTime	[0..1]	Component	
MarketDisruption	[0..1]	Component	
OptionExercise	[0..1]	Component	
StreamGrp	[0..*]	Group	
ProvisionGrp	[0..*]	Group	
AdditionalTermGrp	[0..*]	Group	
ProtectionTermGrp	[0..*]	Group	
CashSettlTermGrp	[0..*]	Group	
PhysicalSettlTermGrp	[0..*]	Group	
ExtraordinaryEventGrp	[0..*]	Group	
ExtraordinaryEventAdjustmentMethod	[0..1]	CodeSet	
ExchangeLookAlike	[0..1]	Boolean

180.2.1205 InstrumentExtension

The InstrumentExtension component block identifies additional security attributes that are more commonly found for Fixed Income securities.

Name	Mult.	Type	Description
DeliveryForm	[0..1]	CodeSet	Identifies the form of delivery.
PctAtRisk	[0..1]	Percentage	Percent at risk due to lowest possible call.
AttrbGrp	[0..*]	Group	Number of repeating InstrAttrib group entries.
CommodityFinalPriceType	[0..1]	CodeSet	
IndexRollMonthGrp	[0..*]	Group	
NextIndexRollDate	[0..1]	LocalMktDate	
FloatingRateIndex	[0..1]	Component	
ReferenceDataDateGrp	[0..*]	Group	

Used in groups: InstrmtGrp, InstrmtMDReqGrp, MDIncGrp, RelSymDerivSecGrp, RelSymDerivSecUpdGrp, SecListGrp, SecLstUpdRelSymGrp, SecMassStatGrp

Used in messages: Advertisement, AllocationInstruction, AllocationInstructionAlert, AllocationReport, Confirmation, IOI, MarketDataSnapshotFullRefresh, MarketDataStatisticsReport, MarketDataStatisticsRequest, SecurityDefinition, SecurityDefinitionRequest, SecurityDefinitionUpdateReport, SecurityListRequest, SecurityStatus, SecurityStatusRequest, TradeCaptureReport, TradeCaptureReportAck, TradeCaptureReportRequest, TradeCaptureReportRequestAck

180.2.1206 InstrumentLeg

The InstrumentLeg component block, like the Instrument component block, contains all the fields commonly used to describe a security or instrument. In the case of the InstrumentLeg component block it describes a security used in multileg-oriented messages.

Name	Mult.	Type	Description
LegSymbol	[0..1]	String	Common, "human understood" representation of the security. SecurityID value can be specified if no symbol exists (e.g. non-exchange traded Collective Investment Vehicles). Use "[N/A]" for products which do not have a symbol. Required if the InstrumentLeg component is marked as required where the component is used.
LegSymbolSfx	[0..1]	CodeSet	
LegSecurityID	[0..1]	String	
LegSecurityIDSource	[0..1]	CodeSet	
LegSecAltIDGrp	[0..*]	Group	
LegID	[0..1]	String	Used for unique identification of the leg that can subsequently be used whenever a simple leg identification is sufficient. It can also serve as input value for LegRefID(654) whenever only a simple leg reference is allowed or needed.
LegProduct	[0..1]	CodeSet	
LegSecurityGroup	[0..1]	String	
LegCFICode	[0..1]	String	
LegUPICode	[0..1]	String	
LegSecurityType	[0..1]	CodeSet	
LegSecuritySubType	[0..1]	String	
LegMaturityMonthYear	[0..1]	MonthYear	
LegMaturityDate	[0..1]	LocalMktDate	
LegMaturityTime	[0..1]	TZTimeOnly	
LegMaturityFrequencyUnit	[0..1]	CodeSet	Conditionally required when LegMaturityFrequencyPeriod(2987) is specified.
LegMaturityFrequencyPeriod	[0..1]	int	Conditionally required when LegMaturityFrequencyUnit(2986) is specified and the value is not EOM (End of Month) or F (Flexible).
LegSettleOnOpenFlag	[0..1]	String	
LegInstrmtAssignmentMethod	[0..1]	CodeSet	
LegSecurityStatus	[0..1]	CodeSet	
LegCouponPaymentDate	[0..1]	LocalMktDate	
LegRestructuringType	[0..1]	CodeSet	
LegSeniority	[0..1]	CodeSet	
LegNotionalPercentageOutstanding	[0..1]	Percentage	

Name	Mult.	Type	Description
LegOriginalNotionalPercentageOutstanding	[0..1]	Percentage	
LegAttachmentPoint	[0..1]	Percentage	
LegDetachmentPoint	[0..1]	Percentage	
LegObligationType	[0..1]	CodeSet	
LegAssetGroup	[0..1]	CodeSet	
LegAssetClass	[0..1]	CodeSet	Required if LegAssetSubClass(2068) is specified.
LegAssetSubClass	[0..1]	CodeSet	Required if LegAssetType(2069) is specified.
LegAssetType	[0..1]	String	Required if LegAssetSubType(2739) is specified.
LegAssetSubType	[0..1]	String	
LegSecondaryAssetGrp	[0..*]	Group	
LegAssetAttributeGrp	[0..*]	Group	
LegSwapClass	[0..1]	CodeSet	
LegSwapSubClass	[0..1]	CodeSet	
LegNthToDefault	[0..1]	int	Conditionally required when LegMthToDefault(2158) is specified.
LegMthToDefault	[0..1]	int	
LegSettledEntityMatrixSource	[0..1]	String	
LegSettledEntityMatrixPublicationDate	[0..1]	LocalMktDate	
LegCouponType	[0..1]	CodeSet	
LegTotalIssuedAmount	[0..1]	Amt	
LegCouponFrequencyPeriod	[0..1]	int	Conditionally required when LegCouponFreqUnit(2164) is specified.
LegCouponFrequencyUnit	[0..1]	CodeSet	Conditionally required when LegCouponFreqPeriod(2163) is specified.
LegCouponDayCount	[0..1]	CodeSet	
LegCouponOtherDayCount	[0..1]	String	
LegConvertibleBondEquityID	[0..1]	String	
LegConvertibleBondEquityIDSource	[0..1]	CodeSet	Conditionally required when LegConvertibleBondEquityID(2166) is specified.
LegContractPriceRefMonth	[0..1]	MonthYear	
LegLienSeniority	[0..1]	CodeSet	
LegLoanFacility	[0..1]	CodeSet	
LegReferenceEntityType	[0..1]	CodeSet	
LegIndexSeries	[0..1]	int	

Name	Mult.	Type	Description
LegIndexAnnexVersion	[0..1]	int	
LegIndexAnnexDate	[0..1]	LocalMktDate	
LegIndexAnnexSource	[0..1]	String	
LegSettlRateIndex	[0..1]	String	
LegSettlRateIndexLocation	[0..1]	String	
LegOptionExpirationDesc	[0..1]	String	
EncodedLegOptionExpirationDescLen	[0..1]	Length	Must be set if EncodedLegOptionExpirationDesc(2180) field is specified and must immediately precede it.
EncodedLegOptionExpirationDesc	[0..1]	data	Encoded (non-ASCII characters) representation of the LegOptionExpirationDesc(2178) field in the encoded format specified via the MessageEncoding(347) field.
LegIssueDate	[0..1]	LocalMktDate	
LegRepoCollateralSecurityType	[0..1]	String	
LegRepurchaseTerm	[0..1]	int	
LegRepurchaseRate	[0..1]	Percentage	
LegFactor	[0..1]	float	
LegCreditRating	[0..1]	String	
LegInstrRegistry	[0..1]	String	
LegCountryOfIssue	[0..1]	Country	
LegStateOrProvinceOfIssue	[0..1]	String	
LegLocaleOfIssue	[0..1]	String	
LegRedemptionDate	[0..1]	LocalMktDate	
LegStrikePrice	[0..1]	Price	
LegStrikeCurrency	[0..1]	Currency	
LegStrikeCurrencyCodeSource	[0..1]	CodeSet	
LegStrikeMultiplier	[0..1]	float	
LegStrikeValue	[0..1]	float	
LegStrikeUnitOfMeasure	[0..1]	CodeSet	
LegStrikeIndex	[0..1]	String	
LegStrikeIndexCurvePoint	[0..1]	String	
LegStrikeIndexSpread	[0..1]	PriceOffset	
LegStrikeIndexQuote	[0..1]	CodeSet	
LegStrikePriceDeterminationMethod	[0..1]	CodeSet	

Name	Mult.	Type	Description
LegStrikePriceBoundaryMethod	[0..1]	CodeSet	When specified, LegPutOrCall(1358), LegStrikePrice(612), and LegStrikePriceBoundaryPrecision(2188) must also be specified.
LegStrikePriceBoundaryPrecision	[0..1]	Percentage	
LegUnderlyingPriceDetermination-Method	[0..1]	CodeSet	
LegOptAttribute	[0..1]	char	
LegContractMultiplier	[0..1]	float	
LegContractMultiplierUnit	[0..1]	CodeSet	
LegTradingUnitPeriodMultiplier	[0..1]	int	
LegFlowScheduleType	[0..1]	CodeSet	
LegMinPriceIncrement	[0..1]	float	
LegMinPriceIncrementAmount	[0..1]	Amt	
LegUnitOfMeasure	[0..1]	CodeSet	
LegUnitOfMeasureQty	[0..1]	Qty	
LegUnitOfMeasureCurrency	[0..1]	Currency	
LegUnitOfMeasureCurrencyCodeS- ource	[0..1]	CodeSet	
LegPriceUnitOfMeasure	[0..1]	CodeSet	
LegPriceUnitOfMeasureQty	[0..1]	Qty	
LegPriceUnitOfMeasureCurrency	[0..1]	Currency	
LegPriceUnitOfMeasureCurrency- CodeSource	[0..1]	CodeSet	
LegSettlMethod	[0..1]	CodeSet	
LegTimeUnit	[0..1]	CodeSet	Used to indicate a time unit for the contract (e.g., days, weeks, months, etc.)
LegExerciseStyle	[0..1]	CodeSet	
LegOptPayoutType	[0..1]	CodeSet	
LegOptPayoutAmount	[0..1]	Amt	Conditionally required if LegOptPayoutTyp(2193) = 3 (Binary).
LegReturnTrigger	[0..1]	CodeSet	
LegPriceQuoteMethod	[0..1]	CodeSet	
LegValuationMethod	[0..1]	CodeSet	
LegValuationSource	[0..1]	String	
LegValuationReferenceModel	[0..1]	String	

Name	Mult.	Type	Description
LegPriceQuoteCurrency	[0..1]	Currency	
LegPriceQuoteCurrencyCodeSource	[0..1]	CodeSet	
LegListMethod	[0..1]	CodeSet	
LegCapPrice	[0..1]	Price	
LegFloorPrice	[0..1]	Price	
LegFlexibleIndicator	[0..1]	Boolean	
LegFlexProductEligibilityIndicator	[0..1]	Boolean	
LegCouponRate	[0..1]	Percentage	
LegSecurityExchange	[0..1]	Exchange	
LegPositionLimit	[0..1]	int	
LegNTPositionLimit	[0..1]	int	
LegIssuer	[0..1]	String	
EncodedLegIssuerLen	[0..1]	Length	Must be set if EncodedLegIssuer(618) field is specified and must immediately precede it.
EncodedLegIssuer	[0..1]	data	Encoded (non-ASCII characters) representation of the LegIssuer(617) field in the encoded format specified via the MessageEncoding(347) field.
LegFinancialInstrumentShortName	[0..1]	String	
LegFinancialInstrumentFullName	[0..1]	String	
EncodedLegFinancialInstrumentFull-NameLen	[0..1]	Length	Must be set if EncodedLegFinancialInstrumentFullName(2719) field is specified and must immediately precede it.
EncodedLegFinancialInstrumentFull-Name	[0..1]	data	Encoded (non-ASCII characters) representation of the LegFinancialInstrumentFullName(2717) field in the encoded format specified via the MessageEncoding(347) field.
LegSecurityDesc	[0..1]	String	
EncodedLegSecurityDescLen	[0..1]	Length	Must be set if LegEncodedSecurityDesc(622) field is specified and must immediately precede it.
EncodedLegSecurityDesc	[0..1]	data	Encoded (non-ASCII characters) representation of the LegSecurityDesc(620) field in the encoded format specified via the MessageEncoding(347) field.
LegSecurityXML	[0..1]	Component	Embedded XML document describing the leg instrument.
LegCPPProgram	[0..1]	CodeSet	
LegCPRegType	[0..1]	String	

Name	Mult.	Type	Description
LegRatioQty	[0..1]	float	Specific to the <InstrumentLeg> (not in <Instrument>)
LegSide	[0..1]	CodeSet	Specific to the <InstrumentLeg> (not in <Instrument>)
LegCurrency	[0..1]	Currency	Specific to the <InstrumentLeg> (not in <Instrument>)
LegCurrencyCodeSource	[0..1]	CodeSet	
LegPool	[0..1]	String	Identifies MBS / ABS pool
LegDatedDate	[0..1]	LocalMktDate	
LegContractSettlMonth	[0..1]	MonthYear	
LegInterestAccrualDate	[0..1]	LocalMktDate	
LegPutOrCall	[0..1]	CodeSet	Used to express option right
LegInTheMoneyCondition	[0..1]	CodeSet	Used to express in-the-moneyness behavior in general terms for the option without the use of LegStrikePrice(612) and LegPutOrCall(1358).
LegContraryInstructionEligibilityIndicator	[0..1]	Boolean	
LegOptionRatio	[0..1]	float	LegOptionRatio is provided on covering leg to create a delta neutral spread. In Listed Derivatives, the delta of the leg is multiplied by LegOptionRatio and OrderQty to determine the covering quantity.
LegPrice	[0..1]	Price	Used to specify an anchor price for a leg as part of the definition or creation of the strategy - not used for execution price.
LegEvtGrp	[0..*]	Group	
LegInstrumentParties	[0..*]	Group	
LegShortSaleRestriction	[0..1]	CodeSet	
LegComplexEvents	[0..*]	Group	
LegStrategyType	[0..1]	CodeSet	
LegCommonPricingIndicator	[0..1]	Boolean	
LegSettlDisruptionProvision	[0..1]	CodeSet	
LegDeliveryRouteOrCharter	[0..1]	String	
LegInstrumentRoundingDirection	[0..1]	CodeSet	
LegInstrumentRoundingPrecision	[0..1]	int	
LegDateAdjustment	[0..1]	Component	
LegPricingDateTime	[0..1]	Component	
LegMarketDisruption	[0..1]	Component

LegAdditionalTermGrp	[0..*]	Group	
LegProtectionTermGrp	[0..*]	Group	
LegCashSettlTermGrp	[0..*]	Group	
LegPhysicalSettlTermGrp	[0..*]	Group	
LegExtraordinaryEventGrp	[0..*]	Group	
LegExtraordinaryEventAdjustment-Method	[0..1]	CodeSet	
LegExchangeLookAlike	[0..1]	Boolean	

Used in groups: InstrmtLegExecGrp, InstrmtLegGrp, InstrmtLegIOIGrp, InstrmtLegSecListGrp, LegOrdGrp, LegQuotGrp, LegQuotStatGrp, QuotReqLegsGrp, SecLstUpdRelSymsLegGrp, TrdInstrmtLegGrp

180.2.1207 InstrumentParties

The use of this component block is restricted to instrument definition only and is not permitted to contain transactional information. Only a specified subset of party roles will be supported within the InstrumentParty block.

Name	Mult.	Type	Description
NoInstrumentParties	[1..1]	NumInGroup	Repeating group below should contain unique combinations of InstrumentPartyID(1019), InstrumentPartyIDSource(1050) and InstrumentPartyRole(1051).
InstrumentPartyID	[0..1]	String	Required if NoInstrumentParties(1018) > 0. Identification of the party.
InstrumentPartyIDSource	[0..1]	CodeSet	Required if NoInstrumentParties(1018) > 0. Used to identify classification source.
InstrumentPartyRole	[0..1]	CodeSet	Required if NoInstrumentParties(1018) > 0. Identifies the type of InstrumentPartyID(1019).
InstrumentPartyRoleQualifier	[0..1]	CodeSet	
InstrumentPtysSubGrp	[0..*]	Group	Repeating group of party sub-identifiers.

Used in components: **Instrument**

180.2.1208 InstrumentPartyID

PartyID value within an instrument party repeating group. Same values as PartyID (448)

Type: **String**

Used in groups: **InstrumentParties**

180.2.1209 InstrumentPartyIDSource

PartyIDSource value within an instrument partyrepeating group.

Same values as PartyIDSource (447)

Type: **char**

Allowed values in PartyIDSourceCodeSet:

Code	Name	Description
1	KoreanInvestorID	Korean Investor ID. Also known as the Investor Registration Certificate (IRC) issued by Korea's Financial Supervisory Service (FSS), an identifier tied into the depository for settlement and record keeping.
6	UKNationalInsuranceOrPension-Number	UK National Insurance or Pension Number
B	BIC	BIC (Bank Identification Code - SWIFT managed) code (ISO9362 - See "Appendix 6-B")
I	ISITCAcronym	Directed broker three character acronym as defined in ISITC "ETC Best Practice" guidelines document
2	TaiwaneseForeignInvestorID	Taiwanese Qualified Foreign Investor ID QFII/FID
7	USSocialSecurityNumber	US Social Security Number
C	GeneralIdentifier	Generally accepted market participant identifier (e.g. NASD mnemonic)
3	TaiwaneseTradingAcct	Taiwanese Trading Acct
8	USEmployerOrTaxIDNumber	US Employer or Tax ID Number
D	Proprietary	Proprietary / Custom code. Custom ID schema used between counterparties, trading platforms and repositories.
4	MalaysianCentralDepository	Malaysian Central Depository (MCD) number
9	AustralianBusinessNumber	Australian Business Number
E	ISOCountryCode	ISO Country Code
5	ChineseInvestorID	Chinese Investor ID

Code	Name	Description
A	AustralianTaxFileNumber	Australian Tax File Number
F	SettlementEntityLocation	Settlement Entity Location (note if Local Market Settlement use "E=ISO Country Code") (see "Appendix 6-G" for valid values)
G	MIC	Market Identifier Code (ISO 10383) MIC
J	TaxID	Tax ID
H	CSDParticipant	CSD participant/member code (e.g. Euroclear, DTC, CREST or Kassenverein number)
K	AustralianCompanyNumber	Australian Company Number
L	AustralianRegisteredBodyNumber	Australian Registered Body Number
M	CFTCReportingFirmIdentifier	CFTC reporting firm identifier
N	LegalEntityIdentifier	Legal Entity Identifier (ISO 17442) LEI
O	InterimIdentifier	Interim identifier. An interim entity identifier assigned by a regulatory agency prior to an LEI (ISO 17442) being assigned.
P	ShortCodeIdentifier	Short code identifier. A generic means for trading venues, brokers, investment managers to convey a bilaterally agreed upon "short hand" code for an identifier that is a reference to a mapping between the parties.
Q	NationalIDNaturalPerson	National ID of natural person. An identification number generally assigned by a government authority or agency to a natural person which is unique to the person it is assigned to. Examples include, but not limited to, "social security number", "pension number".
R	IndiaPermanentAccountNumber	India Permanent Account Number. Also referred to as PAN ID. An identifier issued by the Income Tax Department of India.
S	FDID	Firm designated identifier. Also referred to as FDID. A unique identifier required by the SEC for each trading account designated by Industry Members for purposes of reporting to CAT (Consolidated Audit Trail).
T	SPSAID	Special Segregated Account ID. Also referred to as SPSA ID. The Special Segregated Account identifier issued by Hong Kong Exchanges and Clearing.
U	MasterSPSAID	Master Special Segregated Account ID. Also referred to as Master SPSA ID. The master identifier issued by Hong Kong Exchanges and Clearing for the aggregation of SPSA IDs.
V	KoreaShortSellingRegistrationNumber	Korea Short Selling Registration Number. Short selling registration number assigned by Korea's Financial Supervisory Service (FSS) for institutions placing eligible orders under Korea's Financial Services Commission's "Short Sale Reform Measures".

Used in groups: **InstrumentParties**

180.2.1210 InstrumentPartyRole

PartyRole value within an instrument party repeating group.

Same values as PartyRole (452)

Type: **int**

Allowed values in PartyRoleCodeSet:

Code	Name	Description
1	ExecutingFirm	Executing Firm (formerly FIX 4.2 ExecBroker)
2	BrokerOfCredit	Broker of Credit (formerly FIX 4.2 BrokerOfCredit)
3	ClientID	Client ID (formerly FIX 4.2 ClientID)
4	ClearingFirm	Clearing Firm (formerly FIX 4.2 ClearingFirm)
5	InvestorID	Investor ID
6	IntroducingFirm	Introducing Firm
7	EnteringFirm	Entering Firm
8	Locate	Locate / Lending Firm (for short-sales)
9	FundManagerClientID	Fund Manager Client ID (for CIV)
10	SettlementLocation	Settlement Location (formerly FIX 4.2 SettlLocation)
11	OrderOriginationTrader	Order Origination Trader (associated with Order Origination Firm - i.e. trader who initiates/submits the order)
12	ExecutingTrader	Executing Trader (associated with Executing Firm - actually executes)
13	OrderOriginationFirm	Order Origination Firm (e.g. buy-side firm)
14	GiveupClearingFirmDepr	Giveup Clearing Firm (firm to which trade is given up)
15	CorrespondantClearingFirm	Correspondant Clearing Firm
16	ExecutingSystem	Executing System
17	ContraFirm	Contra Firm
18	ContraClearingFirm	Contra Clearing Firm
19	SponsoringFirm	Sponsoring Firm
20	UnderlyingContraFirm	Underlying Contra Firm
21	ClearingOrganization	Clearing Organization
22	Exchange	Exchange. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.

Code	Name	Description
24	CustomerAccount	Customer Account
25	CorrespondentClearingOrganization	Correspondent Clearing Organization
26	CorrespondentBroker	Correspondent Broker
27	Buyer	Buyer/Seller (Receiver/Deliverer)
28	Custodian	Custodian
29	Intermediary	Intermediary
30	Agent	Agent
31	SubCustodian	Sub-custodian
32	Beneficiary	Beneficiary
33	InterestedParty	Interested party
34	RegulatoryBody	Regulatory body. In the context of regulatory reporting, this identifies the regulator the trade is being reported to.
35	LiquidityProvider	Liquidity provider
36	EnteringTrader	Entering trader
37	ContraTrader	Contra trader
38	PositionAccount	Position account. The account which positions are maintained. Typically represents the aggregation of one or more customer accounts.
39	ContraInvestorID	Contra Investor ID
40	TransferToFirm	Transfer to Firm
41	ContraPositionAccount	Contra Position Account
42	ContraExchange	Contra Exchange
43	InternalCarryAccount	Internal Carry Account
44	OrderEntryOperatorID	Order Entry Operator ID
45	SecondaryAccountNumber	Secondary Account Number
46	ForeignFirm	Foreign Firm
47	ThirdPartyAllocationFirm	Third Party Allocation Firm
48	ClaimingAccount	Claiming Account
49	AssetManager	Asset Manager
50	PledgorAccount	Pledgor Account
51	PledgeeAccount	Pledgee Account
52	LargeTraderReportableAccount	Large Trader Reportable Account
53	TraderMnemonic	Trader mnemonic
54	SenderLocation	Sender Location
55	SessionID	Session ID

Code	Name	Description
56	AcceptableCounterparty	Acceptable Counterparty
57	UnacceptableCounterparty	Unacceptable Counterparty
58	EnteringUnit	Entering Unit
59	ExecutingUnit	Executing Unit
60	IntroducingBroker	Introducing Broker
61	QuoteOriginator	Quote originator
62	ReportOriginator	Report originator
63	SystematicInternaliser	Systematic internaliser (SI)
64	MultilateralTradingFacility	Multilateral Trading Facility (MTF). Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
65	RegulatedMarket	Regulated Market (RM). Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
66	MarketMaker	Market Maker
67	InvestmentFirm	Investment Firm
68	HostCompetentAuthority	Host Competent Authority (Host CA)
69	HomeCompetentAuthority	Home Competent Authority (Home CA)
70	CompetentAuthorityLiquidity	Competent Authority of the most relevant market in terms of liquidity (CAL)
71	CompetentAuthorityTransactionVenue	Competent Authority of the Transaction (Execution) Venue (CATV)
72	ReportingIntermediary	Reporting intermediary. The medium or vendor used to report to a regulator, non-regulatory agency or data repository.
73	ExecutionVenue	Execution Venue. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
74	MarketDataEntryOriginator	Market data entry originator
75	LocationID	Location ID
76	DeskID	Desk ID
77	MarketDataMarket	Market data market
78	AllocationEntity	Allocation Entity
79	PrimeBroker	Prime Broker providing General Trade Services
80	StepOutFirm	Step-Out Firm (Prime Broker)
81	BrokerClearingID	Broker clearing identifier
82	CentralRegistrationDepository	Central Registration Depository (CRD)
83	ClearingAccount	Clearing Account
84	AcceptableSettlingCounterparty	Acceptable Settling Counterparty

Code	Name	Description
85	UnacceptableSettlingCounterparty	Unacceptable Settling Counterparty
86	CLSMemberBank	CLS Member Bank
87	InConcertGroup	In Concert Group
88	InConcertControllingEntity	In Concert Controlling Entity
89	LargePositionsReportingAccount	Large Positions Reporting Account
90	SettlementFirm	Settlement Firm
91	SettlementAccount	Settlement account. The account to which individual payment obligations are aggregated for netting and funds movement. Typically represents the aggregation of many margin (performance bond) accounts.
92	ReportingMarketCenter	Reporting Market Center
93	RelatedReportingMarketCenter	Related Reporting Market Center
94	AwayMarket	Away Market. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
95	GiveupTradingFirm	Give-up (trading) firm
96	TakeupTradingFirm	Take-up (trading) firm
97	GiveupClearingFirm	Give-up clearing firm
98	TakeupClearingFirm	Take-up clearing firm
99	OriginatingMarket	Originating Market. Identifies the Market using PartyIDSource(tag 447) = G (Market Identifier Code) where an order originated in the event that the order is sent to an alternative market for execution. Serves as an inverse of an away market.
100	MarginAccount	Margin account. Also referred to as "performance bond account". The margin account is the calculated margin requirements. Typically represents the aggregation of one or more position accounts.
101	CollateralAssetAccount	Collateral asset account. The account at which individual collateral assets are maintained. Typically, although not always, one-for-one with the settlement account.
102	DataRepository	Data repository. Multiple instances of this PartyRole may appear for reporting purposes.
103	CalculationAgent	Calculation agent
104	ExerciseNoticeSender	Sender of exercise notice
105	ExerciseNoticeReceiver	Receiver of exercise notice
106	RateReferenceBank	Rate reference bank. The bank providing the reference rate. Multiple instance of this PartyRole may appear.
107	Correspondent	Correspondent

Code	Name	Description
109	BeneficiaryBank	Beneficiary's bank or depository institution. The institution in which the beneficiary, a person or an entity, has their account with. The institution may be a bank or non-bank institution.
110	Borrower	Borrower
111	PrimaryObligator	Primary obligator
112	Guarantor	Guarantor
113	ExcludedReferenceEntity	Excluded reference entity
114	DeterminingParty	Determining party
115	HedgingParty	Hedging party
116	ReportingEntity	Reporting entity. The entity that is reporting the information.
117	SalesPerson	Sales person. The person who is involved in the sales activities for their firm.
118	Operator	Operator. The person who has the capabilities and authorization to take certain actions; for example, setting entitlements, etc.
119	CSD	Central Securities Depository (CSD)
120	ICSD	International Central Securities Depository (ICSD)
121	TradingSubAccount	Trading sub-account. Example of sub-accounts include a clearing account that has multiple trading sub-accounts, a trading account that has multiple trading sub-accounts belonging to different trading firms.
122	InvestmentDecisionMaker	Investment decision maker. In the context of ESMA RTS reporting, this is used to specify party responsible for the investment decision. See RTS 24, Annex, Table 2, Field 4.
123	PublishingIntermediary	Publishing intermediary. The medium or vendor used to publish to the market.
124	CSDParticipant	Central Securities Depository (CSD) Participant. In the context of EU SFTR reporting the identifier of the CSD participant or indirect participant of the reporting counterparty. Where both the CSD participant and indirect participant are involved in the transaction this should identify the indirect participant.
125	Issuer	Issuer. The issuer of the security.
126	ContraCustomerAccount	Contra Customer Account. Same as PartyRole(452) = 24 (Customer Account) but for the counterparty. Can be used whenever the parties component is not nested in a repeating group representing both sides.

Code	Name	Description
127	ContraInvestmentDecisionMaker	Contra Investment Decision Maker. Same as PartyRole(452) = 122 (Investment Decision Maker) but for the counterparty. Can be used whenever the parties component is not nested in a repeating group representing both sides.
128	AuthorizingPerson	Authorizing person. In the context of MiFIR, this value is used to identify the person authorizing algorithms within a trading firm.

Used in groups: **InstrumentParties**

180.2.1211 InstrumentPartyRoleQualifier

Used to further qualify the value of InstrumentPartyRole(1051).

Type: **int**

Allowed values in PartyDetailRoleQualifierCodeSet:

Code	Name	Description
0	Agency	Agency
1	Principal	Principal
2	RisklessPrincipal	Riskless principal
3	GeneralClearingMember	General clearing member
30	ExchangeOrderSubmitter	Exchange order submitter. Used to identify original or initial exchange order submitting broker when party role "1" (Executing Firm) appears more than once.
4	IndividualClearingMember	Individual clearing member
5	PreferredMarketMaker	Preferred market maker. Market maker getting a part of the matched quantity before primary or default market maker.
6	DirectedMarketMaker	Directed market maker. Single market maker to handle the order provided.
7	Bank	Bank
8	Hub	Hub. Indicates that the Intermediary party is a hub system or service provider.
9	PrimaryTrdRepository	Primary trade repository. Used to differentiate the principal trade repository from the Original or Additional trade repositories when there are multiple trade repositories being reported.

Code	Name	Description
10	OrigTrdRepository	Original trade repository. Used to identify the trade repository to which the trade was originally reported if different from the current repository to which the trade is being reported.
11	AddtnlIntlTrdRepository	Additional international trade repository. Used with InternationalSwapIndicator(2526) to identify the trade repository that is in addition to the local swaps data repository as required by U.S. law.
12	AddtnlDomesticTrdRepository	Additional domestic trade repository. Used with MixedSwapIndicator(1929) to identify the trade repository that is in addition to the current trade repository when the assets in the swap are subject to two different domestic regulators.
13	RelatedExchange	Related exchange
14	OptionsExchange	Options exchange
15	SpecifiedExchange	Specified exchange
16	ConstituentExchange	Constituent exchange.
17	ExemptFromTradeReporting	Exempt from trade reporting. In the context of FINRA TRACE reporting requirements, this is used to indicate the ATS has been granted a regulatory exemption from reporting.
18	Current	Current. Can be used to convey an existing party identifier for the same party role in a single message.
19	New	New. Can be used to convey a future party identifier for the same party role in a single message.
20	DesignatedSponsor	Designated sponsor. Market maker jointly providing liquidity for the same security with other market makers.
21	Specialist	Specialist. Market maker being the only one providing liquidity for a security.
22	Algorithm	Algorithm
23	FirmOrLegalEntity	Firm or legal entity
24	NaturalPerson	Natural person
25	RegularTrader	Regular trader. Standard trader profile.
26	HeadTrader	Head trader. Senior trader leading a group of regular traders.
27	Supervisor	Supervisor. Administrative user that has only limited rights for normal trading but possibly special rights for emergency actions.
28	TriParty	Tri-party. In the context of EU SFTR reporting, identifies the third party, not necessarily the custodian, to which the reporting counterparty has outsourced the post-trade processing of an SFT (if applicable).

Code	Name	Description
29	Lender	Lender. In the context of EU SFTR reporting, identifies the agent lender involved in the securities lending transaction.

Used in groups: **InstrumentParties**

180.2.1212 InstrumentPartySubID

PartySubID value within an instrument party repeating group.

Same values as PartySubID (523)

Type: **String**

Used in groups: **InstrumentPtysSubGrp**

180.2.1213 InstrumentPartySubIDType

Type of InstrumentPartySubID (1053) value.

Same values as PartySubIDType (803)

Type: **int**

Allowed values in PartySubIDTypeCodeSet:

Code	Name	Description
1	Firm	Firm
2	Person	Person
3	System	System
4	Application	Application
5	FullLegalNameOfFirm	Full legal name of firm
6	PostalAddress	Postal address
7	PhoneNumber	Phone number
8	EmailAddress	Email address
9	ContactName	Contact name
10	SecuritiesAccountNumber	Securities account number (for settlement instructions)
11	RegistrationNumber	Registration number (for settlement instructions and confirmations)

Code	Name	Description
12	RegisteredAddressForConfirmation	Registered address (for confirmation purposes)
13	RegulatoryStatus	Regulatory status (for confirmation purposes)
14	RegistrationName	Registration name (for settlement instructions)
15	CashAccountNumber	Cash account number (for settlement instructions)
16	BIC	BIC
17	CSDParticipantMemberCode	CSD participant member code
18	RegisteredAddress	Registered address
19	FundAccountName	Fund account name
20	TelexNumber	Telex number
21	FaxNumber	Fax number
22	SecuritiesAccountName	Securities account name
23	CashAccountName	Cash account name
24	Department	Department
25	LocationDesk	Location desk
26	PositionAccountType	Position account type
27	SecurityLocateID	Security locate ID
28	MarketMaker	Market maker
29	EligibleCounterparty	Eligible counterparty
30	ProfessionalClient	Professional client
31	Location	Location
32	ExecutionVenue	Execution venue
33	CurrencyDeliveryIdentifier	Currency delivery identifier
34	AddressCity	Address City
35	AddressStateOrProvince	Address State/Province
36	AddressPostalCode	Address Postal Code
37	AddressStreet	Address Street
38	AddressISOCountryCode	Address Country (ISO country code)
39	ISOCountryCode	ISO country code
40	MarketSegment	Market segment
41	CustomerAccountType	Customer account type
42	OmnibusAccount	Omnibus account
43	FundsSegregationType	Funds segregation type

Code	Name	Description
44	GuaranteeFund	Guarantee fund. Identifies a guarantee fund related to an account. Used when one account has multiple funds of collateral, each guaranteeing different positions. Can be used for PartyRole(452) = Customer Account(24).
45	SwapDealer	Swap dealer. The US regulator's defined term for identifying the trade counterparty as "any person who holds itself out as a dealer in swaps, makes a market in swaps, regularly enters into swaps with counterparties as an ordinary course of business for its own account, or engages in activity causing itself to be commonly known in the trade as a dealer or market maker in swaps".
46	MajorParticipant	Major participant. When PartySubID(523)=Y the counterparty is not the swap dealer but is a major swap participant as defined in the regulations.
47	FinancialEntity	Financial entity. When PartySubID(523)=Y the counterparty is neither a swap dealer nor a major swap participant but is a financial entity as defined in the regulations.
48	USPerson	U.S. person. A legal term referring to any U.S. person or legal entity anywhere in the world that should be taxed under U.S. law.
49	ReportingEntityIndicator	Reporting entity indicator. Indicates the entity obligated or delegated to report to their regulator, a non-regulatory agency or data repository. Set PartySubID(523)=Y if true.
50	ElectedClearingRequirementException	Elected clearing requirement exception
51	BusinessCenter	Business center.
52	ReferenceText	Reference text
53	ShortMarkingExemptAccount	Short-marking exempt account
54	ParentFirmIdentifier	Parent firm identifier. Implementation-specific identifier of this party's parent entity.
55	ParentFirmName	Parent firm name. Full name of this party's parent entity.
56	DealIdentifier	Deal identifier. The internal identifier assigned to the trade by this party, particularly by a Clearing Organization.
57	SystemTradeID	System trade identifier
58	SystemTradeSubID	System trade sub-identifier
59	FCMCode	Futures Commission Merchant (FCM) code. The FCM's code or identifier in relation to the PartyRole(452). For example, if PartyRole(452) is the exchange or clearinghouse, the FCM code/ID specified in PartySubID(523) is the FCM's identifier at the exchange or clearinghouse.

Code	Name	Description
60	DlvryTrmlCode	Delivery terminal customer account/code. Usually used for gas delivery to identify whose account the gas is allocated to at the delivery terminal. Often referred to as "HUB" code.
61	VolntyRptEntity	Voluntary reporting entity. The entity voluntarily reporting the trade to the regulator. Set PartySubID(523)=Y if true.
62	RptObligJursdctn	Reporting obligation jurisdiction. For a trade that falls under multiple jurisdictions this may be used to identify, through PartySubID(523), the reporting jurisdiction to which the party is obligated to report.
63	VolntyRptJursdctn	Voluntary reporting jurisdiction. For a trade that falls under multiple jurisdictions this may be used to identify, through PartySubID(523), the regulatory jurisdiction to which the party is submitting a voluntary report.
64	CompanyActivities	Company activities. For regulatory reporting. ID values include: A = Assurance undertaking authorized in accordance with Directive 2002/83/EC C = Credit institution authorized in accordance with Directive 2006/48/EC F = Investment firm in accordance with Directive 2004/39/EC I = Insurance undertaking authorized in accordance with Directive 73/239/EC L = Alternative investment fund managed by AIFMs authorized or registered in accordance with Directive 2011/61/EC O = Institution for occupational retirement provision within the meaning of Article 6(a) of Directive 2003/41/EC R = Reinsurance undertaking authorized in accordance with Directive 2005/68/EC U = UCITS and its management company, authorized in accordance with Directive 2009/65/EC or blank in case of coverage by LEI or in case of non-financial counterparties. In the context of EU SFTR reporting use the appropriate 4- or 1-character code noted in the regulations. See SFTR ITS "Commission Implementing Regulation (EU) 2019/363" Annexes 1 and 2 for values.
65	EEAreaDomiciled	European Economic Area domiciled. ID values: Y or N
66	ContractLinked	Contract linked to commercial or treasury financing for this counterparty. ID values: Y or N
67	ContractAbove	Contract above clearing threshold for this counterparty. ID values: Y or N
68	VolntyRptPty	Voluntary reporting party. When PartySubID(523)=Y, identifies that the trading party is reporting voluntarily when VoluntaryRegulatoryReport(1935)=Y.
69	EndUser	End user. When PartySubID(523)=Y, the counterparty is neither the swap dealer, major swap participant nor financial entity as defined in the regulations.

Code	Name	Description
70	LocationOrJurisdiction	Location or jurisdiction. One or more instances may be used in combination with PartySubIDType(803) = 49 (Reporting entity indicator) or 102 (Data repository) to identify the jurisdiction, countries, regions or provinces for which the party is a reporting entity or data repository when that characteristic is ambiguous or where there are multiple locations. The party sub-ID value is either a jurisdiction acronym, a 2-character ISO 3166 country code, or a hyphenated combination of the country code and the standard post-office abbreviation for province, state or region if necessary. E.g. "US" for United States or "CA-QC" for Quebec Canada.
71	DerivativesDealer	Derivatives dealer. Indicates whether the party is a derivatives dealer or not (Y/N). The Canadian regulator's defined term for identifying the trade counterparty as "a person or company engaging in or holding himself, herself or itself out as engaging in the business of trading in derivatives in Ontario as principal or agent".
72	Domicile	Domicile. Country and optionally province, state or region of domicile. The party sub-ID value is either a 2-character ISO 3166 country code or a hyphenated combination of the country code and the standard post-office abbreviation of province, state or region if necessary. E.g. "US" for United States or "CA-QC" for Quebec Canada.
73	ExemptFromRecognition	Exempt from recognition. Used with party role 21 "Clearing Organization" to indicate exemption (Y/N). Identifies a clearing agency as exempt from oversight in Ontario, i.e. one that 1) only provides limited services and does not present significant risks or 2) is foreign-based, intends to operate in Ontario but is subject to regulatory oversight in another jurisdiction.
74	Payer	Payer. Identifies the party as the payer of a particular payment stream or bullet payment by quoting the stream's StreamDesc(40051) (or LegStreamDesc(40243) or UnderlyingStreamDesc(40542)) or payment's PaymentDesc(43087) in the associated party sub-identifier field.
75	Receiver	Receiver. Identifies the party as the receiver of a particular payment stream or bullet payment by quoting the stream's StreamDesc(40051) (or LegStreamDesc(40243) or UnderlyingStreamDesc(40542)) or payment's PaymentDesc(43087) in the associated party sub-identifier field.

Code	Name	Description
76	SystematicInternaliser	Systematic Internaliser (SI). In the context of ESMA reporting, this is used to indicate whether the specified party is a Systematic Internaliser or not for the security defined in the Instrument component (Y/N).
77	PublishingEntityIndicator	Publishing entity indicator. Indicates the entity obligated or delegated to publish to the market. Set PartySubID(523)=Y if true.
78	FirstName	First name. The first name(s) of a natural person. If multiple names, separate entries by a comma.
79	Surname	Surname. The surname(s) or lastname(s) of a natural person. If multiple names, separate entries by a comma.
80	DateOfBirth	Date of birth. The date of birth of a natural person in the format YYYYMMDD.
81	OrderTransmittingFirm	Order transmitting firm. Identifies whether the party specified in PartyID(448) is the firm that transmitted the order. In the context of RTS 22 Article 4, when "true" the PartySubID(523)=Y shall be set "by the transmitting firm within the transmitting firm's report where conditions for transmission specified in Article 4 were not satisfied."
82	OrderTransmittingFirmBuyer	Order transmitting firm for buyer. Identifies the firm that transmitted the order for the buyer. In the context of ESMA RTS 22, PartySubID(523)=Y is used to indicate the firm identified in PartyID(448) is the firm that transmitted the order for the buyer. "This shall be populated by the receiving firm within the receiving firm's report with the identification code provided by the transmitting firm."
83	OrderTransmitterSeller	Order transmitter for seller. Identifies the order transmitting firm for the seller. In the context of ESMA RTS 22, PartySubID(523)=Y is used to indicate the firm identified in PartyID(448) is the firm that transmitted the order for the seller. "This shall be populated by the receiving firm within the receiving firm's report with the identification code provided by the transmitting firm."
84	LegalEntityIdentifier	Legal Entity Identifier (ISO 17442) LEI
85	SubSectorClassification	Sub-sector classification. Supplemental to party sub-ID type "64" (Company activities) for regulatory reporting. For EU SFTR reporting use the appropriate 4-character code noted in the regulations applying the conditional association rules. See SFTR ITS "Commission Implementing Regulation (EU) 2019/363" Annexes 1 and 2 for values.

Code	Name	Description
86	PartySide	Party side. May be used, when appropriate, to explicitly indicate the transaction side of the party, e.g. Buyer, Seller, Lender, Borrower, Maker, Taker, etc. in the ID. In the context of EU SFTR reporting, use values as required by SFTR, "GIVE" and "TAKE" in the ID, to identify collateral giver and taker.
87	LegalRegistrationCountry	Legal registration country. ISO Country Code where the registered office of the party is located as specified in the LEI reference data.

Used in groups: [InstrumentPtysSubGrp](#)

180.2.1214 InstrumentPricePrecision

Specifies the number of decimal places for instrument prices.

Type: [int](#)

Used in components: [Instrument](#)

180.2.1215 InstrumentPtysSubGrp

Name	Mult.	Type	Description
NoInstrumentPartySubIDs	[1..1]	NumInGroup	
InstrumentPartySubID	[0..1]	String	
InstrumentPartySubIDType	[0..1]	CodeSet	

Used in groups: [InstrumentParties](#)

180.2.1216 InstrumentRoundingDirection

Specifies the rounding direction if not overridden elsewhere.

Type: [char](#)

Allowed values in RoundingDirectionCodeSet:

Code	Name	Description
0	RoundToNearest	Round to nearest
1	RoundDown	Round down
2	RoundUp	Round up

Used in components: **Instrument**

180.2.1217 InstrumentRoundingPrecision

Specifies the rounding precision in terms of a number of decimal places. Note how a percentage rate rounding of 5 decimal places is expressed as a rounding precision of 7.

Type: **int**

Used in components: **Instrument**

180.2.1218 InstrumentScopeCFIcode

Used to limit instrument scope to specified CFIcode.

See CFIcode(461) field for description.

Type: **String**

Used in components: **InstrumentScope**

180.2.1219 InstrumentScope

Used to specify the instrument

Name	Mult.	Type	Description
InstrumentScopeSymbol	[0..1]	String	
InstrumentScopeSymbolSfx	[0..1]	CodeSet	
InstrumentScopeSecurityID	[0..1]	String	
InstrumentScopeSecurityIDSource	[0..1]	CodeSet	
InstrumentScopeSecurityAltIDGrp	[0..*]	Group	
InstrumentScopeProduct	[0..1]	CodeSet	
InstrumentScopeProductComplex	[0..1]	String	

Name	Mult.	Type	Description
InstrumentScopeSecurityGroup	[0..1]	String	
InstrumentScopeCFIcode	[0..1]	String	
InstrumentScopeUPIcode	[0..1]	String	
InstrumentScopeSecurityType	[0..1]	CodeSet	
InstrumentScopeSecuritySubType	[0..1]	String	
InstrumentScopeMaturityMonthYear	[0..1]	MonthYear	
InstrumentScopeMaturityTime	[0..1]	TZTimeOnly	
InstrumentScopeRestructuringType	[0..1]	String	
InstrumentScopeSeniority	[0..1]	String	
InstrumentScopePutOrCall	[0..1]	CodeSet	
InstrumentScopeFlexibleIndicator	[0..1]	Boolean	
InstrumentScopeCouponRate	[0..1]	Percentage	
InstrumentScopeSecurityExchange	[0..1]	Exchange	
InstrumentScopeSecurityDesc	[0..1]	String	
InstrumentScopeEncodedSecurityDescLen	[0..1]	Length	
InstrumentScopeEncodedSecurityDesc	[0..1]	data	
InstrumentScopeSettlType	[0..1]	CodeSet	Can be used to specify FX tenors.

Used in groups: **InstrumentScopeGrp**, **RiskInstrumentScopeGrp**

Used in messages: **PartyActionReport**, **PartyActionRequest**, **SecurityMassStatus**, **SecurityMassStatus-Request**

180.2.1220 InstrumentScopeCouponRate

Used to limit instrument scope to specified coupon rate.

See **CouponRate(223)** field for description.

Type: **Percentage**

Used in components: **InstrumentScope**

180.2.1221 InstrumentScopeEncodedSecurityDesc

Encoded (non-ASCII characters) representation of the InstrumentScopeSecurityDesc(1556) field in the encoded format specified via the MessageEncoding(347) field. If used, the ASCII (English) representation should also be specified in the InstrumentScopeSecurityDesc(1556) field.

Type: **data**

Used in components: **InstrumentScope**

180.2.1222 InstrumentScopeEncodedSecurityDescLen

Byte length of encoded (non-ASCII characters) InstrumentScopeEncodedSecurityDesc (1621) field

Type: **Length**

Used in components: **InstrumentScope**

180.2.1223 InstrumentScopeFlexibleIndicator

Used to limit instrument scope to securities that can be defined using flexible terms or not.

See FlexibleIndicator(1244) field for description.

Type: **Boolean**

Used in components: **InstrumentScope**

180.2.1224 InstrumentScopeGrp

Repeating group of InstrumentScope Components. Used to specify the instruments to which a request applies.

Name	Mult.	Type	Description
NoInstrumentScopes	[1..1]	NumInGroup	
InstrumentScopeOperator	[0..1]	CodeSet	Required when NoInstrumentScopes > 0.
InstrumentScope	[0..1]	Component	

Used in groups: **EntitlementGrp**, **TestScenarioGrp**

Used in messages: **MarketDefinition**, **MarketDefinitionUpdateReport**, **PartyEntitlementsRequest**

180.2.1225 InstrumentScopeMaturityMonthYear

Used to limit instrument scope to specified maturity month and year.

See MaturityMonthYear(200) field for description.

Type: **MonthYear**

Used in components: **InstrumentScope**

180.2.1226 InstrumentScopeMaturityTime

Used to limit instrument scope to specified maturity time.

See MaturityTime(1079) field for description.

Type: **TZTimeOnly**

Used in components: **InstrumentScope**

180.2.1227 InstrumentScopeOperator

Operator to perform on the instrument(s) specified

Type: **int**

Allowed values in InstrumentScopeOperatorCodeSet:

Code	Name	Description
1	Include	Include
2	Exclude	Exclude

Used in groups: **InstrumentScopeGrp**, **RiskInstrumentScopeGrp**

180.2.1228 InstrumentScopeProduct

Used to limit instrument scope to specified instrument product category.

See Product (460) field for description.

Type: **int**

Allowed values in ProductCodeSet:

Code	Name	Description
1	AGENCY	AGENCY
2	COMMODITY	COMMODITY
3	CORPORATE	CORPORATE
4	CURRENCY	CURRENCY
5	EQUITY	EQUITY
6	GOVERNMENT	GOVERNMENT
7	INDEX	INDEX
8	LOAN	LOAN
9	MONEYMARKET	MONEYMARKET
10	MORTGAGE	MORTGAGE
11	MUNICIPAL	MUNICIPAL
12	OTHER	OTHER
13	FINANCING	FINANCING

Used in components: **InstrumentScope**

180.2.1229 InstrumentScopeProductComplex

Used to limit instrument scope to specified product complex.

See ProductComplex(1227) field for description.

Type: **String**

Used in components: **InstrumentScope**

180.2.1230 InstrumentScopePutOrCall

Used to limit instrument scope to puts or calls.

See PutOrCall(201) field for description.

Type: **int**

Allowed values in PutOrCallCodeSet:

Code	Name	Description
0	Put	Put. Also used for the case in which the buyer of a Swaption has the right to enter into an IRS contract as a fixed-rate receiver or into a CDS contract as a seller of protection or for the case of a Floor.
1	Call	Call. Also used for the case in which the buyer of a Swaption has the right to enter into an IRS contract as a fixed-rate payer or into a CDS contract as a buyer of protection or for the case of a Cap.
2	Other	Other. In the context of ESMA RTS 22 reporting, this value may be used when, at the time of execution, the option right cannot be determined.
3	Chooser	Chooser. Indicates that the option buyer may choose to buy or sell the underlying security on exercise or if a Swaption to pay or receive the underlying IRS cash flow stream or to buy or sell CDS protection.

Used in components: [InstrumentScope](#)

180.2.1231 InstrumentScopeRestructuringType

Used to limit instrument scope to specified restructuring type.

See RestructuringType(1449) field for description.

Type: [String](#)

Used in components: [InstrumentScope](#)

180.2.1232 InstrumentScopeSecurityAltID

Used to limit instrument scope to specified security alternate identifier.

See SecurityAltID(455) field for description.

Type: [String](#)

Used in groups: [InstrumentScopeSecurityAltIDGrp](#)

180.2.1233 InstrumentScopeSecurityAltIDGrp

Alternative SecurityIDs for an instrument specified in the InstrumentScope.

Name	Mult.	Type	Description
NoInstrumentScopeSecurityAltID	[1..1]	NumInGroup	
InstrumentScopeSecurityAltID	[0..1]	String	Required when NoInstrumentScopeSecurityAltID > 0.
InstrumentScopeSecurityAltIDSource	[0..1]	CodeSet	Required when NoInstrumentScopeSecurityAltID > 0.

Used in components: **InstrumentScope**

180.2.1234 InstrumentScopeSecurityAltIDSource

Used to limit instrument scope to specified security alternate identifier source.

See SecurityAltIDSource(456) field for complete definition.

Type: **String**

Allowed values in SecurityIDSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
3	QUIK	QUIK
4	ISINNumber	ISIN
5	RICCode	RIC
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
7	ISOCountryCode	ISO Country Code
8	ExchangeSymbol	Exchange symbol
9	ConsolidatedTapeAssociation	Consolidated Tape Association (CTA) Symbol (SIAC CTS/CQS line format)
A	BloombergSymbol	Bloomberg Symbol
B	Wertpapier	Wertpapier
C	Dutch	Dutch
D	Valoren	Valoren
E	Sicovam	Sicovam
F	Belgian	Belgian
G	Common	"Common" (Clearstream and Euroclear)

Code	Name	Description
H	ClearingHouse	Clearing house / Clearing organization
I	ISDAFpMLSpecification	ISDA/FpML product specification (XML in SecurityXML(1185))
J	OptionPriceReportingAuthority	Option Price Reporting Authority
K	ISDAFpMLURL	ISDA/FpML product URL (URL in SecurityID(48))
L	LetterOfCredit	Letter of credit
M	MarketplaceAssignedIdentifier	Marketplace-assigned Identifier
N	MarkitREDEntityCLIP	Markit RED entity CLIP
P	MarkitREDPairCLIP	Markit RED pair CLIP
Q	CFTCCommodityCode	CFTC commodity code
R	ISDACommodityReferencePrice	ISDA Commodity Reference Price
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbolology BBGID".
T	LegalEntityIdentifier	Legal entity identifier
U	Synthetic	Synthetic. Used to specify that the security identifier is synthetic for linking nested underliers when there is no market identifier for the collection.
V	FidessaInstrumentMnemonic	Fidessa Instrument Mnemonic (FIM)
W	IndexName	Index name. Standard name of the index or rate index, e.g. "LIBOR" or "iTraxx Australia".
X	UniformSymbol	Uniform Symbol (UMTF Symbol)
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in groups: **InstrumentScopeSecurityAltIDGrp**

180.2.1235 InstrumentScopeSecurityDesc

Used to limit instrument scope to specified security description.

See SecurityDesc(107) field for description.

Type: **String**

Used in components: **InstrumentScope**

180.2.1236 InstrumentScopeSecurityExchange

Used to limit instrument scope to specified security exchange.

See SecurityExchange(207) field for description.

Type: **Exchange**

Used in components: **InstrumentScope**

180.2.1237 InstrumentScopeSecurityGroup

Used to limit instrument scope to specified security group.

See SecurityGroup(1151) field for description.

Type: **String**

Used in components: **InstrumentScope**

180.2.1238 InstrumentScopeSecurityID

Used to limit instrument scope to specified security identifier.

See SecurityID(48) field for description.

Type: **String**

Used in components: **InstrumentScope**

180.2.1239 InstrumentScopeSecurityIDSource

Used to limit instrument scope to specified security identifier source.

See SecurityIDSource(22) field for description.

Type: **String**

Allowed values in SecurityIDSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
3	QUIK	QUIK
4	ISINNumber	ISIN
5	RICCode	RIC
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)

Code	Name	Description
7	ISOCountryCode	ISO Country Code
8	ExchangeSymbol	Exchange symbol
9	ConsolidatedTapeAssociation	Consolidated Tape Association (CTA) Symbol (SIAC CTS/CQS line format)
A	BloombergSymbol	Bloomberg Symbol
B	Wertpapier	Wertpapier
C	Dutch	Dutch
D	Valoren	Valoren
E	Sicovam	Sicovam
F	Belgian	Belgian
G	Common	"Common" (Clearstream and Euroclear)
H	ClearingHouse	Clearing house / Clearing organization
I	ISDAFpMLSpecification	ISDA/FpML product specification (XML in SecurityXML(1185))
J	OptionPriceReportingAuthority	Option Price Reporting Authority
K	ISDAFpMLURL	ISDA/FpML product URL (URL in SecurityID(48))
L	LetterOfCredit	Letter of credit
M	MarketplaceAssignedIdentifier	Marketplace-assigned Identifier
N	MarkitREDEntityCLIP	Markit RED entity CLIP
P	MarkitREDPairCLIP	Markit RED pair CLIP
Q	CFTCCommodityCode	CFTC commodity code
R	ISDACommodityReferencePrice	ISDA Commodity Reference Price
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
T	LegalEntityIdentifier	Legal entity identifier
U	Synthetic	Synthetic. Used to specify that the security identifier is synthetic for linking nested underliers when there is no market identifier for the collection.
V	FidessaInstrumentMnemonic	Fidessa Instrument Mnemonic (FIM)
W	IndexName	Index name. Standard name of the index or rate index, e.g. "LIBOR" or "iTraxx Australia".
X	UniformSymbol	Uniform Symbol (UMTF Symbol)
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in components: **InstrumentScope**

180.2.1240 InstrumentScopeSecuritySubType

Used to limit instrument scope to specified security sub-type.

See SecuritySubType(762) field for description.

Type: **String**

Used in components: **InstrumentScope**

180.2.1241 InstrumentScopeSecurityType

Used to limit instrument scope to specified security type.

See SecurityType(167) field for description).

Type: **String**

Allowed values in SecurityTypeCodeSet:

Code	Name	Description
ABS	AssetBackedSecurities	Asset-backed Securities
AN	OtherAnticipationNotes	Other Anticipation Notes (BAN, GAN, etc.)
BA	BankersAcceptance	Bankers Acceptance
BRADY	BradyBond	Brady Bond
CORP	CorporateBond	Corporate Bond
CS	CommonStock	Common Stock
EUSUPRA	EuroSupranationalCoupons	Euro Supranational Coupons. Identify the issuer name in Issuer(106).
FOR	ForeignExchangeContract	Foreign Exchange Contract
MF	MutualFund	Mutual Fund
REPO	Repurchase	Repurchase
TERM	TermLoan	Term Loan
BDN	BankDepositoryNote	Bank Depository Note
CAN	CanadianTreasuryNotes	Canadian Treasury Notes
CAP	Cap	Cap. In an interest rate cap, the buyer receives payments at the end of each period in which the rate index exceeds the agreed strike rate.
CMB	CanadianMortgageBonds	Canadian Mortgage Bonds
COFO	CertificateOfObligation	Certificate Of Obligation
CPP	CorporatePrivatePlacement	Corporate Private Placement

Code	Name	Description
FAC	FederalAgencyCoupon	Federal Agency Coupon
FORWARD	Forward	Forward
FXNDF	NonDeliverableForward	Non-deliverable forward
MLEG	MultilegInstrument	Multileg Instrument
PS	PreferredStock	Preferred Stock
RVLV	RevolverLoan	Revolver Loan
BN	BankNotes	Bank Notes
BUYSELL	BuySellback	Buy Sellback
CB	ConvertibleBond	Convertible Bond
CDS	CreditDefaultSwap	Credit Default Swap
CMBS	Corp	Corp. Mortgage-backed Securities
COFP	CertificateOfParticipation	Certificate Of Participation
CTB	CanadianTreasuryBills	Canadian Treasury Bills
DR	DepositoryReceipts	Depository Receipts
FADN	FederalAgencyDiscountNote	Federal Agency Discount Note
FXSPOT	FXSpot	FX Spot
NONE	NoSecurityType	No Security Type
RVLVTRM	Revolver	Revolver/Term Loan
BOX	BillOfExchanges	Bill Of Exchanges
BRIDGE	BridgeLoan	Bridge Loan
CLLR	Collar	Collar. In an interest rate collar, this is a combination of a cap and a floor.
CMO	CollateralizedMortgageObligation	Collateralized Mortgage Obligation
DUAL	DualCurrency	Dual Currency
EUSOV	EuroSovereigns	Euro Sovereigns. Identify the issuer name in Issuer(106).
FXFWD	FXForward	FX Forward
GO	GeneralObligationBonds	General Obligation Bonds
PEF	PrivateExportFunding	Private Export Funding. Identify the issuer name in Issuer(106).
SECLOAN	SecuritiesLoan	Securities Loan
UST	USTreasuryNoteOld	US Treasury Note (Deprecated Value Use TNOTE)
CAMM	CanadianMoneyMarkets	Canadian Money Markets
CMDTYSWAP	CommoditySwap	Commodity swap
EUCORP	EuroCorporateBond	Euro Corporate Bond
FXSWAP	FXSwap	FX Swap

Code	Name	Description
IET	IOETTEMortgage	IOETTE Mortgage
LOFC	LetterOfCredit	Letter Of Credit
MT	MandatoryTender	Mandatory Tender
PROV	CanadianProvincialBonds	Canadian Provincial Bonds
SECPLEDGE	SecuritiesPledge	Securities Pledge
SUPRA	USDSupranationalCoupons	USD Supranational Coupons. Identify the issuer name in Issuer(106).
USTB	USTreasuryBillOld	US Treasury Bill (Deprecated Value Use TBILL)
?	Wildcard	Wildcard entry for use on Security Definition Request
CD	CertificateOfDeposit	Certificate Of Deposit
DVPLDG	DeliveryVersusPledge	Delivery versus pledge
EUFRN	EuroCorporateFloatingRateNotes	Euro Corporate Floating Rate Notes
EXOTIC	Exotic	Exotic
FXNDS	NonDeliverableSwap	Non-deliverable Swap
MBS	MortgageBackedSecurities	Mortgage-backed Securities
RAN	RevenueAnticipationNote	Revenue Anticipation Note
SWING	SwingLineFacility	Swing Line Facility
TB	TreasuryBill	Treasury Bill - non US
CASH	Cash	Cash
CL	CallLoans	Call Loans
COLLBSKT	CollateralBasket	Collateral basket. A collection of securities held as collateral in the customer's collateral fund. The collateral fund is usually managed by a custodian.
DINP	DebtorInPossession	Debtor In Possession
FLR	Floor	Floor. In an interest rate floor, the buyer receives payments at the end of each period in which the rate index is below the agreed strike rate.
FRN	USCorporateFloatingRateNotes	US Corporate Floating Rate Notes
FXBN	FXBankNote	FX Bank Note
MIO	MortgageInterestOnly	Mortgage Interest Only
OOC	OptionsOnCombo	Options on Combo
REV	RevenueBonds	Revenue Bonds
TBOND	USTreasuryBond	US Treasury Bond
CP	CommercialPaper	Commercial Paper
DEFLTED	Defaulted	Defaulted

Code	Name	Description
FRA	FRA	Forward Rate Agreement
FXDN	ForeignCurrencyDiscountNote	Foreign Currency Discount Note. Discount notes issued in foreign currency by Fannie Mae.
MPO	MortgagePrincipalOnly	Mortgage Principal Only
Other	Other	Other
SFP	StructuredFinanceProduct	Structured finance product
SPCLA	SpecialAssessment	Special Assessment
TINT	InterestStripFromAnyBondOrNote	Interest Strip From Any Bond Or Note
XLINKD	IndexedLinked	Indexed Linked
DN	DepositNotes	Deposit Notes
ETN	ExchangeTradedNote	Exchange traded note
FUT	Future	Future
MPP	MortgagePrivatePlacement	Mortgage Private Placement
SPCLO	SpecialObligation	Special Obligation
STRUCT	StructuredNotes	Structured Notes
TBILL	USTreasuryBill	US Treasury Bill
TIPS	TreasuryInflationProtectedSecurities	Treasury Inflation Protected Securities
WITHDRN	Withdrawn	Withdrawn
EUCD	EuroCertificateOfDeposit	Euro Certificate Of Deposit
FWD	DerivativeForward	Derivative forward
MPT	MiscellaneousPassThrough	Miscellaneous Pass-through
MGRNLOAN	MarginLoan	Margin loan
REPLACD	Replaced	Replaced
SPCLT	SpecialTax	Special Tax
TCAL	PrincipalStripOfACallableBondOrNote	Principal Strip Of A Callable Bond Or Note
YANK	YankeeCorporateBond	Yankee Corporate Bond
DIMSUMCORP	OffshoreIssuedChineseYuanCorporateBond	Offshore issued Chinese Yuan (CNY) denominated corporate bond
EUCP	EuroCommercialPaper	Euro Commercial Paper
IRS	InterestRateSwap	Interest Rate Swap
MATURED	Matured	Matured
PFAND	Pfandbrief	Pfandbrief. Identify the issuer name in Issuer(106).
SECDERIV	SecuritizedDerivative	Securitized derivative
TAN	TaxAnticipationNote	Tax Anticipation Note

Code	Name	Description
TPRN	PrincipalStripFromANonCallable-BondOrNote	Principal Strip From A Non-Callable Bond Or Note
TRS	TotalReturnSwap	Total return swap
AMENDED	Amended	Amended and restated
ETF	ExchangeTradedFund	Exchange Traded Fund
LOANLEASE	LoanLease	Loan/lease
LQN	LiquidityNote	Liquidity Note
PRCORP	PreferredCorporateBond	Preferred Corporate Bond
TAXA	TaxAllocation	Tax Allocation
TBA	ToBeAnnounced	To Be Announced
TNOTE	USTreasuryNote	US Treasury Note
DIGITAL	DigitalAsset	Digital Asset. Asset that exists only in digital form or which is the digital representation of another asset (Source: ISO 24165 - Terms and Definitions).
DIMSUMSOV	OffshoreIssuedChineseYuanSovereignBond	Offshore issued Chinese Yuan (CNY) denominated sovereign bond
MTN	MediumTermNotes	Medium Term Notes
RETIRED	Retired	Retired
TECP	TaxExemptCommercialPaper	Tax Exempt Commercial Paper
ONITE	Overnight	Overnight
OOF	OptionsOnFutures	Options on Futures
SOV	SovereignBond	Sovereign Bond. Sovereign or government bond other than Euro and US issuer. Specify sovereign issuer in Issuer(106).
TMCP	TaxableMunicipalCP	Taxable Municipal CP
OOP	OptionsOnPhysical	Options on Physical - use not recommended
PN	PromissoryNote	Promissory Note
STN	ShortTermLoanNote	Short Term Loan Note
TFRN	USTreasuryFloatingRateNote	US Treasury Floating Rate Note
TRAN	TaxRevenueAnticipationNote	Tax Revenue Anticipation Note
OPT	Option	Option
PZFJ	PlazosFijos	Plazos Fijos
VRDN	VariableRateDemandNote	Variable Rate Demand Note
SLQN	SecuredLiquidityNote	Secured Liquidity Note
SPOTFWD	SpotForward	Spot forward
WAR	Warrant	Warrant

Code	Name	Description
MCPIB	MunicipalInterestBearingCommercialPaper	Municipal Interest Bearing Commercial Paper
SWAPTION	SwapOption	Swap option
TD	TimeDeposit	Time Deposit
TMB	TaxableMunicipalBond	Taxable Municipal Bond
XMISSION	Transmission	Transmission
INDEX	Index	General type for a contract based on an established index
TLQN	TermLiquidityNote	Term Liquidity Note
VRDO	VariableRateDemandObligation	Variable Rate Demand Obligation
BDBSKT	BondBasket	Bond basket
XCN	ExtendedCommNote	Extended Comm Note
CFD	ContractForDifference	Contract for difference
YCD	YankeeCertificateOfDeposit	Yankee Certificate Of Deposit
BAB	BankAcceptedBill	Bank Accepted Bill. Also known as Bank Bill.
CRLNSWAP	CorrelationSwap	Correlation swap
BNST	ShortTermBankNote	Short Term Bank Note
DVDNDSWAP	DividendSwap	Dividend swap
CLCP	CallableCommercialPaper	Callable Commercial Paper
EQBSKT	EquityBasket	Equity basket
CN	CommercialNote	Commercial Note
EQFWD	EquityForward	Equity forward
CPIB	InterestBearingCommercialPaper	Interest Bearing Commercial Paper
RTRNSWAP	ReturnSwap	Return swap
EUMTN	EuroMediumTermNote	Euro Medium Term Note
VARSWAP	VarianceSwap	Variance swap
EUNCP	EuroNegotiableCommercialPaper	Euro Negotiable Commercial Paper
PRTFLIOSWAP	PortfolioSwaps	Portfolio swap
EUSTLQN	EuroStructuredLiquidityNote	Euro Structured Liquidity Note
FUTSWAP	FuturesOnASwap	Futures on a Swap
EUTD	EuroTimeDeposit	Euro Time Deposit
FWDSWAP	ForwardsOnASwap	Forwards on a Swap
FWDFRTAGMT	ForwardFreightAgreement	Forward Freight Agreement
JCD	JumboCertificateOfDeposit	Jumbo Certificate of Deposit
MMF	MoneyMarketFund	Money Market Fund

Code	Name	Description
SPREADBET	SpreadBetting	Spread Betting
ETC	ExchangeTradedCommodity	Exchange traded commodity
MN	MasterNote	Master Note. Short term notes issued by Federal Farm Credit Banks Funding Corporation to provide loans and funding under Federal Farm Credit System (FFCS).
NCD	NegotiableCertificateOfDeposit	Negotiable Certificate of Deposit
NCP	NegotiableCommercialPaper	Negotiable Commercial Paper
RCD	RetailCertificateOfDeposit	Retail Certificate of Deposit
TDR	TermDepositReceipt	Term Deposit Receipt

Used in components: **InstrumentScope**

180.2.1242 InstrumentScopeSeniority

Used to limit instrument scope to specified seniority type.

See Seniority(1450) field for description.

Type: **String**

Used in components: **InstrumentScope**

180.2.1243 InstrumentScopeSettlType

Used to limit instrument scope to specified settlement type.

See SettlType(63) field for description.

Type: **String**

Allowed values in SettlTypeCodeSet:

Code	Name	Description
0	Regular	Regular / FX Spot settlement (T+1 or T+2 depending on currency)
1	Cash	Cash (TOD / T+0)
2	NextDay	Next Day (TOM / T+1)
3	TPlus2	T+2

Code	Name	Description
4	TPlus3	T+3
5	TPlus4	T+4
6	Future	Future
7	WhenAndIfIssued	When And If Issued
8	SellersOption	Sellers Option
9	TPlus5	T+5
B	BrokenDate	Broken date. Use within FX to specify a non-standard tenor. The use of SettlDate(64) is required to specify the actual settlement date when SettlType(63) = B (Broken date).
C	FXSpotNextSettlement	FX Spot Next settlement (Spot+1, aka next day)

Used in components: [InstrumentScope](#)

180.2.1244 InstrumentScopeSymbol

Used to limit instrument scope to specified symbol.

See Symbol(55) field for description.

Type: [String](#)

Used in components: [InstrumentScope](#)

180.2.1245 InstrumentScopeSymbolSfx

Used to limit instrument scope to specified symbol suffix.

See SymbolSfx(65) field for description.

Type: [String](#)

Allowed values in SymbolSfxCodeSet:

Code	Name	Description
CD	EUCPWithLumpSumInterest	EUCP with lump-sum interest rather than discount price
WI	WhenIssued	"When Issued" for a security to be reissued under an old CUSIP or ISIN

Used in components: [InstrumentScope](#)

180.2.1246 InstrumentScopeUPICode

Uniquely identifies the product of a security using ISO 4914 as filter criteria. See UPICode(2891) for further detail.

Type: **String**

Used in components: **InstrumentScope**

180.2.1247 InterestAccrualDate

The start date used for calculating accrued interest on debt instruments which are being sold between interest payment dates. Often but not always the same as the Issue Date and the Dated Date

Type: **LocalMktDate**

Used in components: **Instrument**

180.2.1248 InterestAtMaturity

Amount of interest (i.e. lump-sum) at maturity.

Type: **Amt**

Used in groups: **TrdCapRptAckSideGrp**, **TrdCapRptSideGrp**

Used in messages: **AllocationInstruction**, **AllocationInstructionAlert**, **AllocationReport**, **Confirmation**, **ExecutionReport**

180.2.1249 InternationalSwapIndicator

Identifies the swap trade as an "international" transaction.

Type: **Boolean**

Used in messages: **TradeCaptureReport**

180.2.1250 InTheMoneyCondition

Specifies an option instrument's "in the money" condition.

Type: **int**

Allowed values in InTheMoneyConditionCodeSet:

Code	Name	Description
0	StandardITM	Standard in-the-money. The option's strike price is less than the underlying settlement price for a call or greater than the underlying settlement price for a put.
1	ATMITM	At-the-money is in-the-money. The option's strike price of either the put or call is equal to the underlying settlement price in addition to standard in-the-money behavior.
2	ATMCallITM	At-the-money call is in-the-money. The call option's strike price is equal to the underlying settlement price in addition to standard in-the-money behavior.
3	ATMPutITM	At-the-money put is in-the-money. The put option's strike price is equal to the underlying settlement price in addition to standard in-the-money behavior.

Used in components: **Instrument**

180.2.1251 IntraFirmTradeIndicator

Indicates whether the trade or position was entered into as an intra-group transaction, i.e. between two units of the same parent entity having majority ownership interest in both counterparties.

Type: **Boolean**

Used in groups: **MDFullGrp**, **MDIncGrp**

Used in messages: **PositionReport**, **TradeCaptureReport**

180.2.1252 InvestorCountryOfResidence

The ISO 3166 Country code (2 character) identifying which country the beneficial investor is resident for tax purposes.

Type: **Country**

Used in groups: **RgstDtlsGrp**

180.2.1253 InViewOfCommon

Indicates whether or not the halt was due to Common Stock trading being halted.

Type: **Boolean**

Allowed values in InViewOfCommonCodeSet:

Code	Name	Description
N	HaltWasNotRelatedToA-HaltOfTheCommonStock	Halt was not related to a halt of the common stock
Y	HaltWasDueToCommonStockBeing-Halted	Halt was due to common stock being halted

Used in messages: [SecurityStatus](#)

180.2.1254 IOIID

Unique identifier of IOI message.

(Prior to FIX 4.1 this field was of type int)

Type: [String](#)

Used in groups: [ListOrdGrp](#)

Used in messages: [CrossOrderCancelReplaceRequest](#), [IOI](#), [MultilegOrderCancelReplace](#), [NewOrder-Cross](#), [NewOrderMultileg](#), [NewOrderSingle](#), [QuoteResponse](#)

180.2.1255 IOINaturalFlag

Indicates that IOI is the result of an existing agency order or a facilitation position resulting from an agency order, not from principal trading or order solicitation activity.

Type: [Boolean](#)

Allowed values in IOINaturalFlagCodeSet:

Code	Name	Description
N	NotNatural	Not Natural
Y	Natural	Natural

Used in messages: [IOI](#)

180.2.1256 IOIQltyInd

Relative quality of indication

Type: **char**

Allowed values in IOIQltyIndCodeSet:

Code	Name	Description
H	High	High
L	Low	Low
M	Medium	Medium

Used in messages: **IOI**

180.2.1257 IOIQty

Quantity (e.g. number of shares) in numeric form or relative size.

Type: **String**

Allowed values in IOIQtyCodeSet:

Code	Name	Description
S	Small	Small
M	Medium	Medium
L	Large	Large
U	UndisclosedQuantity	Undisclosed Quantity

Used in messages: **IOI**

180.2.1258 IOIQualGrp

Name	Mult.	Type	Description
NoIOIQualifiers	[1..1]	NumInGroup	Required if any IOIQualifiers are specified. Indicates the number of repeating IOIQualifiers.
IOIQualifier	[0..1]	CodeSet	Required if NoIOIQualifiers > 0

Used in messages: **IOI**

180.2.1259 IOIQualifier

Code to qualify IOI use. (see Volume : "Glossary" for value definitions)

Type: **char**

Allowed values in IOIQualifierCodeSet:

Code	Name	Description
A	AllOrNone	All or None (AON)
B	MarketOnClose	Market On Close (MOC) (held to close)
C	AtTheClose	At the close (around/not held to close)
D	VWAP	VWAP (Volume Weighted Average Price)
E	Axe	Axe. Indicates that a quote is an Axe, without specifying a side preference. Mutually exclusive with F(Axe on bid) and G(Axe on offer).
F	AxeOnBid	Axe on bid. Indicates that a quote is an Axe, with a preference to execute on the bid side. Mutually exclusive with E(Axe) and G (Axe on offer)
G	AxeOnOffer	Axe on offer. Indicates that a quote is an Axe, with a preference to execute on the offer side. Mutually exclusive with E(Axe) and F (Axe on bid)
H	ClientNaturalWorking	Client natural working. With reference to the AFME/IA Framework for Indications of Interest, this is to be used to denote IOIs of type C2 – Client Natural (Working). A client should be able to seek verification (from IOI publisher's management/compliance) that, for any C2 IOIs received, there was a corresponding live client order for at least the advertised size prior to the IOI being generated. Resulting trades are expected to be of a riskless nature.
I	InTouchWith	In touch with. With reference to the AFME/IA Framework for Indications of Interest, this is to be used to denote IOIs of type P1 - Potential. Post-execution, a client should be able to seek verification (from IOI publisher's management/ compliance) that, for any P1 IOIs received and executed against, there was by time of the execution, an opposing specific client order. Resulting trades are expected to be of a riskless nature. If the anticipated client order does not materialise, and the broker elects to commit capital, this must be disclosed prior to execution.

Code	Name	Description
J	PositionWanted	Position wanted. With reference to the AFME/IA Framework for Indications of Interest, this is to be used to denote IOIs of type H2 – Position Wanted. Brokers will be likely be sourcing liquidity and therefore may advertise the size of IOI they wish; however, clients can expect the broker to honour the size of IOI shown. The presumption is that there is no intent to immediately unwind the position without notification, however, brokers may provide additional granularity to the category and may offer bilateral post trade commitments. Brokers will also offer clients a feedback mechanism.
K	MarketMaking	Market making. With reference to the AFME/IA Framework for Indications of Interest, this is to be used to denote IOIs of type H3 – Market Making, no enforcement is required.
L	Limit	Limit
M	MoreBehind	More Behind
N	ClientNaturalBlock	Client natural block. With reference to the AFME/IA Framework for Indications of Interest, this is to be used to denote IOIs of type C1 - Client Natural (Block). A client should be able to seek verification (from IOI publisher's management/compliance) that, for any C1 IOIs received, there was a corresponding live client order for at least the advertised size prior to the IOI being generated. Resulting trades are expected to be of a riskless nature.
O	AtTheOpen	At the Open
P	TakingAPosition	Taking a Position
Q	AtTheMarket	At the Market (previously called Current Quote)
R	ReadyToTrade	Ready to Trade
S	PortfolioShown	Inventory or Portfolio Shown
T	ThroughTheDay	Through the Day
U	Unwind	Unwind. With reference to the AFME/IA Framework for Indications of Interest, this is to be used to denote IOIs of type H1 - Unwind. Brokers will be responsible for ensuring that the size of the IOI reflects the actual house position in the relevant business unit and should not inflate the size of the IOI. The presumption is that there is no intent to immediately replace the position without notification, however, brokers may provide additional granularity to the category and may offer bilateral post trade commitments. Brokers will also offer clients a feedback mechanism.
V	Versus	Versus

Code	Name	Description
W	Indication	Indication - Working Away
X	CrossingOpportunity	Crossing Opportunity
Y	AtTheMidpoint	At the Midpoint
Z	PreOpen	Pre-open
1	QuantityNegotiable	Quantity is negotiable. When specified, the dealer may counter with a reduced quantity in its Quotes in response to QuoteRequest(35=R). All-or-none if omitted.
2	AllowLateBids	Allow late bids. When specified in QuoteRequest(35=R) the dealer may submit quotes after curtain time has elapsed.
3	ImmediateOrCounter	Immediate or counter. When specified, the buy-side customer is permitted to counter a firm quote during wiretime.
4	AutoTrade	Auto trade. Trade is in an auto-trading mode whereby the best quote that satisfies user criteria as determined by the trading platform will be accepted automatically.
a	AutomaticSpot	Automatic spot. At completion of price negotiation based on spread the trading platform will propose a benchmark spot price which may be filled immediately by the dealer or countered.
b	PlatformCalculatedSpot	Platform calculated spot. At completion of price negotiation based on spread the trading platform will supply a benchmark spot price and immediately complete the trade reporting fill. There is no dealer last look.
c	OutsideSpread	Outside spread. The IOI is identifiable outside the current bid/offer.
d	DeferredSpot	Deferred spot. At a future time after completion of price negotiation based on spread and reported in StrikeTime(443) the trading platform will propose a benchmark spot price which may be filled immediately by the dealer or countered.
n	NegotiatedSpot	Negotiated spot. Once price negotiation based on spread is completed negotiation of the benchmark spot price proceeds immediately.

Used in groups: **IOIQualGrp**

180.2.1260 IOIRefID

Reference identifier used with CANCEL and REPLACE, transaction types.

(Prior to FIX 4.1 this field was of type int)

Type: **String**

Used in messages: **IOI**

180.2.1261 IOITransType

Identifies IOI message transaction type

Type: **char**

Allowed values in IOITransTypeCodeSet:

Code	Name	Description
N	New	New
C	Cancel	Cancel
R	Replace	Replace

Used in messages: **IOI**

180.2.1262 IRSDirection

Used to specify whether the principal is paying or receiving the fixed rate in an interest rate swap.

Type: **String**

Allowed values in IRSDirectionCodeSet:

Code	Name	Description
PAY	Pay	Principal is paying fixed rate.
RCV	Rcv	Principal is receiving fixed rate
NA	NA	Swap is float/float or fixed/fixed

Used in messages: **TradeCaptureReport**

180.2.1263 IssueDate

The date on which a bond or stock offering is issued. It may or may not be the same as the effective date ("Dated Date") or the date on which interest begins to accrue ("Interest Accrual Date")

(Note tag # was reserved in FIX 4.1, added in FIX 4.3)

(prior to FIX 4.4 field was of type UTCDate)

Type: **LocalMktDate**

Used in components: **Instrument**

180.2.1264 Issuer

Name of security issuer (e.g. International Business Machines, GNMA).

see also Volume 7: "PRODUCT: FIXED INCOME - Euro Issuer Values"

Type: **String**

Used in components: **Instrument**

180.2.1265 LanguageCode

The national language in which the news item is provided.

Type: **Language**

Used in messages: **News**

180.2.1266 LastAlgoID

Identifies the algorithm a broker has opted to use when executing an order.

Type: **String**

Used in messages: **ExecutionReport**

180.2.1267 LastCapacity

Broker capacity in order execution

Type: **char**

Allowed values in LastCapacityCodeSet:

Code	Name	Description
1	Agent	Agent

Code	Name	Description
2	CrossAsAgent	Cross as agent
3	CrossAsPrincipal	Cross as principal
4	Principal	Principal
5	RisklessPrincipal	Riskless principal

Used in groups: [ExecAllocGrp](#), [TrdCapRptSideGrp](#)

Used in messages: [ExecutionReport](#)

180.2.1268 LastForwardPoints

F/X forward points added to LastSpotRate(194). May be a negative value. Expressed in decimal form. For example, 61.99 points is expressed and sent as 0.006199.

Type: [PriceOffset](#)

Used in messages: [ExecutionReport](#), [TradeCaptureReport](#), [TradeCaptureReportAck](#)

180.2.1269 LastForwardPoints2

F/X forward points of the future part of a F/X swap order added to LastSpotRate(194). May be a negative value.

Type: [PriceOffset](#)

Used in messages: [ExecutionReport](#)

180.2.1270 LastFragment

Indicates whether this message is the last in a sequence of messages for those messages that support fragmentation, such as Allocation Instruction, Mass Quote, Security List, Derivative Security List

Type: [Boolean](#)

Allowed values in LastFragmentCodeSet:

Code	Name	Description
N	NotLastMessage	Not Last Message

Code	Name	Description
Y	LastMessage	Last Message

Used in groups: [QuotSetAckGrp](#), [QuotSetGrp](#)

Used in messages: [AllocationInstruction](#), [AllocationInstructionAlert](#), [AllocationReport](#), [DerivativeSecurityList](#), [DerivativeSecurityListUpdateReport](#), [ExecutionReport](#), [ListStatus](#), [ListStrikePrice](#), [MassOrder](#), [MassOrderAck](#), [NewOrderList](#), [OrderMassActionReport](#), [PartyDetailsListReport](#), [PartyDetailsListUpdateReport](#), [PartyEntitlementsReport](#), [PartyEntitlementsUpdateReport](#), [PartyRiskLimitsReport](#), [PartyRiskLimitsUpdateReport](#), [SecurityList](#), [SecurityListUpdateReport](#), [SecurityRiskMetricsReport](#), [SecurityTypes](#)

180.2.1271 LastLimitAmt

The amount that has been drawn down against the counterparty for a given trade. The type of limit is specified in LimitAmtType(1631).

Bilateral agreements dictate the units and maximum value of this field.

Type: [Amt](#)

Used in groups: [LimitAmts](#)

180.2.1272 LastLiquidityInd

Indicator to identify whether this fill was a result of a liquidity provider providing or liquidity taker taking the liquidity.

Type: [int](#)

Allowed values in LastLiquidityIndCodeSet:

Code	Name	Description
0	NeitherAddedNorRemovedLiquidity	Neither added nor removed liquidity. May be used by venues where market rules do not define "add" or "remove" liquidity. In the context of the SEC amendment of Regulation NMS Rule 606(b), may be used to identify executions that are only reported as part of total shares executed and not as part of shares providing or removing liquidity (see https://www.sec.gov/rules/final/2018/34-84528.pdf for details).

Code	Name	Description
1	AddedLiquidity	Added Liquidity
2	RemovedLiquidity	Removed Liquidity
3	LiquidityRoutedOut	Liquidity Routed Out
4	Auction	Auction execution
5	TriggeredStopOrder	Triggered stop order. Fill was the result of a stop order being triggered and immediately executed.
6	TriggeredContingencyOrder	Triggered contingency order. Fill was the result of a contingency order (OCO, OTO, OUO) becoming active (after cancelling or updating another order) and being immediately executed.
7	TriggeredMarketOrder	Triggered market order. Fill was the result of a market order being triggered due to an executable orderbook situation.
8	RemovedLiquidityAfterFirmOrder-Commitment	Removed liquidity after firm order commitment. An order that was submitted for continuous trading that required a firm order commit prior to execution. "Conditional order" is an alternate term used for such orders.
9	AuctionExecutionAfterFirmOrder-Commitment	Auction execution after firm order commitment. An order that was submitted for auction trading that required a firm order commit prior to execution. "Conditional order" is an alternate term used for such orders.
10	Unknown	Unknown. The liquidity indicator of the execution cannot be determined or was not provided upon execution.
11	Other	Other. None of the existing liquidity indicators are applicable for the execution (e.g. due to a venue's new order type that does not fit existing values).

Used in messages: [ExecutionReport](#)

180.2.1273 LastMkt

Market of execution for last fill, or an indication of the market where an order was routed

Valid values:

See "Appendix 6-C"

Type: [Exchange](#)

Used in groups: [InstrmtMatchSideGrp](#)

Used in messages: [Advertisement](#), [AllocationInstruction](#), [AllocationInstructionAlert](#), [AllocationReport](#), [Confirmation](#), [ExecutionReport](#), [TradeCaptureReport](#), [TradeCaptureReportAck](#)

180.2.1274 LastMsgSeqNumProcessed

The last MsgSeqNum (34) value received by the FIX engine and processed by downstream application, such as trading engine or order routing system. Can be specified on every message sent. Useful for detecting a backlog with a counterparty.

Type: **SeqNum**

Used in components: **StandardHeader**

180.2.1275 LastMultipliedQty

Expresses the quantity bought or sold when LastQty(32) is expressed in number of contracts. Used in addition to LastQty(32). It is the product of LastQty(32) and ContractMultiplier(231).

Type: **Qty**

Used in messages: **TradeCaptureReport**

180.2.1276 LastNetworkResponseID

Identifier of the previous Network Response message sent to a counterparty, used to allow incremental updates.

Type: **String**

Used in messages: **NetworkCounterpartySystemStatusResponse**

180.2.1277 LastParPx

Last price expressed in percent-of-par. Conditionally required for Fixed Income trades when LastPx (31) is expressed in Yield, Spread, Discount or any other type.

Usage: Execution Report and Allocation Report repeating executions block (from sellside).

Type: **Price**

Used in groups: **ExecAllocGrp**

Used in messages: **ExecutionAck**, **ExecutionReport**, **TradeCaptureReport**, **TradeCaptureReportAck**

180.2.1278 LastPx

Price of this (last) fill.

Type: **Price**

Used in groups: **ExecAllocGrp**, **ExecutionAggregationGrp**, **InstrmtMatchSideGrp**, **MDFullGrp**, **MDIncGrp**

Used in messages: **DontKnowTrade**, **ExecutionAck**, **ExecutionReport**, **SecurityStatus**, **TradeCaptureReport**, **TradeCaptureReportAck**

180.2.1279 LastQty

Quantity (e.g. shares) bought/sold on this (last) fill.

(Prior to FIX 4.2 this field was of type int)

Type: **Qty**

Used in groups: **ExecAllocGrp**, **ExecutionAggregationGrp**, **InstrmtMatchSideGrp**

Used in messages: **DontKnowTrade**, **ExecutionAck**, **ExecutionReport**, **TradeCaptureReport**, **TradeCaptureReportAck**

180.2.1280 LastQtyChanged

The positive or negative change in quantity when this report is a trade correction or continuation.

Type: **Qty**

Used in messages: **TradeCaptureReport**

180.2.1281 LastQtyVariance

When LastQty is an estimated value, e.g. for a Repo “circled” trade, LastQtyVariance specifies the absolute amount that the size may vary up or down when finalized. Omitted when LastQty(32) is already final.

Type: **Qty**

Used in messages: **ExecutionReport**, **TradeCaptureReport**

180.2.1282 LastRptRequested

Indicates whether this message is the last report message in response to a request message, e.g. OrderMassStatusRequest(35=AF), TradeCaptureReportRequest(35=AD).

Type: **Boolean**

Allowed values in LastRptRequestedCodeSet:

Code	Name	Description
N	NotLastMessage	Not last message
Y	LastMessage	Last message

Used in messages: **AssignmentReport**, **CollateralReport**, **ExecutionReport**, **MarginRequirementReport**, **PositionReport**, **TradeCaptureReport**

180.2.1283 LastSpotRate

F/X spot rate.

Type: **Price**

Used in messages: **ExecutionReport**, **TradeCaptureReport**, **TradeCaptureReportAck**

180.2.1284 LastSwapPoints

For FX Swap, this is used to express the last market event for the differential between the far leg's bid/offer and the near leg's bid/offer in a fill or partial fill. Value can be negative. Expressed in decimal form. For example, 61.99 points is expressed and sent as 0.006199

Type: **PriceOffset**

Used in messages: **ExecutionReport**, **TradeCaptureReport**, **TradeCaptureReportAck**

180.2.1285 LastUpdateTime

Timestamp of last update to data item (or creation if no updates made since creation).

Type: **UTCTimestamp**

Used in groups: **SettlInstGrp**, **SettlObligationInstructions**, **TrdCapDtGrp**

Used in messages: [AlgoCertificateReport](#), [DerivativeSecurityList](#), [DerivativeSecurityListUpdateReport](#), [MarketDataSnapshotFullRefresh](#), [SecurityDefinition](#), [SecurityDefinitionUpdateReport](#), [SettlementInstructionRequest](#), [TradeCaptureReport](#), [TradeCaptureReportAck](#)

180.2.1286 LastUpfrontPrice

Price used to determine upfront payment for swaps contracts reported for a deal (trade).

Type: [Price](#)

Used in messages: [ExecutionReport](#), [TradeCaptureReport](#)

180.2.1287 LateIndicator

Indicates if the contrary intention was received after the exchange imposed cutoff time

Type: [Boolean](#)

Used in messages: [ContraryIntentionReport](#)

180.2.1288 LeavesQty

Quantity open for further execution. If the OrdStatus (39) is Canceled, DoneForTheDay, Expired, Calculated, or Rejected (in which case the order is no longer active) then LeavesQty could be 0, otherwise $\text{LeavesQty} = \text{OrderQty} (38) - \text{CumQty} (14)$.

(Prior to FIX 4.2 this field was of type int)

Type: [Qty](#)

Used in components: [TradeReportOrderDetail](#)

Used in groups: [OrdListStatGrp](#), [OrderEntryAckGrp](#)

Used in messages: [ExecutionReport](#)

180.2.1289 LegAccount

Account mnemonic as agreed between buy and sell sides, e.g. broker and institution or investor/intermediary and fund manager.

Type: [String](#)

Used in groups: [InstrmtLegExecGrp](#), [LegOrdGrp](#), [TrdInstrmtLegGrp](#)

180.2.1290 LegAdditionalDividendsIndicator

Indicates whether additional dividends are applicable.

Type: **Boolean**

Used in components: **LegDividendConditions**

180.2.1291 LegAdditionalTermBondCouponFrequencyPeriod

Time unit multiplier for the frequency of the bond's coupon payment.

Type: **int**

Used in groups: **LegAdditionalTermBondRefGrp**

180.2.1292 LegAdditionalTermBondCouponFrequencyUnit

Time unit associated with the frequency of the bond's coupon payment.

Type: **String**

Allowed values in CouponFrequencyUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year
H	Hour	Hour
Min	Minute	Minute
S	Second	Second
T	Term	Term

Used in groups: **LegAdditionalTermBondRefGrp**

180.2.1293 LegAdditionalTermBondCouponRate

Coupon rate of the bond. See also CouponRate(223).

Type: **Percentage**

Used in groups: [LegAdditionalTermBondRefGrp](#)

180.2.1294 LegAdditionalTermBondCouponType

Specifies the coupon type of the bond.

Type: [int](#)

Allowed values in CouponTypeCodeSet:

Code	Name	Description
0	Zero	Zero
1	FixedRate	Fixed rate
2	FloatingRate	Floating rate
3	Structured	Structured

Used in groups: [LegAdditionalTermBondRefGrp](#)

180.2.1295 LegAdditionalTermBondCurrency

Specifies the currency the bond value is denominated in. Uses ISO 4217 currency codes.

Type: [Currency](#)

Used in groups: [LegAdditionalTermBondRefGrp](#)

180.2.1296 LegAdditionalTermBondCurrentTotalIssuedAmount

Total issued amount of the bond.

Type: [Amt](#)

Used in groups: [LegAdditionalTermBondRefGrp](#)

180.2.1297 LegAdditionalTermBondDayCount

The day count convention used in interest calculations for a bond or an interest bearing security.

Type: [int](#)

Allowed values in CouponDayCountCodeSet:

Code	Name	Description
0	OneOne	1/1. If parties specify the Day Count Fraction to be 1/1 then in calculating the applicable amount, 1 is simply input into the calculation as the relevant Day Count Fraction. See also 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (a).
1	ThirtyThreeSixtyUS	30/360 (30U/360 or Bond Basis). See also ISO 15022 MICO code 'A001'.
2	ThirtyThreeSixtySIA	30/360 (SIA). A variant of "30/360" - when Date1 and Date2 are both Feb. 28th or 29th convert them to 30th using the same logic in the conversion of 31st to 30th.
3	ThirtyThreeSixtyM	30/360M. Commonly used day count convention for US mortgage backed securities. Feb 28th (or 29th in a leap year) is always considered as a 30th for a start date. As a comparison, in the regular 30/360 day count as used by most US agency and corporate bonds, a start date of Feb 28th (or 29th in a leap year) is still considered as the 28th (or 29th) day of a month of 30 days.
4	ThirtyEThreeSixty	30E/360 (Eurobond Basis). See also ISO 15022 MICO code 'A007'.
5	ThirtyEThreeSixtyISDA	30E/360 (ISDA). Date adjustment rules are: (1) if Date1 is the last day of the month, then change Date1 to 30; (2) if D2 is the last day of the month (unless Date2 is the maturity date and Date2 is in February), then change Date2 to 30. See also 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (h).
6	ActThreeSixty	Act/360. See also ISO 15022 MICO code 'A004'.
7	ActThreeSixtyFiveFixed	Act/365 (FIXED). See also ISO 15022 MICO code 'A005'.
8	ActActAFB	Act/Act (AFB). See also ISO 15022 MICO code 'A010'.
9	ActActICMA	Act/Act (ICMA). See also ISO 15022 MICO code 'A006'.
10	ActActISMAUltimo	Act/Act (ICMA Ultimo). The Act/Act (ICMA Ultimo) differs from Act/Act (ICMA) method only that it assumes that regular coupons always fall on the last day of the month.
11	ActActISDA	Act/Act (ISDA). See also ISO 15022 MICO code 'A008'.
12	BusTwoFiftyTwo	BUS/252. Used for Brazilian Real swaps, which is based on business days instead of calendar days. The number of business days divided by 252.
13	ThirtyEPlusThreeSixty	30E+/360. Variation on 30E/360. Date adjustment rules: (1) If Date1 falls on the 31st, then change it to the 30th; (2) If Date2 falls on the 31st, then change it to 1 and increase Month2 by one, i.e. next month.
14	ActThreeSixtyFiveL	Act/365L. See also ISO 15022 MICO code 'A009'.

Code	Name	Description
15	NLThreeSixtyFive	NL365. See also ISO 15022 MICO code 'A014'.
16	NLThreeSixty	NL360. This is the same as Act/360, with the exception of leap days (29th February) which are ignored.
17	Act364	Act/364. The actual number of days between Date1 and Date2, divided by 364.
18	ThirtyThreeSixtyFive	30/365. Interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and a 365-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31 is assumed to be a 30 and the 28 February (or 29 February for a leap year) is assumed to be a 28 (or 29). See also ISO 15022 MICO code 'A002'.
19	ThirtyActual	30/Actual. Interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and the assumed number of days in a year in a way similar to the Actual/Actual (ICMA). Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31 is assumed to be a 30 and the 28 February (or 29 February for a leap year) is assumed to be a 28 (or 29). The assumed number of days in a year is computed as the actual number of days in the coupon period multiplied by the number of interest payments in the year. See also ISO 15022 MICO code 'A003'.
20	ThirtyThreeSixtyICMA	30/360 (ICMA or basis rule). Interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30 calendar day of the same month, except for February. This means that a 31 is assumed to be a 30 and the 28 February (or 29 February for a leap year) is assumed to be a 28 (or 29). It is the most commonly used 30/360 method for non-US straight and convertible bonds issued before 1 January 1999. See also ISO 15022 MICO code 'A011'.

Code	Name	Description
21	ThirtyETwoThreeSixty	30E2/360 (Eurobond basis model two). Interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for the last day of February whose day of the month value shall be adapted to the value of the first day of the interest period if the latter is higher and if the period is one of a regular schedule. This means that a 31 is assumed to be a 30 and the 28 February of a non-leap year is assumed to be equivalent to a 29 February when the first day of the interest period is a 29, or to a 30 February when the first day of the interest period is a 30 or a 31. The 29 February of a leap year is assumed to be equivalent to a 30 February when the first day of the interest period is a 30 or a 31. Similarly, if the coupon period starts on the last day of February, it is assumed to produce only one day of interest in February as if it was starting on a 30 February when the end of the period is a 30 or a 31, or two days of interest in February when the end of the period is a 29, or three days of interest in February when it is the 28 February of a non-leap year and the end of the period is before the 29. See also ISO 15022 MICO code 'A012'.
22	ThirtyEThreeThreeSixty	30E3/360 (Eurobond basis model three). Interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that a 31 is assumed to be a 30 and the 28 February (or 29 February for a leap year) is assumed to be equivalent to a 30 February. It is a variation of the 30E/360 (or Eurobond basis) method where the last day of February is always assumed to be a 30, even if it is the last day of the maturity coupon period. See also ISO 15022 MICO code 'A013'.
99	Other	Other. For other day count method. See also ISO 15022 MICO code 'OTHR'.

Used in groups: [LegAdditionalTermBondRefGrp](#)

180.2.1298 **LegAdditionalTermBondDesc**

Description of the bond.

Type: [String](#)

Used in groups: [LegAdditionalTermBondRefGrp](#)

180.2.1299 LegAdditionalTermBondIssuer

Issuer of the bond.

Type: **String**

Used in groups: **LegAdditionalTermBondRefGrp**

180.2.1300 LegAdditionalTermBondMaturityDate

The maturity date of the bond.

Type: **LocalMktDate**

Used in groups: **LegAdditionalTermBondRefGrp**

180.2.1301 LegAdditionalTermBondParValue

The par value of the bond.

Type: **Amt**

Used in groups: **LegAdditionalTermBondRefGrp**

180.2.1302 LegAdditionalTermBondRefGrp

The LegAdditionalTermBondRefGrp is a repeating group subcomponent of the LegAdditionalTermGrp component used to identify an underlying reference bond for a swap.

Name	Mult.	Type	Description
NoLegAdditionalTermBondRefs	[1..1]	NumInGroup	
LegAdditionalTermBondSecurityID	[0..1]	String	Required if NoLegAdditionalTermBondRefs(41316) > 0.
LegAdditionalTermBondSecurityID-Source	[0..1]	CodeSet	Conditionally required when LegAdditionalTermBondSecurityID(41317) is specified.
LegAdditionalTermBondDesc	[0..1]	String	
EncodedLegAdditionalTermBondDescLen	[0..1]	Length	Must be set if EncodedLegAdditionalTermBondDesc(41321) field is specified and must immediately precede it.

Name	Mult.	Type	Description
EncodedLegAdditionalTermBondDesc	[0..1]	data	Encoded (non-ASCII characters) representation of the LegAdditionalTermBondDesc(41319) field in the encoded format specified via the MessageEncoding(347) field.
LegAdditionalTermBondCurrency	[0..1]	Currency	
LegAdditionalTermBondIssuer	[0..1]	String	
EncodedLegAdditionalTermBondIssuerLen	[0..1]	Length	Must be set if EncodedLegAdditionalTermBondIssuer(41325) field is specified and must immediately precede it.
EncodedLegAdditionalTermBondIssuer	[0..1]	data	Encoded (non-ASCII characters) representation of the LegAdditionalTermBondIssuer(41323) field in the encoded format specified via the MessageEncoding(347) field.
LegAdditionalTermBondSeniority	[0..1]	CodeSet	
LegAdditionalTermBondCouponType	[0..1]	CodeSet	
LegAdditionalTermBondCouponRate	[0..1]	Percentage	
LegAdditionalTermBondMaturityDate	[0..1]	LocalMktDate	
LegAdditionalTermBondParValue	[0..1]	Amt	
LegAdditionalTermBondCurrentTotalIssuedAmount	[0..1]	Amt	
LegAdditionalTermBondCouponFrequencyPeriod	[0..1]	int	Conditionally required when LegAdditionalTermBondCouponFrequencyUnit(41333) is specified.
LegAdditionalTermBondCouponFrequencyUnit	[0..1]	CodeSet	Conditionally required when LegAdditionalTermBondCouponFrequencyPeriod(41332) is specified.
LegAdditionalTermBondDayCount	[0..1]	CodeSet	

Used in groups: **LegAdditionalTermGrp**

180.2.1303 LegAdditionalTermBondSecurityID

Security identifier of the bond.

Type: **String**

Used in groups: **LegAdditionalTermBondRefGrp**

180.2.1304 LegAdditionalTermBondSecurityIDSource

Identifies the source scheme of the LegAdditionalTermBondSecurityID(41317) value.

Type: **String**

Allowed values in SecurityIDSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
3	QUIK	QUIK
4	ISINNumber	ISIN
5	RICCode	RIC
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
7	ISOCountryCode	ISO Country Code
8	ExchangeSymbol	Exchange symbol
9	ConsolidatedTapeAssociation	Consolidated Tape Association (CTA) Symbol (SIAC CTS/CQS line format)
A	BloombergSymbol	Bloomberg Symbol
B	Wertpapier	Wertpapier
C	Dutch	Dutch
D	Valoren	Valoren
E	Sicovam	Sicovam
F	Belgian	Belgian
G	Common	"Common" (Clearstream and Euroclear)
H	ClearingHouse	Clearing house / Clearing organization
I	ISDAFpMLSpecification	ISDA/FpML product specification (XML in SecurityXML(1185))
J	OptionPriceReportingAuthority	Option Price Reporting Authority
K	ISDAFpMLURL	ISDA/FpML product URL (URL in SecurityID(48))
L	LetterOfCredit	Letter of credit
M	MarketplaceAssignedIdentifier	Marketplace-assigned Identifier
N	MarkitREDEntityCLIP	Markit RED entity CLIP
P	MarkitREDPairCLIP	Markit RED pair CLIP
Q	CFTCCommodityCode	CFTC commodity code
R	ISDACommodityReferencePrice	ISDA Commodity Reference Price

Code	Name	Description
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
T	LegalEntityIdentifier	Legal entity identifier
U	Synthetic	Synthetic. Used to specify that the security identifier is synthetic for linking nested underliers when there is no market identifier for the collection.
V	FidessaInstrumentMnemonic	Fidessa Instrument Mnemonic (FIM)
W	IndexName	Index name. Standard name of the index or rate index, e.g. "LIBOR" or "iTraxx Australia".
X	UniformSymbol	Uniform Symbol (UMTF Symbol)
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in groups: **LegAdditionalTermBondRefGrp**

180.2.1305 LegAdditionalTermBondSeniority

Specifies the bond's payment priority in the event of a default.

Type: **String**

Allowed values in SeniorityCodeSet:

Code	Name	Description
SD	SeniorSecured	Senior Secured
SR	Senior	Senior
SB	Subordinated	Subordinated
JR	Junior	Junior. In the context of MiFID II this value is used as identified in RTS 23 Annex I Table 3 Field 23 "Seniority of the bond".
MZ	Mezzanine	Mezzanine. In the context of MiFID II this value is used as identified in RTS 23 Annex I Table 3 Field 23 "Seniority of the bond".
SN	SeniorNonPreferred	Senior Non-Preferred. For CDS reference obligations of non-preferred senior debt issued by European Financials that constitute a layer of debt ranking between the bank's normal senior debt but above the bank's normal tier 2 subordinated debt (reference: ISDA Credit Market Infrastructure Group).

Used in groups: [LegAdditionalTermBondRefGrp](#)

180.2.1306 LegAdditionalTermConditionPrecedentBondIndicator

Indicates whether the condition precedent bond is applicable. The swap contract is only valid if the bond is issued and if there is any dispute over the terms of fixed stream then the bond terms would be used.

Type: [Boolean](#)

Used in groups: [LegAdditionalTermGrp](#)

180.2.1307 LegAdditionalTermDiscrepancyClauseIndicator

Indicates whether the discrepancy clause is applicable.

Type: [Boolean](#)

Used in groups: [LegAdditionalTermGrp](#)

180.2.1308 LegAdditionalTermGrp

The LegAdditionalTermGrp is a repeating subcomponent of the InstrumentLeg component used to report additional contract terms.

Name	Mult.	Type	Description
NoLegAdditionalTerms	[1..1]	NumInGroup	
LegAdditionalTermConditionPrecedentBondIndicator	[0..1]	Boolean	Required if NoLegAdditionalTerms(41335) > 0.
LegAdditionalTermDiscrepancyClauseIndicator	[0..1]	Boolean	
LegAdditionalTermBondRefGrp	[0..*]	Group	

Used in components: [InstrumentLeg](#)

180.2.1309 LegAgreementCurrency

Contractual currency forming the basis of a financing agreement and associated transactions. Usually, but not always, the same as the trade currency.

Type: **Currency**

Used in components: **LegFinancingDetails**

180.2.1310 LegAgreementCurrencyCodeSource

Identifies class or source of the LegAgreementCurrency(2495) value.

Type: **String**

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in components: **LegFinancingDetails**

180.2.1311 LegAgreementDate

A reference to the date the underlying agreement specified by LegAgreementID(2498) and LegAgreementDesc(2497) was executed.

Type: **LocalMktDate**

Used in components: **LegFinancingDetails**

180.2.1312 LegAgreementDesc

The full name of the base standard agreement, annexes and amendments in place between the principals applicable to a financing transaction. See <http://www.fpml.org/coding-scheme/master-agreement-type> for derivative values.

Type: **String**

Used in components: **LegFinancingDetails**

180.2.1313 LegAgreementID

A common reference to the applicable standing agreement between the counterparties to a financing transaction.

Type: **String**

Used in components: **LegFinancingDetails**

180.2.1314 LegAgreementVersion

The version of the master agreement.

Type: **String**

Used in components: **LegFinancingDetails**

180.2.1315 LegalConfirm

Indicates that this message is to serve as the final and legal confirmation.

Type: **Boolean**

Allowed values in LegalConfirmCodeSet:

Code	Name	Description
N	DoesNotConstituteALegalConfirm	Does not constitute a Legal Confirm
Y	LegalConfirm	Legal Confirm

Used in messages: **AllocationInstruction**, **AllocationInstructionAlert**, **AllocationReport**, **Confirmation**

180.2.1316 LegAllDividendsIndicator

Represents the European Master Confirmation value of 'All Dividends' which, when applicable, signifies that, for a given Ex-Date, the daily observed share price for that day is adjusted (reduced) by the cash dividend and/or the cash value of any non-cash dividend per share (including extraordinary dividends) declared by the issuer.

Type: **Boolean**

Used in components: **LegDividendConditions**

180.2.1317 LegAllocAccount

Allocation Account for the leg

See AllocAccount (79) for description and valid values.

Type: **String**

Used in groups: **LegPreAllocGrp**

180.2.1318 LegAllocAcctIDSource

Identifies the source of the LegAllocAccount(671).

Type: **int**

Allowed values in AcctIDSourceCodeSet:

Code	Name	Description
1	BIC	BIC
2	SIDCode	SID Code
3	TFM	TFM (GSPTA)
4	OMGEO	OMGEO (Alert ID)
5	DTCCCode	DTCC Code
6	SPSAID	Special Segregated Account ID. Also referred to as SPSA ID. The Special Segregated Account identifier issued by Hong Kong Exchanges and Clearing.
99	Other	Other (custom or proprietary)

Used in groups: **LegPreAllocGrp**

180.2.1319 LegAllocID

The AllocID(70) of an individual leg of a multileg order.

Type: **String**

Used in groups: **InstrmtLegExecGrp**, **LegOrdGrp**, **SideCrossLegGrp**

180.2.1320 LegAllocQty

Leg allocation quantity.

See AllocQty (80) for description and valid values.

Type: Qty

Used in groups: LegPreAllocGrp

180.2.1321 LegAllocSettlCurrency

Identifies settlement currency for the leg level allocation.

Type: Currency

Used in groups: LegPreAllocGrp

180.2.1322 LegAllocSettlCurrencyCodeSource

Identifies class or source of the LegAllocSettlCurrency(1367) value.

Type: String

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in groups: LegPreAllocGrp

180.2.1323 LegAssetAttributeGrp

The LegAssetAttributeGrp is a repeating subcomponent of the InstrumentLeg component used to detail attributes of the instrument asset.

Name	Mult.	Type	Description
NoLegAssetAttributes	[1..1]	NumInGroup	
LegAssetAttributeType	[0..1]	String	Required if NoLegAssetAttributes(2308) > 0.
LegAssetAttributeValue	[0..1]	String	
LegAssetAttributeLimit	[0..1]	String	

Used in components: **InstrumentLeg**

180.2.1324 LegAssetAttributeLimit

Limit or lower acceptable value of the attribute.

Type: **String**

Used in groups: **LegAssetAttributeGrp**

180.2.1325 LegAssetAttributeType

Specifies the name of the attribute.

See http://www.fixtradingcommunity.org/codelists#Asset_Attribute_Types for code list of applicable asset attribute types.

Type: **String**

Used in groups: **LegAssetAttributeGrp**

180.2.1326 LegAssetAttributeValue

Specifies the value of the attribute.

Type: **String**

Used in groups: **LegAssetAttributeGrp**

180.2.1327 LegAssetClass

The broad asset category for assessing risk exposure.

Type: **int**

Allowed values in AssetClassCodeSet:

Code	Name	Description
1	InterestRate	Interest rate
2	Currency	Currency
3	Credit	Credit
4	Equity	Equity
5	Commodity	Commodity
6	Other	Other
7	Cash	Cash
8	Debt	Debt
9	Fund	Fund. Such as mutual fund, collective investment vehicle, investment program, specialized account program.
10	LoanFacility	Loan facility
11	Index	Index. A main index identified as a security type, for example under EU SFTR reporting.

Used in components: **InstrumentLeg**

180.2.1328 LegAssetGroup

Indicates the broad product or asset classification. May be used to provide grouping for the product taxonomy (Product(460), SecurityType(167), etc.) and/or the risk taxonomy (AssetClass(1938), AssetSubClass(1939), AssetType(1940), etc.).

Type: **int**

Allowed values in AssetGroupCodeSet:

Code	Name	Description
1	Financials	Financials. A categorization which usually includes rates, foreign exchange, credit, bonds and equity products or assets.
2	Commodities	Commodities. A categorization which usually includes hard commodities such as agricultural, metals, freight, energy products or assets.
3	AlternativeInvestments	Alternative investments. A categorization which usually includes weather, housing, and commodity indices products or assets.

Used in components: [InstrumentLeg](#)

180.2.1329 LegAssetSubClass

The general subcategory description of the asset class.

Type: [int](#)

Allowed values in AssetSubClassCodeSet:

Code	Name	Description
1	SingleCurrency	Single currency
2	CrossCurrency	Cross currency
3	Basket	Basket [for multi-currency]
4	SingleName	Single name
5	CreditIndex	Credit index
6	IndexTranche	Index tranche
7	CreditBasket	Credit basket
8	Exotic	Exotic
9	Common	Common
10	Preferred	Preferred
11	EquityIndex	Equity index
12	EquityBasket	Equity basket
13	Metals	Metals
14	Bullion	Bullion
15	Energy	Energy
16	CommodityIndex	Commodity index
17	Agricultural	Agricultural
18	Environmental	Environmental
19	Freight	Freight
20	Government	Government
21	Agency	Agency
22	Corporate	Corporate
23	Financing	Financing
24	MoneyMarket	Money market
25	Mortgage	Mortgage
26	Municipal	Municipal

Code	Name	Description
27	MutualFund	Mutual fund
28	CollectiveInvestmentVehicle	Collective investment vehicle
29	InvestmentProgram	Investment program. A generalized fund for major investors.
30	SpecializedAccountProgram	Specialized account program. A specialized fund setup for a particular account or group of accounts.
31	TermLoan	Term loan
32	BridgeLoan	Bridge loan
33	LetterOfCredit	Letter of credit
34	DividendIndex	Dividend index
35	StockDividend	Stock dividend
36	ExchangeTradedFund	Exchange traded fund
37	VolatilityIndex	Volatility index
38	FXCrossRates	FX cross rates
39	FXEmergingMarkets	FX emerging markets
40	FXMajors	FX Majors
41	Fertilizer	Fertilizer
42	IndustrialProduct	Industrial product
43	Inflation	Inflation
44	Paper	Paper
45	Polypropylene	Polypropylene
46	OfficialEconomicStatistics	Official economic statistics
47	OtherC10	Other C10. Defined under MiFID II (Directive 2014/65/EU) Section C(10) of Annex I and paraphrased in ESMA RTS 2 Annex III Section 10, "Other C10" is a financial instrument "which is not a 'Freight derivative', any of the following interest rate derivatives sub-asset classes: 'Inflation multi-currency swap or cross-currency swap', a 'Future/forward on inflation multi-currency swaps or cross-currency swaps', an 'Inflation single currency swap', a 'Future/forward on inflation single currency swap' and any of the following equity derivatives sub-asset classes: a 'Volatility index option', a 'Volatility index future/forward', a swap with parameter return variance, a swap with parameter return volatility, a portfolio swap with parameter return variance, a portfolio swap with parameter return volatility".
48	Other	Other. May be used with any AssetClass(1938) values.

Used in components: **InstrumentLeg**

180.2.1330 LegAssetSubType

Used to provide a more specific description of the asset specified in LegAssetType(2069).

See <https://www.fixtrading.org/codelists/AssetSubType> for code list of applicable values.

Type: **String**

Used in components: **InstrumentLeg**

180.2.1331 LegAssetType

Used to provide more specific description of the asset specified in LegAssetSubClass(2068).

See <https://www.fixtrading.org/codelists/AssetType> for code list of applicable values. ISO 4721 Currency Code values are to be used when specific currency as an asset type is to be expressed.

Other values may be used by mutual agreement of the counterparties.

Type: **String**

Used in components: **InstrumentLeg**

180.2.1332 LegAttachmentPoint

Lower bound percentage of the loss that the tranche can endure.

Type: **Percentage**

Used in components: **InstrumentLeg**

180.2.1333 LegAutomaticExerciseIndicator

Indicates (when 'Y') that exercise is automatic when the strike price is crossed or the underlying trade is in the money.

Type: **Boolean**

Used in components: **LegOptionExercise**

180.2.1334 LegAutomaticExerciseThresholdRate

The threshold rate for triggering automatic exercise.

Type: **float**

Used in components: **LegOptionExercise**

180.2.1335 LegBenchmarkCurveCurrency

LegBenchmarkPrice (679) currency

See BenchmarkCurveCurrency (220) for description and valid values.

Type: **Currency**

Used in components: **LegBenchmarkCurveData**

180.2.1336 LegBenchmarkCurveCurrencyCodeSource

Identifies class or source of the LegBenchmarkCurveCurrency(676) value.

Type: **String**

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbolology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in components: **LegBenchmarkCurveData**

180.2.1337 LegBenchmarkCurveData

The LegBenchmarkCurveData is used to convey the benchmark information used for pricing in a multi-legged Fixed Income security.

Name	Mult.	Type	Description
LegBenchmarkCurveCurrency	[0..1]	Currency	
LegBenchmarkCurveCurrencyCodeSource	[0..1]	CodeSet	
LegBenchmarkCurveName	[0..1]	CodeSet	
LegBenchmarkCurvePoint	[0..1]	String	
LegBenchmarkPrice	[0..1]	Price	
LegBenchmarkPriceType	[0..1]	CodeSet	

Used in groups: InstrmtLegSecListGrp, LegQuotGrp, QuotReqLegsGrp, SecLstUpdRelSymsLegGrp

180.2.1338 LegBenchmarkCurveName

Name of the Leg Benchmark Curve.

See BenchmarkCurveName (22) for description and valid values.

Type: **String**

Allowed values in BenchmarkCurveNameCodeSet:

Code	Name	Description
EONIA	EONIA	EONIA
EUREPO	EUREPO	EUREPO
Euribor	Euribor	EURIBOR (deprecated use enum EURIBOR instead). Deprecated use of EURIBOR for the enumeration.
FutureSWAP	FutureSWAP	FutureSWAP
LIBID	LIBID	LIBID
LIBOR	LIBOR	LIBOR (London Inter-Bank Offer)
MuniAAA	MuniAAA	MuniAAA
OTHER	OTHER	OTHER
Pfandbriefe	Pfandbriefe	Pfandbriefe
SONIA	SONIA	SONIA
SWAP	SWAP	SWAP
Treasury	Treasury	Treasury

Code	Name	Description
FEDEFF	FedFundRateEffective	US Federal Reserve fed funds effective rate. US Federal Reserve fed funds effective rate or the weighted average of the actual negotiated rates banks pay each other to to borrow funds.
FEDOPEN	FedOpen	US fed funds target rate. Fed funds target rate as determined by the US Federal Reserve Federal Open Market Committee.
EURIBOR	EURIBOR	Euro interbank offer rate
AUBSW	AUBSW	Australian Bank Bill Swap Rate
BUBOR	BUBOR	Budapest Bank Offered Rate
CDOR	CDOR	Canadian Dollar Offered Rate
CIBOR	CIBOR	Copenhagen Interbank Offered Rate
EONIASWAP	EONIASWAP	Euro Overnight Index Average Swap Rate
ESTR	ESTR	Euro Short Term Rate. Replaces EONIA.
EURODOLLAR	EURODOLLAR	Euro Dollar Rate
EUROSWISS	EUROSWISS	Euro Swiss Franc Rate
GCFREPO	GCFREPO	DTCC General Collateral Finance Repo Index
ISDAFIX	ISDAFIX	ICE Swap Rate
JIBAR	JIBAR	Johannesburg Interbank Agreed Rate
MOSPRIM	MOSPRIM	Moscow Prime Offered Rate
NIBOR	NIBOR	Nigeria Three Month Interbank Rate
PRIBOR	PRIBOR	Czech Republic Interbank Offered Rate
SOFR	SOFR	Secured Overnight Financing Rate. Replaces LIBOR.
STIBOR	STIBOR	Stockholm Interbank Offered Rate
TELBOR	TELBOR	Bank of Israel Interbank Offered Rate
TIBOR	TIBOR	Tokyo Interbank Offered Rate
WIBOR	WIBOR	Warsaw Interbank Offered Rate
AONIA	AONIA	Reserve Bank of Australia Interbank Overnight Cash Rate. Also known as AUD Overnight Index Average.
AONIA-R	AONIA-R	Realised AONIA. "Realised AONIA applies a compounding formula to the daily AONIA rate, to determine the compounded average rate over the prior 1 to 6 month period." (source https://www.asx.com.au/documents/products/realised-aonia-explained.pdf).
BKBM	BKBM	New Zealand Bank Bill Market Rate
CD91D	CD91D	Republic of Korea 90-Day Certificate of Deposit Rate

Code	Name	Description
CORRA	CORRA	Canadian Overnight Repo Rate Average
DIRR-TN	DIRRTN	Danish Interbank Interest Rate-Tomorrow or Next
EIBOR	EIBOR	Emirates Interbank Offered Rate
FixingRepoRate	FixingRepoRate	China Interbank Overnight Repo Rate
HIBOR	HIBOR	Hong Kong Interbank Offered Rate
IBR	IBR	Colombia Overnight Interbank Reference Rate
KLIBOR	KLIBOR	Kuala Lumpur Interbank Offered Rate
MIBOR	MIBOR	Mumbia Interbank Offered Rate
NZONIA	NZONIA	New Zealand Overnight Indexed Swaps (OIS)
PHIREF	PHIREF	Philippines Interbank Reference Rate
REIBOR	REIBOR	Reykjavik Interbank Offered Rate
SAIBOR	SAIBOR	Saudi Arabian Interbank Offered Rate
SARON	SARON	Swiss Average Rate Overnight
SORA	SORA	Singapore Swap Offer Rate
TLREF	TLREF	Turkish Lira Overnight Reference Rate
TIIE	TIIE	Mexico Interbank Equilibrium Interest Rate
THBFIX	THBFIX	Thai Baht Interest Rate Fixing
TONAR	TONAR	Tokyo Overnight Average Rate

Used in components: [LegBenchmarkCurveData](#)

180.2.1339 LegBenchmarkCurvePoint

Identifies the point on the Leg Benchmark Curve.

See BenchmarkCurvePoint (222) for description and valid values.

Type: [String](#)

Used in components: [LegBenchmarkCurveData](#)

180.2.1340 LegBenchmarkPrice

Used to identify the price of the benchmark security.

See BenchmarkPrice (662) for description and valid values.

Type: **Price**

Used in components: **LegBenchmarkCurveData**

180.2.1341 LegBenchmarkPriceType

The price type of the LegBenchmarkPrice(679).

Type: **int**

Allowed values in PriceTypeCodeSet:

Code	Name	Description
1	Percentage	Percentage (i.e. percent of par) (often called "dollar price" for fixed income)
2	PerUnit	Per unit (i.e. per share or contract)
3	FixedAmount	Fixed amount (absolute value)
4	Discount	Discount - percentage points below par
5	Premium	Premium - percentage points over par
6	Spread	Spread (basis points spread). Usually the difference in yield between two switched bonds or a corporate bond traded spread-to-benchmark.
7	TEDPrice	TED Price
8	TEDYield	TED Yield
9	Yield	Yield
10	FixedCabinetTradePrice	Fixed cabinet trade price (primarily for listed futures and options)
11	VariableCabinetTradePrice	Variable cabinet trade price (primarily for listed futures and options)
12	PriceSpread	Price spread. Price spread is expressed based on market convention for the asset being priced or traded. For example, the difference between the prices of a multileg switch or strategy expressed in basis points for a CDS or TBA roll; a price value to be added to a reference price, such as a "pay up" for specified pools
13	ProductTicksInHalves	Product ticks in halves
14	ProductTicksInFourths	Product ticks in fourths
15	ProductTicksInEighths	Product ticks in eighths
16	ProductTicksInSixteenths	Product ticks in sixteenths
17	ProductTicksInThirtySeconds	Product ticks in thirty-seconds

Code	Name	Description
18	ProductTicksInSixtyFourths	Product ticks in sixty-fourths
19	ProductTicksInOneTwentyEighths	Product ticks in one-twenty-eighths
20	NormalRateRepresentation	Normal rate representation (e.g. FX rate)
21	InverseRateRepresentation	Inverse rate representation (e.g. FX rate)
22	BasisPoints	Basis points. When the price is not spread based.
23	UpfrontPoints	Up front points. Used specifically for CDS pricing.
24	InterestRate	Interest rate. When the price is an interest rate. For example, used with benchmark reference rate.
25	PercentageNotional	Percentage of notional

Used in components: [LegBenchmarkCurveData](#)

180.2.1342 LegBidForwardPoints

The bid FX forward points for the leg of an FX Swap. Value can be negative. Expressed in decimal form. For example, 61.99 points is expressed and sent as 0.006199

Type: [PriceOffset](#)

Used in groups: [LegQuotGrp](#)

180.2.1343 LegBidPx

Bid price of this leg.

See BidPx (32) for description and valid values.

Type: [Price](#)

Used in groups: [LegQuotGrp](#)

180.2.1344 LegBrokerConfirmationDesc

Describes the type of broker confirmation executed between the parties. Can be used as an alternative to MasterConfirmationDesc(1962). See <http://www.fpml.org/coding-scheme/broker-confirmation-type> for values.

Type: [String](#)

Used in components: [LegFinancingDetails](#)

180.2.1345 LegBusinessCenter

A business center whose calendar is used for date adjustment, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **LegBusinessCenterGrp**

180.2.1346 LegBusinessCenterGrp

LegBusinessCenterGrp is a repeating subcomponent within the LegDateAdjustment component. It is used to specify the set of business centers whose calendars drive the date adjustment. The business centers defined here apply to all adjustable dates in the instrument leg unless specifically overridden elsewhere in the respective specified components further within the InstrumentLeg component.

Name	Mult.	Type	Description
NoLegBusinessCenters	[1..1]	NumInGroup	
LegBusinessCenter	[0..1]	String	Required if NoLegBusinessCenters(40923) > 0.

Used in components: **LegDateAdjustment**

180.2.1347 LegBusinessDayConvention

The business day convention used for adjusting dates. The value defined here applies to all adjustable dates in the instrument leg unless specifically overridden.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.

Code	Name	Description
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [LegDateAdjustment](#)

180.2.1348 LegCalculatedCcyLastQty

Used for the calculated quantity of the other side of the currency for this leg. Can be derived from LegQty and LegLastPx.

Type: [Qty](#)

Used in groups: [InstrmtLegExecGrp](#), [TrdInstrmtLegGrp](#)

180.2.1349 LegCapPrice

Used to express the ceiling price of a capped call.

Type: [Price](#)

Used in components: [InstrumentLeg](#)

180.2.1350 LegCashSettlAccruedInterestIndicator

Indicates whether accrued interest is included or not in the value provided in LegCashSettlAmount(41357).

For cash settlement this specifies whether quotations should be obtained inclusive or not of accrued interest.

For physical settlement this specifies whether the buyer should deliver the obligation with an outstanding principal balance that includes or excludes accrued interest.

Type: [Boolean](#)

Used in groups: [LegCashSettlTermGrp](#)

180.2.1351 LegCashSettlAmount

The amount paid between the trade parties, seller to the buyer, for cash settlement on the cash settlement date.

Type: **Amt**

Used in groups: **LegCashSettlTermGrp**

180.2.1352 LegCashSettlBusinessCenter

Identifies the business center calendar used at valuation time for cash settlement purposes e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **LegCashSettlTermGrp**

180.2.1353 LegCashSettlBusinessDays

The number of business days used in the determination of the cash settlement payment date.

Type: **int**

Used in groups: **LegCashSettlTermGrp**

180.2.1354 LegCashSettlCurrency

Specifies the currency the LegCashSettlAmount(41357) is denominated in. Uses ISO 4217 currency codes.

Type: **Currency**

Used in groups: **LegCashSettlTermGrp**

180.2.1355 LegCashSettlDateAdjusted

The adjusted cash settlement date.

Type: **LocalMktDate**

Used in components: **LegCashSettlDate**

180.2.1356 LegCashSettlDateBusinessCenter

The business center calendar used for date adjustment of the cash settlement unadjusted or relative date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **LegCashSettlDateBusinessCenterGrp**

180.2.1357 LegCashSettlDateBusinessCenterGrp

LegCashSettlDateBusinessCenterGrp is a repeating subcomponent within the LegCashSettlDate component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the DateAdjustment component in Instrument.

Name	Mult.	Type	Description
NoLegCashSettlDateBusinessCenters	[1..1]	NumInGroup	
LegCashSettlDateBusinessCenter	[0..1]	String	Required if NoLegCashSettlDateBusinessCenters(42306) > 0.

Used in components: **LegCashSettlDate**

180.2.1358 LegCashSettlDateBusinessDayConvention

The business day convention used to adjust the cash settlement provision's date. Used only to override the business day convention defined in the InstrumentLeg component.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.

Code	Name	Description
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [LegCashSettlDate](#)

180.2.1359 LegCashSettlDate

The LegCashSettlDate component is a subcomponent within the LegCashSettlTermGrp component used to report the cash settlement date defined in the settlement provision.

Name	Mult.	Type	Description
LegCashSettlDateUnadjusted	[0..1]	LocalMktDate	
LegCashSettlDateBusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the DateAdjustment component in the Instrument component. The specified value would be specific to this instance of the cash settlement provision.
LegCashSettlDateBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the DateAdjustment component in the Instrument component. The specified values would be specific to this instance of the cash settlement provision.
LegCashSettlDateRelativeTo	[0..1]	int	
LegCashSettlDateOffsetPeriod	[0..1]	int	Conditionally required when LegCashSettlDateOffsetUnit(42303) is specified.
LegCashSettlDateOffsetUnit	[0..1]	CodeSet	Conditionally required when LegCashSettlDateOffsetPeriod(42302) is specified.
LegCashSettlDateOffsetDayType	[0..1]	CodeSet	
LegCashSettlDateAdjusted	[0..1]	LocalMktDate	

Used in groups: [LegCashSettlTermGrp](#)

180.2.1360 LegCashSettlDateOffsetDayType

Specifies the day type of the relative cash settlement date offset.

Type: **int**

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: **LegCashSettlDate**

180.2.1361 LegCashSettlDateOffsetPeriod

Time unit multiplier for the relative cash settlement date offset.

Type: **int**

Used in components: **LegCashSettlDate**

180.2.1362 LegCashSettlDateOffsetUnit

Time unit associated with the relative cash settlement date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: **LegCashSettlDate**

180.2.1363 LegCashSettlDateRelativeTo

Specifies the anchor date when the cash settlement date is relative to an anchor date.

See http://www.fixtradingcommunity.org/codelists#Relative_To_Date for values.

Type: **int**

Used in components: **LegCashSettlDate**

180.2.1364 LegCashSettlDateUnadjusted

The unadjusted cash settlement date.

Type: **LocalMktDate**

Used in components: **LegCashSettlDate**

180.2.1365 LegCashSettlDealer

Identifies the dealer from whom price quotations for the reference obligation are obtained for the purpose of cash settlement valuation calculation.

Type: **String**

Used in groups: **LegCashSettlDealerGrp**

180.2.1366 LegCashSettlDealerGrp

LegCashSettlDealerGrp is a repeating subcomponent of the LegCashSettlTermGrp component used to specify the dealers from whom price quotations for the reference obligation are obtained for the purpose of cash settlement valuation.

Name	Mult.	Type	Description
NoLegCashSettlDealers	[1..1]	NumInGroup	
LegCashSettlDealer	[0..1]	String	Required if NoLegCashSettlDealers(41342) > 0.

Used in groups: **LegCashSettlTermGrp**

180.2.1367 LegCashSettlFixedTermIndicator

Indicates whether fixed settlement is applicable or not applicable in a recovery lock.

Type: **Boolean**

Used in groups: **LegCashSettlTermGrp**

180.2.1368 LegCashSettlMinimumQuoteAmount

When determining the cash settlement amount, if weighted average price quotes are to be obtained for the reference obligation, this is the minimum intended threshold amount of outstanding principal balance of the reference obligation for which the quote should be obtained. If not specified, the ISDA definitions provide for a fallback amount of the lower of either USD1,000,000 (or its equivalent in the relevant obligation currency) or the (minimum) quoted amount.

Type: **Amt**

Used in groups: **LegCashSettlTermGrp**

180.2.1369 LegCashSettlMinimumQuoteCurrency

Specifies the currency the LegCashSettlQuoteMinimumAmount(41354) is denominated in. Uses ISO 4217 Currency Code.

Type: **Currency**

Used in groups: **LegCashSettlTermGrp**

180.2.1370 LegCashSettlNumOfValuationDates

Where multiple valuation dates are specified as being applicable for cash settlement, this element specifies the number of applicable valuation dates.

Type: **int**

Used in groups: **LegCashSettlTermGrp**

180.2.1371 LegCashSettlPriceDefault

The default election for determining settlement price.

Type: **int**

Allowed values in CashSettlPriceDefaultCodeSet:

Code	Name	Description
0	Close	Close. Official closing price.
1	Hedge	Hedge. Determined by the hedging party.

Used in groups: [LegCashSettlTermGrp](#)

180.2.1372 LegCashSettlPriceSource

The source from which the settlement price is to be obtained.

See <http://www.fpml.org/coding-scheme/settlement-price-source> for values.

Type: [String](#)

Used in groups: [LegCashSettlTermGrp](#)

180.2.1373 LegCashSettlQuoteAmount

When determining the cash settlement amount, if weighted average price quotes are to be obtained for the reference obligation, this is the upper limit to the outstanding principal balance of the reference obligation for which the quote should be obtained. If not specified, the ISDA definitions provide for a fallback amount equal to floating rate payer calculation amount.

Type: [Amt](#)

Used in groups: [LegCashSettlTermGrp](#)

180.2.1374 LegCashSettlQuoteCurrency

Specifies the currency the LegCashSettlQuoteAmount(41352) is denominated in. Uses ISO 4217 Currency Code.

Type: [Currency](#)

Used in groups: [LegCashSettlTermGrp](#)

180.2.1375 LegCashSettlQuoteMethod

The type of quote used to determine the cash settlement price.

Type: **int**

Allowed values in CashSettlQuoteMethodCodeSet:

Code	Name	Description
0	Bid	Bid
1	Mid	Mid
2	Offer	Offer

Used in groups: **LegCashSettlTermGrp**

180.2.1376 LegCashSettlRecoveryFactor

Used for fixed recovery, this specifies the recovery level as determined at contract inception, to be applied in the event of a default. The factor is used to calculate the amount paid by the seller to the buyer for cash settlement on the cash settlement date. The amount calculated is $(1 - \text{LegCashSettlRecoveryFactor}(41358)) \times \text{floating rate payer calculation amount}$. The currency is derived from the floating rate payer calculation amount.

Type: **float**

Used in groups: **LegCashSettlTermGrp**

180.2.1377 LegCashSettlTermGrp

The LegCashSettlTermGrp is a repeating component within the InstrumentLeg component used to report cash settlement terms.

Name	Mult.	Type	Description
NoLegCashSettlTerms	[1..1]	NumInGroup	
LegCashSettlCurrency	[0..1]	Currency	Required if NoLegCashSettlTerms(41344) > 0.
LegCasSettlValuationFirstBusiness-DayOffset	[0..1]	int	
LegCashSettlValuationSubsequent-BusinessDaysOffset	[0..1]	int	

Name	Mult.	Type	Description
LegCashSettlNumOfValuationDates	[0..1]	int	
LegCashSettlValuationTime	[0..1]	LocalMktTime	
LegCashSettlBusinessCenter	[0..1]	String	
LegCashSettlQuoteMethod	[0..1]	CodeSet	
LegCashSettlQuoteAmount	[0..1]	Amt	
LegCashSettlQuoteCurrency	[0..1]	Currency	
LegCashSettlMinimumQuoteAmount	[0..1]	Amt	
LegCashSettlMinimumQuoteCurrency	[0..1]	Currency	
LegCashSettlDealerGrp	[0..*]	Group	
LegCashSettlPriceSource	[0..1]	String	
LegCashSettlPriceDefault	[0..1]	CodeSet	
LegCashSettlBusinessDays	[0..1]	int	
LegCashSettlAmount	[0..1]	Amt	
LegCashSettlDate	[0..1]	Component	
LegCashSettlRecoveryFactor	[0..1]	float	
LegCashSettlFixedTermIndicator	[0..1]	Boolean	
LegCashSettlAccruedInterestIndicator	[0..1]	Boolean	
LegCashSettlValuationMethod	[0..1]	CodeSet	
LegCashSettlTermXID	[0..1]	XID	

Used in components: **InstrumentLeg**

180.2.1378 LegCashSettlTermXID

A named string value referenced by UnderlyingSettlTermXIDRef(41315).

Type: **XID**

Used in groups: **LegCashSettlTermGrp**

180.2.1379 LegCashSettlValuationMethod

The ISDA defined methodology for determining the final price of the reference obligation for purposes of cash settlement.

Type: **int**

Allowed values in CashSettlValuationMethodCodeSet:

Code	Name	Description
0	Market	Market
1	Highest	Highest
2	AverageMarket	Average market
3	AverageHighest	Average highest
4	BlendedMarket	Blended market
5	BlendedHighest	Blended highest
6	AverageBlendedMarket	Average blended market
7	AverageBlendedHighest	Average blended highest

Used in groups: **LegCashSettlTermGrp**

180.2.1380 LegCashSettlValuationSubsequentBusinessDaysOffset

The number of business days between successive valuation dates when multiple valuation dates are applicable for cash settlement.

Type: **int**

Used in groups: **LegCashSettlTermGrp**

180.2.1381 LegCashSettlValuationTime

Time of valuation.

Type: **LocalMktTime**

Used in groups: **LegCashSettlTermGrp**

180.2.1382 LegCasSettlValuationFirstBusinessDayOffset

The number of business days after settlement conditions have been satisfied, when the calculation agent is to obtain a price quotation on the reference obligation for purposes of cash settlement.

Type: **int**

Used in groups: **LegCashSettlTermGrp**

180.2.1383 LegCFIcode

Multileg instrument's individual security's CFIcode.

See CFIcode (461) field for description

Type: **String**

Used in components: **InstrumentLeg**

180.2.1384 LegClearingAccountType

Designates the capacity in which the order will be submitted to clearing.

Type: **int**

Allowed values in ClearingAccountTypeCodeSet:

Code	Name	Description
1	Customer	Customer
2	Firm	Firm
3	MarketMaker	Market maker

Used in groups: **InstrmtLegExecGrp**, **LegOrdGrp**, **SideCrossLegGrp**, **TrdInstrmtLegGrp**

180.2.1385 LegCommonPricingIndicator

When this element is specified and set to 'Y', it indicates that common pricing applies. Common pricing may be relevant for a transaction that references more than one commodity reference price.

Type: **Boolean**

Used in components: **InstrumentLeg**

180.2.1386 LegComplexEvenReferencePageHeading

Identifies the reference page heading from the rate source.

Type: **String**

Used in groups: **LegComplexEventRateSourceGrp**

180.2.1387 LegComplexEventAveragingObservationGrp

LegComplexEventAveragingObservationGrp is an optional subcomponent of LegComplexEventPeriodGrp for specifying the weight of each of the dated observations.

Name	Mult.	Type	Description
NoLegComplexEventAveragingObservations	[1..1]	NumInGroup	
LegComplexEventAveragingObservationNumber	[0..1]	int	Required if NoLegComplexEventAveragingObservations(41363) > 0.
LegComplexEventAveragingWeight	[0..1]	float	

Used in groups: [LegComplexEventPeriodGrp](#)

180.2.1388 LegComplexEventAveragingObservationNumber

Cross reference to the ordinal observation as specified either in the LegComplexEventScheduleGrp or LegComplexEventPeriodDateGrp components.

Type: [int](#)

Used in groups: [LegComplexEventAveragingObservationGrp](#)

180.2.1389 LegComplexEventAveragingWeight

The weight factor to be applied to the observation.

Type: [float](#)

Used in groups: [LegComplexEventAveragingObservationGrp](#)

180.2.1390 LegComplexEventBusinessCenter

The business center for adjusting dates and times in the schedule or date-time group.

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in groups: [LegComplexEventPeriodGrp](#)

180.2.1391 LegComplexEventCalculationAgent

Used to identify the calculation agent.

Type: **int**

Allowed values in ProvisionCalculationAgentCodeSet:

Code	Name	Description
0	ExercisingParty	Exercising party
1	NonExercisingParty	Non-exercising party
2	MasterAgreeent	As specified in the master agreement
3	Supplement	As specified in the standard terms supplement

Used in groups: **LegComplexEvents**

180.2.1392 LegComplexEventCondition

Specifies the condition between complex events when more than one event is specified.

Multiple barrier events would use an "or" condition since only one can be effective at a given time. A set of digital range events would use an "and" condition since both conditions must be in effect for a payout to result.

Type: **int**

Allowed values in ComplexEventConditionCodeSet:

Code	Name	Description
1	And	And
2	Or	Or

Used in groups: **LegComplexEvents**

180.2.1393 LegComplexEventCreditEventBusinessCenter

Specifies the local business center for which the credit event is to be determined. The inclusion of this business center implies that Greenwich Mean Time in Section 3.3 of the 2003 ISDA Credit Derivatives Definitions is replaced by the local time of the specified business center.

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **LegComplexEvents**

180.2.1394 LegComplexEventCreditEventCurrency

Specifies the applicable currency when LegComplexEventCreditEventCurrency(41368) is an amount.

Uses ISO 4217 currency codes.

Type: **Currency**

Used in groups: **LegComplexEventCreditEventGrp**

180.2.1395 LegComplexEventCreditEventDayType

Specifies the day type for the complex credit events.

Type: **int**

Allowed values in ComplexEventDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in groups: **LegComplexEventCreditEventGrp**

180.2.1396 LegComplexEventCreditEventGrp

The LegComplexEventCreditEventGrp is a repeating component within the LegComplexEventGrp component used to report applicable option credit events.

Name	Mult.	Type	Description
NoLegComplexEventCreditEvents	[1..1]	NumInGroup	
LegComplexEventCreditEventType	[0..1]	String	Required if NoLegComplexEventCreditEvents(41366) > 0.
LegComplexEventCreditEventValue	[0..1]	String	
LegComplexEventCreditEventCurrency	[0..1]	Currency	
LegComplexEventCreditEventPeriod	[0..1]	int	Conditionally required when LegComplexEventCreditEventUnit(41371) is specified.
LegComplexEventCreditEventUnit	[0..1]	CodeSet	Conditionally required when LegComplexEventCreditEventPeriod(41370) is specified.
LegComplexEventCreditEventDayType	[0..1]	CodeSet	
LegComplexEventCreditEventRate-Source	[0..1]	int	
LegComplexEventCreditEventQualifierGrp	[0..*]	Group	

Used in groups: [LegComplexEvents](#)

180.2.1397 LegComplexEventCreditEventMinimumSources

The minimum number of the specified public information sources that must publish information that reasonably confirms that a credit event has occurred. The market convention is two.

Type: [int](#)

Used in groups: [LegComplexEvents](#)

180.2.1398 LegComplexEventCreditEventNotifyingParty

The notifying party is the party that notifies the other party when a credit event has occurred by means of a credit event notice. If more than one party is referenced as being the notifying party then either party may notify the other of a credit event occurring.

Type: [int](#)

Allowed values in ComplexEventCreditEventNotifyingPartyCodeSet:

Code	Name	Description
0	SellerNotifies	Seller notifies
1	BuyerNotifies	Buyer notifies
2	SellerOrBuyerNotifies	Seller or buyer notifies

Used in groups: [LegComplexEvents](#)

180.2.1399 LegComplexEventCreditEventPeriod

Time unit multiplier for complex credit events.

Type: [int](#)

Used in groups: [LegComplexEventCreditEventGrp](#)

180.2.1400 LegComplexEventCreditEventQualifier

Specifies a complex event qualifier. Used to further qualify LegComplexEventCreditEvent-Type(41367).

Type: [char](#)

Allowed values in ProtectionTermEventQualifierCodeSet:

Code	Name	Description
H	RestructuringMultipleHoldingObligations	Restructuring - multiple holding obligations. In relation to a restructuring credit event, unless multiple holder obligation is not specified restructurings are limited to multiple holder obligations. A multiple holder obligation means an obligation that is held by more than three holders that are not affiliates of each other and where at least two thirds of the holders must agree to the event that constitutes the restructuring credit event. ISDA 2003 Term: Multiple Holder Obligation.
E	RestructuringMultipleCreditEvent-Notices	Restructuring - multiple credit event notices. Presence of this element and value set to 'true' indicates that Section 3.9 of the 2003 Credit Derivatives Definitions shall apply. Absence of this element indicates that Section 3.9 shall not apply. NOTE: Not allowed under ISDA Credit 1999.
C	FloatingRateInterestShortfall	Floating rate interest shortfall. Indicates compounding.

Used in groups: [LegComplexEventCreditEventQualifierGrp](#)

180.2.1401 LegComplexEventCreditEventQualifierGrp

The LegComplexEventCreditEventQualifierGrp is a repeating component within the LegComplexEventCreditEventGrp component used to specify qualifying attributes to an event.

Name	Mult.	Type	Description
NoLegComplexEventCreditEventQualifiers	[1..1]	NumInGroup	
LegComplexEventCreditEventQualifier	[0..1]	CodeSet	Required if NoLegComplexEventCreditEventQualifiers(41374) > 0.

Used in groups: [LegComplexEventCreditEventGrp](#)

180.2.1402 LegComplexEventCreditEventRateSource

Identifies the source of rate information used for credit events.

See http://www.fixtradingcommunity.org/codelists#Credit_Event_Rate_Source for code list of applicable sources.

Type: [int](#)

Used in groups: [LegComplexEventCreditEventGrp](#)

180.2.1403 LegComplexEventCreditEventSource

A newspaper or electronic news service that may publish relevant information used in the determination of whether or not a credit event has occurred.

Type: [String](#)

Used in groups: [LegComplexEventCreditEventSourceGrp](#)

180.2.1404 LegComplexEventCreditEventSourceGrp

LegComplexEventCreditEventSourceGrp is a repeating subcomponent of the LegComplexEvents component used to specify the particular newspapers or electronic news services that may publish relevant information used in the determination of whether or not a credit event has occurred.

Name	Mult.	Type	Description
NoLegComplexEventCreditEventSources	[1..1]	NumInGroup	
LegComplexEventCreditEventSource	[0..1]	String	Required if NoLegComplexEventCreditEventSources(41398) > 0.

Used in groups: [LegComplexEvents](#)

180.2.1405 LegComplexEventCreditEventStandardSources

When this element is specified and set to 'Y', indicates that ISDA defined Standard Public Sources are applicable.

Type: [Boolean](#)

Used in groups: [LegComplexEvents](#)

180.2.1406 LegComplexEventCreditEventsXIDRef

Reference to credit event table elsewhere in the message.

Type: [XIDREF](#)

Used in groups: [LegComplexEvents](#)

180.2.1407 LegComplexEventCreditEventType

Specifies the type of credit event.

See http://www.fixtradingcommunity.org/codelists#Credit_Event_Types for code list of applicable event types.

Type: [String](#)

Used in groups: [LegComplexEventCreditEventGrp](#)

180.2.1408 LegComplexEventCreditEventUnit

Time unit associated with complex credit events.

Type: **String**

Allowed values in ProtectionTermEventUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in groups: **LegComplexEventCreditEventGrp**

180.2.1409 LegComplexEventCreditEventValue

The credit event value appropriate to LegComplexEventCreditEventType(41367).

See http://www.fixtradingcommunity.org/codelists#Credit_Event_Types for applicable event type values.

Type: **String**

Used in groups: **LegComplexEventCreditEventGrp**

180.2.1410 LegComplexEventCurrencyOne

Specifies the first or only reference currency of the trade.

LegComplexEventCurrencyOneCodeSource(2945) may be used to disambiguate the code source scheme used, and ISO 4217 is the default scheme if absent.

Type: **Currency**

Used in groups: **LegComplexEvents**

180.2.1411 LegComplexEventCurrencyOneCodeSource

Identifies class or source of the LegComplexEventCurrencyOne(2233) value.

Type: **String**

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in groups: [LegComplexEvents](#)

180.2.1412 LegComplexEventCurrencyTwo

Specifies the second reference currency of the trade.

LegComplexEventCurrencyTwoCodeSource(2946) may be used to disambiguate the code source scheme used, and ISO 4217 is the default scheme if absent.

Type: [Currency](#)

Used in groups: [LegComplexEvents](#)

180.2.1413 LegComplexEventCurrencyTwoCodeSource

Identifies class or source of the LegComplexEventCurrencyTwo(2234) value.

Type: [String](#)

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".

Code	Name	Description
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in groups: [LegComplexEvents](#)

180.2.1414 LegComplexEventDateAdjusted

The adjusted complex event date.

Type: [LocalMktDate](#)

Used in components: [LegComplexEventRelativeDate](#)

180.2.1415 LegComplexEventDateBusinessCenter

The business center calendar used to adjust the event date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in groups: [LegComplexEventDateBusinessCenterGrp](#)

180.2.1416 LegComplexEventDateBusinessCenterGrp

[LegComplexEventDateBusinessCenterGrp](#) is a repeating subcomponent of the [LegComplexEventRelativeDate](#) component used to specify the set of business centers whose calendars drive date adjustment. Used only to override the business centers defined in the [LegDateAdjustment](#) component in [InstrumentLeg](#).

Name	Mult.	Type	Description
NoLegComplexEventDateBusinessCenters	[1..1]	NumInGroup	
LegComplexEventDateBusinessCenter	[0..1]	String	Required if NoLegComplexEventDateBusinessCenters (41387) > 0.

Used in components: [LegComplexEventRelativeDate](#)

180.2.1417 LegComplexEventDateBusinessDayConvention

The business day convention used to adjust the event date. Used only to override the business day convention specified in the LegDateAdjustment component within the InstrumentLeg component.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: **LegComplexEventRelativeDate**

180.2.1418 LegComplexEventDateOffsetDayType

Specifies the day type of the relative date offset.

Type: **int**

Allowed values in ComplexEventDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: **LegComplexEventRelativeDate**

180.2.1419 LegComplexEventDateOffsetPeriod

Time unit multiplier for the relative date offset.

Type: **int**

Used in components: **LegComplexEventRelativeDate**

180.2.1420 LegComplexEventDateOffsetUnit

Time unit associated with the relative date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: **LegComplexEventRelativeDate**

180.2.1421 LegComplexEventDateRelativeTo

Specifies the anchor date when the complex event date is relative to an anchor date.

See http://www.fixtradingcommunity.org/codelists#Relative_To_Date for values.

Type: **int**

Used in components: **LegComplexEventRelativeDate**

180.2.1422 LegComplexEventDates

The LegComplexEventDates and subcomponent LegComplexEventTimes components are used to constrain a complex event to a specific date range, and optional time range. If specified the event is only effective on or within the specified dates and times.

Name	Mult.	Type	Description
NoLegComplexEventDates	[1..1]	NumInGroup	
LegComplexEventStartDate	[0..1]	UTCDateOnly	Required if NoLegComplexEventDates(2250) > 0.
LegComplexEventEndDate	[0..1]	UTCDateOnly	Required if NoLegComplexEventDates(2250) > 0.
LegComplexEventTimes	[0..*]	Group	

Used in groups: **LegComplexEvents**

180.2.1423 LegComplexEventDateUnadjusted

The unadjusted complex event date.

Type: **LocalMktDate**

Used in components: **LegComplexEventRelativeDate**

180.2.1424 LegComplexEventDeterminationMethod

Specifies the method according to which an amount or a date is determined.

See <http://www.fpml.org/coding-scheme/determination-method> for values.

Type: **String**

Used in groups: **LegComplexEvents**

180.2.1425 LegComplexEventEndDate

The end date of the date range on which a complex event is effective. The start date will be set equal to the end date for single day events such as Bermuda options.

The end date must always be greater than or equal to start date.

Type: **UTCDateOnly**

Used in groups: **LegComplexEventDates**

180.2.1426 LegComplexEventEndTime

The end time of the time range on which a complex event date is effective.

The end time must always be greater than or equal to the start time.

Type: **UTCTimeOnly**

Used in groups: **LegComplexEventTimes**

180.2.1427 LegComplexEventFixedFXRate

Specifies the fixed FX rate alternative for FX Quanto options.

Type: **float**

Used in groups: **LegComplexEvents**

180.2.1428 LegComplexEventFixingTime

The local market fixing time.

Type: **LocalMktTime**

Used in components: **LegComplexEventRelativeDate**

180.2.1429 LegComplexEventFixingTimeBusinessCenter

The business center for determining the actual fixing times.

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in components: **LegComplexEventRelativeDate**

180.2.1430 LegComplexEventForwardPoints

FX forward points added to spot rate. May be a negative value.

Type: **PriceOffset**

Used in groups: **LegComplexEvents**

180.2.1431 LegComplexEventFuturesPriceValuation

Indicates whether the official settlement price as announced by the related exchange is applicable, in accordance with the ISDA 2002 definitions. Applicable only to futures contracts.

Type: **Boolean**

Used in groups: **LegComplexEvents**

180.2.1432 LegComplexEventOptionsPriceValuation

Indicates whether the official settlement price as announced by the related exchange is applicable, in accordance with the ISDA 2002 definitions. Applicable only to options contracts.

Type: **Boolean**

Used in groups: **LegComplexEvents**

180.2.1433 LegComplexEventPeriodDate

Averaging date for an Asian option.

Trigger date for a Barrier or Knock option.

Type: **LocalMktDate**

Used in groups: **LegComplexEventPeriodDateGrp**

180.2.1434 LegComplexEventPeriodDateGrp

LegComplexEventPeriodDateGrp is a subcomponent of LegComplexEventPeriodGrp for specifying fixed period dates and times for an Asian or Strike Schedule option or trigger dates for a Barrier or Knock option.

Name	Mult.	Type	Description
NoLegComplexEventPeriodDateTimes	[1..1]	NumInGroup	
LegComplexEventPeriodDate	[0..1]	LocalMktDate	Required if NoLegComplexEventPeriodDateTimes(41376) > 0.
LegComplexEventPeriodTime	[0..1]	LocalMktTime	

Used in groups: **LegComplexEventPeriodGrp**

180.2.1435 LegComplexEventPeriodGrp

LegComplexEventPeriodGrp is a subcomponent of LegComplexEvents for specifying the periods for an Asian, Barrier, Knock or Strike Schedule option feature.

Name	Mult.	Type	Description
NoLegComplexEventPeriods	[1..1]	NumInGroup	
LegComplexEventPeriodType	[0..1]	CodeSet	Required if NoLegComplexEventPeriods(41379) > 0.
LegComplexEventBusinessCenter	[0..1]	String	
LegComplexEventScheduleGrp	[0..*]	Group	
LegComplexEventPeriodDateGrp	[0..*]	Group	
LegComplexEventAveragingObservationGrp	[0..*]	Group	

Used in groups: [LegComplexEvents](#)

180.2.1436 LegComplexEventPeriodTime

Averaging time for an Asian option.

Type: [LocalMktTime](#)

Used in groups: [LegComplexEventPeriodDateGrp](#)

180.2.1437 LegComplexEventPeriodType

Specifies the period type.

Type: [int](#)

Allowed values in ComplexEventPeriodTypeCodeSet:

Code	Name	Description
0	AsianOut	Asian Out
1	AsianIn	Asian In
2	BarrierCap	Barrier Cap
3	BarrierFloor	Barrier Floor
4	KnockOut	Knock Out

Code	Name	Description
5	KnockIn	Knock In

Used in groups: [LegComplexEventPeriodGrp](#)

180.2.1438 LegComplexEventPrice

Specifies the price at which the complex event takes effect. Impact of the event price is determined by the LegComplexEventType(2219).

Type: [Price](#)

Used in groups: [LegComplexEvents](#)

180.2.1439 LegComplexEventPriceBoundaryMethod

Specifies the boundary condition to be used for the event price relative to the complex event price at the point the complex event outcome takes effect as determined by the LegComplexEventPriceTimeType(2231).

Type: [int](#)

Allowed values in ComplexEventPriceBoundaryMethodCodeSet:

Code	Name	Description
1	LessThanComplexEventPrice	Less than ComplexEventPrice(1486)
2	LessThanOrEqualToComplexEvent-Price	Less than or equal to ComplexEventPrice(1486)
3	EqualToComplexEventPrice	Equal to ComplexEventPrice(1486)
4	GreaterThanOrEqualToComplex-EventPrice	Greater than or equal to ComplexEventPrice(1486)
5	GreaterThanComplexEventPrice	Greater than ComplexEventPrice(1486)

Used in groups: [LegComplexEvents](#)

180.2.1440 LegComplexEventPriceBoundaryPrecision

Used in combination with LegComplexEventPriceBoundaryMethod(2229) to specify the percentage of the strike price in relation to the underlying price. The percentage is generally 100 or greater for puts and 100 or less for calls.

Type: **Percentage**

Used in groups: **LegComplexEvents**

180.2.1441 LegComplexEventPricePercentage

Specifies the price percentage at which the complex event takes effect. Impact of the event price is determined by the LegComplexEventType(2219).

Type: **Percentage**

Used in groups: **LegComplexEvents**

180.2.1442 LegComplexEventPriceTimeType

Specifies when the complex event outcome takes effect. The outcome of a complex event is a payout or barrier action as specified by the LegComplexEventType(2219).

Type: **int**

Allowed values in ComplexEventPriceTimeTypeCodeSet:

Code	Name	Description
1	Expiration	Expiration
2	Immediate	Immediate (At Any Time)
3	SpecifiedDate	Specified Date/Time
4	Close	Close. Official closing time of the exchange on valuation date.
5	Open	Open. Official opening time of the exchange on valuation date.
6	OfficialSettlPrice	Official settlement price. Official settlement price determination time.
7	DerivativesClose	Derivatives close. Official closing time of the derivatives exchange.
8	AsSpecifiedMasterConfirmation	As specified in Master Confirmation

Used in groups: **LegComplexEvents**

180.2.1443 LegComplexEventPVFinalPriceElectionFallback

Specifies the fallback provisions for the hedging party in the determination of the final settlement price

Type: **int**

Allowed values in ComplexEventPVFinalPriceElectionFallbackCodeSet:

Code	Name	Description
0	Close	Close. In respect of the "early final valuation date", the provisions for "future present value close" shall apply.
1	HedgeElection	Hedge election. In respect of the "early final valuation date", the provisions for "future present value hedge execution" shall apply.

Used in groups: **LegComplexEvents**

180.2.1444 LegComplexEventQuoteBasis

For foreign exchange Quanto option feature.

Type: **int**

Allowed values in ComplexEventQuoteBasisCodeSet:

Code	Name	Description
0	Currency1PerCurrency2	Currency 1 per currency 2
1	Currency2PerCurrency1	Currency 2 per currency 1

Used in groups: **LegComplexEvents**

180.2.1445 LegComplexEventRateSource

Identifies the source of rate information.

For FX, the reference source to be used for the FX spot rate.

Type: **int**

Allowed values in RateSourceCodeSet:

Code	Name	Description
0	Bloomberg	Bloomberg
1	Reuters	Reuters
2	Telerate	Telerate
3	ISDARateOption	ISDA Settlement Rate Option. The source of the currency conversion as specified by the ISDA terms in Annex A to the 1998 FX and Currency Option Definitions. See http://www.fpml.org/coding-scheme/settlement-rate-option
99	Other	Other

Used in groups: [LegComplexEventRateSourceGrp](#)

180.2.1446 LegComplexEventRateSourceGrp

LegComplexEventRateSourceGrp is a subcomponent of LegComplexEvents for specifying primary and secondary rate sources.

Name	Mult.	Type	Description
NoLegComplexEventRateSources	[1..1]	NumInGroup	
LegComplexEventRateSource	[0..1]	CodeSet	Required if NoLegComplexEventRateSources (41382) > 0.
LegComplexEventRateSourceType	[0..1]	CodeSet	Required if NoLegComplexEventRateSources (41382) > 0.
LegComplexEventReferencePage	[0..1]	String	Conditionally required when LegComplexEventRateSource (41383) = 99 (Other).
LegComplexEventReferencePageHeading	[0..1]	String	

Used in groups: [LegComplexEvents](#)

180.2.1447 LegComplexEventRateSourceType

Indicates whether the rate source specified is a primary or secondary source.

Type: [int](#)

Allowed values in RateSourceTypeCodeSet:

Code	Name	Description
0	Primary	Primary
1	Secondary	Secondary

Used in groups: [LegComplexEventRateSourceGrp](#)

180.2.1448 LegComplexEventReferencePage

Identifies the reference page from the rate source.

For FX, the reference page to the spot rate is to be used for the reference FX spot rate.

When LegComplexEventRateSource(41383) = 3 (ISDA Settlement Rate Option) this contains the value from the scheme that reflects the terms of the Annex A to the ISDA 1998 FX and Currency Option Definitions. See: <http://www.fpml.org/coding-scheme/settlement-rate-option>.

Type: [String](#)

Used in groups: [LegComplexEventRateSourceGrp](#)

180.2.1449 LegComplexEventRelativeDate

LegComplexEventRelativeDate is a subcomponent of LegComplexEvents for specifying the event date and time for an FX or Calendar Spread option or the payout date for a Barrier or Knock option.

Name	Mult.	Type	Description
LegComplexEventDateUnadjusted	[0..1]	LocalMktDate	
LegComplexEventDateRelativeTo	[0..1]	int	
LegComplexEventDateOffsetPeriod	[0..1]	int	Conditionally required when LegComplexEventDateOffsetUnit(41392) is specified.
LegComplexEventDateOffsetUnit	[0..1]	CodeSet	Conditionally required when LegComplexEventDateOffsetPeriod(41391) is specified.
LegComplexEventDateOffsetDayType	[0..1]	CodeSet	
LegComplexEventDateBusinessDay-Convention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the LegDateAdjustment component in InstrumentLeg. The specified value would be specific to complex event dates.

Name	Mult.	Type	Description
LegComplexEventDateBusinessCenter-Grp	[0..*]	Group	When specified, this overrides the business centers defined in the LegDateAdjustment component in InstrumentLeg. The specified values would be specific to complex event dates.
LegComplexEventDateAdjusted	[0..1]	LocalMktDate	
LegComplexEventFixingTime	[0..1]	LocalMktTime	
LegComplexEventFixingTimeBusiness-Center	[0..1]	String	

Used in groups: [LegComplexEvents](#)

180.2.1450 LegComplexEventScheduleEndDate

The end date of the schedule.

Type: [LocalMktDate](#)

Used in groups: [LegComplexEventScheduleGrp](#)

180.2.1451 LegComplexEventScheduleFrequencyPeriod

Time unit multiplier for the schedule date frequency.

Type: [int](#)

Used in groups: [LegComplexEventScheduleGrp](#)

180.2.1452 LegComplexEventScheduleFrequencyUnit

Time unit associated with the schedule date frequency.

Type: [String](#)

Allowed values in ProtectionTermEventUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month

Code	Name	Description
Yr	Year	Year

Used in groups: [LegComplexEventScheduleGrp](#)

180.2.1453 LegComplexEventScheduleGrp

LegComplexEventScheduleGrp is a subcomponent of LegComplexEventPeriodGrp for specifying a periodic schedule for an Asian, Barrier or Strike Schedule option feature.

Name	Mult.	Type	Description
NoLegComplexEventSchedules	[1..1]	NumInGroup	
LegComplexEventScheduleStartDate	[0..1]	LocalMktDate	Required if NoLegComplexEventSchedules(41400) > 0.
LegComplexEventScheduleEndDate	[0..1]	LocalMktDate	
LegComplexEventScheduleFrequencyPeriod	[0..1]	int	Conditionally required when LegComplex-EventScheduleFrequencyUnit(41404) is specified.
LegComplexEventScheduleFrequencyUnit	[0..1]	CodeSet	Conditionally required when LegComplex-EventScheduleFrequencyPeriod(41403) is specified.
LegComplexEventScheduleRollConvention	[0..1]	CodeSet	When specified, this overrides the date roll convention defined in the LegDateAdjustment component in InstrumentLeg. The specified values would be specific to this instance of the option expiration dates and times.

Used in groups: [LegComplexEventPeriodGrp](#)

180.2.1454 LegComplexEventScheduleRollConvention

The convention for determining the sequence of dates. It is used in conjunction with a specified frequency. Used only to override the roll convention defined in the LegDateAdjustment component in InstrumentLeg.

Type: [String](#)

Allowed values in DateRollConventionCodeSet:

Code	Name	Description
1	FirstDay	1st day of the month
2	SecondDay	2nd day of the month
3	ThirdDay	3rd day of the month
4	FourthDay	4th day of the month
5	FifthDay	5th day of the month
6	SixthDay	6th day of the month
7	SeventhDay	7th day of the month
8	EighthDay	8th day of the month
9	NinthDay	9th day of the month
10	TenthDay	10th day of the month
11	EleventhDay	11th day of the month
12	TwelfthDay	12th day of the month
13	ThirteenthDay	13th day of the month
14	FourteenthDay	14th day of the month
15	FifteenthDay	15th day of the month
16	SixteenthDay	16th day of the month
17	SeventeenthDay	17th day of the month
18	EighteenthDay	18th day of the month
19	NineteenthDay	19th day of the month
20	TwentiethDay	20th day of the month
21	TwentyFirstDay	21st day of the month
22	TwentySecondDay	22nd day of the month
23	TwentyThirdDay	23rd day of the month
24	TwentyFourthDay	24th day of the month
25	TwentyFifthDay	25th day of the month
26	TwentySixthDay	26th day of the month
27	TwentySeventhDay	27th day of the month
28	TwentyEighthDay	28th day of the month
29	TwentyNinthDay	29th day of the month
30	ThirtiethDay	30th day of the month
EOM	EOM	The end of the month. Use EOM for 31st day of the month.
FRN	FRN	The floating rate note convention or Eurodollar convention.
IMM	IMM	The International Money Market settlement date, i.e. the 3rd Wednesday of the month.

Code	Name	Description
IMMCAD	IMMCAD	The last trading day/expiration day of the Canadian Derivatives Exchange.
IMMAUD	IMMAUD	The last trading day of the Sydney Futures Exchange Australian 90-day bank accepted bill futures contract.
IMMNZD	IMMNZD	The last trading day of the Sydney Futures Exchange New Zealand 90-day bank bill futures contract.
SFE	SFE	The Sydney Futures Exchange 90-day bank accepted bill futures settlement dates.
NONE	NONE	No adjustment
TBILL	TBILL	The 13-week and 26-week U.S. Treasury Bill auction dates.
MON	MON	Monday
TUE	TUE	Tuesday
WED	WED	Wednesday
THU	THU	Thursday
FRI	FRI	Friday
SAT	SAT	Saturday
SUN	SUN	Sunday

Used in groups: [LegComplexEventScheduleGrp](#)

180.2.1455 LegComplexEventScheduleStartDate

The start date of the schedule.

Type: [LocalMktDate](#)

Used in groups: [LegComplexEventScheduleGrp](#)

180.2.1456 LegComplexEvents

The LegComplexEvent Group is a repeating block which allows specifying an unlimited number and types of advanced events, such as observation and pricing over the lifetime of an option, futures, commodities or equity swap contract. Use LegEvtGrp to specify more straightforward events.

Name	Mult.	Type	Description
NoLegComplexEvents	[1..1]	NumInGroup	

Name	Mult.	Type	Description
LegComplexEventType	[0..1]	CodeSet	Required if NoLegComplexEvents(2218)) > 0.
LegComplexOptPayoutPaySide	[0..1]	CodeSet	
LegComplexOptPayoutReceiveSide	[0..1]	CodeSet	
LegComplexOptPayoutUnderlier	[0..1]	String	
LegComplexOptPayoutAmount	[0..1]	Amt	
LegComplexOptPayoutPercentage	[0..1]	Percentage	
LegComplexOptPayoutTime	[0..1]	CodeSet	
LegComplexOptPayoutCurrency	[0..1]	Currency	
LegComplexOptPayoutCurrency-CodeSource	[0..1]	CodeSet	
LegComplexEventPrice	[0..1]	Price	
LegComplexEventPricePercentage	[0..1]	Percentage	
LegComplexEventPriceBoundaryMethod	[0..1]	CodeSet	
LegComplexEventPriceBoundaryPrecision	[0..1]	Percentage	
LegComplexEventPriceTimeType	[0..1]	CodeSet	
LegComplexEventCondition	[0..1]	CodeSet	Conditionally required when there are more than one LegComplexEvents occurrences. A chain of LegComplexEvents must be linked together through use of the LegComplexEventCondition(2232) in which the relationship between any two events is described. For any two LegComplexEvents the first occurrence will specify the LegComplexEventCondition(2232) which links it with the second event.
LegComplexEventDates	[0..*]	Group	
LegComplexEventCurrencyOne	[0..1]	Currency	
LegComplexEventCurrencyOneCodeSource	[0..1]	CodeSet	
LegComplexEventCurrencyTwo	[0..1]	Currency	
LegComplexEventCurrencyTwoCodeSource	[0..1]	CodeSet	
LegComplexEventQuoteBasis	[0..1]	CodeSet	
LegComplexEventFixedFXRate	[0..1]	float	
LegComplexEventSpotRate	[0..1]	Price	

Name	Mult.	Type	Description
LegComplexEventForwardPoints	[0..1]	PriceOffset	
LegComplexEventDetermination-Method	[0..1]	String	
LegComplexEventCalculationAgent	[0..1]	CodeSet	
LegComplexEventStrikePrice	[0..1]	Price	
LegComplexEventStrikeFactor	[0..1]	float	
LegComplexEventStrikeNumberOfOptions	[0..1]	int	
LegComplexEventRateSourceGrp	[0..*]	Group	
LegComplexEventRelativeDate	[0..1]	Component	
LegComplexEventPeriodGrp	[0..*]	Group	
LegComplexEventCreditEventsXIDRef	[0..1]	XIDREF	
LegComplexEventCreditEventNotifyingParty	[0..1]	CodeSet	
LegComplexEventCreditEventBusinessCenter	[0..1]	String	
LegComplexEventCreditEventStandardSources	[0..1]	Boolean	
LegComplexEventCreditEventMinimumSources	[0..1]	int	
LegComplexEventCreditEventSourceGrp	[0..*]	Group	
LegComplexEventCreditEventGrp	[0..*]	Group	
LegComplexEventFuturesPriceValuation	[0..1]	Boolean	
LegComplexEventOptionsPriceValuation	[0..1]	Boolean	
LegComplexEventPVFinalPriceElectionFallback	[0..1]	CodeSet	
LegComplexEventXID	[0..1]	XID	
LegComplexEventXIDRef	[0..1]	XIDREF	

Used in components: **InstrumentLeg**

180.2.1457 LegComplexEventSpotRate

FX spot rate.

Type: **Price**

Used in groups: **LegComplexEvents**

180.2.1458 LegComplexEventStartDate

The start date of the date range on which a complex event is effective. The start date will be set equal to the end date for single day events such as Bermuda options.

The start date must always be less than or equal to end date.

Type: **UTCDateOnly**

Used in groups: **LegComplexEventDates**

180.2.1459 LegComplexEventStartTime

The start time of the time range on which a complex event date is effective.

The start time must always be less than or equal to the end time.

Type: **UTCTimeOnly**

Used in groups: **LegComplexEventTimes**

180.2.1460 LegComplexEventStrikeFactor

Strike factor for Asian option feature. Upper strike percentage for a Strike Spread.

Type: **float**

Used in groups: **LegComplexEvents**

180.2.1461 LegComplexEventStrikeNumberOfOptions

Upper string number of options for a Strike Spread.

Type: **int**

Used in groups: **LegComplexEvents**

180.2.1462 LegComplexEventStrikePrice

Upper strike price for Asian option feature. Strike percentage for a Strike Spread.

Type: **Price**

Used in groups: **LegComplexEvents**

180.2.1463 LegComplexEventTimes

The LegComplexEventTimes is a repeating subcomponent of the LegComplexEventDates component. It is used to further qualify any dates placed on the event and is used to specify time ranges for which a complex event is effective. It is always provided within the context of start and end dates. The time range is assumed to be in effect for the entirety of the date or date range specified.

Name	Mult.	Type	Description
NoLegComplexEventTimes	[1..1]	NumInGroup	
LegComplexEventStartTime	[0..1]	UTCTimeOnly	Required if NoLegComplexEventTimes(2253) > 0.
LegComplexEventEndTime	[0..1]	UTCTimeOnly	Required if NoLegComplexEventTimes(2253) > 0.

Used in groups: **LegComplexEventDates**

180.2.1464 LegComplexEventType

Identifies the type of complex event.

Type: **int**

Allowed values in ComplexEventTypeCodeSet:

Code	Name	Description
1	Capped	Capped
2	Trigger	Trigger
3	KnockInUp	Knock-in up
4	KnockInDown	Knock-in down
5	KnockOutUp	Knock-out up
6	KnockOutDown	Knock-out down
7	Underlying	Underlying

Code	Name	Description
8	ResetBarrier	Reset Barrier
9	RollingBarrier	Rolling Barrier
10	OneTouch	One-touch
11	NoTouch	No-touch
12	DblOneTouch	Double one-touch
13	DblNoTouch	Double no-touch
14	FXComposite	Foreign exchange composite
15	FXQuanto	Foreign exchange Quanto
16	FXCrssCcy	Foreign exchange cross currency
17	StrkSpread	Strike spread
18	ClndrSpread	Calendar spread
19	PxObsvtn	Price observation (Asian or Lookback)
20	PassThrough	Pass-through
21	StrkSched	Strike schedule
22	EquityValuation	Equity valuation
23	DividendValuation	Dividend valuation

Used in groups: [LegComplexEvents](#)

180.2.1465 LegComplexEventXID

Identifier of this complex event for cross referencing elsewhere in the message.

Type: [XID](#)

Used in groups: [LegComplexEvents](#)

180.2.1466 LegComplexEventXIDRef

Reference to a complex event elsewhere in the message.

Type: [XIDREF](#)

Used in groups: [LegComplexEvents](#)

180.2.1467 LegComplexOptPayoutAmount

Cash amount indicating the pay out associated with an event. For binary options this is a fixed amount.

Type: **Amt**

Used in groups: **LegComplexEvents**

180.2.1468 LegComplexOptPayoutCurrency

Specifies the currency of the payout amount.

LegComplexOptPayoutCurrencyCodeSource(2944) may be used to disambiguate the code source scheme used, and ISO 4217 is the default scheme if absent.

Type: **Currency**

Used in groups: **LegComplexEvents**

180.2.1469 LegComplexOptPayoutCurrencyCodeSource

Identifies class or source of the LegComplexOptPayoutCurrency(2226) value.

Type: **String**

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbolology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in groups: **LegComplexEvents**

180.2.1470 LegComplexOptPayoutPaySide

Trade side of payout payer.

Type: **int**

Allowed values in PaymentPaySideCodeSet:

Code	Name	Description
1	Buy	Buy
2	Sell	Sell

Used in groups: **LegComplexEvents**

180.2.1471 LegComplexOptPayoutPercentage

Percentage of observed price for calculating the payout associated with the event.

Type: **Percentage**

Used in groups: **LegComplexEvents**

180.2.1472 LegComplexOptPayoutReceiveSide

Trade side of payout receiver.

Type: **int**

Allowed values in PaymentPaySideCodeSet:

Code	Name	Description
1	Buy	Buy
2	Sell	Sell

Used in groups: **LegComplexEvents**

180.2.1473 LegComplexOptPayoutTime

Specifies when the payout is to occur.

Type: **int**

Allowed values in ComplexOptPayoutTimeCodeSet:

Code	Name	Description
0	Close	Close
1	Open	Open
2	OfficialSettl	Official settlement
3	ValuationTime	Valuation time
4	ExcahgneSettlTime	Exchange settlement time
5	DerivativesClose	Derivatives close
6	AsSpecified	As specified in master confirmation

Used in groups: **LegComplexEvents**

180.2.1474 LegComplexOptPayoutUnderlier

Reference to the underlier whose payments are being passed through.

Type: **String**

Used in groups: **LegComplexEvents**

180.2.1475 LegContractMultiplier

Multileg instrument's individual security's ContractMultiplier.

See ContractMultiplier (23) field for description

Type: **float**

Used in components: **InstrumentLeg**

180.2.1476 LegContractMultiplierUnit

Indicates the type of multiplier being applied to the contract. Can be optionally used to further define what unit LegContractMultiplier(614) is expressed in.

Type: **int**

Allowed values in ContractMultiplierUnitCodeSet:

Code	Name	Description
0	Shares	Shares
1	Hours	Hours
2	Days	Days

Used in components: **InstrumentLeg**

180.2.1477 LegContractPriceRefMonth

Reference month if there is no applicable LegMaturityMonthYear(610) value for the contract or security.

Type: **MonthYear**

Used in components: **InstrumentLeg**

180.2.1478 LegContractSettlMonth

Specifies when the contract (i.e. MBS/TBA) will settle.

Type: **MonthYear**

Used in components: **InstrumentLeg**

180.2.1479 LegContractualDefinition

Specifies which contract definition, such as those published by ISDA, will apply for the terms of the trade. See <http://www.fpml.org/coding-scheme/contractual-definitions> for values.

Type: **String**

Used in groups: **LegFinancingContractualDefinitionsGrp**

180.2.1480 LegContractualMatrixDate

Specifies the publication date of the applicable version of the contract matrix. If not specified, the ISDA Standard Terms Supplement defines rules for which version of the matrix is applicable.

Type: **LocalMktDate**

Used in groups: **LegFinancingContractualMatrixGrp**

180.2.1481 LegContractualMatrixSource

Identifies the applicable contract matrix. See <http://www.fpml.org/coding-scheme/matrix-type-1-0.xml> for values.

Type: **String**

Used in groups: **LegFinancingContractualMatrixGrp**

180.2.1482 LegContractualMatrixTerm

Specifies the applicable key into the relevant contract matrix. In the case of 2000 ISDA Definitions Settlement Matrix for Early Termination and Swaptions, the LegContractualMatrixTerm(42206) is not applicable and is to be omitted. See <http://www.fpml.org/coding-scheme/credit-matrix-transaction-type> for values.

Type: **String**

Used in groups: **LegFinancingContractualMatrixGrp**

180.2.1483 LegContraryInstructionEligibilityIndicator

Identifies whether the option instrument is eligible for contrary instructions at the time of exercise. The contrariness of an instruction will be determined in the context of LegInTheMoneyCondition(2682). When not specified, the eligibility is undefined or not applicable.

Type: **Boolean**

Used in components: **InstrumentLeg**

180.2.1484 LegConvertibleBondEquityID

Identifies the equity in which a convertible bond can be converted to.

Type: **String**

Used in components: **InstrumentLeg**

180.2.1485 LegConvertibleBondEquityIDSource

Identifies class or source of the LegConvertibleBondEquitySecurityID(2166) value.

Type: **String**

Allowed values in SecurityIDSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
3	QUIK	QUIK
4	ISINNumber	ISIN
5	RICCode	RIC
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
7	ISOCountryCode	ISO Country Code
8	ExchangeSymbol	Exchange symbol
9	ConsolidatedTapeAssociation	Consolidated Tape Association (CTA) Symbol (SIAC CTS/CQS line format)
A	BloombergSymbol	Bloomberg Symbol
B	Wertpapier	Wertpapier
C	Dutch	Dutch
D	Valoren	Valoren
E	Sicovam	Sicovam
F	Belgian	Belgian
G	Common	"Common" (Clearstream and Euroclear)
H	ClearingHouse	Clearing house / Clearing organization
I	ISDAFpMLSpecification	ISDA/FpML product specification (XML in SecurityXML(1185))
J	OptionPriceReportingAuthority	Option Price Reporting Authority
K	ISDAFpMLURL	ISDA/FpML product URL (URL in SecurityID(48))
L	LetterOfCredit	Letter of credit
M	MarketplaceAssignedIdentifier	Marketplace-assigned Identifier
N	MarkitREDEntityCLIP	Markit RED entity CLIP
P	MarkitREDPairCLIP	Markit RED pair CLIP

Code	Name	Description
Q	CFTCommodityCode	CFTC commodity code
R	ISDACommodityReferencePrice	ISDA Commodity Reference Price
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
T	LegalEntityIdentifier	Legal entity identifier
U	Synthetic	Synthetic. Used to specify that the security identifier is synthetic for linking nested underliers when there is no market identifier for the collection.
V	FidessaInstrumentMnemonic	Fidessa Instrument Mnemonic (FIM)
W	IndexName	Index name. Standard name of the index or rate index, e.g. "LIBOR" or "iTraxx Australia".
X	UniformSymbol	Uniform Symbol (UMTF Symbol)
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in components: **InstrumentLeg**

180.2.1486 LegCountryOfIssue

Multileg instrument's individual leg security's CountryOfIssue.

See CountryOfIssue (470) field for description

Type: **Country**

Used in components: **InstrumentLeg**

180.2.1487 LegCouponDayCount

The day count convention used in interest calculations for a bond or an interest bearing security.

Type: **int**

Allowed values in CouponDayCountCodeSet:

Code	Name	Description
0	OneOne	1/1. If parties specify the Day Count Fraction to be 1/1 then in calculating the applicable amount, 1 is simply input into the calculation as the relevant Day Count Fraction. See also 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (a).
1	ThirtyThreeSixtyUS	30/360 (30U/360 or Bond Basis). See also ISO 15022 MICO code 'A001'.
2	ThirtyThreeSixtySIA	30/360 (SIA). A variant of "30/360" - when Date1 and Date2 are both Feb. 28th or 29th convert them to 30th using the same logic in the conversion of 31st to 30th.
3	ThirtyThreeSixtyM	30/360M. Commonly used day count convention for US mortgage backed securities. Feb 28th (or 29th in a leap year) is always considered as a 30th for a start date. As a comparison, in the regular 30/360 day count as used by most US agency and corporate bonds, a start date of Feb 28th (or 29th in a leap year) is still considered as the 28th (or 29th) day of a month of 30 days.
4	ThirtyEThreeSixty	30E/360 (Eurobond Basis). See also ISO 15022 MICO code 'A007'.
5	ThirtyEThreeSixtyISDA	30E/360 (ISDA). Date adjustment rules are: (1) if Date1 is the last day of the month, then change Date1 to 30; (2) if D2 is the last day of the month (unless Date2 is the maturity date and Date2 is in February), then change Date2 to 30. See also 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (h).
6	ActThreeSixty	Act/360. See also ISO 15022 MICO code 'A004'.
7	ActThreeSixtyFiveFixed	Act/365 (FIXED). See also ISO 15022 MICO code 'A005'.
8	ActActAFB	Act/Act (AFB). See also ISO 15022 MICO code 'A010'.
9	ActActICMA	Act/Act (ICMA). See also ISO 15022 MICO code 'A006'.
10	ActActISMAUltimo	Act/Act (ICMA Ultimo). The Act/Act (ICMA Ultimo) differs from Act/Act (ICMA) method only that it assumes that regular coupons always fall on the last day of the month.
11	ActActISDA	Act/Act (ISDA). See also ISO 15022 MICO code 'A008'.
12	BusTwoFiftyTwo	BUS/252. Used for Brazilian Real swaps, which is based on business days instead of calendar days. The number of business days divided by 252.
13	ThirtyEPlusThreeSixty	30E+/360. Variation on 30E/360. Date adjustment rules: (1) If Date1 falls on the 31st, then change it to the 30th; (2) If Date2 falls on the 31st, then change it to 1 and increase Month2 by one, i.e. next month.
14	ActThreeSixtyFiveL	Act/365L. See also ISO 15022 MICO code 'A009'.

Code	Name	Description
15	NLThreeSixtyFive	NL365. See also ISO 15022 MICO code 'A014'.
16	NLThreeSixty	NL360. This is the same as Act/360, with the exception of leap days (29th February) which are ignored.
17	Act364	Act/364. The actual number of days between Date1 and Date2, divided by 364.
18	ThirtyThreeSixtyFive	30/365. Interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and a 365-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31 is assumed to be a 30 and the 28 February (or 29 February for a leap year) is assumed to be a 28 (or 29). See also ISO 15022 MICO code 'A002'.
19	ThirtyActual	30/Actual. Interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and the assumed number of days in a year in a way similar to the Actual/Actual (ICMA). Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31 is assumed to be a 30 and the 28 February (or 29 February for a leap year) is assumed to be a 28 (or 29). The assumed number of days in a year is computed as the actual number of days in the coupon period multiplied by the number of interest payments in the year. See also ISO 15022 MICO code 'A003'.
20	ThirtyThreeSixtyICMA	30/360 (ICMA or basis rule). Interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30 calendar day of the same month, except for February. This means that a 31 is assumed to be a 30 and the 28 February (or 29 February for a leap year) is assumed to be a 28 (or 29). It is the most commonly used 30/360 method for non-US straight and convertible bonds issued before 1 January 1999. See also ISO 15022 MICO code 'A011'.

Code	Name	Description
21	ThirtyETwoThreeSixty	30E2/360 (Eurobond basis model two). Interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for the last day of February whose day of the month value shall be adapted to the value of the first day of the interest period if the latter is higher and if the period is one of a regular schedule. This means that a 31 is assumed to be a 30 and the 28 February of a non-leap year is assumed to be equivalent to a 29 February when the first day of the interest period is a 29, or to a 30 February when the first day of the interest period is a 30 or a 31. The 29 February of a leap year is assumed to be equivalent to a 30 February when the first day of the interest period is a 30 or a 31. Similarly, if the coupon period starts on the last day of February, it is assumed to produce only one day of interest in February as if it was starting on a 30 February when the end of the period is a 30 or a 31, or two days of interest in February when the end of the period is a 29, or three days of interest in February when it is the 28 February of a non-leap year and the end of the period is before the 29. See also ISO 15022 MICO code 'A012'.
22	ThirtyEThreeThreeSixty	30E3/360 (Eurobond basis model three). Interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that a 31 is assumed to be a 30 and the 28 February (or 29 February for a leap year) is assumed to be equivalent to a 30 February. It is a variation of the 30E/360 (or Eurobond basis) method where the last day of February is always assumed to be a 30, even if it is the last day of the maturity coupon period. See also ISO 15022 MICO code 'A013'.
99	Other	Other. For other day count method. See also ISO 15022 MICO code 'OTHR'.

Used in components: [InstrumentLeg](#)

180.2.1488 LegCouponFrequencyPeriod

Time unit multiplier for the frequency of the bond's coupon payment.

Type: [int](#)

Used in components: [InstrumentLeg](#)

180.2.1489 LegCouponFrequencyUnit

Time unit associated with the frequency of the bond's coupon payment.

Type: **String**

Allowed values in CouponFrequencyUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year
H	Hour	Hour
Min	Minute	Minute
S	Second	Second
T	Term	Term

Used in components: **InstrumentLeg**

180.2.1490 LegCouponOtherDayCount

The industry name of the day count convention not listed in LegCouponDayCount(2165).

Type: **String**

Used in components: **InstrumentLeg**

180.2.1491 LegCouponPaymentDate

Multileg instrument's individual leg security's CouponPaymentDate.

See CouponPaymentDate (224) field for description

(Note tag # was reserved in FIX 4.1, added in FIX 4.3)

(prior to FIX 4.4 field was of type UTCDate)

Type: **LocalMktDate**

Used in components: **InstrumentLeg**

180.2.1492 LegCouponRate

Multileg instrument's individual security's CouponRate.

See CouponRate (223) field for description

Type: **Percentage**

Used in components: **InstrumentLeg**

180.2.1493 LegCouponType

Specifies the coupon type of the bond.

Type: **int**

Allowed values in CouponTypeCodeSet:

Code	Name	Description
0	Zero	Zero
1	FixedRate	Fixed rate
2	FloatingRate	Floating rate
3	Structured	Structured

Used in components: **InstrumentLeg**

180.2.1494 LegCoveredOrUncovered

CoveredOrUncovered for leg of a multileg

See CoveredOrUncovered (203) field for description

Type: **int**

Allowed values in CoveredOrUncoveredCodeSet:

Code	Name	Description
0	Covered	Covered
1	Uncovered	Uncovered

Used in groups: **InstrmtLegExecGrp**, **LegOrdGrp**, **SideCrossLegGrp**, **TrdInstrmtLegExecGrp**, **TrdInstrmt-LegGrp**

180.2.1495 LegCPPProgram

The program under which a commercial paper is issued.

Type: **int**

Allowed values in CPPProgramCodeSet:

Code	Name	Description
1	Program3a3	3(a)(3). Arising out of a current transaction with a maturity less than 9 months.
2	Program42	4(2). Issued not involving any public offering.
3	Program3a2	3(a)(2). Issued or guaranteed by the US, state or territorial government.
4	Program3a3And3c7	3(a)(3) & 3(c)(7). Combination of 3(a)(3) and 3(c)(7).
5	Program3a4	3(a)(4). Religious, education, benevolent, fraternal, charitable or reformatory purposes.
6	Program3a5	3(a)(5). Issued by an institution supervised by state or federal authority or by an exempt farmer's cooperative.
7	Program3a7	3(a)(7). Issued by a receiver or trustee in bankruptcy.
8	Program3c7	3(c)(7). Qualified hedge-fund under the Investment Company Act of 1940.
99	Other	Other

Used in components: **InstrumentLeg**

180.2.1496 LegCPRegType

The registration type of a commercial paper issuance.

Type: **String**

Used in components: **InstrumentLeg**

180.2.1497 LegCreditRating

Multileg instrument's individual leg security's CreditRating.

See CreditRating (255) field for description

(Note tag # was reserved in FIX 4.1, added in FIX 4.3)

Type: **String**

Used in components: **InstrumentLeg**

180.2.1498 LegCreditSupportAgreementDate

The date of the ISDA Credit Support Agreement executed between the parties and intended to govern collateral arrangements for all OTC derivatives transactions between those parties.

Type: **LocalMktDate**

Used in components: **LegFinancingDetails**

180.2.1499 LegCreditSupportAgreementDesc

The type of ISDA Credit Support Agreement. See <http://www.fpml.org/coding-scheme/credit-support-agreement-type> for values.

Type: **String**

Used in components: **LegFinancingDetails**

180.2.1500 LegCreditSupportAgreementID

A common reference or unique identifier to identify the ISDA Credit Support Agreement executed between the parties.

Type: **String**

Used in components: **LegFinancingDetails**

180.2.1501 LegCurrency

Currency associated with a particular Leg's quantity

Type: **Currency**

Used in components: **InstrumentLeg**

180.2.1502 LegCurrencyCodeSource

Identifies class or source of the LegCurrency(556) value.

Type: **String**

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in components: **InstrumentLeg**

180.2.1503 LegCurrencyRatio

Specifies the currency ratio between the currency used for a multileg price and the currency used by the outright book defined by the leg. Example: Multileg quoted in EUR, outright leg in USD and 1 EUR = 0,7 USD then LegCurrencyRatio = 0.7

Type: **float**

Used in groups: **InstrmtLegExecGrp**, **LegOrdGrp**, **SideCrossLegGrp**, **TrdInstrmtLegGrp**

180.2.1504 LegCurrentCostBasis

The amount that the current shares are worth. If this lot was liquidated, the total gain/loss for a trade is equal to the trade amount minus the current cost basis.

Type: **Amt**

Used in groups: **LegPreAllocGrp**

180.2.1505 LegCustodialLotID

An opaque identifier used to communicate the custodian's identifier for the lot. It is expected that this information would be provided by the custodian as part of a reconciliation process that occurs before trading.

Type: **String**

Used in groups: **LegPreAllocGrp**

180.2.1506 LegDateAdjustment

LegDateAdjustment is a subcomponent within the InstrumentLeg component. It is used to specify date adjustment parameters and rules. The date adjustments specified here applies to all adjustable dates for the instrument leg, unless specifically overridden elsewhere in the respective specified components further within the InstrumentLeg component.

Name	Mult.	Type	Description
LegBusinessDayConvention	[0..1]	CodeSet	
LegBusinessCenterGrp	[0..*]	Group	
LegDateRollConvention	[0..1]	CodeSet	

Used in components: **InstrumentLeg**

180.2.1507 LegDatedDate

The effective date of a new securities issue determined by its underwriters. Often but not always the same as the Issue Date and the Interest Accrual Date

Type: **LocalMktDate**

Used in components: **InstrumentLeg**

180.2.1508 LegDateRollConvention

The convention for determining a sequence of dates. It is used in conjunction with a specified frequency. The value defined here applies to all adjustable dates in the instrument leg unless specifically overridden.

Type: **String**

Allowed values in DateRollConventionCodeSet:

Code	Name	Description
1	FirstDay	1st day of the month
2	SecondDay	2nd day of the month
3	ThirdDay	3rd day of the month
4	FourthDay	4th day of the month
5	FifthDay	5th day of the month
6	SixthDay	6thd day of the month
7	SeventhDay	7th day of the month
8	EighthDay	8th day of the month
9	NinthDay	9th day of the month
10	TenthDay	10th day of the month
11	EleventhDay	11th day of the month
12	TwelvthDay	12th day of the month
13	ThirteenthDay	13th day of the month
14	ForteenthDay	14th day of the month
15	FifteenthDay	15th day of the month
16	SixteenthDay	16th day of the month
17	SeventeenthDay	17th day of the month
18	EighteenthDay	18th day of the month
19	NineteenthDay	19th day of the month
20	TwentiethDay	20th day of the month
21	TwentyFirstDay	21st day of the month
22	TwentySecondDay	22nd day of the month
23	TwentyThirdDay	23rd day of the month
24	TwentyFourthDay	24th day of the month
25	TwentyFifthDay	25th day of the month
26	TwentySixthDay	26th day of the month
27	TwentySeventhDay	27th day of the month
28	TwentyEigthDa28y	28th day of the month
29	TwentyNinthDay	29th day of the month
30	ThirtiethDay	30th day of the month
EOM	EOM	The end of the month. Use EOM for 31st day of the month.
FRN	FRN	The floating rate note convention or Eurodollar convention.

Code	Name	Description
IMM	IMM	The International Money Market settlement date, i.e. the 3rd Wednesday of the month.
IMMCAD	IMMCAD	The last trading day/expiration day of the Canadian Derivatives Exchange.
IMMAUD	IMMAUD	The last trading day of the Sydney Futures Exchange Australian 90-day bank accepted bill futures contract.
IMMNZD	IMMNZD	The last trading day of the Sydney Futures Exchange New Zealand 90-day bank bill futures contract.
SFE	SFE	The Sydney Futures Exchange 90-day bank accepted bill futures settlement dates.
NONE	NONE	No adjustment
TBILL	TBILL	The 13-week and 26-week U.S. Treasury Bill auction dates.
MON	MON	Monday
TUE	TUE	Tuesday
WED	WED	Wednesday
THU	THU	Thursday
FRI	FRI	Friday
SAT	SAT	Saturday
SUN	SUN	Sunday

Used in components: [LegDateAdjustment](#)

180.2.1509 LegDeliveryRouteOrCharter

Specific delivery route or time charter average. Applicable to commodity freight contracts.

Type: [String](#)

Used in components: [InstrumentLeg](#)

180.2.1510 LegDeliveryScheduleGrp

The LegDeliveryScheduleGrp is a repeating subcomponent of the LegStream component used to detail step schedules associated with a delivery stream.

Name	Mult.	Type	Description
NoLegDeliverySchedules	[1..1]	NumInGroup	
LegDeliveryScheduleType	[0..1]	CodeSet	Required if NoLegDeliverySchedules(41408) > 0.
LegDeliveryScheduleXID	[0..1]	XID	
LegDeliveryScheduleNotional	[0..1]	Qty	
LegDeliveryScheduleNotionalUnitOfMeasure	[0..1]	CodeSet	
LegDeliveryScheduleNotionalCommodityFrequency	[0..1]	CodeSet	
LegDeliveryScheduleNegativeTolerance	[0..1]	float	
LegDeliverySchedulePositiveTolerance	[0..1]	float	
LegDeliveryScheduleToleranceUnitOfMeasure	[0..1]	CodeSet	
LegDeliveryScheduleToleranceType	[0..1]	CodeSet	Conditionally required when LegDeliveryScheduleNegativeTolerance(41414) or LegDeliverySchedulePositiveTolerance(41415) is specified.
LegDeliveryScheduleSettlCountry	[0..1]	Country	
LegDeliveryScheduleSettlTimeZone	[0..1]	String	
LegDeliveryScheduleSettlFlowType	[0..1]	CodeSet	
LegDeliveryScheduleSettlHolidaysProcessingInstruction	[0..1]	CodeSet	
LegDeliveryScheduleSettlDayGrp	[0..*]	Group	

Used in groups: [LegStreamGrp](#)

180.2.1511 LegDeliveryScheduleNegativeTolerance

Specifies the negative tolerance value. The value may be an absolute quantity or a percentage, as specified in LegDeliveryScheduleToleranceType(41417). Percentage value is to be expressed relative to "1.0" representing 100% (e.g. a value of "0.0575" represents 5.75%).

Type: **float**

Used in groups: [LegDeliveryScheduleGrp](#)

180.2.1512 LegDeliveryScheduleNotional

Physical delivery quantity.

Type: **Qty**

Used in groups: **LegDeliveryScheduleGrp**

180.2.1513 LegDeliveryScheduleNotionalCommodityFrequency

The frequency of notional delivery.

Type: **int**

Allowed values in StreamNotionalCommodityFrequencyCodeSet:

Code	Name	Description
0	Term	Term
1	PerBusinessDay	Per business day
2	PerCalculationPeriod	Per calculation period
3	PerSettlPeriod	Per settlement period
4	PerCalendarDay	Per calendar day
5	PerHour	Per hour
6	PerMonth	Per month

Used in groups: **LegDeliveryScheduleGrp**

180.2.1514 LegDeliveryScheduleNotionalUnitOfMeasure

Specifies the delivery quantity unit of measure (UOM).

Type: **String**

Allowed values in UnitOfMeasureCodeSet:

Code	Name	Description
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet
Bbl	Barrels	Barrels. Equal to 42 US gallons
CBM	CubicMeters	Cubic Meters

Code	Name	Description
BDFT	BoardFeet	Board feet. Equal to 144 cubic inches
GJ	Gigajoules	gigajoules
Bu	Bushels	Bushels
kHR	HeatRate	Heat rate. The number of BTUs required to produce one kilowatt hour of electricity, typically 3,412.14 BTUs per 1 kWh.
Ccy	Currency	Amount of currency
kWh	KilowattHours	Kilowatt hours
CDD	CoolingDegreeDay	Cooling degree day
MHR	MegaHeatRate	Mega heat rate. The number of million BTUs required to produce one megawatt hour of electricity, typically 3.41214 million BTUs per 1 MWh.
CER	CertifiedEmissionsReduction	Certified emissions reduction
MMBtu	OneMillionBTU	One Million BTU
CPD	CriticalPrecipDay	Critical precipitation day
MWh	MegawattHours	Megawatt hours
CRT	ClimateReserveTonnes	Climate reserve tonnes
thm	Therms	therms. Equal to 100,000 BTU
cwt	Hundredweight	Hundredweight(US). Equal to 100 lbs
tnCO2	TonsOfCarbonDioxide	Tons of carbon dioxide
day	Day	Days
dt	DryMetricTons	Dry metric tons
EnvAllwnc	EnvAllwncCert	Environmental allowance certificates
EnvCrd	EnvironmentalCredit	Environmental credit
EnvOfst	EnvironmentalOffset	Environmental Offset
g	Grams	Grams
Gal	Gallons	Gallons
GT	GrossTons	Gross tons. Also known as long tons or imperial tons, equal to 2240 lbs
HDD	HeatingDegreeDay	Heating degree day
IPNT	IndexPoint	Index point
kg	Kilograms	Kilograms
kL	Kiloliters	kiloliters
kW-a	KilowattYear	Kilowatt year (electrical capacity)
kW-d	KilowattDay	Kilowatt day (electrical capacity)
kW-h	KilowattHour	Kilowatt hour (electrical capacity)

Code	Name	Description
kW-M	KilowattMonth	Kilowatt month (electrical capacity)
kW-min	KilowattMinute	Kilowatt-Minute (electrical capacity)
L	Liters	liters
lbs	Pounds	pounds
MW-a	MegawattYear	Megawatt year (electrical capacity)
MW-d	MegawattDay	Megawatt day (electrical capacity)
MW-h	MegawattHour	Megawatt hour (electrical capacity)
MW-M	MegawattMonth	Megawatt month (electrical capacity)
MW-min	MegawattMinute	Megawatt minute (electrical capacity)
oz_tr	TroyOunces	Troy ounces
PRINC	PrincipalWithRelationToDebtInstrument	Principal with relation to debt instrument
t	MetricTons	Metric tons. Also known as Tonnes, equal to 1000 kg
tn	Tons	Tons (US). Equal to 2000 lbs
a	Are	Are
ac	Acre	Acre
cL	Centiliter	Centiliter
cM	Centimeter	Centimeter
DGE	DieselGallonEquivalent	Diesel gallon equivalent
ft	Foot	Foot
Gal_gb	GBGallon	GB Gallon
GGE	GasolineGallonEquivalent	Gasonline gallon equivalent
ha	Hectare	Hectare
in	Inch	Inch
kM	Kilometer	Kilometer
M	Meter	Meter
mi	Mile	Mile
mL	Milliliter	Milliliter
mM	Millimeter	Millimeter
oz	USOunce	US ounce
pc	Piece	Piece
pt	USPint	US Pint
pt_gb	GBPint	GB pint
qt	USQuart	US Quart

Code	Name	Description
qt_gb	GBQuart	GB Quart
SqcM	SquareCentimeter	Square centimeter
Sqft	SquareFoot	Square foot
Sqin	SquareInch	Square inch
SqkM	SquareKilometer	Square kilometer
SqM	SquareMeter	Square meter
Sqmi	SquareMile	Square mile
SqmM	SquareMillimeter	Square millimeter
Sqyd	SquareYard	Square yard
yd	Yard	Yard
MMbbl	MillionBarrels	Million Barrels
USD	USDollars	US Dollars

Used in groups: [LegDeliveryScheduleGrp](#)

180.2.1515 LegDeliverySchedulePositiveTolerance

Specifies the positive tolerance value. The value may be an absolute quantity or a percentage, as specified in [LegDeliveryScheduleToleranceType\(41417\)](#). Value may exceed agreed upon value. Percentage value is to be expressed relative to "1.0" representing 100% (e.g. a value of "0.0575" represents 5.75%).

Type: [float](#)

Used in groups: [LegDeliveryScheduleGrp](#)

180.2.1516 LegDeliveryScheduleSettlCountry

Specifies the country where delivery takes place. Uses ISO 3166 2-character country code.

Type: [Country](#)

Used in groups: [LegDeliveryScheduleGrp](#)

180.2.1517 LegDeliveryScheduleSettlDay

Specifies the day or group of days for delivery.

Type: **int**

Allowed values in DeliveryScheduleSettlDayCodeSet:

Code	Name	Description
1	Monday	Monday
2	Tuesday	Tuesday
3	Wednesday	Wednesday
4	Thursday	Thursday
5	Friday	Friday
6	Saturday	Saturday
7	Sunday	Sunday
8	AllWeekdays	All weekdays
9	AllDays	All days
10	AllWeekends	All weekends

Used in groups: **LegDeliveryScheduleSettlDayGrp**

180.2.1518 LegDeliveryScheduleSettlDayGrp

The LegDeliveryScheduleSettlDayGrp is a repeating subcomponent of the LegDeliveryScheduleGrp component used to detail commodity delivery days.

Name	Mult.	Type	Description
NoLegDeliveryScheduleSettlDays	[1..1]	NumInGroup	
LegDeliveryScheduleSettlDay	[0..1]	CodeSet	Required if NoLegDeliveryScheduleSettlDays(41422) > 0.
LegDeliveryScheduleSettlTotalHours	[0..1]	int	
LegDeliveryScheduleSettlTimeGrp	[0..*]	Group	

Used in groups: **LegDeliveryScheduleGrp**

180.2.1519 LegDeliveryScheduleSettlEnd

The scheduled end time for the delivery of the commodity where delivery occurs over specified times. The format of the time value is specified in LegDeliveryScheduleSettlTimeType(41428).

Type: **String**

Used in groups: **LegDeliveryScheduleSettlTimeGrp**

180.2.1520 LegDeliveryScheduleSettlFlowType

Specifies the delivery flow type.

Type: **int**

Allowed values in DeliveryScheduleSettlFlowTypeCodeSet:

Code	Name	Description
0	AllTimes	All times
1	OnPeak	On peak
2	OffPeak	Off peak
3	Base	Base
4	BlockHours	Block hours
5	Other	Other

Used in groups: **LegDeliveryScheduleGrp**

180.2.1521 LegDeliveryScheduleSettlHolidaysProcessingInstruction

Indicates whether holidays are included in the settlement periods. Required for electricity contracts.

Type: **int**

Allowed values in DeliveryScheduleSettlHolidaysProcessingInstructionCodeSet:

Code	Name	Description
0	DoNotIncludeHolidays	Do not include holidays
1	IncludeHolidays	Include holidays

Used in groups: **LegDeliveryScheduleGrp**

180.2.1522 LegDeliveryScheduleSettlStart

The scheduled start time for the delivery of the commodity where delivery occurs over specified times. The format of the time value is specified in LegDeliveryScheduleSettlTimeType(41428).

Type: **String**

Used in groups: **LegDeliveryScheduleSettlTimeGrp**

180.2.1523 LegDeliveryScheduleSettlTimeGrp

The LegDeliveryScheduleSettlTimeGrp is a repeating subcomponent of the LegDeliveryScheduleSettlDayGrp component used to detail commodity delivery time periods.

Name	Mult.	Type	Description
NoLegDeliveryScheduleSettlTimes	[1..1]	NumInGroup	
LegDeliveryScheduleSettlStart	[0..1]	String	Required if NoLegDeliveryScheduleSettlTimes(41425) > 0.
LegDeliveryScheduleSettlEnd	[0..1]	String	Required if NoLegDeliveryScheduleSettlTimes(41425) > 0.
LegDeliveryScheduleSettlTimeType	[0..1]	CodeSet	May be defaulted to market convention or bilaterally agreed if not specified.

Used in groups: **LegDeliveryScheduleSettlDayGrp**

180.2.1524 LegDeliveryScheduleSettlTimeType

Specifies the format of the delivery start and end time values.

Type: **int**

Allowed values in DeliveryScheduleSettlTimeTypeCodeSet:

Code	Name	Description
0	Hour	Hour of the day. Applicable for electricity contracts. Time value is expressed as an integer hour of the day (1-24). The delivery start/end hour is specified as the end of the included hour. For example, a start hour of "4" begins at 3 a.m.; an end hour of "20" ends at 8 p.m.; a start hour of "1" and end hour of "24" indicates midnight to midnight delivery.

Code	Name	Description
1	Timestamp	HH:MM time format. Applicable for gas contracts. Time value is expressed using a 24-hour time format. For example, a time value of "13:30" is 1:30 p.m.

Used in groups: [LegDeliveryScheduleSettlTimeGrp](#)

180.2.1525 LegDeliveryScheduleSettlTimeZone

Delivery timezone specified as "prevailing" rather than "standard" or "daylight".

See http://www.fixtradingcommunity.org/codelists#Prevailing_Timezones for code list of applicable prevailing timezones.

Type: [String](#)

Used in groups: [LegDeliveryScheduleGrp](#)

180.2.1526 LegDeliveryScheduleSettlTotalHours

The sum of the total hours specified in the LegDeliveryScheduleSettlTimeGrp component.

Type: [int](#)

Used in groups: [LegDeliveryScheduleSettlDayGrp](#)

180.2.1527 LegDeliveryScheduleToleranceType

Specifies the tolerance value type.

Type: [int](#)

Allowed values in DeliveryScheduleToleranceTypeCodeSet:

Code	Name	Description
0	Absolute	Absolute
1	Percentage	Percentage

Used in groups: [LegDeliveryScheduleGrp](#)

180.2.1528 LegDeliveryScheduleToleranceUnitOfMeasure

Specifies the tolerance value's unit of measure (UOM).

Type: **String**

Allowed values in UnitOfMeasureCodeSet:

Code	Name	Description
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet
Bbl	Barrels	Barrels. Equal to 42 US gallons
CBM	CubicMeters	Cubic Meters
BDFT	BoardFeet	Board feet. Equal to 144 cubic inches
GJ	Gigajoules	gigajoules
Bu	Bushels	Bushels

Used in groups: **LegDeliveryScheduleGrp**

180.2.1529 LegDeliveryScheduleType

Specifies the type of delivery schedule.

Type: **int**

Allowed values in DeliveryScheduleTypeCodeSet:

Code	Name	Description
0	Notional	Notional
1	Delivery	Delivery

Code	Name	Description
2	PhysicalSettlPeriods	Physical settlement period

Used in groups: [LegDeliveryScheduleGrp](#)

180.2.1530 LegDeliveryScheduleXID

Identifier for this instance of delivery schedule for cross referencing elsewhere in the message.

Type: [XID](#)

Used in groups: [LegDeliveryScheduleGrp](#)

180.2.1531 LegDeliveryStreamCommoditySource

The SCoTA coal cargo origin, mining region, mine(s), mining complex(es), loadout(s) or river dock(s) or other point(s) of origin that seller and buyer agree are acceptable origins for the coal product. For international coal transactions, this is the origin of the coal product.

See <http://www.fpml.org/coding-scheme/commodity-coal-product-source> for values.

Type: [String](#)

Used in groups: [LegDeliveryStreamCommoditySourceGrp](#)

180.2.1532 LegDeliveryStreamCommoditySourceGrp

The LegDeliveryStreamCommoditySourceGrp is a repeating subcomponent of the LegDeliveryStream component used to detail the origins or sources of the commodity.

Name	Mult.	Type	Description
NoLegDeliveryStreamCommoditySources	[1..1]	NumInGroup	
LegDeliveryStreamCommoditySource	[0..1]	String	Required if NoLegDeliveryStreamCommoditySources (41460) > 0.

Used in components: [LegDeliveryStream](#)

180.2.1533 LegDeliveryStream

The LegDeliveryStream component is a subcomponent of the LegStream used to detail the attributes of a physical delivery stream in a swap.

Name	Mult.	Type	Description
LegDeliveryStreamType	[0..1]	CodeSet	
LegDeliveryStreamCommoditySource-Grp	[0..*]	Group	
LegDeliveryStreamPipeline	[0..1]	String	
LegDeliveryStreamEntryPoint	[0..1]	String	
LegDeliveryStreamWithdrawalPoint	[0..1]	String	
LegDeliveryStreamDeliveryPoint	[0..1]	String	
LegDeliveryStreamDelivery-PointSource	[0..1]	CodeSet	
LegDeliveryStreamDeliveryPointDesc	[0..1]	String	
LegDeliveryStreamDeliveryRestriction	[0..1]	CodeSet	
LegDeliveryStreamDeliveryContingency	[0..1]	String	
LegDeliveryStreamDeliveryContingent-PartySide	[0..1]	CodeSet	
LegDeliveryStreamDeliverAtSourceIndicator	[0..1]	Boolean	
LegDeliveryStreamRiskApportionment	[0..1]	String	
LegDeliveryStreamRiskApportionmentSource	[0..1]	String	
LegDeliveryStreamCycleGrp	[0..*]	Group	
LegDeliveryStreamTitleTransferLocation	[0..1]	String	
LegDeliveryStreamTitleTransferCondition	[0..1]	CodeSet	
LegDeliveryStreamImporterOfRecord	[0..1]	String	
LegDeliveryStreamNegativeTolerance	[0..1]	float	
LegDeliveryStreamPositiveTolerance	[0..1]	float	
LegDeliveryStreamToleranceUnitOfMeasure	[0..1]	CodeSet	
LegDeliveryStreamToleranceType	[0..1]	CodeSet	

Name	Mult.	Type	Description
LegDeliveryStreamToleranceOption-Side	[0..1]	CodeSet	
LegDeliveryStreamTotalPositiveTolerance	[0..1]	Percentage	
LegDeliveryStreamTotalNegativeTolerance	[0..1]	Percentage	
LegDeliveryStreamNotionalConversionFactor	[0..1]	float	
LegDeliveryStreamTransportEquipment	[0..1]	String	
LegDeliveryStreamElectingPartySide	[0..1]	CodeSet	
LegDeliveryStreamRouteOrCharter	[0..1]	String	

Used in groups: [LegStreamGrp](#)

180.2.1534 LegDeliveryStreamCycleDesc

The delivery cycles during which the oil product will be transported in the pipeline.

Type: [String](#)

Used in groups: [LegDeliveryStreamCycleGrp](#)

180.2.1535 LegDeliveryStreamCycleGrp

The LegDeliveryStreamCycleGrp is a repeating subcomponent of the LegDeliveryStream component used to detail delivery cycles during which the oil product will be transported in the pipeline.

Name	Mult.	Type	Description
NoLegDeliveryStreamCycles	[1..1]	NumInGroup	
LegDeliveryStreamCycleDesc	[0..1]	String	Required if NoLegDeliveryStreamCycles(41456) > 0.
EncodedLegDeliveryStreamCycleDescLen	[0..1]	Length	Must be set if EncodedLegDeliveryStreamCycleDesc(41459) field is specified and must immediately precede it.

Name	Mult.	Type	Description
EncodedLegDeliveryStreamCycleDesc	[0..1]	data	Encoded (non-ASCII characters) representation of the LegDeliveryStreamCycleDesc(41457) field in the encoded format specified via the MessageEncoding(347) field.

Used in components: [LegDeliveryStream](#)

180.2.1536 LegDeliveryStreamDeliverAtSourceIndicator

When this element is specified and set to 'Y', delivery of the coal product is to be at its source.

Type: [Boolean](#)

Used in components: [LegDeliveryStream](#)

180.2.1537 LegDeliveryStreamDeliveryContingency

Specifies the electricity delivery contingency. See

<http://www.fpml.org/coding-scheme/electricity-transmission-contingency> for values.

Type: [String](#)

Used in components: [LegDeliveryStream](#)

180.2.1538 LegDeliveryStreamDeliveryContingentPartySide

The trade side value of the party responsible for electricity delivery contingency.

Type: [int](#)

Allowed values in DeliveryStreamElectingPartySideCodeSet:

Code	Name	Description
0	Buyer	Buyer
1	Seller	Seller

Used in components: [LegDeliveryStream](#)

180.2.1539 LegDeliveryStreamDeliveryPoint

The point at which the commodity product will be delivered and received. Value specified should follow market convention appropriate for the commodity product.

For bullion, see <http://www.fpml.org/coding-scheme/bullion-delivery-location> for values.

Type: **String**

Used in components: **LegDeliveryStream**

180.2.1540 LegDeliveryStreamDeliveryPointDesc

Description of the delivery point identified in LegDeliveryStreamDeliveryPoint(41433).

Type: **String**

Used in components: **LegDeliveryStream**

180.2.1541 LegDeliveryStreamDeliveryPointSource

Identifies the class or source of LegDeliveryStreamDeliveryPoint(41433).

Type: **int**

Allowed values in DeliveryStreamDeliveryPointSourceCodeSet:

Code	Name	Description
0	Proprietary	Proprietary
1	EIC	Energy Identification Code (EIC). Energy Identification Code specifies the location or connection point codes of energy delivery. See http://www.entsog.eu/eic-codes/eic-location-codes-v or http://www.eiccodes.eu for more information and allocated values to use in DeliveryStreamDeliveryPoint(41062).

Used in components: **LegDeliveryStream**

180.2.1542 LegDeliveryStreamDeliveryRestriction

Specifies under what conditions the buyer and seller should be excused of their delivery obligations.

Type: **int**

Allowed values in DeliveryStreamDeliveryRestrictionCodeSet:

Code	Name	Description
1	Firm	Firm. Never excused of delivery obligations.
2	NonFirm	Interruptable or non-firm. Excused when interrupted for any reason or for no reason without liability.
3	ForceMajeure	Force majeure. Excused when prevented by force majeure.
4	SystemFirm	System firm. Must be supplied from the owned or controlled generation of pre-existing purchased power assets of the system specified.
5	UnitFirm	Unit firm. Must be supplied from the generation asset specified.

Used in components: **LegDeliveryStream**

180.2.1543 LegDeliveryStreamElectingPartySide

A reference to the party able to choose whether the gas is delivered for a particular period e.g. a swing or interruptible contract.

Type: **int**

Allowed values in DeliveryStreamElectingPartySideCodeSet:

Code	Name	Description
0	Buyer	Buyer
1	Seller	Seller

Used in components: **LegDeliveryStream**

180.2.1544 LegDeliveryStreamEntryPoint

The point at which the commodity will enter the delivery mechanism or pipeline.

Type: **String**

Used in components: **LegDeliveryStream**

180.2.1545 LegDeliveryStreamImporterOfRecord

A party, not necessarily of the trade, who is the Importer of Record for the purposes of paying customs duties and applicable taxes or costs related to importation.

Type: **String**

Used in components: **LegDeliveryStream**

180.2.1546 LegDeliveryStreamNegativeTolerance

Specifies the negative tolerance value. The value may be an absolute quantity or a percentage, as specified in LegDeliveryStreamToleranceType(41445). Percentage value is to be expressed relative to "1.0" representing 100% (e.g. a value of "0.0575" represents 5.75%).

Type: **float**

Used in components: **LegDeliveryStream**

180.2.1547 LegDeliveryStreamNotionalConversionFactor

If the notional quantity is specified in a unit that does not match the unit in which the commodity reference price is quoted, the scaling or conversion factor used to convert the commodity reference price unit into the notional quantity unit should be stated here. If there is no conversion, this field is not intended to be used.

Type: **float**

Used in components: **LegDeliveryStream**

180.2.1548 LegDeliveryStreamPipeline

The name of the oil delivery pipeline.

Type: **String**

Used in components: **LegDeliveryStream**

180.2.1549 LegDeliveryStreamPositiveTolerance

Specifies the positive tolerance value. The value may be an absolute quantity or a percentage, as specified in LegDeliveryStreamToleranceType(41445). Value may exceed agreed upon value. Percent-

age value is to be expressed relative to "1.0" representing 100% (e.g. a value of "0.0575" represents 5.75%).

Type: **float**

Used in components: **LegDeliveryStream**

180.2.1550 LegDeliveryStreamRiskApportionment

Specifies how the parties to the trade apportion responsibility for the delivery of the commodity product.

See http://www.fixtradingcommunity.org/codelists#Risk_Apportionment for the details of the external code list.

Type: **String**

Used in components: **LegDeliveryStream**

180.2.1551 LegDeliveryStreamRiskApportionmentSource

Specifies the source or legal framework for the risk apportionment.

See http://www.fixtradingcommunity.org/codelists#Risk_Apportionment_Source for the details of the external code list.

Type: **String**

Used in components: **LegDeliveryStream**

180.2.1552 LegDeliveryStreamRouteOrCharter

Specific delivery route or time charter average. Applicable to commodity freight swaps.

Type: **String**

Used in components: **LegDeliveryStream**

180.2.1553 LegDeliveryStreamTitleTransferCondition

Specifies the condition of title transfer.

Type: **int**

Allowed values in DeliveryStreamTitleTransferConditionCodeSet:

Code	Name	Description
0	Transfers	Transfers with risk of loss
1	DoesNotTransfer	Does not transfer with risk of loss

Used in components: [LegDeliveryStream](#)

180.2.1554 LegDeliveryStreamTitleTransferLocation

Specifies the title transfer location.

Type: [String](#)

Used in components: [LegDeliveryStream](#)

180.2.1555 LegDeliveryStreamToleranceOptionSide

Indicates whether the tolerance is at the seller's or buyer's option.

Type: [int](#)

Allowed values in DeliveryStreamToleranceOptionSideCodeSet:

Code	Name	Description
1	Buyer	Buyer
2	Seller	Seller

Used in components: [LegDeliveryStream](#)

180.2.1556 LegDeliveryStreamToleranceType

Specifies the tolerance value type.

Type: [int](#)

Allowed values in DeliveryScheduleToleranceTypeCodeSet:

Code	Name	Description
0	Absolute	Absolute

Code	Name	Description
1	Percentage	Percentage

Used in components: [LegDeliveryStream](#)

180.2.1557 LegDeliveryStreamToleranceUnitOfMeasure

Specifies the tolerance value's unit of measure (UOM).

Type: [String](#)

Allowed values in UnitOfMeasureCodeSet:

Code	Name	Description
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet
Bbl	Barrels	Barrels. Equal to 42 US gallons
CBM	CubicMeters	Cubic Meters
BDFT	BoardFeet	Board feet. Equal to 144 cubic inches
GJ	Gigajoules	gigajoules
Bu	Bushels	Bushels
kHR	HeatRate	Heat rate. The number of BTUs required to produce one kilowatt hour of electricity, typically 3,412.14 BTUs per 1 kWh.
Ccy	Currency	Amount of currency
kWh	KilowattHours	Kilowatt hours
CDD	CoolingDegreeDay	Cooling degree day
MHR	MegaHeatRate	Mega heat rate. The number of million BTUs required to produce one megawatt hour of electricity, typically 3.41214 million BTUs per 1 MWh.
CER	CertifiedEmissionsReduction	Certified emissions reduction
MMBtu	OneMillionBTU	One Million BTU
CPD	CriticalPrecipDay	Critical precipitation day
MWh	MegawattHours	Megawatt hours
CRT	ClimateReserveTonnes	Climate reserve tonnes
thm	Therms	therms. Equal to 100,000 BTU
cwt	Hundredweight	Hundredweight(US). Equal to 100 lbs
tnCO2	TonsOfCarbonDioxide	Tons of carbon dioxide

Code	Name	Description
day	Day	Days
dt	DryMetricTons	Dry metric tons
EnvAllwnc	EnvAllwncCert	Environmental allowance certificates
EnvCrd	EnvironmentalCredit	Environmental credit
EnvOfst	EnvironmentalOffset	Environmental Offset
g	Grams	Grams
Gal	Gallons	Gallons
GT	GrossTons	Gross tons. Also known as long tons or imperial tons, equal to 2240 lbs
HDD	HeatingDegreeDay	Heating degree day
IPNT	IndexPoint	Index point
kg	Kilograms	Kilograms
kL	Kiloliters	kiloliters
kW-a	KilowattYear	Kilowatt year (electrical capacity)
kW-d	KilowattDay	Kilowatt day (electrical capacity)
kW-h	KilowattHour	Kilowatt hour (electrical capacity)
kW-M	KilowattMonth	Kilowatt month (electrical capacity)
kW-min	KilowattMinute	Kilowatt-Minute (electrical capacity)
L	Liters	liters
lbs	Pounds	pounds
MW-a	MegawattYear	Megawatt year (electrical capacity)
MW-d	MegawattDay	Megawatt day (electrical capacity)
MW-h	MegawattHour	Megawatt hour (electrical capacity)
MW-M	MegawattMonth	Megawatt month (electrical capacity)
MW-min	MegawattMinute	Megawatt minute (electrical capacity)
oz_tr	TroyOunces	Troy ounces
PRINC	PrincipalWithRelationToDebtInstrument	Principal with relation to debt instrument
t	MetricTons	Metric tons. Also known as Tonnes, equal to 1000 kg
tn	Tons	Tons (US). Equal to 2000 lbs
a	Are	Are
ac	Acre	Acre
cL	Centiliter	Centiliter
cM	Centimeter	Centimeter
DGE	DieselGallonEquivalent	Diesel gallon equivalent

Code	Name	Description
ft	Foot	Foot
Gal_gb	GBGallon	GB Gallon
GGE	GasolineGallonEquivalent	Gasonline gallon equivalent
ha	Hectare	Hectare

SqM	SquareMeter	Square meter
Sqmi	SquareMile	Square mile
SqmM	SquareMillimeter	Square millimeter
Sqyd	SquareYard	Square yard
yd	Yard	Yard
MMbbl	MillionBarrels	Million Barrels
USD	USDollars	US Dollars

Used in components: [LegDeliveryStream](#)

180.2.1558 LegDeliveryStreamTotalNegativeTolerance

The negative percent tolerance which applies to the total quantity delivered over all shipment periods.

Percentage value is to be expressed relative to "1.0" representing 100% (e.g. a value of "0.0575" represents 5.75%).

Type: **Percentage**

Used in components: **LegDeliveryStream**

180.2.1559 LegDeliveryStreamTotalPositiveTolerance

The positive percent tolerance which applies to the total quantity delivered over all shipment periods.

Percentage value is to be expressed relative to "1.0" representing 100% (e.g. a value of "0.0575" represents 5.75%).

Type: **Percentage**

Used in components: **LegDeliveryStream**

180.2.1560 LegDeliveryStreamTransportEquipment

The transportation equipment with which the commodity product will be delivered and received.

Type: **String**

Used in components: **LegDeliveryStream**

180.2.1561 LegDeliveryStreamType

Specifies the type of delivery stream.

Type: **int**

Allowed values in DeliveryStreamTypeCodeSet:

Code	Name	Description
0	Periodic	Periodic (default if not specified)
1	Initial	Initial
2	Single	Single

Used in components: **LegDeliveryStream**

180.2.1562 LegDeliveryStreamWithdrawalPoint

The point at which the commodity product will be withdrawn prior to delivery.

Type: **String**

Used in components: **LegDeliveryStream**

180.2.1563 LegDeliveryType

Identifies type of settlement.

Type: **int**

Allowed values in DeliveryTypeCodeSet:

Code	Name	Description
0	VersusPayment	"Versus Payment": Deliver (if sell) or Receive (if buy) vs. (against) Payment
1	Free	"Free": Deliver (if sell) or Receive (if buy) Free
2	TriParty	Tri-Party
3	HoldInCustody	Hold In Custody
4	DeliverByValue	Deliver-by-Value. In the context of EU SFTR reporting, indicates that the transaction is to be or was settled using the DBV mechanism.

Used in components: **LegFinancingDetails**

180.2.1564 LegDetachmentPoint

Upper bound percentage of the loss the tranche can endure.

Type: **Percentage**

Used in components: **InstrumentLeg**

180.2.1565 LegDifferentialPrice

Used in pricing a group of individual Trade at Settlement (TAS) and Trade At Marker (TAM) contracts as an atomic unit. The value is the negotiated currency offset either at settlement (TAS) or at the time specified in the product definition (TAM). The final contract price is reported in LegLastPx(637).

Type: **PriceOffset**

Used in groups: **TrdInstrmtLegGrp**

180.2.1566 LegDividendAccrualFixedRate

The dividend accrual fixed rate per annum expressed as a decimal.

A value of 5% would be represented as "0.05".

Type: **Percentage**

Used in components: **LegDividendConditions**

180.2.1567 LegDividendAccrualFloatingRate

The LegDividendAccrualFloatingRate component is a subcomponent of LegDividendConditions used to define the dividend accrual floating rate attributes of dividend payment conditions.

Name	Mult.	Type	Description
LegDividendFloatingRateIndex	[0..1]	String	
LegDividendFloatingRateIndex-CurvePeriod	[0..1]	int	Conditionally required when LegDividendFloatingRateIndexCurveUnit(42314) is specified.
LegDividendFloatingRateIndexCurveUnit	[0..1]	CodeSet	Conditionally required when LegDividendFloatingRateIndexCurvePeriod(42313) is specified.
LegDividendFloatingRateMultiplier	[0..1]	float	
LegDividendFloatingRateSpread	[0..1]	PriceOffset	
LegDividendFloatingRateSpreadPositionType	[0..1]	CodeSet	
LegDividendFloatingRateTreatment	[0..1]	CodeSet	
LegDividendCapRate	[0..1]	Percentage	
LegDividendCapRateBuySide	[0..1]	CodeSet	
LegDividendCapRateSellSide	[0..1]	CodeSet	
LegDividendFloorRate	[0..1]	Percentage	
LegDividendFloorRateBuySide	[0..1]	CodeSet	
LegDividendFloorRateSellSide	[0..1]	CodeSet	
LegDividendInitialRate	[0..1]	Percentage	
LegDividendFinalRateRoundingDirection	[0..1]	CodeSet	

Name	Mult.	Type	Description
LegDividendFinalRatePrecision	[0..1]	int	
LegDividendAveragingMethod	[0..1]	CodeSet	
LegDividendNegativeRateTreatment	[0..1]	CodeSet	

Used in components: [LegDividendConditions](#)

180.2.1568 LegDividendAccrualPaymentDateAdjusted

The adjusted accrual payment date.

Type: [LocalMktDate](#)

Used in components: [LegDividendAccrualPaymentDate](#)

180.2.1569 LegDividendAccrualPaymentDateBusinessCenter

The business center calendar used for date adjustment of the instrument's dividend accrual payment date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in groups: [LegDividendAccrualPaymentDateBusinessCenterGrp](#)

180.2.1570 LegDividendAccrualPaymentDateBusinessCenterGrp

LegDividendAccrualPaymentDateBusinessCenterGrp is a repeating subcomponent within the LegDividendAccrualPaymentDate component. It is used to specify the set of business centers whose calendars drive the date adjustment.

Name	Mult.	Type	Description
NoLegDividendAccrualPaymentDate-BusinessCenters	[1..1]	NumInGroup	
LegDividendAccrualPaymentDateBusinessCenter	[0..1]	String	Required if NoLegDividendAccrualPaymentDate-BusinessCenters(42310) > 0.

Used in components: [LegDividendAccrualPaymentDate](#)

180.2.1571 LegDividendAccrualPaymentDateBusinessDayConvention

Accrual payment date adjustment business day convention.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: **LegDividendAccrualPaymentDate**

180.2.1572 LegDividendAccrualPaymentDate

The LegDividendAccrualPaymentDate component is a subcomponent of LegDividendConditions used to report the dividend accrual payment date.

Name	Mult.	Type	Description
LegDividendAccrualPaymentDateRelativeTo	[0..1]	int	
LegDividendAccrualPaymentDateOffsetPeriod	[0..1]	int	Conditionally required when LegDividendAccrualPaymentDateOffsetUnit(42332) is specified.
LegDividendAccrualPaymentDateOffsetUnit	[0..1]	CodeSet	Conditionally required when LegDividendAccrualPaymentDateOffsetPeriod(42331) is specified.
LegDividendAccrualPaymentDateOffsetDayType	[0..1]	CodeSet	
LegDividendAccrualPaymentDateUnadjusted	[0..1]	LocalMktDate	

Name	Mult.	Type	Description
LegDividendAccrualPaymentDateBusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the LegDateAdjustment component in InstrumentLeg. The value would be specific to this instance of LegDividendAccrualPaymentDate.
LegDividendAccrualPaymentDateBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the LegDateAdjustment component in InstrumentLeg. The values would be specific to this instance of LegDividendAccrualPaymentDate.
LegDividendAccrualPaymentDateAdjusted	[0..1]	LocalMktDate	

Used in components: [LegDividendConditions](#)

180.2.1573 LegDividendAccrualPaymentDateOffsetDayType

Specifies the day type of the relative accrual payment date offset.

Type: [int](#)

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: [LegDividendAccrualPaymentDate](#)

180.2.1574 LegDividendAccrualPaymentDateOffsetPeriod

Time unit multiplier for the relative accrual payment date offset.

Type: [int](#)

Used in components: [LegDividendAccrualPaymentDate](#)

180.2.1575 LegDividendAccrualPaymentDateOffsetUnit

Time unit associated with the relative accrual payment date offset.

Type: [String](#)

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: [LegDividendAccrualPaymentDate](#)

180.2.1576 LegDividendAccrualPaymentDateRelativeTo

Specifies the anchor date when the accrual payment date is relative to an anchor date.

See http://www.fixtradingcommunity.org/codelists#Relative_To_Date for values.

Type: [int](#)

Used in components: [LegDividendAccrualPaymentDate](#)

180.2.1577 LegDividendAccrualPaymentDateUnadjusted

The unadjusted accrual payment date.

Type: [LocalMktDate](#)

Used in components: [LegDividendAccrualPaymentDate](#)

180.2.1578 LegDividendAmountType

Indicates how the gross cash dividend amount per share is determined.

Type: [int](#)

Allowed values in DividendAmountTypeCodeSet:

Code	Name	Description
0	RecordAmount	Record amount. 100% of the gross cash dividend per share paid over record date during relevant dividend period.
1	ExAmount	Ex amount. 100% of gross cash dividend per share paid after the ex-dividend date during relevant dividend period.
2	PaidAmount	Paid amount. 100% of gross cash dividend per share paid during relevant dividend period.
3	PerMasterConfirm	As specified in master confirmation. The amount is determined as provided in the relevant master confirmation.

Used in components: [LegDividendConditions](#)

180.2.1579 LegDividendAveragingMethod

When averaging is applicable, used to specify whether a weighted or unweighted average method of calculation is to be used.

Type: [int](#)

Allowed values in PaymentStreamAveragingMethodCodeSet:

Code	Name	Description
0	Unweighted	Unweighted
1	Weighted	Weighted

Used in components: [LegDividendAccrualFloatingRate](#)

180.2.1580 LegDividendCapRate

The cap rate, if any, which applies to the floating rate. It is only required where the floating rate is capped at a certain level. The cap rate is assumed to be exclusive of any spread and is a per annum rate, expressed as a decimal. A cap rate of 5% would be represented as "0.05".

Type: [Percentage](#)

Used in components: [LegDividendAccrualFloatingRate](#)

180.2.1581 LegDividendCapRateBuySide

Reference to the buyer of the cap rate option through its trade side.

Type: **int**

Allowed values in PaymentStreamCapRateBuySideCodeSet:

Code	Name	Description
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

Used in components: **LegDividendAccrualFloatingRate**

180.2.1582 LegDividendCapRateSellSide

Reference to the seller of the cap rate option through its trade side.

Type: **int**

Allowed values in PaymentStreamCapRateBuySideCodeSet:

Code	Name	Description
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

Used in components: **LegDividendAccrualFloatingRate**

180.2.1583 LegDividendCashEquivalentPercentage

Declared cash-equivalent dividend percentage.

A value of 5% would be represented as "0.05".

Type: **Percentage**

Used in components: **LegDividendConditions**

180.2.1584 LegDividendCashPercentage

Declared cash dividend percentage.

A value of 5% would be represented as "0.05".

Type: **Percentage**

Used in components: **LegDividendConditions**

180.2.1585 LegDividendComposition

Defines how the composition of dividends is to be determined.

Type: **int**

Allowed values in DividendCompositionCodeSet:

Code	Name	Description
0	EquityAmountReceiver	Equity amount receiver election. The equity amount receiver determines the composition of dividends (subject to conditions).
1	CalculationAgent	Calculation agent election. The calculation agent determines the composition of dividends (subject to conditions).

Used in components: **LegDividendConditions**

180.2.1586 LegDividendCompoundingMethod

The compounding method to be used when more than one dividend period contributes to a single payment.

Type: **int**

Allowed values in PaymentStreamCompoundingMethodCodeSet:

Code	Name	Description
0	None	None
1	Flat	Flat
2	Straight	Straight
3	SpreadExclusive	Spread exclusive

Used in components: [LegDividendConditions](#)

180.2.1587 LegDividendConditions

The LegDividendConditions component is a subcomponent of LegPaymentStream used to specify the conditions' valuations and dates governing the payment of dividends.

Name	Mult.	Type	Description
LegDividendReinvestmentIndicator	[0..1]	Boolean	
LegDividendEntitlementEvent	[0..1]	CodeSet	
LegDividendAmountType	[0..1]	CodeSet	
LegDividendUnderlierRefID	[0..1]	String	
LegDividendPeriodGrp	[0..*]	Group	
LegExtraordinaryDividendPartySide	[0..1]	CodeSet	
LegExtraordinaryDividendAmountType	[0..1]	CodeSet	
LegExtraordinaryDividendCurrency	[0..1]	Currency	
LegExtraordinaryDividendDeterminationMethod	[0..1]	String	
LegDividendFXTriggerDate	[0..1]	Component	
LegDividendAccrualFloatingRate	[0..1]	Component	
LegDividendAccrualFixedRate	[0..1]	Percentage	
LegDividendAccrualPaymentDate	[0..1]	Component	
LegDividendCompoundingMethod	[0..1]	CodeSet	
LegDividendNumOfIndexUnits	[0..1]	int	
LegDividendCashPercentage	[0..1]	Percentage	
LegDividendCashEquivalentPercentage	[0..1]	Percentage	
LegNonCashDividendTreatment	[0..1]	CodeSet	
LegDividendComposition	[0..1]	CodeSet	
LegSpecialDividendsIndicator	[0..1]	Boolean	
LegMaterialDividendsIndicator	[0..1]	Boolean	
LegOptionsExchangeDividendsIndicator	[0..1]	Boolean	
LegAdditionalDividendsIndicator	[0..1]	Boolean	
LegAllDividendsIndicator	[0..1]	Boolean	

Used in components: [LegPaymentStreamFloatingRate](#)

180.2.1588 LegDividendEntitlementEvent

Defines the contract event which the receiver of the derivative is entitled to the dividend.

Type: **int**

Allowed values in DividendEntitlementEventCodeSet:

Code	Name	Description
0	ExDate	Ex-date. Dividend entitlement is on the dividend ex-date.
1	RecordDate	Record date. Dividend entitlement is on the dividend record date.

Used in components: **LegDividendConditions**

180.2.1589 LegDividendFinalRatePrecision

Specifies the rounding precision of the final rate in terms of a number of decimal places. Note how a percentage rate rounding of 5 decimal places is expressed as a rounding precision of 7.

Type: **int**

Used in components: **LegDividendAccrualFloatingRate**

180.2.1590 LegDividendFinalRateRoundingDirection

Specifies the rounding direction of the final rate.

Type: **char**

Allowed values in RoundingDirectionCodeSet:

Code	Name	Description
0	RoundToNearest	Round to nearest
1	RoundDown	Round down
2	RoundUp	Round up

Used in components: **LegDividendAccrualFloatingRate**

180.2.1591 LegDividendFloatingRateIndex

The dividend accrual floating rate index.

Type: **String**

Used in components: **LegDividendAccrualFloatingRate**

180.2.1592 LegDividendFloatingRateIndexCurvePeriod

Time unit multiplier for the dividend accrual floating rate index curve.

Type: **int**

Used in components: **LegDividendAccrualFloatingRate**

180.2.1593 LegDividendFloatingRateIndexCurveUnit

Time unit associated with the dividend accrual floating rate index curve period.

Type: **String**

Allowed values in PaymentStreamRateIndexCurveUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: **LegDividendAccrualFloatingRate**

180.2.1594 LegDividendFloatingRateMultiplier

A rate multiplier to apply to the floating rate. The multiplier can be less than or greater than 1 (one). This should only be included if the multiplier is not equal to 1 (one) for the term of the contract.

Type: **float**

Used in components: **LegDividendAccrualFloatingRate**

180.2.1595 LegDividendFloatingRateSpread

The basis points spread from the index specified in LegDividendFloatingRateIndex(42312).

Type: **PriceOffset**

Used in components: **LegDividendAccrualFloatingRate**

180.2.1596 LegDividendFloatingRateSpreadPositionType

Identifies whether the rate spread is applied to a long or short position.

Type: **int**

Allowed values in PaymentStreamRateSpreadPositionTypeCodeSet:

Code	Name	Description
0	Short	Short
1	Long	Long

Used in components: **LegDividendAccrualFloatingRate**

180.2.1597 LegDividendFloatingRateTreatment

Specifies the yield calculation treatment for the index.

Type: **int**

Allowed values in PaymentStreamRateTreatmentCodeSet:

Code	Name	Description
0	BondEquivalentYield	Bond equivalent yield
1	MoneyMarketYield	Money market yield

Used in components: **LegDividendAccrualFloatingRate**

180.2.1598 LegDividendFloorRate

The floor rate, if any, which applies to the floating rate. The floor rate (strike) is only required where the floating rate is floored at a certain strike level. The floor rate is assumed to be exclusive of any spread and is a per annum rate. The rate is expressed as a decimal, e.g. 5% is represented as "0.05".

Type: **Percentage**

Used in components: **LegDividendAccrualFloatingRate**

180.2.1599 LegDividendFloorRateBuySide

Reference to the buyer of the floor rate option through its trade side.

Type: **int**

Allowed values in PaymentStreamFloorRateBuySideCodeSet:

Code	Name	Description
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

Used in components: **LegDividendAccrualFloatingRate**

180.2.1600 LegDividendFloorRateSellSide

Reference to the seller of the floor rate option through its trade side.

Type: **int**

Allowed values in PaymentStreamFloorRateBuySideCodeSet:

Code	Name	Description
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

Used in components: **LegDividendAccrualFloatingRate**

180.2.1601 LegDividendFXTriggerDateAdjusted

The adjusted FX trigger date.

Type: **LocalMktDate**

Used in components: **LegDividendFXTriggerDate**

180.2.1602 LegDividendFXTriggerDateBusinessCenter

The business center calendar used for date adjustment of the instrument's FX trigger date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **LegDividendFXTriggerDateBusinessCenterGrp**

180.2.1603 LegDividendFXTriggerDateBusinessCenterGrp

LegDividendFXTriggerDateBusinessCenterGrp is a repeating subcomponent within the LegDividendFXTriggerDate component. It is used to specify the set of business centers whose calendars drive the date adjustment.

Name	Mult.	Type	Description
NoLegDividendFXTriggerDateBusiness-Centers	[1..1]	NumInGroup	
LegDividendFXTriggerDateBusiness-Center	[0..1]	String	Required if NoLegDividendFXTriggerDateBusiness-Centers(42364) > 0.

Used in components: **LegDividendFXTriggerDate**

180.2.1604 LegDividendFXTriggerDateBusinessDayConvention

The business day convention used for the FX trigger date adjustment.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [LegDividendFXTriggerDate](#)

180.2.1605 LegDividendFXTriggerDate

The LegDividendFXTriggerDate component is a subcomponent of LegDividendConditions used to report the dividend date when a foreign exchange trade is triggered.

Name	Mult.	Type	Description
LegDividendFXTriggerDateRelativeTo	[0..1]	int	
LegDividendFXTriggerDateOffsetPeriod	[0..1]	int	Conditionally required when LegDividendFXTriggerDateOffsetUnit(42359) is specified.
LegDividendFXTriggerDateOffsetUnit	[0..1]	CodeSet	Conditionally required when LegDividendFXTriggerDateOffsetPeriod(42358) is specified.
LegDividendFXTriggerDateOffsetDay-Type	[0..1]	CodeSet	
LegDividendFXTriggerDateUnadjusted	[0..1]	LocalMktDate	
LegDividendFXTriggerDateBusiness-DayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the LegDateAdjustment component in InstrumentLeg. The value would be specific to this instance of LegDividendFXTriggerDate.
LegDividendFXTriggerDateBusiness-CenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the LegDateAdjustment component in InstrumentLeg. The values would be specific to this instance of LegDividendFXTriggerDate.

Name	Mult.	Type	Description
LegDividendFXTriggerDateAdjusted	[0..1]	LocalMktDate	

Used in components: [LegDividendConditions](#)

180.2.1606 LegDividendFXTriggerDateOffsetDayType

Specifies the day type of the relative FX trigger date offset.

Type: [int](#)

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: [LegDividendFXTriggerDate](#)

180.2.1607 LegDividendFXTriggerDateOffsetPeriod

Time unit multiplier for the relative FX trigger date offset.

Type: [int](#)

Used in components: [LegDividendFXTriggerDate](#)

180.2.1608 LegDividendFXTriggerDateOffsetUnit

Time unit associated with the relative FX trigger date offset.

Type: [String](#)

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: [LegDividendFXTriggerDate](#)

180.2.1609 LegDividendFXTriggerDateRelativeTo

Specifies the anchor date when the FX trigger date is relative to an anchor date.

See http://www.fixtradingcommunity.org/codelists#Relative_To_Date for values.

Type: [int](#)

Used in components: [LegDividendFXTriggerDate](#)

180.2.1610 LegDividendFXTriggerDateUnadjusted

The unadjusted FX trigger date.

Type: [LocalMktDate](#)

Used in components: [LegDividendFXTriggerDate](#)

180.2.1611 LegDividendInitialRate

The initial floating rate reset agreed between the principal parties involved in the trade. This is assumed to be the first required reset rate for the first regular calculation period. It should only be included when the rate is not equal to the rate published on the source implied by the floating rate index. The initial rate is expressed in decimal form, e.g. 5% is represented as "0.05".

Type: [Percentage](#)

Used in components: [LegDividendAccrualFloatingRate](#)

180.2.1612 LegDividendNegativeRateTreatment

The specification of any provisions for calculating payment obligations when a floating rate is negative (either due to a quoted negative floating rate or by operation of a spread that is subtracted from the floating rate).

Type: **int**

Allowed values in PaymentStreamNegativeRateTreatmentCodeSet:

Code	Name	Description
0	ZeroInterestRateMethod	Zero interest rate method
1	NegativeInterestRateMethod	Negative interest rate method

Used in components: **LegDividendAccrualFloatingRate**

180.2.1613 LegDividendNumOfIndexUnits

The number of index units applicable to dividends.

Type: **int**

Used in components: **LegDividendConditions**

180.2.1614 LegDividendPeriodBusinessCenter

The business center calendar used for date adjustment of the instrument's dividend period date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **LegDividendPeriodBusinessCenterGrp**

180.2.1615 LegDividendPeriodBusinessCenterGrp

LegDividendPeriodBusinessCenterGrp is a repeating subcomponent within the LegDividendPeriodGrp component. It is used to specify the set of business centers whose calendars drive the date adjustment.

Name	Mult.	Type	Description
NoLegDividendPeriodBusinessCenters	[1..1]	NumInGroup	
LegDividendPeriodBusinessCenter	[0..1]	String	Required if NoLegDividendPeriodBusinessCenters(42386) > 0.

Used in groups: [LegDividendPeriodGrp](#)

180.2.1616 LegDividendPeriodBusinessDayConvention

The dividend period dates business day convention.

Type: [int](#)

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in groups: [LegDividendPeriodGrp](#)

180.2.1617 LegDividendPeriodEndDateUnadjusted

The unadjusted date on which the dividend period will end.

Type: [LocalMktDate](#)

Used in groups: [LegDividendPeriodGrp](#)

180.2.1618 LegDividendPeriodGrp

LegDividendPeriodGrp is a repeating subcomponent within the LegDividendConditions component. It is used to specify the valuation and payments dates of the dividend leg of a dividend swap.

Name	Mult.	Type	Description
NoLegDividendPeriods	[1..1]	NumInGroup	
LegDividendPeriodSequence	[0..1]	int	Required if NoLegDividendPeriods(42366) > 0.
LegDividendPeriodStartDateUnadjusted	[0..1]	LocalMktDate	
LegDividendPeriodEndDateUnadjusted	[0..1]	LocalMktDate	
LegDividendPeriodUnderlierRefID	[0..1]	String	When specified, this overrides LegDividendUnderlierRefID(42340). The specified value would be specific to this dividend period instance.
LegDividendPeriodStrikePrice	[0..1]	Price	
LegDividendPeriodBusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the LegDateAdjustment component in InstrumentLeg. The specified value would be specific to this dividend period instance.
LegDividendPeriodBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the LegDateAdjustment component in InstrumentLeg. The specified values would be specific to this dividend period instance.
LegDividendPeriodValuationDateUnadjusted	[0..1]	LocalMktDate	
LegDividendPeriodValuationDateRelativeTo	[0..1]	int	
LegDividendPeriodValuationDateOffsetPeriod	[0..1]	int	Conditionally required when LegDividendPeriodValuationDateOffsetUnit(42376) is specified.
LegDividendPeriodValuationDateOffsetUnit	[0..1]	CodeSet	Conditionally required when LegDividendPeriodValuationDateOffsetPeriod(42375) is specified.
LegDividendPeriodValuationDateOffsetDayType	[0..1]	CodeSet	
LegDividendPeriodValuationDateAdjusted	[0..1]	LocalMktDate	
LegDividendPeriodPaymentDateUnadjusted	[0..1]	LocalMktDate	

Name	Mult.	Type	Description
LegDividendPeriodPaymentDateRelativeTo	[0..1]	int	
LegDividendPeriodPaymentDateOffsetPeriod	[0..1]	int	Conditionally required when LegDividendPeriodPaymentDateOffsetUnit(42382) is specified.
LegDividendPeriodPaymentDateOffsetUnit	[0..1]	CodeSet	Conditionally required when LegDividendPeriodPaymentDateOffsetPeriod(42381) is specified.
LegDividendPeriodPaymentDateOffsetDayType	[0..1]	CodeSet	
LegDividendPeriodPaymentDateAdjusted	[0..1]	LocalMktDate	
LegDividendPeriodXID	[0..1]	XID	

Used in components: [LegDividendConditions](#)

180.2.1619 LegDividendPeriodPaymentDateAdjusted

The adjusted dividend period payment date.

Type: [LocalMktDate](#)

Used in groups: [LegDividendPeriodGrp](#)

180.2.1620 LegDividendPeriodPaymentDateOffsetDayType

Specifies the day type of the relative dividend period payment date offset.

Type: [int](#)

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in groups: [LegDividendPeriodGrp](#)

180.2.1621 LegDividendPeriodPaymentDateOffsetPeriod

Time unit multiplier for the relative dividend period payment date offset.

Type: [int](#)

Used in groups: [LegDividendPeriodGrp](#)

180.2.1622 LegDividendPeriodPaymentDateOffsetUnit

Time unit associated with the relative dividend period payment date offset.

Type: [String](#)

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in groups: [LegDividendPeriodGrp](#)

180.2.1623 LegDividendPeriodPaymentDateRelativeTo

Specifies the anchor date when the dividend period payment date is relative to an anchor date.

See http://www.fixtradingcommunity.org/codelists#Relative_To_Date for values.

Type: [int](#)

Used in groups: [LegDividendPeriodGrp](#)

180.2.1624 LegDividendPeriodPaymentDateUnadjusted

The unadjusted dividend period payment date.

Type: [LocalMktDate](#)

Used in groups: [LegDividendPeriodGrp](#)

180.2.1625 LegDividendPeriodSequence

Defines the ordinal dividend period. E.g. 1 = First period, 2 = Second period, etc.

Type: **int**

Used in groups: **LegDividendPeriodGrp**

180.2.1626 LegDividendPeriodStartDateUnadjusted

The unadjusted date on which the dividend period will begin.

Type: **LocalMktDate**

Used in groups: **LegDividendPeriodGrp**

180.2.1627 LegDividendPeriodStrikePrice

Specifies the fixed strike price of the dividend period.

Type: **Price**

Used in groups: **LegDividendPeriodGrp**

180.2.1628 LegDividendPeriodUnderlierRefID

References the dividend underlier through the instrument's UnderlyingSecurityID(309) which must be fully specified in an instance of the UnderlyingInstrument component.

Type: **String**

Used in groups: **LegDividendPeriodGrp**

180.2.1629 LegDividendPeriodValuationDateAdjusted

The adjusted dividend period valuation date.

Type: **LocalMktDate**

Used in groups: **LegDividendPeriodGrp**

180.2.1630 LegDividendPeriodValuationDateOffsetDayType

Specifies the day type of the relative dividend period valuation date offset.

Type: **int**

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in groups: **LegDividendPeriodGrp**

180.2.1631 LegDividendPeriodValuationDateOffsetPeriod

Time unit multiplier for the relative dividend period valuation date offset.

Type: **int**

Used in groups: **LegDividendPeriodGrp**

180.2.1632 LegDividendPeriodValuationDateOffsetUnit

Time unit associated with the relative dividend period valuation date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in groups: **LegDividendPeriodGrp**

180.2.1633 LegDividendPeriodValuationDateRelativeTo

Specifies the anchor date when the dividend period valuation date is relative to an anchor date.

See http://www.fixtradingcommunity.org/codelists#Relative_To_Date for values.

Type: **int**

Used in groups: **LegDividendPeriodGrp**

180.2.1634 LegDividendPeriodValuationDateUnadjusted

The unadjusted dividend period valuation date.

Type: **LocalMktDate**

Used in groups: **LegDividendPeriodGrp**

180.2.1635 LegDividendPeriodXID

Identifier for linking this stream dividend period to an underlier through an instance of RelatedInstrumentGrp.

Type: **XID**

Used in groups: **LegDividendPeriodGrp**

180.2.1636 LegDividendReinvestmentIndicator

Indicates whether the dividend will be reinvested.

Type: **Boolean**

Used in components: **LegDividendConditions**

180.2.1637 LegDividendUnderlierRefID

References the dividend underlier through the instrument's UnderlyingSecurityID(309) which must be fully specified in an instance of the UnderlyingInstrument component.

Type: **String**

Used in components: **LegDividendConditions**

180.2.1638 LegDividendYield

Refer to definition for DividendYield(1380).

Type: **Percentage**

Used in groups: **InstrmtLegExecGrp**, **LegOrdGrp**, **SideCrossLegGrp**, **TrdInstrmtLegGrp**

180.2.1639 LegDocumentationText

A sentence or phrase pertinent to the trade, not a reference to an external document. E.g. "To be registered with the U.S. Environmental Protection Agency, Acid Rain Division, SO2 Allowance Tracking System".

Type: **String**

Used in components: **LegFinancingDetails**

180.2.1640 LegEndDate

End date of a financing deal, i.e. the date the seller reimburses the buyer and takes back control of the collateral.

Type: **LocalMktDate**

Used in components: **LegFinancingDetails**

180.2.1641 LegEventDate

The date of the event.

Type: **LocalMktDate**

Used in groups: **LegEvntGrp**

180.2.1642 LegEventMonthYear

Used with derivatives when an event is express as a month-year with optional day or month or week of month.

Format:

YYYYMM (e.g. 199903)

YYYYMMDD (e.g. 20030323)

YYYYMMwN (e.g. 200303w2) for week

A specific date can be appended to the month-year. For instance, if multiple event types exist in the same Year and Month, but actually at a different time, a value can be appended, such as "w" or "w2" to indicate week. Likewise, the day of month (0-31) can be appended to indicate a specific event date.

Type: **MonthYear**

Used in groups: **LegEvntGrp**

180.2.1643 LegEventPx

Predetermined price of issue at event, if applicable.

Type: **Price**

Used in groups: **LegEvntGrp**

180.2.1644 LegEventText

Free form text to specify additional information or enumeration description when a standard value does not apply.

Type: **String**

Used in groups: **LegEvntGrp**

180.2.1645 LegEventTime

Specific time of event. To be used in combination with LegEventDate(2061).

Type: **UTCTimestamp**

Used in groups: **LegEvntGrp**

180.2.1646 LegEventTimePeriod

Time unit multiplier for the event.

Type: **int**

Used in groups: **LegEvntGrp**

180.2.1647 LegEventTimeUnit

Time unit associated with the event.

Type: **String**

Allowed values in EventTimeUnitCodeSet:

Code	Name	Description
H	Hour	Hour
Min	Minute	Minute
S	Second	Second
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in groups: **LegEvtGrp**

180.2.1648 LegEventType

Code to represent the type of event.

Type: **int**

Allowed values in EventTypeCodeSet:

Code	Name	Description
1	Put	Put
2	Call	Call
3	Tender	Tender
4	SinkingFundCall	Sinking fund call
5	Activation	Activation
6	Inactivation	Inactivation
7	LastEligibleTradeDate	Last eligible trade date
8	SwapStartDate	Swap start date
9	SwapEndDate	Swap end date
10	SwapRollDate	Swap roll date

Code	Name	Description
11	SwapNextStartDate	Swap next start date
12	SwapNextRollDate	Swap next roll date
13	FirstDeliveryDate	First delivery date
14	LastDeliveryDate	Last delivery date
15	InitialInventoryDueDate	Initial inventory due date
16	FinalInventoryDueDate	Final inventory due date
17	FirstIntentDate	First intent date
18	LastIntentDate	Last intent date
19	PositionRemovalDate	Position removal date
20	MinimumNotice	Minimum notice
21	DeliveryStartTime	Delivery start time
22	DeliveryEndTime	Delivery end time
23	FirstNoticeDate	First notice date. The first day that a notice of intent to deliver a commodity can be made by a clearing house to a buyer in fulfillment of a given month's futures contract.
24	LastNoticeDate	Last notice date. The last day on which a clearing house may inform an investor that a seller intends to make delivery of a commodity that the investor previously bought in a futures contract. The date is governed by the rules of different exchanges and clearing houses, but may also be stated in the futures contract itself.
25	FirstExerciseDate	First exercise date
26	RedemptionDate	Redemption date
27	TrdCntntnEfctvDt	Trade continuation effective date
99	Other	Other

Used in groups: **LegEvntGrp**

180.2.1649 LegEvntGrp

The LegEvntGrp is a repeating subcomponent of the InstrumentLeg component used to specify straight-forward events associated with the instrument. Examples include put and call dates for bonds and options; first exercise date for options; inventory and delivery dates for commodities; start, end and roll dates for swaps. Use LegComplexEvents for more advanced dates such as option, futures, commodities and equity swap observation and pricing events.

Name	Mult.	Type	Description
NoLegEvents	[1..1]	NumInGroup	
LegEventType	[0..1]	CodeSet	Required if NoLegEvents(2059) > 0.
LegEventDate	[0..1]	LocalMktDate	Conditionally required when LegEventTime(2062) is specified.
LegEventTime	[0..1]	UTCTimestamp	
LegEventTimeUnit	[0..1]	CodeSet	Conditionally required when LegEventTimePeriod(2064) is specified.
LegEventTimePeriod	[0..1]	int	Conditionally required when LegEventTimeUnit(2063) is specified.
LegEventMonthYear	[0..1]	MonthYear	
LegEventPx	[0..1]	Price	
LegEventText	[0..1]	String	
EncodedLegEventTextLen	[0..1]	Length	Must be set if EncodedLegEventText(2075) field is specified and must immediately precede it.
EncodedLegEventText	[0..1]	data	Encoded (non-ASCII characters) representation of the LegEventText(2066) field in the encoded format specified via the MessageEncoding(347) field.

Used in components: **InstrumentLeg**

180.2.1650 LegExchangeLookAlike

For a share option trade, indicates whether the instrument is to be treated as an 'exchange look-alike'.

Type: **Boolean**

Used in components: **InstrumentLeg**

180.2.1651 LegExecID

The ExecID(17) value corresponding to a trade leg.

Type: **String**

Used in groups: **TrdInstrmtLegExecGrp**

180.2.1652 LegExecInst

Refer to ExecInst(18)

Same values as ExecInst(18)

Type: **MultipleCharValue**

Allowed values in ExecInstCodeSet:

Code	Name	Description
0	StayOnOfferSide	Stay on offer side
1	NotHeld	Not held
2	Work	Work
3	GoAlong	Go along
4	OverTheDay	Over the day
5	Held	Held
6	ParticipateDoNotInitiate	Participate don't initiate
7	StrictScale	Strict scale
8	TryToScale	Try to scale
9	StayOnBidSide	Stay on bid side
A	NoCross	No cross. Cross is forbidden.
B	OKToCross	OK to cross
C	CallFirst	Call first
D	PercentOfVolume	Percent of volume. Indicates that the sender does not want the order to be all of the volume on the floor vs. a specific percentage.
E	DoNotIncrease	Do not increase - DNI
F	DoNotReduce	Do not reduce - DNR
G	AllOrNone	All or none - AON
H	ReinstateOnSystemFailure	Reinstate on system failure. Mutually exclusive with Q and I (lower case L).
I	InstitutionsOnly	Institutions only
J	ReinstateOnTradingHalt	Reinstate on trading halt. Mutually exclusive with K and m.
K	CancelOnTradingHalt	Cancel on trading halt. Mutually exclusive with J and m.
L	LastPeg	Last peg (last sale)
M	MidPricePeg	Mid-price peg (midprice of inside quote)
N	NonNegotiable	Non-negotiable
O	OpeningPeg	Opening peg

Code	Name	Description
P	MarketPeg	Market peg
Q	CancelOnSystemFailure	Cancel on system failure. Mutually exclusive with H and I(lower case L).
R	PrimaryPeg	Primary peg. Primary market - buy at bid, sell at offer.
S	Suspend	Suspend
T	FixedPegToLocalBestBidOrOfferAt-TimeOfOrder	Fixed peg to local best bid or offer at time of order
U	CustomerDisplayInstruction	Customer display instruction. Used in US Markets for: SEC Rule 11Ac1-1/4.
V	Netting	Netting (for Forex)
W	PegToVWAP	Peg to VWAP
X	TradeAlong	Trade along
Y	TryToStop	Try to stop
Z	CancelIfNotBest	Cancel if not best
a	TrailingStopPeg	Trailing stop peg
b	StrictLimit	Strict limit. No price improvement.
c	IgnorePriceValidityChecks	Ignore price validity checks
d	PegToLimitPrice	Peg to limit price
e	WorkToTargetStrategy	Work to target strategy
f	IntermarketSweep	Intermarket sweep
g	ExternalRoutingAllowed	External routing allowed
h	ExternalRoutingNotAllowed	External routing not allowed
i	ImbalanceOnly	Imbalance only
j	SingleExecutionRequestedForBlock-Trade	Single execution requested for block trade
k	BestExecution	Best execution
l	SuspendOnSystemFailure	Suspend on system failure. Mutually exclusive with H and Q.
m	SuspendOnTradingHalt	Suspend on trading halt. Mutually exclusive with J and K.
n	ReinstateOnConnectionLoss	Reinstate on connection loss. Mutually exclusive with o and p.
o	CancelOnConnectionLoss	Cancel on connection loss. Mutually exclusive with n and p.
p	SuspendOnConnectionLoss	Suspend on connection loss. Mutually exclusive with n and o.
q	Release	Release. Mutually exclusive with S and w.
r	ExecuteAsDeltaNeutral	Execute as delta neutral using volatility provided
s	ExecuteAsDurationNeutral	Execute as duration neutral
t	ExecuteAsFXNeutral	Execute as FX neutral

Code	Name	Description
u	MinGuaranteedFillEligible	Minimum guaranteed fill eligible
v	BypassNonDisplayLiquidity	Bypass non-displayed liquidity
w	Lock	Lock. Mutually exclusive with q.
x	IgnoreNotionalValueChecks	Ignore notional value checks
y	TrdAtRefPx	Trade at reference price. In the context of Reg NMS and the Tick Size Pilot Program, this is intended to indicate the order should Trade At Intermarket Sweep Order (TAISO) price.
z	AllowFacilitation	Allow facilitation. Express explicit consent to receive facilitation services from the counterparty. Facilitation services are when an institutional client allows a broker to assume a risk-taking principal position rather than an agency position, to obtain liquidity or achieve a guaranteed execution price on the client's behalf. Interpretation of absence of this value needs to be bilaterally agreed, if applicable. In the context of Hong Kong's SFC, this can be used to comply with SFC regulations for disclosure of client facilitation.

Used in groups: [InstrmtLegExecGrp](#), [LegOrdGrp](#), [SideCrossLegGrp](#), [TrdInstrmtLegGrp](#)

180.2.1653 LegExecRefID

Used to reference the value from LegExecID(1893).

Type: [String](#)

Used in groups: [TrdInstrmtLegExecGrp](#)

180.2.1654 LegExerciseConfirmationMethod

Indicates whether follow-up confirmation of exercise (written or electronic) is required following telephonic notice by the buyer to the seller or seller's agent.

Type: [int](#)

Allowed values in ExerciseConfirmationMethodCodeSet:

Code	Name	Description
0	NotRequired	Not required
1	NonElectronic	Non-electronic

Code	Name	Description
2	Electronic	Electronic
3	Unknown	Unknown at time of report

Used in components: [LegOptionExercise](#)

180.2.1655 LegExerciseDesc

A description of the option exercise.

Type: [String](#)

Used in components: [LegOptionExercise](#)

180.2.1656 LegExerciseSplitTicketIndicator

Indicates in physical settlement of bond and convertible bond options whether the party required to deliver the bonds will divide those to be delivered as notifying party desires to facilitate delivery obligations.

Type: [Boolean](#)

Used in components: [LegOptionExercise](#)

180.2.1657 LegExerciseStyle

Type of exercise of a derivatives security

Type: [int](#)

Allowed values in ExerciseStyleCodeSet:

Code	Name	Description
0	European	European
1	American	American
2	Bermuda	Bermuda
99	Other	Other

Used in components: [InstrumentLeg](#)

180.2.1658 LegExtraordinaryDividendAmountType

Indicates how the extraordinary gross cash dividend per share is determined.

Type: **int**

Allowed values in DividendAmountTypeCodeSet:

Code	Name	Description
0	RecordAmount	Record amount. 100% of the gross cash dividend per share paid over record date during relevant dividend period.
1	ExAmount	Ex amount. 100% of gross cash dividend per share paid after the ex-dividend date during relevant dividend period.
2	PaidAmount	Paid amount. 100% of gross cash dividend per share paid during relevant dividend period.
3	PerMasterConfirm	As specified in master confirmation. The amount is determined as provided in the relevant master confirmation.

Used in components: **LegDividendConditions**

180.2.1659 LegExtraordinaryDividendCurrency

The currency in which the excess dividend is denominated. Uses ISO 4217 currency codes.

Type: **Currency**

Used in components: **LegDividendConditions**

180.2.1660 LegExtraordinaryDividendDeterminationMethod

Specifies the method in which the excess amount is determined.

See <http://www.fpml.org/coding-scheme/determination-method> for values.

Type: **String**

Used in components: **LegDividendConditions**

180.2.1661 LegExtraordinaryDividendPartySide

Reference to the party through its side in the trade who makes the determination whether dividends are extraordinary in relation to normal levels.

Type: **int**

Allowed values in PaymentStreamCapRateBuySideCodeSet:

Code	Name	Description
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

Used in components: **LegDividendConditions**

180.2.1662 LegExtraordinaryEventAdjustmentMethod

Defines how adjustments will be made to the contract should one or more of the extraordinary events occur.

Type: **int**

Allowed values in ExtraordinaryEventAdjustmentMethodCodeSet:

Code	Name	Description
0	CalculationAgent	Calculation agent. The Calculation Agent has the right to adjust the terms of the trade following a corporate action.
1	OptionsExchange	Options exchange. The trade will be adjusted in accordance with any adjustment made by the exchange on which options on the underlying are listed.

Used in components: **InstrumentLeg**

180.2.1663 LegExtraordinaryEventGrp

The LegExtraordinaryEventGrp is a repeating component within the InstrumentLeg component. It is used to report extraordinary and disruptive events applicable to the reference entity that affects the contract.

Name	Mult.	Type	Description
NoLegExtraordinaryEvents	[1..1]	NumInGroup	
LegExtraordinaryEventType	[0..1]	String	Required if NoLegExtraordinaryEvents(42388) > 0.

Name	Mult.	Type	Description
LegExtraordinaryEventValue	[0..1]	String	Required if NoLegExtraordinaryEvents(42388) > 0.

Used in components: [InstrumentLeg](#)

180.2.1664 LegExtraordinaryEventType

Identifies the type of extraordinary or disruptive event applicable to the reference entity.

See http://www.fixtradingcommunity.org/codelists#Extraordinary_Event_Type for code list of extraordinary event types and values.

Type: [String](#)

Used in groups: [LegExtraordinaryEventGrp](#)

180.2.1665 LegExtraordinaryEventValue

The extraordinary or disruptive event value appropriate to LegExtraordinaryEventType(42389).

See http://www.fixtradingcommunity.org/codelists#Extraordinary_Event_Type for code list of extraordinary event types and values.

Type: [String](#)

Used in groups: [LegExtraordinaryEventGrp](#)

180.2.1666 LegFactor

Multileg instrument's individual leg security's Factor.

See Factor (228) field for description

(Note tag # was reserved in FIX 4.1, added in FIX 4.3)

Type: [float](#)

Used in components: [InstrumentLeg](#)

180.2.1667 LegFallbackExerciseIndicator

Indicates whether the notional amount of the underlying swap, not previously exercised under the option, will be automatically exercised at the expiration time on the expiration date if at such time the buyer is in-the-money, provided that the difference between the settlement rate and the fixed rate under the relevant underlying swap is not less than one tenth of a percentage point (0.10% or 0.001).

Type: **Boolean**

Used in components: **LegOptionExercise**

180.2.1668 LegFinancialInstrumentFullName

The full normative name of the multileg's financial instrument.

Type: **String**

Used in components: **InstrumentLeg**

180.2.1669 LegFinancialInstrumentShortName

Short name of the financial instrument. Uses ISO 18774 (FISN) values.

Type: **String**

Used in components: **InstrumentLeg**

180.2.1670 LegFinancingContractualDefinitionsGrp

The LegFinancingContractualDefinitionGrp is a repeating component within the LegFinancingDetails component used to report the definitions published by ISDA that define the terms of a derivative trade.

Name	Mult.	Type	Description
NoLegContractualDefinitions	[1..1]	NumInGroup	
LegContractualDefinition	[0..1]	String	Required if NoLegContractualDefinitions(42198) > 0.

Used in components: **LegFinancingDetails**

180.2.1671 LegFinancingContractualMatrixGrp

The LegFinancingContractualMatrixGrp is a repeating component within the LegFinancingDetails component used to report the ISDA Physical Settlement Matrix Transaction Type.

Name	Mult.	Type	Description
NoLegContractualMatrices	[1..1]	NumInGroup	
LegContractualMatrixSource	[0..1]	String	Required if NoLegContractualMatrices(42203) > 0.
LegContractualMatrixDate	[0..1]	LocalMktDate	
LegContractualMatrixTerm	[0..1]	String	

Used in components: [LegFinancingDetails](#)

180.2.1672 LegFinancingDetails

Component block is optionally used for financial transactions where legal contracts, master agreements or master confirmations are to be referenced. This component identifies the legal agreement under which the deal was made and other unique characteristics of the transaction. For example, the LegAgreementDesc(2497) field refers to base standard documents such as MRA 1996 Repurchase Agreement, GMRA 2000 Bills Transaction (U.K.), MSLA 1993 Securities Loan - Amended 1998, for example.

Name	Mult.	Type	Description
LegAgreementDesc	[0..1]	String	
LegAgreementID	[0..1]	String	
LegAgreementVersion	[0..1]	String	
LegAgreementDate	[0..1]	LocalMktDate	
LegAgreementCurrency	[0..1]	Currency	
LegAgreementCurrencyCodeSource	[0..1]	CodeSet	
LegMasterConfirmationDesc	[0..1]	String	
LegMasterConfirmationDate	[0..1]	LocalMktDate	
LegMasterConfirmationAnnexDesc	[0..1]	String	
LegMasterConfirmationAnnexDate	[0..1]	LocalMktDate	
LegBrokerConfirmationDesc	[0..1]	String	
LegFinancingContractualDefinitions-Grp	[0..*]	Group	
LegFinancingTermSupplementGrp	[0..*]	Group	

Name	Mult.	Type	Description
LegFinancingContractualMatrixGrp	[0..*]	Group	
LegCreditSupportAgreementDesc	[0..1]	String	
LegCreditSupportAgreementDate	[0..1]	LocalMktDate	
LegCreditSupportAgreementID	[0..1]	String	
LegGoverningLaw	[0..1]	String	
LegDocumentationText	[0..1]	String	
EncodedLegDocumentationTextLen	[0..1]	Length	Must be set if EncodedLegDocumentationText(2493) field is specified and must immediately precede it.
EncodedLegDocumentationText	[0..1]	data	Encoded (non-ASCII characters) representation of the LegDocumentationText(2505) field in the encoded format specified via the MessageEncoding(347) field.
LegTerminationType	[0..1]	CodeSet	
LegStartDate	[0..1]	LocalMktDate	
LegEndDate	[0..1]	LocalMktDate	
LegDeliveryType	[0..1]	CodeSet	
LegMarginRatio	[0..1]	Percentage	

Used in groups: InstrmtLegGrp, TrdInstrmtLegGrp

180.2.1673 LegFinancingTermSupplementDate

Specifies the publication date of the applicable version of the contractual supplement.

Type: LocalMktDate

Used in groups: LegFinancingTermSupplementGrp

180.2.1674 LegFinancingTermSupplementDesc

Identifies the applicable contractual supplement. See <http://www.fpml.org/coding-scheme/contractual-supplement> for values.

Type: String

Used in groups: LegFinancingTermSupplementGrp

180.2.1675 LegFinancingTermSupplementGrp

The LegFinancingTermSupplementGrp is a repeating component within the LegFinancingDetails component used to report contractual terms supplements of derivative trades.

Name	Mult.	Type	Description
NoLegFinancingTermSupplements	[1..1]	NumInGroup	
LegFinancingTermSupplementDesc	[0..1]	String	Required if NoLegFinancingTermSupplements(42200) > 0.
LegFinancingTermSupplementDate	[0..1]	LocalMktDate	

Used in components: [LegFinancingDetails](#)

180.2.1676 LegFlexibleIndicator

Used to indicate a derivatives security that can be defined using flexible terms. The terms commonly permitted to be defined by market participants are expiration date and strike price. FlexibleIndicator is an alternative to LegCFIcode(608) Standard/Non-standard attribute.

Type: [Boolean](#)

Used in components: [InstrumentLeg](#)

180.2.1677 LegFlexProductEligibilityIndicator

Used to indicate if a product or group of product supports the creation of flexible securities.

Type: [Boolean](#)

Used in components: [InstrumentLeg](#)

180.2.1678 LegFloorPrice

Used to express the floor price of a capped put.

Type: [Price](#)

Used in components: [InstrumentLeg](#)

180.2.1679 LegFlowScheduleType

The industry standard flow schedule by which electricity or natural gas is traded. Schedules exist by regions and on-peak and off-peak status, such as "Western Peak".

Type: **int**

Allowed values in FlowScheduleTypeCodeSet:

Code	Name	Description
0	NERCEasternOffPeak	NERC Eastern Off-Peak
1	NERCWesternOffPeak	NERC Western Off-Peak
2	NERCCalendarAllDaysInMonth	NERC Calendar-All Days in month
3	NERCEasternPeak	NERC Eastern Peak
4	NERCWesternPeak	NERC Western Peak
5	AllTimes	All times
6	OnPeak	On peak
7	OffPeak	Off peak
8	Base	Base
9	Block	Block
99	Other	Other

Used in components: **InstrumentLeg**

180.2.1680 LegGoverningLaw

Identification of the law governing the transaction. See <http://www.fpml.org/coding-scheme/governing-law> for values.

Type: **String**

Used in components: **LegFinancingDetails**

180.2.1681 LegGrossTradeAmt

The gross trade amount of the leg. For FX Futures this is used to express the notional value of a fill when LegLastQty and other quantity fields are express in terms of contract size.

Type: **Amt**

Used in groups: **InstrmtLegExecGrp**, **TrdInstrmtLegGrp**

180.2.1682 LegID

Unique identifier for the leg within the context of a message (the scope of uniqueness to be defined by counterparty agreement). The LegID(1788) can be referenced using LegRefID(654).

Type: **String**

Used in components: **InstrumentLeg**

180.2.1683 LegIndexAnnexDate

The date of a credit default swap index series annex.

Type: **LocalMktDate**

Used in components: **InstrumentLeg**

180.2.1684 LegIndexAnnexSource

The source of a credit default swap series annex.

Type: **String**

Used in components: **InstrumentLeg**

180.2.1685 LegIndexAnnexVersion

The version of a credit default swap index annex.

Type: **int**

Used in components: **InstrumentLeg**

180.2.1686 LegIndexSeries

The series identifier of a credit default swap index.

Type: **int**

Used in components: **InstrumentLeg**

180.2.1687 LegIndividualAllocID

Reference for the individual allocation ticket

See IndividualAllocID (467) for description and valid values.

Type: **String**

Used in groups: **LegPreAllocGrp**

180.2.1688 LegInstrmtAssignmentMethod

Specifies the method under which assignment was conducted.

Type: **char**

Allowed values in InstrmtAssignmentMethodCodeSet:

Code	Name	Description
P	ProRata	Pro rata
R	Random	Random

Used in components: **InstrumentLeg**

180.2.1689 LegInstrRegistry

Multileg instrument's individual leg security's InstrRegistry.

See InstrRegistry (543) field for description

Type: **String**

Used in components: **InstrumentLeg**

180.2.1690 LegInstrumentParties

The use of this component block is restricted to instrument definition only and is not permitted to contain transactional information. Only a specified subset of party roles will be supported within the LegInstrumentParty block.

Name	Mult.	Type	Description
NoLegInstrumentParties	[1..1]	NumInGroup	Repeating group below should contain unique combinations of LegInstrumentPartyID(2255), LegInstrumentPartyIDSource(2256) and LegInstrumentPartyRole(2257).
LegInstrumentPartyID	[0..1]	String	Used to identify the source of PartyID. Required if LegInstrumentPartyIDSource(2256) is specified. Required if NoLegInstrumentParties(2254) > 0.
LegInstrumentPartyIDSource	[0..1]	CodeSet	Used to identify class source of LegInstrumentPartyID(2255) value (e.g. BIC). Required if LegInstrumentPartyID(2255) is specified. Required if NoLegInstrumentParties(2254) > 0.
LegInstrumentPartyRole	[0..1]	CodeSet	Identifies the type of LegInstrumentPartyID(2255) (e.g. Executing Broker). Required if NoLegInstrumentParties(2254) > 0.
LegInstrumentPartyRoleQualifier	[0..1]	CodeSet	
LegInstrumentPtysSubGrp	[0..*]	Group	Repeating group of party sub-identifiers.

Used in components: **InstrumentLeg**

180.2.1691 LegInstrumentPartyID

Used to identify party id related to instrument.

Type: **String**

Used in groups: **LegInstrumentParties**

180.2.1692 LegInstrumentPartyIDSource

Used to identify source of instrument party id.

Type: **char**

Allowed values in PartyIDSourceCodeSet:

Code	Name	Description
1	KoreanInvestorID	Korean Investor ID. Also known as the Investor Registration Certificate (IRC) issued by Korea's Financial Supervisory Service (FSS), an identifier tied into the depository for settlement and record keeping.
6	UKNationalInsuranceOrPension-Number	UK National Insurance or Pension Number
B	BIC	BIC (Bank Identification Code - SWIFT managed) code (ISO9362 - See "Appendix 6-B")
I	ISITCAcronym	Directed broker three character acronym as defined in ISITC "ETC Best Practice" guidelines document
2	TaiwaneseForeignInvestorID	Taiwanese Qualified Foreign Investor ID QFII/FID
7	USSocialSecurityNumber	US Social Security Number
C	GeneralIdentifier	Generally accepted market participant identifier (e.g. NASD mnemonic)
3	TaiwaneseTradingAcct	Taiwanese Trading Acct
8	USEmployerOrTaxIDNumber	US Employer or Tax ID Number
D	Proprietary	Proprietary / Custom code. Custom ID schema used between counterparties, trading platforms and repositories.
4	MalaysianCentralDepository	Malaysian Central Depository (MCD) number
9	AustralianBusinessNumber	Australian Business Number
E	ISOCountryCode	ISO Country Code
5	ChineseInvestorID	Chinese Investor ID
A	AustralianTaxFileNumber	Australian Tax File Number
F	SettlementEntityLocation	Settlement Entity Location (note if Local Market Settlement use "E=ISO Country Code") (see "Appendix 6-G" for valid values)
G	MIC	Market Identifier Code (ISO 10383) MIC
J	TaxID	Tax ID
H	CSDParticipant	CSD participant/member code (e.g. Euroclear, DTC, CREST or Kassenverein number)
K	AustralianCompanyNumber	Australian Company Number
L	AustralianRegisteredBodyNumber	Australian Registered Body Number
M	CFTCReportingFirmIdentifier	CFTC reporting firm identifier
N	LegalEntityIdentifier	Legal Entity Identifier (ISO 17442) LEI
O	InterimIdentifier	Interim identifier. An interim entity identifier assigned by a regulatory agency prior to an LEI (ISO 17442) being assigned.

Code	Name	Description
P	ShortCodeIdentifier	Short code identifier. A generic means for trading venues, brokers, investment managers to convey a bilaterally agreed upon "short hand" code for an identifier that is a reference to a mapping between the parties.
Q	NationalIDNaturalPerson	National ID of natural person. An identification number generally assigned by a government authority or agency to a natural person which is unique to the person it is assigned to. Examples include, but not limited to, "social security number", "pension number".
R	IndiaPermanentAccountNumber	India Permanent Account Number. Also referred to as PAN ID. An identifier issued by the Income Tax Department of India.
S	FDID	Firm designated identifier. Also referred to as FDID. A unique identifier required by the SEC for each trading account designated by Industry Members for purposes of reporting to CAT (Consolidated Audit Trail).
T	SPSAID	Special Segregated Account ID. Also referred to as SPSA ID. The Special Segregated Account identifier issued by Hong Kong Exchanges and Clearing.
U	MasterSPSAID	Master Special Segregated Account ID. Also referred to as Master SPSA ID. The master identifier issued by Hong Kong Exchanges and Clearing for the aggregation of SPSA IDs.
V	KoreaShortSellingRegistrationNumber	Korea Short Selling Registration Number. Short selling registration number assigned by Korea's Financial Supervisory Service (FSS) for institutions placing eligible orders under Korea's Financial Services Commission's "Short Sale Reform Measures".

Used in groups: [LegInstrumentParties](#)

180.2.1693 LegInstrumentPartyRole

Used to identify the role of instrument party id.

Type: [int](#)

Allowed values in PartyRoleCodeSet:

Code	Name	Description
1	ExecutingFirm	Executing Firm (formerly FIX 4.2 ExecBroker)

Code	Name	Description
2	BrokerOfCredit	Broker of Credit (formerly FIX 4.2 BrokerOfCredit)
3	ClientID	Client ID (formerly FIX 4.2 ClientID)
4	ClearingFirm	Clearing Firm (formerly FIX 4.2 ClearingFirm)
5	InvestorID	Investor ID
6	IntroducingFirm	Introducing Firm
7	EnteringFirm	Entering Firm
8	Locate	Locate / Lending Firm (for short-sales)
9	FundManagerClientID	Fund Manager Client ID (for CIV)
10	SettlementLocation	Settlement Location (formerly FIX 4.2 SettlLocation)
11	OrderOriginationTrader	Order Origination Trader (associated with Order Origination Firm - i.e. trader who initiates/submits the order)
12	ExecutingTrader	Executing Trader (associated with Executing Firm - actually executes)
13	OrderOriginationFirm	Order Origination Firm (e.g. buy-side firm)
14	GiveupClearingFirmDepr	Giveup Clearing Firm (firm to which trade is given up)
15	CorrespondantClearingFirm	Correspondant Clearing Firm
16	ExecutingSystem	Executing System
17	ContraFirm	Contra Firm
18	ContraClearingFirm	Contra Clearing Firm
19	SponsoringFirm	Sponsoring Firm
20	UnderlyingContraFirm	Underlying Contra Firm
21	ClearingOrganization	Clearing Organization
22	Exchange	Exchange. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
24	CustomerAccount	Customer Account
25	CorrespondentClearingOrganization	Correspondent Clearing Organization
26	CorrespondentBroker	Correspondent Broker
27	Buyer	Buyer/Seller (Receiver/Deliverer)
28	Custodian	Custodian
29	Intermediary	Intermediary
30	Agent	Agent
31	SubCustodian	Sub-custodian
32	Beneficiary	Beneficiary
33	InterestedParty	Interested party

Code	Name	Description
34	RegulatoryBody	Regulatory body. In the context of regulatory reporting, this identifies the regulator the trade is being reported to.
35	LiquidityProvider	Liquidity provider
36	EnteringTrader	Entering trader
37	ContraTrader	Contra trader
38	PositionAccount	Position account. The account which positions are maintained. Typically represents the aggregation of one or more customer accounts.
39	ContraInvestorID	Contra Investor ID
40	TransferToFirm	Transfer to Firm
41	ContraPositionAccount	Contra Position Account
42	ContraExchange	Contra Exchange
43	InternalCarryAccount	Internal Carry Account
44	OrderEntryOperatorID	Order Entry Operator ID
45	SecondaryAccountNumber	Secondary Account Number
46	ForeignFirm	Foreign Firm
47	ThirdPartyAllocationFirm	Third Party Allocation Firm
48	ClaimingAccount	Claiming Account
49	AssetManager	Asset Manager
50	PledgorAccount	Pledgor Account
51	PledgeeAccount	Pledgee Account
52	LargeTraderReportableAccount	Large Trader Reportable Account
53	TraderMnemonic	Trader mnemonic
54	SenderLocation	Sender Location
55	SessionID	Session ID
56	AcceptableCounterparty	Acceptable Counterparty
57	UnacceptableCounterparty	Unacceptable Counterparty
58	EnteringUnit	Entering Unit
59	ExecutingUnit	Executing Unit
60	IntroducingBroker	Introducing Broker
61	QuoteOriginator	Quote originator
62	ReportOriginator	Report originator
63	SystematicInternaliser	Systematic internaliser (SI)

Code	Name	Description
64	MultilateralTradingFacility	Multilateral Trading Facility (MTF). Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
65	RegulatedMarket	Regulated Market (RM). Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
66	MarketMaker	Market Maker
67	InvestmentFirm	Investment Firm
68	HostCompetentAuthority	Host Competent Authority (Host CA)
69	HomeCompetentAuthority	Home Competent Authority (Home CA)
70	CompetentAuthorityLiquidity	Competent Authority of the most relevant market in terms of liquidity (CAL)
71	CompetentAuthorityTransactionV- enue	Competent Authority of the Transaction (Execution) Venue (CATV)
72	ReportingIntermediary	Reporting intermediary. The medium or vendor used to report to a regulator, non-regulatory agency or data repository.
73	ExecutionVenue	Execution Venue. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
74	MarketDataEntryOriginator	Market data entry originator
75	LocationID	Location ID
76	DeskID	Desk ID
77	MarketDataMarket	Market data market
78	AllocationEntity	Allocation Entity
79	PrimeBroker	Prime Broker providing General Trade Services
80	StepOutFirm	Step-Out Firm (Prime Broker)
81	BrokerClearingID	Broker clearing identifier
82	CentralRegistrationDepository	Central Registration Depository (CRD)
83	ClearingAccount	Clearing Account
84	AcceptableSettlingCounterparty	Acceptable Settling Counterparty
85	UnacceptableSettlingCounterparty	Unacceptable Settling Counterparty
86	CLSMemberBank	CLS Member Bank
87	InConcertGroup	In Concert Group
88	InConcertControllingEntity	In Concert Controlling Entity
89	LargePositionsReportingAccount	Large Positions Reporting Account
90	SettlementFirm	Settlement Firm

Code	Name	Description
91	SettlementAccount	Settlement account. The account to which individual payment obligations are aggregated for netting and funds movement. Typically represents the aggregation of many margin (performance bond) accounts.
92	ReportingMarketCenter	Reporting Market Center
93	RelatedReportingMarketCenter	Related Reporting Market Center
94	AwayMarket	Away Market. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
95	GiveupTradingFirm	Give-up (trading) firm
96	TakeupTradingFirm	Take-up (trading) firm
97	GiveupClearingFirm	Give-up clearing firm
98	TakeupClearingFirm	Take-up clearing firm
99	OriginatingMarket	Originating Market. Identifies the Market using PartyIDSource(tag 447) = G (Market Identifier Code) where an order originated in the event that the order is sent to an alternative market for execution. Serves as an inverse of an away market.
100	MarginAccount	Margin account. Also referred to as "performance bond account". The margin account is the calculated margin requirements. Typically represents the aggregation of one or more position accounts.
101	CollateralAssetAccount	Collateral asset account. The account at which individual collateral assets are maintained. Typically, although not always, one-for-one with the settlement account.
102	DataRepository	Data repository. Multiple instances of this PartyRole may appear for reporting purposes.
103	CalculationAgent	Calculation agent
104	ExerciseNoticeSender	Sender of exercise notice
105	ExerciseNoticeReceiver	Receiver of exercise notice
106	RateReferenceBank	Rate reference bank. The bank providing the reference rate. Multiple instance of this PartyRole may appear.
107	Correspondent	Correspondent
109	BeneficiaryBank	Beneficiary's bank or depository institution. The institution in which the beneficiary, a person or an entity, has their account with. The institution may be a bank or non-bank institution.
110	Borrower	Borrower
111	PrimaryObligator	Primary obligator
112	Guarantor	Guarantor

Code	Name	Description
113	ExcludedReferenceEntity	Excluded reference entity
114	DeterminingParty	Determining party
115	HedgingParty	Hedging party
116	ReportingEntity	Reporting entity. The entity that is reporting the information.
117	SalesPerson	Sales person. The person who is involved in the sales activities for their firm.
118	Operator	Operator. The person who has the capabilities and authorization to take certain actions; for example, setting entitlements, etc.
119	CSD	Central Securities Depository (CSD)
120	ICSD	International Central Securities Depository (ICSD)
121	TradingSubAccount	Trading sub-account. Example of sub-accounts include a clearing account that has multiple trading sub-accounts, a trading account that has multiple trading sub-accounts belonging to different trading firms.
122	InvestmentDecisionMaker	Investment decision maker. In the context of ESMA RTS reporting, this is used to specify party responsible for the investment decision. See RTS 24, Annex, Table 2, Field 4.
123	PublishingIntermediary	Publishing intermediary. The medium or vendor used to publish to the market.
124	CSDParticipant	Central Securities Depository (CSD) Participant. In the context of EU SFTR reporting the identifier of the CSD participant or indirect participant of the reporting counterparty. Where both the CSD participant and indirect participant are involved in the transaction this should identify the indirect participant.
125	Issuer	Issuer. The issuer of the security.
126	ContraCustomerAccount	Contra Customer Account. Same as PartyRole(452) = 24 (Customer Account) but for the counterparty. Can be used whenever the parties component is not nested in a repeating group representing both sides.
127	ContraInvestmentDecisionMaker	Contra Investment Decision Maker. Same as PartyRole(452) = 122 (Investment Decision Maker) but for the counterparty. Can be used whenever the parties component is not nested in a repeating group representing both sides.
128	AuthorizingPerson	Authorizing person. In the context of MiFIR, this value is used to identify the person authorizing algorithms within a trading firm.

Used in groups: **LegInstrumentParties**

180.2.1694 LegInstrumentPartyRoleQualifier

Used to further qualify the value of LegInstrumentPartyRole(2257).

Type: **int**

Allowed values in PartyDetailRoleQualifierCodeSet:

Code	Name	Description
0	Agency	Agency
1	Principal	Principal
2	RisklessPrincipal	Riskless principal
3	GeneralClearingMember	General clearing member
30	ExchangeOrderSubmitter	Exchange order submitter. Used to identify original or initial exchange order submitting broker when party role "1" (Executing Firm) appears more than once.
4	IndividualClearingMember	Individual clearing member
5	PreferredMarketMaker	Preferred market maker. Market maker getting a part of the matched quantity before primary or default market maker.
6	DirectedMarketMaker	Directed market maker. Single market maker to handle the order provided.
7	Bank	Bank
8	Hub	Hub. Indicates that the Intermediary party is a hub system or service provider.
9	PrimaryTrdRepository	Primary trade repository. Used to differentiate the principal trade repository from the Original or Additional trade repositories when there are multiple trade repositories being reported.
10	OrigTrdRepository	Original trade repository. Used to identify the trade repository to which the trade was originally reported if different from the current repository to which the trade is being reported.
11	AddtnlIntlTrdRepository	Additional international trade repository. Used with InternationalSwapIndicator(2526) to identify the trade repository that is in addition to the local swaps data repository as required by U.S. law.
12	AddtnlDomesticTrdRepository	Additional domestic trade repository. Used with MixedSwapIndicator(1929) to identify the trade repository that is in addition to the current trade repository when the assets in the swap are subject to two different domestic regulators.
13	RelatedExchange	Related exchange
14	OptionsExchange	Options exchange

Code	Name	Description
15	SpecifiedExchange	Specified exchange
16	ConstituentExchange	Constituent exchange.
17	ExemptFromTradeReporting	Exempt from trade reporting. In the context of FINRA TRACE reporting requirements, this is used to indicate the ATS has been granted a regulatory exemption from reporting.
18	Current	Current. Can be used to convey an existing party identifier for the same party role in a single message.
19	New	New. Can be used to convey a future party identifier for the same party role in a single message.
20	DesignatedSponsor	Designated sponsor. Market maker jointly providing liquidity for the same security with other market makers.
21	Specialist	Specialist. Market maker being the only one providing liquidity for a security.
22	Algorithm	Algorithm
23	FirmOrLegalEntity	Firm or legal entity
24	NaturalPerson	Natural person
25	RegularTrader	Regular trader. Standard trader profile.
26	HeadTrader	Head trader. Senior trader leading a group of regular traders.
27	Supervisor	Supervisor. Administrative user that has only limited rights for normal trading but possibly special rights for emergency actions.
28	TriParty	Tri-party. In the context of EU SFTR reporting, identifies the third party, not necessarily the custodian, to which the reporting counterparty has outsourced the post-trade processing of an SFT (if applicable).
29	Lender	Lender. In the context of EU SFTR reporting, identifies the agent lender involved in the securities lending transaction.

Used in groups: [LegInstrumentParties](#)

180.2.1695 LegInstrumentPartySubID

PartySubID value within an instrument party repeating group.

Type: [String](#)

Used in groups: [LegInstrumentPtysSubGrp](#)

180.2.1696 LegInstrumentPartySubIDType

Type of LegInstrumentPartySubID (2259) value.

Type: **int**

Allowed values in PartySubIDTypeCodeSet:

Code	Name	Description
1	Firm	Firm
2	Person	Person
3	System	System
4	Application	Application
5	FullLegalNameOfFirm	Full legal name of firm
6	PostalAddress	Postal address
7	PhoneNumber	Phone number
8	EmailAddress	Email address
9	ContactName	Contact name
10	SecuritiesAccountNumber	Securities account number (for settlement instructions)
11	RegistrationNumber	Registration number (for settlement instructions and confirmations)
12	RegisteredAddressForConfirmation	Registered address (for confirmation purposes)
13	RegulatoryStatus	Regulatory status (for confirmation purposes)
14	RegistrationName	Registration name (for settlement instructions)
15	CashAccountNumber	Cash account number (for settlement instructions)
16	BIC	BIC
17	CSDParticipantMemberCode	CSD participant member code
18	RegisteredAddress	Registered address
19	FundAccountName	Fund account name
20	TelexNumber	Telex number
21	FaxNumber	Fax number
22	SecuritiesAccountName	Securities account name
23	CashAccountName	Cash account name
24	Department	Department
25	LocationDesk	Location desk
26	PositionAccountType	Position account type
27	SecurityLocateID	Security locate ID
28	MarketMaker	Market maker

Code	Name	Description
29	EligibleCounterparty	Eligible counterparty
30	ProfessionalClient	Professional client
31	Location	Location
32	ExecutionVenue	Execution venue
33	CurrencyDeliveryIdentifier	Currency delivery identifier
34	AddressCity	Address City
35	AddressStateOrProvince	Address State/Province
36	AddressPostalCode	Address Postal Code
37	AddressStreet	Address Street
38	AddressISOCountryCode	Address Country (ISO country code)
39	ISOCountryCode	ISO country code
40	MarketSegment	Market segment
41	CustomerAccountType	Customer account type
42	OmnibusAccount	Omnibus account
43	FundsSegregationType	Funds segregation type
44	GuaranteeFund	Guarantee fund. Identifies a guarantee fund related to an account. Used when one account has multiple funds of collateral, each guaranteeing different positions. Can be used for PartyRole(452) = Customer Account(24).
45	SwapDealer	Swap dealer. The US regulator's defined term for identifying the trade counterparty as "any person who holds itself out as a dealer in swaps, makes a market in swaps, regularly enters into swaps with counterparties as an ordinary course of business for its own account, or engages in activity causing itself to be commonly known in the trade as a dealer or market maker in swaps".
46	MajorParticipant	Major participant. When PartySubID(523)=Y the counterparty is not the swap dealer but is a major swap participant as defined in the regulations.
47	FinancialEntity	Financial entity. When PartySubID(523)=Y the counterparty is neither a swap dealer nor a major swap participant but is a financial entity as defined in the regulations.
48	USPerson	U.S. person. A legal term referring to any U.S. person or legal entity anywhere in the world that should be taxed under U.S. law.
49	ReportingEntityIndicator	Reporting entity indicator. Indicates the entity obligated or delegated to report to their regulator, a non-regulatory agency or data repository. Set PartySubID(523)=Y if true.

Code	Name	Description
50	ElectedClearingRequirementException	Elected clearing requirement exception
51	BusinessCenter	Business center.
52	ReferenceText	Reference text
53	ShortMarkingExemptAccount	Short-marking exempt account
54	ParentFirmIdentifier	Parent firm identifier. Implementation-specific identifier of this party's parent entity.
55	ParentFirmName	Parent firm name. Full name of this party's parent entity.
56	DealIdentifier	Deal identifier. The internal identifier assigned to the trade by this party, particularly by a Clearing Organization.
57	SystemTradeID	System trade identifier
58	SystemTradeSubID	System trade sub-identifier
59	FCMCode	Futures Commission Merchant (FCM) code. The FCM's code or identifier in relation to the PartyRole(452). For example, if PartyRole(452) is the exchange or clearinghouse, the FCM code/ID specified in PartySubID(523) is the FCM's identifier at the exchange or clearinghouse.
60	DlvryTrmlCode	Delivery terminal customer account/code. Usually used for gas delivery to identify whose account the gas is allocated to at the delivery terminal. Often referred to as "HUB" code.
61	VolntyRptEntity	Voluntary reporting entity. The entity voluntarily reporting the trade to the regulator. Set PartySubID(523)=Y if true.
62	RptObligJursdctn	Reporting obligation jurisdiction. For a trade that falls under multiple jurisdictions this may be used to identify, through PartySubID(523), the reporting jurisdiction to which the party is obligated to report.
63	VolntyRptJursdctn	Voluntary reporting jurisdiction. For a trade that falls under multiple jurisdictions this may be used to identify, through PartySubID(523), the regulatory jurisdiction to which the party is submitting a voluntary report.

Code	Name	Description
64	CompanyActivities	Company activities. For regulatory reporting. ID values include: A = Assurance undertaking authorized in accordance with Directive 2002/83/EC C=Credit institution authorized in accordance with Directive 2006/48/EC F=Investment firm in accordance with Directive 2004/39/EC I=Insurance undertaking authorized in accordance with Directive 73/239/EC L=Alternative investment fund managed by AIFMs authorized or registered in accordance with Directive 2011/61/EC O=Institution for occupational retirement provision within the meaning of Article 6(a) of Directive 2003/41/EC R=Reinsurance undertaking authorized in accordance with Directive 2005/68/EC U=UCITS and its management company, authorized in accordance with Directive 2009/65/EC or blank in case of coverage by LEI or in case of non-financial counterparties. In the context of EU SFTR reporting use the appropriate 4- or 1-character code noted in the regulations. See SFTR ITS "Commission Implementing Regulation (EU) 2019/363" Annexes 1 and 2 for values.
65	EEAreaDomiciled	European Economic Area domiciled. ID values: Y or N
66	ContractLinked	Contract linked to commercial or treasury financing for this counterparty. ID values: Y or N
67	ContractAbove	Contract above clearing threshold for this counterparty. ID values: Y or N
68	VolntyRptPty	Voluntary reporting party. When PartySubID(523)=Y, identifies that the trading party is reporting voluntarily when VoluntaryRegulatoryReport(1935)=Y.
69	EndUser	End user. When PartySubID(523)=Y, the counterparty is neither the swap dealer, major swap participant nor financial entity as defined in the regulations.
70	LocationOrJurisdiction	Location or jurisdiction. One or more instances may be used in combination with PartySubIDType(803) = 49 (Reporting entity indicator) or 102 (Data repository) to identify the jurisdiction, countries, regions or provinces for which the party is a reporting entity or data repository when that characteristic is ambiguous or where there are multiple locations. The party sub-ID value is either a jurisdiction acronym, a 2-character ISO 3166 country code, or a hyphenated combination of the country code and the standard post-office abbreviation for province, state or region if necessary. E.g. "US" for United States or "CA-QC" for Quebec Canada.

Code	Name	Description
71	DerivativesDealer	Derivatives dealer. Indicates whether the party is a derivatives dealer or not (Y/N). The Canadian regulator's defined term for identifying the trade counterparty as "a person or company engaging in or holding himself, herself or itself out as engaging in the business of trading in derivatives in Ontario as principal or agent".
72	Domicile	Domicile. Country and optionally province, state or region of domicile. The party sub-ID value is either a 2-character ISO 3166 country code or a hyphenated combination of the country code and the standard post-office abbreviation of province, state or region if necessary. E.g. "US" for United States or "CA-QC" for Quebec Canada.
73	ExemptFromRecognition	Exempt from recognition. Used with party role 21 "Clearing Organization" to indicate exemption (Y/N). Identifies a clearing agency as exempt from oversight in Ontario, i.e. one that 1) only provides limited services and does not present significant risks or 2) is foreign-based, intends to operate in Ontario but is subject to regulatory oversight in another jurisdiction.
74	Payer	Payer. Identifies the party as the payer of a particular payment stream or bullet payment by quoting the stream's StreamDesc(40051) (or LegStreamDesc(40243) or UnderlyingStreamDesc(40542)) or payment's PaymentDesc(43087) in the associated party sub-identifier field.
75	Receiver	Receiver. Identifies the party as the receiver of a particular payment stream or bullet payment by quoting the stream's StreamDesc(40051) (or LegStreamDesc(40243) or UnderlyingStreamDesc(40542)) or payment's PaymentDesc(43087) in the associated party sub-identifier field.
76	SystematicInternaliser	Systematic Internaliser (SI). In the context of ESMA reporting, this is used to indicate whether the specified party is a Systematic Internaliser or not for the security defined in the Instrument component (Y/N).
77	PublishingEntityIndicator	Publishing entity indicator. Indicates the entity obligated or delegated to publish to the market. Set PartySubID(523)=Y if true.
78	FirstName	First name. The first name(s) of a natural person. If multiple names, separate entries by a comma.
79	Surname	Surname. The surname(s) or lastname(s) of a natural person. If multiple names, separate entries by a comma.

Code	Name	Description
80	DateOfBirth	Date of birth. The date of birth of a natural person in the format YYYYMMDD.
81	OrderTransmittingFirm	Order transmitting firm. Identifies whether the party specified in PartyID(448) is the firm that transmitted the order. In the context of RTS 22 Article 4, when "true" the PartySubID(523)=Y shall be set "by the transmitting firm within the transmitting firm's report where conditions for transmission specified in Article 4 were not satisfied."
82	OrderTransmittingFirmBuyer	Order transmitting firm for buyer. Identifies the firm that transmitted the order for the buyer. In the context of ESMA RTS 22, PartySubID(523)=Y is used to indicate the firm identified in PartyID(448) is the firm that transmitted the order for the buyer. "This shall be populated by the receiving firm within the receiving firm's report with the identification code provided by the transmitting firm."
83	OrderTransmitterSeller	Order transmitter for seller. Identifies the order transmitting firm for the seller. In the context of ESMA RTS 22, PartySubID(523)=Y is used to indicate the firm identified in PartyID(448) is the firm that transmitted the order for the seller. "This shall be populated by the receiving firm within the receiving firm's report with the identification code provided by the transmitting firm."
84	LegalEntityIdentifier	Legal Entity Identifier (ISO 17442) LEI
85	SubSectorClassification	Sub-sector classification. Supplemental to party sub-ID type "64" (Company activities) for regulatory reporting. For EU SFTR reporting use the appropriate 4-character code noted in the regulations applying the conditional association rules. See SFTR ITS "Commission Implementing Regulation (EU) 2019/363" Annexes 1 and 2 for values.
86	PartySide	Party side. May be used, when appropriate, to explicitly indicate the transaction side of the party, e.g. Buyer, Seller, Lender, Borrower, Maker, Taker, etc. in the ID. In the context of EU SFTR reporting, use values as required by SFTR, "GIVE" and "TAKE" in the ID, to identify collateral giver and taker.
87	LegalRegistrationCountry	Legal registration country. ISO Country Code where the registered office of the party is located as specified in the LEI reference data.

Used in groups: **LegInstrumentPtysSubGrp**

180.2.1697 LegInstrumentPtysSubGrp

Name	Mult.	Type	Description
NoLegInstrumentPartySubIDs	[1..1]	NumInGroup	
LegInstrumentPartySubID	[0..1]	String	Required if NoLegInstrumentPartySubIDs(2258) > 0.
LegInstrumentPartySubIDType	[0..1]	CodeSet	

Used in groups: [LegInstrumentParties](#)

180.2.1698 LegInstrumentRoundingDirection

Specifies the rounding direction if not overridden elsewhere.

Type: [char](#)

Allowed values in RoundingDirectionCodeSet:

Code	Name	Description
0	RoundToNearest	Round to nearest
1	RoundDown	Round down
2	RoundUp	Round up

Used in components: [InstrumentLeg](#)

180.2.1699 LegInstrumentRoundingPrecision

Specifies the rounding precision in terms of a number of decimal places. Note how a percentage rate rounding of 5 decimal places is expressed as a rounding precision of 7.

Type: [int](#)

Used in components: [InstrumentLeg](#)

180.2.1700 LegInterestAccrualDate

The start date used for calculating accrued interest on debt instruments which are being sold between interest payment dates. Often but not always the same as the Issue Date and the Dated Date

Type: **LocalMktDate**

Used in components: **InstrumentLeg**

180.2.1701 LegInTheMoneyCondition

Specifies an option instrument's "in the money" condition in general terms.

Type: **int**

Allowed values in InTheMoneyConditionCodeSet:

Code	Name	Description
0	StandardITM	Standard in-the-money. The option's strike price is less than the underlying settlement price for a call or greater than the underlying settlement price for a put.
1	ATMITM	At-the-money is in-the-money. The option's strike price of either the put or call is equal to the underlying settlement price in addition to standard in-the-money behavior.
2	ATMCallITM	At-the-money call is in-the-money. The call option's strike price is equal to the underlying settlement price in addition to standard in-the-money behavior.
3	ATMPutITM	At-the-money put is in-the-money. The put option's strike price is equal to the underlying settlement price in addition to standard in-the-money behavior.

Used in components: **InstrumentLeg**

180.2.1702 LegIOIQty

Leg-specific IOI quantity.

See IOIQty (27) for description and valid values

Type: **String**

Allowed values in IOIQtyCodeSet:

Code	Name	Description
S	Small	Small
M	Medium	Medium

Code	Name	Description
L	Large	Large
U	UndisclosedQuantity	Undisclosed Quantity

Used in groups: [InstrmtLegIOIGrp](#)

180.2.1703 LegIssueDate

Multileg instrument's individual leg security's IssueDate.

See IssueDate (225) field for description

(Note tag # was reserved in FIX 4.1, added in FIX 4.3)

(prior to FIX 4.4 field was of type UTCDate)

Type: [LocalMktDate](#)

Used in components: [InstrumentLeg](#)

180.2.1704 LegIssuer

Multileg instrument's individual security's Issuer.

See Issuer (106) field for description

Type: [String](#)

Used in components: [InstrumentLeg](#)

180.2.1705 LegLastForwardPoints

The forward points for this leg's fill event. Value can be negative. Expressed in decimal form. For example, 61.99 points is expressed and sent as 0.006199

Type: [PriceOffset](#)

Used in groups: [InstrmtLegExecGrp](#), [TrdInstrmtLegGrp](#)

180.2.1706 LegLastMultipliedQty

Expresses the quantity bought/sold when LastQty is expressed in contracts. Used in addition to LegLastQty(1418), it is the product of LegLastQty(1418) and LegContractMultiplier(614).

Type: Qty

Used in groups: TrdInstrmtLegGrp

180.2.1707 LegLastPx

Execution price assigned to a leg of a multileg instrument.

See LastPx (31) field for description and values

Type: Price

Used in groups: InstrmtLegExecGrp, TrdInstrmtLegExecGrp, TrdInstrmtLegGrp

180.2.1708 LegLastQty

Fill quantity for the leg instrument

Type: Qty

Used in groups: InstrmtLegExecGrp, TrdInstrmtLegExecGrp, TrdInstrmtLegGrp

180.2.1709 LegLienSeniority

Indicates the seniority level of the lien in a loan.

Type: int

Allowed values in LienSeniorityCodeSet:

Code	Name	Description
0	Unknown	Unknown
1	FirstLien	First lien
2	SecondLien	Second lien
3	ThirdLien	Third lien

Used in components: InstrumentLeg

180.2.1710 LegLimitRightToConfirmIndicator

Indicates whether the Seller may request the Buyer to confirm its intent to exercise if not done on or before the expiration time on the expiration date. If true ("Y") specific rules will apply in relation to the settlement mode.

Type: **Boolean**

Used in components: **LegOptionExercise**

180.2.1711 LegListMethod

Indicates whether instruments are pre-listed only or can also be defined via user request.

Type: **int**

Allowed values in ListMethodCodeSet:

Code	Name	Description
0	PreListedOnly	pre-listed only
1	UserRequested	user requested

Used in components: **InstrumentLeg**

180.2.1712 LegLoanFacility

Specifies the type of loan when the credit default swap's reference obligation is a loan.

Type: **int**

Allowed values in LoanFacilityCodeSet:

Code	Name	Description
0	BridgeLoan	Bridge loan
1	LetterOfCredit	Letter of credit
2	RevolvingLoan	Revolving loan
3	SwinglineFunding	Swingline funding
4	TermLoan	Term loan
5	TradeClaim	Trade claim

Used in components: **InstrumentLeg**

180.2.1713 LegLocaleOfIssue

Multileg instrument's individual leg security's LocaleOfIssue.

See LocaleOfIssue (472) field for description

Type: **String**

Used in components: **InstrumentLeg**

180.2.1714 LegMakeWholeAmount

Amount to be paid by the buyer of the option if the option is exercised prior to the LegMakeWhole-Date(42392).

Type: **Amt**

Used in components: **LegOptionExerciseMakeWholeProvision**

180.2.1715 LegMakeWholeBenchmarkCurveName

Identifies the benchmark floating rate index.

Type: **String**

Used in components: **LegOptionExerciseMakeWholeProvision**

180.2.1716 LegMakeWholeBenchmarkCurvePoint

The point on the floating rate index curve.

Sample values:

M = combination of a number between 1-12 and an "M" for month, e.g. 3M

Y = combination of number between 1-100 and a "Y" for year, e.g. 10Y

10Y-OLD = see above, then add "-OLD" when appropriate

INTERPOLATED = the point is mathematically derived

2/2031 5 3/8 = the point is stated via a combination of maturity month / year and coupon.

Type: **String**

Used in components: **LegOptionExerciseMakeWholeProvision**

180.2.1717 LegMakeWholeBenchmarkQuote

The quote side of the benchmark to be used for calculating the "make whole" amount.

Type: **int**

Allowed values in StrikeIndexQuoteCodeSet:

Code	Name	Description
0	Bid	Bid.
1	Mid	Mid
2	Offer	Offer

Used in components: **LegOptionExerciseMakeWholeProvision**

180.2.1718 LegMakeWholeDate

The date through which option cannot be exercised without penalty.

Type: **LocalMktDate**

Used in components: **LegOptionExerciseMakeWholeProvision**

180.2.1719 LegMakeWholeInterpolationMethod

The method used when calculating the "make whole" amount. The most common is linear method.

Type: **int**

Allowed values in PaymentStreamInflationInterpolationMethodCodeSet:

Code	Name	Description
0	None	None
1	LinearZeroYield	Linear zero yield

Used in components: **LegOptionExerciseMakeWholeProvision**

180.2.1720 LegMakeWholeRecallSpread

Spread over the floating rate index.

Type: **PriceOffset**

Used in components: **LegOptionExerciseMakeWholeProvision**

180.2.1721 LegManualNoticeBusinessCenter

Identifies the business center used for adjusting the time for manual exercise notice.

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in components: **LegOptionExercise**

180.2.1722 LegMarginRatio

The fraction of the cash consideration that must be collateralized, expressed as a percent. A MarginRatio of 2% indicates that the value of the collateral (after deducting for "haircut") must exceed the cash consideration by 2%.

Type: **Percentage**

Used in components: **LegFinancingDetails**

180.2.1723 LegMarketDisruption

The LegMarketDisruption component is a subcomponent of the InstrumentLeg used to specify the market disruption provisions of the swap.

Name	Mult.	Type	Description
LegMarketDisruptionProvision	[0..1]	CodeSet	
LegMarketDisruptionEventGrp	[0..*]	Group	
LegMarketDisruptionFallbackProvision	[0..1]	CodeSet	
LegMarketDisruptionFallbackGrp	[0..*]	Group	
LegMarketDisruptionFallbackReferencePriceGrp	[0..*]	Group	
LegMarketDisruptionMaximumDays	[0..1]	int	

Name	Mult.	Type	Description
LegMarketDisruptionMaterialityPercentage	[0..1]	Percentage	If specified, the disruption event should be specified in LegMarketDisruptionEventGrp.
LegMarketDisruptionMinimumFuturesContracts	[0..1]	int	Applicable only when LegMarketDisruptionEvent(41468)='DeMinimisTrading'.

Used in components: [InstrumentLeg](#)

180.2.1724 LegMarketDisruptionEvent

Specifies the market disruption event.

For commodities see <http://www.fpml.org/coding-scheme/commodity-market-disruption> for values.

For foreign exchange, see http://www.fixtradingcommunity.org/codelists#Market_Disruption_Event for code list of applicable event types.

Type: [String](#)

Used in groups: [LegMarketDisruptionEventGrp](#)

180.2.1725 LegMarketDisruptionEventGrp

The LegMarketDisruptionEventGrp is a repeating subcomponent of the LegMarketDisruption component used to specify the market disruption events.

Name	Mult.	Type	Description
NoLegMarketDisruptionEvents	[1..1]	NumInGroup	
LegMarketDisruptionEvent	[0..1]	String	Required if NoLegMarketDisruptionEvents(41467) > 0.
LegMarketDisruptionValue	[0..1]	String	

Used in components: [LegMarketDisruption](#)

180.2.1726 LegMarketDisruptionFallbackBasketCurrency

Specifies the currency if the underlier is a basket. Uses ISO 4217 currency codes.

Type: **Currency**

Used in groups: **LegMarketDisruptionFallbackReferencePriceGrp**

180.2.1727 LegMarketDisruptionFallbackBasketDivisor

Specifies the basket divisor amount. This value is normally used to adjust the constituent weight for pricing or to adjust for dividends, or other corporate actions.

Type: **float**

Used in groups: **LegMarketDisruptionFallbackReferencePriceGrp**

180.2.1728 LegMarketDisruptionFallbackGrp

The LegMarketDisruptionFallbackGrp is a repeating subcomponent of the LegMarketDisruption component used to specify the market disruption fallback provisions.

Name	Mult.	Type	Description
NoLegMarketDisruptionFallbacks	[1..1]	NumInGroup	
LegMarketDisruptionFallbackType	[0..1]	String	Required if NoLegMarketDisruptionFallbacks(41469) > 0. The sequence of entries specifies the order in which the fallback provisions should be applied.
LegMarketDisruptionFallbackValue	[0..1]	String	

Used in components: **LegMarketDisruption**

180.2.1729 LegMarketDisruptionFallbackOpenUnits

If there are multiple underlying assets, this specifies the number of units (index or securities) that constitute the underlier of the swap. In the case of a basket swap, this is used to reference both the number of basket units, and the number of each asset components of the basket when these are expressed in absolute terms.

Type: **Qty**

Used in groups: **LegMarketDisruptionFallbackReferencePriceGrp**

180.2.1730 LegMarketDisruptionFallbackProvision

Specifies the location of the fallback provision documentation.

Type: **int**

Allowed values in MarketDisruptionFallbackProvisionCodeSet:

Code	Name	Description
0	MasterAgreement	As specified in master agreement
1	Confirmation	As specified in confirmation

Used in components: **LegMarketDisruption**

180.2.1731 LegMarketDisruptionFallbackReferencePriceGrp

The LegMarketDisruptionFallbackReferencePriceGrp is a repeating subcomponent of the LegMarketDisruption component used to specify the fallback reference price and underlying security provisions

Name	Mult.	Type	Description
NoLegMarketDisruptionFallbackReferencePrices	[1..1]	NumInGroup	
LegMarketDisruptionFallbackUnderlierType	[0..1]	CodeSet	Required if NoLegMarketDisruptionFallbackReferencePrices(41471) > 0.
LegMarketDisruptionFallbackUnderlierSecurityID	[0..1]	String	Conditionally required when LegMarketDisruptionFallbackUnderlierSecurityIDSource(41474) is specified.
LegMarketDisruptionFallbackUnderlierSecurityIDSource	[0..1]	CodeSet	Conditionally required when LegMarketDisruptionFallbackUnderlierSecurityID(41473) is specified.
LegMarketDisruptionFallbackUnderlierSecurityDesc	[0..1]	String	
EncodedLegMarketDisruptionFallbackUnderlierSecurityDescLen	[0..1]	Length	Must be set if EncodedLegMarketDisruptionFallbackUnderlierSecurityDesc(41477) field is specified and must immediately precede it.
EncodedLegMarketDisruptionFallbackUnderlierSecurityDesc	[0..1]	data	Encoded (non-ASCII characters) representation of the LegMarketDisruptionFallbackUnderlierSecurityDesc(41475) field in the encoded format specified via the MessageEncoding(347) field.

Name	Mult.	Type	Description
LegMarketDisruptionFallbackOpenUnits	[0..1]	Qty	
LegMarketDisruptionFallbackBasketCurrency	[0..1]	Currency	
LegMarketDisruptionFallbackBasketDivisor	[0..1]	float	

Used in components: [LegMarketDisruption](#)

180.2.1732 LegMarketDisruptionFallbackType

Specifies the type of disruption fallback.

See <http://www.fpml.org/coding-scheme/commodity-market-disruption-fallback> for values.

Type: [String](#)

Used in groups: [LegMarketDisruptionFallbackGrp](#)

180.2.1733 LegMarketDisruptionFallbackUnderlierSecurityDesc

Specifies the description of the underlying security.

Type: [String](#)

Used in groups: [LegMarketDisruptionFallbackReferencePriceGrp](#)

180.2.1734 LegMarketDisruptionFallbackUnderlierSecurityID

Specifies the identifier value of the security.

Type: [String](#)

Used in groups: [LegMarketDisruptionFallbackReferencePriceGrp](#)

180.2.1735 LegMarketDisruptionFallbackUnderlierSecurityIDSource

Specifies the class or source scheme of the security identifier.

Type: [String](#)

Allowed values in SecurityIDSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
3	QUIK	QUIK
4	ISINNumber	ISIN
5	RICCode	RIC
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
7	ISOCountryCode	ISO Country Code
8	ExchangeSymbol	Exchange symbol
9	ConsolidatedTapeAssociation	Consolidated Tape Association (CTA) Symbol (SIAC CTS/CQS line format)
A	BloombergSymbol	Bloomberg Symbol
B	Wertpapier	Wertpapier
C	Dutch	Dutch
D	Valoren	Valoren
E	Sicovam	Sicovam
F	Belgian	Belgian
G	Common	"Common" (Clearstream and Euroclear)
H	ClearingHouse	Clearing house / Clearing organization
I	ISDAFpMLSpecification	ISDA/FpML product specification (XML in SecurityXML(1185))
J	OptionPriceReportingAuthority	Option Price Reporting Authority
K	ISDAFpMLURL	ISDA/FpML product URL (URL in SecurityID(48))
L	LetterOfCredit	Letter of credit
M	MarketplaceAssignedIdentifier	Marketplace-assigned Identifier
N	MarkitREDEntityCLIP	Markit RED entity CLIP
P	MarkitREDPairCLIP	Markit RED pair CLIP
Q	CFTCCommodityCode	CFTC commodity code
R	ISDACommodityReferencePrice	ISDA Commodity Reference Price
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
T	LegalEntityIdentifier	Legal entity identifier
U	Synthetic	Synthetic. Used to specify that the security identifier is synthetic for linking nested underliers when there is no market identifier for the collection.

Code	Name	Description
V	FidessaInstrumentMnemonic	Fidessa Instrument Mnemonic (FIM)
W	IndexName	Index name. Standard name of the index or rate index, e.g. "LIBOR" or "iTraxx Australia".
X	UniformSymbol	Uniform Symbol (UMTF Symbol)
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in groups: [LegMarketDisruptionFallbackReferencePriceGrp](#)

180.2.1736 LegMarketDisruptionFallbackUnderlierType

The type of reference price underlier.

Type: [int](#)

Allowed values in MarketDisruptionFallbackUnderlierTypeCodeSet:

Code	Name	Description
0	Basket	Basket
1	Bond	Bond
2	Cash	Cash
3	Commodity	Commodity
4	ConvertibleBond	Convertible bond
5	Equity	Equity
6	ExchangeTradedFund	Exchange traded fund
7	Future	Future
8	Index	Index
9	Loan	Loan
10	Mortgage	Mortgage
11	MutualFund	Mutual fund

Used in groups: [LegMarketDisruptionFallbackReferencePriceGrp](#)

180.2.1737 LegMarketDisruptionFallbackValue

Applicable value for LegMarketDisruptionFallbackType(41470).

Type: **String**

Used in groups: **LegMarketDisruptionFallbackGrp**

180.2.1738 LegMarketDisruptionMaterialityPercentage

Used when a price materiality percentage applies to the price source disruption event and this event has been specified.

Type: **Percentage**

Used in components: **LegMarketDisruption**

180.2.1739 LegMarketDisruptionMaximumDays

Specifies the maximum number of market disruption days (commodity or bullion business days) in a contract or confirmation. If none are specified, the maximum number of market disruption days is five (5).

Type: **int**

Used in components: **LegMarketDisruption**

180.2.1740 LegMarketDisruptionMinimumFuturesContracts

Specifies the minimum futures contracts level that dictates whether or not a 'De Minimis Trading' event has occurred.

Type: **int**

Used in components: **LegMarketDisruption**

180.2.1741 LegMarketDisruptionProvision

The consequences of market disruption events.

Type: **int**

Allowed values in MarketDisruptionProvisionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable

Code	Name	Description
1	Applicable	Applicable
2	AsInMasterAgreement	As specified in master agreement
3	AsInConfirmation	As specified in confirmation

Used in components: [LegMarketDisruption](#)

180.2.1742 LegMarketDisruptionValue

Applicable value for LegMarketDisruptionEvent(41468).

Type: [String](#)

Used in groups: [LegMarketDisruptionEventGrp](#)

180.2.1743 LegMasterConfirmationAnnexDate

The date that an annexation to the master confirmation was executed between the parties.

Type: [LocalMktDate](#)

Used in components: [LegFinancingDetails](#)

180.2.1744 LegMasterConfirmationAnnexDesc

The type of master confirmation annexation executed between the parties. See <http://www.fpml.org/coding-scheme/master-confirmation-annex-type> for values.

Type: [String](#)

Used in components: [LegFinancingDetails](#)

180.2.1745 LegMasterConfirmationDate

Alternative to broker confirmation. The date of the confirmation executed between the parties and intended to govern all relevant transactions between those parties.

Type: [LocalMktDate](#)

Used in components: [LegFinancingDetails](#)

180.2.1746 LegMasterConfirmationDesc

The type of master confirmation executed between the parties. See <http://www.fpml.org/coding-scheme/master-confirmation-type> for values.

Type: **String**

Used in components: **LegFinancingDetails**

180.2.1747 LegMaterialDividendsIndicator

Indicates whether material non-cash dividends are applicable.

Type: **Boolean**

Used in components: **LegDividendConditions**

180.2.1748 LegMaturityDate

Multileg instrument's individual security's MaturityDate.

See MaturityDate(541) field for description.

Type: **LocalMktDate**

Used in components: **InstrumentLeg**

180.2.1749 LegMaturityFrequencyPeriod

Time unit multiplier for the minimum frequency of the instrument maturity intervals.

Type: **int**

Used in components: **InstrumentLeg**

180.2.1750 LegMaturityFrequencyUnit

Time unit associated with the minimum frequency of the instrument maturity intervals.

Type: **String**

Allowed values in TimeUnitCodeSet:

Code	Name	Description
H	Hour	Hour
Min	Minute	Minute
S	Second	Second
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year
Q	Quarter	Quarter
EOM	EndOfMonth	End of Month. End of Month identifies a relative time unit, e.g. until the third Friday of each month.
F	Flexible	Flexible. A flexible time unit indicates that a specific time unit for the contract is currently undetermined.

Used in components: [InstrumentLeg](#)

180.2.1751 LegMaturityMonthYear

Multileg instrument's individual security's MaturityMonthYear.

See MaturityMonthYear (200) field for description

Type: [MonthYear](#)

Used in components: [InstrumentLeg](#)

180.2.1752 LegMaturityTime

Time of security's maturity expressed in local time with offset to UTC specified

Type: [TZTimeOnly](#)

Used in components: [InstrumentLeg](#)

180.2.1753 LegMidPx

Leg Mid price/rate.

For OTC swaps, this is the mid-market mark (for example, as defined by CFTC).

For uncleared OTC swaps, LegMidPx(2346) and the MidPx(631) fields are mutually exclusive.

Type: **Price**

Used in groups: **InstrmtLegExecGrp**, **LegQuotGrp**, **LegQuotStatGrp**, **QuotReqLegsGrp**, **TrdInstrmtLegGrp**

180.2.1754 LegMinPriceIncrement

Minimum price increment for a given exchange-traded instrument. Could also be used to represent tick value.

Type: **float**

Used in components: **InstrumentLeg**

180.2.1755 LegMinPriceIncrementAmount

Minimum price increment amount associated with the LegMinPriceIncrement(2190). For listed derivatives, the value can be calculated by multiplying LegMinPriceIncrement(2190) by LegContractMultiplier(614).

Type: **Amt**

Used in components: **InstrumentLeg**

180.2.1756 LegMthToDefault

The Mth reference obligation to default in a CDS reference basket. When an NthToDefault(2157) to MthToDefault(2158) are represented then the CDS payout occurs between the Nth and Mth obligations to default.

Type: **int**

Used in components: **InstrumentLeg**

180.2.1757 LegNonCashDividendTreatment

Defines the treatment of non-cash dividends.

Type: **int**

Allowed values in NonCashDividendTreatmentCodeSet:

Code	Name	Description
0	PotentialAdjustment	Potential adjustment event. The treatment of any non-cash dividend shall be determined in accordance with the potential adjustment event provisions.
1	CashEquivalent	Cash equivalent. Any non-cash dividend shall be treated as a declared cash equivalent dividend.

Used in components: [LegDividendConditions](#)

180.2.1758 LegNonDeliverableFixingDate

The non-deliverable fixing date. Type of date is specified in LegNonDeliverableFixingDate-Type(40369).

Type: [LocalMktDate](#)

Used in groups: [LegPaymentStreamNonDeliverableFixingDateGrp](#)

180.2.1759 LegNonDeliverableFixingDateType

Specifies the type of date (e.g. adjusted for holidays).

Type: [int](#)

Allowed values in NonDeliverableFixingDateTypeCodeSet:

Code	Name	Description
0	Unadjusted	Unadjusted
1	Adjusted	Adjusted

Used in groups: [LegPaymentStreamNonDeliverableFixingDateGrp](#)

180.2.1760 LegNotionalPercentageOutstanding

Indicates the notional percentage of the deal that is still outstanding based on the remaining components of the index.

Used to calculate the true value of a CDS trade or position.

Type: **Percentage**

Used in components: **InstrumentLeg**

180.2.1761 LegNthToDefault

The Nth reference obligation in a CDS reference basket. If specified without LegMthToDefault(2158) the default will trigger a CDS payout. If LegMthToDefault(2158) is also present then payout occurs between the Nth and Mth obligations to default.

Type: **int**

Used in components: **InstrumentLeg**

180.2.1762 LegNTPositionLimit

Position limit in the near-term contract for a given exchange-traded product.

Type: **int**

Used in components: **InstrumentLeg**

180.2.1763 LegNumber

Allow sequencing of Legs for a Strategy to be captured

Type: **int**

Used in groups: **TrdInstrmtLegGrp**

180.2.1764 LegObligationType

Type of reference obligation for credit derivatives contracts.

Type: **String**

Allowed values in ObligationTypeCodeSet:

Code	Name	Description
0	Bond	Bond
1	ConvertBond	Convertible bond
2	Mortgage	Mortgage

Code	Name	Description
3	Loan	Loan

Used in components: [InstrumentLeg](#)

180.2.1765 LegOfferForwardPoints

The offer FX forward points for the leg of an FX Swap. Value can be negative. Expressed in decimal form. For example, 61.99 points is expressed and sent as 0.006199

Type: [PriceOffset](#)

Used in groups: [LegQuotGrp](#)

180.2.1766 LegOfferPx

Offer price of this leg.

See OfferPx (133) for description and valid values

Type: [Price](#)

Used in groups: [LegQuotGrp](#)

180.2.1767 LegOptAttribute

Multileg instrument's individual security's OptAttribute.

See OptAttribute (206) field for description

Type: [char](#)

Used in components: [InstrumentLeg](#)

180.2.1768 LegOptionExerciseBusinessCenter

The business center calendar used to adjust the option exercise dates, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in groups: [LegOptionExerciseBusinessCenterGrp](#)

180.2.1769 LegOptionExerciseBusinessCenterGrp

LegOptionExerciseBusinessCenterGrp is a repeating subcomponent of the LegOptionExerciseDates component used to specify the set of business centers whose calendars drive date adjustment. Used only to override the business centers defined in the LegDateAdjustment component in InstrumentLeg.

Name	Mult.	Type	Description
NoLegOptionExerciseBusinessCenters	[1..1]	NumInGroup	
LegOptionExerciseBusinessCenter	[0..1]	String	Required if NoLegOptionExerciseBusinessCenters(41491) > 0.

Used in components: [LegOptionExerciseDates](#)

180.2.1770 LegOptionExerciseBusinessDayConvention

The business day convention used to adjust the option exercise dates. Used only to override the business day convention specified in the LegDateAdjustment component within the InstrumentLeg component.

Type: [int](#)

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [LegOptionExerciseDates](#)

180.2.1771 LegOptionExercise

The LegOptionExercise component is a subcomponent of the InstrumentLeg component used to specify option exercise provisions. Its purpose is to identify the opportunities and conditions for exercise, e.g. the schedule of dates on which exercise is allowed. The embedded LegOptionExerciseExpiration component is used to terminate the opportunity for exercise.

Name	Mult.	Type	Description
LegExerciseDesc	[0..1]	String	
EncodedLegExerciseDescLen	[0..1]	Length	Must be set if EncodedLegExerciseDesc (41483) field is specified and must immediately precede it.
EncodedLegExerciseDesc	[0..1]	data	Encoded (non-ASCII characters) representation of the LegExerciseDesc(41481) field in the encoded format specified via the MessageEncoding(347) field.
LegAutomaticExerciseIndicator	[0..1]	Boolean	
LegAutomaticExerciseThresholdRate	[0..1]	float	
LegExerciseConfirmationMethod	[0..1]	CodeSet	
LegManualNoticeBusinessCenter	[0..1]	String	
LegFallbackExerciseIndicator	[0..1]	Boolean	
LegLimitRightToConfirmIndicator	[0..1]	Boolean	
LegExerciseSplitTicketIndicator	[0..1]	Boolean	
LegSettlMethodElectingPartySide	[0..1]	CodeSet	
LegSettlMethodElectionDate	[0..1]	Component	
LegOptionExerciseDates	[0..1]	Component	
LegOptionExerciseExpiration	[0..1]	Component	
LegOptionExerciseMakeWholeProvision	[0..1]	Component	

Used in components: [InstrumentLeg](#)

180.2.1772 LegOptionExerciseDate

The adjusted or unadjusted option exercise fixed date.

Type: [LocalMktDate](#)

Used in groups: [LegOptionExerciseDateGrp](#)

180.2.1773 LegOptionExerciseDateGrp

The LegOptionExerciseDateGrp is a repeating subcomponent of the LegOptionExerciseDates component used to specify fixed dates for exercise.

Name	Mult.	Type	Description
NoLegOptionExerciseDates	[1..1]	NumInGroup	
LegOptionExerciseDate	[0..1]	LocalMktDate	Required if NoLegOptionExerciseDates(41512) > 0.
LegOptionExerciseDateType	[0..1]	CodeSet	When specified it applies not only to the current date but to all subsequent dates in the group until overridden with a new type.

Used in components: [LegOptionExerciseDates](#)

180.2.1774 LegOptionExerciseDates

The LegOptionExerciseDates component is a subcomponent of the LegOptionExercise component used to specify option exercise dates.

Name	Mult.	Type	Description
LegOptionExerciseBusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the LegDateAdjustment component in InstrumentLeg. The specified value would be specific to this instance of option exercise dates.
LegOptionExerciseBusinessCenterGrp	[0..*]	Group	
LegOptionExerciseDateGrp	[0..*]	Group	
LegOptionExerciseEarliestDateOffset-DayType	[0..1]	CodeSet	
LegOptionExerciseEarliestDateOffset-Period	[0..1]	int	Conditionally required when LegOptionExerciseEarliestDateUnit(41496) is specified.
LegOptionExerciseEarliestDateOffsetUnit	[0..1]	CodeSet	Conditionally required when LegOptionExerciseEarliestDatePeriod(41495) is specified.
LegOptionExerciseFrequencyPeriod	[0..1]	int	Conditionally required when LegOptionExerciseFrequencyUnit(41498) is specified.

Name	Mult.	Type	Description
LegOptionExerciseFrequencyUnit	[0..1]	CodeSet	Conditionally required when LegOptionExerciseFrequencyPeriod(41497) is specified.
LegOptionExerciseStartDateUnadjusted	[0..1]	LocalMktDate	
LegOptionExerciseStartDateRelativeTo	[0..1]	int	
LegOptionExerciseStartDateOffsetPeriod	[0..1]	int	Conditionally required when LegOptionExerciseStartDateOffsetUnit(41502) is specified.
LegOptionExerciseStartDateOffsetUnit	[0..1]	CodeSet	Conditionally required when LegOptionExerciseStartDateOffsetPeriod(41501) is specified.
LegOptionExerciseStartDateOffsetDayType	[0..1]	CodeSet	
LegOptionExerciseStartDateAdjusted	[0..1]	LocalMktDate	
LegOptionExerciseSkip	[0..1]	int	
LegOptionExerciseNominationDeadline	[0..1]	LocalMktDate	
LegOptionExerciseFirstDateUnadjusted	[0..1]	LocalMktDate	
LegOptionExerciseLastDateUnadjusted	[0..1]	LocalMktDate	
LegOptionExerciseEarliestTime	[0..1]	LocalMktTime	
LegOptionExerciseLatestTime	[0..1]	LocalMktTime	
LegOptionExerciseTimeBusinessCenter	[0..1]	String	

Used in components: **LegOptionExercise**

180.2.1775 LegOptionExerciseDateType

Specifies the type of option exercise date. When specified it applies not only to the current date but to all subsequent dates in the group until overridden with a new type.

Type: **int**

Allowed values in OptionExerciseDateTypeCodeSet:

Code	Name	Description
0	Unadjusted	Unadjusted
1	Adjusted	Adjusted

Used in groups: [LegOptionExerciseDateGrp](#)

180.2.1776 LegOptionExerciseEarliestDateOffsetDayType

Specifies the day type of the relative earliest exercise date offset.

Type: [int](#)

Allowed values in ComplexEventDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: [LegOptionExerciseDates](#)

180.2.1777 LegOptionExerciseEarliestDateOffsetPeriod

Time unit multiplier for the relative earliest exercise date offset.

Type: [int](#)

Used in components: [LegOptionExerciseDates](#)

180.2.1778 LegOptionExerciseEarliestDateOffsetUnit

Time unit associated with the relative earliest exercise date offset.

Type: [String](#)

Allowed values in ProvisionOptionExerciseEarliestDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: [LegOptionExerciseDates](#)

180.2.1779 LegOptionExerciseEarliestTime

The earliest time at which notice of exercise can be given by the buyer to the seller (or seller's agent) (i) on the expiration date, in the case of a European style option, (ii) on each Bermuda option exercise date and the expiration date, in the case of a Bermuda style option, (iii) the commencement date to, and including, the expiration date, in the case of an American option.

Type: [LocalMktTime](#)

Used in components: [LegOptionExerciseDates](#)

180.2.1780 LegOptionExerciseExpiration

The LegOptionExerciseExpiration component is a subcomponent of the LegOptionExercise component used to specify option exercise expiration dates and times. The purpose of LegOptionExercise is to identify the scheduled opportunities for exercise. LegOptionExerciseExpiration identifies the end of the schedule.

Name	Mult.	Type	Description
LegOptionExerciseExpirationDateBusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the LegDateAdjustment component in InstrumentLeg. The specified values would be specific to the option exercise expiration date.
LegOptionExerciseExpirationDateBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the LegDateAdjustment component in InstrumentLeg. The specified values would be specific to the option exercise expiration date.
LegOptionExerciseExpirationDateGrp	[0..*]	Group	

Name	Mult.	Type	Description
LegOptionExerciseExpirationDateRelativeTo	[0..1]	int	
LegOptionExerciseExpirationDateOffsetPeriod	[0..1]	int	Conditionally required when LegOptionExerciseExpirationDateOffsetUnit(41520) is specified.
LegOptionExerciseExpirationDateOffsetUnit	[0..1]	CodeSet	Conditionally required when LegOptionExerciseExpirationDateOffsetPeriod(41519) is specified.
LegOptionExerciseExpirationFrequencyPeriod	[0..1]	int	Conditionally required when LegOptionExerciseExpirationFrequencyUnit(41522) is specified.
LegOptionExerciseExpirationFrequencyUnit	[0..1]	CodeSet	Conditionally required when LegOptionExerciseExpirationFrequencyPeriod(41521) is specified.
LegOptionExerciseExpirationRollConvention	[0..1]	CodeSet	When specified, this overrides the date roll convention defined in the LegDateAdjustment component in InstrumentLeg. The specified values would be specific to this instance of the option expiration date.
LegOptionExerciseExpirationDateOffsetDayType	[0..1]	CodeSet	
LegOptionExerciseExpirationTime	[0..1]	LocalMktTime	
LegOptionExerciseExpirationTimeBusinessCenter	[0..1]	String	

Used in components: **LegOptionExercise**

180.2.1781 LegOptionExerciseExpirationDate

The adjusted or unadjusted option exercise expiration fixed date.

Type: **LocalMktDate**

Used in groups: **LegOptionExerciseExpirationDateGrp**

180.2.1782 LegOptionExerciseExpirationDateBusinessCenter

The business center calendar used to adjust the option exercise expiration dates, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **LegOptionExerciseExpirationDateBusinessCenterGrp**

180.2.1783 LegOptionExerciseExpirationDateBusinessCenterGrp

LegOptionExerciseExpirationDateBusinessCenterGrp is a repeating subcomponent of the LegOptionExerciseExpiration component used to specify the set of business centers whose calendars drive date adjustment. Used only to override the business centers defined in the LegDateAdjustment component in InstrumentLeg.

Name	Mult.	Type	Description
NoLegOptionExerciseExpirationDateBusinessCenters	[1..1]	NumInGroup	
LegOptionExerciseExpirationDateBusinessCenter	[0..1]	String	Required if NoLegOptionExerciseExpirationDateBusinessCenters(41515) > 0.

Used in components: [LegOptionExerciseExpiration](#)

180.2.1784 LegOptionExerciseExpirationDateBusinessDayConvention

The business day convention used to adjust the option exercise expiration dates. Used only to override the business day convention specified in the LegDateAdjustment component within the InstrumentLeg component.

Type: [int](#)

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [LegOptionExerciseExpiration](#)

180.2.1785 LegOptionExerciseExpirationDateGrp

The LegOptionExerciseExpirationDateGrp is a repeating subcomponent of the LegOptionExerciseExpiration component used to specify fixed dates for expiration.

Name	Mult.	Type	Description
NoLegOptionExerciseExpirationDates	[1..1]	NumInGroup	
LegOptionExerciseExpirationDate	[0..1]	LocalMktDate	Required if NoLegOptionExerciseExpirationDates(41527) > 0.
LegOptionExerciseExpirationDateType	[0..1]	CodeSet	When specified it applies not only to the current date but to all subsequent dates in the group until overridden with a new type.

Used in components: [LegOptionExerciseExpiration](#)

180.2.1786 LegOptionExerciseExpirationDateOffsetDayType

Specifies the day type of the relative option exercise expiration date offset.

Type: [int](#)

Allowed values in ComplexEventDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: [LegOptionExerciseExpiration](#)

180.2.1787 LegOptionExerciseExpirationDateOffsetPeriod

Time unit multiplier for the relative exercise expiration date offset.

Type: [int](#)

Used in components: [LegOptionExerciseExpiration](#)

180.2.1788 LegOptionExerciseExpirationDateOffsetUnit

Time unit associated with the relative exercise expiration date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: **LegOptionExerciseExpiration**

180.2.1789 LegOptionExerciseExpirationDateRelativeTo

Specifies the anchor date when the option exercise expiration date is relative to an anchor date.

See http://www.fixtradingcommunity.org/codelists#Relative_To_Date for values.

Type: **int**

Used in components: **LegOptionExerciseExpiration**

180.2.1790 LegOptionExerciseExpirationDateType

Specifies the type of option exercise expiration date. When specified it applies not only to the current date but to all subsequent dates in the group until overridden with a new type.

Type: **int**

Allowed values in OptionExerciseDateTypeCodeSet:

Code	Name	Description
0	Unadjusted	Unadjusted
1	Adjusted	Adjusted

Used in groups: **LegOptionExerciseExpirationDateGrp**

180.2.1791 LegOptionExerciseExpirationFrequencyPeriod

Time unit multiplier for the frequency of exercise expiration dates.

Type: **int**

Used in components: **LegOptionExerciseExpiration**

180.2.1792 LegOptionExerciseExpirationFrequencyUnit

Time unit associated with the frequency of exercise expiration dates.

Type: **String**

Allowed values in ProtectionTermEventUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: **LegOptionExerciseExpiration**

180.2.1793 LegOptionExerciseExpirationRollConvention

The convention for determining the sequence of exercise expiration dates. It is used in conjunction with a specified frequency. Used only to override the roll convention defined in the LegDateAdjustment component in InstrumentLeg.

Type: **String**

Allowed values in DateRollConventionCodeSet:

Code	Name	Description
1	FirstDay	1st day of the month
2	SecondDay	2nd day of the month
3	ThirdDay	3rd day of the month
4	FourthDay	4th day of the month
5	FifthDay	5th day of the month

Code	Name	Description
6	SixthDay	6thd day of the month
7	SeventhDay	7th day of the month
8	EighthDay	8th day of the month
9	NinthDay	9th day of the month
10	TenthDay	10th day of the month
11	EleventhDay	11th day of the month
12	TwelvthDay	12th day of the month
13	ThirteenthDay	13th day of the month
14	ForteenthDay	14th day of the month
15	FifteenthDay	15th day of the month
16	SixteenthDay	16th day of the month
17	SeventeenthDay	17th day of the month
18	EighteenthDay	18th day of the month
19	NineteenthDay	19th day of the month
20	TwentiethDay	20th day of the month
21	TwentyFirstDay	21st day of the month
22	TwentySecondDay	22nd day of the month
23	TwentyThirdDay	23rd day of the month
24	TwentyFourthDay	24th day of the month
25	TwentyFifthDay	25th day of the month
26	TwentySixthDay	26th day of the month
27	TwentySeventhDay	27th day of the month
28	TwentyEigthDa28y	28th day of the month
29	TwentyNinthDay	29th day of the month
30	ThirtiethDay	30th day of the month
EOM	EOM	The end of the month. Use EOM for 31st day of the month.
FRN	FRN	The floating rate note convention or Eurodollar convention.
IMM	IMM	The International Money Market settlement date, i.e. the 3rd Wednesday of the month.
IMMCAD	IMMCAD	The last trading day/expiration day of the Canadian Derivatives Exchange.
IMMAUD	IMMAUD	The last trading day of the Sydney Futures Exchange Australian 90-day bank accepted bill futures contract.
IMMNZD	IMMNZD	The last trading day of the Sydney Futures Exchange New Zealand 90-day bank bill futures contract.

Code	Name	Description
SFE	SFE	The Sydney Futures Exchange 90-day bank accepted bill futures settlement dates.
NONE	NONE	No adjustment
TBILL	TBILL	The 13-week and 26-week U.S. Treasury Bill auction dates.
MON	MON	Monday
TUE	TUE	Tuesday
WED	WED	Wednesday
THU	THU	Thursday
FRI	FRI	Friday
SAT	SAT	Saturday
SUN	SUN	Sunday

Used in components: [LegOptionExerciseExpiration](#)

180.2.1794 LegOptionExerciseExpirationTime

The option exercise expiration time.

Type: [LocalMktTime](#)

Used in components: [LegOptionExerciseExpiration](#)

180.2.1795 LegOptionExerciseExpirationTimeBusinessCenter

The business center used to determine the locale for option exercise expiration time, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in components: [LegOptionExerciseExpiration](#)

180.2.1796 LegOptionExerciseFirstDateUnadjusted

The unadjusted first exercise date.

Type: [LocalMktDate](#)

Used in components: [LegOptionExerciseDates](#)

180.2.1797 LegOptionExerciseFrequencyPeriod

Time unit multiplier for the frequency of exercise dates.

Type: **int**

Used in components: **LegOptionExerciseDates**

180.2.1798 LegOptionExerciseFrequencyUnit

Time unit associated with the frequency of exercise dates.

Type: **String**

Allowed values in ProtectionTermEventUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: **LegOptionExerciseDates**

180.2.1799 LegOptionExerciseLastDateUnadjusted

The unadjusted last exercise date.

Type: **LocalMktDate**

Used in components: **LegOptionExerciseDates**

180.2.1800 LegOptionExerciseLatestTime

The latest exercise time. See also LegOptionExerciseEarliestTime(41509).

Type: **LocalMktTime**

Used in components: **LegOptionExerciseDates**

180.2.1801 LegOptionExerciseMakeWholeProvision

LegOptionExerciseMakeWholeProvision is a subcomponent of the LegOptionExercise component used to specify the set of rules of maintaining balance when an option is exercised.

Name	Mult.	Type	Description
LegMakeWholeDate	[0..1]	LocalMktDate	
LegMakeWholeAmount	[0..1]	Amt	
LegMakeWholeBenchmarkCurveName	[0..1]	String	
LegMakeWholeBenchmarkCurvePoint	[0..1]	String	
LegMakeWholeRecallSpread	[0..1]	PriceOffset	
LegMakeWholeBenchmarkQuote	[0..1]	CodeSet	
LegMakeWholeInterpolationMethod	[0..1]	CodeSet	

Used in components: [LegOptionExercise](#)

180.2.1802 LegOptionExerciseNominationDeadline

The last date (adjusted) for establishing the option exercise terms.

Type: [LocalMktDate](#)

Used in components: [LegOptionExerciseDates](#)

180.2.1803 LegOptionExerciseSkip

The number of periods in the referenced date schedule that are between each date in the relative date schedule. Thus a skip of 2 would mean that dates are relative to every second date in the referenced schedule. If present this should have a value greater than 1.

Type: [int](#)

Used in components: [LegOptionExerciseDates](#)

180.2.1804 LegOptionExerciseStartDateAdjusted

The adjusted start date for calculating periodic exercise dates.

Type: [LocalMktDate](#)

Used in components: [LegOptionExerciseDates](#)

180.2.1805 LegOptionExerciseStartDateOffsetDayType

Specifies the day type of the relative option exercise start date offset.

Type: **int**

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: **LegOptionExerciseDates**

180.2.1806 LegOptionExerciseStartDateOffsetPeriod

Time unit multiplier for the relative exercise start date offset.

Type: **int**

Used in components: **LegOptionExerciseDates**

180.2.1807 LegOptionExerciseStartDateOffsetUnit

Time unit associated with the relative exercise start date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: **LegOptionExerciseDates**

180.2.1808 LegOptionExerciseStartDateRelativeTo

Specifies the anchor date when the option exercise start date is relative to an anchor date.

See http://www.fixtradingcommunity.org/codelists#Relative_To_Date for values.

Type: **int**

Used in components: **LegOptionExerciseDates**

180.2.1809 LegOptionExerciseStartDateUnadjusted

The unadjusted start date for calculating periodic exercise dates.

Type: **LocalMktDate**

Used in components: **LegOptionExerciseDates**

180.2.1810 LegOptionExerciseTimeBusinessCenter

The business center used to determine the locale for option exercise time, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in components: **LegOptionExerciseDates**

180.2.1811 LegOptionExpirationDesc

Description of the option expiration.

Type: **String**

Used in components: **InstrumentLeg**

180.2.1812 LegOptionRatio

Expresses the risk of an option leg

Value must be between -1 and 1.

A Call Option will require a ratio value between 0 and 1

A Put Option will require a ratio value between -1 and 0

Type: **float**

Used in components: **InstrumentLeg**

180.2.1813 LegOptionsExchangeDividendsIndicator

Indicates whether option exchange dividends are applicable.

Type: **Boolean**

Used in components: **LegDividendConditions**

180.2.1814 LegOptPayoutAmount

Cash amount indicating the pay out associated with an option. For binary options this is a fixed amount.

Type: **Amt**

Used in components: **InstrumentLeg**

180.2.1815 LegOptPayoutType

Indicates the type of valuation method or trigger payout for an in-the-money option.

Type: **int**

Allowed values in OptPayoutTypeCodeSet:

Code	Name	Description
1	Vanilla	Vanilla
2	Capped	Capped
3	Binary	Digital (Binary)
4	Asian	Asian
5	Barrier	Barrier
6	DigitalBarrier	Digital Barrier
7	Lookback	Lookback
8	OtherPathDependent	Other path dependent
99	Other	Other

Used in components: **InstrumentLeg**

180.2.1816 LegOrderQty

Quantity ordered of this leg.

See OrderQty (38) for description and valid values

Type: Qty

Used in groups: InstrmtLegExecGrp, LegOrdGrp, LegQuotGrp, LegQuotStatGrp, QuotReqLegsGrp, SideCrossLegGrp, TrdInstrmtLegExecGrp, TrdInstrmtLegGrp

180.2.1817 LegOrdGrp

Name	Mult.	Type	Description
NoLegs	[1..1]	NumInGroup	
InstrumentLeg	[0..1]	Component	Required if NoLegs(555) > 0.
LegOrderQty	[0..1]	Qty	Quantity ordered for this leg as provided during order entry.
LegQty	[0..1]	Qty	The LegQty(687) field is deprecated. The use of LegOrderQty(685) is recommended instead.
LegSwapType	[0..1]	CodeSet	Instead of LegOrderQty(685) requests that the sellside calculate LegOrderQty(685) based on opposite Leg.
LegStipulations	[0..*]	Group	
LegAllocID	[0..1]	String	
LegPreAllocGrp	[0..*]	Group	
LegAccount	[0..1]	String	
LegClearingAccountType	[0..1]	CodeSet	Provide if different from the value specified for the overall multileg security in ClearingAccountType(1816) in the Instrument component.
LegPositionEffect	[0..1]	CodeSet	Provide if different from the value specified for the overall multileg security in PositionEffect(77) in the Instrument component.
LegCoveredOrUncovered	[0..1]	CodeSet	Provide if different from the value specified for the overall multileg security in CoveredOrUncovered(203) in the Instrument component
NestedParties	[0..*]	Group	

Name	Mult.	Type	Description
LegRefID	[0..1]	String	Use of LegRefID(654) in this component is deprecated. Recommend the use of LegID(1788) in the InstrumentLeg component.
LegSettlType	[0..1]	CodeSet	
LegSettlDate	[0..1]	LocalMktDate	
LegSettlCurrency	[0..1]	Currency	
LegSettlCurrencyCodeSource	[0..1]	CodeSet	
LegVolatility	[0..1]	float	
LegDividendYield	[0..1]	Percentage	
LegCurrencyRatio	[0..1]	float	
LegExecInst	[0..1]	CodeSet	
LegShortSaleExemptionReason	[0..1]	CodeSet	Available for optional use when LegSide(624) = 6 (Sell short exempt) in InstrumentLeg component.

Used in messages: [MultilegOrderCancelReplace](#), [NewOrderMultileg](#), [PartyRiskLimitCheckRequest](#), [PartyRiskLimitCheckRequestAck](#)

180.2.1818 LegOriginalNotionalPercentageOutstanding

Used to reflect the Original value prior to the application of a credit event. See LegNotionalPercentageOutstanding(2151).

Type: [Percentage](#)

Used in components: [InstrumentLeg](#)

180.2.1819 LegPaymentScheduleCurrency

The currency for this step schedule. Uses ISO 4217 currency codes.

Type: [Currency](#)

Used in groups: [LegPaymentScheduleGrp](#)

180.2.1820 LegPaymentScheduleEndDateUnadjusted

The unadjusted end date of a cashflow payment.

Type: **LocalMktDate**

Used in groups: **LegPaymentScheduleGrp**

180.2.1821 LegPaymentScheduleFixedAmount

The explicit payment amount for this step schedule.

Type: **Amt**

Used in groups: **LegPaymentScheduleGrp**

180.2.1822 LegPaymentScheduleFixedCurrency

The currency of the fixed amount. Uses ISO 4217 currency codes.

Type: **Currency**

Used in groups: **LegPaymentScheduleGrp**

180.2.1823 LegPaymentScheduleFixingDateAdjusted

The adjusted fixing date.

Type: **LocalMktDate**

Used in groups: **LegPaymentScheduleGrp**

180.2.1824 LegPaymentScheduleFixingDateBusinessCenter

The business center calendar used to adjust the payment schedule's fixing date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **LegPaymentScheduleFixingDateBusinessCenterGrp**

180.2.1825 LegPaymentScheduleFixingDateBusinessCenterGrp

LegPaymentScheduleFixingDateBusinessCenterGrp is a repeating subcomponent within the **LegPaymentScheduleGrp** component. It is used to specify the set of business centers whose calendars drive

the date adjustment. Used only to override the business centers defined in the LegDateAdjustment component in InstrumentLeg.

Name	Mult.	Type	Description
NoLegPaymentScheduleFixingDate-BusinessCenters	[1..1]	NumInGroup	
LegPaymentScheduleFixingDateBusinessCenter	[0..1]	String	Required if NoLegPaymentScheduleFixingDate-BusinessCenters(40927) > 0.

Used in groups: [LegPaymentScheduleGrp](#)

180.2.1826 LegPaymentScheduleFixingDateBusinessDayConvention

The business day convention used to adjust the payment schedule's fixing date. Used only to override the business day convention specified in the LegDateAdjustment component within the InstrumentLeg component.

Type: [int](#)

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in groups: [LegPaymentScheduleGrp](#)

180.2.1827 LegPaymentScheduleFixingDateOffsetDayType

Specifies the day type of the relative fixing date offset.

Type: [int](#)

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in groups: [LegPaymentScheduleGrp](#)

180.2.1828 LegPaymentScheduleFixingDateOffsetPeriod

Time unit multiplier for the relative fixing date offset.

Type: [int](#)

Used in groups: [LegPaymentScheduleGrp](#)

180.2.1829 LegPaymentScheduleFixingDateOffsetUnit

Time unit associated with the relative fixing date offset.

Type: [String](#)

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in groups: [LegPaymentScheduleGrp](#)

180.2.1830 LegPaymentScheduleFixingDateRelativeTo

Specifies the anchor date when the fixing date is relative to an anchor date.

See http://www.fixtradingcommunity.org/codelists#Relative_To_Date for values.

Type: **int**

Used in groups: **LegPaymentScheduleGrp**

180.2.1831 LegPaymentScheduleFixingDateUnadjusted

The unadjusted fixing date.

Type: **LocalMktDate**

Used in groups: **LegPaymentScheduleGrp**

180.2.1832 LegPaymentScheduleFixingDayCount

The number of days over which fixing should take place.

Type: **int**

Used in groups: **LegPaymentScheduleGrp**

180.2.1833 LegPaymentScheduleFixingDayDistribution

The distribution of fixing days.

Type: **int**

Allowed values in PaymentStreamPricingDayDistributionCodeSet:

Code	Name	Description
0	All	All
1	First	First
2	Last	Last
3	Penultimate	Penultimate

Used in groups: **LegPaymentScheduleGrp**

180.2.1834 LegPaymentScheduleFixingDayGrp

The LegPaymentScheduleFixingDayGrp is a repeating subcomponent of the LegPaymentScheduleGrp component used to detail periodic fixing days.

Name	Mult.	Type	Description
NoLegPaymentScheduleFixingDays	[1..1]	NumInGroup	
LegPaymentScheduleFixingDay-OfWeek	[0..1]	CodeSet	Required if NoLegPaymentScheduleFixingDays(41530) > 0.
LegPaymentScheduleFixingDayNumber	[0..1]	int	

Used in groups: [LegPaymentScheduleGrp](#)

180.2.1835 LegPaymentScheduleFixingDayNumber

The occurrence of the day of week on which fixing takes place.

Type: [int](#)

Used in groups: [LegPaymentScheduleFixingDayGrp](#)

180.2.1836 LegPaymentScheduleFixingDayOfWeek

The day of the week on which fixing takes place.

Type: [int](#)

Allowed values in PaymentStreamPricingDayOfWeekCodeSet:

Code	Name	Description
0	EveryDay	Every day (the default if not specified)
1	Monday	Monday
2	Tuesday	Tuesday
3	Wednesday	Wednesday
4	Thursday	Thursday
5	Friday	Friday
6	Saturday	Saturday

Code	Name	Description
7	Sunday	Sunday

Used in groups: [LegPaymentScheduleFixingDayGrp](#)

180.2.1837 LegPaymentScheduleFixingFirstObservationDateOffsetPeriod

Time unit multiplier for the relative first observation date offset.

Type: [int](#)

Used in groups: [LegPaymentScheduleGrp](#)

180.2.1838 LegPaymentScheduleFixingFirstObservationDateOffsetUnit

Time unit associated with the relative first observation date offset.

Type: [String](#)

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in groups: [LegPaymentScheduleGrp](#)

180.2.1839 LegPaymentScheduleFixingLagPeriod

Time unit multiplier for the fixing lag duration.

Type: [int](#)

Used in groups: [LegPaymentScheduleGrp](#)

180.2.1840 LegPaymentScheduleFixingLagUnit

Time unit associated with the fixing lag duration.

Type: **String**

Allowed values in PaymentStreamInflationLagUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in groups: **LegPaymentScheduleGrp**

180.2.1841 LegPaymentScheduleFixingTime

The fixing time associated with the step schedule.

Type: **LocalMktTime**

Used in groups: **LegPaymentScheduleGrp**

180.2.1842 LegPaymentScheduleFixingTimeBusinessCenter

Business center for determining fixing time.

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **LegPaymentScheduleGrp**

180.2.1843 LegPaymentScheduleGrp

The LegPaymentScheduleGrp is a repeating subcomponent of the LegPaymentStream component used to specify notional and rate steps in the payment stream.

Name	Mult.	Type	Description
NoLegPaymentSchedules	[1..1]	NumInGroup	
LegPaymentScheduleType	[0..1]	CodeSet	Required if NoLegPaymentSchedules(40374) > 0.
LegPaymentScheduleXID	[0..1]	XID	
LegPaymentScheduleXIDRef	[0..1]	XIDREF	
LegPaymentScheduleStubType	[0..1]	CodeSet	
LegPaymentScheduleStartDateUnadjusted	[0..1]	LocalMktDate	
LegPaymentScheduleEndDateUnadjusted	[0..1]	LocalMktDate	
LegPaymentSchedulePaySide	[0..1]	CodeSet	
LegPaymentScheduleReceiveSide	[0..1]	CodeSet	
LegPaymentScheduleNotional	[0..1]	Amt	
LegPaymentScheduleCurrency	[0..1]	Currency	
LegPaymentScheduleRate	[0..1]	Percentage	
LegPaymentScheduleRateMultiplier	[0..1]	float	
LegPaymentScheduleRateSpread	[0..1]	PriceOffset	
LegPaymentScheduleRateCurrency	[0..1]	Currency	
LegPaymentScheduleRateUnitOfMeasure	[0..1]	CodeSet	
LegPaymentScheduleRateConversionFactor	[0..1]	float	
LegPaymentScheduleRateSpreadType	[0..1]	CodeSet	
LegPaymentScheduleRateSpreadPositionType	[0..1]	CodeSet	
LegPaymentScheduleRateTreatment	[0..1]	CodeSet	
LegPaymentScheduleFixedAmount	[0..1]	Amt

LegPaymentScheduleFixingDayGrp	[0..*]	Group	
LegPaymentScheduleFixingLagPeriod	[0..1]	int	Conditionally required when LegPaymentScheduleFixingLagUnit(41546) is specified.

Name	Mult.	Type	Description
LegPaymentScheduleFixingLagUnit	[0..1]	CodeSet	Conditionally required when LegPaymentScheduleFixingLagPeriod(41545) is specified.
LegPaymentScheduleFixingFirstObservationDateOffsetPeriod	[0..1]	int	Conditionally required when LegPaymentScheduleFixingFirstObservationDateOffsetUnit(41548) is specified.
LegPaymentScheduleFixingFirstObservationDateOffsetUnit	[0..1]	CodeSet	Conditionally required when LegPaymentScheduleFixingFirstObservationDateOffsetPeriod(41547) is specified.
LegPaymentScheduleFixingTime	[0..1]	LocalMktTime	
LegPaymentScheduleFixingTimeBusinessCenter	[0..1]	String	
LegPaymentScheduleInterimExchangePaymentDateRelativeTo	[0..1]	int	
LegPaymentScheduleInterimExchangeDatesBusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the LegDateAdjustment component in InstrumentLeg. The specified value would be specific to this instance of the leg payment schedule.
LegPaymentScheduleInterimExchangeDateBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the LegDateAdjustment component in InstrumentLeg. The specified values would be specific to this instance of the leg payment schedule.
LegPaymentScheduleInterimExchangeDatesOffsetPeriod	[0..1]	int	Conditionally required when LegPaymentScheduleInterimExchangeDatesOffsetUnit(40411) is specified.
LegPaymentScheduleInterimExchangeDatesOffsetUnit	[0..1]	CodeSet	Conditionally required when LegPaymentScheduleInterimExchangeDatesOffsetPeriod(40410) is specified.
LegPaymentScheduleInterimExchangeDatesOffsetDayType	[0..1]	CodeSet	
LegPaymentScheduleInterimExchangeDateAdjusted	[0..1]	LocalMktDate	

Used in groups: **LegStreamGrp**

180.2.1844 LegPaymentScheduleInterimExchangeDateAdjusted

The adjusted interim exchange date.

Type: **LocalMktDate**

Used in groups: **LegPaymentScheduleGrp**

180.2.1845 LegPaymentScheduleInterimExchangeDateBusinessCenterGrp

LegPaymentScheduleInterimExchangeDateBusinessCenterGrp is a repeating subcomponent within the LegPaymentScheduleGrp component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the LegDateAdjustment component in InstrumentLeg.

Name	Mult.	Type	Description
NoLegPaymentScheduleInterimExchangeDateBusinessCenters	[1..1]	NumInGroup	
LegPaymentScheduleInterimExchangeDatesBusinessCenter	[0..1]	String	Required if NoLegPaymentScheduleInterimExchangeDateBusinessCenters(40928) > 0.

Used in groups: **LegPaymentScheduleGrp**

180.2.1846 LegPaymentScheduleInterimExchangeDatesBusinessCenter

The business center calendar used to adjust the payment schedule's interim exchange date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **LegPaymentScheduleInterimExchangeDateBusinessCenterGrp**

180.2.1847 LegPaymentScheduleInterimExchangeDatesBusinessDayConvention

The business day convention used to adjust the payment schedule's interim exchange date. Used only to override the business day convention specified in the LegDateAdjustment component within the InstrumentLeg component.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in groups: [LegPaymentScheduleGrp](#)

180.2.1848 LegPaymentScheduleInterimExchangeDatesOffsetDayType

Specifies the day type of the relative interim exchange date offset.

Type: [int](#)

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in groups: [LegPaymentScheduleGrp](#)

180.2.1849 LegPaymentScheduleInterimExchangeDatesOffsetPeriod

Time unit multiplier for the relative interim exchange date offset.

Type: [int](#)

Used in groups: [LegPaymentScheduleGrp](#)

180.2.1850 LegPaymentScheduleInterimExchangeDatesOffsetUnit

Time unit associated with the relative interim exchange date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in groups: **LegPaymentScheduleGrp**

180.2.1851 LegPaymentScheduleInterimExchangePaymentDateRelativeTo

Specifies the anchor date when the interim exchange payment date is relative to an anchor date.

See http://www.fixtradingcommunity.org/codelists#Relative_To_Date for values.

Type: **int**

Used in groups: **LegPaymentScheduleGrp**

180.2.1852 LegPaymentScheduleNotional

The notional value for this step schedule, or amount of a cashflow payment.

Type: **Amt**

Used in groups: **LegPaymentScheduleGrp**

180.2.1853 LegPaymentSchedulePaySide

The side of the party paying the step schedule.

Type: **int**

Allowed values in PaymentPaySideCodeSet:

Code	Name	Description
1	Buy	Buy
2	Sell	Sell

Used in groups: [LegPaymentScheduleGrp](#)

180.2.1854 LegPaymentScheduleRate

The rate value for this step schedule.

Type: [Percentage](#)

Used in groups: [LegPaymentScheduleGrp](#)

180.2.1855 LegPaymentScheduleRateConversionFactor

The number multiplied by the derived floating rate of the leg's payment schedule in order to arrive at the payment rate. If omitted, the schedule rate conversion factor is 1.

Type: [float](#)

Used in groups: [LegPaymentScheduleGrp](#)

180.2.1856 LegPaymentScheduleRateCurrency

The currency of the schedule rate. Uses ISO 4217 currency codes.

Type: [Currency](#)

Used in groups: [LegPaymentScheduleGrp](#)

180.2.1857 LegPaymentScheduleRateMultiplier

A rate multiplier to apply to the floating rate. The multiplier can be less than or greater than 1 (one). This element should only be included if the multiplier is not equal to 1 (one) for the term of the stream.

Type: [float](#)

Used in groups: [LegPaymentScheduleGrp](#)

180.2.1858 LegPaymentScheduleRateSource

Identifies the source of rate information.

Type: **int**

Allowed values in RateSourceCodeSet:

Code	Name	Description
0	Bloomberg	Bloomberg
1	Reuters	Reuters
2	Telerate	Telerate
3	ISDARateOption	ISDA Settlement Rate Option. The source of the currency conversion as specified by the ISDA terms in Annex A to the 1998 FX and Currency Option Definitions. See http://www.fpml.org/coding-scheme/settlement-rate-option
99	Other	Other

Used in groups: **LegPaymentScheduleRateSourceGrp**

180.2.1859 LegPaymentScheduleRateSourceGrp

LegPaymentScheduleRateSourceGrp is a repeating component within the LegPaymentScheduleGrp component used to identify primary and secondary rate sources.

Name	Mult.	Type	Description
NoLegPaymentScheduleRateSources	[1..1]	NumInGroup	
LegPaymentScheduleRateSource	[0..1]	CodeSet	Required if NoLegPaymentScheduleRateSources(40414) > 0.
LegPaymentScheduleRateSourceType	[0..1]	CodeSet	Required if NoLegPaymentScheduleRateSources(40414) > 0.
LegPaymentScheduleReferencePage	[0..1]	String	Conditionally required when LegPaymentScheduleRateSource(40415) = 99 (Other).

Used in groups: **LegPaymentScheduleGrp**

180.2.1860 LegPaymentScheduleRateSourceType

Rate source type.

Type: **int**

Allowed values in RateSourceTypeCodeSet:

Code	Name	Description
0	Primary	Primary
1	Secondary	Secondary

Used in groups: **LegPaymentScheduleRateSourceGrp**

180.2.1861 LegPaymentScheduleRateSpread

The spread value for this step schedule.

Type: **PriceOffset**

Used in groups: **LegPaymentScheduleGrp**

180.2.1862 LegPaymentScheduleRateSpreadPositionType

Identifies whether the rate spread is applied to a long or a short position.

Type: **int**

Allowed values in PaymentStreamRateSpreadPositionTypeCodeSet:

Code	Name	Description
0	Short	Short
1	Long	Long

Used in groups: **LegPaymentScheduleGrp**

180.2.1863 LegPaymentScheduleRateSpreadType

Identifies whether the rate spread is an absolute value to be added to the index rate or a percentage of the index rate.

Type: **int**

Allowed values in PaymentStreamRateSpreadTypeCodeSet:

Code	Name	Description
0	Absolute	Absolute
1	Percentage	Percentage

Used in groups: **LegPaymentScheduleGrp**

180.2.1864 LegPaymentScheduleRateTreatment

Specifies the yield calculation treatment for the step schedule.

Type: **int**

Allowed values in PaymentStreamRateTreatmentCodeSet:

Code	Name	Description
0	BondEquivalentYield	Bond equivalent yield
1	MoneyMarketYield	Money market yield

Used in groups: **LegPaymentScheduleGrp**

180.2.1865 LegPaymentScheduleRateUnitOfMeasure

The schedule rate unit of measure (UOM).

Type: **String**

Allowed values in UnitOfMeasureCodeSet:

Code	Name	Description
Alw	Allowances	Allowances

Code	Name	Description
Bcf	BillionCubicFeet	Billion cubic feet
Bbl	Barrels	Barrels. Equal to 42 US gallons
CBM	CubicMeters	Cubic Meters
BDFT	BoardFeet	Board feet. Equal to 144 cubic inches
GJ	Gigajoules	gigajoules
Bu	Bushels	Bushels
kHR	HeatRate	Heat rate. The number of BTUs required to produce one kilowatt hour of electricity, typically 3,412.14 BTUs per 1 kWh.
Ccy	Currency	Amount of currency
kWh	KilowattHours	Kilowatt hours
CDD	CoolingDegreeDay	Cooling degree day
MHR	MegaHeatRate	Mega heat rate. The number of million BTUs required to produce one megawatt hour of electricity, typically 3.41214 million BTUs per 1 MWh.
CER	CertifiedEmissionsReduction	Certified emissions reduction
MMBtu	OneMillionBTU	One Million BTU
CPD	CriticalPrecipDay	Critical precipitation day
MWh	MegawattHours	Megawatt hours
CRT	ClimateReserveTonnes	Climate reserve tonnes
thm	Therms	therms. Equal to 100,000 BTU
cwt	Hundredweight	Hundredweight(US). Equal to 100 lbs
tnCO2	TonsOfCarbonDioxide	Tons of carbon dioxide
day	Day	Days
dt	DryMetricTons	Dry metric tons
EnvAllwnc	EnvAllwncCert	Environmental allowance certificates
EnvCrd	EnvironmentalCredit	Environmental credit
EnvOfst	EnvironmentalOffset	Environmental Offset
g	Grams	Grams
Gal	Gallons	Gallons
GT	GrossTons	Gross tons. Also known as long tons or imperial tons, equal to 2240 lbs
HDD	HeatingDegreeDay	Heating degree day
IPNT	IndexPoint	Index point
kg	Kilograms	Kilograms
kL	Kiloliters	kiloliters

Code	Name	Description
kW-a	KilowattYear	Kilowatt year (electrical capacity)
kW-d	KilowattDay	Kilowatt day (electrical capacity)
kW-h	KilowattHour	Kilowatt hour (electrical capacity)
kW-M	KilowattMonth	Kilowatt month (electrical capacity)
kW-min	KilowattMinute	Kilowatt-Minute (electrical capacity)
L	Liters	liters
lbs	Pounds	pounds
MW-a	MegawattYear	Megawatt year (electrical capacity)
MW-d	MegawattDay	Megawatt day (electrical capacity)
MW-h	MegawattHour	Megawatt hour (electrical capacity)
MW-M	MegawattMonth	Megawatt month (electrical capacity)
MW-min	MegawattMinute	Megawatt minute (electrical capacity)
oz_tr	TroyOunces	Troy ounces
PRINC	PrincipalWithRelationToDebtInstrument	Principal with relation to debt instrument
t	MetricTons	Metric tons. Also known as Tonnes, equal to 1000 kg
tn	Tons	Tons (US). Equal to 2000 lbs
a	Are	Are
ac	Acre	Acre
cL	Centiliter	Centiliter
cM	Centimeter	Centimeter
DGE	DieselGallonEquivalent	Diesel gallon equivalent
ft	Foot	Foot
Gal_gb	GBGallon	GB Gallon
GGE	GasolineGallonEquivalent	Gasonline gallon equivalent
ha	Hectare	Hectare
in	Inch	Inch
kM	Kilometer	Kilometer
M	Meter	Meter
mi	Mile	Mile
mL	Milliliter	Milliliter
mM	Millimeter	Millimeter
oz	USOunce	US ounce
pc	Piece	Piece

Code	Name	Description
pt	USPint	US Pint
pt_gb	GBPint	GB pint
qt	USQuart	US Quart
qt_gb	GBQuart	GB Quart
SqcM	SquareCentimeter	Square centimeter
Sqft	SquareFoot	Square foot
Sqin	SquareInch	Square inch
SqkM	SquareKilometer	Square kilometer
SqM	SquareMeter	Square meter
Sqmi	SquareMile	Square mile
SqmM	SquareMillimeter	Square millimeter
Sqyd	SquareYard	Square yard
yd	Yard	Yard
MMbbl	MillionBarrels	Million Barrels
USD	USDollars	US Dollars

Used in groups: [LegPaymentScheduleGrp](#)

180.2.1866 LegPaymentScheduleReceiveSide

The side of the party receiving the step schedule.

Type: [int](#)

Allowed values in PaymentPaySideCodeSet:

Code	Name	Description
1	Buy	Buy
2	Sell	Sell

Used in groups: [LegPaymentScheduleGrp](#)

180.2.1867 LegPaymentScheduleReferencePage

Identifies the reference "page" from the rate source.

For FX, the reference page to the spot rate to be used for the reference FX spot rate.

When RateSource(1446) = 3 (ISDA Settlement Rate Option) this contains the value from the scheme that reflects the terms of the Annex A to the ISDA 1998 FX and Currency Option Definitions. See: <http://www.fpml.org/coding-scheme/settlement-rate-option>

Type: **String**

Used in groups: **LegPaymentScheduleRateSourceGrp**

180.2.1868 LegPaymentScheduleSettlPeriodPrice

The schedule settlement period price.

Type: **Price**

Used in groups: **LegPaymentScheduleGrp**

180.2.1869 LegPaymentScheduleSettlPeriodPriceCurrency

The currency of the schedule settlement period price. Uses ISO 4217 currency codes.

Type: **Currency**

Used in groups: **LegPaymentScheduleGrp**

180.2.1870 LegPaymentScheduleSettlPeriodPriceUnitOfMeasure

The settlement period price unit of measure (UOM).

Type: **String**

Allowed values in UnitOfMeasureCodeSet:

Code	Name	Description
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet
Bbl	Barrels	Barrels. Equal to 42 US gallons
CBM	CubicMeters	Cubic Meters

Used in groups: [LegPaymentScheduleGrp](#)

180.2.1871 LegPaymentScheduleStartDateUnadjusted

The unadjusted date on which the value is adjusted, or calculated if a future value notional for certain non-deliverable interest rate swaps (e.g. Brazillian Real (BRL) vs. CETIP Interbank Deposit Rate (CDI)), or the start date of a cashflow payment.

Type: [LocalMktDate](#)

Used in groups: [LegPaymentScheduleGrp](#)

180.2.1872 LegPaymentScheduleStepFrequencyPeriod

Time unit multiplier for the step frequency.

Type: [int](#)

Used in groups: [LegPaymentScheduleGrp](#)

180.2.1873 LegPaymentScheduleStepFrequencyUnit

Time unit associated with the step frequency.

Type: [String](#)

Allowed values in CouponFrequencyUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year
H	Hour	Hour
Min	Minute	Minute
S	Second	Second
T	Term	Term

Used in groups: [LegPaymentScheduleGrp](#)

180.2.1874 LegPaymentScheduleStepOffsetRate

The explicit amount that the rate changes on each step date. This can be a positive or negative value.

Type: [Percentage](#)

Used in groups: [LegPaymentScheduleGrp](#)

180.2.1875 LegPaymentScheduleStepOffsetValue

The explicit amount that the notional changes on each step date. This can be a positive or negative amount.

Type: [Amt](#)

Used in groups: [LegPaymentScheduleGrp](#)

180.2.1876 LegPaymentScheduleStepRate

The percentage by which the notional changes on each step date. The percentage is either a percentage applied to the initial notional amount or the previous outstanding notional, depending on the value specified in [LegPaymentScheduleStepRelativeTo\(40395\)](#). The percentage can be either positive or negative.

Type: [Percentage](#)

Used in groups: [LegPaymentScheduleGrp](#)

180.2.1877 LegPaymentScheduleStepRelativeTo

Specifies whether the LegPaymentScheduleStepRate(40393) or LegPaymentScheduleStepOffsetValue(40392) should be applied to the initial notional or the previous notional in order to calculate the notional step change amount.

Type: **int**

Allowed values in PaymentScheduleStepRelativeToCodeSet:

Code	Name	Description
0	Initial	Initial
1	Previous	Previous

Used in groups: **LegPaymentScheduleGrp**

180.2.1878 LegPaymentScheduleStepUnitOfMeasure

The schedule step unit of measure (UOM).

Type: **String**

Allowed values in UnitOfMeasureCodeSet:

Code	Name	Description
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet
Bbl	Barrels	Barrels. Equal to 42 US gallons
CBM	CubicMeters	Cubic Meters

Used in groups: [LegPaymentScheduleGrp](#)

180.2.1879 LegPaymentScheduleStubType

Indicates to which stub this schedule applies.

Type: [int](#)

Allowed values in PaymentStubTypeCodeSet:

Code	Name	Description
0	Initial	Initial
1	Final	Final
2	CompoundingInitial	Compounding initial
3	CompoundingFinal	Compounding final

Used in groups: [LegPaymentScheduleGrp](#)

180.2.1880 LegPaymentScheduleType

Specifies the type of schedule.

Type: [int](#)

Allowed values in PaymentScheduleTypeCodeSet:

Code	Name	Description
0	Notional	Notional
1	CashFlow	Cash flow
2	FXLinkedNotional	FX linked notional
3	FixedRate	Fixed rate

Code	Name	Description
4	FutureValueNotional	Future value notional
5	KnownAmount	Known amount
6	FloatingRateMultiplier	Floating rate multiplier
7	Spread	Spread
8	CapRate	Cap rate
9	FloorRate	Floor rate
10	NonDeliverableSettlPaymentDates	Non-deliverable settlement payment dates
11	NonDeliverableSettlCalculation-Dates	Non-deliverable settlement calculation dates
12	NonDeliverableFXFixingDates	Non-deliverable fixing dates.
13	SettlPeriodNotnl	Settlement period notional
14	SettlPeriodPx	Settlement period price
15	CalcPeriod	Calculation period
16	DividendAccrualRateMultiplier	Dividend accrual rate multiplier
17	DividendAccrualRateSpread	Dividend accrual rate spread
18	DividendAccrualCapRate	Dividend accrual cap rate
19	DividendAccrualFloorRate	Dividend accrual floor rate
20	CompoundingRateMultiplier	Compounding rate multiplier
21	CompoundingRateSpread	Compounding rate spread
22	CompoundingCapRate	Compounding cap rate
23	CompoundingFloorRate	Compounding floor rate

Used in groups: [LegPaymentScheduleGrp](#)

180.2.1881 LegPaymentScheduleWeight

Floating rate observation weight for cashflow payment.

Type: [float](#)

Used in groups: [LegPaymentScheduleGrp](#)

180.2.1882 LegPaymentScheduleXID

Identifier of this LegPaymentSchedule for cross referencing elsewhere in the message.

Type: **XID**

Used in groups: **LegPaymentScheduleGrp**

180.2.1883 LegPaymentScheduleXIDRef

Reference to payment schedule elsewhere in the message.

Type: **XIDREF**

Used in groups: **LegPaymentScheduleGrp**

180.2.1884 LegPaymentStreamAccrualDays

The number of days from the adjusted calculation period start date to the adjusted value date, calculated in accordance with the applicable day count fraction.

Type: **int**

Used in components: **LegPaymentStream**

180.2.1885 LegPaymentStreamAveragingMethod

When averaging is applicable, used to specify whether a weighted or unweighted average method of calculation is to be used.

Type: **int**

Allowed values in PaymentStreamAveragingMethodCodeSet:

Code	Name	Description
0	Unweighted	Unweighted
1	Weighted	Weighted

Used in components: **LegPaymentStreamFloatingRate**

180.2.1886 LegPaymentStreamBoundsFirstDateUnadjusted

The unadjusted first date of the compounding schedule. This can be used to restrict the range of dates when they are relative.

Type: [LocalMktDate](#)

Used in components: [LegPaymentStreamCompoundingDates](#)

180.2.1887 LegPaymentStreamBoundsLastDateUnadjusted

The unadjusted last date of the compounding schedule. This can be used to restrict the range of dates when they are relative.

Type: [LocalMktDate](#)

Used in components: [LegPaymentStreamCompoundingDates](#)

180.2.1888 LegPaymentStreamCalculationLagPeriod

Time unit multiplier for the calculation lag duration.

Type: [int](#)

Used in components: [LegPaymentStreamFloatingRate](#)

180.2.1889 LegPaymentStreamCalculationLagUnit

Time unit associated with the calculation lag duration.

Type: [String](#)

Allowed values in PaymentStreamInflationLagUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: [LegPaymentStreamFloatingRate](#)

180.2.1890 LegPaymentStreamCapRate

The cap rate, if any, which applies to the floating rate. It is only required where the floating rate on a swap stream is capped at a certain level. The cap rate is assumed to be exclusive of any spread and is a per annum rate, expressed as a decimal. A cap rate of 5% would be represented as 0.05.

Type: **Percentage**

Used in components: **LegPaymentStreamFloatingRate**

180.2.1891 LegPaymentStreamCapRateBuySide

Reference to the buyer of the cap rate option through its trade side.

Type: **int**

Allowed values in PaymentStreamCapRateBuySideCodeSet:

Code	Name	Description
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

Used in components: **LegPaymentStreamFloatingRate**

180.2.1892 LegPaymentStreamCapRateSellSide

Reference to the seller of the cap rate option through its trade side.

Type: **int**

Allowed values in PaymentStreamCapRateBuySideCodeSet:

Code	Name	Description
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

Used in components: **LegPaymentStreamFloatingRate**

180.2.1893 LegPaymentStreamCashSettlIndicator

Indicates whether cash settlement is applicable.

Type: **Boolean**

Used in components: **LegPaymentStream**

180.2.1894 LegPaymentStream

The LegPaymentStream component is a subcomponent of the LegStreamGrp used to detail the attributes of a payment stream in a swap.

Name	Mult.	Type	Description
LegPaymentStreamType	[0..1]	CodeSet	
LegPaymentStreamMarketRate	[0..1]	int	
LegPaymentStreamDelayIndicator	[0..1]	Boolean	
LegPaymentStreamCashSettlIndicator	[0..1]	Boolean	
LegPaymentStreamSettlCurrency	[0..1]	Currency	
LegPaymentStreamDayCount	[0..1]	CodeSet	
LegPaymentStreamOtherDayCount	[0..1]	String	May be used to specify a count method not listed in LegPaymentStreamDayCount(40283).
LegPaymentStreamAccrualDays	[0..1]	int	
LegPaymentStreamDiscountType	[0..1]	CodeSet	
LegPaymentStreamDiscountRate	[0..1]	Percentage	
LegPaymentStreamDiscountRateDay-Count	[0..1]	CodeSet	
LegPaymentStreamCompounding-Method	[0..1]	CodeSet	
LegPaymentStreamCompoundingX-IDRef	[0..1]	XIDREF	Mutually exclusive with LegPaymentStreamCompoundingFixedRate(42404) or the LegPaymentStreamCompoundingFloatingRate component.
LegPaymentStreamCompound-ingSpread	[0..1]	PriceOffset	
LegPaymentStreamInterpolation-Method	[0..1]	CodeSet	
LegPaymentStreamInterpolationPe-riod	[0..1]	CodeSet	

Name	Mult.	Type	Description
LegPaymentStreamInitialPrincipalExchangeIndicator	[0..1]	Boolean	
LegPaymentStreamInterimPrincipalExchangeIndicator	[0..1]	Boolean	
LegPaymentStreamFinalPrincipalExchangeIndicator	[0..1]	Boolean	
LegPaymentStreamFlatRateIndicator	[0..1]	Boolean	
LegPaymentStreamFlatRateAmount	[0..1]	Amt	
LegPaymentStreamFlatRateCurrency	[0..1]	Currency	
LegStreamMaximumPaymentAmount	[0..1]	Amt	
LegStreamMaximumPaymentCurrency	[0..1]	Currency	
LegStreamMaximumTransactionAmount	[0..1]	Amt	
LegStreamMaximumTransactionCurrency	[0..1]	Currency	
LegPaymentStreamPaymentDates	[0..1]	Component	
LegPaymentStreamResetDates	[0..1]	Component	
LegPaymentStreamFixedRate	[0..1]	Component	
LegPaymentStreamFloatingRate	[0..1]	Component	
LegPaymentStreamCompoundingFixedRate	[0..1]	float	Mutually exclusive with LegPaymentStreamCompoundingXIDRef(42400) or the LegPaymentStreamCompoundingFloatingRate component.
LegPaymentStreamCompoundingFloatingRate	[0..1]	Component	Mutually exclusive with LegPaymentStreamCompoundingFixedRate(42404) or the LegPaymentStreamCompoundingXIDRef(42400).
LegPaymentStreamCompoundingDates	[0..1]	Component	
LegPaymentStreamNonDeliverableSettlementTerms	[0..1]	Component	

Used in groups: **LegStreamGrp**

180.2.1895 LegPaymentStreamCompoundingAveragingMethod

Specifies the averaging method when compounding floating rate averaging is applicable (e.g. weighted or unweighted).

Type: **int**

Allowed values in PaymentStreamAveragingMethodCodeSet:

Code	Name	Description
0	Unweighted	Unweighted
1	Weighted	Weighted

Used in components: **LegPaymentStreamCompoundingFloatingRate**

180.2.1896 LegPaymentStreamCompoundingCapRate

The cap rate, if any, which applies to the compounding floating rate. It is only required where the compounding floating rate on a swap stream is capped at a certain level. The cap rate is assumed to be exclusive of any spread and is a per annum rate, expressed as a decimal. A cap rate of 5% would be represented as "0.05".

Type: **Percentage**

Used in components: **LegPaymentStreamCompoundingFloatingRate**

180.2.1897 LegPaymentStreamCompoundingCapRateBuySide

Reference to the buyer of the compounding cap rate option through its trade side.

Type: **int**

Allowed values in PaymentStreamCapRateBuySideCodeSet:

Code	Name	Description
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

Used in components: **LegPaymentStreamCompoundingFloatingRate**

180.2.1898 LegPaymentStreamCompoundingCapRateSellSide

Reference to the seller of the compounding cap rate option through its trade side.

Type: **int**

Allowed values in PaymentStreamCapRateBuySideCodeSet:

Code	Name	Description
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

Used in components: **LegPaymentStreamCompoundingFloatingRate**

180.2.1899 LegPaymentStreamCompoundingDate

The compounding date. Type of date is specified in LegPaymentStreamCompoundingDate-Type(42407).

Type: **LocalMktDate**

Used in groups: **LegPaymentStreamCompoundingDateGrp**

180.2.1900 LegPaymentStreamCompoundingDateGrp

LegPaymentStreamCompoundingDateGrp is a subcomponent of the LegPaymentStreamCompoundingDates component used to specify predetermined compounding dates.

Name	Mult.	Type	Description
NoLegPaymentStreamCompounding-Dates	[1..1]	NumInGroup	
LegPaymentStreamCompoundingDate	[0..1]	LocalMktDate	Required if NoLegPaymentStreamCompounding-Dates(42405) > 0.
LegPaymentStreamCompounding-DateType	[0..1]	CodeSet	When specified it applies not only to the current date instance but to all subsequent date instances in the group until overridden when a new type is specified.

Used in components: **LegPaymentStreamCompoundingDates**

180.2.1901 LegPaymentStreamCompoundingDatesBusinessCenter

The business center calendar used for date adjustment of the payment stream compounding dates, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **LegPaymentStreamCompoundingDatesBusinessCenterGrp**

180.2.1902 LegPaymentStreamCompoundingDatesBusinessCenterGrp

LegPaymentStreamCompoundingDatesBusinessCenterGrp is a repeating subcomponent within the LegPaymentStreamCompoundingDates component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the LegDateAdjustment component in InstrumentLeg.

Name	Mult.	Type	Description
NoLegPaymentStreamCompounding-DatesBusinessCenters	[1..1]	NumInGroup	
LegPaymentStreamCompounding-DatesBusinessCenter	[0..1]	String	Required if NoLegPaymentStreamCompounding-DatesBusinessCenters(42419) > 0.

Used in components: **LegPaymentStreamCompoundingDates**

180.2.1903 LegPaymentStreamCompoundingDatesBusinessDayConvention

The compounding dates business day convention.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.

Code	Name	Description
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [LegPaymentStreamCompoundingDates](#)

180.2.1904 LegPaymentStreamCompoundingDates

LegPaymentStreamCompoundingDates is a subcomponent of the LegPaymentStream component used to specify the compounding dates of the stream - either specific, relative or periodic dates.

Name	Mult.	Type	Description
LegPaymentStreamCompounding-DatesBusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the LegDateAdjustment component in InstrumentLeg. The specified value would be specific to payment stream compounding dates.
LegPaymentStreamCompounding-DatesBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the LegDateAdjustment component in InstrumentLeg. The specified values would be specific to payment stream compounding dates.
LegPaymentStreamCompounding-DateGrp	[0..*]	Group	
LegPaymentStreamCompounding-DatesRelativeTo	[0..1]	int	
LegPaymentStreamCompounding-DatesOffsetPeriod	[0..1]	int	Conditionally required when LegPaymentStream-CompoundingDatesOffsetUnit(42411) is specified.
LegPaymentStreamCompounding-DatesOffsetUnit	[0..1]	CodeSet	Conditionally required when LegPaymentStream-CompoundingDatesOffsetPeriod(42410) is specified.
LegPaymentStreamCompounding-DatesOffsetDayType	[0..1]	CodeSet	
LegPaymentStreamCompoundingPeriodSkip	[0..1]	int	

Name	Mult.	Type	Description
LegPaymentStreamCompoundingStartDate	[0..1]	Component	
LegPaymentStreamCompoundingEndDate	[0..1]	Component	
LegPaymentStreamCompoundingFrequencyPeriod	[0..1]	int	Conditionally required when LegPaymentStreamCompoundingFrequencyUnit(42415) is specified.
LegPaymentStreamCompoundingFrequencyUnit	[0..1]	CodeSet	Conditionally required when LegPaymentStreamCompoundingFrequencyPeriod(42414) is specified.
LegPaymentStreamCompoundingRollConvention	[0..1]	CodeSet	When specified, this overrides the date roll convention defined in the LegDateAdjustment component in InstrumentLeg. The specified value would be specific to this instance of payment stream compounding dates.
LegPaymentStreamBoundsFirstDateUnadjusted	[0..1]	LocalMktDate	
LegPaymentStreamBoundsLastDateUnadjusted	[0..1]	LocalMktDate	

Used in components: [LegPaymentStream](#)

180.2.1905 LegPaymentStreamCompoundingDatesOffsetDayType

Specifies the day type of the relative compounding date offset.

Type: [int](#)

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: [LegPaymentStreamCompoundingDates](#)

180.2.1906 LegPaymentStreamCompoundingDatesOffsetPeriod

Time unit multiplier for the relative compounding date offset.

Type: **int**

Used in components: **LegPaymentStreamCompoundingDates**

180.2.1907 LegPaymentStreamCompoundingDatesOffsetUnit

Time unit associated with the relative compounding date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: **LegPaymentStreamCompoundingDates**

180.2.1908 LegPaymentStreamCompoundingDatesRelativeTo

Specifies the anchor date when the compounding dates are relative to an anchor date.

See http://www.fixtradingcommunity.org/codelists#Relative_To_Date for values.

Type: **int**

Used in components: **LegPaymentStreamCompoundingDates**

180.2.1909 LegPaymentStreamCompoundingDateType

Specifies the type of payment compounding date (e.g. adjusted for holidays).

Type: **int**

Allowed values in NonDeliverableFixingDateTypeCodeSet:

Code	Name	Description
0	Unadjusted	Unadjusted
1	Adjusted	Adjusted

Used in groups: [LegPaymentStreamCompoundingDateGrp](#)

180.2.1910 LegPaymentStreamCompoundingEndDateAdjusted

The adjusted compounding end date.

Type: [LocalMktDate](#)

Used in components: [LegPaymentStreamCompoundingEndDate](#)

180.2.1911 LegPaymentStreamCompoundingEndDate

LegPaymentStreamCompoundingEndDate is a subcomponent of the LegPaymentStreamCompoundingDates component used to specify the end date for compounding.

Name	Mult.	Type	Description
LegPaymentStreamCompoundingEndDateUnadjusted	[0..1]	LocalMktDate	
LegPaymentStreamCompoundingEndDateRelativeTo	[0..1]	int	
LegPaymentStreamCompoundingEndDateOffsetPeriod	[0..1]	int	Conditionally required when LegPaymentStreamCompoundingEndDateOffsetUnit(42424) is specified.
LegPaymentStreamCompoundingEndDateOffsetUnit	[0..1]	CodeSet	Conditionally required when LegPaymentStreamCompoundingEndDateOffsetPeriod(42423) is specified.
LegPaymentStreamCompoundingEndDateOffsetDayType	[0..1]	CodeSet	
LegPaymentStreamCompoundingEndDateAdjusted	[0..1]	LocalMktDate	

Used in components: [LegPaymentStreamCompoundingDates](#)

180.2.1912 LegPaymentStreamCompoundingEndDateOffsetDayType

Specifies the day type of the relative compounding end date offset.

Type: **int**

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: **LegPaymentStreamCompoundingEndDate**

180.2.1913 LegPaymentStreamCompoundingEndDateOffsetPeriod

Time unit multiplier for the relative compounding end date offset.

Type: **int**

Used in components: **LegPaymentStreamCompoundingEndDate**

180.2.1914 LegPaymentStreamCompoundingEndDateOffsetUnit

Time unit associated with the relative compounding end date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: **LegPaymentStreamCompoundingEndDate**

180.2.1915 LegPaymentStreamCompoundingEndDateRelativeTo

Specifies the anchor date when the compounding end date is relative to an anchor date.

See http://www.fixtradingcommunity.org/codelists#Relative_To_Date for values.

Type: **int**

Used in components: **LegPaymentStreamCompoundingEndDate**

180.2.1916 LegPaymentStreamCompoundingEndDateUnadjusted

The unadjusted compounding end date.

Type: **LocalMktDate**

Used in components: **LegPaymentStreamCompoundingEndDate**

180.2.1917 LegPaymentStreamCompoundingFinalRatePrecision

Specifies the compounding floating rate rounding precision in terms of a number of decimal places. Note how a percentage rate rounding of 5 decimal places is expressed as a rounding precision of 7.

Type: **int**

Used in components: **LegPaymentStreamCompoundingFloatingRate**

180.2.1918 LegPaymentStreamCompoundingFinalRateRoundingDirection

Specifies the rounding direction for the compounding floating rate.

Type: **char**

Allowed values in RoundingDirectionCodeSet:

Code	Name	Description
0	RoundToNearest	Round to nearest
1	RoundDown	Round down
2	RoundUp	Round up

Used in components: **LegPaymentStreamCompoundingFloatingRate**

180.2.1919 LegPaymentStreamCompoundingFixedRate

The compounding fixed rate applicable to the payment stream.

Type: **float**

Used in components: **LegPaymentStream**

180.2.1920 LegPaymentStreamCompoundingFloatingRate

LegPaymentStreamCompoundingFloatingRate is a subcomponent of the LegPaymentStream component used to report the parameters for determining the compounding floating rate of the stream.

Name	Mult.	Type	Description
LegPaymentStreamCompoundingRateIndex	[0..1]	String	
LegPaymentStreamCompoundingRateIndexCurvePeriod	[0..1]	int	Conditionally required if LegPaymentStreamCompoundingRateIndexCurveUnit(42429) is specified.
LegPaymentStreamCompoundingRateIndexCurveUnit	[0..1]	CodeSet	Conditionally required if LegPaymentStreamCompoundingRateIndexCurvePeriod(42428) is specified.
LegPaymentStreamCompoundingRateMultiplier	[0..1]	float	
LegPaymentStreamCompoundingRateSpread	[0..1]	PriceOffset	
LegPaymentStreamCompoundingRateSpreadPositionType	[0..1]	CodeSet	
LegPaymentStreamCompoundingRateTreatment	[0..1]	CodeSet	
LegPaymentStreamCompoundingCapRate	[0..1]	Percentage	
LegPaymentStreamCompoundingCapRateBuySide	[0..1]	CodeSet	
LegPaymentStreamCompoundingCapRateSellSide	[0..1]	CodeSet	
LegPaymentStreamCompoundingFloorRate	[0..1]	Percentage	
LegPaymentStreamCompoundingFloorRateBuySide	[0..1]	CodeSet	
LegPaymentStreamCompoundingFloorRateSellSide	[0..1]	CodeSet	

Name	Mult.	Type	Description
LegPaymentStreamCompoundingInitialRate	[0..1]	Percentage	
LegPaymentStreamCompoundingFinalRateRoundingDirection	[0..1]	CodeSet	
LegPaymentStreamCompoundingFinalRatePrecision	[0..1]	int	
LegPaymentStreamCompoundingAveragingMethod	[0..1]	CodeSet	
LegPaymentStreamCompoundingNegativeRateTreatment	[0..1]	CodeSet	

Used in components: [LegPaymentStream](#)

180.2.1921 LegPaymentStreamCompoundingFloorRate

The floor rate, if any, which applies to the compounding floating rate. The floor rate (strike) is only required where the compounding floating rate on a swap stream is floored at a certain strike level. The floor rate is assumed to be exclusive of any spread and is a per annum rate. The rate is expressed as a decimal, e.g. 5% is represented as "0.05".

Type: [Percentage](#)

Used in components: [LegPaymentStreamCompoundingFloatingRate](#)

180.2.1922 LegPaymentStreamCompoundingFloorRateBuySide

Reference to the buyer of the compounding floor rate option through its trade side.

Type: [int](#)

Allowed values in PaymentStreamFloorRateBuySideCodeSet:

Code	Name	Description
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

Used in components: [LegPaymentStreamCompoundingFloatingRate](#)

180.2.1923 LegPaymentStreamCompoundingFloorRateSellSide

Reference to the seller of the floor rate option through its trade side.

Type: **int**

Allowed values in PaymentStreamFloorRateBuySideCodeSet:

Code	Name	Description
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

Used in components: **LegPaymentStreamCompoundingFloatingRate**

180.2.1924 LegPaymentStreamCompoundingFrequencyPeriod

Time unit multiplier for the frequency at which compounding dates occur.

Type: **int**

Used in components: **LegPaymentStreamCompoundingDates**

180.2.1925 LegPaymentStreamCompoundingFrequencyUnit

Time unit associated with the frequency at which compounding dates occur.

Type: **String**

Allowed values in CouponFrequencyUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year
H	Hour	Hour
Min	Minute	Minute
S	Second	Second
T	Term	Term

Used in components: **LegPaymentStreamCompoundingDates**

180.2.1926 LegPaymentStreamCompoundingInitialRate

The initial compounding floating rate reset agreed between the principal parties involved in the trade. It should only be included when the rate is not equal to the rate published on the source implied by the floating rate index. The initial rate is expressed in decimal form, e.g. 5% is represented as "0.05".

Type: **Percentage**

Used in components: **LegPaymentStreamCompoundingFloatingRate**

180.2.1927 LegPaymentStreamCompoundingMethod

Compounding method.

Type: **int**

Allowed values in PaymentStreamCompoundingMethodCodeSet:

Code	Name	Description
0	None	None
1	Flat	Flat
2	Straight	Straight
3	SpreadExclusive	Spread exclusive

Used in components: **LegPaymentStream**

180.2.1928 LegPaymentStreamCompoundingNegativeRateTreatment

Specifies the method for calculating payment obligations when a compounding floating rate is negative (either due to a quoted negative floating rate or by operation of a spread that is subtracted from the floating rate).

Type: **int**

Allowed values in PaymentStreamNegativeRateTreatmentCodeSet:

Code	Name	Description
0	ZeroInterestRateMethod	Zero interest rate method
1	NegativeInterestRateMethod	Negative interest rate method

Used in components: **LegPaymentStreamCompoundingFloatingRate**

180.2.1929 LegPaymentStreamCompoundingPeriodSkip

The number of periods in the "RelativeTo" schedule that are between each date in the compounding schedule. A skip of 2 would mean that compounding dates are relative to every second date in the "RelativeTo" schedule. If present this should have a value greater than 1.

Type: **int**

Used in components: **LegPaymentStreamCompoundingDates**

180.2.1930 LegPaymentStreamCompoundingRateIndex

The payment stream's compounding floating rate index.

Type: **String**

Used in components: **LegPaymentStreamCompoundingFloatingRate**

180.2.1931 LegPaymentStreamCompoundingRateIndexCurvePeriod

Time unit multiplier for the payment stream's compounding floating rate index curve period.

Type: **int**

Used in components: **LegPaymentStreamCompoundingFloatingRate**

180.2.1932 LegPaymentStreamCompoundingRateIndexCurveUnit

Time unit associated with the payment stream's compounding floating rate index curve period.

Type: **String**

Allowed values in PaymentStreamRateIndexCurveUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: **LegPaymentStreamCompoundingFloatingRate**

180.2.1933 LegPaymentStreamCompoundingRateMultiplier

A rate multiplier to apply to the compounding floating rate. The multiplier can be less than or greater than 1 (one). This should only be included if the multiplier is not equal to 1 (one) for the term of the stream.

Type: **float**

Used in components: **LegPaymentStreamCompoundingFloatingRate**

180.2.1934 LegPaymentStreamCompoundingRateSpread

The basis points spread from the index specified in LegPaymentStreamCompoundingRateIndex(42427).

Type: **PriceOffset**

Used in components: **LegPaymentStreamCompoundingFloatingRate**

180.2.1935 LegPaymentStreamCompoundingRateSpreadPositionType

Identifies whether the rate spread is applied to a long or short position.

Type: **int**

Allowed values in PaymentStreamRateSpreadPositionTypeCodeSet:

Code	Name	Description
0	Short	Short
1	Long	Long

Used in components: **LegPaymentStreamCompoundingFloatingRate**

180.2.1936 LegPaymentStreamCompoundingRateTreatment

Specifies the yield calculation treatment for the index.

Type: **int**

Allowed values in PaymentStreamRateTreatmentCodeSet:

Code	Name	Description
0	BondEquivalentYield	Bond equivalent yield
1	MoneyMarketYield	Money market yield

Used in components: [LegPaymentStreamCompoundingFloatingRate](#)

180.2.1937 LegPaymentStreamCompoundingRollConvention

The convention for determining the sequence of compounding dates. It is used in conjunction with a specified frequency.

Type: [String](#)

Allowed values in DateRollConventionCodeSet:

Code	Name	Description
1	FirstDay	1st day of the month
2	SecondDay	2nd day of the month
3	ThirdDay	3rd day of the month
4	FourthDay	4th day of the month
5	FifthDay	5th day of the month
6	SixthDay	6th day of the month
7	SeventhDay	7th day of the month
8	EighthDay	8th day of the month
9	NinthDay	9th day of the month
10	TenthDay	10th day of the month
11	EleventhDay	11th day of the month
12	TwelfthDay	12th day of the month
13	ThirteenthDay	13th day of the month
14	FourteenthDay	14th day of the month
15	FifteenthDay	15th day of the month
16	SixteenthDay	16th day of the month
17	SeventeenthDay	17th day of the month
18	EighteenthDay	18th day of the month
19	NineteenthDay	19th day of the month
20	TwentiethDay	20th day of the month

Code	Name	Description
21	TwentyFirstDay	21st day of the month
22	TwentySecondDay	22nd day of the month
23	TwentyThirdDay	23rd day of the month
24	TwentyFourthDay	24th day of the month
25	TwentyFifthDay	25th day of the month
26	TwentySixthDay	26th day of the month
27	TwentySeventhDay	27th day of the month
28	TwentyEighthDay	28th day of the month
29	TwentyNinthDay	29th day of the month
30	ThirtiethDay	30th day of the month
EOM	EOM	The end of the month. Use EOM for 31st day of the month.
FRN	FRN	The floating rate note convention or Eurodollar convention.
IMM	IMM	The International Money Market settlement date, i.e. the 3rd Wednesday of the month.
IMMCAD	IMMCAD	The last trading day/expiration day of the Canadian Derivatives Exchange.
IMMAUD	IMMAUD	The last trading day of the Sydney Futures Exchange Australian 90-day bank accepted bill futures contract.
IMMNZD	IMMNZD	The last trading day of the Sydney Futures Exchange New Zealand 90-day bank bill futures contract.
SFE	SFE	The Sydney Futures Exchange 90-day bank accepted bill futures settlement dates.
NONE	NONE	No adjustment
TBILL	TBILL	The 13-week and 26-week U.S. Treasury Bill auction dates.
MON	MON	Monday
TUE	TUE	Tuesday
WED	WED	Wednesday
THU	THU	Thursday
FRI	FRI	Friday
SAT	SAT	Saturday
SUN	SUN	Sunday

Used in components: [LegPaymentStreamCompoundingDates](#)

180.2.1938 LegPaymentStreamCompoundingSpread

The spread to be used for compounding. Used in scenarios where the interest payment is based on a compounding formula that uses a compounding spread in addition to the regular spread.

Type: **PriceOffset**

Used in components: **LegPaymentStream**

180.2.1939 LegPaymentStreamCompoundingStartDateAdjusted

The adjusted compounding start date.

Type: **LocalMktDate**

Used in components: **LegPaymentStreamCompoundingStartDate**

180.2.1940 LegPaymentStreamCompoundingStartDate

LegPaymentStreamCompoundingStartDate is a subcomponent of the LegPaymentStreamCompoundingDates component used to specify the start date for compounding.

Name	Mult.	Type	Description
LegPaymentStreamCompoundingStartDateUnadjusted	[0..1]	LocalMktDate	
LegPaymentStreamCompoundingStartDateRelativeTo	[0..1]	int	
LegPaymentStreamCompoundingStartDateOffsetPeriod	[0..1]	int	Conditionally required when LegPaymentStreamCompoundingStartDateOffsetUnit(42448) is specified.
LegPaymentStreamCompoundingStartDateOffsetUnit	[0..1]	CodeSet	Conditionally required when LegPaymentStreamCompoundingStartDateOffsetPeriod(42447) is specified.
LegPaymentStreamCompoundingStartDateOffsetDayType	[0..1]	CodeSet	
LegPaymentStreamCompoundingStartDateAdjusted	[0..1]	LocalMktDate	

Used in components: **LegPaymentStreamCompoundingDates**

180.2.1941 LegPaymentStreamCompoundingStartDateOffsetDayType

Specifies the day type of the relative compounding start date offset.

Type: **int**

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: **LegPaymentStreamCompoundingStartDate**

180.2.1942 LegPaymentStreamCompoundingStartDateOffsetPeriod

Time unit multiplier for the relative compounding start date offset.

Type: **int**

Used in components: **LegPaymentStreamCompoundingStartDate**

180.2.1943 LegPaymentStreamCompoundingStartDateOffsetUnit

Time unit associated with the relative compounding start date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: **LegPaymentStreamCompoundingStartDate**

180.2.1944 LegPaymentStreamCompoundingStartDateRelativeTo

Specifies the anchor date when the compounding start date is relative to an anchor date.

See http://www.fixtradingcommunity.org/codelists#Relative_To_Date for values.

Type: **int**

Used in components: **LegPaymentStreamCompoundingStartDate**

180.2.1945 LegPaymentStreamCompoundingStartDateUnadjusted

The unadjusted compounding start date.

Type: **LocalMktDate**

Used in components: **LegPaymentStreamCompoundingStartDate**

180.2.1946 LegPaymentStreamCompoundingXIDRef

Reference to the stream which details the compounding fixed or floating rate.

Type: **XIDREF**

Used in components: **LegPaymentStream**

180.2.1947 LegPaymentStreamContractPrice

The price per relevant unit for purposes of the calculation of a fixed amount for a dry voyage charter or time charter commodity swap.

Type: **Price**

Used in components: **LegPaymentStreamFixedRate**

180.2.1948 LegPaymentStreamContractPriceCurrency

Specifies the currency of LegPaymentStreamContractPrice(41559). Uses ISO 4217 currency codes.

Type: **Currency**

Used in components: **LegPaymentStreamFixedRate**

180.2.1949 LegPaymentStreamDayCount

The day count convention used in the payment stream calculations.

Type: **int**

Allowed values in CouponDayCountCodeSet:

Code	Name	Description
0	OneOne	1/1. If parties specify the Day Count Fraction to be 1/1 then in calculating the applicable amount, 1 is simply input into the calculation as the relevant Day Count Fraction. See also 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (a).
1	ThirtyThreeSixtyUS	30/360 (30U/360 or Bond Basis). See also ISO 15022 MICO code 'A001'.
2	ThirtyThreeSixtySIA	30/360 (SIA). A variant of "30/360" - when Date1 and Date2 are both Feb. 28th or 29th convert them to 30th using the same logic in the conversion of 31st to 30th.
3	ThirtyThreeSixtyM	30/360M. Commonly used day count convention for US mortgage backed securities. Feb 28th (or 29th in a leap year) is always considered as a 30th for a start date. As a comparison, in the regular 30/360 day count as used by most US agency and corporate bonds, a start date of Feb 28th (or 29th in a leap year) is still considered as the 28th (or 29th) day of a month of 30 days.
4	ThirtyEThreeSixty	30E/360 (Eurobond Basis). See also ISO 15022 MICO code 'A007'.
5	ThirtyEThreeSixtyISDA	30E/360 (ISDA). Date adjustment rules are: (1) if Date1 is the last day of the month, then change Date1 to 30; (2) if D2 is the last day of the month (unless Date2 is the maturity date and Date2 is in February), then change Date2 to 30. See also 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (h).
6	ActThreeSixty	Act/360. See also ISO 15022 MICO code 'A004'.
7	ActThreeSixtyFiveFixed	Act/365 (FIXED). See also ISO 15022 MICO code 'A005'.
8	ActActAFB	Act/Act (AFB). See also ISO 15022 MICO code 'A010'.
9	ActActICMA	Act/Act (ICMA). See also ISO 15022 MICO code 'A006'.
10	ActActISMAUltimo	Act/Act (ICMA Ultimo). The Act/Act (ICMA Ultimo) differs from Act/Act (ICMA) method only that it assumes that regular coupons always fall on the last day of the month.
11	ActActISDA	Act/Act (ISDA). See also ISO 15022 MICO code 'A008'.

Code	Name	Description
12	BusTwoFiftyTwo	BUS/252. Used for Brazilian Real swaps, which is based on business days instead of calendar days. The number of business days divided by 252.
13	ThirtyEPlusThreeSixty	30E+/360. Variation on 30E/360. Date adjustment rules: (1) If Date1 falls on the 31st, then change it to the 30th; (2) If Date2 falls on the 31st, then change it to 1 and increase Month2 by one, i.e. next month.
14	ActThreeSixtyFiveL	Act/365L. See also ISO 15022 MICO code 'A009'.
15	NLThreeSixtyFive	NL365. See also ISO 15022 MICO code 'A014'.
16	NLThreeSixty	NL360. This is the same as Act/360, with the exception of leap days (29th February) which are ignored.
17	Act364	Act/364. The actual number of days between Date1 and Date2, divided by 364.
18	ThirtyThreeSixtyFive	30/365. Interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and a 365-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31 is assumed to be a 30 and the 28 February (or 29 February for a leap year) is assumed to be a 28 (or 29). See also ISO 15022 MICO code 'A002'.
19	ThirtyActual	30/Actual. Interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and the assumed number of days in a year in a way similar to the Actual/Actual (ICMA). Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31 is assumed to be a 30 and the 28 February (or 29 February for a leap year) is assumed to be a 28 (or 29). The assumed number of days in a year is computed as the actual number of days in the coupon period multiplied by the number of interest payments in the year. See also ISO 15022 MICO code 'A003'.
20	ThirtyThreeSixtyICMA	30/360 (ICMA or basis rule). Interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30 calendar day of the same month, except for February. This means that a 31 is assumed to be a 30 and the 28 February (or 29 February for a leap year) is assumed to be a 28 (or 29). It is the most commonly used 30/360 method for non-US straight and convertible bonds issued before 1 January 1999. See also ISO 15022 MICO code 'A011'.

Code	Name	Description
21	ThirtyETwoThreeSixty	30E2/360 (Eurobond basis model two). Interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for the last day of February whose day of the month value shall be adapted to the value of the first day of the interest period if the latter is higher and if the period is one of a regular schedule. This means that a 31 is assumed to be a 30 and the 28 February of a non-leap year is assumed to be equivalent to a 29 February when the first day of the interest period is a 29, or to a 30 February when the first day of the interest period is a 30 or a 31. The 29 February of a leap year is assumed to be equivalent to a 30 February when the first day of the interest period is a 30 or a 31. Similarly, if the coupon period starts on the last day of February, it is assumed to produce only one day of interest in February as if it was starting on a 30 February when the end of the period is a 30 or a 31, or two days of interest in February when the end of the period is a 29, or three days of interest in February when it is the 28 February of a non-leap year and the end of the period is before the 29. See also ISO 15022 MICO code 'A012'.
22	ThirtyEThreeThreeSixty	30E3/360 (Eurobond basis model three). Interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that a 31 is assumed to be a 30 and the 28 February (or 29 February for a leap year) is assumed to be equivalent to a 30 February. It is a variation of the 30E/360 (or Eurobond basis) method where the last day of February is always assumed to be a 30, even if it is the last day of the maturity coupon period. See also ISO 15022 MICO code 'A013'.
99	Other	Other. For other day count method. See also ISO 15022 MICO code 'OTHR'.

Used in components: **LegPaymentStream**

180.2.1950 LegPaymentStreamDaysAdjustmentIndicator

Indicates whether the contract specifies that the notional should be scaled by the number of days in range divided by the estimate trading days or not. The number of "days in range" refers to the number of returns that contribute to the realized volatility.

Type: **Boolean**

Used in components: **LegPaymentStreamFloatingRate**

180.2.1951 LegPaymentStreamDelayIndicator

Applicable to credit default swaps on mortgage backed securities to specify whether payment delays are applicable to the fixed amount.

Residential mortgage backed securities typically have a payment delay of 5 days between the coupon date of the reference obligation and the payment date of the synthetic swap.

Commercial mortgage backed securities do not typically have a payment delay, with both payment dates (the coupon date of the reference obligation and the payment date of the synthetic swap) being on the 25th of each month.

Type: **Boolean**

Used in components: **LegPaymentStream**

180.2.1952 LegPaymentStreamDiscountRate

Discount rate. The rate is expressed in decimal, e.g. 5% is expressed as 0.05.

Type: **Percentage**

Used in components: **LegPaymentStream**

180.2.1953 LegPaymentStreamDiscountRateDayCount

The day count convention applied to the LegPaymentStreamDiscountRate(40286).

Type: **int**

Allowed values in CouponDayCountCodeSet:

Code	Name	Description
0	OneOne	1/1. If parties specify the Day Count Fraction to be 1/1 then in calculating the applicable amount, 1 is simply input into the calculation as the relevant Day Count Fraction. See also 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (a).

Code	Name	Description
1	ThirtyThreeSixtyUS	30/360 (30U/360 or Bond Basis). See also ISO 15022 MICO code 'A001'.
2	ThirtyThreeSixtySIA	30/360 (SIA). A variant of "30/360" - when Date1 and Date2 are both Feb. 28th or 29th convert them to 30th using the same logic in the conversion of 31st to 30th.
3	ThirtyThreeSixtyM	30/360M. Commonly used day count convention for US mortgage backed securities. Feb 28th (or 29th in a leap year) is always considered as a 30th for a start date. As a comparison, in the regular 30/360 day count as used by most US agency and corporate bonds, a start date of Feb 28th (or 29th in a leap year) is still considered as the 28th (or 29th) day of a month of 30 days.
4	ThirtyEThreeSixty	30E/360 (Eurobond Basis). See also ISO 15022 MICO code 'A007'.
5	ThirtyEThreeSixtyISDA	30E/360 (ISDA). Date adjustment rules are: (1) if Date1 is the last day of the month, then change Date1 to 30; (2) if D2 is the last day of the month (unless Date2 is the maturity date and Date2 is in February), then change Date2 to 30. See also 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (h).
6	ActThreeSixty	Act/360. See also ISO 15022 MICO code 'A004'.
7	ActThreeSixtyFiveFixed	Act/365 (FIXED). See also ISO 15022 MICO code 'A005'.
8	ActActAFB	Act/Act (AFB). See also ISO 15022 MICO code 'A010'.
9	ActActICMA	Act/Act (ICMA). See also ISO 15022 MICO code 'A006'.
10	ActActISMAUltimo	Act/Act (ICMA Ultimo). The Act/Act (ICMA Ultimo) differs from Act/Act (ICMA) method only that it assumes that regular coupons always fall on the last day of the month.
11	ActActISDA	Act/Act (ISDA). See also ISO 15022 MICO code 'A008'.
12	BusTwoFiftyTwo	BUS/252. Used for Brazilian Real swaps, which is based on business days instead of calendar days. The number of business days divided by 252.
13	ThirtyEPlusThreeSixty	30E+/360. Variation on 30E/360. Date adjustment rules: (1) If Date1 falls on the 31st, then change it to the 30th; (2) If Date2 falls on the 31st, then change it to 1 and increase Month2 by one, i.e. next month.
14	ActThreeSixtyFiveL	Act/365L. See also ISO 15022 MICO code 'A009'.
15	NLThreeSixtyFive	NL365. See also ISO 15022 MICO code 'A014'.
16	NLThreeSixty	NL360. This is the same as Act/360, with the exception of leap days (29th February) which are ignored.
17	Act364	Act/364. The actual number of days between Date1 and Date2, divided by 364.

Code	Name	Description
18	ThirtyThreeSixtyFive	30/365. Interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and a 365-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31 is assumed to be a 30 and the 28 February (or 29 February for a leap year) is assumed to be a 28 (or 29). See also ISO 15022 MICO code 'A002'.
19	ThirtyActual	30/Actual. Interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and the assumed number of days in a year in a way similar to the Actual/Actual (ICMA). Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31 is assumed to be a 30 and the 28 February (or 29 February for a leap year) is assumed to be a 28 (or 29). The assumed number of days in a year is computed as the actual number of days in the coupon period multiplied by the number of interest payments in the year. See also ISO 15022 MICO code 'A003'.
20	ThirtyThreeSixtyICMA	30/360 (ICMA or basis rule). Interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30 calendar day of the same month, except for February. This means that a 31 is assumed to be a 30 and the 28 February (or 29 February for a leap year) is assumed to be a 28 (or 29). It is the most commonly used 30/360 method for non-US straight and convertible bonds issued before 1 January 1999. See also ISO 15022 MICO code 'A011'.

Code	Name	Description
21	ThirtyETwoThreeSixty	30E2/360 (Eurobond basis model two). Interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for the last day of February whose day of the month value shall be adapted to the value of the first day of the interest period if the latter is higher and if the period is one of a regular schedule. This means that a 31 is assumed to be a 30 and the 28 February of a non-leap year is assumed to be equivalent to a 29 February when the first day of the interest period is a 29, or to a 30 February when the first day of the interest period is a 30 or a 31. The 29 February of a leap year is assumed to be equivalent to a 30 February when the first day of the interest period is a 30 or a 31. Similarly, if the coupon period starts on the last day of February, it is assumed to produce only one day of interest in February as if it was starting on a 30 February when the end of the period is a 30 or a 31, or two days of interest in February when the end of the period is a 29, or three days of interest in February when it is the 28 February of a non-leap year and the end of the period is before the 29. See also ISO 15022 MICO code 'A012'.
22	ThirtyEThreeThreeSixty	30E3/360 (Eurobond basis model three). Interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that a 31 is assumed to be a 30 and the 28 February (or 29 February for a leap year) is assumed to be equivalent to a 30 February. It is a variation of the 30E/360 (or Eurobond basis) method where the last day of February is always assumed to be a 30, even if it is the last day of the maturity coupon period. See also ISO 15022 MICO code 'A013'.
99	Other	Other. For other day count method. See also ISO 15022 MICO code 'OTHR'.

Used in components: **LegPaymentStream**

180.2.1954 LegPaymentStreamDiscountType

The method of calculating discounted payment amounts.

Type: **int**

Allowed values in PaymentStreamDiscountTypeCodeSet:

Code	Name	Description
0	Standard	Standard
1	FRA	Forward Rate Agreement (FRA)

Used in components: [LegPaymentStream](#)

180.2.1955 [LegPaymentStreamFinalPricePaymentDateAdjusted](#)

The adjusted final price payment date.

Type: [LocalMktDate](#)

Used in components: [LegPaymentStreamFinalPricePaymentDate](#)

180.2.1956 [LegPaymentStreamFinalPricePaymentDate](#)

[LegPaymentStreamFinalPricePaymentDate](#) is a subcomponent of the [LegPaymentStreamPaymentDates](#) component used to specify the final price payment date, e.g. for an equity return swap.

Name	Mult.	Type	Description
LegPaymentStreamFinalPricePaymentDateUnadjusted	[0..1]	LocalMktDate	
LegPaymentStreamFinalPricePaymentDateRelativeTo	[0..1]	int	
LegPaymentStreamFinalPricePaymentDateOffsetPeriod	[0..1]	int	Conditionally required when LegPaymentStreamFinalPricePaymentDateOffsetUnit(42456) is specified.
LegPaymentStreamFinalPricePaymentDateOffsetUnit	[0..1]	CodeSet	Conditionally required when LegPaymentStreamFinalPricePaymentDateOffsetPeriod(42455) is specified.
LegPaymentStreamFinalPricePaymentDateOffsetDayType	[0..1]	CodeSet	
LegPaymentStreamFinalPricePaymentDateAdjusted	[0..1]	LocalMktDate	

Used in components: [LegPaymentStreamPaymentDates](#)

180.2.1957 LegPaymentStreamFinalPricePaymentDateOffsetDayType

Specifies the day type of the relative final price payment date offset.

Type: **int**

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: **LegPaymentStreamFinalPricePaymentDate**

180.2.1958 LegPaymentStreamFinalPricePaymentDateOffsetPeriod

Time unit multiplier for the relative final price payment date offset.

Type: **int**

Used in components: **LegPaymentStreamFinalPricePaymentDate**

180.2.1959 LegPaymentStreamFinalPricePaymentDateOffsetUnit

Time unit associated with the relative final price payment date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: **LegPaymentStreamFinalPricePaymentDate**

180.2.1960 LegPaymentStreamFinalPricePaymentDateRelativeTo

Specifies the anchor date when the final price payment date is relative to an anchor date.

See http://www.fixtradingcommunity.org/codelists#Relative_To_Date for values.

Type: **int**

Used in components: **LegPaymentStreamFinalPricePaymentDate**

180.2.1961 LegPaymentStreamFinalPricePaymentDateUnadjusted

The unadjusted final price payment date.

Type: **LocalMktDate**

Used in components: **LegPaymentStreamFinalPricePaymentDate**

180.2.1962 LegPaymentStreamFinalPrincipalExchangeIndicator

Indicates whether there is a final exchange of principal on the termination date.

Type: **Boolean**

Used in components: **LegPaymentStream**

180.2.1963 LegPaymentStreamFinalRate

The floating rate determined at the final reset. The rate is expressed in decimal form, e.g. 5% is represented as 0.05.

Type: **Percentage**

Used in components: **LegPaymentStreamFloatingRate**

180.2.1964 LegPaymentStreamFinalRatePrecision

Specifies the rounding precision in terms of a number of decimal places. Note how a percentage rate rounding of 5 decimal places is expressed as a rounding precision of 7.

Type: **int**

Used in components: **LegPaymentStreamFloatingRate**

180.2.1965 LegPaymentStreamFinalRateRoundingDirection

Specifies the rounding direction.

Type: **char**

Allowed values in RoundingDirectionCodeSet:

Code	Name	Description
0	RoundToNearest	Round to nearest
1	RoundDown	Round down
2	RoundUp	Round up

Used in components: **LegPaymentStreamFloatingRate**

180.2.1966 LegPaymentStreamFirstObservationDateAdjusted

The adjusted initial price observation date.

Type: **LocalMktDate**

Used in components: **LegPaymentStreamFloatingRate**

180.2.1967 LegPaymentStreamFirstObservationDateOffsetDayType

Specifies the day type of the initial price observation date offset.

Type: **int**

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: **LegPaymentStreamFloatingRate**

180.2.1968 LegPaymentStreamFirstObservationDateOffsetPeriod

Time unit multiplier for the relative first observation date offset.

Type: **int**

Used in components: **LegPaymentStreamFloatingRate**

180.2.1969 LegPaymentStreamFirstObservationDateOffsetUnit

Time unit associated with the relative first observation date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: **LegPaymentStreamFloatingRate**

180.2.1970 LegPaymentStreamFirstObservationDateRelativeTo

Specifies the anchor date when the initial price observation date is relative to an anchor date.

See http://www.fixtradingcommunity.org/codelists#Relative_To_Date for values.

Type: **int**

Used in components: **LegPaymentStreamFloatingRate**

180.2.1971 LegPaymentStreamFirstObservationDateUnadjusted

The unadjusted initial price observation date.

Type: **LocalMktDate**

Used in components: **LegPaymentStreamFloatingRate**

180.2.1972 LegPaymentStreamFirstPaymentDateUnadjusted

The unadjusted first payment date.

Type: **LocalMktDate**

Used in components: **LegPaymentStreamPaymentDates**

180.2.1973 LegPaymentStreamFixedAmount

The leg instrument payment stream's fixed payment amount. In a CDS, this can be an alternative to LegPaymentStreamRate(40326).

Type: **Amt**

Used in components: **LegPaymentStreamFixedRate**

180.2.1974 LegPaymentStreamFixedAmountUnitOfMeasure

The fixed payment amount unit of measure (UOM).

Type: **String**

Allowed values in UnitOfMeasureCodeSet:

Code	Name	Description
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet
Bbl	Barrels	Barrels. Equal to 42 US gallons
CBM	CubicMeters	Cubic Meters
BDFT	BoardFeet	Board feet. Equal to 144 cubic inches
GJ	Gigajoules	gigajoules
Bu	Bushels	Bushels
kHR	HeatRate	Heat rate. The number of BTUs required to produce one kilowatt hour of electricity, typically 3,412.14 BTUs per 1 kWh.
Ccy	Currency	Amount of currency
kWh	KilowattHours	Kilowatt hours
CDD	CoolingDegreeDay	Cooling degree day
MHR	MegaHeatRate	Mega heat rate. The number of million BTUs required to produce one megawatt hour of electricity, typically 3.41214 million BTUs per 1 MWh.

Code	Name	Description
CER	CertifiedEmissionsReduction	Certified emissions reduction
MMBtu	OneMillionBTU	One Million BTU
CPD	CriticalPrecipDay	Critical precipitation day
MWh	MegawattHours	Megawatt hours
CRT	ClimateReserveTonnes	Climate reserve tonnes
thm	Therms	therms. Equal to 100,000 BTU
cwt	Hundredweight	Hundredweight(US). Equal to 100 lbs
tnCO2	TonsOfCarbonDioxide	Tons of carbon dioxide
day	Day	Days
dt	DryMetricTons	Dry metric tons
EnvAllwnc	EnvAllwncCert	Environmental allowance certificates
EnvCrd	EnvironmentalCredit	Environmental credit
EnvOfst	EnvironmentalOffset	Environmental Offset
g	Grams	Grams
Gal	Gallons	Gallons
GT	GrossTons	Gross tons. Also known as long tons or imperial tons, equal to 2240 lbs
HDD	HeatingDegreeDay	Heating degree day
IPNT	IndexPoint	Index point
kg	Kilograms	Kilograms
kL	Kiloliters	kiloliters
kW-a	KilowattYear	Kilowatt year (electrical capacity)
kW-d	KilowattDay	Kilowatt day (electrical capacity)
kW-h	KilowattHour	Kilowatt hour (electrical capacity)
kW-M	KilowattMonth	Kilowatt month (electrical capacity)
kW-min	KilowattMinute	Kilowatt-Minute (electrical capacity)
L	Liters	liters
lbs	Pounds	pounds
MW-a	MegawattYear	Megawatt year (electrical capacity)
MW-d	MegawattDay	Megawatt day (electrical capacity)
MW-h	MegawattHour	Megawatt hour (electrical capacity)
MW-M	MegawattMonth	Megawatt month (electrical capacity)
MW-min	MegawattMinute	Megawatt minute (electrical capacity)
oz_tr	TroyOunces	Troy ounces

Code	Name	Description
PRINC	PrincipalWithRelationToDebtInstrument	Principal with relation to debt instrument
t	MetricTons	Metric tons. Also known as Tonnes, equal to 1000 kg
tn	Tons	Tons (US). Equal to 2000 lbs
a	Are	Are
ac	Acre	Acre
cL	Centiliter	Centiliter
cM	Centimeter	Centimeter
DGE	DieselGallonEquivalent	Diesel gallon equivalent
ft	Foot	Foot
Gal_gb	GBGallon	GB Gallon
GGE	GasolineGallonEquivalent	Gasonline gallon equivalent
ha	Hectare	Hectare
in	Inch	Inch
kM	Kilometer	Kilometer
M	Meter	Meter
mi	Mile	Mile
mL	Milliliter	Milliliter
mM	Millimeter	Millimeter
oz	USOunce	US ounce
pc	Piece	Piece
pt	USPint	US Pint
pt_gb	GBPint	GB pint
qt	USQuart	US Quart
qt_gb	GBQuart	GB Quart
SqcM	SquareCentimeter	Square centimeter
Sqft	SquareFoot	Square foot
Sqin	SquareInch	Square inch
SqkM	SquareKilometer	Square kilometer
SqM	SquareMeter	Square meter
Sqmi	SquareMile	Square mile
SqmM	SquareMillimeter	Square millimeter
Sqyd	SquareYard	Square yard
yd	Yard	Yard

Code	Name	Description
MMbbl	MillionBarrels	Million Barrels
USD	USDollars	US Dollars

Used in components: [LegPaymentStreamFixedRate](#)

180.2.1975 LegPaymentStreamFixedRate

LegPaymentStreamFixedRate is a subcomponent of the LegPaymentStream component used to report the fixed rate or fixed payment amount of the payment stream.

Name	Mult.	Type	Description
LegPaymentStreamRate	[0..1]	Percentage	Mutually exclusive with LegPaymentStreamFixedAmount(40327).
LegPaymentStreamFixedAmount	[0..1]	Amt	Mutually exclusive with LegPaymentStreamRate(40326).
LegPaymentStreamRateOrAmountCurrency	[0..1]	Currency	
LegPaymentStreamFixedAmountUnitOfMeasure	[0..1]	CodeSet	
LegPaymentStreamTotalFixedAmount	[0..1]	Amt	
LegPaymentStreamFutureValueNotional	[0..1]	Amt	
LegPaymentStreamFutureValueDateAdjusted	[0..1]	LocalMktDate	
LegPaymentStreamWorldScaleRate	[0..1]	float	
LegPaymentStreamContractPrice	[0..1]	Price	
LegPaymentStreamContractPriceCurrency	[0..1]	Currency	

Used in components: [LegPaymentStream](#)

180.2.1976 LegPaymentStreamFixingDate

The fixing date. Type of date is specified in LegPaymentStreamFixingDateType(42461).

Type: [LocalMktDate](#)

Used in groups: [LegPaymentStreamFixingDateGrp](#)

180.2.1977 LegPaymentStreamFixingDateAdjusted

The adjusted fixing date.

Type: [LocalMktDate](#)

Used in components: [LegPaymentStreamResetDates](#)

180.2.1978 LegPaymentStreamFixingDateBusinessCenter

The business center calendar used to adjust the payment stream's fixing date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in groups: [LegPaymentStreamFixingDateBusinessCenterGrp](#)

180.2.1979 LegPaymentStreamFixingDateBusinessCenterGrp

LegPaymentStreamFixingDateBusinessCenterGrp is a repeating subcomponent within the LegPaymentStreamResetDates component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the LegDateAdjustment component in InstrumentLeg.

Name	Mult.	Type	Description
NoLegPaymentStreamFixingDateBusinessCenters	[1..1]	NumInGroup	
LegPaymentStreamFixingDateBusinessCenter	[0..1]	String	Required if NoLegPaymentStreamFixingDateBusinessCenters (40933) > 0.

Used in components: [LegPaymentStreamResetDates](#)

180.2.1980 LegPaymentStreamFixingDateBusinessDayConvention

The business day convention used to adjust the payment stream's fixing date. Used only to override the business day convention specified in the LegDateAdjustment component within the InstrumentLeg component.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: **LegPaymentStreamResetDates**

180.2.1981 LegPaymentStreamFixingDateGrp

LegPaymentStreamFixingDateGrp is a subcomponent of the LegPaymentStreamResetDates component used to specify predetermined fixing dates.

Name	Mult.	Type	Description
NoLegPaymentStreamFixingDates	[1..1]	NumInGroup	
LegPaymentStreamFixingDate	[0..1]	LocalMktDate	Required if NoLegPaymentStreamFixingDates(42459) > 0.
LegPaymentStreamFixingDateType	[0..1]	CodeSet	When specified it applies not only to the current date instance but to all subsequent date instances in the group until overridden when a new type is specified.

Used in components: **LegPaymentStreamResetDates**

180.2.1982 LegPaymentStreamFixingDateOffsetDayType

Specifies the day type of the relative fixing date offset.

Type: **int**

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: [LegPaymentStreamResetDates](#)

180.2.1983 LegPaymentStreamFixingDateOffsetPeriod

Time unit multiplier for the relative fixing date offset.

Type: [int](#)

Used in components: [LegPaymentStreamResetDates](#)

180.2.1984 LegPaymentStreamFixingDateOffsetUnit

Time unit associated with the relative fixing date offset.

Type: [String](#)

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: [LegPaymentStreamResetDates](#)

180.2.1985 LegPaymentStreamFixingDateRelativeTo

Specifies the anchor date when the fixing date is relative to an anchor date.

See http://www.fixtradingcommunity.org/codelists#Relative_To_Date for values.

Type: **int**

Used in components: **LegPaymentStreamResetDates**

180.2.1986 LegPaymentStreamFixingDateType

Specifies the type of fixing date (e.g. adjusted for holidays).

Type: **int**

Allowed values in NonDeliverableFixingDateTypeCodeSet:

Code	Name	Description
0	Unadjusted	Unadjusted
1	Adjusted	Adjusted

Used in groups: **LegPaymentStreamFixingDateGrp**

180.2.1987 LegPaymentStreamFlatRateAmount

Specifies the actual monetary value of the flat rate when LegPaymentStreamFlatRateIndicator(41549) = 'Y'.

Type: **Amt**

Used in components: **LegPaymentStream**

180.2.1988 LegPaymentStreamFlatRateCurrency

Specifies the currency of the actual flat rate. Uses ISO 4217 currency codes.

Type: **Currency**

Used in components: **LegPaymentStream**

180.2.1989 LegPaymentStreamFlatRateIndicator

When this element is specified and set to 'Y', the Flat Rate is the New Worldwide Tanker Nominal Freight Scale for the Freight Index Route taken at the trade date of the transaction "Fixed". If 'N' it is taken on each pricing date "Floating".

Type: **Boolean**

Used in components: **LegPaymentStream**

180.2.1990 LegPaymentStreamFloatingRate

LegPaymentStreamFloatingRate is a subcomponent of the LegPaymentStream component used to report the floating rate attributes of the payment stream.

Name	Mult.	Type	Description
LegPaymentStreamRateIndex	[0..1]	String	
LegPaymentStreamRateIndexSource	[0..1]	CodeSet	
LegPaymentStreamRateIndexID	[0..1]	String	Conditionally required when LegPaymentStreamRateIndexIDSource(43089) is specified.
LegPaymentStreamRateIndexIDSource	[0..1]	CodeSet	Conditionally required when LegPaymentStreamRateIndexID(43088) is specified.
LegPaymentStreamRateIndexCurveUnit	[0..1]	CodeSet	Conditionally required when LegPaymentStreamRateIndexCurvePeriod(40334) is specified.
LegPaymentStreamRateIndexCurvePeriod	[0..1]	int	Conditionally required when LegPaymentStreamRateIndexCurveUnit(40333) is specified.
LegPaymentStreamRateIndex2	[0..1]	String	
LegPaymentStreamRateIndex2Source	[0..1]	CodeSet	
LegPaymentStreamRateIndex2ID	[0..1]	String	Conditionally required when LegPaymentStreamRateIndex2IDSource(43119) is specified.
LegPaymentStreamRateIndex2IDSource	[0..1]	CodeSet	Conditionally required when LegPaymentStreamRateIndex2ID(43118) is specified.
LegPaymentStreamRateIndex2CurveUnit	[0..1]	CodeSet	Conditionally required when LegPaymentStreamRateIndex2CurvePeriod(41564) is specified.

Name	Mult.	Type	Description
LegPaymentStreamRateIndex2CurvePeriod	[0..1]	int	Conditionally required when LegPaymentStreamRateIndex2CurveUnit(41563) is specified.
LegPaymentStreamRateIndexLocation	[0..1]	String	
LegPaymentStreamRateIndexLevel	[0..1]	Qty	
LegPaymentStreamRateIndexUnitOfMeasure	[0..1]	CodeSet	
LegPaymentStreamSettlLevel	[0..1]	CodeSet	
LegPaymentStreamReferenceLevel	[0..1]	Qty	
LegPaymentStreamReferenceLevelUnitOfMeasure	[0..1]	CodeSet	
LegPaymentStreamReferenceLevelEqualsZeroIndicator	[0..1]	Boolean	
LegPaymentStreamRateMultiplier	[0..1]	float	
LegPaymentStreamRateSpread	[0..1]	PriceOffset	
LegPaymentStreamRateSpreadCurrency	[0..1]	Currency	
LegPaymentStreamRateSpreadUnitOfMeasure	[0..1]	CodeSet	
LegPaymentStreamRateConversionFactor	[0..1]	float	
LegPaymentStreamRateSpreadType	[0..1]	CodeSet	
LegPaymentStreamRateSpreadPositionType	[0..1]	CodeSet	
LegPaymentStreamRateTreatment	[0..1]	CodeSet	
LegPaymentStreamCapRate	[0..1]	Percentage	
LegPaymentStreamCapRateBuySide	[0..1]	CodeSet	
LegPaymentStreamCapRateSellSide	[0..1]	CodeSet	
LegPaymentStreamFloorRate	[0..1]	Percentage	
LegPaymentStreamFloorRateBuySide	[0..1]	CodeSet	
LegPaymentStreamFloorRateSellSide	[0..1]	CodeSet	
LegPaymentStreamInitialRate	[0..1]	Percentage	
LegPaymentStreamLastResetRate	[0..1]	Percentage	
LegPaymentStreamFinalRate	[0..1]	Percentage	
LegPaymentStreamFinalRateRoundingDirection	[0..1]	CodeSet	
LegPaymentStreamFinalRatePrecision	[0..1]	int	

Name	Mult.	Type	Description
LegPaymentStreamAveragingMethod	[0..1]	CodeSet	
LegPaymentStreamNegativeRateTreatment	[0..1]	CodeSet	
LegPaymentStreamCalculationLagPeriod	[0..1]	int	Conditionally required when LegPaymentStreamCalculationLagUnit(41579) is specified.
LegPaymentStreamCalculationLagUnit	[0..1]	CodeSet	Conditionally required when LegPaymentStreamCalculationLagPeriod(41578) is specified.
LegPaymentStreamFirstObservation-DateUnadjusted	[0..1]	LocalMktDate	
LegPaymentStreamFirstObservation-DateRelativeTo	[0..1]	int	
LegPaymentStreamFirstObservation-DateOffsetDayType	[0..1]	CodeSet	
LegPaymentStreamFirstObservation-DateOffsetPeriod	[0..1]	int	Conditionally required when LegPaymentStream-FirstObservationOffsetUnit(41581) is specified.
LegPaymentStreamFirstObservation-DateOffsetUnit	[0..1]	CodeSet	Conditionally required when LegPaymentStream-FirstObservationOffsetPeriod(41580) is specified.
LegPaymentStreamFirstObservation-DateAdjusted	[0..1]	LocalMktDate	
LegPaymentStreamPricingDayType	[0..1]	CodeSet	
LegPaymentStreamPricingDayDistribution	[0..1]	CodeSet	
LegPaymentStreamPricingDayCount	[0..1]	int	
LegPaymentStreamPricingBusiness-Calendar	[0..1]	String	
LegPaymentStreamPricingBusiness-DayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the LegDateAdjustment component in InstrumentLeg. The specified values would be specific to the payment stream pricing date.
LegPaymentStreamPricingBusiness-CenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the LegDateAdjustment component in InstrumentLeg. The specified values would be specific to the the payment stream pricing date.
LegPaymentStreamPricingDayGrp	[0..*]	Group	
LegPaymentStreamPricingDateGrp	[0..*]	Group	

Name	Mult.	Type	Description
LegPaymentStreamInflationLagPeriod	[0..1]	int	Conditionally required when LegPaymentStreamInflationLagUnit(40351) is specified.
LegPaymentStreamInflationLagUnit	[0..1]	CodeSet	Conditionally required when LegPaymentStreamInflationLagPeriod(40350) is specified.
LegPaymentStreamInflationLagDay-Type	[0..1]	CodeSet	
LegPaymentStreamInflationInterpolationMethod	[0..1]	CodeSet	
LegPaymentStreamInflationIndex-Source	[0..1]	CodeSet	
LegPaymentStreamInflationPublicationSource	[0..1]	String	
LegPaymentStreamInflationInitialIndexLevel	[0..1]	float	
LegPaymentStreamInflationFallbackBondApplicable	[0..1]	Boolean	
LegPaymentStreamFRADiscounting	[0..1]	CodeSet	
LegPaymentStreamUnderlierRefID	[0..1]	String	
LegPaymentStreamFormula	[0..1]	Component	
LegDividendConditions	[0..1]	Component	
LegReturnRateNotionalReset	[0..1]	Boolean	
LegReturnRateGrp	[0..*]	Group	
LegPaymentStreamLinkInitialLevel	[0..1]	Price	
LegPaymentStreamLinkClosingLevelIndicator	[0..1]	Boolean	
LegPaymentStreamLinkExpiringLevelIndicator	[0..1]	Boolean	
LegPaymentStreamLinkEstimatedTradingDays	[0..1]	int	
LegPaymentStreamLinkStrikePrice	[0..1]	Price	
LegPaymentStreamLinkStrikePrice-Type	[0..1]	CodeSet	
LegPaymentStreamLinkMaximumBoundary	[0..1]	float	
LegPaymentStreamLinkMinimumBoundary	[0..1]	float	

Name	Mult.	Type	Description
LegPaymentStreamLinkNumberOfDataSeries	[0..1]	int	
LegPaymentStreamVarianceUnadjustedCap	[0..1]	float	
LegPaymentStreamRealizedVarianceMethod	[0..1]	CodeSet	
LegPaymentStreamDaysAdjustmentIndicator	[0..1]	Boolean	
LegPaymentStreamNearestExchangeContractRefID	[0..1]	String	
LegPaymentStreamVegaNotionalAmount	[0..1]	float	

Used in components: [LegPaymentStream](#)

180.2.1991 LegPaymentStreamFloorRate

The floor rate, if any, which applies to the floating rate. The floor rate (strike) is only required where the floating rate on a swap stream is floored at a certain strike level. The floor rate is assumed to be exclusive of any spread and is a per annum rate. The rate is expressed as a decimal, e.g. 5% is represented as 0.05.

Type: [Percentage](#)

Used in components: [LegPaymentStreamFloatingRate](#)

180.2.1992 LegPaymentStreamFloorRateBuySide

Reference to the buyer of the floor rate option through its trade side.

Type: [int](#)

Allowed values in PaymentStreamFloorRateBuySideCodeSet:

Code	Name	Description
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

Used in components: [LegPaymentStreamFloatingRate](#)

180.2.1993 LegPaymentStreamFloorRateSellSide

Reference to the seller of the floor rate option through its trade side.

Type: **int**

Allowed values in PaymentStreamFloorRateBuySideCodeSet:

Code	Name	Description
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

Used in components: **LegPaymentStreamFloatingRate**

180.2.1994 LegPaymentStreamFormula

Contains an XML representation of the formula. Defined for flexibility in choice of language (MathML, OpenMath or text).

Type: **XMLData**

Used in groups: **LegPaymentStreamFormulaMathGrp**

180.2.1995 LegPaymentStreamFormula

LegPaymentStreamFormula is a subcomponent of the LegPaymentStreamFloatingRate component used to report the parameters for determining the floating rate of the stream e.g. for equity swaps.

Name	Mult.	Type	Description
LegPaymentStreamFormulaCurrency	[0..1]	Currency	
LegPaymentStreamFormulaCurrency-DeterminationMethod	[0..1]	String	
LegPaymentStreamFormulaReferenceAmount	[0..1]	int	
LegPaymentStreamFormulaMathGrp	[0..*]	Group	
LegPaymentStreamFormulaImage	[0..1]	Component	

Used in components: **LegPaymentStreamFloatingRate**

180.2.1996 LegPaymentStreamFormulaCurrency

The currency in which the formula amount is denominated. Uses ISO 4217 currency codes.

Type: **Currency**

Used in components: **LegPaymentStreamFormula**

180.2.1997 LegPaymentStreamFormulaCurrencyDeterminationMethod

Specifies the method according to which the formula amount currency is determined.

See <http://www.fpml.org/coding-scheme/determination-method> for values.

Type: **String**

Used in components: **LegPaymentStreamFormula**

180.2.1998 LegPaymentStreamFormulaDesc

A description of the math formula in LegPaymentStreamFormula(42486).

Type: **String**

Used in groups: **LegPaymentStreamFormulaMathGrp**

180.2.1999 LegPaymentStreamFormulaImage

Image of the formula image when represented through an encoded clip in base64Binary.

Type: **data**

Used in components: **LegPaymentStreamFormulaImage**

180.2.2000 LegPaymentStreamFormulaImage

LegPaymentStreamFormulaImage is a subcomponent of the LegPaymentStreamFormula component used to include a base64Binary-encoded image clip of the formula.

Name	Mult.	Type	Description
LegPaymentStreamFormulalImageLength	[0..1]	Length	Conditionally required when LegPaymentStreamFormulalImage(42452) is specified.
LegPaymentStreamFormulalImage	[0..1]	data	Conditionally required when LegPaymentStreamFormulalImageLength(42451) is specified.

Used in components: [LegPaymentStreamFormula](#)

180.2.2001 LegPaymentStreamFormulalImageLength

Length in bytes of the LegPaymentStreamFormulalImage(42452) field.

Type: [Length](#)

Used in components: [LegPaymentStreamFormulalImage](#)

180.2.2002 LegPaymentStreamFormulaLength

Byte length of encoded (non-ASCII characters) LegPaymentStreamFormula(42486) field.

Type: [Length](#)

Used in groups: [LegPaymentStreamFormulaMathGrp](#)

180.2.2003 LegPaymentStreamFormulaMathGrp

LegPaymentStreamFormulaMathGrp is a repeating subcomponent within the LegPaymentStreamFormula component. It is used to specify the set of formulas, sub-formulas and descriptions from which the rate is derived.

Name	Mult.	Type	Description
NoLegPaymentStreamFormulas	[1..1]	NumInGroup	
LegPaymentStreamFormulaLength	[0..1]	Length	Required if NoLegPaymentStreamFormulas(42485) > 0.
LegPaymentStreamFormula	[0..1]	XMLData	Required if NoLegPaymentStreamFormulas(42485) > 0.
LegPaymentStreamFormulaDesc	[0..1]	String	

Used in components: [LegPaymentStreamFormula](#)

180.2.2004 LegPaymentStreamFormulaReferenceAmount

Specifies the reference amount when this term either corresponds to the standard ISDA Definition (either the 2002 Equity Definition for the Equity Amount, or the 2000 Definition for the Interest Amount), or refers to a term defined elsewhere in the swap document.

See http://www.fixtradingcommunity.org/codelists#Payment_Amount_Relative_To for code list of reference amounts.

Type: [int](#)

Used in components: [LegPaymentStreamFormula](#)

180.2.2005 LegPaymentStreamFRADiscounting

The method of Forward Rate Agreement (FRA) discounting, if any, that will apply.

Type: [int](#)

Allowed values in PaymentStreamFRADiscountingCodeSet:

Code	Name	Description
0	None	None
1	ISDA	International Swaps and Derivatives Association (ISDA)
2	AFMA	Australian Financial Markets Association (AFMA)

Used in components: [LegPaymentStreamFloatingRate](#)

180.2.2006 LegPaymentStreamFutureValueDateAdjusted

The adjusted value date of the future value amount.

Type: [LocalMktDate](#)

Used in components: [LegPaymentStreamFixedRate](#)

180.2.2007 LegPaymentStreamFutureValueNotional

The future value notional is normally only required for certain non-deliverable interest rate swaps (e.g. Brazilian Real (BRL) vs. CETIP Interbank Deposit Rate (CDI)). The value is calculated as follows: Future Value Notional = Notional Amount * (1 + Fixed Rate) ^ (Fixed Rate Day Count Fraction). The currency is the same as the stream notional.

Type: **Amt**

Used in components: **LegPaymentStreamFixedRate**

180.2.2008 LegPaymentStreamInflationFallbackBondApplicable

Indicates whether a fallback bond as defined in the 2006 ISDA Inflation Derivatives Definitions, sections 1.3 and 1.8, is applicable or not. If not specified, the default value is "Y" (True/Yes).

Type: **Boolean**

Used in components: **LegPaymentStreamFloatingRate**

180.2.2009 LegPaymentStreamInflationIndexSource

The inflation index reference source.

Type: **int**

Allowed values in PaymentStreamRateIndexSourceCodeSet:

Code	Name	Description
0	Bloomberg	Bloomberg
1	Reuters	Reuters
2	Telerate	Telerate
99	Other	Other

Used in components: **LegPaymentStreamFloatingRate**

180.2.2010 LegPaymentStreamInflationInitialIndexLevel

Initial known index level for the first calculation period.

Type: **float**

Used in components: **LegPaymentStreamFloatingRate**

180.2.2011 LegPaymentStreamInflationInterpolationMethod

The method used when calculating the inflation index level from multiple points. The most common is linear method.

Type: **int**

Allowed values in PaymentStreamInflationInterpolationMethodCodeSet:

Code	Name	Description
0	None	None
1	LinearZeroYield	Linear zero yield

Used in components: **LegPaymentStreamFloatingRate**

180.2.2012 LegPaymentStreamInflationLagDayType

The inflation lag period day type.

Type: **int**

Allowed values in PaymentStreamInflationLagDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: **LegPaymentStreamFloatingRate**

180.2.2013 LegPaymentStreamInflationLagPeriod

Time unit multiplier for the inflation lag period. The lag period is the offsetting period from the payment date which determines the reference period for which the inflation index is observed.

Type: **int**

Used in components: **LegPaymentStreamFloatingRate**

180.2.2014 LegPaymentStreamInflationLagUnit

Time unit associated with the inflation lag period.

Type: **String**

Allowed values in PaymentStreamInflationLagUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: **LegPaymentStreamFloatingRate**

180.2.2015 LegPaymentStreamInflationPublicationSource

The publication source, such as relevant web site, news publication or a government body, where inflation information is obtained.

Type: **String**

Used in components: **LegPaymentStreamFloatingRate**

180.2.2016 LegPaymentStreamInitialFixingDateAdjusted

The adjusted initial fixing date.

Type: **LocalMktDate**

Used in components: **LegPaymentStreamResetDates**

180.2.2017 LegPaymentStreamInitialFixingDateBusinessCenter

The business center calendar used to adjust the payment stream's initial fixing date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **LegPaymentStreamInitialFixingDateBusinessCenterGrp**

180.2.2018 LegPaymentStreamInitialFixingDateBusinessCenterGrp

LegPaymentStreamInitialFixingDateBusinessCenterGrp is a repeating subcomponent within the LegPaymentStreamResetDates component used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the LegDateAdjustment component in InstrumentLeg.

Name	Mult.	Type	Description
NoLegPaymentStreamInitialFixingDateBusinessCenters	[1..1]	NumInGroup	
LegPaymentStreamInitialFixingDateBusinessCenter	[0..1]	String	Required if NoLegPaymentStreamInitialFixingDateBusinessCenters(40932) > 0.

Used in components: [LegPaymentStreamResetDates](#)

180.2.2019 LegPaymentStreamInitialFixingDateBusinessDayConvention

The business day convention used to adjust the payment stream's initial fixing date. Used only to override the business day convention specified in the LegDateAdjustment component within the InstrumentLeg component.

Type: [int](#)

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [LegPaymentStreamResetDates](#)

180.2.2020 LegPaymentStreamInitialFixingDateOffsetDayType

Specifies the day type of the relative initial fixing date offset.

Type: **int**

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: **LegPaymentStreamResetDates**

180.2.2021 LegPaymentStreamInitialFixingDateOffsetPeriod

Time unit multiplier for the relative initial fixing date offset.

Type: **int**

Used in components: **LegPaymentStreamResetDates**

180.2.2022 LegPaymentStreamInitialFixingDateOffsetUnit

Time unit associated with the relative initial fixing date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: **LegPaymentStreamResetDates**

180.2.2023 LegPaymentStreamInitialFixingDateRelativeTo

Specifies the anchor date when the initial fixing date is relative to an anchor date.

See http://www.fixtradingcommunity.org/codelists#Relative_To_Date for values.

Type: **int**

Used in components: **LegPaymentStreamResetDates**

180.2.2024 LegPaymentStreamInitialPrincipalExchangeIndicator

Indicates whether there is an initial exchange of principal on the effective date.

Type: **Boolean**

Used in components: **LegPaymentStream**

180.2.2025 LegPaymentStreamInitialRate

The initial floating rate reset agreed between the principal parties involved in the trade. This is assumed to be the first required reset rate for the first regular calculation period. It should only be included when the rate is not equal to the rate published on the source implied by the floating rate index. The initial rate is expressed in decimal form, e.g. 5% is represented as 0.05.

Type: **Percentage**

Used in components: **LegPaymentStreamFloatingRate**

180.2.2026 LegPaymentStreamInterimPrincipalExchangeIndicator

Indicates whether there are intermediate or interim exchanges of principal during the term of the swap.

Type: **Boolean**

Used in components: **LegPaymentStream**

180.2.2027 LegPaymentStreamInterpolationMethod

The method used when calculating the index rate from multiple points on the curve. The most common is linear method.

Type: **int**

Allowed values in PaymentStreamInflationInterpolationMethodCodeSet:

Code	Name	Description
0	None	None
1	LinearZeroYield	Linear zero yield

Used in components: **LegPaymentStream**

180.2.2028 LegPaymentStreamInterpolationPeriod

Defines applicable periods for interpolation.

Type: **int**

Allowed values in PaymentStreamInterpolationPeriodCodeSet:

Code	Name	Description
0	Initial	Initial. Interpolation is applicable to the initial period only.
1	InitialAndFinal	Initial and final. Interpolation is applicable to the initial and final periods only.
2	Final	Final. Interpolation is applicable to the final period only.
3	AnyPeriod	Any period. Interpolation is applicable to any non-standard period.

Used in components: **LegPaymentStream**

180.2.2029 LegPaymentStreamLastRegularPaymentDateUnadjusted

The unadjusted last regular payment date.

Type: **LocalMktDate**

Used in components: **LegPaymentStreamPaymentDates**

180.2.2030 LegPaymentStreamLastResetRate

The floating rate determined at the most recent reset. The rate is expressed in decimal form, e.g. 5% is represented as 0.05.

Type: **Percentage**

Used in components: **LegPaymentStreamFloatingRate**

180.2.2031 LegPaymentStreamLinkClosingLevelIndicator

Indicates whether the correlation or variance swap contract will ("Y") strike off the closing level of the default exchange traded contract or not.

Type: **Boolean**

Used in components: **LegPaymentStreamFloatingRate**

180.2.2032 LegPaymentStreamLinkEstimatedTradingDays

The expected number of trading days in the variance or correlation swap stream.

Type: **int**

Used in components: **LegPaymentStreamFloatingRate**

180.2.2033 LegPaymentStreamLinkExpiringLevelIndicator

Indicates whether the correlation or variance swap contract will ("Y") strike off the expiring level of the default exchange traded contract or not.

Type: **Boolean**

Used in components: **LegPaymentStreamFloatingRate**

180.2.2034 LegPaymentStreamLinkInitialLevel

Price level at which the correlation or variance swap contract will strike.

Type: **Price**

Used in components: **LegPaymentStreamFloatingRate**

180.2.2035 LegPaymentStreamLinkMaximumBoundary

Specifies the maximum or upper boundary for variance or strike determination.

For a variation swap stream all observations above this price level will be excluded from the variance calculation.

For a correlation swap stream the maximum boundary is a percentage of the strike price.

Type: **float**

Used in components: **LegPaymentStreamFloatingRate**

180.2.2036 LegPaymentStreamLinkMinimumBoundary

Specifies the minimum or lower boundary for variance or strike determination.

For a variation swap stream all observations below this price level will be excluded from the variance calculation.

For a correlation swap stream the minimum boundary is a percentage of the strike price.

Type: **float**

Used in components: **LegPaymentStreamFloatingRate**

180.2.2037 LegPaymentStreamLinkNumberOfDataSeries

Number of data series for a correlation swap. Normal market practice is that correlation data sets are drawn from geographic market areas, such as America, Europe and Asia Pacific. Each of these geographic areas will have its own data series to avoid contagion.

Type: **int**

Used in components: **LegPaymentStreamFloatingRate**

180.2.2038 LegPaymentStreamLinkStrikePrice

The strike price of a correlation or variance swap stream.

Type: **Price**

Used in components: **LegPaymentStreamFloatingRate**

180.2.2039 LegPaymentStreamLinkStrikePriceType

For a variance swap specifies how LegPaymentStreamLinkStrikePrice(42472) is expressed.

Type: **int**

Allowed values in PaymentStreamLinkStrikePriceTypeCodeSet:

Code	Name	Description
0	Volatility	Volatility
1	Variance	Variance

Used in components: **LegPaymentStreamFloatingRate**

180.2.2040 LegPaymentStreamMarketRate

Used only for credit index trade. This contains the credit spread ("fair value") at which the trade was executed. The market rate varies over the life of the index depending on market conditions. This is the price of the index as quoted by trading desks.

Type: **int**

Used in components: **LegPaymentStream**

180.2.2041 LegPaymentStreamMasterAgreementPaymentDatesIndicator

When set to 'Y', it indicates that payment dates are specified in the relevant master agreement.

Type: **Boolean**

Used in components: **LegPaymentStreamPaymentDates**

180.2.2042 LegPaymentStreamNearestExchangeContractRefID

References a contract listed on an exchange through the instrument's UnderlyingSecurityID(309) which must be fully specified in an instance of the UnderlyingInstrument component.

Type: **String**

Used in components: **LegPaymentStreamFloatingRate**

180.2.2043 LegPaymentStreamNegativeRateTreatment

The specification of any provisions for calculating payment obligations when a floating rate is negative (either due to a quoted negative floating rate or by operation of a spread that is subtracted from the floating rate).

Type: **int**

Allowed values in PaymentStreamNegativeRateTreatmentCodeSet:

Code	Name	Description
0	ZeroInterestRateMethod	Zero interest rate method
1	NegativeInterestRateMethod	Negative interest rate method

Used in components: **LegPaymentStreamFloatingRate**

180.2.2044 LegPaymentStreamNonDeliverableFixingDateGrp

LegPaymentStreamNonDeliverableFixingDate is a subcomponent of the LegPaymentStreamNonDeliverableSettlTerms component used to specify predetermined fixing dates.

Name	Mult.	Type	Description
NoLegNonDeliverableFixingDates	[1..1]	NumInGroup	
LegNonDeliverableFixingDate	[0..1]	LocalMktDate	Required if NoLegNonDeliverableFixingDates(40367) > 0.
LegNonDeliverableFixingDateType	[0..1]	CodeSet	When specified it applies not only to the current date but to all subsequent dates in the group until overridden with a new type.

Used in components: **LegPaymentStreamNonDeliverableSettlTerms**

180.2.2045 LegPaymentStreamNonDeliverableFixingDatesBusinessCenter

The business center calendar used to adjust the payment stream's fixing date for the non-deliverable terms, e.g. "GBLO". See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **LegPaymentStreamNonDeliverableFixingDatesBusinessCenterGrp**

180.2.2046 LegPaymentStreamNonDeliverableFixingDatesBusinessCenterGrp

LegPaymentStreamNonDeliverableFixingDatesBusinessCenterGrp is a repeating subcomponent within the LegPaymentStreamNonDeliverableSettlTerms component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the LegDateAdjustment component in InstrumentLeg.

Name	Mult.	Type	Description
NoLegPaymentStreamNonDeliverable-FixingDateBusinessCenters	[1..1]	NumInGroup	
LegPaymentStreamNonDeliverableFixingDatesBusinessCenter	[0..1]	String	Required if NoLegPaymentStreamNonDeliverable-FixingDatesBusinessCenters(40929) > 0.

Used in components: [LegPaymentStreamNonDeliverableSettlTerms](#)

180.2.2047 LegPaymentStreamNonDeliverableFixingDatesBusinessDayConvention

The business day convention used to adjust the payment stream's fixing date for the non-deliverable settlement terms. Used only to override the business day convention specified in the LegDateAdjustment component within the InstrumentLeg component.

Type: [int](#)

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [LegPaymentStreamNonDeliverableSettlTerms](#)

180.2.2048 LegPaymentStreamNonDeliverableFixingDatesOffsetDayType

Specifies the day type of the relative non-deliverable fixing date offset.

Type: **int**

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: [LegPaymentStreamNonDeliverableSettlTerms](#)

180.2.2049 LegPaymentStreamNonDeliverableFixingDatesOffsetPeriod

Time unit multiplier for the relative non-deliverable fixing date offset.

Type: **int**

Used in components: [LegPaymentStreamNonDeliverableSettlTerms](#)

180.2.2050 LegPaymentStreamNonDeliverableFixingDatesOffsetUnit

Time unit associated with the relative non-deliverable fixing date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: [LegPaymentStreamNonDeliverableSettlTerms](#)

180.2.2051 LegPaymentStreamNonDeliverableFixingDatesRelativeTo

Specifies the anchor date when the non-deliverable fixing dates are relative to an anchor date.

See http://www.fixtradingcommunity.org/codelists#Relative_To_Date for values.

Type: **int**

Used in components: **LegPaymentStreamNonDeliverableSettlTerms**

180.2.2052 LegPaymentStreamNonDeliverableRefCurrency

Non-deliverable settlement reference currency. Uses ISO 4217 currency codes.

Type: **Currency**

Used in components: **LegPaymentStreamNonDeliverableSettlTerms**

180.2.2053 LegPaymentStreamNonDeliverableSettlRateSource

Identifies the source of the rate information.

Type: **int**

Allowed values in RateSourceCodeSet:

Code	Name	Description
0	Bloomberg	Bloomberg
1	Reuters	Reuters
2	Telerate	Telerate
3	ISDARateOption	ISDA Settlement Rate Option. The source of the currency conversion as specified by the ISDA terms in Annex A to the 1998 FX and Currency Option Definitions. See http://www.fpml.org/coding-scheme/settlement-rate-option
99	Other	Other

Used in components: **LegPaymentStreamNonDeliverableSettlRateSource**

180.2.2054 LegPaymentStreamNonDeliverableSettlRateSource

LegPaymentStreamNonDeliverableSettlRateSource is a subcomponent of the LegPaymentStreamNonDeliverableSettlTerms component used to specify the rate source in the event of payment non-delivery.

Name	Mult.	Type	Description
LegPaymentStreamNonDeliverableSettlRateSource	[0..1]	CodeSet	
LegPaymentStreamNonDeliverableSettlReferencePage	[0..1]	String	Conditionally required when LegPaymentStreamNonDeliverableSettlRateSource(40087) = 3 (ISDA Settlement Rate Option) or 99 (Other).

Used in components: [LegPaymentStreamNonDeliverableSettlTerms](#)

180.2.2055 [LegPaymentStreamNonDeliverableSettlReferencePage](#)

Identifies the reference "page" from the rate source.

When [LegPaymentStreamNonDeliverableSettlRateSource\(40087\)](#) = 3 (ISDA Settlement Rate Option) this contains a value from the scheme that reflects the terms of the Annex A to the ISDA 1998 FX and Currency Option Definitions. See: <http://www.fpml.org/coding-scheme/settlement-rate-option>

Type: [String](#)

Used in components: [LegPaymentStreamNonDeliverableSettlRateSource](#)

180.2.2056 [LegPaymentStreamNonDeliverableSettlTerms](#)

[LegPaymentStreamNonDeliverableSettl](#) is a subcomponent of the [LegPaymentStream](#) component used to specify the non-deliverable settlement terms of the payment stream.

Name	Mult.	Type	Description
LegPaymentStreamNonDeliverableRefCurrency	[0..1]	Currency	
LegPaymentStreamNonDeliverableFixingDatesBusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the LegDateAdjustment component in InstrumentLeg . The specified value would be specific to this instance of the non-deliverable currency's fixing date.
LegPaymentStreamNonDeliverableFixingDatesBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the LegDateAdjustment component in InstrumentLeg . The specified values would be specific to this instance of the non-deliverable currency's fixing date.

Name	Mult.	Type	Description
LegPaymentStreamNonDeliverableFixingDatesRelativeTo	[0..1]	int	
LegPaymentStreamNonDeliverableFixingDatesOffsetPeriod	[0..1]	int	Conditionally required when LegPaymentStreamNonDeliverableFixingDateOffsetUnit(40364) is specified.
LegPaymentStreamNonDeliverableFixingDatesOffsetUnit	[0..1]	CodeSet	Conditionally required when LegPaymentStreamNonDeliverableFixingDateOffsetPeriod(40363) is specified.
LegPaymentStreamNonDeliverableFixingDatesOffsetDayType	[0..1]	CodeSet	
LegPaymentStreamNonDeliverableSettlRateSource	[0..1]	Component	
LegPaymentStreamNonDeliverableFixingDateGrp	[0..*]	Group	
LegSettlRateDisruptionFallbackGrp	[0..*]	Group	

Used in components: **LegPaymentStream**

180.2.2057 LegPaymentStreamOtherDayCount

The industry name of the day count convention not listed in LegPaymentStreamDayCount(40283).

Type: **String**

Used in components: **LegPaymentStream**

180.2.2058 LegPaymentStreamPaymentDate

The adjusted or unadjusted fixed stream payment date.

Type: **LocalMktDate**

Used in groups: **LegPaymentStreamPaymentDateGrp**

180.2.2059 LegPaymentStreamPaymentDateBusinessCenter

The business center calendar used to adjust the payment stream's payment date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **LegPaymentStreamPaymentDateBusinessCenterGrp**

180.2.2060 LegPaymentStreamPaymentDateBusinessCenterGrp

LegPaymentStreamPaymentDateBusinessCenterGrp is a repeating subcomponent of the LegPaymentStreamPaymentDates component used to specify the set of business centers whose calendars drive date adjustment. Used only to override the business centers defined in the LegDateAdjustment component in InstrumentLeg.

Name	Mult.	Type	Description
NoLegPaymentStreamPaymentDateBusinessCenters	[1..1]	NumInGroup	
LegPaymentStreamPaymentDateBusinessCenter	[0..1]	String	Requirend if NoLegPaymentStreamPaymentDateBusinessCenters(40930) > 0.

Used in components: **LegPaymentStreamPaymentDates**

180.2.2061 LegPaymentStreamPaymentDateBusinessDayConvention

The business day convention used to adjust the payment stream's payment date. Used only to override the business day convention specified in the LegDateAdjustment component within the InstrumentLeg component.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [LegPaymentStreamPaymentDates](#)

180.2.2062 LegPaymentStreamPaymentDateGrp

The LegPaymentStreamPaymentDateGrp is a repeating subcomponent of the LegPaymentStreamPaymentDates component used to detail fixed dates for swap stream payments.

Name	Mult.	Type	Description
NoLegPaymentStreamPaymentDates	[1..1]	NumInGroup	
LegPaymentStreamPaymentDate	[0..1]	LocalMktDate	Required if NoLegPaymentStreamPaymentDates(41589) > 0.
LegPaymentStreamPaymentDateType	[0..1]	CodeSet	When specified it applies not only to the current date but to all subsequent dates in the group until overridden with a new type.

Used in components: [LegPaymentStreamPaymentDates](#)

180.2.2063 LegPaymentStreamPaymentDateOffsetDayType

Specifies the day type of the relative payment date offset.

Type: [int](#)

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: [LegPaymentStreamPaymentDates](#)

180.2.2064 LegPaymentStreamPaymentDateOffsetPeriod

Time unit multiplier for the relative payment date offset.

Type: **int**

Used in components: **LegPaymentStreamPaymentDates**

180.2.2065 LegPaymentStreamPaymentDateOffsetUnit

Time unit associated with the relative payment date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: **LegPaymentStreamPaymentDates**

180.2.2066 LegPaymentStreamPaymentDateRelativeTo

Specifies the anchor date when payment dates are relative to an anchor date.

See http://www.fixtradingcommunity.org/codelists#Relative_To_Date for values.

Type: **int**

Used in components: **LegPaymentStreamPaymentDates**

180.2.2067 LegPaymentStreamPaymentDates

The LegPaymentStreamPaymentDates component is a subcomponent of the LegPaymentStream component used to specify the payment dates of the stream.

Name	Mult.	Type	Description
LegPaymentStreamPaymentDateBusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the LegDateAdjustment component in InstrumentLeg. The specified value would be specific to this instance of the leg payment stream.
LegPaymentStreamPaymentDateBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the LegDateAdjustment component in InstrumentLeg. The specified values would be specific to this instance of the leg payment stream.
LegPaymentStreamPaymentDateGrp	[0..*]	Group	
LegPaymentStreamPaymentFrequencyPeriod	[0..1]	int	Conditionally required when LegPaymentStreamPaymentFrequencyUnit(40295) is specified.
LegPaymentStreamPaymentFrequencyUnit	[0..1]	CodeSet	Conditionally required when LegPaymentStreamFrequencyPeriod(40294) is specified.
LegPaymentStreamPaymentRollConvention	[0..1]	CodeSet	When specified, this overrides the date roll convention defined in the LegDateAdjustment component in InstrumentLeg. The specified values would be specific to this instance of the stream payment dates.
LegPaymentStreamFirstPaymentDateUnadjusted	[0..1]	LocalMktDate	
LegPaymentStreamLastRegularPaymentDateUnadjusted	[0..1]	LocalMktDate	
LegPaymentStreamPaymentDateRelativeTo	[0..1]	int	
LegPaymentStreamPaymentDateOffsetPeriod	[0..1]	int	Conditionally required when LegPaymentStreamPaymentDateOffsetUnit(40301) is specified.
LegPaymentStreamPaymentDateOffsetUnit	[0..1]	CodeSet	Conditionally required when LegPaymentStreamPaymentDateOffsetPeriod(40300) is specified.
LegPaymentStreamPaymentDateOffsetDayType	[0..1]	CodeSet	
LegPaymentStreamMasterAgreementPaymentDatesIndicator	[0..1]	Boolean	
LegPaymentStreamFinalPricePaymentDate	[0..1]	Component	

Used in components: [LegPaymentStream](#)

180.2.2068 LegPaymentStreamPaymentDateType

Specifies the type of payment date. When specified it applies not only to the current date but to all subsequent dates in the group until overridden with a new type.

Type: **int**

Allowed values in OptionExerciseDateTypeCodeSet:

Code	Name	Description
0	Unadjusted	Unadjusted
1	Adjusted	Adjusted

Used in groups: **LegPaymentStreamPaymentDateGrp**

180.2.2069 LegPaymentStreamPaymentFrequencyPeriod

Time unit multiplier for the frequency of payments.

Type: **int**

Used in components: **LegPaymentStreamPaymentDates**

180.2.2070 LegPaymentStreamPaymentFrequencyUnit

Time unit associated with the frequency of payments.

Type: **String**

Allowed values in PaymentStreamPaymentFrequencyUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year
T	Term	Term

Used in components: **LegPaymentStreamPaymentDates**

180.2.2071 LegPaymentStreamPaymentRollConvention

The convention for determining the sequence of end dates. It is used in conjunction with a specified frequency. Used only to override the roll convention specified in the LegDateAdjustment component within the InstrumentLeg component.

Type: **String**

Allowed values in DateRollConventionCodeSet:

Code	Name	Description
1	FirstDay	1st day of the month
2	SecondDay	2nd day of the month
3	ThirdDay	3rd day of the month
4	FourthDay	4th day of the month
5	FifthDay	5th day of the month
6	SixthDay	6th day of the month
7	SeventhDay	7th day of the month
8	EighthDay	8th day of the month
9	NinthDay	9th day of the month
10	TenthDay	10th day of the month
11	EleventhDay	11th day of the month
12	TwelfthDay	12th day of the month
13	ThirteenthDay	13th day of the month
14	FourteenthDay	14th day of the month
15	FifteenthDay	15th day of the month
16	SixteenthDay	16th day of the month
17	SeventeenthDay	17th day of the month
18	EighteenthDay	18th day of the month
19	NineteenthDay	19th day of the month
20	TwentiethDay	20th day of the month
21	TwentyFirstDay	21st day of the month
22	TwentySecondDay	22nd day of the month
23	TwentyThirdDay	23rd day of the month
24	TwentyFourthDay	24th day of the month
25	TwentyFifthDay	25th day of the month
26	TwentySixthDay	26th day of the month
27	TwentySeventhDay	27th day of the month

Code	Name	Description
28	TwentyEighthDa28y	28th day of the month
29	TwentyNinthDay	29th day of the month
30	ThirtiethDay	30th day of the month
EOM	EOM	The end of the month. Use EOM for 31st day of the month.
FRN	FRN	The floating rate note convention or Eurodollar convention.
IMM	IMM	The International Money Market settlement date, i.e. the 3rd Wednesday of the month.
IMMCAD	IMMCAD	The last trading day/expiration day of the Canadian Derivatives Exchange.
IMMAUD	IMMAUD	The last trading day of the Sydney Futures Exchange Australian 90-day bank accepted bill futures contract.
IMMNZD	IMMNZD	The last trading day of the Sydney Futures Exchange New Zealand 90-day bank bill futures contract.
SFE	SFE	The Sydney Futures Exchange 90-day bank accepted bill futures settlement dates.
NONE	NONE	No adjustment
TBILL	TBILL	The 13-week and 26-week U.S. Treasury Bill auction dates.
MON	MON	Monday
TUE	TUE	Tuesday
WED	WED	Wednesday
THU	THU	Thursday
FRI	FRI	Friday
SAT	SAT	Saturday
SUN	SUN	Sunday

Used in components: [LegPaymentStreamPaymentDates](#)

180.2.2072 LegPaymentStreamPricingBusinessCalendar

Specifies the business calendar to use for pricing.

See <http://www.fpml.org/coding-scheme/commodity-business-calendar> for values.

Type: [String](#)

Used in components: [LegPaymentStreamFloatingRate](#)

180.2.2073 LegPaymentStreamPricingBusinessCenter

The business center calendar used to adjust the pricing dates, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **LegPaymentStreamPricingBusinessCenterGrp**

180.2.2074 LegPaymentStreamPricingBusinessCenterGrp

LegPaymentStreamPricingBusinessCenterGrp is a repeating subcomponent of the LegPaymentStream-FloatingRate component used to specify the set of business centers whose calendars drive date adjustment. Used only to override the business centers defined in the LegDateAdjustment component in InstrumentLeg.

Name	Mult.	Type	Description
NoLegPaymentStreamPricingBusinessCenters	[1..1]	NumInGroup	
LegPaymentStreamPricingBusinessCenter	[0..1]	String	Required if NoLegPaymentStreamPricingBusinessCenters(41561) > 0.

Used in components: **LegPaymentStreamFloatingRate**

180.2.2075 LegPaymentStreamPricingBusinessDayConvention

The business day convention used to adjust the payment stream's pricing dates. Used only to override the business day convention specified in the LegDateAdjustment component within the InstrumentLeg component.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.

Code	Name	Description
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [LegPaymentStreamFloatingRate](#)

180.2.2076 LegPaymentStreamPricingDate

The adjusted or unadjusted fixed stream pricing date.

Type: [LocalMktDate](#)

Used in groups: [LegPaymentStreamPricingDateGrp](#)

180.2.2077 LegPaymentStreamPricingDateGrp

The LegPaymentStreamPricingDateGrp is a repeating subcomponent of the LegPaymentStreamFloatingRate component used to detail fixed pricing dates.

Name	Mult.	Type	Description
NoLegPaymentStreamPricingDates	[1..1]	NumInGroup	
LegPaymentStreamPricingDate	[0..1]	LocalMktDate	Required if NoPaymentStreamPricingDates(41593) > 0.
LegPaymentStreamPricingDateType	[0..1]	CodeSet	When specified it applies not only to the current date but to all subsequent dates in the group until overridden with a new type.

Used in components: [LegPaymentStreamFloatingRate](#)

180.2.2078 LegPaymentStreamPricingDateType

Specifies the type of pricing date. When specified it applies not only to the current date but to all subsequent dates in the group until overridden with a new type.

Type: **int**

Allowed values in OptionExerciseDateTypeCodeSet:

Code	Name	Description
0	Unadjusted	Unadjusted
1	Adjusted	Adjusted

Used in groups: **LegPaymentStreamPricingDateGrp**

180.2.2079 LegPaymentStreamPricingDayCount

The number of days over which pricing should take place.

Type: **int**

Used in components: **LegPaymentStreamFloatingRate**

180.2.2080 LegPaymentStreamPricingDayDistribution

The distribution of pricing days.

Type: **int**

Allowed values in PaymentStreamPricingDayDistributionCodeSet:

Code	Name	Description
0	All	All
1	First	First
2	Last	Last
3	Penultimate	Penultimate

Used in components: **LegPaymentStreamFloatingRate**

180.2.2081 LegPaymentStreamPricingDayGrp

The LegPaymentStreamPricingDayGrp is a repeating subcomponent of the LegPaymentStreamFloatingRate component used to detail periodic pricing days.

Name	Mult.	Type	Description
NoLegPaymentStreamPricingDays	[1..1]	NumInGroup	
LegPaymentStreamPricingDayOfWeek	[0..1]	CodeSet	Required if NoLegPaymentStreamPricingDays(41596) > 0.
LegPaymentStreamPricingDayNumber	[0..1]	int	

Used in components: [LegPaymentStreamFloatingRate](#)

180.2.2082 LegPaymentStreamPricingDayNumber

The occurrence of the day of week on which pricing takes place.

Type: [int](#)

Used in groups: [LegPaymentStreamPricingDayGrp](#)

180.2.2083 LegPaymentStreamPricingDayOfWeek

The day of the week on which pricing takes place.

Type: [int](#)

Allowed values in PaymentStreamPricingDayOfWeekCodeSet:

Code	Name	Description
0	EveryDay	Every day (the default if not specified)
1	Monday	Monday
2	Tuesday	Tuesday
3	Wednesday	Wednesday
4	Thursday	Thursday
5	Friday	Friday
6	Saturday	Saturday
7	Sunday	Sunday

Used in groups: [LegPaymentStreamPricingDayGrp](#)

180.2.2084 LegPaymentStreamPricingDayType

Specifies the commodity pricing day type.

Type: **int**

Allowed values in ComplexEventDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: **LegPaymentStreamFloatingRate**

180.2.2085 LegPaymentStreamRate

The rate applicable to the fixed rate payment stream.

Type: **Percentage**

Used in components: **LegPaymentStreamFixedRate**

180.2.2086 LegPaymentStreamRateConversionFactor

The number to be multiplied by the derived floating rate of the leg's payment stream in order to arrive at the payment rate. If omitted, the floating rate conversion factor is 1.

Type: **float**

Used in components: **LegPaymentStreamFloatingRate**

180.2.2087 LegPaymentStreamRateCutoffDateOffsetDayType

Specifies the day type of the relative rate cut-off date offset.

Type: **int**

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: [LegPaymentStreamResetDates](#)

180.2.2088 LegPaymentStreamRateCutoffDateOffsetPeriod

Time unit multiplier for the relative rate cut-off date offset.

Type: [int](#)

Used in components: [LegPaymentStreamResetDates](#)

180.2.2089 LegPaymentStreamRateCutoffDateOffsetUnit

Time unit associated with the relative rate cut-off date offset.

Type: [String](#)

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: [LegPaymentStreamResetDates](#)

180.2.2090 LegPaymentStreamRateIndex

The payment stream floating rate index.

Type: **String**

Used in components: **LegPaymentStreamFloatingRate**

180.2.2091 LegPaymentStreamRateIndex2

The payment stream's second floating rate index.

Type: **String**

Used in components: **LegPaymentStreamFloatingRate**

180.2.2092 LegPaymentStreamRateIndex2CurvePeriod

Secondary time unit multiplier for the payment stream's floating rate index curve.

Type: **int**

Used in components: **LegPaymentStreamFloatingRate**

180.2.2093 LegPaymentStreamRateIndex2CurveUnit

Secondary time unit associated with the payment stream's floating rate index curve.

Type: **String**

Allowed values in PaymentStreamRateIndexCurveUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: **LegPaymentStreamFloatingRate**

180.2.2094 LegPaymentStreamRateIndex2ID

Security identifier of the second floating rate index.

Type: **String**

Used in components: **LegPaymentStreamFloatingRate**

180.2.2095 LegPaymentStreamRateIndex2IDSource

Source for the second floating rate index identified in LegPaymentStreamRateIndex2ID(43118).

Type: **String**

Allowed values in SecurityIDSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
3	QUIK	QUIK
4	ISINNumber	ISIN
5	RICCode	RIC
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
7	ISOCountryCode	ISO Country Code
8	ExchangeSymbol	Exchange symbol
9	ConsolidatedTapeAssociation	Consolidated Tape Association (CTA) Symbol (SIAC CTS/CQS line format)
A	BloombergSymbol	Bloomberg Symbol
B	Wertpapier	Wertpapier
C	Dutch	Dutch
D	Valoren	Valoren
E	Sicovam	Sicovam
F	Belgian	Belgian
G	Common	"Common" (Clearstream and Euroclear)
H	ClearingHouse	Clearing house / Clearing organization
I	ISDAFpMLSpecification	ISDA/FpML product specification (XML in SecurityXML(1185))
J	OptionPriceReportingAuthority	Option Price Reporting Authority
K	ISDAFpMLURL	ISDA/FpML product URL (URL in SecurityID(48))
L	LetterOfCredit	Letter of credit

Code	Name	Description
M	MarketplaceAssignedIdentifier	Marketplace-assigned Identifier
N	MarkitREDEntityCLIP	Markit RED entity CLIP
P	MarkitREDPairCLIP	Markit RED pair CLIP
Q	CFTCCommodityCode	CFTC commodity code
R	ISDACommodityReferencePrice	ISDA Commodity Reference Price
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbolology BBGID".
T	LegalEntityIdentifier	Legal entity identifier
U	Synthetic	Synthetic. Used to specify that the security identifier is synthetic for linking nested underliers when there is no market identifier for the collection.
V	FidessaInstrumentMnemonic	Fidessa Instrument Mnemonic (FIM)
W	IndexName	Index name. Standard name of the index or rate index, e.g. "LIBOR" or "iTraxx Australia".
X	UniformSymbol	Uniform Symbol (UMTF Symbol)
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in components: [LegPaymentStreamFloatingRate](#)

180.2.2096 LegPaymentStreamRateIndex2Source

The source of the payment stream's second floating rate index.

Type: [int](#)

Allowed values in PaymentStreamRateIndexSourceCodeSet:

Code	Name	Description
0	Bloomberg	Bloomberg
1	Reuters	Reuters
2	Telerate	Telerate
99	Other	Other

Used in components: [LegPaymentStreamFloatingRate](#)

180.2.2097 LegPaymentStreamRateIndexCurvePeriod

Time unit multiplier for the payment stream's floating rate index curve period.

Type: **int**

Used in components: **LegPaymentStreamFloatingRate**

180.2.2098 LegPaymentStreamRateIndexCurveUnit

Time unit associated with the payment stream's floating rate index curve period.

Type: **String**

Allowed values in PaymentStreamRateIndexCurveUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: **LegPaymentStreamFloatingRate**

180.2.2099 LegPaymentStreamRateIndexID

Security identifier of the floating rate index.

Type: **String**

Used in components: **LegPaymentStreamFloatingRate**

180.2.2100 LegPaymentStreamRateIndexIDSource

Source for the floating rate index identified in LegPaymentStreamRateIndexID(43088).

Type: **String**

Allowed values in SecurityIDSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
3	QUIK	QUIK
4	ISINNumber	ISIN
5	RICCode	RIC
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
7	ISOCountryCode	ISO Country Code
8	ExchangeSymbol	Exchange symbol
9	ConsolidatedTapeAssociation	Consolidated Tape Association (CTA) Symbol (SIAC CTS/CQS line format)
A	BloombergSymbol	Bloomberg Symbol
B	Wertpapier	Wertpapier
C	Dutch	Dutch
D	Valoren	Valoren
E	Sicovam	Sicovam
F	Belgian	Belgian
G	Common	"Common" (Clearstream and Euroclear)
H	ClearingHouse	Clearing house / Clearing organization
I	ISDAFpMLSpecification	ISDA/FpML product specification (XML in SecurityXML(1185))
J	OptionPriceReportingAuthority	Option Price Reporting Authority
K	ISDAFpMLURL	ISDA/FpML product URL (URL in SecurityID(48))
L	LetterOfCredit	Letter of credit
M	MarketplaceAssignedIdentifier	Marketplace-assigned Identifier
N	MarkitREDEntityCLIP	Markit RED entity CLIP
P	MarkitREDPairCLIP	Markit RED pair CLIP
Q	CFTCCommodityCode	CFTC commodity code
R	ISDACommodityReferencePrice	ISDA Commodity Reference Price
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
T	LegalEntityIdentifier	Legal entity identifier
U	Synthetic	Synthetic. Used to specify that the security identifier is synthetic for linking nested underliers when there is no market identifier for the collection.
V	FidessaInstrumentMnemonic	Fidessa Instrument Mnemonic (FIM)

Code	Name	Description
W	IndexName	Index name. Standard name of the index or rate index, e.g. "LIBOR" or "iTraxx Australia".
X	UniformSymbol	Uniform Symbol (UMTF Symbol)
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in components: [LegPaymentStreamFloatingRate](#)

180.2.2101 LegPaymentStreamRateIndexLevel

This is the weather Cooling Degree Days (CDD), Heating Degree Days (HDD) or HDD index level specified as the number of (amount of) weather index units specified by the parties in the related confirmation.

Type: [Qty](#)

Used in components: [LegPaymentStreamFloatingRate](#)

180.2.2102 LegPaymentStreamRateIndexLocation

Specifies the location of the floating rate index.

Type: [String](#)

Used in components: [LegPaymentStreamFloatingRate](#)

180.2.2103 LegPaymentStreamRateIndexSource

The source of the payment stream floating rate index.

Type: [int](#)

Allowed values in PaymentStreamRateIndexSourceCodeSet:

Code	Name	Description
0	Bloomberg	Bloomberg
1	Reuters	Reuters
2	Telerate	Telerate
99	Other	Other

Used in components: [LegPaymentStreamFloatingRate](#)

180.2.2104 LegPaymentStreamRateIndexUnitOfMeasure

The unit of measure (UOM) of the rate index level.

Type: **String**

Allowed values in UnitOfMeasureCodeSet:

Code	Name	Description
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet
Bbl	Barrels	Barrels. Equal to 42 US gallons
CBM	CubicMeters	Cubic Meters
BDFT	BoardFeet	Board feet. Equal to 144 cubic inches
GJ	Gigajoules	gigajoules
Bu	Bushels	Bushels

Used in components: [LegPaymentStreamFloatingRate](#)

180.2.2105 LegPaymentStreamRateMultiplier

A rate multiplier to apply to the floating rate. The multiplier can be less than or greater than 1 (one). This element should only be included if the multiplier is not equal to 1 (one) for the term of the stream.

Type: [float](#)

Used in components: [LegPaymentStreamFloatingRate](#)

180.2.2106 LegPaymentStreamRateOrAmountCurrency

Specifies the currency in which LegPaymentStreamFixedAmount(40327) or LegPaymentStreamRate(40326) is denominated. Uses ISO 4217 currency codes.

Type: **Currency**

Used in components: **LegPaymentStreamFixedRate**

180.2.2107 LegPaymentStreamRateSpread

The basis points spread from the index specified in LegPaymentStreamRateIndex(40331).

Type: **PriceOffset**

Used in components: **LegPaymentStreamFloatingRate**

180.2.2108 LegPaymentStreamRateSpreadCurrency

Specifies the currency of the floating rate spread. Uses ISO 4217 currency codes.

Type: **Currency**

Used in components: **LegPaymentStreamFloatingRate**

180.2.2109 LegPaymentStreamRateSpreadPositionType

Identifies whether the rate spread is applied to a long or short position.

Type: **int**

Allowed values in PaymentStreamRateSpreadPositionTypeCodeSet:

Code	Name	Description
0	Short	Short
1	Long	Long

Used in components: **LegPaymentStreamFloatingRate**

180.2.2110 LegPaymentStreamRateSpreadType

Identifies whether the rate spread is an absolute value to be added to the index rate or a percentage of the index rate.

Type: **int**

Allowed values in PaymentStreamRateSpreadTypeCodeSet:

Code	Name	Description
0	Absolute	Absolute
1	Percentage	Percentage

Used in components: **LegPaymentStreamFloatingRate**

180.2.2111 LegPaymentStreamRateSpreadUnitOfMeasure

Specifies the unit of measure (UOM) of the floating rate spread.

Type: **String**

Allowed values in UnitOfMeasureCodeSet:

Code	Name	Description
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet
Bbl	Barrels	Barrels. Equal to 42 US gallons
CBM	CubicMeters	Cubic Meters
BDFT	BoardFeet	Board feet. Equal to 144 cubic inches
GJ	Gigajoules	gigajoules
Bu	Bushels	Bushels
kHR	HeatRate	Heat rate. The number of BTUs required to produce one kilowatt hour of electricity, typically 3,412.14 BTUs per 1 kWh.
Ccy	Currency	Amount of currency
kWh	KilowattHours	Kilowatt hours
CDD	CoolingDegreeDay	Cooling degree day
MHR	MegaHeatRate	Mega heat rate. The number of million BTUs required to produce one megawatt hour of electricity, typically 3.41214 million BTUs per 1 MWh.

Code	Name	Description
CER	CertifiedEmissionsReduction	Certified emissions reduction
MMBtu	OneMillionBTU	One Million BTU

USD	USDollars	US Dollars

Used in components: [LegPaymentStreamFloatingRate](#)

180.2.2112 LegPaymentStreamRateTreatment

Specifies the yield calculation treatment for the index.

Type: [int](#)

Allowed values in PaymentStreamRateTreatmentCodeSet:

Code	Name	Description
0	BondEquivalentYield	Bond equivalent yield
1	MoneyMarketYield	Money market yield

Used in components: [LegPaymentStreamFloatingRate](#)

180.2.2113 LegPaymentStreamRealizedVarianceMethod

Indicates which price to use to satisfy the boundary condition.

Type: [int](#)

Allowed values in PaymentStreamRealizedVarianceMethodCodeSet:

Code	Name	Description
0	Previous	Previous. For a return on day T, the observed price on T-1 must be in range.
1	Last	Last. For a return on day T, the observed price on T must be in range.
2	Both	Both. For a return on day T, the observed prices on both T and T-1 must be in range.

Used in components: [LegPaymentStreamFloatingRate](#)

180.2.2114 LegPaymentStreamReferenceLevel

This is the weather Cooling Degree Days (CDD), Heating Degree Days (HDD) or HDD reference level specified as the number of (amount of) weather index units specified by the parties in the related confirmation.

Type: **Qty**

Used in components: **LegPaymentStreamFloatingRate**

180.2.2115 LegPaymentStreamReferenceLevelEqualsZeroIndicator

When set to 'Y', it indicates that the weather reference level equals zero.

Type: **Boolean**

Used in components: **LegPaymentStreamFloatingRate**

180.2.2116 LegPaymentStreamReferenceLevelUnitOfMeasure

The unit of measure (UOM) of the rate reference level.

Type: **String**

Allowed values in UnitOfMeasureCodeSet:

Code	Name	Description
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet

Used in components: [LegPaymentStreamFloatingRate](#)

180.2.2117 LegPaymentStreamResetDateBusinessCenter

The business center calendar used to adjust the payment stream's reset date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in groups: [LegPaymentStreamResetDateBusinessCenterGrp](#)

180.2.2118 LegPaymentStreamResetDateBusinessCenterGrp

LegPaymentStreamResetDateBusinessCenterGrp is a repeating subcomponent within the LegPaymentStreamResetDates component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the LegDateAdjustment component in InstrumentLeg.

Name	Mult.	Type	Description
NoLegPaymentStreamResetDateBusinessCenters	[1..1]	NumInGroup	
LegPaymentStreamResetDateBusinessCenter	[0..1]	String	Required if NoLegPaymentStreamResetDateBusinessCenters (40931) > 0.

Used in components: [LegPaymentStreamResetDates](#)

180.2.2119 LegPaymentStreamResetDateBusinessDayConvention

The business day convention used to adjust the payment stream's reset date. Used only to override the business day convention specified in the LegDateAdjustment component within the InstrumentLeg component.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: **LegPaymentStreamResetDates**

180.2.2120 LegPaymentStreamResetDateRelativeTo

Specifies the anchor date when the reset dates are relative to an anchor date.

If the reset frequency is specified as daily this element must not be included.

See http://www.fixtradingcommunity.org/codelists#Relative_To_Date for values.

Type: **int**

Used in components: **LegPaymentStreamResetDates**

180.2.2121 LegPaymentStreamResetDates

The LegPaymentStreamResetDates component is a subcomponent of the LegPaymentStream component used to specify the floating rate reset dates of the stream.

Name	Mult.	Type	Description
LegPaymentStreamResetDateRelativeTo	[0..1]	int	

Name	Mult.	Type	Description
LegPaymentStreamResetDateBusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the LegDateAdjustment component in InstrumentLeg. The specified value would be specific to this instance of the leg payment stream reset dates.
LegPaymentStreamResetDateBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the LegDateAdjustment component in InstrumentLeg. The specified values would be specific to this instance of the leg payment stream reset dates.
LegPaymentStreamResetFrequencyPeriod	[0..1]	int	Conditionally required when LegPaymentStreamResetFrequencyUnit(40307) is specified.
LegPaymentStreamResetFrequencyUnit	[0..1]	CodeSet	Conditionally required when LegPaymentStreamResetFrequencyPeriod(40306) is specified.
LegPaymentStreamResetWeeklyRollConvention	[0..1]	CodeSet	When specified, this overrides the date roll convention defined in the LegDateAdjustment component in InstrumentLeg. The specified values would be specific to this instance of the stream payment dates.
LegPaymentStreamInitialFixingDateRelativeTo	[0..1]	int	
LegPaymentStreamInitialFixingDateBusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the LegDateAdjustment component in InstrumentLeg. The specified value would be specific to this instance of the leg payment stream reset dates.
LegPaymentStreamInitialFixingDateBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the LegDateAdjustment component in InstrumentLeg. The specified values would be specific to this instance of the leg payment stream reset dates.
LegPaymentStreamInitialFixingDateOffsetPeriod	[0..1]	int	Conditionally required when LegPaymentStreamInitialFixingDateOffsetUnit(40313) is specified.
LegPaymentStreamInitialFixingDateOffsetUnit	[0..1]	CodeSet	Conditionally required when LegPaymentStreamInitialFixingDateOffsetPeriod(40312) is specified.
LegPaymentStreamInitialFixingDateOffsetDayType	[0..1]	CodeSet	

Name	Mult.	Type	Description
LegPaymentStreamInitialFixingDateAdjusted	[0..1]	LocalMktDate	
LegPaymentStreamFixingDateRelativeTo	[0..1]	int	
LegPaymentStreamFixingDateBusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the LegDateAdjustment component in InstrumentLeg. The specified value would be specific to this instance of the leg payment stream reset dates.
LegPaymentStreamFixingDateBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the LegDateAdjustment component in InstrumentLeg. The specified values would be specific to this instance of the leg payment stream reset dates.
LegPaymentStreamFixingDateOffsetPeriod	[0..1]	int	Conditionally required when LegPaymentStreamFixingDateOffsetUnit(40320) is specified.
LegPaymentStreamFixingDateOffsetUnit	[0..1]	CodeSet	Conditionally required when LegPaymentStreamFixingDateOffsetPeriod(40319) is specified.
LegPaymentStreamFixingDateOffsetDayType	[0..1]	CodeSet	
LegPaymentStreamFixingDateAdjusted	[0..1]	LocalMktDate	
LegPaymentStreamRateCutoffDateOffsetPeriod	[0..1]	int	Conditionally required when LegPaymentStreamRateCutoffDateOffsetUnit(40324) is specified.
LegPaymentStreamRateCutoffDateOffsetUnit	[0..1]	CodeSet	Conditionally required when LegPaymentStreamRateCutoffDateOffsetPeriod(40323) is specified.
LegPaymentStreamRateCutoffDateOffsetDayType	[0..1]	CodeSet	
LegPaymentStreamFixingDateGrp	[0..*]	Group	

Used in components: [LegPaymentStream](#)

180.2.2122 LegPaymentStreamResetFrequencyPeriod

Time unit multiplier for frequency of resets.

Type: [int](#)

Used in components: [LegPaymentStreamResetDates](#)

180.2.2123 LegPaymentStreamResetFrequencyUnit

Time unit associated with frequency of resets.

Type: **String**

Allowed values in CouponFrequencyUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year
H	Hour	Hour
Min	Minute	Minute
S	Second	Second
T	Term	Term

Used in components: **LegPaymentStreamResetDates**

180.2.2124 LegPaymentStreamResetWeeklyRollConvention

Used to specify the day of the week in which the reset occurs for payments that reset on a weekly basis.

Type: **String**

Allowed values in PaymentStreamResetWeeklyRollConventionCodeSet:

Code	Name	Description
MON	Monday	Monday
TUE	Tuesday	Tuesday
WED	Wednesday	Wednesday
THU	Thursday	Thursday
FRI	Friday	Friday
SAT	Saturday	Saturday
SUN	Sunday	Sunday

Used in components: **LegPaymentStreamResetDates**

180.2.2125 LegPaymentStreamSettlCurrency

Specifies the currency that the stream settles in (to support swaps that settle in a currency different from the notional currency). Uses ISO 4217 currency codes.

Type: **Currency**

Used in components: **LegPaymentStream**

180.2.2126 LegPaymentStreamSettlLevel

Specifies how weather index units are to be calculated.

Type: **int**

Allowed values in PaymentStreamSettlLevelCodeSet:

Code	Name	Description
0	Average	Average. The cumulative number of weather index units for each day in the calculation period divided by the number of days in the calculation period.
1	Maximum	Maximum. The maximum number of weather index units for any day in the calculation period.
2	Minimum	Minimum. The minimum number of weather index units for any day in the calculation period.
3	Cumulative	Cumulative. The cumulative number of weather index units for each day in the calculation period.

Used in components: **LegPaymentStreamFloatingRate**

180.2.2127 LegPaymentStreamTotalFixedAmount

Specifies the total fixed payment amount.

Type: **Amt**

Used in components: **LegPaymentStreamFixedRate**

180.2.2128 LegPaymentStreamType

Identifies the type of payment stream applicable to the swap stream associated with the instrument leg.

Type: **int**

Allowed values in PaymentStreamTypeCodeSet:

Code	Name	Description
0	Periodic	Periodic (default)
1	Initial	Initial
2	Single	Single
3	Dividend	Dividend
4	Interest	Interest
5	DividendReturn	Dividend return
6	PriceReturn	Price return
7	TotalReturn	Total return
8	Variance	Variance
9	Correlation	Correlation

Used in components: **LegPaymentStream**

180.2.2129 LegPaymentStreamUnderlierRefID

References the dividend underlier through the instrument's UnderlyingSecurityID(309) which must be fully specified in an instance of the UnderlyingInstrument component.

Type: **String**

Used in components: **LegPaymentStreamFloatingRate**

180.2.2130 LegPaymentStreamVarianceUnadjustedCap

Indicates the scaling factor to be multiplied by the variance strike price thereby making variance cap applicable.

Type: **float**

Used in components: **LegPaymentStreamFloatingRate**

180.2.2131 LegPaymentStreamVegaNotionalAmount

Vega Notional represents the approximate gain/loss at maturity for a 1% difference between RVol (realized volatility) and KVol (strike volatility). It does not necessarily represent the Vega risk of the

trade.

Type: **float**

Used in components: **LegPaymentStreamFloatingRate**

180.2.2132 LegPaymentStreamWorldScaleRate

The number of Worldscale points for purposes of the calculation of a fixed amount for a wet voyage charter commodity swap.

Type: **float**

Used in components: **LegPaymentStreamFixedRate**

180.2.2133 LegPaymentStubEndDateAdjusted

The adjusted stub end date.

Type: **LocalMktDate**

Used in components: **LegPaymentStubEndDate**

180.2.2134 LegPaymentStubEndDateBusinessCenter

The business center calendar used for date adjustment of the payment stub end date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **LegPaymentStubEndDateBusinessCenterGrp**

180.2.2135 LegPaymentStubEndDateBusinessCenterGrp

LegPaymentStubEndDateBusinessCenterGrp is a repeating subcomponent within the **LegPaymentStubEndDate** component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the **LegDateAdjustment** component in **InstrumentLeg**.

Name	Mult.	Type	Description
NoLegPaymentStubEndDateBusiness-Centers	[1..1]	NumInGroup	
LegPaymentStubEndDateBusiness-Center	[0..1]	String	Required if NoLegPaymentStubEndDateBusiness-Centers(42495) > 0.

Used in components: [LegPaymentStubEndDate](#)

180.2.2136 LegPaymentStubEndDateBusinessDayConvention

The stub end date business day convention.

Type: [int](#)

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [LegPaymentStubEndDate](#)

180.2.2137 LegPaymentStubEndDate

LegPaymentStubEndDate is a subcomponent of the LegPaymentStubGrp component used to specify the end date of the payment stub.

Name	Mult.	Type	Description
LegPaymentStubEndDateUnadjusted	[0..1]	LocalMktDate	

Name	Mult.	Type	Description
LegPaymentStubEndDateBusiness-DayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the LegDateAdjustment component in InstrumentLeg. The specified value would be specific to this payment stub instance.
LegPaymentStubEndDateBusiness-CenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the LegDateAdjustment component in InstrumentLeg. The specified values would be specific to this payment stub instance.
LegPaymentStubEndDateRelativeTo	[0..1]	int	
LegPaymentStubEndDateOffsetPeriod	[0..1]	int	Conditionally required when LegPaymentStubEndDateOffsetUnit(42492) is specified.
LegPaymentStubEndDateOffsetUnit	[0..1]	CodeSet	Conditionally required when LegPaymentStubEndDateOffsetPeriod(42491) is specified.
LegPaymentStubEndDateOffsetDay-Type	[0..1]	CodeSet	
LegPaymentStubEndDateAdjusted	[0..1]	LocalMktDate	

Used in groups: [LegPaymentStubGrp](#)

180.2.2138 LegPaymentStubEndDateOffsetDayType

Specifies the day type of the relative stub end date offset.

Type: [int](#)

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: [LegPaymentStubEndDate](#)

180.2.2139 LegPaymentStubEndDateOffsetPeriod

Time unit multiplier for the relative stub end date offset.

Type: **int**

Used in components: **LegPaymentStubEndDate**

180.2.2140 LegPaymentStubEndDateOffsetUnit

Time unit associated with the relative stub end date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: **LegPaymentStubEndDate**

180.2.2141 LegPaymentStubEndDateRelativeTo

Specifies the anchor date when the stub end date is relative to an anchor date.

See http://www.fixtradingcommunity.org/codelists#Relative_To_Date for values.

Type: **int**

Used in components: **LegPaymentStubEndDate**

180.2.2142 LegPaymentStubEndDateUnadjusted

The unadjusted stub end date.

Type: **LocalMktDate**

Used in components: **LegPaymentStubEndDate**

180.2.2143 LegPaymentStubFixedAmount

A fixed payment amount for the stub.

Type: **Amt**

Used in groups: **LegPaymentStubGrp**

180.2.2144 LegPaymentStubFixedCurrency

The currency of the fixed payment amount. Uses ISO 4217 currency codes.

Type: **Currency**

Used in groups: **LegPaymentStubGrp**

180.2.2145 LegPaymentStubGrp

The LegPaymentStubGrp is a repeating subcomponent of the LegPaymentStream component used to specify front and back stubs in the payment stream.

Name	Mult.	Type	Description
NoLegPaymentStubs	[1..1]	NumInGroup	
LegPaymentStubType	[0..1]	CodeSet	Required if NoLegPaymentStubs(40418) > 0.
LegPaymentStubLength	[0..1]	CodeSet	
LegPaymentStubStartDate	[0..1]	Component	
LegPaymentStubEndDate	[0..1]	Component	
LegPaymentStubRate	[0..1]	Percentage	
LegPaymentStubFixedAmount	[0..1]	Amt	
LegPaymentStubFixedCurrency	[0..1]	Currency	
LegPaymentStubIndex	[0..1]	String	
LegPaymentStubIndexSource	[0..1]	CodeSet	
LegPaymentStubIndexCurvePeriod	[0..1]	int	Conditionally required when LegPaymentStubIndexCurveUnit(40427) is specified.
LegPaymentStubIndexCurveUnit	[0..1]	CodeSet	Copnditionally required when LegPaymentStubIndexCurvePeriod(40426) is specified.
LegPaymentStubIndexRateMultiplier	[0..1]	float	
LegPaymentStubIndexRateSpread	[0..1]	PriceOffset	

Name	Mult.	Type	Description
LegPaymentStubIndexRateSpreadPositionType	[0..1]	CodeSet	
LegPaymentStubIndexRateTreatment	[0..1]	CodeSet	
LegPaymentStubIndexCapRate	[0..1]	Percentage	
LegPaymentStubIndexCapRateBuy-Side	[0..1]	CodeSet	
LegPaymentStubIndexCapRateSell-Side	[0..1]	CodeSet	
LegPaymentStubIndexFloorRate	[0..1]	Percentage	
LegPaymentStubIndexFloorRateBuy-Side	[0..1]	CodeSet	
LegPaymentStubIndexFloorRateSell-Side	[0..1]	CodeSet	
LegPaymentStubIndex2	[0..1]	String	
LegPaymentStubIndex2Source	[0..1]	CodeSet	
LegPaymentStubIndex2CurvePeriod	[0..1]	int	Conditionally required when LegPaymentStubIndex2CurveUnit(40441) is specified.
LegPaymentStubIndex2CurveUnit	[0..1]	CodeSet	Conditionally required when LegPaymentStubIndex2CurvePeriod(40440) is specified.
LegPaymentStubIndex2RateMultiplier	[0..1]	float	
LegPaymentStubIndex2RateSpread	[0..1]	PriceOffset	
LegPaymentStubIndex2RateSpreadPositionType	[0..1]	CodeSet	
LegPaymentStubIndex2RateTreatment	[0..1]	CodeSet	
LegPaymentStubIndex2CapRate	[0..1]	Percentage	
LegPaymentStubIndex2FloorRate	[0..1]	Percentage	

Used in groups: **LegStreamGrp**

180.2.2146 LegPaymentStubIndex

The stub floating rate index.

Type: **String**

Used in groups: **LegPaymentStubGrp**

180.2.2147 LegPaymentStubIndex2

The second stub floating rate index.

Type: **String**

Used in groups: **LegPaymentStubGrp**

180.2.2148 LegPaymentStubIndex2CapRate

The cap rate, if any, which applies to the second floating rate. The cap rate (strike) is only required where the floating rate on a swap stream is capped at a certain level. The cap rate is assumed to be exclusive of any spread and is a per annum rate, expressed as a decimal. A cap rate of 5% would be represented as 0.05.

Type: **Percentage**

Used in groups: **LegPaymentStubGrp**

180.2.2149 LegPaymentStubIndex2CurvePeriod

Secondary time unit multiplier for the stub floating rate index curve.

Type: **int**

Used in groups: **LegPaymentStubGrp**

180.2.2150 LegPaymentStubIndex2CurveUnit

Secondary time unit associated with the stub floating rate index curve.

Type: **String**

Allowed values in PaymentStreamRateIndexCurveUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in groups: **LegPaymentStubGrp**

180.2.2151 LegPaymentStubIndex2FloorRate

The floor rate, if any, which applies to the second floating rate. The floor rate (strike) is only required where the floating rate on a swap stream is floored at a certain strike level. The floor rate is assumed to be exclusive of any spread and is a per annum rate, expressed as a decimal. A floor rate of 5% would be represented as 0.05.

Type: **Percentage**

Used in groups: **LegPaymentStubGrp**

180.2.2152 LegPaymentStubIndex2RateMultiplier

A rate multiplier to apply to the second floating rate. The multiplier can be less than or greater than 1 (one). This element should only be included if the multiplier is not equal to 1 (one) for the term of the stream.

Type: **float**

Used in groups: **LegPaymentStubGrp**

180.2.2153 LegPaymentStubIndex2RateSpread

Spread from the second floating rate index.

Type: **PriceOffset**

Used in groups: **LegPaymentStubGrp**

180.2.2154 LegPaymentStubIndex2RateSpreadPositionType

Identifies whether the rate spread is applied to a long or a short position.

Type: **int**

Allowed values in PaymentStreamRateSpreadPositionTypeCodeSet:

Code	Name	Description
0	Short	Short
1	Long	Long

Used in groups: **LegPaymentStubGrp**

180.2.2155 LegPaymentStubIndex2RateTreatment

Specifies the yield calculation treatment for the second stub index.

Type: **int**

Allowed values in PaymentStreamRateTreatmentCodeSet:

Code	Name	Description
0	BondEquivalentYield	Bond equivalent yield
1	MoneyMarketYield	Money market yield

Used in groups: **LegPaymentStubGrp**

180.2.2156 LegPaymentStubIndex2Source

The source for the second stub floating rate index.

Type: **int**

Allowed values in PaymentStreamRateIndexSourceCodeSet:

Code	Name	Description
0	Bloomberg	Bloomberg
1	Reuters	Reuters
2	Telerate	Telerate
99	Other	Other

Used in groups: **LegPaymentStubGrp**

180.2.2157 LegPaymentStubIndexCapRate

The cap rate, if any, which applies to the floating rate. The cap rate (strike) is only required where the floating rate on a swap stream is capped at a certain level. The cap rate is assumed to be exclusive of any spread and is a per annum rate, expressed as a decimal. A cap rate of 5% would be represented as 0.05.

Type: **Percentage**

Used in groups: **LegPaymentStubGrp**

180.2.2158 LegPaymentStubIndexCapRateBuySide

Reference to the buyer of the cap rate option through its trade side.

Type: **int**

Allowed values in PaymentStreamCapRateBuySideCodeSet:

Code	Name	Description
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

Used in groups: **LegPaymentStubGrp**

180.2.2159 LegPaymentStubIndexCapRateSellSide

Reference to the seller of the cap rate option through its trade side.

Type: **int**

Allowed values in PaymentStreamCapRateBuySideCodeSet:

Code	Name	Description
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

Used in groups: **LegPaymentStubGrp**

180.2.2160 LegPaymentStubIndexCurvePeriod

Time unit multiplier for the floating rate index.

Type: **int**

Used in groups: **LegPaymentStubGrp**

180.2.2161 LegPaymentStubIndexCurveUnit

Time unit associated with the floating rate index.

Type: **String**

Allowed values in PaymentStreamRateIndexCurveUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in groups: **LegPaymentStubGrp**

180.2.2162 LegPaymentStubIndexFloorRate

The floor rate, if any, which applies to the floating rate. The floor rate (strike) is only required where the floating rate on a swap stream is floored at a certain strike level. The floor rate is assumed to be exclusive of any spread and is a per annum rate, expressed as a decimal. A floor rate of 5% would be represented as 0.05.

Type: **Percentage**

Used in groups: **LegPaymentStubGrp**

180.2.2163 LegPaymentStubIndexFloorRateBuySide

Reference to the buyer of the floor rate option through its trade side.

Type: **int**

Allowed values in PaymentStreamFloorRateBuySideCodeSet:

Code	Name	Description
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

Used in groups: **LegPaymentStubGrp**

180.2.2164 LegPaymentStubIndexFloorRateSellSide

Reference to the seller of the floor rate option through its trade side.

Type: **int**

Allowed values in PaymentStreamFloorRateBuySideCodeSet:

Code	Name	Description
1	Buyer	Buyer of the trade
2	Seller	Seller of the trade

Used in groups: **LegPaymentStubGrp**

180.2.2165 LegPaymentStubIndexRateMultiplier

A rate multiplier to apply to the floating rate. The multiplier can be less than or greater than 1 (one). This element should only be included if the multiplier is not equal to 1 (one) for the term of the stream.

Type: **float**

Used in groups: **LegPaymentStubGrp**

180.2.2166 LegPaymentStubIndexRateSpread

Spread from floating rate index.

Type: **PriceOffset**

Used in groups: **LegPaymentStubGrp**

180.2.2167 LegPaymentStubIndexRateSpreadPositionType

Identifies whether the rate spread is applied to a long or a short position.

Type: **int**

Allowed values in PaymentStreamRateSpreadPositionTypeCodeSet:

Code	Name	Description
0	Short	Short
1	Long	Long

Used in groups: [LegPaymentStubGrp](#)

180.2.2168 LegPaymentStubIndexRateTreatment

Specifies the yield calculation treatment for the stub index.

Type: [int](#)

Allowed values in PaymentStreamRateTreatmentCodeSet:

Code	Name	Description
0	BondEquivalentYield	Bond equivalent yield
1	MoneyMarketYield	Money market yield

Used in groups: [LegPaymentStubGrp](#)

180.2.2169 LegPaymentStubIndexSource

The source for the stub floating rate index.

Type: [int](#)

Allowed values in PaymentStreamRateIndexSourceCodeSet:

Code	Name	Description
0	Bloomberg	Bloomberg
1	Reuters	Reuters
2	Telerate	Telerate
99	Other	Other

Used in groups: [LegPaymentStubGrp](#)

180.2.2170 LegPaymentStubLength

Optional indication whether stub is shorter or longer than the regular swap period.

Type: **int**

Allowed values in PaymentStubLengthCodeSet:

Code	Name	Description
0	Short	Short
1	Long	Long

Used in groups: **LegPaymentStubGrp**

180.2.2171 LegPaymentStubRate

The agreed upon fixed rate for this stub.

Type: **Percentage**

Used in groups: **LegPaymentStubGrp**

180.2.2172 LegPaymentStubStartDateAdjusted

The adjusted stub start date.

Type: **LocalMktDate**

Used in components: **LegPaymentStubStartDate**

180.2.2173 LegPaymentStubStartDateBusinessCenter

The business center calendar used for date adjustment of the payment stub start date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **LegPaymentStubStartDateBusinessCenterGrp**

180.2.2174 LegPaymentStubStartDateBusinessCenterGrp

LegPaymentStubStartDateBusinessCenterGrp is a repeating subcomponent within the LegPaymentStubStartDate component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the LegDateAdjustment component in InstrumentLeg.

Name	Mult.	Type	Description
NoLegPaymentStubStartDateBusinessCenters	[1..1]	NumInGroup	
LegPaymentStubStartDateBusinessCenter	[0..1]	String	Required if NoLegPaymentStubStartDateBusinessCenters(42504) > 0.

Used in components: [LegPaymentStubStartDate](#)

180.2.2175 LegPaymentStubStartDateBusinessDayConvention

The stub start date business day convention.

Type: [int](#)

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [LegPaymentStubStartDate](#)

180.2.2176 LegPaymentStubStartDate

LegPaymentStubStartDate is a subcomponent of the LegPaymentStubGrp component used to specify the start date of the payment stub.

Name	Mult.	Type	Description
LegPaymentStubStartDateUnadjusted	[0..1]	LocalMktDate	
LegPaymentStubStartDateBusiness-DayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the LegDateAdjustment component in InstrumentLeg. The specified value would be specific to this payment stub instance.
LegPaymentStubStartDateBusiness-CenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the LegDateAdjustment component in InstrumentLeg. The specified values would be specific to this payment stub instance.
LegPaymentStubStartDateRelativeTo	[0..1]	int	
LegPaymentStubStartDateOffsetPeriod	[0..1]	int	Conditionally required when LegPaymentStubStartDateOffsetUnit(42501) is specified.
LegPaymentStubStartDateOffsetUnit	[0..1]	CodeSet	Conditionally required when LegPaymentStubStartDateOffsetPeriod(42500) is specified.
LegPaymentStubStartDateOffsetDay-Type	[0..1]	CodeSet	
LegPaymentStubStartDateAdjusted	[0..1]	LocalMktDate	

Used in groups: LegPaymentStubGrp

180.2.2177 LegPaymentStubStartDateOffsetDayType

Specifies the day type of the relative stub start date offset.

Type: int

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar

Code	Name	Description
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: [LegPaymentStubStartDate](#)

180.2.2178 LegPaymentStubStartDateOffsetPeriod

Time unit multiplier for the relative stub start date offset.

Type: [int](#)

Used in components: [LegPaymentStubStartDate](#)

180.2.2179 LegPaymentStubStartDateOffsetUnit

Time unit associated with the relative stub start date offset.

Type: [String](#)

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: [LegPaymentStubStartDate](#)

180.2.2180 LegPaymentStubStartDateRelativeTo

Specifies the anchor date when the stub start date is relative to an anchor date.

See http://www.fixtradingcommunity.org/codelists#Relative_To_Date for values.

Type: [int](#)

Used in components: [LegPaymentStubStartDate](#)

180.2.2181 LegPaymentStubStartDateUnadjusted

The unadjusted stub start date.

Type: [LocalMktDate](#)

Used in components: [LegPaymentStubStartDate](#)

180.2.2182 LegPaymentStubType

Stub type.

Type: [int](#)

Allowed values in PaymentStubTypeCodeSet:

Code	Name	Description
0	Initial	Initial
1	Final	Final
2	CompoundingInitial	Compounding initial
3	CompoundingFinal	Compounding final

Used in groups: [LegPaymentStubGrp](#)

180.2.2183 LegPhysicalSettlBusinessDays

The number of business days used in the determination of physical settlement. Its precise meaning depends on the context in which this is used.

Type: [int](#)

Used in groups: [LegPhysicalSettlTermGrp](#)

180.2.2184 LegPhysicalSettlCurrency

Specifies the currency of physical settlement. Uses ISO 4217 currency codes.

Type: [Currency](#)

Used in groups: [LegPhysicalSettlTermGrp](#)

180.2.2185 LegPhysicalSettlDeliverableObligationGrp

The LegPhysicalSettlDeliverableObligationGrp is a repeating component within the LegPhysicalSettlTermGrp component used to report credit default swap (CDS) physical settlement delivery obligations.

Name	Mult.	Type	Description
NoLegPhysicalSettlDeliverableObligations	[1..1]	NumInGroup	
LegPhysicalSettlDeliverableObligationType	[0..1]	String	Required if NoLegPhysicalSettlDeliverableObligations(41604) > 0.
LegPhysicalSettlDeliverableObligationValue	[0..1]	String	

Used in groups: [LegPhysicalSettlTermGrp](#)

180.2.2186 LegPhysicalSettlDeliverableObligationType

Specifies the type of delivery obligation applicable for physical settlement.

See http://www.fixptradingcommunity.org/codelists#Deliverable_Obligation_Types for code list for applicable deliverable obligation types.

Type: [String](#)

Used in groups: [LegPhysicalSettlDeliverableObligationGrp](#)

180.2.2187 LegPhysicalSettlDeliverableObligationValue

Physical settlement delivery obligation value appropriate to LegPhysicalSettlDeliverableObligationType(41605).

See http://www.fixtradingcommunity.org/codelists#Deliverable_Obligation_Types for code list for applicable deliverable obligation types.

Type: [String](#)

Used in groups: [LegPhysicalSettlDeliverableObligationGrp](#)

180.2.2188 LegPhysicalSettlMaximumBusinessDays

A maximum number of business days. Its precise meaning depends on the context in which this element is used. Intended to be used to limit a particular ISDA fallback provision.

Type: **int**

Used in groups: **LegPhysicalSettlTermGrp**

180.2.2189 LegPhysicalSettlTermGrp

The LegPhysicalSettlTermGrp is a repeating component within the InstrumentLeg component used to report physical settlement terms.

Name	Mult.	Type	Description
NoLegPhysicalSettlTerms	[1..1]	NumInGroup	
LegPhysicalSettlDeliverableObligation-Grp	[0..*]	Group	Required if NoLegPhysicalSettlTerms(41599) > 0.
LegPhysicalSettlCurrency	[0..1]	Currency	
LegPhysicalSettlBusinessDays	[0..1]	int	
LegPhysicalSettlMaximumBusiness-Days	[0..1]	int	
LegPhysicalSettlTermXID	[0..1]	XID	

Used in components: **InstrumentLeg**

180.2.2190 LegPhysicalSettlTermXID

A named string value referenced by UnderlyingSettlTermXIDRef(41315).

Type: **XID**

Used in groups: **LegPhysicalSettlTermGrp**

180.2.2191 LegPool

For Fixed Income, identifies MBS / ABS pool for a specific leg of a multi-leg instrument.

See Pool (691) for description and valid values.

Type: **String**

Used in components: **InstrumentLeg**

180.2.2192 LegPosAmt

Leg position amount.

Type: **Amt**

Used in groups: **LegPositionAmountData**

180.2.2193 LegPosAmtReason

Specifies the reason for an amount type when reported on a position. Useful when multiple instances of the same amount type are reported.

Type: **int**

Allowed values in PosAmtReasonCodeSet:

Code	Name	Description
0	OptionsSettlement	Options settlement
1	PendingErosionAdjustment	Pending erosion adjustment
2	FinalErosionAdjustment	Final erosion adjustment
3	TearUpCouponAmount	Tear-up coupon amount
4	PriceAlignmentInterest	Price alignment interest. To minimize the impact of daily cash variation margin payments on the pricing of interest rate swaps, the Clearing House will charge interest on cumulative variation margin received and pay interest on cumulative variation margin paid in respect of these instruments. This interest element is known as price alignment interest.
5	DeliveryInvoiceCharges	Delivery invoice charges
6	DeliveryStorageCharges	Delivery storage charges

Used in groups: **LegPositionAmountData**

180.2.2194 LegPosAmtType

Type of leg position amount.

Type: **String**

Allowed values in PosAmtTypeCodeSet:

Code	Name	Description
CASH	CashAmount	Cash amount (corporate event)
CRES	CashResidualAmount	Cash residual amount
FMTM	FinalMarkToMarketAmount	Final mark-to-market amount
IMTM	IncrementalMarkToMarketAmount	Incremental mark-to-market
PREM	PremiumAmount	Premium amount
SMTM	StartOfDayMarkToMarketAmount	Start of day mark-to-market
TVAR	TradeVariationAmount	Trade variation amount
VADJ	ValueAdjustedAmount	Value adjusted amount
SETL	SettlementValue	Settlement value
ICPN	InitialTradeCouponAmount	Initial trade coupon amount
ACPN	AccruedCouponAmount	Accrued coupon amount
CPN	CouponAmount	Coupon amount
IACPN	IncrementalAccruedCoupon	Incremental accrued coupon
CMTM	CollateralizedMarkToMarket	Collateralized mark-to-market
ICMTM	IncrementalCollateralizedMark-ToMarket	Incremental collateralized mark-to-market
DLV	CompensationAmount	Compensation amount
BANK	TotalBankedAmount	Total banked amount
COLAT	TotalCollateralizedAmount	Total collateralized amount
LSNV	LongPairedSwapNotionalValue	Long paired swap or swaption notional value
SSNV	ShortPairedSwapNotionalValue	Short paired swap or swaption notional value
SACPN	StartOfDayAccruedCoupon	Start-of-day accrued coupon
NPV	NetPresentValue	Net present value
SNPV	StartOfDayNetPresentValue	Start-of-day net present value
NCF	NetCashFlow	Net cash flow
PVFEES	PresentValueOfFees	Present value of all fees
PV01	PresentValueOneBasisPoints	Present value of one basis points. Change in value if yield curve shifts 0.01%.
5YREN	FiveYearEquivalentNotional	The five year equivalent notional amount
UMTM	UndiscountedMarkToMarket	Undiscounted mark-to-market
MTD	MarkToModel	Mark-to-model
VMTM	MarkToMarketVariance	Mark-to-market variance

Code	Name	Description
VMTD	MarkToModelVariance	Mark-to-model variance
UPFRNT	UpfrontPayment	Upfront payment
ENDV	EndVale	End value. Principal amount of a securities financing transaction on maturity date.
MGNLN	OutstandingMarginLoan	Outstanding margin loan. The amount of the outstanding margin loan. In the event that the loan has a short market value, PosAmt(708) would be a negative value.
LNVL	LoanValue	Loan value. The amount of the loan.

Used in groups: [LegPositionAmountData](#)

180.2.2195 LegPosCurrency

Leg position currency.

Type: [Currency](#)

Used in groups: [LegPositionAmountData](#)

180.2.2196 LegPosCurrencyCodeSource

Identifies class or source of the LegPosCurrency(1589) value.

Type: [String](#)

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in groups: [LegPositionAmountData](#)

180.2.2197 LegPositionAmountData

Name	Mult.	Type	Description
NoLegPosAmt	[1..1]	NumInGroup	Number of Position Amount entries
LegPosAmt	[0..1]	Amt	Conditionally required if NoLegPosAmt > 0.
LegPosAmtType	[0..1]	CodeSet	
LegPosCurrency	[0..1]	Currency	
LegPosCurrencyCodeSource	[0..1]	CodeSet	
LegPosAmtReason	[0..1]	CodeSet	

Used in groups: [TrdInstrmtLegGrp](#)

180.2.2198 LegPositionEffect

PositionEffect for leg of a multileg

See PositionEffect (77) field for description

Type: [char](#)

Allowed values in PositionEffectCodeSet:

Code	Name	Description
C	Close	Close
F	FIFO	FIFO
O	Open	Open
R	Rolled	Rolled
N	CloseButNotifyOnOpen	Close but notify on open
D	Default	Default

Used in groups: [InstrmtLegExecGrp](#), [LegOrdGrp](#), [SideCrossLegGrp](#), [TrdInstrmtLegExecGrp](#), [TrdInstrmtLegGrp](#)

180.2.2199 LegPositionLimit

Position Limit for a given exchange-traded product.

Type: **int**

Used in components: **InstrumentLeg**

180.2.2200 LegPreAllocGrp

Name	Mult.	Type	Description
NoLegAllocs	[1..1]	NumInGroup	
LegAllocAccount	[0..1]	String	
LegIndividualAllocID	[0..1]	String	
NestedParties2	[0..*]	Group	
LegAllocQty	[0..1]	Qty	
LegAllocAcctIDSource	[0..1]	CodeSet	
LegAllocSettlCurrency	[0..1]	Currency	
LegAllocSettlCurrencyCodeSource	[0..1]	CodeSet	
LegCustodialLotID	[0..1]	String	Only used for specific lot trades.
LegVersusPurchaseDate	[0..1]	LocalMktDate	Only used for specific lot trades. If this field is used, either LegVersusPurchasePrice(1758) or LegCurrentCostBasis(1759) should be specified.
LegVersusPurchasePrice	[0..1]	Price	Only used for specific lot trades. If this field is used, LegVersusPurchaseDate(1757) should be specified.
LegCurrentCostBasis	[0..1]	Amt	Only used for specific lot trades. If this field is used, LegVersusPurchaseDate(1757) should be specified

Used in groups: **InstrmtLegExecGrp**, **LegOrdGrp**, **SideCrossLegGrp**

180.2.2201 LegPrice

Price for leg of a multileg

See Price (44) field for description

Type: **Price**

Used in components: **InstrumentLeg**

180.2.2202 LegPriceQuoteCurrency

Default currency in which the price is quoted. Defined at the instrument level. Used in place of Currency (tag 15) to express the currency of a product when the former is implemented as the FX dealt currency.

Type: **Currency**

Used in components: **InstrumentLeg**

180.2.2203 LegPriceQuoteCurrencyCodeSource

Identifies class or source of the LegPriceQuoteCurrency(1528) value.

Type: **String**

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbolology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in components: **InstrumentLeg**

180.2.2204 LegPriceQuoteMethod

Specifies the method for price quotation.

Type: **String**

Allowed values in PriceQuoteMethodCodeSet:

Code	Name	Description
STD	Standard	Standard, money per unit of a physical
INX	Index	Index

Code	Name	Description
INT	InterestRateIndex	Interest rate Index
PCTPAR	PercentOfPar	Percent of Par

Used in components: [InstrumentLeg](#)

180.2.2205 LegPriceType

The price type of the LegBidPx (681) and/or LegOfferPx (684).

See PriceType (423) for description and valid values

Type: [int](#)

Allowed values in PriceTypeCodeSet:

Code	Name	Description
1	Percentage	Percentage (i.e. percent of par) (often called "dollar price" for fixed income)
2	PerUnit	Per unit (i.e. per share or contract)
3	FixedAmount	Fixed amount (absolute value)
4	Discount	Discount - percentage points below par
5	Premium	Premium - percentage points over par
6	Spread	Spread (basis points spread). Usually the difference in yield between two switched bonds or a corporate bond traded spread-to-benchmark.
7	TEDPrice	TED Price
8	TEDYield	TED Yield
9	Yield	Yield
10	FixedCabinetTradePrice	Fixed cabinet trade price (primarily for listed futures and options)
11	VariableCabinetTradePrice	Variable cabinet trade price (primarily for listed futures and options)
12	PriceSpread	Price spread. Price spread is expressed based on market convention for the asset being priced or traded. For example, the difference between the prices of a multileg switch or strategy expressed in basis points for a CDS or TBA roll; a price value to be added to a reference price, such as a "pay up" for specified pools

Code	Name	Description
13	ProductTicksInHalves	Product ticks in halves
14	ProductTicksInFourths	Product ticks in fourths
15	ProductTicksInEighths	Product ticks in eighths
16	ProductTicksInSixteenths	Product ticks in sixteenths
17	ProductTicksInThirtySeconds	Product ticks in thirty-seconds
18	ProductTicksInSixtyFourths	Product ticks in sixty-fourths
19	ProductTicksInOneTwentyEighths	Product ticks in one-twenty-eighths
20	NormalRateRepresentation	Normal rate representation (e.g. FX rate)
21	InverseRateRepresentation	Inverse rate representation (e.g. FX rate)
22	BasisPoints	Basis points. When the price is not spread based.
23	UpfrontPoints	Up front points. Used specifically for CDS pricing.
24	InterestRate	Interest rate. When the price is an interest rate. For example, used with benchmark reference rate.
25	PercentageNotional	Percentage of notional

Used in groups: [LegQuotGrp](#), [TrdInstrmtLegExecGrp](#), [TrdInstrmtLegGrp](#)

180.2.2206 LegPriceUnitOfMeasure

Refer to definition for PriceUnitOfMeasure(1191)

Type: [String](#)

Allowed values in UnitOfMeasureCodeSet:

Code	Name	Description
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet
Bbl	Barrels	Barrels. Equal to 42 US gallons
CBM	CubicMeters	Cubic Meters
BDFT	BoardFeet	Board feet. Equal to 144 cubic inches
GJ	Gigajoules	gigajoules
Bu	Bushels	Bushels
kHR	HeatRate	Heat rate. The number of BTUs required to produce one kilowatt hour of electricity, typically 3,412.14 BTUs per 1 kWh.

Code	Name	Description
Ccy	Currency	Amount of currency
kWh	KilowattHours	Kilowatt hours
CDD	CoolingDegreeDay	Cooling degree day
MHR	MegaHeatRate	Mega heat rate. The number of million BTUs required to produce one megawatt hour of electricity, typically 3.41214 million BTUs per 1 MWh.
CER	CertifiedEmissionsReduction	Certified emissions reduction
MMBtu	OneMillionBTU	One Million BTU
CPD	CriticalPrecipDay	Critical precipitation day
MWh	MegawattHours	Megawatt hours
CRT	ClimateReserveTonnes	Climate reserve tonnes
thm	Therms	therms. Equal to 100,000 BTU
cwt	Hundredweight	Hundredweight(US). Equal to 100 lbs
tnCO2	TonsOfCarbonDioxide	Tons of carbon dioxide
day	Day	Days
dt	DryMetricTons	Dry metric tons
EnvAllwnc	EnvAllwncCert	Environmental allowance certificates
EnvCrd	EnvironmentalCredit	Environmental credit
EnvOfst	EnvironmentalOffset	Environmental Offset
g	Grams	Grams
Gal	Gallons	Gallons
GT	GrossTons	Gross tons. Also known as long tons or imperial tons, equal to 2240 lbs
HDD	HeatingDegreeDay	Heating degree day
IPNT	IndexPoint	Index point
kg	Kilograms	Kilograms
kL	Kiloliters	kiloliters
kW-a	KilowattYear	Kilowatt year (electrical capacity)
kW-d	KilowattDay	Kilowatt day (electrical capacity)
kW-h	KilowattHour	Kilowatt hour (electrical capacity)
kW-M	KilowattMonth	Kilowatt month (electrical capacity)
kW-min	KilowattMinute	Kilowatt-Minute (electrical capacity)
L	Liters	liters
lbs	Pounds	pounds
MW-a	MegawattYear	Megawatt year (electrical capacity)

Code	Name	Description
MW-d	MegawattDay	Megawatt day (electrical capacity)
MW-h	MegawattHour	Megawatt hour (electrical capacity)
MW-M	MegawattMonth	Megawatt month (electrical capacity)
MW-min	MegawattMinute	Megawatt minute (electrical capacity)
oz_tr	TroyOunces	Troy ounces
PRINC	PrincipalWithRelationToDebtInstrument	Principal with relation to debt instrument
t	MetricTons	Metric tons. Also known as Tonnes, equal to 1000 kg
tn	Tons	Tons (US). Equal to 2000 lbs
a	Are	Are
ac	Acre	Acre
cL	Centiliter	Centiliter
cM	Centimeter	Centimeter
DGE	DieselGallonEquivalent	Diesel gallon equivalent
ft	Foot	Foot
Gal_gb	GBGallon	GB Gallon
GGE	GasolineGallonEquivalent	Gasonline gallon equivalent
ha	Hectare	Hectare
in	Inch	Inch
kM	Kilometer	Kilometer
M	Meter	Meter
mi	Mile	Mile
mL	Milliliter	Milliliter
mM	Millimeter	Millimeter
oz	USOunce	US ounce
pc	Piece	Piece
pt	USPint	US Pint
pt_gb	GBPint	GB pint
qt	USQuart	US Quart
qt_gb	GBQuart	GB Quart
SqcM	SquareCentimeter	Square centimeter
Sqft	SquareFoot	Square foot
Sqin	SquareInch	Square inch
SqkM	SquareKilometer	Square kilometer

Code	Name	Description
SqM	SquareMeter	Square meter
Sqmi	SquareMile	Square mile
SqmM	SquareMillimeter	Square millimeter
Sqyd	SquareYard	Square yard
yd	Yard	Yard
MMbbl	MillionBarrels	Million Barrels
USD	USDollars	US Dollars

Used in components: [InstrumentLeg](#)

180.2.2207 LegPriceUnitOfMeasureCurrency

Indicates the currency of the price unit of measure. Conditionally required when LegPriceUnitOfMeasure(1421) = Ccy

Type: [Currency](#)

Used in components: [InstrumentLeg](#)

180.2.2208 LegPriceUnitOfMeasureCurrencyCodeSource

Identifies class or source of the LegPriceUnitOfMeasureCurrency(1721) value.

Type: [String](#)

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in components: [InstrumentLeg](#)

180.2.2209 LegPriceUnitOfMeasureQty

Refer to definition of PriceUnitOfMeasureQty(1192)

Type: Qty

Used in components: InstrumentLeg

180.2.2210 LegPricingDateAdjusted

The adjusted pricing or fixing date.

Type: LocalMktDate

Used in components: LegPricingDateTime

180.2.2211 LegPricingDateBusinessCenter

The business center calendar used to adjust the pricing or fixing date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: String

Used in groups: LegPricingDateBusinessCenterGrp

180.2.2212 LegPricingDateBusinessCenterGrp

LegPricingDateBusinessCenterGrp is a repeating subcomponent of the LegPricingDateTime component used to specify the set of business centers whose calendars drive date adjustment. Used only to override the business centers defined in the LegDateAdjustment component in InstrumentLeg.

Name	Mult.	Type	Description
NoLegPricingDateBusinessCenters	[1..1]	NumInGroup	
LegPricingDateBusinessCenter	[0..1]	String	Required if NoLegPricingDateBusinessCenters(41607) > 0.

Used in components: LegPricingDateTime

180.2.2213 LegPricingDateBusinessDayConvention

The business day convention used to adjust the pricing or fixing date. Used only to override the business day convention specified in the LegDateAdjustment component within the InstrumentLeg component.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: **LegPricingDateTime**

180.2.2214 LegPricingDateTime

The LegPricingDateTime component is a subcomponent of InstrumentLeg used to specify an adjusted or unadjusted pricing or fixing date and optionally the time, e.g. for a commodity or FX forward trade.

Name	Mult.	Type	Description
LegPricingDateUnadjusted	[0..1]	LocalMktDate	
LegPricingDateBusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the LegDateAdjustment component in InstrumentLeg. The specified value would be specific to the pricing dates.
LegPricingDateBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the LegDateAdjustment component in InstrumentLeg. The specified values would be specific to the pricing dates.
LegPricingDateAdjusted	[0..1]	LocalMktDate	

Name	Mult.	Type	Description
LegPricingTime	[0..1]	LocalMktTime	
LegPricingTimeBusinessCenter	[0..1]	String	

Used in components: [InstrumentLeg](#)

180.2.2215 LegPricingDateUnadjusted

The unadjusted pricing or fixing date.

Type: [LocalMktDate](#)

Used in components: [LegPricingDateTime](#)

180.2.2216 LegPricingTime

The local market pricing or fixing time.

Type: [LocalMktTime](#)

Used in components: [LegPricingDateTime](#)

180.2.2217 LegPricingTimeBusinessCenter

Specifies the business center for determining the pricing or fixing time. See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in components: [LegPricingDateTime](#)

180.2.2218 LegProduct

Multileg instrument's individual security's Product.

See Product (460) field for description

Type: [int](#)

Allowed values in ProductCodeSet:

Code	Name	Description
1	AGENCY	AGENCY
2	COMMODITY	COMMODITY
3	CORPORATE	CORPORATE
4	CURRENCY	CURRENCY
5	EQUITY	EQUITY
6	GOVERNMENT	GOVERNMENT
7	INDEX	INDEX
8	LOAN	LOAN
9	MONEYMARKET	MONEYMARKET
10	MORTGAGE	MORTGAGE
11	MUNICIPAL	MUNICIPAL
12	OTHER	OTHER
13	FINANCING	FINANCING

Used in components: **InstrumentLeg**

180.2.2219 LegProtectionTermBuyerNotifies

The notifying party is the party that notifies the other party when a credit event has occurred by means of a credit event notice. If more than one party is referenced as being the notifying party then either party may notify the other of a credit event occurring. LegProtectionTermBuyerNotifies(41621)=Y indicates that the buyer notifies.

Type: **Boolean**

Used in groups: **LegProtectionTermGrp**

180.2.2220 LegProtectionTermCurrency

The currency of LegProtectionTermNotional(41618). Uses ISO 4217 currency codes.

Type: **Currency**

Used in groups: **LegProtectionTermGrp**

180.2.2221 LegProtectionTermEventBusinessCenter

When used, the business center indicates the local time of the business center that replaces the Greenwich Mean Time in Section 3.3 of the 2003 ISDA Credit Derivatives Definitions.

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **LegProtectionTermGrp**

180.2.2222 LegProtectionTermEventCurrency

Applicable currency if the event value is an amount. Uses ISO 4217 currency codes.

Type: **Currency**

Used in groups: **LegProtectionTermEventGrp**

180.2.2223 LegProtectionTermEventDayType

Day type for events that specify a period and unit.

Type: **int**

Allowed values in PaymentStreamInflationLagDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in groups: **LegProtectionTermEventGrp**

180.2.2224 LegProtectionTermEventGrp

The LegProtectionTermEventGrp is a repeating component within the LegProtectionTermGrp component used to report applicable CDS credit events.

Name	Mult.	Type	Description
NoLegProtectionTermEvents	[1..1]	NumInGroup	
LegProtectionTermEventType	[0..1]	String	Required if NoLegProtectionTermEvents(41625) > 0.
LegProtectionTermEventValue	[0..1]	String	
LegProtectionTermEventCurrency	[0..1]	Currency	
LegProtectionTermEventPeriod	[0..1]	int	Conditionally required when LegProtectionTermEventUnit(41630).
LegProtectionTermEventUnit	[0..1]	CodeSet	Conditionally required when LegProtectionTermEventPeriod(41629).
LegProtectionTermEventDayType	[0..1]	CodeSet	
LegProtectionTermEventRateSource	[0..1]	String	
LegProtectionTermEventQualifierGrp	[0..*]	Group	

Used in groups: [LegProtectionTermGrp](#)

180.2.2225 LegProtectionTermEventMinimumSources

The minimum number of the specified public information sources that must publish information that reasonably confirms that a credit event has occurred. The market convention is two.

Type: [int](#)

Used in groups: [LegProtectionTermGrp](#)

180.2.2226 LegProtectionTermEventNewsSource

A newspaper or electronic news service that may publish relevant information used in the determination of whether or not a credit event has occurred.

Type: [String](#)

Used in groups: [LegProtectionTermEventNewsSourceGrp](#)

180.2.2227 LegProtectionTermEventNewsSourceGrp

LegProtectionTermEventNewsSourceGrp is a repeating subcomponent of the LegProtectionTermGrp component used to specify the particular newspapers or electronic news services that may publish relevant information used in the determination of whether or not a credit event has occurred.

Name	Mult.	Type	Description
NoLegProtectionTermEventNewsSources	[1..1]	NumInGroup	
LegProtectionTermEventNewsSource	[0..1]	String	Required if NoLegProtectionTermEventNewsSources(41614) > 0.

Used in groups: [LegProtectionTermGrp](#)

180.2.2228 LegProtectionTermEventPeriod

Time unit multiplier for protection term events.

Type: [int](#)

Used in groups: [LegProtectionTermEventGrp](#)

180.2.2229 LegProtectionTermEventQualifier

Specifies the protection term event qualifier. Used to further qualify LegProtectionTermEvent-Type(41626).

Type: [char](#)

Allowed values in ProtectionTermEventQualifierCodeSet:

Code	Name	Description
H	RestructuringMultipleHoldingObligations	Restructuring - multiple holding obligations. In relation to a restructuring credit event, unless multiple holder obligation is not specified restructurings are limited to multiple holder obligations. A multiple holder obligation means an obligation that is held by more than three holders that are not affiliates of each other and where at least two thirds of the holders must agree to the event that constitutes the restructuring credit event. ISDA 2003 Term: Multiple Holder Obligation.
E	RestructuringMultipleCreditEvent-Notices	Restructuring - multiple credit event notices. Presence of this element and value set to 'true' indicates that Section 3.9 of the 2003 Credit Derivatives Definitions shall apply. Absence of this element indicates that Section 3.9 shall not apply. NOTE: Not allowed under ISDA Credit 1999.
C	FloatingRateInterestShortfall	Floating rate interest shortfall. Indicates compounding.

Code	Name	Description
------	------	-------------

Used in groups: [LegProtectionTermEventQualifierGrp](#)

180.2.2230 LegProtectionTermEventQualifierGrp

The LegProtectionTermEventQualifierGrp is a repeating component within the LegProtectionTermEventGrp component used to specify qualifying attributes to the event.

Name	Mult.	Type	Description
NoLegProtectionTermEventQualifiers	[1..1]	NumInGroup	
LegProtectionTermEventQualifier	[0..1]	CodeSet	Required if NoLegProtectionTermEventQualifiers(41633) > 0.

Used in groups: [LegProtectionTermEventGrp](#)

180.2.2231 LegProtectionTermEventRateSource

Rate source for events that specify a rate source, e.g. floating rate interest shortfall.

Type: [String](#)

Used in groups: [LegProtectionTermEventGrp](#)

180.2.2232 LegProtectionTermEventType

Specifies the type of credit event applicable to the protection terms.

See http://www.fixtradingcommunity.org/codelists#Protection_Term_Event_Types for code list of applicable event types.

Type: [String](#)

Used in groups: [LegProtectionTermEventGrp](#)

180.2.2233 LegProtectionTermEventUnit

Time unit associated with protection term events.

Type: **String**

Allowed values in ProtectionTermEventUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in groups: **LegProtectionTermEventGrp**

180.2.2234 LegProtectionTermEventValue

Specifies the protection term event value appropriate to LegProtectionTermEventType(41626). See http://www.fixtradingcommunity.org/codelists#Protection_Term_Event_Types for applicable event type values.

Type: **String**

Used in groups: **LegProtectionTermEventGrp**

180.2.2235 LegProtectionTermGrp

The LegProtectionTermGrp is a repeating component within the InstrumentLeg component used to report protection term details.

Name	Mult.	Type	Description
NoLegProtectionTerms	[1..1]	NumInGroup	
LegProtectionTermNotional	[0..1]	Amt	Required if NoLegProtectionTerms(41616) > 0.
LegProtectionTermCurrency	[0..1]	Currency	
LegProtectionTermSellerNotifies	[0..1]	Boolean	
LegProtectionTermBuyerNotifies	[0..1]	Boolean	
LegProtectionTermEventBusinessCenter	[0..1]	String	

Name	Mult.	Type	Description
LegProtectionTermStandardSources	[0..1]	Boolean	
LegProtectionTermEventMinimum-Sources	[0..1]	int	
LegProtectionTermEventNewsSource-Grp	[0..*]	Group	
LegProtectionTermEventGrp	[0..*]	Group	
LegProtectionTermObligationGrp	[0..*]	Group	
LegProtectionTermXID	[0..1]	XID	

Used in components: [InstrumentLeg](#)

180.2.2236 LegProtectionTermNotional

The notional amount of protection coverage.

Type: [Amt](#)

Used in groups: [LegProtectionTermGrp](#)

180.2.2237 LegProtectionTermObligationGrp

The LegProtectionTermObligationGrp is a repeating component within the LegProtectionTermGrp component used to report applicable credit default swap (CDS) obligations.

Name	Mult.	Type	Description
NoLegProtectionTermObligations	[1..1]	NumInGroup	
LegProtectionTermObligationType	[0..1]	String	Required if NoLegProtectionTermObligations(41635) > 0.
LegProtectionTermObligationValue	[0..1]	String	

Used in groups: [LegProtectionTermGrp](#)

180.2.2238 LegProtectionTermObligationType

Specifies the type of obligation applicable to the protection terms.

See http://www.fixtradingcommunity.org/codelists#Protection_Term_Obligation_Types for code list of applicable obligation types.

Type: **String**

Used in groups: **LegProtectionTermObligationGrp**

180.2.2239 LegProtectionTermObligationValue

The value associated with the protection term obligation specified in LegProtectionTermObligationType(41636). See http://www.fixtradingcommunity.org/codelists#Protection_Term_Obligation_Types for applicable obligation type values.

Type: **String**

Used in groups: **LegProtectionTermObligationGrp**

180.2.2240 LegProtectionTermSellerNotifies

The notifying party is the party that notifies the other party when a credit event has occurred by means of a credit event notice. If more than one party is referenced as being the notifying party then either party may notify the other of a credit event occurring. LegProtectionTermSellerNotifies(41620)=Y indicates that the seller notifies.

Type: **Boolean**

Used in groups: **LegProtectionTermGrp**

180.2.2241 LegProtectionTermStandardSources

Indicates whether ISDA defined Standard Public Sources are applicable (LegProtectionTermStandardSources(41623)=Y) or not.

Type: **Boolean**

Used in groups: **LegProtectionTermGrp**

180.2.2242 LegProtectionTermXID

A named string value referenced from UnderlyingProtectionTermXIDRef(41314).

Type: **XID**

Used in groups: **LegProtectionTermGrp**

180.2.2243 LegProvisionBreakFeeElection

Type of fee elected for the break provision.

Type: **int**

Allowed values in ProvisionBreakFeeElectionCodeSet:

Code	Name	Description
0	FlatFee	Flat fee
1	AmortizedFee	Amortized fee
2	FundingFee	Funding fee
3	FlatAndFundingFee	Flat fee and funding fee
4	AmortizedAndFundingFee	Amortized fee and funding fee

Used in groups: **LegProvisionGrp**

180.2.2244 LegProvisionBreakFeeRate

Break fee election rate when the break fee is proportional to the notional. A fee rate of 5% would be represented as "0.05".

Type: **Percentage**

Used in groups: **LegProvisionGrp**

180.2.2245 LegProvisionCalculationAgent

Used to identify the calculation agent. The calculation agent may be identified in LegProvisionCalculationAgent(40456) or in the ProvisionParties component.

Type: **int**

Allowed values in ProvisionCalculationAgentCodeSet:

Code	Name	Description
0	ExercisingParty	Exercising party
1	NonExercisingParty	Non-exercising party
2	MasterAgreement	As specified in the master agreement
3	Supplement	As specified in the standard terms supplement

Code	Name	Description
------	------	-------------

Used in groups: [LegProvisionGrp](#)

180.2.2246 LegProvisionCashSettlCurrency

Specifies the currency of settlement. Uses ISO 4217 currency codes.

Type: [Currency](#)

Used in groups: [LegProvisionGrp](#)

180.2.2247 LegProvisionCashSettlCurrency2

Specifies the currency of settlement for a cross-currency provision. Uses ISO 4217 currency codes.

Type: [Currency](#)

Used in groups: [LegProvisionGrp](#)

180.2.2248 LegProvisionCashSettlMethod

An ISDA defined cash settlement method used for the determination of the applicable cash settlement amount. The method is defined in the 2006 ISDA Definitions, Section 18.3. Cash Settlement Methods, paragraph (e).

Type: [int](#)

Allowed values in ProvisionCashSettlMethodCodeSet:

Code	Name	Description
------	------	-------------

0	CashPrice	Cash price
1	CashPriceAlternate	Cash price alternate
2	ParYieldCurveAdjusted	Par yield curve adjusted
3	ZeroCouponYieldCurveAdjusted	Zero coupon yield curve adjusted
4	ParYieldCurveUnadjusted	Par yield curve unadjusted
5	CrossCurrency	Cross currency
6	CollateralizedPrice	Collateralized price

Used in groups: [LegProvisionGrp](#)

180.2.2249 LegProvisionCashSettlPaymentDate

The cash settlement payment date, unadjusted or adjusted depending on LegProvisionCashSettlPaymentDateType(40521).

Type: **LocalMktDate**

Used in groups: **LegProvisionCashSettlPaymentFixedDateGrp**

180.2.2250 LegProvisionCashSettlPaymentDateBusinessCenter

The business center calendar used to adjust the provisional cash settlement payment's termination, or relative termination, date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **LegProvisionCashSettlPaymentDateBusinessCenterGrp**

180.2.2251 LegProvisionCashSettlPaymentDateBusinessCenterGrp

LegProvisionCashSettlPaymentDateBusinessCenterGrp is a repeating subcomponent within the LegProvisionCashSettlPaymentDates component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the LegDateAdjustment component in InstrumentLeg.

Name	Mult.	Type	Description
NoLegProvisionCashSettlPaymentDateBusinessCenters	[1..1]	NumInGroup	
LegProvisionCashSettlPaymentDateBusinessCenter	[0..1]	String	Required if NoLegProvisionCashSettlPaymentDateBusinessCenters(40934) > 0.

Used in components: **LegProvisionCashSettlPaymentDates**

180.2.2252 LegProvisionCashSettlPaymentDateBusinessDayConvention

The business day convention used to adjust the provisional cash settlement payment's termination, or relative termination, date. Used only to override the business day convention specified in the LegDateAdjustment component within the InstrumentLeg component.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: **LegProvisionCashSettlPaymentDates**

180.2.2253 LegProvisionCashSettlPaymentDateOffsetDayType

Specifies the day type of the provision's relative cash settlement payment date offset.

Type: **int**

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: **LegProvisionCashSettlPaymentDates**

180.2.2254 LegProvisionCashSettlPaymentDateOffsetPeriod

Time unit multiplier for the relative cash settlement payment date offset.

Type: **int**

Used in components: **LegProvisionCashSettlPaymentDates**

180.2.2255 LegProvisionCashSettlPaymentDateOffsetUnit

Time unit associated with the relative cash settlement payment date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: **LegProvisionCashSettlPaymentDates**

180.2.2256 LegProvisionCashSettlPaymentDateRangeFirst

The first date in range when a settlement date range is provided.

Type: **LocalMktDate**

Used in components: **LegProvisionCashSettlPaymentDates**

180.2.2257 LegProvisionCashSettlPaymentDateRangeLast

The last date in range when a settlement date range is provided.

Type: **LocalMktDate**

Used in components: **LegProvisionCashSettlPaymentDates**

180.2.2258 LegProvisionCashSettlPaymentDateRelativeTo

Specifies the anchor date when the cash settlement payment date is relative to an anchor date.

See http://www.fixtradingcommunity.org/codelists#Relative_To_Date for values.

Type: **int**

Used in components: **LegProvisionCashSettlPaymentDates**

180.2.2259 LegProvisionCashSettlPaymentDates

The LegProvisionCashSettlPaymentDates component is a sub-component within the LegProvisionGrp component used to report the cash settlement payment dates defined in the provision.

Name	Mult.	Type	Description
LegProvisionCashSettlPaymentDate-BusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the LegDateAdjustment component in InstrumentLeg. The specified value would be specific to this instance of the leg provision cash settlement payment dates.
LegProvisionCashSettlPaymentDate-BusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the LegDateAdjustment component in InstrumentLeg. The specified values would be specific to this instance of the leg provision cash settlement payment dates.
LegProvisionCashSettlPaymentDateRelativeTo	[0..1]	int	
LegProvisionCashSettlPaymentDate-OffsetPeriod	[0..1]	int	Conditionally required when LegProvisionCashSettlPaymentDateOffsetUnit(40520) is specified.
LegProvisionCashSettlPaymentDate-OffsetUnit	[0..1]	CodeSet	Conditionally required when LegProvisionCashSettlPaymentDateOffsetPeriod(40519) is specified.
LegProvisionCashSettlPaymentDate-OffsetDayType	[0..1]	CodeSet	
LegProvisionCashSettlPaymentDateRangeFirst	[0..1]	LocalMktDate	
LegProvisionCashSettlPaymentDateRangeLast	[0..1]	LocalMktDate	
LegProvisionCashSettlPaymentFixedDateGrp	[0..*]	Group	

Used in groups: **LegProvisionGrp**

180.2.2260 LegProvisionCashSettlPaymentDateType

Specifies the type of date (e.g. adjusted for holidays).

Type: **int**

Allowed values in ProvisionCashSettlPaymentDateTypeCodeSet:

Code	Name	Description
0	Unadjusted	Unadjusted
1	Adjusted	Adjusted

Used in groups: **LegProvisionCashSettlPaymentFixedDateGrp**

180.2.2261 LegProvisionCashSettlPaymentFixedDateGrp

The ProvisionCashSettlPaymentFixedDateGrp is a repeating component within the ProvisionCashSettlPaymentDates component used to report fixed cash settlement payment dates defined in the provision.

Name	Mult.	Type	Description
NoLegProvisionCashSettlPayment-Dates	[1..1]	NumInGroup	
LegProvisionCashSettlPaymentDate	[0..1]	LocalMktDate	Required if NoLegProvisionCashSettlPaymentDates (40473) > 0.
LegProvisionCashSettlPaymentDate-Type	[0..1]	CodeSet	When specified it applies not only to the current date but to all subsequent dates in the group until overridden with a new type.

Used in components: **LegProvisionCashSettlPaymentDates**

180.2.2262 LegProvisionCashSettlQuoteReferencePage

Identifies the reference "page" from the quote source.

Type: **String**

Used in components: **LegProvisionCashSettlQuoteSource**

180.2.2263 LegProvisionCashSettlQuoteSource

Identifies the source of quote information.

Type: **int**

Allowed values in PaymentStreamRateIndexSourceCodeSet:

Code	Name	Description
0	Bloomberg	Bloomberg
1	Reuters	Reuters
2	Telerate	Telerate
99	Other	Other

Used in components: **LegProvisionCashSettlQuoteSource**

180.2.2264 LegProvisionCashSettlQuoteSource

The LegProvisionCashSettlQuoteSource is a subcomponent of the LEgProvisionGrp component used to specify the reference source for currency or rate quote for cash settlement purposes.

Name	Mult.	Type	Description
LegProvisionCashSettlQuoteSource	[0..1]	CodeSet	
LegProvisionCashSettlQuoteReferencePage	[0..1]	String	

Used in groups: **LegProvisionGrp**

180.2.2265 LegProvisionCashSettlQuoteType

Identifies the type of quote to be used.

Type: **int**

Allowed values in ProvisionCashSettlQuoteTypeCodeSet:

Code	Name	Description
0	Bid	Bid
1	Mid	Mid
2	Offer	Offer
3	ExercisingPartyPays	Exercising party pays. See 2000 ISDA Definitions, Section 17.2, Certain Definitions Relating to Cash Settlement, paragraph (j) for definition of "exercising party pays".

Used in groups: [LegProvisionGrp](#)

180.2.2266 LegProvisionCashSettlValueDateAdjusted

The adjusted cash settlement value date.

Type: [LocalMktDate](#)

Used in components: [LegProvisionCashSettlValueDates](#)

180.2.2267 LegProvisionCashSettlValueDateBusinessCenter

The business center calendar used to adjust the provision's cash settlement valuation date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in groups: [LegProvisionCashSettlValueDateBusinessCenterGrp](#)

180.2.2268 LegProvisionCashSettlValueDateBusinessCenterGrp

`LegProvisionCashSettlValueDateBusinessCenterGrp` is a repeating subcomponent within the `LegProvisionCashSettlValueDate` component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the `LegDateAdjustment` component in `InstrumentLeg`.

Name	Mult.	Type	Description
NoLegProvisionCashSettlValueDate-BusinessCenters	[1..1]	NumInGroup	
LegProvisionCashSettlValueDateBusinessCenter	[0..1]	String	Required if NoLegProvisionCashSettlValueDate-BusinessCenters(40935) > 0.

Used in components: [LegProvisionCashSettlValueDates](#)

180.2.2269 LegProvisionCashSettlValueDateBusinessDayConvention

The business day convention used to adjust the provision's cash settlement valuation date. Used only to override the business day convention specified in the LegDateAdjustment component within the InstrumentLeg component.

Type: [int](#)

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [LegProvisionCashSettlValueDates](#)

180.2.2270 LegProvisionCashSettlValueDateOffsetDayType

Specifies the day type of the provision's relative cash settlement value date offset.

Type: [int](#)

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: [LegProvisionCashSettlValueDates](#)

180.2.2271 LegProvisionCashSettlValueDateOffsetPeriod

Time unit multiplier for the relative cash settlement value date offset.

Type: [int](#)

Used in components: [LegProvisionCashSettlValueDates](#)

180.2.2272 LegProvisionCashSettlValueDateOffsetUnit

Time unit associated with the relative cash settlement value date offset.

Type: [String](#)

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: [LegProvisionCashSettlValueDates](#)

180.2.2273 LegProvisionCashSettlValueDateRelativeTo

Specifies the anchor date when the cash settlement value date is relative to an anchor date.

See http://www.fixtradingcommunity.org/codelists#Relative_To_Date for values.

Type: **int**

Used in components: **LegProvisionCashSettlValueDates**

180.2.2274 LegProvisionCashSettlValueDates

The LegProvisionCashSettlValueDates component is a subcomponent within the LegProvisionGrp component used to report the cash settlement value date and time defined in the provision.

Name	Mult.	Type	Description
LegProvisionCashSettlValueTime	[0..1]	LocalMktTime	
LegProvisionCashSettlValueTimeBusinessCenter	[0..1]	String	
LegProvisionCashSettlValueDateBusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the LegDateAdjustment component in InstrumentLeg. The specified value would be specific to this instance of the leg provision cash settlement value date.
LegProvisionCashSettlValueDateBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the LegDateAdjustment component in InstrumentLeg. The specified values would be specific to this instance of the leg provision cash settlement value date.
LegProvisionCashSettlValueDateRelativeTo	[0..1]	int	
LegProvisionCashSettlValueDateOffsetPeriod	[0..1]	int	Conditionally required when LegProvisionCashSettlValueDateOffsetUnit(40530) is specified.
LegProvisionCashSettlValueDateOffsetUnit	[0..1]	CodeSet	Conditionally required when LegProvisionCashSettlValueDateOffsetPeriod(40529) is specified.
LegProvisionCashSettlValueDateOffsetDayType	[0..1]	CodeSet	
LegProvisionCashSettlValueDateAdjusted	[0..1]	LocalMktDate	

Used in groups: **LegProvisionGrp**

180.2.2275 LegProvisionCashSettlValueTime

A time specified in 24-hour format, e.g. 11am would be represented as 11:00:00. The time of the cash settlement valuation date when the cash settlement amount will be determined according to the cash settlement method if the parties have not otherwise been able to agree to the cash settlement amount.

Type: **LocalMktTime**

Used in components: **LegProvisionCashSettlValueDates**

180.2.2276 LegProvisionCashSettlValueTimeBusinessCenter

Identifies the business center calendar used with the provision's cash settlement valuation time.

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in components: **LegProvisionCashSettlValueDates**

180.2.2277 LegProvisionDateAdjusted

The adjusted date of the provision.

Type: **LocalMktDate**

Used in groups: **LegProvisionGrp**

180.2.2278 LegProvisionDateBusinessCenter

The business center calendar used to adjust the instrument leg's provision's date, e.g. "GBLO". See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **LegProvisionDateBusinessCenterGrp**

180.2.2279 LegProvisionDateBusinessCenterGrp

LegProvisionDateBusinessCenterGrp is a repeating subcomponent within the **LegProvisionGrp** component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used

only to override the business centers defined in the LegDateAdjustment component in Instrument-Leg.

Name	Mult.	Type	Description
NoLegProvisionDateBusinessCenters	[1..1]	NumInGroup	
LegProvisionDateBusinessCenter	[0..1]	String	Required if NoLegProvisionDateBusinessCenters(40939) > 0.

Used in groups: [LegProvisionGrp](#)

180.2.2280 LegProvisionDateBusinessDayConvention

The business day convention used to adjust the instrument leg's provision's date. Used only to override the business day convention specified in the LegDateAdjustment component within the InstrumentLeg component.

Type: [int](#)

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in groups: [LegProvisionGrp](#)

180.2.2281 LegProvisionDateTenorPeriod

Time unit multiplier for the leg provision's tenor period.

Type: [int](#)

Used in groups: [LegProvisionGrp](#)

180.2.2282 LegProvisionDateTenorUnit

Time unit associated with the leg provision's tenor period.

Type: **String**

Allowed values in ProvisionDateTenorUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in groups: **LegProvisionGrp**

180.2.2283 LegProvisionDateUnadjusted

The unadjusted date of the provision.

Type: **LocalMktDate**

Used in groups: **LegProvisionGrp**

180.2.2284 LegProvisionGrp

The LegProvisionGrp is a repeating subcomponent of the InstrumentLeg component used to detail the provisions associated with the instrument.

Name	Mult.	Type	Description
NoLegProvisions	[1..1]	NumInGroup	
LegProvisionType	[0..1]	CodeSet	Required if NoLegProvisions(40448) > 0.
LegProvisionDateUnadjusted	[0..1]	LocalMktDate	
LegProvisionDateBusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the LegDateAdjustment component in InstrumentLeg. The specified value would be specific to this instance of the instrument's leg provision.

Name	Mult.	Type	Description
LegProvisionDateBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the LegDateAdjustment component in InstrumentLeg. The specified values would be specific to this instance of the instrument's leg provision.
LegProvisionDateAdjusted	[0..1]	LocalMktDate	
LegProvisionDateTenorPeriod	[0..1]	int	Conditionally required when LegProvisionDateTenorUnit(40455) is specified.
LegProvisionDateTenorUnit	[0..1]	CodeSet	Conditionally required when LegProvisionDateTenorPeriod(40454) is specified.
LegProvisionBreakFeeElection	[0..1]	CodeSet	
LegProvisionBreakFeeRate	[0..1]	Percentage	
LegProvisionCalculationAgent	[0..1]	CodeSet	
LegProvisionOptionSinglePartyBuyer-Side	[0..1]	CodeSet	
LegProvisionOptionSinglePartySeller-Side	[0..1]	CodeSet	
LegProvisionCashSettlValueDates	[0..1]	Component	
LegProvisionOptionExerciseDates	[0..1]	Component	
LegProvisionOptionExpirationDate	[0..1]	Component	
LegProvisionOptionRelevantUnderlyingDate	[0..1]	Component	
LegProvisionOptionExerciseStyle	[0..1]	CodeSet	
LegProvisionOptionExerciseMultipleNotional	[0..1]	Amt	
LegProvisionOptionExerciseMinimumNotional	[0..1]	Amt	
LegProvisionOptionExerciseMaximumNotional	[0..1]	Amt	
LegProvisionOptionMinimumNumber	[0..1]	int	
LegProvisionOptionMaximumNumber	[0..1]	int	
LegProvisionOptionExerciseConfirmation	[0..1]	Boolean	
LegProvisionCashSettlPaymentDates	[0..1]	Component	
LegProvisionCashSettlMethod	[0..1]	CodeSet	
LegProvisionCashSettlCurrency	[0..1]	Currency	
LegProvisionCashSettlCurrency2	[0..1]	Currency	

Name	Mult.	Type	Description
LegProvisionCashSettlQuoteType	[0..1]	CodeSet	
LegProvisionCashSettlQuoteSource	[0..1]	Component	
LegProvisionText	[0..1]	String	
EncodedLegProvisionTextLen	[0..1]	Length	Must be set if EncodedLegProvisionText(40981) field is specified and must immediately precede it.
EncodedLegProvisionText	[0..1]	data	Encoded (non-ASCII characters) representation of the LegProvisionText(40472) field in the encoded format specified via the MessageEncoding(347) field.
LegProvisionParties	[0..*]	Group	

Used in components: **InstrumentLeg**

180.2.2285 LegProvisionOptionExerciseBoundsFirstDateUnadjusted

The unadjusted first date of a schedule. This can be used to restrict the range of exercise dates when they are relative.

Type: **LocalMktDate**

Used in components: **LegProvisionOptionExerciseDates**

180.2.2286 LegProvisionOptionExerciseBoundsLastDateUnadjusted

The unadjusted last date of a schedule. This can be used to restrict the range of exercise dates when they are relative.

Type: **LocalMktDate**

Used in components: **LegProvisionOptionExerciseDates**

180.2.2287 LegProvisionOptionExerciseBusinessCenter

The business center calendar used to adjust the instrument leg's provision's option exercise date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **LegProvisionOptionExerciseBusinessCenterGrp**

180.2.2288 LegProvisionOptionExerciseBusinessCenterGrp

LegProvisionOptionExerciseBusinessCenterGrp is a repeating subcomponent within the LegProvisionOptionExerciseDates component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the LegDateAdjustment component in InstrumentLeg.

Name	Mult.	Type	Description
NoLegProvisionOptionExerciseBusinessCenters	[1..1]	NumInGroup	
LegProvisionOptionExerciseBusinessCenter	[0..1]	String	Required if NoLegProvisionOptionExerciseBusinessCenters(40936) > 0.

Used in components: [LegProvisionOptionExerciseDates](#)

180.2.2289 LegProvisionOptionExerciseBusinessDayConvention

The business day convention used to adjust the instrument leg's provision's option exercise date. Used only to override the business day convention specified in the LegDateAdjustment component within the InstrumentLeg component.

Type: [int](#)

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [LegProvisionOptionExerciseDates](#)

180.2.2290 LegProvisionOptionExerciseConfirmation

Used to indicate whether follow-up confirmation of exercise (written or electronic) is required following telephonic notice by the buyer to the seller or seller's agent.

Type: **Boolean**

Used in groups: **LegProvisionGrp**

180.2.2291 LegProvisionOptionExerciseDates

The LegProvisionOptionExerciseDates is a subcomponent within the LegProvisionGrp component used to report the option exercise dates and times defined in the provision.

Name	Mult.	Type	Description
LegProvisionOptionExerciseBusiness-DayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the LegDateAdjustment component in InstrumentLeg. The specified value would be specific to this instance of the leg provision option exercise dates.
LegProvisionOptionExerciseBusiness-CenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the LegDateAdjustment component in InstrumentLeg. The specified values would be specific to this instance of the leg provision option exercise dates.
LegProvisionOptionExerciseFixedDate-Grp	[0..*]	Group	
LegProvisionOptionExerciseEarliestDateOffsetPeriod	[0..1]	int	Conditionally required when LegProvisionOptionExerciseEarliestDateUnit(40479) is specified.
LegProvisionOptionExerciseEarliestDateOffsetUnit	[0..1]	CodeSet	Conditionally required when LegProvisionOptionExerciseEarliestDatePeriod(40478) is specified.
LegProvisionOptionExerciseFrequencyPeriod	[0..1]	int	Conditionally required when LegProvisionOptionExerciseFrequencyUnit(40481) is specified.
LegProvisionOptionExerciseFrequencyUnit	[0..1]	CodeSet	Conditionally required when LegProvisionOptionExerciseFrequencyPeriod(40480) is specified.
LegProvisionOptionExerciseStartDate-Unadjusted	[0..1]	LocalMktDate	
LegProvisionOptionExerciseStartDateRelativeTo	[0..1]	int	

Name	Mult.	Type	Description
LegProvisionOptionExerciseStartDate-OffsetPeriod	[0..1]	int	Conditionally required when LegProvisionOptionExerciseStartDateOffsetUnit(40485) is specified.
LegProvisionOptionExerciseStartDate-OffsetUnit	[0..1]	CodeSet	Conditionally required when LegProvisionOptionExerciseStartDateOffsetPeriod(40484) is specified.
LegProvisionOptionExerciseStartDate-OffsetDayType	[0..1]	CodeSet	
LegProvisionOptionExerciseStartDateAdjusted	[0..1]	LocalMktDate	
LegProvisionOptionExercisePeriodSkip	[0..1]	int	
LegProvisionOptionExerciseBounds-FirstDateUnadjusted	[0..1]	LocalMktDate	
LegProvisionOptionExerciseBounds-LastDateUnadjusted	[0..1]	LocalMktDate	
LegProvisionOptionExerciseEarliest-Time	[0..1]	LocalMktTime	
LegProvisionOptionExerciseEarliest-TimeBusinessCenter	[0..1]	String	
LegProvisionOptionExerciseLatest-Time	[0..1]	LocalMktTime	
LegProvisionOptionExerciseLatest-TimeBusinessCenter	[0..1]	String	

Used in groups: [LegProvisionGrp](#)

180.2.2292 LegProvisionOptionExerciseEarliestDateOffsetPeriod

Time unit multiplier for the interval to the first (and possibly only) exercise date in the exercise period.

Type: [int](#)

Used in components: [LegProvisionOptionExerciseDates](#)

180.2.2293 LegProvisionOptionExerciseEarliestDateOffsetUnit

Time unit associated with the interval to the first (and possibly only) exercise date in the exercise period.

Type: **String**

Allowed values in ProvisionOptionExerciseEarliestDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: **LegProvisionOptionExerciseDates**

180.2.2294 LegProvisionOptionExerciseEarliestTime

The earliest time at which notice of exercise can be given by the buyer to the seller (or seller's agent) (i) on the expiration date, in the case of a European style option, (ii) on each bermuda option exercise date and the expiration date, in the case of a Bermuda style option the commencement date to, and including, the expiration date, in the case of an American option.

Type: **LocalMktTime**

Used in components: **LegProvisionOptionExerciseDates**

180.2.2295 LegProvisionOptionExerciseEarliestTimeBusinessCenter

Identifies the business center calendar used with the provision's earliest time for notice of exercise.

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in components: **LegProvisionOptionExerciseDates**

180.2.2296 LegProvisionOptionExerciseFixedDate

A predetermined option exercise date unadjusted or adjusted depending on LegProvisionOptionExerciseFixedDateType(40497).

Type: **LocalMktDate**

Used in groups: **LegProvisionOptionExerciseFixedDateGrp**

180.2.2297 LegProvisionOptionExerciseFixedDateGrp

The LegProvisionOptionExerciseFixedDateGrp is a repeating component within the LegProvisionOptionExerciseDates component used to report an array of unadjusted or adjusted fixed exercise dates.

Name	Mult.	Type	Description
NoLegProvisionOptionExerciseFixedDates	[1..1]	NumInGroup	
LegProvisionOptionExerciseFixedDate	[0..1]	LocalMktDate	Required if NoLegProvisionOptionExerciseFixedDates(40495) > 0.
LegProvisionOptionExerciseFixedDate-Type	[0..1]	CodeSet	When specified it applies not only to the current date but to all subsequent dates in the group until overridden with a new type.

Used in components: [LegProvisionOptionExerciseDates](#)

180.2.2298 LegProvisionOptionExerciseFixedDateType

Specifies the type of date (e.g. adjusted for holidays).

Type: [int](#)

Allowed values in ProvisionOptionExerciseFixedDateTypeCodeSet:

Code	Name	Description
0	Unadjusted	Unadjusted
1	Adjusted	Adjusted

Used in groups: [LegProvisionOptionExerciseFixedDateGrp](#)

180.2.2299 LegProvisionOptionExerciseFrequencyPeriod

Time unit multiplier for subsequent exercise dates in the exercise period following the earliest exercise date. An interval of 1 day should be used to indicate an American style exercise period.

Type: [int](#)

Used in components: [LegProvisionOptionExerciseDates](#)

180.2.2300 LegProvisionOptionExerciseFrequencyUnit

Time unit associated with subsequent exercise dates in the exercise period following the earliest exercise date.

Type: **String**

Allowed values in CouponFrequencyUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year
H	Hour	Hour
Min	Minute	Minute
S	Second	Second
T	Term	Term

Used in components: **LegProvisionOptionExerciseDates**

180.2.2301 LegProvisionOptionExerciseLatestTime

For a Bermuda or American style option, the latest time on an exercise business day (excluding the expiration date) within the exercise period that notice can be given by the buyer to the seller or seller's agent. Notice of exercise given after this time will be deemed to have been given on the next exercise business day.

Type: **LocalMktTime**

Used in components: **LegProvisionOptionExerciseDates**

180.2.2302 LegProvisionOptionExerciseLatestTimeBusinessCenter

Identifies the business center calendar used with the provision's latest time for notice of exercise.

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in components: **LegProvisionOptionExerciseDates**

180.2.2303 LegProvisionOptionExerciseMaximumNotional

The maximum notional amount that can be exercised on a given exercise date.

Type: **Amt**

Used in groups: **LegProvisionGrp**

180.2.2304 LegProvisionOptionExerciseMinimumNotional

The minimum notional amount that can be exercised on a given exercise date.

Type: **Amt**

Used in groups: **LegProvisionGrp**

180.2.2305 LegProvisionOptionExerciseMultipleNotional

A notional amount which restricts the amount of notional that can be exercised when partial exercise or multiple exercise is applicable. The integral multiple amount defines a lower limit of notional that can be exercised and also defines a unit multiple of notional that can be exercised, i.e. only integer multiples of this amount can be exercised.

Type: **Amt**

Used in groups: **LegProvisionGrp**

180.2.2306 LegProvisionOptionExercisePeriodSkip

The number of periods in the referenced date schedule that are between each date in the relative date schedule. Thus a skip of 2 would mean that dates are relative to every second date in the referenced schedule. If present this should have a value greater than 1.

Type: **int**

Used in components: **LegProvisionOptionExerciseDates**

180.2.2307 LegProvisionOptionExerciseStartDateAdjusted

The adjusted first day of the exercise period for an American style option.

Type: **LocalMktDate**

Used in components: **LegProvisionOptionExerciseDates**

180.2.2308 LegProvisionOptionExerciseStartDateOffsetDayType

Specifies the day type of the provision's relative option exercise start date offset.

Type: **int**

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: **LegProvisionOptionExerciseDates**

180.2.2309 LegProvisionOptionExerciseStartDateOffsetPeriod

Time unit multiplier for the relative option exercise start date offset.

Type: **int**

Used in components: **LegProvisionOptionExerciseDates**

180.2.2310 LegProvisionOptionExerciseStartDateOffsetUnit

Time unit associated with the relative option exercise start date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: **LegProvisionOptionExerciseDates**

180.2.2311 LegProvisionOptionExerciseStartDateRelativeTo

Specifies the anchor date when the option exercise start date is relative to an anchor date.

See http://www.fixtradingcommunity.org/codelists#Relative_To_Date for values.

Type: **int**

Used in components: **LegProvisionOptionExerciseDates**

180.2.2312 LegProvisionOptionExerciseStartDateUnadjusted

The unadjusted first day of the exercise period for an American style option.

Type: **LocalMktDate**

Used in components: **LegProvisionOptionExerciseDates**

180.2.2313 LegProvisionOptionExerciseStyle

The instrument provision option exercise style.

Type: **int**

Allowed values in ExerciseStyleCodeSet:

Code	Name	Description
0	European	European
1	American	American
2	Bermuda	Bermuda
99	Other	Other

Used in groups: **LegProvisionGrp**

180.2.2314 LegProvisionOptionExpirationDateAdjusted

The adjusted last date within an exercise period for an American style option. For a European style option it is the only date within the exercise period.

Type: **LocalMktDate**

Used in components: **LegProvisionOptionExpirationDate**

180.2.2315 LegProvisionOptionExpirationDateBusinessCenter

The business center calendar used to adjust the instrument leg's provision's option expiration date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **LegProvisionOptionExpirationDateBusinessCenterGrp**

180.2.2316 LegProvisionOptionExpirationDateBusinessCenterGrp

LegProvisionOptionExpirationDateBusinessCenterGrp is a repeating subcomponent within the LegProvisionOptionExpirationDate component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the LegDateAdjustment component in InstrumentLeg.

Name	Mult.	Type	Description
NoLegProvisionOptionExpirationDate-BusinessCenters	[1..1]	NumInGroup	
LegProvisionOptionExpirationDate-BusinessCenter	[0..1]	String	Required if NoLegProvisionOptionExpirationDate-BusinessCenters(40937) > 0.

Used in components: **LegProvisionOptionExpirationDate**

180.2.2317 LegProvisionOptionExpirationDateBusinessDayConvention

The business day convention used to adjust the instrument leg's provision's option expiration date. Used only to override the business day convention specified in the LegDateAdjustment component within the InstrumentLeg component.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)

Code	Name	Description
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [LegProvisionOptionExpirationDate](#)

180.2.2318 LegProvisionOptionExpirationDate

The LegProvisionOptionExerciseDate is a subcomponent within the LegProvisionGrp component used to report the option expiration date and times defined in the provision.

Name	Mult.	Type	Description
LegProvisionOptionExpirationDateUnadjusted	[0..1]	LocalMktDate	
LegProvisionOptionExpirationDate-BusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the LegDateAdjustment component in InstrumentLeg. The specified value would be specific to this instance of the leg provision option expiration date.
LegProvisionOptionExpirationDate-BusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the LegDateAdjustment component in InstrumentLeg. The specified values would be specific to this instance of the leg provision option expiration date.
LegProvisionOptionExpirationDateRelativeTo	[0..1]	int	
LegProvisionOptionExpirationDateOffsetPeriod	[0..1]	int	Conditionally required when LegProvisionOptionExpirationDateOffsetUnit(40503) is specified.
LegProvisionOptionExpirationDateOffsetUnit	[0..1]	CodeSet	Conditionally required when LegProvisionOptionExpirationDateOffsetPeriod(40502) is specified.
LegProvisionOptionExpirationDateOffsetDayType	[0..1]	CodeSet	
LegProvisionOptionExpirationDateAdjusted	[0..1]	LocalMktDate	

Name	Mult.	Type	Description
LegProvisionOptionExpirationTime	[0..1]	LocalMktTime	
LegProvisionOptionExpirationTime-BusinessCenter	[0..1]	String	

Used in groups: [LegProvisionGrp](#)

180.2.2319 LegProvisionOptionExpirationDateOffsetDayType

Specifies the day type of the provision's relative option expiration date offset.

Type: [int](#)

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: [LegProvisionOptionExpirationDate](#)

180.2.2320 LegProvisionOptionExpirationDateOffsetPeriod

Time unit multiplier for the relative option expiration date offset.

Type: [int](#)

Used in components: [LegProvisionOptionExpirationDate](#)

180.2.2321 LegProvisionOptionExpirationDateOffsetUnit

Time unit associated with the relative option expiration date offset.

Type: [String](#)

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: [LegProvisionOptionExpirationDate](#)

180.2.2322 LegProvisionOptionExpirationDateRelativeTo

Specifies the anchor date when the option expiration date is relative to an anchor date.

See http://www.fixtradingcommunity.org/codelists#Relative_To_Date for values.

Type: [int](#)

Used in components: [LegProvisionOptionExpirationDate](#)

180.2.2323 LegProvisionOptionExpirationDateUnadjusted

The unadjusted last day within an exercise period for an American style option. For a European style option it is the only day within the exercise period.

Type: [LocalMktDate](#)

Used in components: [LegProvisionOptionExpirationDate](#)

180.2.2324 LegProvisionOptionExpirationTime

The latest time for exercise on the expiration date.

Type: [LocalMktTime](#)

Used in components: [LegProvisionOptionExpirationDate](#)

180.2.2325 LegProvisionOptionExpirationTimeBusinessCenter

Identifies the business center calendar used with the provision's latest exercise time on expiration date.

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in components: **LegProvisionOptionExpirationDate**

180.2.2326 LegProvisionOptionMaximumNumber

The maximum number of options that can be exercised on a given exercise date. If the number is not specified, it means that the maximum number of options corresponds to the remaining unexercised options.

Type: **int**

Used in groups: **LegProvisionGrp**

180.2.2327 LegProvisionOptionMinimumNumber

The minimum number of options that can be exercised on a given exercise date.

Type: **int**

Used in groups: **LegProvisionGrp**

180.2.2328 LegProvisionOptionRelevantUnderlyingDateAdjusted

The adjusted date on the underlying set by the exercise of an option. What this date is depends on the option (e.g. in a swaption it is the swap effective date, in an extendible/cancelable provision it is the swap termination date).

Type: **LocalMktDate**

Used in components: **LegProvisionOptionRelevantUnderlyingDate**

180.2.2329 LegProvisionOptionRelevantUnderlyingDateBusinessCenter

The business center calendar used to adjust the instrument leg's provision's option underlying date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **LegProvisionOptionRelevantUnderlyingDateBusinessCenterGrp**

180.2.2330 LegProvisionOptionRelevantUnderlyingDateBusinessCenterGrp

LegProvisionOptionRelevantUnderlyingDateBusinessCenterGrp is a repeating subcomponent within the LegProvisionOptionRelevantUnderlyingDate component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the LegDateAdjustment component in InstrumentLeg.

Name	Mult.	Type	Description
NoLegProvisionOptionRelevantUnderlyingDateBusinessCenters	[1..1]	NumInGroup	
LegProvisionOptionRelevantUnderlyingDateBusinessCenter	[0..1]	String	Required if NoLegProvisionOptionRelevantUnderlyingDateBusinessCenters(40938) > 0.

Used in components: **LegProvisionOptionRelevantUnderlyingDate**

180.2.2331 LegProvisionOptionRelevantUnderlyingDateBusinessDayConvention

The business day convention used to adjust the instrument leg's provision's option relevant underlying date. Used only to override the business day convention specified in the LegDateAdjustment component within the InstrumentLeg component.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.

Code	Name	Description
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [LegProvisionOptionRelevantUnderlyingDate](#)

180.2.2332 LegProvisionOptionRelevantUnderlyingDate

The LegProvisionOptionRelevantUnderlyingDate is a subcomponent within the LegProvisionGrp component used to report the option relevant underlyingdate defined in the provision.

Name	Mult.	Type	Description
LegProvisionOptionRelevantUnderlyingDateUnadjusted	[0..1]	LocalMktDate	
LegProvisionOptionRelevantUnderlyingDateBusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the LegDateAdjustment component in InstrumentLeg. The specified value would be specific to this instance of the leg provision option relevant underlying date.
LegProvisionOptionRelevantUnderlyingDateBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the LegDateAdjustment component in InstrumentLeg. The specified values would be specific to this instance of the leg provision option relevant underlying date.
LegProvisionOptionRelevantUnderlyingDateRelativeTo	[0..1]	int	
LegProvisionOptionRelevantUnderlyingDateOffsetPeriod	[0..1]	int	Conditionally required when LegProvisionOptionRelevantUnderlyingDateOffsetUnit(40513) is specified.
LegProvisionOptionRelevantUnderlyingDateOffsetUnit	[0..1]	CodeSet	Conditionally required when LegProvisionOptionRelevantUnderlyingDateOffsetPeriod(40512) is specified.
LegProvisionOptionRelevantUnderlyingDateOffsetDayType	[0..1]	CodeSet	
LegProvisionOptionRelevantUnderlyingDateAdjusted	[0..1]	LocalMktDate	

Used in groups: [LegProvisionGrp](#)

180.2.2333 LegProvisionOptionRelevantUnderlyingDateOffsetDayType

Specifies the day type of the provision's relative option relevant underlying date offset.

Type: **int**

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: **LegProvisionOptionRelevantUnderlyingDate**

180.2.2334 LegProvisionOptionRelevantUnderlyingDateOffsetPeriod

Time unit multiplier for the relative option relevant underlying date offset.

Type: **int**

Used in components: **LegProvisionOptionRelevantUnderlyingDate**

180.2.2335 LegProvisionOptionRelevantUnderlyingDateOffsetUnit

Time unit associated with the relative option relevant underlying date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: **LegProvisionOptionRelevantUnderlyingDate**

180.2.2336 LegProvisionOptionRelevantUnderlyingDateRelativeTo

Specifies the anchor date when the date relevant to the underlying trade on exercise is relative to an anchor date.

See http://www.fixtradingcommunity.org/codelists#Relative_To_Date for values.

Type: **int**

Used in components: **LegProvisionOptionRelevantUnderlyingDate**

180.2.2337 LegProvisionOptionRelevantUnderlyingDateUnadjusted

The unadjusted date on the underlying set by the exercise of an option. What this date is depends on the option (e.g. in a swaption it is the swap effective date, in an extendible/cancelable provision it is the swap termination date).

Type: **LocalMktDate**

Used in components: **LegProvisionOptionRelevantUnderlyingDate**

180.2.2338 LegProvisionOptionSinglePartyBuyerSide

If optional early termination is not available to both parties then this component identifies the buyer of the option through its side of the trade.

Type: **int**

Allowed values in ProvisionOptionSinglePartyBuyerSideCodeSet:

Code	Name	Description
1	Buy	Buy
2	Sell	Sell

Used in groups: **LegProvisionGrp**

180.2.2339 LegProvisionOptionSinglePartySellerSide

If optional early termination is not available to both parties then this component identifies the seller of the option through its side of the trade.

Type: **int**

Allowed values in ProvisionOptionSinglePartyBuyerSideCodeSet:

Code	Name	Description
1	Buy	Buy
2	Sell	Sell

Used in groups: [LegProvisionGrp](#)

180.2.2340 LegProvisionParties

LegProvisionParties is a repeating component within the LegProvision component used to report the parties identified in the contract provision.

Name	Mult.	Type	Description
NoLegProvisionPartyIDs	[1..1]	NumInGroup	
LegProvisionPartyID	[0..1]	String	Required if NoLegProvisionPartyIDs(40533) > 0.
LegProvisionPartyIDSource	[0..1]	CodeSet	Required if NoLegProvisionPartyIDs(40533) > 0.
LegProvisionPartyRole	[0..1]	CodeSet	Required if NoLegProvisionPartyIDs(40533) > 0.
LegProvisionPartyRoleQualifier	[0..1]	CodeSet	
LegProvisionPtysSubGrp	[0..*]	Group	

Used in groups: [LegProvisionGrp](#)

180.2.2341 LegProvisionPartyID

The party identifier/code for the payment settlement party.

Type: [String](#)

Used in groups: [LegProvisionParties](#)

180.2.2342 LegProvisionPartyIDSource

Identifies the class or source of LegProvisionPartyID(40534).

Type: [char](#)

Allowed values in PartyIDSourceCodeSet:

Code	Name	Description
1	KoreanInvestorID	Korean Investor ID. Also known as the Investor Registration Certificate (IRC) issued by Korea's Financial Supervisory Service (FSS), an identifier tied into the depository for settlement and record keeping.
6	UKNationalInsuranceOrPension-Number	UK National Insurance or Pension Number
B	BIC	BIC (Bank Identification Code - SWIFT managed) code (ISO9362 - See "Appendix 6-B")
I	ISITCAcronym	Directed broker three character acronym as defined in ISITC "ETC Best Practice" guidelines document
2	TaiwaneseForeignInvestorID	Taiwanese Qualified Foreign Investor ID QFII/FID
7	USSocialSecurityNumber	US Social Security Number
C	GeneralIdentifier	Generally accepted market participant identifier (e.g. NASD mnemonic)
3	TaiwaneseTradingAcct	Taiwanese Trading Acct
8	USEmployerOrTaxIDNumber	US Employer or Tax ID Number
D	Proprietary	Proprietary / Custom code. Custom ID schema used between counterparties, trading platforms and repositories.
4	MalaysianCentralDepository	Malaysian Central Depository (MCD) number
9	AustralianBusinessNumber	Australian Business Number
E	ISOCountryCode	ISO Country Code
5	ChineseInvestorID	Chinese Investor ID
A	AustralianTaxFileNumber	Australian Tax File Number
F	SettlementEntityLocation	Settlement Entity Location (note if Local Market Settlement use "E=ISO Country Code") (see "Appendix 6-G" for valid values)
G	MIC	Market Identifier Code (ISO 10383) MIC
J	TaxID	Tax ID
H	CSDParticipant	CSD participant/member code (e.g. Euroclear, DTC, CREST or Kassenverein number)
K	AustralianCompanyNumber	Australian Company Number
L	AustralianRegisteredBodyNumber	Australian Registered Body Number
M	CFTCReportingFirmIdentifier	CFTC reporting firm identifier
N	LegalEntityIdentifier	Legal Entity Identifier (ISO 17442) LEI
O	InterimIdentifier	Interim identifier. An interim entity identifier assigned by a regulatory agency prior to an LEI (ISO 17442) being assigned.

Code	Name	Description
P	ShortCodeIdentifier	Short code identifier. A generic means for trading venues, brokers, investment managers to convey a bilaterally agreed upon "short hand" code for an identifier that is a reference to a mapping between the parties.
Q	NationalIDNaturalPerson	National ID of natural person. An identification number generally assigned by a government authority or agency to a natural person which is unique to the person it is assigned to. Examples include, but not limited to, "social security number", "pension number".
R	IndiaPermanentAccountNumber	India Permanent Account Number. Also referred to as PAN ID. An identifier issued by the Income Tax Department of India.
S	FDID	Firm designated identifier. Also referred to as FDID. A unique identifier required by the SEC for each trading account designated by Industry Members for purposes of reporting to CAT (Consolidated Audit Trail).
T	SPSAID	Special Segregated Account ID. Also referred to as SPSA ID. The Special Segregated Account identifier issued by Hong Kong Exchanges and Clearing.
U	MasterSPSAID	Master Special Segregated Account ID. Also referred to as Master SPSA ID. The master identifier issued by Hong Kong Exchanges and Clearing for the aggregation of SPSA IDs.
V	KoreaShortSellingRegistrationNumber	Korea Short Selling Registration Number. Short selling registration number assigned by Korea's Financial Supervisory Service (FSS) for institutions placing eligible orders under Korea's Financial Services Commission's "Short Sale Reform Measures".

Used in groups: [LegProvisionParties](#)

180.2.2343 LegProvisionPartyRole

Identifies the type or role of LegProvisionPartyID(40534) specified.

Type: [int](#)

Allowed values in PartyRoleCodeSet:

Code	Name	Description
1	ExecutingFirm	Executing Firm (formerly FIX 4.2 ExecBroker)

Code	Name	Description
2	BrokerOfCredit	Broker of Credit (formerly FIX 4.2 BrokerOfCredit)
3	ClientID	Client ID (formerly FIX 4.2 ClientID)
4	ClearingFirm	Clearing Firm (formerly FIX 4.2 ClearingFirm)
5	InvestorID	Investor ID
6	IntroducingFirm	Introducing Firm
7	EnteringFirm	Entering Firm
8	Locate	Locate / Lending Firm (for short-sales)
9	FundManagerClientID	Fund Manager Client ID (for CIV)
10	SettlementLocation	Settlement Location (formerly FIX 4.2 SettlLocation)
11	OrderOriginationTrader	Order Origination Trader (associated with Order Origination Firm - i.e. trader who initiates/submits the order)
12	ExecutingTrader	Executing Trader (associated with Executing Firm - actually executes)
13	OrderOriginationFirm	Order Origination Firm (e.g. buy-side firm)
14	GiveupClearingFirmDepr	Giveup Clearing Firm (firm to which trade is given up)
15	CorrespondantClearingFirm	Correspondant Clearing Firm
16	ExecutingSystem	Executing System
17	ContraFirm	Contra Firm
18	ContraClearingFirm	Contra Clearing Firm
19	SponsoringFirm	Sponsoring Firm
20	UnderlyingContraFirm	Underlying Contra Firm
21	ClearingOrganization	Clearing Organization
22	Exchange	Exchange. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
24	CustomerAccount	Customer Account
25	CorrespondentClearingOrganization	Correspondent Clearing Organization
26	CorrespondentBroker	Correspondent Broker
27	Buyer	Buyer/Seller (Receiver/Deliverer)
28	Custodian	Custodian
29	Intermediary	Intermediary
30	Agent	Agent
31	SubCustodian	Sub-custodian
32	Beneficiary	Beneficiary
33	InterestedParty	Interested party

Code	Name	Description
34	RegulatoryBody	Regulatory body. In the context of regulatory reporting, this identifies the regulator the trade is being reported to.
35	LiquidityProvider	Liquidity provider
36	EnteringTrader	Entering trader
37	ContraTrader	Contra trader
38	PositionAccount	Position account. The account which positions are maintained. Typically represents the aggregation of one or more customer accounts.
39	ContraInvestorID	Contra Investor ID
40	TransferToFirm	Transfer to Firm
41	ContraPositionAccount	Contra Position Account
42	ContraExchange	Contra Exchange
43	InternalCarryAccount	Internal Carry Account
44	OrderEntryOperatorID	Order Entry Operator ID
45	SecondaryAccountNumber	Secondary Account Number
46	ForeignFirm	Foreign Firm
47	ThirdPartyAllocationFirm	Third Party Allocation Firm
48	ClaimingAccount	Claiming Account
49	AssetManager	Asset Manager
50	PledgorAccount	Pledgor Account
51	PledgeeAccount	Pledgee Account
52	LargeTraderReportableAccount	Large Trader Reportable Account
53	TraderMnemonic	Trader mnemonic
54	SenderLocation	Sender Location
55	SessionID	Session ID
56	AcceptableCounterparty	Acceptable Counterparty
57	UnacceptableCounterparty	Unacceptable Counterparty
58	EnteringUnit	Entering Unit
59	ExecutingUnit	Executing Unit
60	IntroducingBroker	Introducing Broker
61	QuoteOriginator	Quote originator
62	ReportOriginator	Report originator
63	SystematicInternaliser	Systematic internaliser (SI)

Code	Name	Description
64	MultilateralTradingFacility	Multilateral Trading Facility (MTF). Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
65	RegulatedMarket	Regulated Market (RM). Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
66	MarketMaker	Market Maker
67	InvestmentFirm	Investment Firm
68	HostCompetentAuthority	Host Competent Authority (Host CA)
69	HomeCompetentAuthority	Home Competent Authority (Home CA)
70	CompetentAuthorityLiquidity	Competent Authority of the most relevant market in terms of liquidity (CAL)
71	CompetentAuthorityTransactionV- enue	Competent Authority of the Transaction (Execution) Venue (CATV)
72	ReportingIntermediary	Reporting intermediary. The medium or vendor used to report to a regulator, non-regulatory agency or data repository.
73	ExecutionVenue	Execution Venue. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
74	MarketDataEntryOriginator	Market data entry originator
75	LocationID	Location ID
76	DeskID	Desk ID
77	MarketDataMarket	Market data market
78	AllocationEntity	Allocation Entity
79	PrimeBroker	Prime Broker providing General Trade Services
80	StepOutFirm	Step-Out Firm (Prime Broker)
81	BrokerClearingID	Broker clearing identifier
82	CentralRegistrationDepository	Central Registration Depository (CRD)
83	ClearingAccount	Clearing Account
84	AcceptableSettlingCounterparty	Acceptable Settling Counterparty
85	UnacceptableSettlingCounterparty	Unacceptable Settling Counterparty
86	CLSMemberBank	CLS Member Bank
87	InConcertGroup	In Concert Group
88	InConcertControllingEntity	In Concert Controlling Entity
89	LargePositionsReportingAccount	Large Positions Reporting Account
90	SettlementFirm	Settlement Firm

Code	Name	Description
91	SettlementAccount	Settlement account. The account to which individual payment obligations are aggregated for netting and funds movement. Typically represents the aggregation of many margin (performance bond) accounts.
92	ReportingMarketCenter	Reporting Market Center
93	RelatedReportingMarketCenter	Related Reporting Market Center
94	AwayMarket	Away Market. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
95	GiveupTradingFirm	Give-up (trading) firm
96	TakeupTradingFirm	Take-up (trading) firm
97	GiveupClearingFirm	Give-up clearing firm
98	TakeupClearingFirm	Take-up clearing firm
99	OriginatingMarket	Originating Market. Identifies the Market using PartyIDSource(tag 447) = G (Market Identifier Code) where an order originated in the event that the order is sent to an alternative market for execution. Serves as an inverse of an away market.
100	MarginAccount	Margin account. Also referred to as "performance bond account". The margin account is the calculated margin requirements. Typically represents the aggregation of one or more position accounts.
101	CollateralAssetAccount	Collateral asset account. The account at which individual collateral assets are maintained. Typically, although not always, one-for-one with the settlement account.
102	DataRepository	Data repository. Multiple instances of this PartyRole may appear for reporting purposes.
103	CalculationAgent	Calculation agent
104	ExerciseNoticeSender	Sender of exercise notice
105	ExerciseNoticeReceiver	Receiver of exercise notice
106	RateReferenceBank	Rate reference bank. The bank providing the reference rate. Multiple instance of this PartyRole may appear.
107	Correspondent	Correspondent
109	BeneficiaryBank	Beneficiary's bank or depository institution. The institution in which the beneficiary, a person or an entity, has their account with. The institution may be a bank or non-bank institution.
110	Borrower	Borrower
111	PrimaryObligator	Primary obligator
112	Guarantor	Guarantor

Code	Name	Description
113	ExcludedReferenceEntity	Excluded reference entity
114	DeterminingParty	Determining party
115	HedgingParty	Hedging party
116	ReportingEntity	Reporting entity. The entity that is reporting the information.
117	SalesPerson	Sales person. The person who is involved in the sales activities for their firm.
118	Operator	Operator. The person who has the capabilities and authorization to take certain actions; for example, setting entitlements, etc.
119	CSD	Central Securities Depository (CSD)
120	ICSD	International Central Securities Depository (ICSD)
121	TradingSubAccount	Trading sub-account. Example of sub-accounts include a clearing account that has multiple trading sub-accounts, a trading account that has multiple trading sub-accounts belonging to different trading firms.
122	InvestmentDecisionMaker	Investment decision maker. In the context of ESMA RTS reporting, this is used to specify party responsible for the investment decision. See RTS 24, Annex, Table 2, Field 4.
123	PublishingIntermediary	Publishing intermediary. The medium or vendor used to publish to the market.
124	CSDParticipant	Central Securities Depository (CSD) Participant. In the context of EU SFTR reporting the identifier of the CSD participant or indirect participant of the reporting counterparty. Where both the CSD participant and indirect participant are involved in the transaction this should identify the indirect participant.
125	Issuer	Issuer. The issuer of the security.
126	ContraCustomerAccount	Contra Customer Account. Same as PartyRole(452) = 24 (Customer Account) but for the counterparty. Can be used whenever the parties component is not nested in a repeating group representing both sides.
127	ContraInvestmentDecisionMaker	Contra Investment Decision Maker. Same as PartyRole(452) = 122 (Investment Decision Maker) but for the counterparty. Can be used whenever the parties component is not nested in a repeating group representing both sides.
128	AuthorizingPerson	Authorizing person. In the context of MiFIR, this value is used to identify the person authorizing algorithms within a trading firm.

Used in groups: **LegProvisionParties**

180.2.2344 LegProvisionPartyRoleQualifier

Used to further qualify the value of LegProvisionPartyRole(40536).

Type: **int**

Allowed values in PartyDetailRoleQualifierCodeSet:

Code	Name	Description
0	Agency	Agency
1	Principal	Principal
2	RisklessPrincipal	Riskless principal
3	GeneralClearingMember	General clearing member
30	ExchangeOrderSubmitter	Exchange order submitter. Used to identify original or initial exchange order submitting broker when party role "1" (Executing Firm) appears more than once.
4	IndividualClearingMember	Individual clearing member
5	PreferredMarketMaker	Preferred market maker. Market maker getting a part of the matched quantity before primary or default market maker.
6	DirectedMarketMaker	Directed market maker. Single market maker to handle the order provided.
7	Bank	Bank
8	Hub	Hub. Indicates that the Intermediary party is a hub system or service provider.
9	PrimaryTrdRepository	Primary trade repository. Used to differentiate the principal trade repository from the Original or Additional trade repositories when there are multiple trade repositories being reported.
10	OrigTrdRepository	Original trade repository. Used to identify the trade repository to which the trade was originally reported if different from the current repository to which the trade is being reported.
11	AddtnlIntlTrdRepository	Additional international trade repository. Used with InternationalSwapIndicator(2526) to identify the trade repository that is in addition to the local swaps data repository as required by U.S. law.
12	AddtnlDomesticTrdRepository	Additional domestic trade repository. Used with MixedSwapIndicator(1929) to identify the trade repository that is in addition to the current trade repository when the assets in the swap are subject to two different domestic regulators.
13	RelatedExchange	Related exchange
14	OptionsExchange	Options exchange

Code	Name	Description
15	SpecifiedExchange	Specified exchange
16	ConstituentExchange	Constituent exchange.
17	ExemptFromTradeReporting	Exempt from trade reporting. In the context of FINRA TRACE reporting requirements, this is used to indicate the ATS has been granted a regulatory exemption from reporting.
18	Current	Current. Can be used to convey an existing party identifier for the same party role in a single message.
19	New	New. Can be used to convey a future party identifier for the same party role in a single message.
20	DesignatedSponsor	Designated sponsor. Market maker jointly providing liquidity for the same security with other market makers.
21	Specialist	Specialist. Market maker being the only one providing liquidity for a security.
22	Algorithm	Algorithm
23	FirmOrLegalEntity	Firm or legal entity
24	NaturalPerson	Natural person
25	RegularTrader	Regular trader. Standard trader profile.
26	HeadTrader	Head trader. Senior trader leading a group of regular traders.
27	Supervisor	Supervisor. Administrative user that has only limited rights for normal trading but possibly special rights for emergency actions.
28	TriParty	Tri-party. In the context of EU SFTR reporting, identifies the third party, not necessarily the custodian, to which the reporting counterparty has outsourced the post-trade processing of an SFT (if applicable).
29	Lender	Lender. In the context of EU SFTR reporting, identifies the agent lender involved in the securities lending transaction.

Used in groups: [LegProvisionParties](#)

180.2.2345 LegProvisionPartySubID

Party sub-identifier, if applicable, for LegProvisionPartyRole(40536).

Type: [String](#)

Used in groups: [LegProvisionPtysSubGrp](#)

180.2.2346 LegProvisionPartySubIDType

The type of LegProvisionPartySubID(40538) value.

Type: **int**

Allowed values in PartySubIDTypeCodeSet:

Code	Name	Description
1	Firm	Firm
2	Person	Person
3	System	System
4	Application	Application
5	FullLegalNameOfFirm	Full legal name of firm
6	PostalAddress	Postal address
7	PhoneNumber	Phone number
8	EmailAddress	Email address
9	ContactName	Contact name
10	SecuritiesAccountNumber	Securities account number (for settlement instructions)
11	RegistrationNumber	Registration number (for settlement instructions and confirmations)
12	RegisteredAddressForConfirmation	Registered address (for confirmation purposes)
13	RegulatoryStatus	Regulatory status (for confirmation purposes)
14	RegistrationName	Registration name (for settlement instructions)
15	CashAccountNumber	Cash account number (for settlement instructions)
16	BIC	BIC
17	CSDParticipantMemberCode	CSD participant member code
18	RegisteredAddress	Registered address
19	FundAccountName	Fund account name
20	TelexNumber	Telex number
21	FaxNumber	Fax number
22	SecuritiesAccountName	Securities account name
23	CashAccountName	Cash account name
24	Department	Department
25	LocationDesk	Location desk
26	PositionAccountType	Position account type
27	SecurityLocateID	Security locate ID
28	MarketMaker	Market maker

Code	Name	Description
29	EligibleCounterparty	Eligible counterparty
30	ProfessionalClient	Professional client
31	Location	Location
32	ExecutionVenue	Execution venue
33	CurrencyDeliveryIdentifier	Currency delivery identifier
34	AddressCity	Address City
35	AddressStateOrProvince	Address State/Province
36	AddressPostalCode	Address Postal Code
37	AddressStreet	Address Street
38	AddressISOCountryCode	Address Country (ISO country code)
39	ISOCountryCode	ISO country code
40	MarketSegment	Market segment
41	CustomerAccountType	Customer account type
42	OmnibusAccount	Omnibus account
43	FundsSegregationType	Funds segregation type
44	GuaranteeFund	Guarantee fund. Identifies a guarantee fund related to an account. Used when one account has multiple funds of collateral, each guaranteeing different positions. Can be used for PartyRole(452) = Customer Account(24).
45	SwapDealer	Swap dealer. The US regulator's defined term for identifying the trade counterparty as "any person who holds itself out as a dealer in swaps, makes a market in swaps, regularly enters into swaps with counterparties as an ordinary course of business for its own account, or engages in activity causing itself to be commonly known in the trade as a dealer or market maker in swaps".
46	MajorParticipant	Major participant. When PartySubID(523)=Y the counterparty is not the swap dealer but is a major swap participant as defined in the regulations.
47	FinancialEntity	Financial entity. When PartySubID(523)=Y the counterparty is neither a swap dealer nor a major swap participant but is a financial entity as defined in the regulations.
48	USPerson	U.S. person. A legal term referring to any U.S. person or legal entity anywhere in the world that should be taxed under U.S. law.
49	ReportingEntityIndicator	Reporting entity indicator. Indicates the entity obligated or delegated to report to their regulator, a non-regulatory agency or data repository. Set PartySubID(523)=Y if true.

Code	Name	Description
50	ElectedClearingRequirementException	Elected clearing requirement exception
51	BusinessCenter	Business center.
52	ReferenceText	Reference text
53	ShortMarkingExemptAccount	Short-marking exempt account
54	ParentFirmIdentifier	Parent firm identifier. Implementation-specific identifier of this party's parent entity.
55	ParentFirmName	Parent firm name. Full name of this party's parent entity.
56	DealIdentifier	Deal identifier. The internal identifier assigned to the trade by this party, particularly by a Clearing Organization.
57	SystemTradeID	System trade identifier
58	SystemTradeSubID	System trade sub-identifier
59	FCMCode	Futures Commission Merchant (FCM) code. The FCM's code or identifier in relation to the PartyRole(452). For example, if PartyRole(452) is the exchange or clearinghouse, the FCM code/ID specified in PartySubID(523) is the FCM's identifier at the exchange or clearinghouse.
60	DlvryTrmlCode	Delivery terminal customer account/code. Usually used for gas delivery to identify whose account the gas is allocated to at the delivery terminal. Often referred to as "HUB" code.
61	VolntyRptEntity	Voluntary reporting entity. The entity voluntarily reporting the trade to the regulator. Set PartySubID(523)=Y if true.
62	RptObligJursdctn	Reporting obligation jurisdiction. For a trade that falls under multiple jurisdictions this may be used to identify, through PartySubID(523), the reporting jurisdiction to which the party is obligated to report.
63	VolntyRptJursdctn	Voluntary reporting jurisdiction. For a trade that falls under multiple jurisdictions this may be used to identify, through PartySubID(523), the regulatory jurisdiction to which the party is submitting a voluntary report.

Code	Name	Description
64	CompanyActivities	Company activities. For regulatory reporting. ID values include: A = Assurance undertaking authorized in accordance with Directive 2002/83/EC C=Credit institution authorized in accordance with Directive 2006/48/EC F=Investment firm in accordance with Directive 2004/39/EC I=Insurance undertaking authorized in accordance with Directive 73/239/EC L=Alternative investment fund managed by AIFMs authorized or registered in accordance with Directive 2011/61/EC O=Institution for occupational retirement provision within the meaning of Article 6(a) of Directive 2003/41/EC R=Reinsurance undertaking authorized in accordance with Directive 2005/68/EC U=UCITS and its management company, authorized in accordance with Directive 2009/65/EC or blank in case of coverage by LEI or in case of non-financial counterparties. In the context of EU SFTR reporting use the appropriate 4- or 1-character code noted in the regulations. See SFTR ITS "Commission Implementing Regulation (EU) 2019/363" Annexes 1 and 2 for values.
65	EEAreaDomiciled	European Economic Area domiciled. ID values: Y or N
66	ContractLinked	Contract linked to commercial or treasury financing for this counterparty. ID values: Y or N
67	ContractAbove	Contract above clearing threshold for this counterparty. ID values: Y or N
68	VolntyRptPty	Voluntary reporting party. When PartySubID(523)=Y, identifies that the trading party is reporting voluntarily when VoluntaryRegulatoryReport(1935)=Y.
69	EndUser	End user. When PartySubID(523)=Y, the counterparty is neither the swap dealer, major swap participant nor financial entity as defined in the regulations.
70	LocationOrJurisdiction	Location or jurisdiction. One or more instances may be used in combination with PartySubIDType(803) = 49 (Reporting entity indicator) or 102 (Data repository) to identify the jurisdiction, countries, regions or provinces for which the party is a reporting entity or data repository when that characteristic is ambiguous or where there are multiple locations. The party sub-ID value is either a jurisdiction acronym, a 2-character ISO 3166 country code, or a hyphenated combination of the country code and the standard post-office abbreviation for province, state or region if necessary. E.g. "US" for United States or "CA-QC" for Quebec Canada.

Code	Name	Description
71	DerivativesDealer	Derivatives dealer. Indicates whether the party is a derivatives dealer or not (Y/N). The Canadian regulator's defined term for identifying the trade counterparty as "a person or company engaging in or holding himself, herself or itself out as engaging in the business of trading in derivatives in Ontario as principal or agent".
72	Domicile	Domicile. Country and optionally province, state or region of domicile. The party sub-ID value is either a 2-character ISO 3166 country code or a hyphenated combination of the country code and the standard post-office abbreviation of province, state or region if necessary. E.g. "US" for United States or "CA-QC" for Quebec Canada.
73	ExemptFromRecognition	Exempt from recognition. Used with party role 21 "Clearing Organization" to indicate exemption (Y/N). Identifies a clearing agency as exempt from oversight in Ontario, i.e. one that 1) only provides limited services and does not present significant risks or 2) is foreign-based, intends to operate in Ontario but is subject to regulatory oversight in another jurisdiction.
74	Payer	Payer. Identifies the party as the payer of a particular payment stream or bullet payment by quoting the stream's StreamDesc(40051) (or LegStreamDesc(40243) or UnderlyingStreamDesc(40542)) or payment's PaymentDesc(43087) in the associated party sub-identifier field.
75	Receiver	Receiver. Identifies the party as the receiver of a particular payment stream or bullet payment by quoting the stream's StreamDesc(40051) (or LegStreamDesc(40243) or UnderlyingStreamDesc(40542)) or payment's PaymentDesc(43087) in the associated party sub-identifier field.
76	SystematicInternaliser	Systematic Internaliser (SI). In the context of ESMA reporting, this is used to indicate whether the specified party is a Systematic Internaliser or not for the security defined in the Instrument component (Y/N).
77	PublishingEntityIndicator	Publishing entity indicator. Indicates the entity obligated or delegated to publish to the market. Set PartySubID(523)=Y if true.
78	FirstName	First name. The first name(s) of a natural person. If multiple names, separate entries by a comma.
79	Surname	Surname. The surname(s) or lastname(s) of a natural person. If multiple names, separate entries by a comma.

Code	Name	Description
80	DateOfBirth	Date of birth. The date of birth of a natural person in the format YYYYMMDD.
81	OrderTransmittingFirm	Order transmitting firm. Identifies whether the party specified in PartyID(448) is the firm that transmitted the order. In the context of RTS 22 Article 4, when "true" the PartySubID(523)=Y shall be set "by the transmitting firm within the transmitting firm's report where conditions for transmission specified in Article 4 were not satisfied."
82	OrderTransmittingFirmBuyer	Order transmitting firm for buyer. Identifies the firm that transmitted the order for the buyer. In the context of ESMA RTS 22, PartySubID(523)=Y is used to indicate the firm identified in PartyID(448) is the firm that transmitted the order for the buyer. "This shall be populated by the receiving firm within the receiving firm's report with the identification code provided by the transmitting firm."
83	OrderTransmitterSeller	Order transmitter for seller. Identifies the order transmitting firm for the seller. In the context of ESMA RTS 22, PartySubID(523)=Y is used to indicate the firm identified in PartyID(448) is the firm that transmitted the order for the seller. "This shall be populated by the receiving firm within the receiving firm's report with the identification code provided by the transmitting firm."
84	LegalEntityIdentifier	Legal Entity Identifier (ISO 17442) LEI
85	SubSectorClassification	Sub-sector classification. Supplemental to party sub-ID type "64" (Company activities) for regulatory reporting. For EU SFTR reporting use the appropriate 4-character code noted in the regulations applying the conditional association rules. See SFTR ITS "Commission Implementing Regulation (EU) 2019/363" Annexes 1 and 2 for values.
86	PartySide	Party side. May be used, when appropriate, to explicitly indicate the transaction side of the party, e.g. Buyer, Seller, Lender, Borrower, Maker, Taker, etc. in the ID. In the context of EU SFTR reporting, use values as required by SFTR, "GIVE" and "TAKE" in the ID, to identify collateral giver and taker.
87	LegalRegistrationCountry	Legal registration country. ISO Country Code where the registered office of the party is located as specified in the LEI reference data.

Used in groups: **LegProvisionPtysSubGrp**

180.2.2347 LegProvisionPtysSubGrp

LegProvisionSubParties is a repeating component within the LegProvisionParties component used to extend information to be reported for the party.

Name	Mult.	Type	Description
NoLegProvisionPartySubIDs	[1..1]	NumInGroup	
LegProvisionPartySubID	[0..1]	String	Required if NoLegProvisionPartySubIDs(40537) > 0.
LegProvisionPartySubIDType	[0..1]	CodeSet	Required if NoLegProvisionPartySubIDs(40537) > 0.

Used in groups: [LegProvisionParties](#)

180.2.2348 LegProvisionText

Free form text to specify additional information or enumeration description when a standard value does not apply.

Type: [String](#)

Used in groups: [LegProvisionGrp](#)

180.2.2349 LegProvisionType

Type of provisions.

Type: [int](#)

Allowed values in ProvisionTypeCodeSet:

Code	Name	Description
0	MandatoryEarlyTermination	Mandatory early termination
1	OptionalEarlyTermination	Optional early termination
2	Cancelable	Cancelable
3	Extendable	Extendable. The contract can be extended by either party usually with a specific time notice prior to the expiry date. In the context of EU SFTR reporting this corresponds to "termination optionality" code "ETSB".

Code	Name	Description
4	MutualEarlyTermination	Mutual early termination
5	Evergreen	Evergreen. The contract automatically renews after the expiry date until one party gives the other notice to terminate. In the context of EU SFTR reporting this corresponds to "termination optionality" code "EGRN".
6	Callable	Callable. Contract is callable.
7	Puttable	Puttable. Contract is puttable.

Used in groups: [LegProvisionGrp](#)

180.2.2350 LegPutOrCall

Indicates whether a leg option contract is a put, call, chooser or undetermined.

Type: [int](#)

Allowed values in PutOrCallCodeSet:

Code	Name	Description
0	Put	Put. Also used for the case in which the buyer of a Swaption has the right to enter into an IRS contract as a fixed-rate receiver or into a CDS contract as a seller of protection or for the case of a Floor.
1	Call	Call. Also used for the case in which the buyer of a Swaption has the right to enter into an IRS contract as a fixed-rate payer or into a CDS contract as a buyer of protection or for the case of a Cap.
2	Other	Other. In the context of ESMA RTS 22 reporting, this value may be used when, at the time of execution, the option right cannot be determined.
3	Chooser	Chooser. Indicates that the option buyer may choose to buy or sell the underlying security on exercise or if a Swaption to pay or receive the underlying IRS cash flow stream or to buy or sell CDS protection.

Used in components: [InstrumentLeg](#)

180.2.2351 LegQty

This field is deprecated and has been replaced by LegOrderQty(685). This field will likely be removed from the FIX standard in a future version.

Type: Qty

Used in groups: InstrmtLegExecGrp, LegOrdGrp, LegQuotGrp, LegQuotStatGrp, QuotReqLegsGrp, TrdInstrmtLegGrp

180.2.2352 LegQtyType

Type of quantity specified in LegQty field. LegContractMultiplier (614) is required when LegQtyType = 1 (Contracts). LegUnitOfMeasure (tag 999) and LegTimeUnit (tag 1001) are required when LegQtyType = 2 (Units of Measure per Time Unit). LegQtyType can be different for each leg.

Type: int

Allowed values in QtyTypeCodeSet:

Code	Name	Description
0	Units	Units (shares, par, currency)
1	Contracts	Contracts
2	UnitsOfMeasurePerTimeUnit	Unit of Measure per Time Unit

Used in groups: TrdInstrmtLegExecGrp, TrdInstrmtLegGrp

180.2.2353 LegQuotGrp

Name	Mult.	Type	Description
NoLegs	[1..1]	NumInGroup	
InstrumentLeg	[0..1]	Component	Required if NoLegs(555) > 0.
LegOrderQty	[0..1]	Qty	
LegQty	[0..1]	Qty	The LegQty(687) field is deprecated. The use of LegOrderQty(685) is recommended instead.
LegMidPx	[0..1]	Price	
LegSwapType	[0..1]	CodeSet	
LegSettlType	[0..1]	CodeSet	

Name	Mult.	Type	Description
LegSettlDate	[0..1]	LocalMktDate	
LegStipulations	[0..*]	Group	
NestedParties	[0..*]	Group	
LegPriceType	[0..1]	CodeSet	Code to represent type of price presented in LegBidPx(681) and LegOfferPx(684). Conditionally required when LegBidPx(681) or PegOfferPx(684) is present.
LegBidPx	[0..1]	Price	
LegOfferPx	[0..1]	Price	
LegBenchmarkCurveData	[0..1]	Component	
LegRefID	[0..1]	String	Use of LegRefID(654) in this component is deprecated. Recommend the use of LegID(1788) in the InstrumentLeg component.
LegBidForwardPoints	[0..1]	PriceOffset	
LegOfferForwardPoints	[0..1]	PriceOffset	

Used in messages: [Quote](#), [QuoteResponse](#)

180.2.2354 LegQuotStatGrp

Name	Mult.	Type	Description
NoLegs	[1..1]	NumInGroup	
InstrumentLeg	[0..1]	Component	Required if NoLegs(555) > 0.
LegOrderQty	[0..1]	Qty	
LegQty	[0..1]	Qty	The LegQty(687) field is deprecated. The use of LegOrderQty(685) is recommended instead.
LegMidPx	[0..1]	Price	
LegSwapType	[0..1]	CodeSet	
LegSettlType	[0..1]	CodeSet	
LegSettlDate	[0..1]	LocalMktDate	
LegStipulations	[0..*]	Group	
NestedParties	[0..*]	Group	

Used in messages: [QuoteStatusReport](#)

180.2.2355 LegRatioQty

The ratio of quantity for this individual leg relative to the entire multileg security.

Type: **float**

Used in components: **InstrumentLeg**

180.2.2356 LegRedemptionDate

Multileg instrument's individual leg security's RedemptionDate. See RedemptionDate (240) field for description (Note tag # was reserved in FIX 4.1, added in FIX 4.3) (prior to FIX 4.4 field was of type UTCDate)

Type: **LocalMktDate**

Used in components: **InstrumentLeg**

180.2.2357 LegReferenceEntityType

Specifies the type of reference entity for first-to-default CDS basket contracts.

Type: **int**

Allowed values in ReferenceEntityTypeCodeSet:

Code	Name	Description
1	Asian	Asian
2	AustralianNewZealand	Australian and New Zealand
3	EuropeanEmergingMarkets	European emerging markets
4	Japanese	Japanese
5	NorthAmericanHighYield	North American high yield
6	NorthAmericanInsurance	North American insurance
7	NorthAmericanInvestmentGrade	North American investment grade
8	Singaporean	Singaporean
9	WesternEuropean	Western European
10	WesternEuropeanInsurance	Western European insurance

Used in components: **InstrumentLeg**

180.2.2358 LegRefID

Unique identifier for a specific leg (uniqueness not defined as part of the FIX specification). LegRefID(654) be used to reference the value from LegID(1788).

Type: **String**

Used in groups: **InstrmtLegExecGrp**, **LegOrdGrp**, **LegQuotGrp**, **MDFullGrp**, **QuotReqLegsGrp**, **SideCrossLegGrp**, **TrdInstrmtLegExecGrp**, **TrdInstrmtLegGrp**

180.2.2359 LegRepoCollateralSecurityType

Multileg instrument's individual leg security's RepoCollateralSecurityType. See RepoCollateralSecurityType (239) field for description (Note tag # was reserved in FIX 4.1, added in FIX 4.3)

Type: **String**

Used in components: **InstrumentLeg**

180.2.2360 LegReportID

Additional attribute to store the Trade ID of the Leg.

Type: **String**

Used in groups: **TrdInstrmtLegGrp**

180.2.2361 LegRepurchaseRate

Multileg instrument's individual leg security's RepurchaseRate. See RepurchaseRate (227) field for description (Note tag # was reserved in FIX 4.1, added in FIX 4.3)

Type: **Percentage**

Used in components: **InstrumentLeg**

180.2.2362 LegRepurchaseTerm

Multileg instrument's individual leg security's RepurchaseTerm. See RepurchaseTerm (226) field for description (Note tag # was reserved in FIX 4.1, added in FIX 4.3)

Type: **int**

Used in components: **InstrumentLeg**

180.2.2363 LegRestructuringType

A category of CDS credit event in which the underlying bond experiences a restructuring.

Used to define a CDS instrument.

Type: **String**

Allowed values in RestructuringTypeCodeSet:

Code	Name	Description
FR	FullRestructuring	Full Restructuring
MR	ModifiedRestructuring	Modified Restructuring
MM	ModifiedModRestructuring	Modified Mod Restructuring
XR	NoRestructuringSpecified	No Restructuring specified

Used in components: **InstrumentLeg**

180.2.2364 LegReturnRateAmountRelativeTo

Specifies the reference amount when the return rate amount is relative to another amount in the trade.

See http://www.fixtradingcommunity.org/codelists#Amount_Relative_To for code list of relative amounts.

Type: **int**

Used in groups: **LegReturnRateGrp**

180.2.2365 LegReturnRateCashFlowType

Specifies the type of cash flows, e.g. coupon payment, premium fee, settlement fee, etc.

See <http://www.fpml.org/coding-scheme/cashflow-type> for values.

Type: **String**

Used in groups: **LegReturnRateGrp**

180.2.2366 LegReturnRateCommissionAmount

The commission amount.

Type: **Amt**

Used in groups: **LegReturnRateGrp**

180.2.2367 LegReturnRateCommissionBasis

Specifies the basis or unit used to calculate the commission.

Type: **char**

Allowed values in CommTypeCodeSet:

Code	Name	Description
1	PerUnit	Amount per unit. Implying shares, par, currency, physical unit etc. Use CommissionUnitOfMeasure(1238) to clarify for commodities.
2	Percent	Percent
3	Absolute	Absolute. Total monetary amount.
4	PercentageWaivedCashDiscount	Percentage waived, cash discount basis. For use with CIV buy orders.
5	PercentageWaivedEnhancedUnits	Percentage waived, enhanced units basis. For use with CIV buy orders.
6	PointsPerBondOrContract	Points per bond or contract. Specify ContractMultiplier(231) in the Instrument component if the security is denominated in a size other than the market convention, e.g. 1000 par for bonds.
7	BasisPoints	Basis points. The commission is expressed in basis points in reference to the gross price of the reference asset.
8	AmountPerContract	Amount per contract. Specify ContractMultiplier(231) in the Instrument component if the security is denominated in a size other than the market convention.

Used in groups: **LegReturnRateGrp**

180.2.2368 LegReturnRateCommissionCurrency

Specifies the currency the commission amount is denominated in. Uses ISO 4217 currency codes.

Type: **Currency**

Used in groups: **LegReturnRateGrp**

180.2.2369 LegReturnRateDateGrp

LegReturnRateDateGrp is a repeating subcomponent within the LegReturnRateGrp component. It is used to specify the equity and dividend valuation dates for an equity return swap payment stream.

Name	Mult.	Type	Description
NoLegReturnRateDates	[1..1]	NumInGroup	
LegReturnRateDateMode	[0..1]	CodeSet	Required if NoLegReturnRateDates(42508) > 0.
LegReturnRateValuationDateGrp	[0..*]	Group	
LegReturnRateValuationDateRelativeTo	[0..1]	int	
LegReturnRateValuationDateOffsetPeriod	[0..1]	int	Conditionally required when LegReturnRateValuationDateOffsetUnit(42512) is specified.
LegReturnRateValuationDateOffsetUnit	[0..1]	CodeSet	Conditionally required when LegReturnRateValuationDateOffsetPeriod(42511) is specified.
LegReturnRateValuationDateOffsetDayType	[0..1]	CodeSet	
LegReturnRateValuationStartDateUnadjusted	[0..1]	LocalMktDate	
LegReturnRateValuationStartDateRelativeTo	[0..1]	int	
LegReturnRateValuationStartDateOffsetPeriod	[0..1]	int	Conditionally required when LegReturnRateValuationStartDateOffsetUnit(42517) is specified.
LegReturnRateValuationStartDateOffsetUnit	[0..1]	CodeSet	Conditionally required when LegReturnRateValuationStartDateOffsetPeriod(42516) is specified.
LegReturnRateValuationStartDateOffsetDayType	[0..1]	CodeSet	
LegReturnRateValuationStartDateAdjusted	[0..1]	LocalMktDate	
LegReturnRateValuationEndDateUnadjusted	[0..1]	LocalMktDate	
LegReturnRateValuationEndDateRelativeTo	[0..1]	int	

Name	Mult.	Type	Description
LegReturnRateValuationEndDateOffsetPeriod	[0..1]	int	Conditionally required when LegReturnRateValuationEndDateOffsetUnit(42523) is specified.
LegReturnRateValuationEndDateOffsetUnit	[0..1]	CodeSet	Conditionally required when LegReturnRateValuationEndDateOffsetPeriod(42522) is specified.
LegReturnRateValuationEndDateOffsetDayType	[0..1]	CodeSet	
LegReturnRateValuationEndDateAdjusted	[0..1]	LocalMktDate	
LegReturnRateValuationFrequencyPeriod	[0..1]	int	Conditionally required when LegReturnRateValuationFrequencyUnit(42527) is specified.
LegReturnRateValuationFrequencyUnit	[0..1]	CodeSet	Conditionally required when LegReturnRateValuationFrequencyPeriod(42526) is specified.
LegReturnRateValuationFrequencyRollConvention	[0..1]	CodeSet	When specified, this overrides the date roll convention defined in the LegDateAdjustment component in InstrumentLeg. The specified values would be specific to this instance of return rate valuation dates.
LegReturnRateValuationDateBusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the LegDateAdjustment component in InstrumentLeg. The specified value would be specific to payment stream return rate valuation dates.
LegReturnRateValuationDateBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business day convention defined in the LegDateAdjustment component in InstrumentLeg. The specified values would be specific to payment stream return rate valuation dates.

Used in groups: **LegReturnRateGrp**

180.2.2370 LegReturnRateDateMode

Specifies the valuation type applicable to the return rate date.

Type: **int**

Allowed values in ReturnRateDateModeCodeSet:

Code	Name	Description
0	PriceValuation	Price valuation
1	DividendValuation	Dividend valuation

Used in groups: **LegReturnRateDateGrp**

180.2.2371 LegReturnRateDeterminationMethod

Specifies the method by which the underlier prices are determined.

See <http://www.fpml.org/coding-scheme/determination-method> for values.

Type: **String**

Used in groups: **LegReturnRateGrp**

180.2.2372 LegReturnRateFinalPriceFallback

Specifies the fallback provision for the hedging party in the determination of the final price.

Type: **int**

Allowed values in ComplexEventPVFinalPriceElectionFallbackCodeSet:

Code	Name	Description
0	Close	Close. In respect of the "early final valuation date", the provisions for "future present value close" shall apply.
1	HedgeElection	Hedge election. In respect of the "early final valuation date", the provisions for "future present value hedge execution" shall apply.

Used in groups: **LegReturnRateGrp**

180.2.2373 LegReturnRateFXConversionGrp

LegReturnRateFXConversionGrp is a repeating subcomponent within the LegReturnRateGrp component. It is used to specify the FX conversion rates for an equity return swap payment stream.

Name	Mult.	Type	Description
NoLegReturnRateFXConversions	[1..1]	NumInGroup	
LegReturnRateFXCurrencySymbol	[0..1]	String	Required if NoLegReturnRateFXConversions(42530) > 0.
LegReturnRateFXRate	[0..1]	float	Required if NoLegReturnRateFXConversions(42530) > 0.
LegReturnRateFXRateCalc	[0..1]	CodeSet	

Used in groups: [LegReturnRateGrp](#)

180.2.2374 LegReturnRateFXCurrencySymbol

Specifies the currency pair for the FX conversion expressed using the CCY1/CCY2 convention. Uses ISO 4217 currency codes.

Type: [String](#)

Used in groups: [LegReturnRateFXConversionGrp](#)

180.2.2375 LegReturnRateFXRate

The rate of exchange between the two currencies specified in LegReturnRateFXCurrencySymbol(42531).

Type: [float](#)

Used in groups: [LegReturnRateFXConversionGrp](#)

180.2.2376 LegReturnRateFXRateCalc

The rate of exchange between the two currencies specified in LegReturnRateFXCurrencySymbol(42531).

Type: [char](#)

Allowed values in SettlCurrFxRateCalcCodeSet:

Code	Name	Description
M	Multiply	Multiply

Code	Name	Description
D	Divide	Divide

Used in groups: [LegReturnRateFXConversionGrp](#)

180.2.2377 LegReturnRateGrp

LegReturnRateGrp is a repeating subcomponent within the LegPaymentStreamFloatingRate component. It is used to specify the multiple return rates for an equity return swap payment stream.

Name	Mult.	Type	Description
NoLegReturnRates	[1..1]	NumInGroup	
LegReturnRatePriceSequence	[0..1]	CodeSet	Required if NoLegReturnRates(42534) > 0.
LegReturnRateCommissionBasis	[0..1]	CodeSet	
LegReturnRateCommissionAmount	[0..1]	Amt	
LegReturnRateCommissionCurrency	[0..1]	Currency	If not specified, this is defaulted to the reporting currency.
LegReturnRateTotalCommissionPer-Trade	[0..1]	Amt	
LegReturnRateDeterminationMethod	[0..1]	String	
LegReturnRatePriceGrp	[0..*]	Group	
LegReturnRateFXConversionGrp	[0..*]	Group	
LegReturnRateAmountRelativeTo	[0..1]	int	
LegReturnRateQuoteMeasureType	[0..1]	String	
LegReturnRateQuoteUnits	[0..1]	String	
LegReturnRateQuoteMethod	[0..1]	CodeSet	
LegReturnRateQuoteCurrency	[0..1]	Currency	
LegReturnRateQuoteCurrencyType	[0..1]	String	
LegReturnRateQuoteTimeType	[0..1]	CodeSet	Mutually exclusive with LegReturnRateQuoteTime(42548).
LegReturnRateQuoteTime	[0..1]	LocalMktTime	Mutually exclusive with LegReturnRateQuoteTimeType(42547).
LegReturnRateQuoteDate	[0..1]	LocalMktDate	
LegReturnRateQuoteExpirationTime	[0..1]	LocalMktTime	
LegReturnRateQuoteBusinessCenter	[0..1]	String	

Name	Mult.	Type	Description
LegReturnRateQuoteExchange	[0..1]	Exchange	
LegReturnRateInformationSourceGrp	[0..*]	Group	
LegReturnRateQuotePricingModel	[0..1]	String	
LegReturnRateCashFlowType	[0..1]	String	
LegReturnRateDateGrp	[0..*]	Group	
LegReturnRateValuationTimeType	[0..1]	CodeSet	Mutually exclusive with LegReturnRateValuationTime(42556).
LegReturnRateValuationTime	[0..1]	LocalMktTime	Mutually exclusive with LegReturnRateValuationTimeType(42555).
LegReturnRateValuationTimeBusiness-Center	[0..1]	String	
LegReturnRateValuationPriceOption	[0..1]	CodeSet	
LegReturnRateFinalPriceFallback	[0..1]	CodeSet	

Used in components: [LegPaymentStreamFloatingRate](#)

180.2.2378 LegReturnRateInformationSource

Identifies the source of rate information. For FX the references source to be used for the FX spot rate.

Type: [int](#)

Allowed values in RateSourceCodeSet:

Code	Name	Description
0	Bloomberg	Bloomberg
1	Reuters	Reuters
2	Telerate	Telerate
3	ISDARateOption	ISDA Settlement Rate Option. The source of the currency conversion as specified by the ISDA terms in Annex A to the 1998 FX and Currency Option Definitions. See http://www.fpml.org/coding-scheme/settlement-rate-option
99	Other	Other

Used in groups: [LegReturnRateInformationSourceGrp](#)

180.2.2379 LegReturnRateInformationSourceGrp

LegReturnRateInformationSourceGrp is a repeating subcomponent within the LegReturnRateGrp component. It is used to specify the information sources for equity prices and FX rates for an equity return swap payment stream.

Name	Mult.	Type	Description
NoLegReturnRateInformationSources	[1..1]	NumInGroup	
LegReturnRateInformationSource	[0..1]	CodeSet	Required if NoLegReturnRateInformationSources(42560) > 0.
LegReturnRateReferencePage	[0..1]	String	
LegReturnRateReferencePageHeading	[0..1]	String	

Used in groups: [LegReturnRateGrp](#)

180.2.2380 LegReturnRateNotionalReset

Indicates whether the term "Equity Notional Reset" as defined in the ISDA 2002 Equity Derivatives Definitions is applicable ("Y") or not.

Type: [Boolean](#)

Used in components: [LegPaymentStreamFloatingRate](#)

180.2.2381 LegReturnRatePrice

Specifies the price of the underlying swap asset.

Type: [Price](#)

Used in groups: [LegReturnRatePriceGrp](#)

180.2.2382 LegReturnRatePriceBasis

The basis of the return price.

Type: [int](#)

Allowed values in ReturnRatePriceBasisCodeSet:

Code	Name	Description
0	Gross	Gross.
1	Net	Net
2	Accrued	Accrued
3	CleanNet	Clean net

Used in groups: [LegReturnRatePriceGrp](#)

180.2.2383 LegReturnRatePriceCurrency

Specifies the currency of the price of the leg swap asset. Uses ISO 4217 currency codes.

Type: [Currency](#)

Used in groups: [LegReturnRatePriceGrp](#)

180.2.2384 LegReturnRatePriceGrp

LegReturnRatePriceGrp is a repeating subcomponent within the LegReturnRateGrp component. It is used to specify the return rate prices for an equity return swap payment stream.

Name	Mult.	Type	Description
NoLegReturnRatePrices	[1..1]	NumInGroup	
LegReturnRatePriceBasis	[0..1]	CodeSet	Required if NoLegReturnRatePrices(42564) > 0.
LegReturnRatePrice	[0..1]	Price	
LegReturnRatePriceCurrency	[0..1]	Currency	
LegReturnRatePriceType	[0..1]	CodeSet	

Used in groups: [LegReturnRateGrp](#)

180.2.2385 LegReturnRatePriceSequence

Specifies the type of price sequence of the return rate.

Type: [int](#)

Allowed values in ReturnRatePriceSequenceCodeSet:

Code	Name	Description
0	Initial	Initial
1	Interim	Interim
2	Final	Final

Used in groups: **LegReturnRateGrp**

180.2.2386 LegReturnRatePriceType

Specifies whether the LegReturnRatePrice(42566) is expressed in absolute or relative terms.

Type: **int**

Allowed values in ReturnRatePriceTypeCodeSet:

Code	Name	Description
0	AbsoluteTerms	Absolute terms
1	PercentageOfNotional	Percentage of notional

Used in groups: **LegReturnRatePriceGrp**

180.2.2387 LegReturnRateQuoteBusinessCenter

The business center calendar used for adjustments associated with LegReturnRateQuoteTimeType(42547) or LegReturnRateQuoteTime(42548) and LegReturnRateQuoteDate(42549), e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **LegReturnRateGrp**

180.2.2388 LegReturnRateQuoteCurrency

Specifies the currency the return rate quote is denominated in. Uses ISO 4217 Currency Code.

Type: **Currency**

Used in groups: **LegReturnRateGrp**

180.2.2389 LegReturnRateQuoteCurrencyType

Specifies the type of currency, e.g. settlement currency, base currency, etc., that the quote is reported in.

See <http://www.fpml.org/coding-scheme/reporting-currency-type> for values.

Type: **String**

Used in groups: **LegReturnRateGrp**

180.2.2390 LegReturnRateQuoteDate

The date when the quote is to be generated.

Type: **LocalMktDate**

Used in groups: **LegReturnRateGrp**

180.2.2391 LegReturnRateQuoteExchange

Specifies the exchange (e.g. stock or listed futures/options exchange) from which the quote is obtained.

Type: **Exchange**

Used in groups: **LegReturnRateGrp**

180.2.2392 LegReturnRateQuoteExpirationTime

The time when the quote ceases to be valid.

Type: **LocalMktTime**

Used in groups: **LegReturnRateGrp**

180.2.2393 LegReturnRateQuoteMeasureType

Specifies the type of the measure applied to the return rate's asset, e.g. valuation, sensitivity risk. This could be an NPV, a cash flow, a clean price, etc.

See <http://www.fpml.org/coding-scheme/asset-measure> for values.

Type: **String**

Used in groups: **LegReturnRateGrp**

180.2.2394 LegReturnRateQuoteMethod

Specifies the type of quote used to determine the return rate of the swap.

Type: **int**

Allowed values in CashSettlQuoteMethodCodeSet:

Code	Name	Description
0	Bid	Bid
1	Mid	Mid
2	Offer	Offer

Used in groups: **LegReturnRateGrp**

180.2.2395 LegReturnRateQuotePricingModel

Specifies the pricing model used to evaluate the underlying asset price.

See <http://www.fpml.org/coding-scheme/pricing-model> for values.

Type: **String**

Used in groups: **LegReturnRateGrp**

180.2.2396 LegReturnRateQuoteTime

The time when the quote is to be generated.

Type: **LocalMktTime**

Used in groups: **LegReturnRateGrp**

180.2.2397 LegReturnRateQuoteTimeType

Specifies how or the timing when the quote is to be obtained.

Type: **int**

Allowed values in ReturnRateQuoteTimeTypeCodeSet:

Code	Name	Description
0	Open	Open. The official opening time of the exchange on valuation date.
1	OfficialSettlPx	Official settlement price time. The time at which the official settlement price is determined.
2	Xetra	XETRA. The time at which the official settlement price (following the auction by the exchange) is determined by the exchange.
3	Close	Close. The official closing time of the exchange on valuation date.
4	DerivativesClose	Derivatives close. The official closing time for derivative trading of the exchange on valuation date.
5	High	High. The high price for the day.
6	Low	Low. The low price for the day.
7	AsSpecifiedInMasterConfirmation	As specified in the master confirmation

Used in groups: [LegReturnRateGrp](#)

180.2.2398 LegReturnRateQuoteUnits

Specifies the units that the measure is expressed in. If not specified, the default is a price/value in currency units.

See <http://www.fpml.org/coding-scheme/price-quote-units> for values.

Type: [String](#)

Used in groups: [LegReturnRateGrp](#)

180.2.2399 LegReturnRateReferencePage

Identifies the reference "page" from the rate source.

For FX, the reference page to the spot rate to be used for the reference FX spot rate.

When `LegReturnRateInformationSource(42561) = 3` (ISDA Settlement Rate Option) this contains the value from the scheme that reflects the terms of the Annex A to the ISDA 1998 FX and Currency Option Definitions.

See: <http://www.fpml.org/coding-scheme/settlement-rate-option>.

Type: [String](#)

Used in groups: [LegReturnRateInformationSourceGrp](#)

180.2.2400 LegReturnRateReferencePageHeading

Identifies the page heading from the rate source.

Type: **String**

Used in groups: **LegReturnRateInformationSourceGrp**

180.2.2401 LegReturnRateTotalCommissionPerTrade

The total commission per trade.

Type: **Amt**

Used in groups: **LegReturnRateGrp**

180.2.2402 LegReturnRateValuationDate

The return rate valuation date. The type of date is specified in LegReturnRateValuationDate-Type(42573).

Type: **LocalMktDate**

Used in groups: **LegReturnRateValuationDateGrp**

180.2.2403 LegReturnRateValuationDateBusinessCenter

The business center calendar used for date adjustment of the return rate valuation unadjusted or relative dates, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **LegReturnRateValuationDateBusinessCenterGrp**

180.2.2404 LegReturnRateValuationDateBusinessCenterGrp

LegReturnRateValuationDateBusinessCenterGrp is a repeating subcomponent within the LegReturnRateValuationDateGrp component. It is used to specify the valuation date business center adjustments for an equity return swap payment stream.

Name	Mult.	Type	Description
NoLegReturnRateValuationDateBusinessCenters	[1..1]	NumInGroup	
LegReturnRateValuationDateBusinessCenter	[0..1]	String	Required if NoLegReturnRateValuationDateBusinessCenters(42569) > 0.

Used in groups: [LegReturnRateDateGrp](#)

180.2.2405 LegReturnRateValuationDateBusinessDayConvention

The return rate valuation dates business day convention.

Type: [int](#)

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in groups: [LegReturnRateDateGrp](#)

180.2.2406 LegReturnRateValuationDateGrp

LegReturnRateValuationDateGrp is a repeating subcomponent within the LegReturnRateDateGrp component. It is used to specify the fixed valuation dates for an equity return swap payment stream.

Name	Mult.	Type	Description
NoLegReturnRateValuationDates	[1..1]	NumInGroup	

Name	Mult.	Type	Description
LegReturnRateValuationDate	[0..1]	LocalMktDate	Required if NoLegReturnRateValuationDates(42571) > 0.
LegReturnRateValuationDateType	[0..1]	CodeSet	When specified it applies not only to the current date instance but to all subsequent date instances in the group until overridden when a new type is specified.

Used in groups: [LegReturnRateDateGrp](#)

180.2.2407 LegReturnRateValuationDateOffsetDayType

Specifies the day type of the relative return rate valuation date offset.

Type: [int](#)

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in groups: [LegReturnRateDateGrp](#)

180.2.2408 LegReturnRateValuationDateOffsetPeriod

Time unit multiplier for the relative return rate valuation date offset.

Type: [int](#)

Used in groups: [LegReturnRateDateGrp](#)

180.2.2409 LegReturnRateValuationDateOffsetUnit

Time unit associated with the relative return rate valuation date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in groups: **LegReturnRateDateGrp**

180.2.2410 LegReturnRateValuationDateRelativeTo

Specifies the anchor date when the return rate valuation dates are relative to an anchor date.

See http://www.fixtradingcommunity.org/codelists#Relative_To_Date for values.

Type: **int**

Used in groups: **LegReturnRateDateGrp**

180.2.2411 LegReturnRateValuationDateType

Specifies the type of return rate valuation date (e.g. adjusted for holidays).

Type: **int**

Allowed values in NonDeliverableFixingDateTypeCodeSet:

Code	Name	Description
0	Unadjusted	Unadjusted
1	Adjusted	Adjusted

Used in groups: **LegReturnRateValuationDateGrp**

180.2.2412 LegReturnRateValuationEndDateAdjusted

The adjusted end date for return rate valuation. This can be used to restrict the range of dates when they are relative.

Type: **LocalMktDate**

Used in groups: **LegReturnRateDateGrp**

180.2.2413 LegReturnRateValuationEndDateOffsetDayType

Specifies the day type of the relative return rate valuation end date offset.

Type: **int**

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in groups: **LegReturnRateDateGrp**

180.2.2414 LegReturnRateValuationEndDateOffsetPeriod

Time unit multiplier for the relative return rate valuation end date offset.

Type: **int**

Used in groups: **LegReturnRateDateGrp**

180.2.2415 LegReturnRateValuationEndDateOffsetUnit

Time unit associated with the relative return rate valuation end date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in groups: [LegReturnRateDateGrp](#)

180.2.2416 LegReturnRateValuationEndDateRelativeTo

Specifies the anchor date when the return rate valuation end date is relative to an anchor date.

See http://www.fixtradingcommunity.org/codelists#Relative_To_Date for values.

Type: [int](#)

Used in groups: [LegReturnRateDateGrp](#)

180.2.2417 LegReturnRateValuationEndDateUnadjusted

The unadjusted end date for return rate valuation. This can be used to restrict the range of dates when they are relative.

Type: [LocalMktDate](#)

Used in groups: [LegReturnRateDateGrp](#)

180.2.2418 LegReturnRateValuationFrequencyPeriod

Time unit multiplier for the frequency at which return rate valuation dates occur.

Type: [int](#)

Used in groups: [LegReturnRateDateGrp](#)

180.2.2419 LegReturnRateValuationFrequencyRollConvention

The convention for determining the sequence of return rate valuation dates. It is used in conjunction with a specified frequency.

Type: **String**

Allowed values in DateRollConventionCodeSet:

Code	Name	Description
1	FirstDay	1st day of the month
2	SecondDay	2nd day of the month
3	ThirdDay	3rd day of the month
4	FourthDay	4th day of the month
5	FifthDay	5th day of the month
6	SixthDay	6th day of the month
7	SeventhDay	7th day of the month
8	EighthDay	8th day of the month
9	NinthDay	9th day of the month
10	TenthDay	10th day of the month
11	EleventhDay	11th day of the month
12	TwelvthDay	12th day of the month
13	ThirteenthDay	13th day of the month
14	ForteenthDay	14th day of the month
15	FifteenthDay	15th day of the month
16	SixteenthDay	16th day of the month
17	SeventeenthDay	17th day of the month
18	EighteenthDay	18th day of the month
19	NineteenthDay	19th day of the month
20	TwentiethDay	20th day of the month
21	TwentyFirstDay	21st day of the month
22	TwentySecondDay	22nd day of the month
23	TwentyThirdDay	23rd day of the month
24	TwentyFourthDay	24th day of the month
25	TwentyFifthDay	25th day of the month
26	TwentySixthDay	26th day of the month
27	TwentySeventhDay	27th day of the month
28	TwentyEighthDay	28th day of the month

Code	Name	Description
29	TwentyNinthDay	29th day of the month
30	ThirtiethDay	30th day of the month
EOM	EOM	The end of the month. Use EOM for 31st day of the month.
FRN	FRN	The floating rate note convention or Eurodollar convention.
IMM	IMM	The International Money Market settlement date, i.e. the 3rd Wednesday of the month.
IMMCAD	IMMCAD	The last trading day/expiration day of the Canadian Derivatives Exchange.
IMMAUD	IMMAUD	The last trading day of the Sydney Futures Exchange Australian 90-day bank accepted bill futures contract.
IMMNZD	IMMNZD	The last trading day of the Sydney Futures Exchange New Zealand 90-day bank bill futures contract.
SFE	SFE	The Sydney Futures Exchange 90-day bank accepted bill futures settlement dates.
NONE	NONE	No adjustment
TBILL	TBILL	The 13-week and 26-week U.S. Treasury Bill auction dates.
MON	MON	Monday
TUE	TUE	Tuesday
WED	WED	Wednesday
THU	THU	Thursday
FRI	FRI	Friday
SAT	SAT	Saturday
SUN	SUN	Sunday

Used in groups: [LegReturnRateDateGrp](#)

180.2.2420 LegReturnRateValuationFrequencyUnit

Time unit associated with the frequency at which return rate valuation dates occur.

Type: [String](#)

Allowed values in CouponFrequencyUnitCodeSet:

Code	Name	Description
D	Day	Day

Code	Name	Description
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year
H	Hour	Hour
Min	Minute	Minute
S	Second	Second
T	Term	Term

Used in groups: [LegReturnRateDateGrp](#)

180.2.2421 LegReturnRateValuationPriceOption

Indicates whether an ISDA price option applies, and if applicable which type of price.

Type: [int](#)

Allowed values in ReturnRateValuationPriceOptionCodeSet:

Code	Name	Description
0	None	None (the default)
1	FuturesPrice	Futures price. The official settlement price as announced by the related futures exchange is applicable.
2	OptionsPrice	Options price. The official settlement price as announced by the related options exchange is applicable.

Used in groups: [LegReturnRateGrp](#)

180.2.2422 LegReturnRateValuationStartDateAdjusted

The adjusted start date for return rate valuation. This can be used to restrict the range of dates when they are relative.

Type: [LocalMktDate](#)

Used in groups: [LegReturnRateDateGrp](#)

180.2.2423 LegReturnRateValuationStartDateOffsetDayType

Specifies the day type of the relative return rate valuation start date offset.

Type: **int**

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in groups: **LegReturnRateDateGrp**

180.2.2424 LegReturnRateValuationStartDateOffsetPeriod

Time unit multiplier for the relative return rate valuation start date offset.

Type: **int**

Used in groups: **LegReturnRateDateGrp**

180.2.2425 LegReturnRateValuationStartDateOffsetUnit

Time unit associated with the relative return rate valuation start date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in groups: **LegReturnRateDateGrp**

180.2.2426 LegReturnRateValuationStartDateRelativeTo

Specifies the anchor date when the return rate valuation start date is relative to an anchor date.

See http://www.fixtradingcommunity.org/codelists#Relative_To_Date for values.

Type: **int**

Used in groups: **LegReturnRateDateGrp**

180.2.2427 LegReturnRateValuationStartDateUnadjusted

The unadjusted start date for return rate valuation. This can be used to restrict the range of dates when they are relative.

Type: **LocalMktDate**

Used in groups: **LegReturnRateDateGrp**

180.2.2428 LegReturnRateValuationTime

The time at which the calculation agent values the underlying asset.

Type: **LocalMktTime**

Used in groups: **LegReturnRateGrp**

180.2.2429 LegReturnRateValuationTimeBusinessCenter

The business center calendar used for adjustments associated with LegReturnRateValuationTime-
Type(42555) or LegReturnRateValuationTime(42556), e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **LegReturnRateGrp**

180.2.2430 LegReturnRateValuationTimeType

Specifies the timing at which the calculation agent values the underlying.

Type: **int**

Allowed values in ReturnRateQuoteTimeTypeCodeSet:

Code	Name	Description
0	Open	Open. The official opening time of the exchange on valuation date.
1	OfficialSettlPx	Official settlement price time. The time at which the official settlement price is determined.
2	Xetra	XETRA. The time at which the official settlement price (following the auction by the exchange) is determined by the exchange.
3	Close	Close. The official closing time of the exchange on valuation date.
4	DerivativesClose	Derivatives close. The official closing time for derivative trading of the exchange on valuation date.
5	High	High. The high price for the day.
6	Low	Low. The low price for the day.
7	AsSpecifiedInMasterConfirmation	As specified in the master confirmation

Used in groups: [LegReturnRateGrp](#)

180.2.2431 LegReturnTrigger

Indicates the type of return or payout trigger for the swap or forward.

Type: [int](#)

Allowed values in ReturnTriggerCodeSet:

Code	Name	Description
1	Dividend	Dividend
2	Variance	Variance
3	Volatility	Volatility
4	TotalReturn	Total return
5	ContractForDifference	Contract for difference
6	CreditDefault	Credit default
7	SpreadBet	Spread bet
8	Price	Price
9	ForwardPriceUnderlyingInstrument	Forward price of underlying instrument
99	Other	Other

Used in components: [InstrumentLeg](#)

180.2.2432 LegSecAltIDGrp

Name	Mult.	Type	Description
NoLegSecurityAltID	[1..1]	NumInGroup	
LegSecurityAltID	[0..1]	String	
LegSecurityAltIDSource	[0..1]	CodeSet	
LegSymbolPositionNumber	[0..1]	int	

Used in components: [InstrumentLeg](#)

180.2.2433 LegSecondaryAssetClass

The broad asset category for assessing risk exposure for a multi-asset trade.

Type: [int](#)

Allowed values in AssetClassCodeSet:

Code	Name	Description
1	InterestRate	Interest rate
2	Currency	Currency
3	Credit	Credit
4	Equity	Equity
5	Commodity	Commodity
6	Other	Other
7	Cash	Cash
8	Debt	Debt
9	Fund	Fund. Such as mutual fund, collective investment vehicle, investment program, specialized account program.
10	LoanFacility	Loan facility
11	Index	Index. A main index identified as a security type, for example under EU SFTR reporting.

Used in groups: [LegSecondaryAssetGrp](#)

180.2.2434 LegSecondaryAssetGrp

LegSecondaryAssetGrp is a repeating subcomponent of the InstrumentLeg component used to specify secondary assets of a multi-asset swap.

Name	Mult.	Type	Description
NoLegSecondaryAssetClasses	[1..1]	NumInGroup	
LegSecondaryAssetClass	[0..1]	CodeSet	Required if NoLegSecondaryAssetClasses(2076) > 0.
LegSecondaryAssetSubClass	[0..1]	CodeSet	Required if LegSecondaryAssetType(2079) is specified.
LegSecondaryAssetType	[0..1]	String	Required if LegSecondaryAssetSubType(2743) is specified.
LegSecondaryAssetSubType	[0..1]	String	

Used in components: **InstrumentLeg**

180.2.2435 LegSecondaryAssetSubClass

An indication of the general description of the asset class.

Type: **int**

Allowed values in AssetSubClassCodeSet:

Code	Name	Description
1	SingleCurrency	Single currency
2	CrossCurrency	Cross currency
3	Basket	Basket [for multi-currency]
4	SingleName	Single name
5	CreditIndex	Credit index
6	IndexTranche	Index tranche
7	CreditBasket	Credit basket
8	Exotic	Exotic
9	Common	Common
10	Preferred	Preferred
11	EquityIndex	Equity index
12	EquityBasket	Equity basket

Code	Name	Description
13	Metals	Metals
14	Bullion	Bullion
15	Energy	Energy
16	CommodityIndex	Commodity index
17	Agricultural	Agricultural
18	Environmental	Environmental
19	Freight	Freight
20	Government	Government
21	Agency	Agency
22	Corporate	Corporate
23	Financing	Financing
24	MoneyMarket	Money market
25	Mortgage	Mortgage
26	Municipal	Municipal
27	MutualFund	Mutual fund
28	CollectiveInvestmentVehicle	Collective investment vehicle
29	InvestmentProgram	Investment program. A generalized fund for major investors.
30	SpecializedAccountProgram	Specialized account program. A specialized fund setup for a particular account or group of accounts.
31	TermLoan	Term loan
32	BridgeLoan	Bridge loan
33	LetterOfCredit	Letter of credit
34	DividendIndex	Dividend index
35	StockDividend	Stock dividend
36	ExchangeTradedFund	Exchange traded fund
37	VolatilityIndex	Volatility index
38	FXCrossRates	FX cross rates
39	FXEmergingMarkets	FX emerging markets
40	FXMajors	FX Majors
41	Fertilizer	Fertilizer
42	IndustrialProduct	Industrial product
43	Inflation	Inflation
44	Paper	Paper
45	Polypropylene	Polypropylene

Code	Name	Description
46	OfficialEconomicStatistics	Official economic statistics
47	OtherC10	Other C10. Defined under MiFID II (Directive 2014/65/EU) Section C(10) of Annex I and paraphrased in ESMA RTS 2 Annex III Section 10, "Other C10" is a financial instrument "which is not a 'Freight derivative', any of the following interest rate derivatives sub-asset classes: 'Inflation multi-currency swap or cross-currency swap', a 'Future/forward on inflation multi-currency swaps or cross-currency swaps', an 'Inflation single currency swap', a 'Future/forward on inflation single currency swap' and any of the following equity derivatives sub-asset classes: a 'Volatility index option', a 'Volatility index future/forward', a swap with parameter return variance, a swap with parameter return volatility, a portfolio swap with parameter return variance, a portfolio swap with parameter return volatility".
48	Other	Other. May be used with any AssetClass(1938) values.

Used in groups: [LegSecondaryAssetGrp](#)

180.2.2436 LegSecondaryAssetSubType

Used to provide a more specific description of the asset specified in LegSecondaryAssetType(2079).

See <https://www.fixtrading.org/codelists/AssetSubType> for code list of applicable values.

Type: [String](#)

Used in groups: [LegSecondaryAssetGrp](#)

180.2.2437 LegSecondaryAssetType

Used to provide more specific description of the asset specified in LegSecondaryAssetSub-Class(2078).

See <https://www.fixtrading.org/codelists/AssetType> for code list of applicable values. ISO 4721 Currency Code values are to be used when specific currency as an asset type is to be expressed.

Other values may be used by mutual agreement of the counterparties.

Type: [String](#)

Used in groups: [LegSecondaryAssetGrp](#)

180.2.2438 LegSecurityAltID

Multileg instrument's individual security's SecurityAltID.

See SecurityAltID (455) field for description

Type: **String**

Used in groups: **LegSecAltIDGrp**

180.2.2439 LegSecurityAltIDSource

Alternate identifier for individual leg security of a multileg instrument.

See SecurityAltIDSource(456) field for complete definition.

Type: **String**

Allowed values in SecurityIDSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
3	QUIK	QUIK
4	ISINNumber	ISIN
5	RICCode	RIC
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
7	ISOCountryCode	ISO Country Code
8	ExchangeSymbol	Exchange symbol
9	ConsolidatedTapeAssociation	Consolidated Tape Association (CTA) Symbol (SIAC CTS/CQS line format)
A	BloombergSymbol	Bloomberg Symbol
B	Wertpapier	Wertpapier
C	Dutch	Dutch
D	Valoren	Valoren
E	Sicovam	Sicovam
F	Belgian	Belgian
G	Common	"Common" (Clearstream and Euroclear)
H	ClearingHouse	Clearing house / Clearing organization
I	ISDAFpMLSpecification	ISDA/FpML product specification (XML in SecurityXML(1185))

Code	Name	Description
J	OptionPriceReportingAuthority	Option Price Reporting Authority
K	ISDAFpMLURL	ISDA/FpML product URL (URL in SecurityID(48))
L	LetterOfCredit	Letter of credit
M	MarketplaceAssignedIdentifier	Marketplace-assigned Identifier
N	MarkitREDEntityCLIP	Markit RED entity CLIP
P	MarkitREDPairCLIP	Markit RED pair CLIP
Q	CFTCCommodityCode	CFTC commodity code
R	ISDACommodityReferencePrice	ISDA Commodity Reference Price
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
T	LegalEntityIdentifier	Legal entity identifier
U	Synthetic	Synthetic. Used to specify that the security identifier is synthetic for linking nested underliers when there is no market identifier for the collection.
V	FidessaInstrumentMnemonic	Fidessa Instrument Mnemonic (FIM)
W	IndexName	Index name. Standard name of the index or rate index, e.g. "LIBOR" or "iTraxx Australia".
X	UniformSymbol	Uniform Symbol (UMTF Symbol)
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in groups: **LegSecAltIDGrp**

180.2.2440 LegSecurityDesc

Description of a multileg instrument.

Can be used by the venue or one of the trading parties to provide an optional non-normative textual description of the financial instrument.

Type: **String**

Used in components: **InstrumentLeg**

180.2.2441 LegSecurityExchange

Multileg instrument's individual security's SecurityExchange.

See SecurityExchange (207) field for description

Type: **Exchange**

Used in components: **InstrumentLeg**

180.2.2442 LegSecurityGroup

Represents the product group of a leg.This is useful in conveying multi-leg instruments where the legs may participate in separate security groups.

Type: **String**

Used in components: **InstrumentLeg**

180.2.2443 LegSecurityID

Multileg instrument's individual security's SecurityID.

See SecurityID (48) field for description

Type: **String**

Used in components: **InstrumentLeg**

180.2.2444 LegSecurityIDSource

Multileg instrument's individual security's SecurityIDSource.

See SecurityIDSource (22) field for description

Type: **String**

Allowed values in SecurityIDSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
3	QUIK	QUIK
4	ISINNumber	ISIN
5	RICCode	RIC
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
7	ISOCountryCode	ISO Country Code

Code	Name	Description
8	ExchangeSymbol	Exchange symbol
9	ConsolidatedTapeAssociation	Consolidated Tape Association (CTA) Symbol (SIAC CTS/CQS line format)
A	BloombergSymbol	Bloomberg Symbol
B	Wertpapier	Wertpapier
C	Dutch	Dutch
D	Valoren	Valoren
E	Sicovam	Sicovam
F	Belgian	Belgian
G	Common	"Common" (Clearstream and Euroclear)
H	ClearingHouse	Clearing house / Clearing organization
I	ISDAFpMLSpecification	ISDA/FpML product specification (XML in SecurityXML(1185))
J	OptionPriceReportingAuthority	Option Price Reporting Authority
K	ISDAFpMLURL	ISDA/FpML product URL (URL in SecurityID(48))
L	LetterOfCredit	Letter of credit
M	MarketplaceAssignedIdentifier	Marketplace-assigned Identifier
N	MarkitREDEntityCLIP	Markit RED entity CLIP
P	MarkitREDPairCLIP	Markit RED pair CLIP
Q	CFTCCommodityCode	CFTC commodity code
R	ISDACommodityReferencePrice	ISDA Commodity Reference Price
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbolology BBGID".
T	LegalEntityIdentifier	Legal entity identifier
U	Synthetic	Synthetic. Used to specify that the security identifier is synthetic for linking nested underliers when there is no market identifier for the collection.
V	FidessaInstrumentMnemonic	Fidessa Instrument Mnemonic (FIM)
W	IndexName	Index name. Standard name of the index or rate index, e.g. "LIBOR" or "iTraxx Australia".
X	UniformSymbol	Uniform Symbol (UMTF Symbol)
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in components: **InstrumentLeg**

180.2.2445 LegSecurityStatus

Indicates the current state of the leg instrument.

Type: **String**

Allowed values in SecurityStatusCodeSet:

Code	Name	Description
1	Active	Active. Instrument is active, i.e. trading is possible.
2	Inactive	Inactive. Instrument has previously been active and is now no longer traded but has not expired yet. The instrument may become active again.
3	ActiveClosingOrdersOnly	Active, closing orders only. Instrument is active but only orders closing positions (reducing risk) are allowed.
4	Expired	Expired. Instrument has expired. E.g. An instrument may expire due to reaching maturity or expired based on contract definitions or exchange rules.
5	Delisted	Delisted. Instrument has been removed from securities reference data. Delisting rules varies from exchange to exchange, which may include non-compliance of capitalization, revenue, consecutive minimum closing price. The instrument may become listed again once the instrument is back in compliance. A delisted instrument would not trade on the exchange but it may still be traded over-the-counter (e.g. OTCBB) or on Pink Sheets, or other similar trading service.
6	KnockedOut	Knocked-out. Instrument has breached a pre-defined price threshold.
7	KnockOutRevoked	Knock-out revoked. Instrument reinstated, i.e. threshold has not been breached.
8	PendingExpiry	Pending Expiry. Instrument is currently still active but will expire after the current business day. For example, a contract that expires intra-day (e.g. at noon time) and is no longer tradeable but will still show up in the current day's order book with related statistics.
9	Suspended	Suspended. Instrument has been temporarily disabled for trading (i.e. halted).
10	Published	Published. Instrument information is provided prior to its first activation.
11	PendingDeletion	Pending Deletion. Instrument is awaiting deletion from security reference data.

Used in components: [InstrumentLeg](#)

180.2.2446 LegSecuritySubType

SecuritySubType of the leg instrument.

See SecuritySubType (762) field for description

Type: [String](#)

Used in components: [InstrumentLeg](#)

180.2.2447 LegSecurityType

Refer to definition of SecurityType(167)

Type: [String](#)

Allowed values in SecurityTypeCodeSet:

Code	Name	Description
ABS	AssetBackedSecurities	Asset-backed Securities
AN	OtherAnticipationNotes	Other Anticipation Notes (BAN, GAN, etc.)
BA	BankersAcceptance	Bankers Acceptance
BRADY	BradyBond	Brady Bond
CORP	CorporateBond	Corporate Bond
CS	CommonStock	Common Stock
EUSUPRA	EuroSupranationalCoupons	Euro Supranational Coupons. Identify the issuer name in Issuer(106).
FOR	ForeignExchangeContract	Foreign Exchange Contract
MF	MutualFund	Mutual Fund
REPO	Repurchase	Repurchase
TERM	TermLoan	Term Loan
BDN	BankDepositoryNote	Bank Depository Note
CAN	CanadianTreasuryNotes	Canadian Treasury Notes
CAP	Cap	Cap. In an interest rate cap, the buyer receives payments at the end of each period in which the rate indec exceeds the agreed strike rate.
CMB	CanadianMortgageBonds	Canadian Mortgage Bonds
COFO	CertificateOfObligation	Certificate Of Obligation

Code	Name	Description
CPP	CorporatePrivatePlacement	Corporate Private Placement
FAC	FederalAgencyCoupon	Federal Agency Coupon
FORWARD	Forward	Forward
FXNDF	NonDeliverableForward	Non-deliverable forward
MLEG	MultilegInstrument	Multileg Instrument
PS	PreferredStock	Preferred Stock
RVLV	RevolverLoan	Revolver Loan
BN	BankNotes	Bank Notes
BUYSELL	BuySellback	Buy Sellback
CB	ConvertibleBond	Convertible Bond
CDS	CreditDefaultSwap	Credit Default Swap

NONE	NoSecurityType	No Security Type
RVLVTRM	Revolver	Revolver/Term Loan
BOX	BillOfExchanges	Bill Of Exchanges
BRIDGE	BridgeLoan	Bridge Loan
CLLR	Collar	Collar. In an interest rate collar, this is a combination of a cap and a floor.
CMO	CollateralizedMortgageObligation	Collateralized Mortgage Obligation
DUAL	DualCurrency	Dual Currency
EUSOV	EuroSovereigns	Euro Sovereigns. Identify the issuer name in Issuer(106).
FXFWD	FXForward	FX Forward
GO	GeneralObligationBonds	General Obligation Bonds
PEF	PrivateExportFunding	Private Export Funding. Identify the issuer name in Issuer(106).
SECLOAN	SecuritiesLoan	Securities Loan
UST	USTreasuryNoteOld	US Treasury Note (Deprecated Value Use TNOTE)
CAMM	CanadianMoneyMarkets	Canadian Money Markets
CMDTYSWAP	CommoditySwap	Commodity swap
EUCORP	EuroCorporateBond	Euro Corporate Bond

Code	Name	Description
FXSWAP	FXSwap	FX Swap
IET	IOETTEMortgage	IOETTE Mortgage
LOFC	LetterOfCredit	Letter Of Credit
MT	MandatoryTender	Mandatory Tender
PROV	CanadianProvincialBonds	Canadian Provincial Bonds
SECPLEDGE	SecuritiesPledge	Securities Pledge
SUPRA	USDSupranationalCoupons	USD Supranational Coupons. Identify the issuer name in Issuer(106).
USTB	USTreasuryBillOld	US Treasury Bill (Deprecated Value Use TBILL)
?	Wildcard	Wildcard entry for use on Security Definition Request
CD	CertificateOfDeposit	Certificate Of Deposit
DVPLDG	DeliveryVersusPledge	Delivery versus pledge
EUFRN	EuroCorporateFloatingRateNotes	Euro Corporate Floating Rate Notes
EXOTIC	Exotic	Exotic
FXNDS	NonDeliverableSwap	Non-deliverable Swap
MBS	MortgageBackedSecurities	Mortgage-backed Securities
RAN	RevenueAnticipationNote	Revenue Anticipation Note
SWING	SwingLineFacility	Swing Line Facility
TB	TreasuryBill	Treasury Bill - non US
CASH	Cash	Cash
CL	CallLoans	Call Loans
COLLBSKT	CollateralBasket	Collateral basket. A collection of securities held as collateral in the customer's collateral fund. The collateral fund is usually managed by a custodian.
DINP	DebtorInPossession	Debtor In Possession
FLR	Floor	Floor. In an interest rate floor, the buyer receives payments at the end of each period in which the rate index is below the agreed strike rate.
FRN	USCorporateFloatingRateNotes	US Corporate Floating Rate Notes
FXBN	FXBankNote	FX Bank Note
MIO	MortgageInterestOnly	Mortgage Interest Only
OOC	OptionsOnCombo	Options on Combo
REV	RevenueBonds	Revenue Bonds
TBOND	USTreasuryBond	US Treasury Bond
CP	CommercialPaper	Commercial Paper

Code	Name	Description
DEFLTED	Defaulted	Defaulted
FRA	FRA	Forward Rate Agreement
FXDN	ForeignCurrencyDiscountNote	Foreign Currency Discount Note. Discount notes issued in foreign currency by Fannie Mae.
MPO	MortgagePrincipalOnly	Mortgage Principal Only
Other	Other	Other
SFP	StructuredFinanceProduct	Structured finance product
SPCLA	SpecialAssessment	Special Assessment
TINT	InterestStripFromAnyBondOrNote	Interest Strip From Any Bond Or Note
XLINKD	IndexedLinked	Indexed Linked
DN	DepositNotes	Deposit Notes
ETN	ExchangeTradedNote	Exchange traded note
FUT	Future	Future
MPP	MortgagePrivatePlacement	Mortgage Private Placement
SPCLO	SpecialObligation	Special Obligation
STRUCT	StructuredNotes	Structured Notes
TBILL	USTreasuryBill	US Treasury Bill
TIPS	TreasuryInflationProtectedSecurities	Treasury Inflation Protected Securities
WITHDRN	Withdrawn	Withdrawn
EUCD	EuroCertificateOfDeposit	Euro Certificate Of Deposit
FWD	DerivativeForward	Derivative forward
MPT	MiscellaneousPassThrough	Miscellaneous Pass-through
MGRNLOAN	MarginLoan	Margin loan
REPLACD	Replaced	Replaced
SPCLT	SpecialTax	Special Tax
TCAL	PrincipalStripOfACallableBondOrNote	Principal Strip Of A Callable Bond Or Note
YANK	YankeeCorporateBond	Yankee Corporate Bond
DIMSUMCORP	OffshoreIssuedChineseYuanCorporateBond	Offshore issued Chinese Yuan (CNY) denominated corporate bond
EUCP	EuroCommercialPaper	Euro Commercial Paper
IRS	InterestRateSwap	Interest Rate Swap
MATURED	Matured	Matured
PFAND	Pfandbrief	Pfandbrief. Identify the issuer name in Issuer(106).
SECDERIV	SecuritizedDerivative	Securitized derivative

Code	Name	Description
TAN	TaxAnticipationNote	Tax Anticipation Note
TPRN	PrincipalStripFromANonCallable-BondOrNote	Principal Strip From A Non-Callable Bond Or Note
TRS	TotalReturnSwap	Total return swap
AMENDED	Amended	Amended and restated
ETF	ExchangeTradedFund	Exchange Traded Fund
LOANLEASE	LoanLease	Loan/lease
LQN	LiquidityNote	Liquidity Note
PRCORP	PreferredCorporateBond	Preferred Corporate Bond
TAXA	TaxAllocation	Tax Allocation
TBA	ToBeAnnounced	To Be Announced
TNOTE	USTreasuryNote	US Treasury Note
DIGITAL	DigitalAsset	Digital Asset. Asset that exists only in digital form or which is the digital representation of another asset (Source: ISO 24165 - Terms and Definitions).
DIMSUMSOV	OffshoreIssuedChineseYuanSovereignBond	Offshore issued Chinese Yuan (CNY) denominated sovereign bond
MTN	MediumTermNotes	Medium Term Notes
RETIRED	Retired	Retired
TECP	TaxExemptCommercialPaper	Tax Exempt Commercial Paper
ONITE	Overnight	Overnight
OOF	OptionsOnFutures	Options on Futures
SOV	SovereignBond	Sovereign Bond. Sovereign or government bond other than Euro and US issuer. Specify sovereign issuer in Issuer(106).
TMCP	TaxableMunicipalCP	Taxable Municipal CP
OOP	OptionsOnPhysical	Options on Physical - use not recommended
PN	PromissoryNote	Promissory Note
STN	ShortTermLoanNote	Short Term Loan Note
TFRN	USTreasuryFloatingRateNote	US Treasury Floating Rate Note
TRAN	TaxRevenueAnticipationNote	Tax Revenue Anticipation Note
OPT	Option	Option
PZFI	PlazosFijos	Plazos Fijos
VRDN	VariableRateDemandNote	Variable Rate Demand Note
SLQN	SecuredLiquidityNote	Secured Liquidity Note
SPOTFWD	SpotForward	Spot forward

Code	Name	Description
WAR	Warrant	Warrant
MCPIB	MunicipalInterestBearingCommercialPaper	Municipal Interest Bearing Commercial Paper
SWAPTION	SwapOption	Swap option
TD	TimeDeposit	Time Deposit
TMB	TaxableMunicipalBond	Taxable Municipal Bond
XMISSION	Transmission	Transmission
INDEX	Index	General type for a contract based on an established index
TLQN	TermLiquidityNote	Term Liquidity Note
VRDO	VariableRateDemandObligation	Variable Rate Demand Obligation
BDBSKT	BondBasket	Bond basket
XCN	ExtendedCommNote	Extended Comm Note
CFD	ContractForDifference	Contract for difference
YCD	YankeeCertificateOfDeposit	Yankee Certificate Of Deposit
BAB	BankAcceptedBill	Bank Accepted Bill. Also known as Bank Bill.
CRLNSWAP	CorrelationSwap	Correlation swap
BNST	ShortTermBankNote	Short Term Bank Note
DVDNSWAP	DividendSwap	Dividend swap
CLCP	CallableCommercialPaper	Callable Commercial Paper
EQBSKT	EquityBasket	Equity basket
CN	CommercialNote	Commercial Note
EQFWD	EquityForward	Equity forward
CPIB	InterestBearingCommercialPaper	Interest Bearing Commercial Paper
RTRNSWAP	ReturnSwap	Return swap
EUMTN	EuroMediumTermNote	Euro Medium Term Note
VARSWAP	VarianceSwap	Variance swap
EUNCP	EuroNegotiableCommercialPaper	Euro Negotiable Commercial Paper
PRTFLIOSWAP	PortfolioSwaps	Portfolio swap
EUSTLQN	EuroStructuredLiquidityNote	Euro Structured Liquidity Note
FUTSWAP	FuturesOnASwap	Futures on a Swap
EUTD	EuroTimeDeposit	Euro Time Deposit
FWDSWAP	ForwardsOnASwap	Forwards on a Swap
FWDFRTAGMT	ForwardFreightAgreement	Forward Freight Agreement
JCD	JumboCertificateOfDeposit	Jumbo Certificate of Deposit

Code	Name	Description
MMF	MoneyMarketFund	Money Market Fund
SPREADBET	SpreadBetting	Spread Betting
ETC	ExchangeTradedCommodity	Exchange traded commodity
MN	MasterNote	Master Note. Short term notes issued by Federal Farm Credit Banks Funding Corporation to provide loans and funding under Federal Farm Credit System (FFCS).
NCD	NegotiableCertificateOfDeposit	Negotiable Certificate of Deposit
NCP	NegotiableCommercialPaper	Negotiable Commercial Paper
RCD	RetailCertificateOfDeposit	Retail Certificate of Deposit
TDR	TermDepositReceipt	Term Deposit Receipt

Used in components: [InstrumentLeg](#)

180.2.2448 LegSecurityXML

XML definition for the leg security.

Type: [XMLData](#)

Used in components: [LegSecurityXML](#)

180.2.2449 LegSecurityXML

The LegSecurityXML component is used to provide a definition in an XML format for the leg instrument.

Name	Mult.	Type	Description
LegSecurityXMLLen	[0..1]	Length	Must be provided if LegSecurityXML(1872) field is specified and must immediately precede it.
LegSecurityXML	[0..1]	XMLData	
LegSecurityXMLSchema	[0..1]	String	

Used in components: [InstrumentLeg](#)

180.2.2450 LegSecurityXMLLen

The length of the LegSecurityXML(1872) data block.

Type: **Length**

Used in components: **LegSecurityXML**

180.2.2451 LegSecurityXMLSchema

The schema used to validate the contents of LegSecurityXML(1872).

Type: **String**

Used in components: **LegSecurityXML**

180.2.2452 LegSeniority

Specifies which issue (underlying bond) will receive payment priority in the event of a default.

Used to define a CDS instrument.

Type: **String**

Allowed values in SeniorityCodeSet:

Code	Name	Description
SD	SeniorSecured	Senior Secured
SR	Senior	Senior
SB	Subordinated	Subordinated
JR	Junior	Junior. In the context of MiFID II this value is used as identified in RTS 23 Annex I Table 3 Field 23 "Seniority of the bond".
MZ	Mezzanine	Mezzanine. In the context of MiFID II this value is used as identified in RTS 23 Annex I Table 3 Field 23 "Seniority of the bond".
SN	SeniorNonPreferred	Senior Non-Preferred. For CDS reference obligations of non-preferred senior debt issued by European Financials that constitute a layer of debt ranking between the bank's normal senior debt but above the bank's normal tier 2 subordinated debt (reference: ISDA Credit Market Infrastructure Group).

Used in components: **InstrumentLeg**

180.2.2453 LegSettlCurrency

Identifies settlement currency for the Leg.

See SettlCurrency (20) for description and valid values

Type: **Currency**

Used in groups: **InstrmtLegExecGrp**, **LegOrdGrp**, **SideCrossLegGrp**, **TrdInstrmtLegExecGrp**, **TrdInstrmt-LegGrp**

180.2.2454 LegSettlCurrencyCodeSource

Identifies class or source of the LegSettlCurrency(675) value.

Type: **String**

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbolology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in groups: **InstrmtLegExecGrp**, **LegOrdGrp**, **SideCrossLegGrp**, **TrdInstrmtLegExecGrp**, **TrdInstrmt-LegGrp**

180.2.2455 LegSettlDate

Refer to description for SettlDate[64]

Type: **LocalMktDate**

Used in groups: **InstrmtLegExecGrp**, **LegOrdGrp**, **LegQuotGrp**, **LegQuotStatGrp**, **QuotReqLegsGrp**, **SideCrossLegGrp**, **TrdInstrmtLegGrp**

180.2.2456 LegSettlDisruptionProvision

Specifies the consequences of bullion settlement disruption events.

Type: **int**

Allowed values in SettlDisruptionProvisionCodeSet:

Code	Name	Description
1	Negotiation	Negotiation
2	Cancellation	Cancellation and payment

Used in components: **InstrumentLeg**

180.2.2457 LegSettledEntityMatrixPublicationDate

The publication date of the applicable version of the matrix. When this element is omitted, the Standard Terms Supplement defines rules for which version of the matrix is applicable.

Type: **LocalMktDate**

Used in components: **InstrumentLeg**

180.2.2458 LegSettledEntityMatrixSource

Relevant settled entity matrix source.

Type: **String**

Used in components: **InstrumentLeg**

180.2.2459 LegSettleOnOpenFlag

Indicator to determine if the instrument is to settle on open.

Type: **String**

Used in components: **InstrumentLeg**

180.2.2460 LegSettlMethod

Settlement method for a contract or instrument. Additional values may be used with bilateral agreement.

Type: **String**

Allowed values in SettlMethodCodeSet:

Code	Name	Description
C	CashSettlementRequired	Cash settlement required
P	PhysicalSettlementRequired	Physical settlement required
E	Election	Election at exercise. The settlement method will be elected at the time of contract exercise.

Used in components: **InstrumentLeg**

180.2.2461 LegSettlMethodElectingPartySide

Side value of the party electing the settlement method.

Type: **int**

Allowed values in PaymentPaySideCodeSet:

Code	Name	Description
1	Buy	Buy
2	Sell	Sell

Used in components: **LegOptionExercise**

180.2.2462 LegSettlMethodElectionDateAdjusted

The adjusted settlement method election date.

Type: **LocalMktDate**

Used in components: **LegSettlMethodElectionDate**

180.2.2463 LegSettlMethodElectionDateBusinessCenter

The business center calendar used for date adjustment of the settlement method election unadjusted or relative date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **LegSettlMethodElectionDateBusinessCenterGrp**

180.2.2464 LegSettlMethodElectionDateBusinessCenterGrp

LegSettlMethodElectionDateBusinessCenterGrp is a repeating subcomponent within the LegSettlMethodElectionDate component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the LegDateAdjustment component in InstrumentLeg.

Name	Mult.	Type	Description
NoLegSettlMethodElectionDateBusinessCenters	[1..1]	NumInGroup	
LegSettlMethodElectionDateBusinessCenter	[0..1]	String	Required if NoLegSettlMethodElectionDateBusinessCenters(42581) > 0.

Used in components: **LegSettlMethodElectionDate**

180.2.2465 LegSettlMethodElectionDateBusinessDayConvention

The settlement method election date adjustment business day convention.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.

Code	Name	Description
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [LegSettlMethodElectionDate](#)

180.2.2466 LegSettlMethodElectionDate

The LegSettlMethodElectionDate component is a subcomponent within the LegOptionExercise component used to report the settlement method election date.

Name	Mult.	Type	Description
LegSettlMethodElectionDateUnadjusted	[0..1]	LocalMktDate	
LegSettlMethodElectionDateBusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the LegDateAdjustment component in InstrumentLeg. The specified value would be specific to LegOptionExercise.
LegSettlMethodElectionDateBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the LegDateAdjustment component in InstrumentLeg. The specified values would be specific to LegOptionExercise.
LegSettlMethodElectionDateRelativeTo	[0..1]	int	
LegSettlMethodElectionDateOffsetPeriod	[0..1]	int	Conditionally required when LegSettlMethodElectionDateOffsetUnit(42578) is specified.
LegSettlMethodElectionDateOffsetUnit	[0..1]	CodeSet	Conditionally required when LegSettlMethodElectionDateOffsetPeriod(42577) is specified.
LegSettlMethodElectionDateOffsetDayType	[0..1]	CodeSet	
LegSettlMethodElectionDateAdjusted	[0..1]	LocalMktDate	

Used in components: [LegOptionExercise](#)

180.2.2467 LegSettlMethodElectionDateOffsetDayType

Specifies the day type of the relative settlement method election date offset.

Type: **int**

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: **LegSettlMethodElectionDate**

180.2.2468 LegSettlMethodElectionDateOffsetPeriod

Time unit multiplier for the relative settlement method election date offset.

Type: **int**

Used in components: **LegSettlMethodElectionDate**

180.2.2469 LegSettlMethodElectionDateOffsetUnit

Time unit associated with the relative settlement method election date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: **LegSettlMethodElectionDate**

180.2.2470 LegSettlMethodElectionDateRelativeTo

Specifies the anchor date when the settlement method election date is relative to an anchor date.

See http://www.fixtradingcommunity.org/codelists#Relative_To_Date for values.

Type: **int**

Used in components: **LegSettlMethodElectionDate**

180.2.2471 LegSettlMethodElectionDateUnadjusted

The unadjusted settlement method election date.

Type: **LocalMktDate**

Used in components: **LegSettlMethodElectionDate**

180.2.2472 LegSettlRateDisruptionFallbackGrp

The LegSettlRateDisruptionsFallbackGrp is a repeating subcomponent of the LegPaymentStreamNon-DeliverableSettlTerms component used to specify the method, prioritized by the order it is listed, to get a replacement rate for a disrupted settlement rate option for a non-deliverable settlement currency.

Name	Mult.	Type	Description
NoLegSettlRateFallbacks	[1..1]	NumInGroup	
LegSettlRatePostponementMaximum-Days	[0..1]	int	Required if NoLegSettlRateFallbacks(40902) > 0.
LegSettlRateFallbackRateSource	[0..1]	Component	
LegSettlRatePostponementSurvey	[0..1]	Boolean	
LegSettlRatePostponementCalculationAgent	[0..1]	CodeSet	

Used in components: **LegPaymentStreamNonDeliverableSettlTerms**

180.2.2473 LegSettlRateFallbackRateSource

Identifies the source of rate information.

Type: **int**

Allowed values in RateSourceCodeSet:

Code	Name	Description
0	Bloomberg	Bloomberg
1	Reuters	Reuters
2	Telerate	Telerate
3	ISDARateOption	ISDA Settlement Rate Option. The source of the currency conversion as specified by the ISDA terms in Annex A to the 1998 FX and Currency Option Definitions. See http://www.fpml.org/coding-scheme/settlement-rate-option
99	Other	Other

Used in components: [LegSettlRateFallbackRateSource](#)

180.2.2474 LegSettlRateFallbackRateSource

LegSettlRateFallbackRateSource is a subcomponent of the LegSettlRateDisruptionFallbackGrp component used to specify the rate source in the event of rate disruption fallback.

Name	Mult.	Type	Description
LegSettlRateFallbackRateSource	[0..1]	CodeSet	
LegSettlRateFallbackReferencePage	[0..1]	String	Conditionally required when LegSettlRateFallbackRateSource(40366) = 3 (ISDA Settlement Rate Option) or 99 (Other).

Used in groups: [LegSettlRateDisruptionFallbackGrp](#)

180.2.2475 LegSettlRateFallbackReferencePage

Identifies the reference "page" from the rate source.

When LegSettlRateFallbackRateSource(40366) = 3 (ISDA Settlement Rate Option) this contains the value from the scheme that reflects the terms of the Annex A to the ISDA 1998 FX and Currency Option Definitions. See: <http://www.fpml.org/coding-scheme/settlement-rate-option>

Type: [String](#)

Used in components: [LegSettlRateFallbackRateSource](#)

180.2.2476 LegSettlRateIndex

In an outright or forward commodity trade that is cash settled this is the index used to determine the cash payment.

Type: **String**

Used in components: **InstrumentLeg**

180.2.2477 LegSettlRateIndexLocation

This is an optional qualifying attribute of LegSettlementRateIndex(2176) such as the delivery zone for an electricity contract.

Type: **String**

Used in components: **InstrumentLeg**

180.2.2478 LegSettlRatePostponementCalculationAgent

Used to identify the settlement rate postponement calculation agent.

Type: **int**

Allowed values in ProvisionCalculationAgentCodeSet:

Code	Name	Description
0	ExercisingParty	Exercising party
1	NonExercisingParty	Non-exercising party
2	MasterAgreement	As specified in the master agreement
3	Supplement	As specified in the standard terms supplement

Used in groups: **LegSettlRateDisruptionFallbackGrp**

180.2.2479 LegSettlRatePostponementMaximumDays

The maximum number of days to wait for a quote from the disrupted settlement rate option before proceeding to this method.

Type: **int**

Used in groups: **LegSettlRateDisruptionFallbackGrp**

180.2.2480 LegSettlRatePostponementSurvey

Indicates whether to request a settlement rate quote from the market.

Type: **Boolean**

Used in groups: **LegSettlRateDisruptionFallbackGrp**

180.2.2481 LegSettlType

Indicates order settlement period. If present, LegSettlDate (588) overrides this field. If both LegSettlType (587) and LegSettlDate (588) are omitted, the default for LegSettlType (587) is 0 (Regular)

Regular is defined as the default settlement period for the particular security on the exchange of execution.

In Fixed Income the contents of this field may influence the instrument definition if the LegSecurityID (602) is ambiguous. In the US an active Treasury offering may be re-opened, and for a time one CUSIP will apply to both the current and "when-issued" securities. Supplying a value of "7" clarifies the instrument description; any other value or the absence of this field should cause the respondent to default to the active issue.

Additionally the following patterns may be used as well as enum values

Dx = FX tenor expression for "days", e.g. "D5", where "x" is any integer > 0

Mx = FX tenor expression for "months", e.g. "M3", where "x" is any integer > 0

Wx = FX tenor expression for "weeks", e.g. "W13", where "x" is any integer > 0

Yx = FX tenor expression for "years", e.g. "Y1", where "x" is any integer > 0.

Note that for FX the tenors expressed using Dx, Mx, Wx, and Yx values do not denote business days, but calendar days.

Type: **String**

Allowed values in SettlTypeCodeSet:

Code	Name	Description
0	Regular	Regular / FX Spot settlement (T+1 or T+2 depending on currency)
1	Cash	Cash (TOD / T+0)
2	NextDay	Next Day (TOM / T+1)
3	TPlus2	T+2

Code	Name	Description
4	TPlus3	T+3
5	TPlus4	T+4
6	Future	Future
7	WhenAndIfIssued	When And If Issued
8	SellersOption	Sellers Option
9	TPlus5	T+5
B	BrokenDate	Broken date. Use within FX to specify a non-standard tenor. The use of SettlDate(64) is required to specify the actual settlement date when SettlType(63) = B (Broken date).
C	FXSpotNextSettlement	FX Spot Next settlement (Spot+1, aka next day)

Used in groups: [InstrmtLegExecGrp](#), [InstrmtLegSecListGrp](#), [LegOrdGrp](#), [LegQuotGrp](#), [LegQuotStatGrp](#), [QuotReqLegsGrp](#), [SecLstUpdRelSymsLegGrp](#), [SideCrossLegGrp](#), [TrdInstrmtLegGrp](#)

180.2.2482 LegShortSaleExemptionReason

Indicates the reason a short sale is exempted from applicable regulation (e.g. Reg SHO addendum (b)(1) in the U.S.)

Type: [int](#)

Allowed values in ShortSaleExemptionReasonCodeSet:

Code	Name	Description
0	ExemptionReasonUnknown	Exemption reason unknown. An exemption reason not provided or received.
1	IncomingSSE	Income sell short exempt. Agency broker has the customer's exemption reason, which is not explicitly provided to executing broker.
2	AboveNationalBestBid	Above national best bid (broker/dealer provision). Broker / dealer responsible for enforcing exemption rule has determined that the order is priced one or more ticks above the nation best bid of the security to be traded.
3	DelayedDelivery	Delayed delivery. The broker-dealer has a reasonable basis to believe the seller owns the covered security (pursuant to Rule 200 in the U.S.), but is subject to restrictions on delivery, provided that the seller intends to deliver the security as soon as all restrictions on delivery have been removed.

Code	Name	Description
4	OddLot	Odd lot. The broker-dealer has a reasonable basis to believe the sale is by a market maker to offset customer odd-lot orders or to liquidate an odd-lot position that changes such broker's or dealer's position by no more than a unit of trading.
5	DomesticArbitrage	Domestic arbitrage. The sale is connected to a bona-fide domestic arbitrage transaction.
6	InternationalArbitrage	International arbitrage. The sale is connected to an international arbitrage transaction.
7	UnderwriterOrSyndicateDistribution	Underwriter or syndicate distribution. The short sale is (i) by an underwriter or member of a syndicate or group participating in the distribution of a security in connection with an over-allotment of securities; or (ii) is for purposes of a lay-off sale by an underwriter or member of a syndicate or group in connection with a distribution of securities through a rights or standby underwriting commitment.
8	RisklessPrincipal	Riskless principal. The short sale is by a broker or dealer effecting the execution of a customer purchase or the execution of a customer "long" sale on a riskless principal basis.
9	VWAP	VWAP. The short sale order is for the sale of a covered security at the volume weighted average price (VWAP) meeting certain criteria.

Used in groups: [InstrmtLegExecGrp](#), [LegOrdGrp](#), [SideCrossLegGrp](#), [TrdInstrmtLegExecGrp](#), [TrdInstrmtLegGrp](#)

180.2.2483 LegShortSaleRestriction

Indicates whether a restriction applies to short selling a security.

Type: [int](#)

Allowed values in ShortSaleRestrictionCodeSet:

Code	Name	Description
0	NoRestrictions	No restrictions
1	SecurityNotShortable	Security is not shortable
2	SecurityNotShortableAtOrBelowBestBid	Security not shortable at or below the best bid

Code	Name	Description
3	SecurityNotShortableWithoutPre-Borrow	Security is not shortable without pre-borrow

Used in components: **InstrumentLeg**

180.2.2484 LegSide

The side of this individual leg (multileg security).

See Side (54) field for description and values

Type: **char**

Allowed values in SideCodeSet:

Code	Name	Description
1	Buy	Buy. For Securities Financing indicates the receipt of securities or collateral.
2	Sell	Sell. For Securities Financing indicates the delivery of securities or collateral.
3	BuyMinus	Buy minus
4	SellPlus	Sell plus
5	SellShort	Sell short
6	SellShortExempt	Sell short exempt
7	Undisclosed	Undisclosed
8	Cross	Cross (orders where counterparty is an exchange, valid for all messages except IOIs)
9	CrossShort	Cross short
A	CrossShortExempt	Cross short exempt
B	AsDefined	"As Defined" (for use with multileg instruments)
C	Opposite	"Opposite" (for use with multileg instruments)
D	Subscribe	Subscribe (e.g. CIV)
E	Redeem	Redeem (e.g. CIV)
F	Lend	Lend (FINANCING - identifies direction of collateral)
G	Borrow	Borrow (FINANCING - identifies direction of collateral)

Code	Name	Description
H	SellUndisclosed	Sell undisclosed. In the context of ESMA RTS 22, this allows for reporting of transactions where the investment firm (broker) is not able to determine whether the sell is a short sale transaction. Corresponds to RTS 22 "short selling indicator" value of 'UNDI'.

Used in components: [InstrumentLeg](#)

180.2.2485 LegSpecialDividendsIndicator

Indicates whether special dividends are applicable.

Type: [Boolean](#)

Used in components: [LegDividendConditions](#)

180.2.2486 LegStartDate

Start date of a financing deal, i.e. the date the buyer pays the seller cash and takes control of the collateral.

Type: [LocalMktDate](#)

Used in components: [LegFinancingDetails](#)

180.2.2487 LegStateOrProvinceOfIssue

Multileg instrument's individual leg security's StateOrProvinceOfIssue.

See StateOrProvinceOfIssue (471) field for description

Type: [String](#)

Used in components: [InstrumentLeg](#)

180.2.2488 LegStipulations

The LegStipulations component block has the same usage as the Stipulations component block, but for a leg instrument in a multi-legged security.

Name	Mult.	Type	Description
NoLegStipulations	[1..1]	NumInGroup	
LegStipulationType	[0..1]	CodeSet	Required if NoLegStipulations >0
LegStipulationValue	[0..1]	String	

Used in groups: InstrmtLegExecGrp, InstrmtLegIOIGrp, InstrmtLegSecListGrp, LegOrdGrp, LegQuotGrp, LegQuotStatGrp, QuotReqLegsGrp, SecLstUpdRelSymsLegGrp, SideCrossLegGrp, TrdInstrmtLegGrp

180.2.2489 LegStipulationType

For Fixed Income, type of Stipulation for this leg.

See StipulationType (233) for description and valid values

Type: String

Allowed values in StipulationTypeCodeSet:

Code	Name	Description
ABS	AbsolutePrepaymentSpeed	Absolute Prepayment Speed
AMT	AlternativeMinimumTax	Alternative Minimum Tax (Y/N)
INCURRCVY	IncurredRecovery	Incurred recovery (Y/N). Specifies whether incurred recovery is applicable (Y) or not (N). Outstanding Swap Notional Amount is defined at any time on any day, as the greater of: (a) Zero; If Incurred Recovery Amount Applicable: (b) The Original Swap Notional Amount minus the sum of all Incurred Loss Amounts and all Incurred Recovery Amounts (if any) determined under this Confirmation at or prior to such time. Incurred Recovery Amount not populated: (b) The Original Swap Notional Amount minus the sum of all Incurred Loss Amounts determined under this Confirmation at or prior to such time. 2009 CDX Tranche Terms.
ADDTRM	AdditionalTerm	Additional term. Used for representing information contained in the Additional Terms field of the 2003 Master Credit Derivatives confirm.
AUTOREINV	AutoReinvestment	Auto Reinvestment at <rate> or better
CPP	ConstantPrepaymentPenalty	Constant Prepayment Penalty
BANKQUAL	BankQualified	Bank qualified (Y/N)
CPR	ConstantPrepaymentRate	Constant Prepayment Rate

Code	Name	Description
MODEQTYDLVY	ModifiedEquityDelivery	Modified equity delivery. Indicates whether delivery of selected obligations having an amount greater than the reference entity notional amount is allowed (Y) or (N). 2005 iTraxx tranching Transactions Standard Terms Supplement.
BGNCON	BargainConditions	Bargain conditions (see StipulationValue (234) for values)
CPY	ConstantPrepaymentYield	Constant Prepayment Yield
NOREFOBLIG	NoReferenceObligation	No reference obligation (Y/N). When specified as "Y" this indicates that there is no Reference Obligation associated with this Credit Default Swap and that there will never be one. 2003 ISDA Credit Derivatives Definitions.
COUPON	CouponRange	Coupon range
HEP	FinalCPRofHomeEquityPrepaymentCurve	final CPR of Home Equity Prepayment Curve
UNKREFOBLIG	UnknownReferenceObligation	Unknown reference obligation (Y/N). When specified as "Y" this indicates that the Reference obligation associated with the Credit Default Swap is currently not known. This is not valid for Legal Confirmation purposes, but is valid for earlier stages in the trade life cycle (e.g. Broker Confirmation). 2003 FpML-CD-4.0.
ALLGUARANTEES	AllGuarantees	All guarantees (Y/N). Indicates whether an obligation of the Reference Entity, guaranteed by the Reference Entity on behalf of a non-Affiliate, is to be considered an Obligation for the purpose of the transaction (Y) or (N). ISDA 2003 Term: All Guarantees.
CURRENCY	ISOCurrencyCode	ISO Currency Code
MHP	PercentOfManufacturedHousingPrepaymentCurve	Percent of Manufactured Housing Prepayment Curve
CUSTOMDATE	CustomStart	Custom start/end date
MPR	MonthlyPrepaymentRate	Monthly Prepayment Rate

Code	Name	Description
REFPX	ReferencePrice	Reference price (Y/N). Specifies the reference price expressed as a percentage between 0 and 1 (e.g. 0.05 is 5%). The reference price is used to determine (a) for physically settled trades, the Physical Settlement Amount, which equals the Floating Rate Payer Calculation Amount times the Reference Price and (b) for cash settled trades, the Cash Settlement Amount, which equals the greater of (i) the difference between the Reference Price and the Final Price and (ii) zero. ISDA 2003 Term: Reference Price.
GEOG	Geographics	Geographics and % range (ex. 234=CA 0-80 [minimum of 80% California assets])
PPC	PercentOfProspectusPrepaymentCurve	Percent of Prospectus Prepayment Curve
REFPOLICY	ReferencePolicy	Reference policy (Y/N). Indicates whether the reference obligation is guaranteed (Y), or not (N), under a reference policy. If the Reference Obligation is guaranteed under a Reference Policy, and such Reference Policy by its terms excludes any component of the Expected Principal Amount for purposes of determining the liability of the relevant Insurer, or the Insurer is otherwise not required to pay any such amounts under the terms of the Reference Policy, the relevant component or amount shall also be excluded for purposes of determining the Expected Principal Amount with respect to any determination of Principal Shortfall hereunder. 2006 ISDA CDS on MBS Terms.
HAIRCUT	ValuationDiscount	Valuation Discount
PSA	PercentOfBMAPrepaymentCurve	Percent of BMA Prepayment Curve
SECRDLIST	SecuredList	Secured list (Y/N). Specifies whether a list of Syndicated Secured Obligations (also known as the Relevant Secured List) exists (Y), or not (N), for the Reference Entity. With respect to any day, the list of Syndicated Secured Obligations of the Designated Priority of the Reference Entity published by Markit Group Limited or any successor thereto appointed by the Specified Dealers (the "Secured List Publisher") on or most recently before such day, which list is currently available at [http://www.markit.com]. ISDA 2003 Term: Relevant Secured List.
INSURED	Insured	Insured (Y/N)
SMM	SingleMonthlyMortality	Single Monthly Mortality

Code	Name	Description
ISSUE	IssueDate	Year Or Year/Month of Issue (ex. 234=2002/09)
ISSUER	Issuer	Issuer's ticker
ISSUESIZE	IssueSizeRange	issue size range
LOOKBACK	LookbackDays	Lookback Days
LOT	ExplicitLotIdentifier	Explicit lot identifier
LOTVAR	LotVariance	Lot Variance (value in percent maximum over- or under-allocation allowed)
MAT	MaturityYearAndMonth	Maturity Year And Month
MATURITY	MaturityRange	Maturity range
MAXSUBS	MaximumSubstitutions	Maximum substitutions (Repo)
MINDNOM	MinimumDenomination	Minimum denomination
MININCR	MinimumIncrement	Minimum increment
MINQTY	MinimumQuantity	Minimum quantity
PAYFREQ	PaymentFrequency	Payment frequency, calendar
PIECES	NumberOfPieces	Number Of Pieces
PMAX	PoolsMaximum	Pools Maximum
PPL	PoolsPerLot	Pools per Lot
PPM	PoolsPerMillion	Pools per Million
PPT	PoolsPerTrade	Pools per Trade
PRICE	PriceRange	Price Range
PRICEFREQ	PricingFrequency	Pricing frequency
PROD	ProductionYear	Production Year
PROTECT	CallProtection	Call protection
PURPOSE	Purpose	Purpose
PXSOURCE	BenchmarkPriceSource	Benchmark price source
RATING	RatingSourceAndRange	Rating source and range
REDEMPTION	TypeOfRedemption	Type Of Redemption - values are: NonCallable, Prefunded, EscrowedToMaturity, Puttable, Convertible
RESTRICTED	Restricted	Restricted (Y/N)
SECTOR	MarketSector	Market Sector
SECTYPE	SecurityTypeIncludedOrExcluded	Security Type included or excluded
STRUCT	Structure	Structure
SUBSFREQ	SubstitutionsFrequency	Substitutions frequency (Repo)
SUBSLEFT	SubstitutionsLeft	Substitutions left (Repo)

Code	Name	Description
TEXT	FreeformText	Freeform Text
TRDVAR	TradeVariance	Trade Variance (value in percent maximum over- or under-allocation allowed)
WAC	WeightedAverageCoupon	Weighted Average Coupon - value in percent (exact or range) plus "Gross" or "Net" of servicing spread (the default) (ex. 234=6.5-Net [minimum of 6.5% net of servicing fee])
WAL	WeightedAverageLifeCoupon	Weighted Average Life Coupon - value in percent (exact or range)
WALA	WeightedAverageLoanAge	Weighted Average Loan Age - value in months (exact or range)
WAM	WeightedAverageMaturity	Weighted Average Maturity - value in months (exact or range)
WHOLE	WholePool	Whole Pool (Y/N)
YIELD	YieldRange	Yield Range
AVFICO	AverageFICOScore	Average FICO Score
ORIGAMT	OriginalAmount	Original amount. The original issued amount of a mortgage backed security or other loan/asset backed security.
AVSIZE	AverageLoanSize	Average Loan Size
POOLEFFDT	PoolEffectiveDate	Pool effective date
MAXBAL	MaximumLoanBalance	Maximum Loan Balance
POOLINITFCTR	PoolInitialFactor	Pool initial factor. For morttgage backed securities, the part of the mortgage that is outstanding on trade inception, i.e. has not been repaid yet as principal. It is expressed as a multiplier factor to the mortgage: where 1 means that the whole mortgage amount is outstanding, 0.8 means that80% remains to be repaid and 20% has been repaid.
POOL	PoolIdentifier	Pool Identifier
TRANCHE	Tranche	Tranche identifier. Identifies the tranche of a mortgage backed security, loan, collateralized mortgage obligation or similar securities that can be split into different risk or maturity (for example) classes.
ROLLTYPE	TypeOfRollTrade	Type of Roll trade
SUBSTITUTION	Substitution	Substitution (Y/N). Indicates whether substitution is applicable (Y) or (N).

Code	Name	Description
MULTEXCHFLLBCK	MULTEXCHFLLBCK	Multiple exchange fallback (Y/N). For an index option transaction, indicates whether a relevant "Multiple Exchange Index Annex" is applicable (Y) to the transaction or not (N). This annex defines additional provisions which are applicable where an index is comprised of component securities that are traded on multiple exchanges.
REFTRADE	ReferenceToRollingOrClosing-Trade	Reference to rolling or closing trade
COMPSECFLBCK	COMPSECFLBCK	Component security fallback (Y/N). For an index option transaction, indicates whether a relevant "Component Security Index Annex" is applicable (Y) to the transaction or not (N).
REFPRIN	PrincipalOfRollingOrClosing-Trade	Principal to rolling or closing trade
LOCLJRSCTN	LOCLJRSCTN	Local jurisdiction (Y/N). "Local Jurisdiction" is used in the AEJ Master Confirmation to determine applicability (Y), or not (N), of local taxes (including taxes, duties, and similar charges) imposed by the taxing authority of the local jurisdiction.
REFINT	InterestOfRollingOrClosingTrade	Interest of rolling or closing trade
AVAILQTY	AvailableOfferQuantity-ToBeShownToTheStreet	Available offer quantity to be shown to the street
RELVJRSCTN	RELVJRSCTN	Relevant jurisdiction (Y/N). "Relevant Jurisdiction" is used in the AEJ Master Confirmation to determine applicability (Y), or not (N), of local taxes (including taxes, duties and similar charges) that would be imposed by the taxing authority of the "country of underlier" on a "hypothetical broker dealer" assuming that the applicable hedge positions are held by its office in the Relevant Jurisdiction.
BROKERCREDIT	BrokerCredit	Broker's sales credit
INTERNALPX	OfferPriceToBeShownToInternalBrokers	Offer price to be shown to internal brokers
INTERNALQTY	OfferQuantityToBeShownToInternalBrokers	Offer quantity to be shown to internal brokers
LEAVEQTY	TheMinimumResidualOffer-Quantity	The minimum residual offer quantity
MAXORDQTY	MaximumOrderSize	Maximum order size
ORDRINCR	OrderQuantityIncrement	Order quantity increment

Code	Name	Description
PRIMARY	PrimaryOrSecondaryMarketIndicator	Primary or Secondary market indicator
SALESCREDITOVR	BrokerSalesCreditOverride	Broker sales credit override
TRADERCREDIT	TraderCredit	Trader's credit
DISCOUNT	DiscountRate	Discount Rate (when price is denominated in percent of par)
YTM	YieldToMaturity	Yield to Maturity (when YieldType(235) and Yield(236) show a different yield)
PAYOFF	InterestPayoffOfRollingOrAmendingTrade	Interest payoff of rolling or amending trade

Used in groups: [LegStipulations](#)

180.2.2490 LegStipulationValue

For Fixed Income, value of stipulation.

See StipulationValue (234) for description and valid values

Type: [String](#)

Used in groups: [LegStipulations](#)

180.2.2491 LegStrategyType

Specifies the type of trade strategy.

Type: [String](#)

Allowed values in StrategyTypeCodeSet:

Code	Name	Description
STD	Straddle	Straddle
STG	Strangle	Strangle
BF	Butterfly	Butterfly
CNDR	Condor	Condor
CISN	CallableInversibleSnowball	Callable inversible snowball
OTHER	Other	Other

Used in components: [InstrumentLeg](#)

180.2.2492 LegStreamAssetAttributeGrp

The LegStreamAssetAttributeGrp is a repeating subcomponent of the LegStreamCommodity component used to detail commodity attributes, quality standards and reject limits.

Name	Mult.	Type	Description
NoLegStreamAssetAttributes	[1..1]	NumInGroup	
LegStreamAssetAttributeType	[0..1]	String	Required if NoLegStreamAssetAttributes(41452) > 0.
LegStreamAssetAttributeValue	[0..1]	String	
LegStreamAssetAttributeLimit	[0..1]	String	

Used in components: [LegStreamCommodity](#)

180.2.2493 LegStreamAssetAttributeLimit

Limit or lower acceptable value of the attribute.

Type: [String](#)

Used in groups: [LegStreamAssetAttributeGrp](#)

180.2.2494 LegStreamAssetAttributeType

Specifies the name of the attribute.

See http://www.fixtradingcommunity.org/codelists#Asset_Attribute_Types for code list of applicable asset attribute types.

Type: [String](#)

Used in groups: [LegStreamAssetAttributeGrp](#)

180.2.2495 LegStreamAssetAttributeValue

Specifies the value of the attribute.

Type: [String](#)

Used in groups: [LegStreamAssetAttributeGrp](#)

180.2.2496 LegStreamCalculationBalanceOfFirstPeriod

When specified and set to 'Y', it indicates that the first calculation period should run from the effective date to the end of the calendar period in which the effective date falls (e.g. Jan 15 - Jan 31 if the calculation periods are one month long and effective date is Jan 15.). If 'N' or not specified, it indicates that the first calculation period should run from the effective date for one whole period (e.g. Jan 15 to Feb 14 if the calculation periods are one month long and the effective date is Jan 15.).

Type: **Boolean**

Used in components: **LegStreamCalculationPeriodDates**

180.2.2497 LegStreamCalculationCorrectionPeriod

Time unit multiplier for the length of time after the publication of the data when corrections can be made.

Type: **int**

Used in components: **LegStreamCalculationPeriodDates**

180.2.2498 LegStreamCalculationCorrectionUnit

Time unit associated with the length of time after the publication of the data when corrections can be made.

Type: **String**

Allowed values in ProtectionTermEventUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: **LegStreamCalculationPeriodDates**

180.2.2499 LegStreamCalculationFrequencyPeriod

Time unit multiplier for the frequency at which calculation period end dates occur.

Type: **int**

Used in components: **LegStreamCalculationPeriodDates**

180.2.2500 LegStreamCalculationFrequencyUnit

Time unit associated with the frequency at which calculation period end dates occur.

Type: **String**

Allowed values in CouponFrequencyUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year
H	Hour	Hour
Min	Minute	Minute
S	Second	Second
T	Term	Term

Used in components: **LegStreamCalculationPeriodDates**

180.2.2501 LegStreamCalculationPeriodBusinessCenter

The business center calendar used to adjust calculation periods, e.g. "GLBO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **LegStreamCalculationPeriodBusinessCenterGrp**

180.2.2502 LegStreamCalculationPeriodBusinessCenterGrp

LegStreamCalculationPeriodBusinessCenterGrp is a repeating subcomponent within the LegStreamCalculationPeriodDates component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the LegDateAdjustment component in InstrumentLeg.

Name	Mult.	Type	Description
NoLegStreamCalculationPeriodBusinessCenters	[1..1]	NumInGroup	
LegStreamCalculationPeriodBusinessCenter	[0..1]	String	Required if NoLegStreamCalculationPeriodBusinessCenters(40940) > 0.

Used in components: [LegStreamCalculationPeriodDates](#)

180.2.2503 LegStreamCalculationPeriodBusinessDayConvention

The business day convention used to adjust calculation periods. Used only to override the business day convention specified in the LegDateAdjustment component within the InstrumentLeg component.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [LegStreamCalculationPeriodDates](#)

180.2.2504 LegStreamCalculationPeriodDate

The adjusted or unadjusted fixed calculation period date.

Type: [LocalMktDate](#)

Used in groups: [LegStreamCalculationPeriodDateGrp](#)

180.2.2505 LegStreamCalculationPeriodDateGrp

The LegStreamCalculationPeriodDateGrp is a repeating subcomponent of the LegStreamCalculationPeriodDates component used to detail fixed dates for the swap stream.

Name	Mult.	Type	Description
NoLegStreamCalculationPeriodDates	[1..1]	NumInGroup	
LegStreamCalculationPeriodDate	[0..1]	LocalMktDate	Required if NoLegStreamCalculationPeriodDates(41638) > 0.
LegStreamCalculationPeriodDateType	[0..1]	CodeSet	

Used in components: [LegStreamCalculationPeriodDates](#)

180.2.2506 LegStreamCalculationPeriodDates

LegStreamCalculationPeriodDates is a subcomponent of the LegStreamGrp component used to specify the calculation period dates of the stream.

Name	Mult.	Type	Description
LegStreamCalculationPeriodDatesXID	[0..1]	XID	
LegStreamCalculationPeriodDatesX- IDRef	[0..1]	XIDREF	
LegStreamCalculationPeriodBusiness- DayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the LegDateAdjustment component in InstrumentLeg. The specified value would be specific to this instance of the leg stream calculation period dates.

Name	Mult.	Type	Description
LegStreamCalculationPeriodBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the LegDateAdjustment component in InstrumentLeg. The specified values would be specific to this instance of the leg stream calculation period dates.
LegStreamCalculationPeriodDateGrp	[0..*]	Group	
LegStreamFirstPeriodStartDateUnadjusted	[0..1]	LocalMktDate	
LegStreamFirstPeriodStartDateBusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the LegDateAdjustment component in InstrumentLeg. The specified value would be specific to this instance of the leg stream calculation period dates.
LegStreamFirstPeriodStartDateBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the LegDateAdjustment component in InstrumentLeg. The specified values would be specific to this instance of the leg stream calculation period dates.
LegStreamFirstPeriodStartDateAdjusted	[0..1]	LocalMktDate	
LegStreamFirstRegularPeriodStartDateUnadjusted	[0..1]	LocalMktDate	
LegStreamFirstCompoundingPeriodEndDateUnadjusted	[0..1]	LocalMktDate	
LegStreamLastRegularPeriodEndDateUnadjusted	[0..1]	LocalMktDate	
LegStreamCalculationFrequencyPeriod	[0..1]	int	Conditionally required when LegStreamCalculationFrequencyUnit(40275) is specified.
LegStreamCalculationFrequencyUnit	[0..1]	CodeSet	Conditionally required when LegStreamCalculationFrequencyPeriod(40274) is specified.
LegStreamCalculationRollConvention	[0..1]	CodeSet	When specified, this overrides the date roll convention defined in the LegDateAdjustment component in InstrumentLeg. The specified values would be specific to this instance of the stream calculation period dates.
LegStreamCalculationBalanceOfFirstPeriod	[0..1]	Boolean	

Name	Mult.	Type	Description
LegStreamCalculationCorrectionPeriod	[0..1]	int	Conditionally required when LegStreamCalculationCorrectionUnit(41645) is specified.
LegStreamCalculationCorrectionUnit	[0..1]	CodeSet	Conditionally required when LegStreamCalculationCorrectionPeriod(41644) is specified.

Used in groups: [LegStreamGrp](#)

180.2.2507 LegStreamCalculationPeriodDatesXID

Identifier of this calculation period for cross referencing elsewhere in the message.

Type: [XID](#)

Used in components: [LegStreamCalculationPeriodDates](#)

180.2.2508 LegStreamCalculationPeriodDatesXIDRef

Cross reference to another calculation period for duplicating its properties.

Type: [XIDREF](#)

Used in components: [LegStreamCalculationPeriodDates](#)

180.2.2509 LegStreamCalculationPeriodDateType

Specifies the type of fixed calculation period date. When specified it applies not only to the current date but to all subsequent dates in the group until overridden with a new type.

Type: [int](#)

Allowed values in OptionExerciseDateTypeCodeSet:

Code	Name	Description
0	Unadjusted	Unadjusted
1	Adjusted	Adjusted

Used in groups: [LegStreamCalculationPeriodDateGrp](#)

180.2.2510 LegStreamCalculationRollConvention

The convention for determining the sequence of end dates. It is used in conjunction with a specified frequency. Used only to override the roll convention specified in the LegDateAdjustment component within the InstrumentLeg component.

Type: **String**

Allowed values in DateRollConventionCodeSet:

Code	Name	Description
1	FirstDay	1st day of the month
2	SecondDay	2nd day of the month
3	ThirdDay	3rd day of the month
4	FourthDay	4th day of the month
5	FifthDay	5th day of the month
6	SixthDay	6th day of the month
7	SeventhDay	7th day of the month
8	EighthDay	8th day of the month
9	NinthDay	9th day of the month
10	TenthDay	10th day of the month
11	EleventhDay	11th day of the month
12	TwelfthDay	12th day of the month
13	ThirteenthDay	13th day of the month
14	FourteenthDay	14th day of the month
15	FifteenthDay	15th day of the month
16	SixteenthDay	16th day of the month
17	SeventeenthDay	17th day of the month
18	EighteenthDay	18th day of the month
19	NineteenthDay	19th day of the month
20	TwentiethDay	20th day of the month
21	TwentyFirstDay	21st day of the month
22	TwentySecondDay	22nd day of the month
23	TwentyThirdDay	23rd day of the month
24	TwentyFourthDay	24th day of the month
25	TwentyFifthDay	25th day of the month
26	TwentySixthDay	26th day of the month
27	TwentySeventhDay	27th day of the month

Code	Name	Description
28	TwentyEigthDa28y	28th day of the month
29	TwentyNinthDay	29th day of the month
30	ThirtiethDay	30th day of the month
EOM	EOM	The end of the month. Use EOM for 31st day of the month.
FRN	FRN	The floating rate note convention or Eurodollar convention.
IMM	IMM	The International Money Market settlement date, i.e. the 3rd Wednesday of the month.
IMMCAD	IMMCAD	The last trading day/expiration day of the Canadian Derivatives Exchange.
IMMAUD	IMMAUD	The last trading day of the Sydney Futures Exchange Australian 90-day bank accepted bill futures contract.
IMMNZD	IMMNZD	The last trading day of the Sydney Futures Exchange New Zealand 90-day bank bill futures contract.
SFE	SFE	The Sydney Futures Exchange 90-day bank accepted bill futures settlement dates.
NONE	NONE	No adjustment
TBILL	TBILL	The 13-week and 26-week U.S. Treasury Bill auction dates.
MON	MON	Monday
TUE	TUE	Tuesday
WED	WED	Wednesday
THU	THU	Thursday
FRI	FRI	Friday
SAT	SAT	Saturday
SUN	SUN	Sunday

Used in components: [LegStreamCalculationPeriodDates](#)

180.2.2511 LegStreamCommodityAltID

Alternate security identifier value for the commodity.

Type: [String](#)

Used in groups: [LegStreamCommodityAltIDGrp](#)

180.2.2512 LegStreamCommodityAltIDGrp

LegStreamCommodityAltIDGrp is a subcomponent of the LegStreamCommodity component used to specify alternate identifiers.

Name	Mult.	Type	Description
NoLegStreamCommodityAltIDs	[1..1]	NumInGroup	
LegStreamCommodityAltID	[0..1]	String	Required if NoLegStreamCommodityAltIDs(41674) > 0.
LegStreamCommodityAltIDSource	[0..1]	String	Required if NoLegStreamCommodityAltIDs(41674) > 0.

Used in components: [LegStreamCommodity](#)

180.2.2513 LegStreamCommodityAltIDSource

Identifies the class or source of the alternate commodity security identifier.

Type: [String](#)

Used in groups: [LegStreamCommodityAltIDGrp](#)

180.2.2514 LegStreamCommodityBase

Specifies the general base type of the commodity traded. Where possible, this should follow the naming convention used in the 2005 ISDA Commodity Definitions.

Type: [String](#)

Used in components: [LegStreamCommodity](#)

180.2.2515 LegStreamCommodity

LegStreamCommodity is a subcomponent of the LegStream component used to identify and describe the underlying commodity.

Name	Mult.	Type	Description
LegStreamCommodityBase	[0..1]	String	
LegStreamCommodityType	[0..1]	String	

Name	Mult.	Type	Description
LegStreamCommoditySecurityID	[0..1]	String	Conditionally required when LegStreamCommoditySecurityIDSource(41651) is specified.
LegStreamCommoditySecurityID-Source	[0..1]	CodeSet	Conditionally required when LegStreamCommoditySecurityID(41650) is specified.
LegStreamCommodityAltIDGrp	[0..*]	Group	
LegStreamCommodityDesc	[0..1]	String	
EncodedLegStreamCommodityDescLen	[0..1]	Length	Must be set if EncodedLegStreamCommodityDesc(41654) field is specified and must immediately precede it.
EncodedLegStreamCommodityDesc	[0..1]	data	Encoded (non-ASCII characters) representation of the LegStreamCommodityDesc(41652) field in the encoded format specified via the MessageEncoding(347) field.
LegStreamCommodityDeliveryPricingRegion	[0..1]	String	May be used to specify the delivery or pricing region of a non-standard commodity swap contract (e.g. when InstrAttribType(871)=38 (US standard contract indicator) and InstrAttribValue(872)=N).
LegStreamAssetAttributeGrp	[0..*]	Group	
LegStreamCommodityUnitOfMeasure	[0..1]	CodeSet	
LegStreamCommodityCurrency	[0..1]	Currency	
LegStreamCommodityExchange	[0..1]	Exchange	
LegStreamCommodityRateSource	[0..1]	int	
LegStreamCommodityRateReferencePage	[0..1]	String	
LegStreamCommodityRateReferencePageHeading	[0..1]	String	
LegStreamDataProvider	[0..1]	String	
LegStreamCommodityDataSourceGrp	[0..*]	Group	
LegStreamCommodityPricingType	[0..1]	String	
LegStreamCommodityNearbySettlementDayPeriod	[0..1]	int	Conditionally required when LegStreamCommodityNearbySettlementDayUnit(41664) is specified.
LegStreamCommodityNearbySettlementDayUnit	[0..1]	CodeSet	Conditionally required when LegStreamCommodityNearbySettlementDayPeriod(41663) is specified.
LegStreamCommoditySettlementDateUnadjusted	[0..1]	LocalMktDate	

Name	Mult.	Type	Description
LegStreamCommoditySettlDateBusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the LegDateAdjustment component in InstrumentLeg. The specified values would be specific to the settlement date.
LegStreamCommoditySettlBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the LegDateAdjustment component in InstrumentLeg. The specified values would be specific to the settlement date.
LegStreamCommoditySettlDateAdjusted	[0..1]	LocalMktDate	
LegStreamCommoditySettlMonth	[0..1]	int	
LegStreamCommoditySettlDateRollPeriod	[0..1]	int	Conditionally required when LegStreamCommoditySettlDateRollUnit(41670) is specified.
LegStreamCommoditySettlDateRollUnit	[0..1]	CodeSet	Conditionally required when LegStreamCommoditySettlDateRollPeriod(41669) is specified.
LegStreamCommoditySettlDayType	[0..1]	CodeSet	
LegStreamCommoditySettlPeriodGrp	[0..*]	Group	
LegStreamCommodityXID	[0..1]	XID	
LegStreamCommodityXIDRef	[0..1]	XIDREF	

Used in groups: [LegStreamGrp](#)

180.2.2516 LegStreamCommodityCurrency

Identifies the currency of the commodity asset. Uses ISO 4217 currency codes.

Type: [Currency](#)

Used in components: [LegStreamCommodity](#)

180.2.2517 LegStreamCommodityDataSourceGrp

[LegStreamCommodityDataSourceGrp](#) is a subcomponent of the [LegStreamCommodity](#) component used to specify sources of data, e.g. weather stations. The order of entry determines priority – first is the main source, second is fallback, third is second fallback.

Name	Mult.	Type	Description
NoLegStreamCommodityDataSources	[1..1]	NumInGroup	
LegStreamCommodityDataSourceID	[0..1]	String	Required if NoLegStreamCommodityDataSources(41677) > 0.
LegStreamCommodityDataSourceID-Type	[0..1]	CodeSet	Required if NoLegStreamCommodityDataSources(41677) > 0.

Used in components: **LegStreamCommodity**

180.2.2518 LegStreamCommodityDataSourceID

Specifies the data source identifier.

Type: **String**

Used in groups: **LegStreamCommodityDataSourceGrp**

180.2.2519 LegStreamCommodityDataSourceIDType

Specifies the type of data source identifier.

Type: **int**

Allowed values in StreamCommodityDataSourceIDTypeCodeSet:

Code	Name	Description
0	City	City (4 character business center code)
1	Airport	Airport (IATA standard)
2	WeatherStation	Weather station WBAN (Weather Bureau Army Navy)
3	WeatherIndex	Weather index WMO (World Meteorological Organization)

Used in groups: **LegStreamCommodityDataSourceGrp**

180.2.2520 LegStreamCommodityDeliveryPricingRegion

The delivery or pricing region associated with the commodity swap. See http://www.ecfr.gov/cgi-bin/text-idx?SID=660d6a40f836aa6ddf213cba080c5b22&node=ap17.2.43_17.e&rgn=div9 for the external code list.

Type: **String**

Used in components: **LegStreamCommodity**

180.2.2521 LegStreamCommodityDesc

Description of the commodity asset.

Type: **String**

Used in components: **LegStreamCommodity**

180.2.2522 LegStreamCommodityExchange

Identifies the exchange where the commodity is traded.

Type: **Exchange**

Used in components: **LegStreamCommodity**

180.2.2523 LegStreamCommodityNearbySettlDayPeriod

Time unit multiplier for the nearby settlement day.

Type: **int**

Used in components: **LegStreamCommodity**

180.2.2524 LegStreamCommodityNearbySettlDayUnit

Time unit associated with the nearby settlement day.

Type: **String**

Allowed values in StreamCommodityNearbySettlDayUnitCodeSet:

Code	Name	Description
Wk	Week	Week
Mo	Month	Month

Used in components: **LegStreamCommodity**

180.2.2525 LegStreamCommodityPricingType

Specifies how the pricing or rate setting of the trade is to be determined or based upon.

See http://www.fixtradingcommunity.org/codelists#Commodity_Rate_Pricing_Type for code list of applicable commodity pricing types.

Type: **String**

Used in components: **LegStreamCommodity**

180.2.2526 LegStreamCommodityRateReferencePage

Identifies the reference "page" from the rate source.

Type: **String**

Used in components: **LegStreamCommodity**

180.2.2527 LegStreamCommodityRateReferencePageHeading

Identifies the page heading from the rate source.

Type: **String**

Used in components: **LegStreamCommodity**

180.2.2528 LegStreamCommodityRateSource

Identifies the source of rate information used for commodities.

See http://www.fixtradingcommunity.org/codelists#Commodity_Rate_Source for code list of applicable sources.

Type: **int**

Used in components: **LegStreamCommodity**

180.2.2529 LegStreamCommoditySecurityID

Specifies the market identifier for the commodity.

Type: **String**

Used in components: **LegStreamCommodity**

180.2.2530 LegStreamCommoditySecurityIDSource

Identifies the class or source of the LegStreamCommoditySecurityIDSource(41650) value.

Type: **String**

Allowed values in SecurityIDSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
3	QUIK	QUIK
4	ISINNumber	ISIN
5	RICCode	RIC
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
7	ISOCountryCode	ISO Country Code
8	ExchangeSymbol	Exchange symbol
9	ConsolidatedTapeAssociation	Consolidated Tape Association (CTA) Symbol (SIAC CTS/CQS line format)
A	BloombergSymbol	Bloomberg Symbol
B	Wertpapier	Wertpapier
C	Dutch	Dutch
D	Valoren	Valoren
E	Sicovam	Sicovam
F	Belgian	Belgian
G	Common	"Common" (Clearstream and Euroclear)
H	ClearingHouse	Clearing house / Clearing organization
I	ISDAFpMLSpecification	ISDA/FpML product specification (XML in SecurityXML(1185))
J	OptionPriceReportingAuthority	Option Price Reporting Authority
K	ISDAFpMLURL	ISDA/FpML product URL (URL in SecurityID(48))
L	LetterOfCredit	Letter of credit
M	MarketplaceAssignedIdentifier	Marketplace-assigned Identifier
N	MarkitREDEntityCLIP	Markit RED entity CLIP
P	MarkitREDPairCLIP	Markit RED pair CLIP
Q	CFTCCommodityCode	CFTC commodity code
R	ISDACommodityReferencePrice	ISDA Commodity Reference Price

Code	Name	Description
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
T	LegalEntityIdentifier	Legal entity identifier
U	Synthetic	Synthetic. Used to specify that the security identifier is synthetic for linking nested underliers when there is no market identifier for the collection.
V	FidessaInstrumentMnemonic	Fidessa Instrument Mnemonic (FIM)
W	IndexName	Index name. Standard name of the index or rate index, e.g. "LIBOR" or "iTraxx Australia".
X	UniformSymbol	Uniform Symbol (UMTF Symbol)
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in components: **LegStreamCommodity**

180.2.2531 LegStreamCommoditySettlBusinessCenter

The business center calendar used to adjust the commodity delivery date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **LegStreamCommoditySettlBusinessCenterGrp**

180.2.2532 LegStreamCommoditySettlBusinessCenterGrp

LegStreamCommoditySettlBusinessCenterGrp is a repeating subcomponent of the LegStreamCommodity component used to specify the set of business centers whose calendars drive date adjustment. Used only to override the business centers defined in the LegDateAdjustment component in InstrumentLeg.

Name	Mult.	Type	Description
NoLegStreamCommoditySettlBusinessCenters	[1..1]	NumInGroup	
LegStreamCommoditySettlBusinessCenter	[0..1]	String	Required if NoLegStreamCommoditySettlementBusinessCenters(41646) > 0.

Used in components: [LegStreamCommodity](#)

180.2.2533 LegStreamCommoditySettlCountry

Specifies the country where delivery takes place. Uses ISO 3166 2-character country code.

Type: [Country](#)

Used in groups: [LegStreamCommoditySettlPeriodGrp](#)

180.2.2534 LegStreamCommoditySettlDateAdjusted

The adjusted commodity delivery date.

Type: [LocalMktDate](#)

Used in components: [LegStreamCommodity](#)

180.2.2535 LegStreamCommoditySettlDateBusinessDayConvention

The business day convention used to adjust the commodity delivery date. Used only to override the business day convention specified in the LegDateAdjustment component within the InstrumentLeg component.

Type: [int](#)

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [LegStreamCommodity](#)

180.2.2536 LegStreamCommoditySettlDateRollPeriod

Time unit multiplier for the commodity delivery date roll.

Type: **int**

Used in components: **LegStreamCommodity**

180.2.2537 LegStreamCommoditySettlDateRollUnit

Time unit associated with the commodity delivery date roll.

Type: **String**

Allowed values in StreamCommoditySettlDateRollUnitCodeSet:

Code	Name	Description
D	Day	Day

Used in components: **LegStreamCommodity**

180.2.2538 LegStreamCommoditySettlDateUnadjusted

The unadjusted commodity delivery date.

Type: **LocalMktDate**

Used in components: **LegStreamCommodity**

180.2.2539 LegStreamCommoditySettlDay

Specifies the day or group of days for delivery.

Type: **int**

Allowed values in DeliveryScheduleSettlDayCodeSet:

Code	Name	Description
1	Monday	Monday
2	Tuesday	Tuesday
3	Wednesday	Wednesday

Code	Name	Description
4	Thursday	Thursday
5	Friday	Friday
6	Saturday	Saturday
7	Sunday	Sunday
8	AllWeekdays	All weekdays
9	AllDays	All days
10	AllWeekends	All weekends

Used in groups: [LegStreamCommoditySettlDayGrp](#)

180.2.2540 LegStreamCommoditySettlDayGrp

The LegStreamCommoditySettlDayGrp is a repeating subcomponent of the LegStreamCommoditySettlPeriodGrp component used to define the settlement days associated with the commodity contract.

Name	Mult.	Type	Description
NoLegStreamCommoditySettlDays	[1..1]	NumInGroup	
LegStreamCommoditySettlDay	[0..1]	CodeSet	Required if NoLegStreamCommoditySettlementDays(41680) > 0.
LegStreamCommoditySettlTotalHours	[0..1]	int	
LegStreamCommoditySettlTimeGrp	[0..*]	Group	

Used in groups: [LegStreamCommoditySettlPeriodGrp](#)

180.2.2541 LegStreamCommoditySettlDayType

Specifies the commodity delivery roll day type.

Type: [int](#)

Allowed values in ComplexEventDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: [LegStreamCommodity](#)

180.2.2542 LegStreamCommoditySettlEnd

The end time for commodity settlement where delivery occurs over time. The time format is specified by the settlement time type.

Type: [String](#)

Used in groups: [LegStreamCommoditySettlTimeGrp](#)

180.2.2543 LegStreamCommoditySettlFlowType

Specifies the commodity delivery flow type.

Type: [int](#)

Allowed values in DeliveryScheduleSettlFlowTypeCodeSet:

Code	Name	Description
0	AllTimes	All times
1	OnPeak	On peak
2	OffPeak	Off peak
3	Base	Base
4	BlockHours	Block hours
5	Other	Other

Used in groups: [LegStreamCommoditySettlPeriodGrp](#)

180.2.2544 LegStreamCommoditySettlHolidaysProcessingInstruction

Indicates whether holidays are included in the settlement periods. Required for electricity contracts.

Type: **int**

Allowed values in DeliveryScheduleSettlHolidaysProcessingInstructionCodeSet:

Code	Name	Description
0	DoNotIncludeHolidays	Do not include holidays
1	IncludeHolidays	Include holidays

Used in groups: **LegStreamCommoditySettlPeriodGrp**

180.2.2545 LegStreamCommoditySettlMonth

Specifies a fixed single month for commodity delivery.

Type: **int**

Used in components: **LegStreamCommodity**

180.2.2546 LegStreamCommoditySettlPeriodFrequencyPeriod

Time unit multiplier for the settlement period frequency.

Type: **int**

Used in groups: **LegStreamCommoditySettlPeriodGrp**

180.2.2547 LegStreamCommoditySettlPeriodFrequencyUnit

Time unit associated with the settlement period frequency.

Type: **String**

Allowed values in ProtectionTermEventUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week

Code	Name	Description
Mo	Month	Month
Yr	Year	Year

Used in groups: [LegStreamCommoditySettlPeriodGrp](#)

180.2.2548 LegStreamCommoditySettlPeriodGrp

The LegStreamCommoditySettlPeriodGrp is a repeating subcomponent of the LegStreamCommodity component used to to define the settlement period details associated with the commodity contract.

Name	Mult.	Type	Description
NoLegStreamCommoditySettlPeriods	[1..1]	NumInGroup	
LegStreamCommoditySettlCountry	[0..1]	Country	Required if NoLegStreamCommoditySettlPeriods (41686) > 0.
LegStreamCommoditySettlTimeZone	[0..1]	String	
LegStreamCommoditySettlFlowType	[0..1]	CodeSet	
LegStreamCommoditySettlPeriodNotional	[0..1]	Qty	
LegStreamCommoditySettlPeriodNotionalUnitOfMeasure	[0..1]	CodeSet	
LegStreamCommoditySettlPeriodFrequencyPeriod	[0..1]	int	Conditionally required when LegStreamCommoditySettlPeriodFrequencyUnit (41693) is specified.
LegStreamCommoditySettlPeriodFrequencyUnit	[0..1]	CodeSet	Conditionally required when LegStreamCommoditySettlPeriodFrequencyPeriod (41692) is specified.
LegStreamCommoditySettlPeriodPrice	[0..1]	Price	
LegStreamCommoditySettlPeriodPriceUnitOfMeasure	[0..1]	CodeSet	
LegStreamCommoditySettlPeriodPriceCurrency	[0..1]	Currency	
LegStreamCommoditySettlHolidaysProcessingInstruction	[0..1]	CodeSet	
LegStreamCommoditySettlDayGrp	[0..*]	Group	
LegStreamCommoditySettlPeriodXID	[0..1]	XID	
LegStreamCommoditySettlPeriodXIDRef	[0..1]	XIDREF	

Used in components: [LegStreamCommodity](#)

180.2.2549 LegStreamCommoditySettlPeriodNotional

Delivery quantity associated with this settlement period.

Type: [Qty](#)

Used in groups: [LegStreamCommoditySettlPeriodGrp](#)

180.2.2550 LegStreamCommoditySettlPeriodNotionalUnitOfMeasure

Specifies the unit of measure (UOM) of the delivery quantity associated with this settlement period.

Type: [String](#)

Allowed values in UnitOfMeasureCodeSet:

Code	Name	Description
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet
Bbl	Barrels	Barrels. Equal to 42 US gallons
CBM	CubicMeters	Cubic Meters
BDFT	BoardFeet	Board feet. Equal to 144 cubic inches
GJ	Gigajoules	gigajoules
Bu	Bushels	Bushels
kHR	HeatRate	Heat rate. The number of BTUs required to produce one kilowatt hour of electricity, typically 3,412.14 BTUs per 1 kWh.
Ccy	Currency	Amount of currency
kWh	KilowattHours	Kilowatt hours
CDD	CoolingDegreeDay	Cooling degree day
MHR	MegaHeatRate	Mega heat rate. The number of million BTUs required to produce one megawatt hour of electricity, typically 3.41214 million BTUs per 1 MWh.
CER	CertifiedEmissionsReduction	Certified emissions reduction
MMBtu	OneMillionBTU	One Million BTU
CPD	CriticalPrecipDay	Critical precipitation day
MWh	MegawattHours	Megawatt hours
CRT	ClimateReserveTonnes	Climate reserve tonnes

Code	Name	Description
thm	Therms	therms. Equal to 100,000 BTU
cwt	Hundredweight	Hundredweight(US). Equal to 100 lbs
tnCO2	TonsOfCarbonDioxide	Tons of carbon dioxide
day	Day	Days
dt	DryMetricTons	Dry metric tons
EnvAllwnc	EnvAllwncCert	Environmental allowance certificates
EnvCrd	EnvironmentalCredit	Environmental credit
EnvOfst	EnvironmentalOffset	Environmental Offset
g	Grams	Grams
Gal	Gallons	Gallons
GT	GrossTons	Gross tons. Also known as long tons or imperial tons, equal to 2240 lbs
HDD	HeatingDegreeDay	Heating degree day
IPNT	IndexPoint	Index point
kg	Kilograms	Kilograms
kL	Kiloliters	kiloliters
kW-a	KilowattYear	Kilowatt year (electrical capacity)
kW-d	KilowattDay	Kilowatt day (electrical capacity)
kW-h	KilowattHour	Kilowatt hour (electrical capacity)
kW-M	KilowattMonth	Kilowatt month (electrical capacity)
kW-min	KilowattMinute	Kilowatt-Minute (electrical capacity)
L	Liters	liters
lbs	Pounds	pounds
MW-a	MegawattYear	Megawatt year (electrical capacity)
MW-d	MegawattDay	Megawatt day (electrical capacity)
MW-h	MegawattHour	Megawatt hour (electrical capacity)
MW-M	MegawattMonth	Megawatt month (electrical capacity)
MW-min	MegawattMinute	Megawatt minute (electrical capacity)
oz_tr	TroyOunces	Troy ounces
PRINC	PrincipalWithRelationToDebtInstrument	Principal with relation to debt instrument
t	MetricTons	Metric tons. Also known as Tonnes, equal to 1000 kg
tn	Tons	Tons (US). Equal to 2000 lbs
a	Are	Are
ac	Acre	Acre

Code	Name	Description
cL	Centiliter	Centiliter
cM	Centimeter	Centimeter
DGE	DieselGallonEquivalent	Diesel gallon equivalent
ft	Foot	Foot
Gal_gb	GBGallon	GB Gallon
GGE	GasolineGallonEquivalent	Gasonline gallon equivalent
ha	Hectare	Hectare
in	Inch	Inch
kM	Kilometer	Kilometer
M	Meter	Meter
mi	Mile	Mile
mL	Milliliter	Milliliter
mM	Millimeter	Millimeter
oz	USOunce	US ounce
pc	Piece	Piece
pt	USPint	US Pint
pt_gb	GBPint	GB pint
qt	USQuart	US Quart
qt_gb	GBQuart	GB Quart
SqcM	SquareCentimeter	Square centimeter
Sqft	SquareFoot	Square foot
Sqin	SquareInch	Square inch
SqkM	SquareKilometer	Square kilometer
SqM	SquareMeter	Square meter
Sqmi	SquareMile	Square mile
SqmM	SquareMillimeter	Square millimeter
Sqyd	SquareYard	Square yard
yd	Yard	Yard
MMbbl	MillionBarrels	Million Barrels
USD	USDollars	US Dollars

Used in groups: [LegStreamCommoditySettlPeriodGrp](#)

180.2.2551 LegStreamCommoditySettlPeriodPrice

The settlement period price.

Type: **Price**

Used in groups: **LegStreamCommoditySettlPeriodGrp**

180.2.2552 LegStreamCommoditySettlPeriodPriceCurrency

The currency of the settlement period price. Uses ISO 4217 currency codes.

Type: **Currency**

Used in groups: **LegStreamCommoditySettlPeriodGrp**

180.2.2553 LegStreamCommoditySettlPeriodPriceUnitOfMeasure

The settlement period price unit of measure (UOM).

Type: **String**

Allowed values in UnitOfMeasureCodeSet:

Code	Name	Description
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet
Bbl	Barrels	Barrels. Equal to 42 US gallons

Used in groups: [LegStreamCommoditySettlPeriodGrp](#)

180.2.2554 LegStreamCommoditySettlPeriodXID

Identifier of this settlement period for cross referencing elsewhere in the message.

Type: [XID](#)

Used in groups: [LegStreamCommoditySettlPeriodGrp](#)

180.2.2555 LegStreamCommoditySettlPeriodXIDRef

Cross reference to another settlement period for duplicating its properties.

Type: [XIDREF](#)

Used in groups: [LegStreamCommoditySettlPeriodGrp](#)

180.2.2556 LegStreamCommoditySettlStart

The start time for commodity settlement where delivery occurs over time. The time format is specified by the settlement time type.

Type: [String](#)

Used in groups: [LegStreamCommoditySettlTimeGrp](#)

180.2.2557 LegStreamCommoditySettlTimeGrp

The LegStreamCommoditySettlTimeGrp is a repeating subcomponent of the LegStreamCommoditySettlDayGrp component used to define the settlement time periods associated with the commodity contract.

Name	Mult.	Type	Description
NoLegStreamCommoditySettlTimes	[1..1]	NumInGroup	
LegStreamCommoditySettlStart	[0..1]	String	Required if NoLegStreamCommoditySettlTimes(41683) > 0.
LegStreamCommoditySettlEnd	[0..1]	String	Required if NoLegStreamCommoditySettlTimes(41683) > 0.
LegStreamCommoditySettlTimeType	[0..1]	CodeSet	May be defaulted to market convention or bilaterally agreed if not specified.

Used in groups: [LegStreamCommoditySettlDayGrp](#)

180.2.2558 LegStreamCommoditySettlTimeType

Specifies the format of the commodity settlement start and end times.

Type: [int](#)

Allowed values in DeliveryScheduleSettlTimeTypeCodeSet:

Code	Name	Description
0	Hour	Hour of the day. Applicable for electricity contracts. Time value is expressed as an integer hour of the day (1-24). The delivery start/end hour is specified as the end of the included hour. For example, a start hour of "4" begins at 3 a.m.; an end hour of "20" ends at 8 p.m.; a start hour of "1" and end hour of "24" indicates midnight to midnight delivery.
1	Timestamp	HH:MM time format. Applicable for gas contracts. Time value is expressed using a 24-hour time format. For example, a time value of "13:30" is 1:30 p.m.

Used in groups: [LegStreamCommoditySettlTimeGrp](#)

180.2.2559 LegStreamCommoditySettlTimeZone

Commodity delivery timezone specified as "prevailing" rather than "standard" or "daylight".

See http://www.fixtradingcommunity.org/codelists#Prevailing_Timezones for code list of applicable prevailing timezones.

Type: [String](#)

Used in groups: [LegStreamCommoditySettlPeriodGrp](#)

180.2.2560 LegStreamCommoditySettlTotalHours

Sum of the hours specified in LegStreamCommoditySettlTimeGrp.

Type: [int](#)

Used in groups: [LegStreamCommoditySettlDayGrp](#)

180.2.2561 LegStreamCommodityType

Specifies the type of commodity product.

For coal see <http://www.fpml.org/coding-scheme/commodity-coal-product-type> for values.

For metals see <http://www.fpml.org/coding-scheme/commodity-metal-product-type> for values.

For bullion see http://www.fixtradingcommunity.org/codelists#Bullion_Types for the external code list of bullion types.

Type: **String**

Used in components: **LegStreamCommodity**

180.2.2562 LegStreamCommodityUnitOfMeasure

The unit of measure (UOM) of the commodity asset.

Type: **String**

Allowed values in UnitOfMeasureCodeSet:

Code	Name	Description
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet
Bbl	Barrels	Barrels. Equal to 42 US gallons
CBM	CubicMeters	Cubic Meters
BDFT	BoardFeet	Board feet. Equal to 144 cubic inches
GJ	Gigajoules	gigajoules
Bu	Bushels	Bushels
kHR	HeatRate	Heat rate. The number of BTUs required to produce one kilowatt hour of electricity, typically 3,412.14 BTUs per 1 kWh.
Ccy	Currency	Amount of currency
kWh	KilowattHours	Kilowatt hours
CDD	CoolingDegreeDay	Cooling degree day
MHR	MegaHeatRate	Mega heat rate. The number of million BTUs required to produce one megawatt hour of electricity, typically 3.41214 million BTUs per 1 MWh.
CER	CertifiedEmissionsReduction	Certified emissions reduction
MMBtu	OneMillionBTU	One Million BTU
CPD	CriticalPrecipDay	Critical precipitation day

Code	Name	Description
MWh	MegawattHours	Megawatt hours
CRT	ClimateReserveTonnes	Climate reserve tonnes
thm	Therms	therms. Equal to 100,000 BTU
cwt	Hundredweight	Hundredweight(US). Equal to 100 lbs
tnCO2	TonsOfCarbonDioxide	Tons of carbon dioxide
day	Day	Days
dt	DryMetricTons	Dry metric tons
EnvAllwnc	EnvAllwncCert	Environmental allowance certificates
EnvCrd	EnvironmentalCredit	Environmental credit
EnvOfst	EnvironmentalOffset	Environmental Offset
g	Grams	Grams
Gal	Gallons	Gallons
GT	GrossTons	Gross tons. Also known as long tons or imperial tons, equal to 2240 lbs
HDD	HeatingDegreeDay	Heating degree day
IPNT	IndexPoint	Index point
kg	Kilograms	Kilograms
kL	Kiloliters	kiloliters
kW-a	KilowattYear	Kilowatt year (electrical capacity)
kW-d	KilowattDay	Kilowatt day (electrical capacity)
kW-h	KilowattHour	Kilowatt hour (electrical capacity)
kW-M	KilowattMonth	Kilowatt month (electrical capacity)
kW-min	KilowattMinute	Kilowatt-Minute (electrical capacity)
L	Liters	liters
lbs	Pounds	pounds
MW-a	MegawattYear	Megawatt year (electrical capacity)
MW-d	MegawattDay	Megawatt day (electrical capacity)
MW-h	MegawattHour	Megawatt hour (electrical capacity)
MW-M	MegawattMonth	Megawatt month (electrical capacity)
MW-min	MegawattMinute	Megawatt minute (electrical capacity)
oz_tr	TroyOunces	Troy ounces
PRINC	PrincipalWithRelationToDebtInstrument	Principal with relation to debt instrument
t	MetricTons	Metric tons. Also known as Tonnes, equal to 1000 kg
tn	Tons	Tons (US). Equal to 2000 lbs

Code	Name	Description
a	Are	Are
ac	Acre	Acre
cL	Centiliter	Centiliter
cM	Centimeter	Centimeter
DGE	DieselGallonEquivalent	Diesel gallon equivalent
ft	Foot	Foot
Gal_gb	GBGallon	GB Gallon
GGE	GasolineGallonEquivalent	Gasonline gallon equivalent
ha	Hectare	Hectare
in	Inch	Inch
kM	Kilometer	Kilometer
M	Meter	Meter
mi	Mile	Mile
mL	Milliliter	Milliliter
mM	Millimeter	Millimeter
oz	USOunce	US ounce
pc	Piece	Piece
pt	USPint	US Pint
pt_gb	GBPint	GB pint
qt	USQuart	US Quart
qt_gb	GBQuart	GB Quart
SqcM	SquareCentimeter	Square centimeter
Sqft	SquareFoot	Square foot
Sqin	SquareInch	Square inch
SqkM	SquareKilometer	Square kilometer
SqM	SquareMeter	Square meter
Sqmi	SquareMile	Square mile
SqmM	SquareMillimeter	Square millimeter
Sqyd	SquareYard	Square yard
yd	Yard	Yard
MMbbl	MillionBarrels	Million Barrels
USD	USDollars	US Dollars

Used in components: [LegStreamCommodity](#)

180.2.2563 LegStreamCommodityXID

Identifier of this stream commodity for cross referencing elsewhere in the message.

Type: **XID**

Used in components: **LegStreamCommodity**

180.2.2564 LegStreamCommodityXIDRef

Reference to a stream commodity elsewhere in the message.

Type: **XIDREF**

Used in components: **LegStreamCommodity**

180.2.2565 LegStreamCurrency

Specifies the currency the LegStreamNotional(40246) is denominated in. Uses ISO 4217 currency codes.

Type: **Currency**

Used in groups: **LegStreamGrp**

180.2.2566 LegStreamDataProvider

Specifies the commodity data or information provider.

See <http://www.fpml.org/coding-scheme/commodity-information-provider> for values.

Type: **String**

Used in components: **LegStreamCommodity**

180.2.2567 LegStreamDesc

A short descriptive name given to the payment stream, e.g. CDS, Fixed, Float, Float2, GBP. The description has no intrinsic meaning but should be arbitrarily chosen by the remitter as a reference.

Type: **String**

Used in groups: **LegStreamGrp**

180.2.2568 LegStreamEffectiveDateAdjusted

The adjusted effective date.

Type: **LocalMktDate**

Used in components: **LegStreamEffectiveDate**

180.2.2569 LegStreamEffectiveDateBusinessCenter

The business center calendar used to adjust the instrument leg's stream's effective date or relative effective date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **LegStreamEffectiveDateBusinessCenterGrp**

180.2.2570 LegStreamEffectiveDateBusinessCenterGrp

LegStreamEffectiveDateBusinessCenterGrp is a repeating subcomponent within the LegStreamEffectiveDate component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the LegDateAdjustment component in InstrumentLeg.

Name	Mult.	Type	Description
NoLegStreamEffectiveDateBusinessCenters	[1..1]	NumInGroup	
LegStreamEffectiveDateBusinessCenter	[0..1]	String	Required if NoLegStreamEffectiveDateBusinessCenters(40942) > 0.

Used in components: **LegStreamEffectiveDate**

180.2.2571 LegStreamEffectiveDateBusinessDayConvention

The business day convention used to adjust the instrument leg's stream's effective date or relative effective date. Used only to override the business day convention specified in the LegDateAdjustment component within the InstrumentLeg component.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [LegStreamEffectiveDate](#)

180.2.2572 LegStreamEffectiveDate

LegStreamEffectiveDate is a subcomponent of the LegStreamGrp component used to specify the effective date of the stream.

Name	Mult.	Type	Description
LegStreamEffectiveDateUnadjusted	[0..1]	LocalMktDate	
LegStreamEffectiveDateBusinessDay-Convention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the LegDateAdjustment component in InstrumentLeg. The specified value would be specific to this instance of the leg stream effective date.
LegStreamEffectiveDateBusinessCenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the LegDateAdjustment component in InstrumentLeg. The specified values would be specific to this instance of the leg stream effective date.
LegStreamEffectiveDateRelativeTo	[0..1]	int	
LegStreamEffectiveDateOffsetPeriod	[0..1]	int	Conditionally required when LegPaymentStream-EffectiveDateOffsetUnit(40254) is specified.
LegStreamEffectiveDateOffsetUnit	[0..1]	CodeSet	Conditionally required when LegPaymentStream-EffectiveDateOffsetPeriod(40253) is specified.
LegStreamEffectiveDateOffsetDayType	[0..1]	CodeSet	
LegStreamEffectiveDateAdjusted	[0..1]	LocalMktDate	

Name	Mult.	Type	Description
------	-------	------	-------------

Used in groups: [LegStreamGrp](#)

180.2.2573 LegStreamEffectiveDateOffsetDayType

Specifies the day type of the relative effective date offset.

Type: [int](#)

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: [LegStreamEffectiveDate](#)

180.2.2574 LegStreamEffectiveDateOffsetPeriod

Time unit multiplier for the relative effective date offset.

Type: [int](#)

Used in components: [LegStreamEffectiveDate](#)

180.2.2575 LegStreamEffectiveDateOffsetUnit

Time unit associated with the relative effective date offset.

Type: [String](#)

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: [LegStreamEffectiveDate](#)

180.2.2576 LegStreamEffectiveDateRelativeTo

Specifies the anchor date when the effective date is relative to an anchor date.

See http://www.fixtradingcommunity.org/codelists#Relative_To_Date for values

Type: [int](#)

Used in components: [LegStreamEffectiveDate](#)

180.2.2577 LegStreamEffectiveDateUnadjusted

The unadjusted effective date.

Type: [LocalMktDate](#)

Used in components: [LegStreamEffectiveDate](#)

180.2.2578 LegStreamFirstCompoundingPeriodEndDateUnadjusted

The unadjusted end date of the initial compounding period.

Type: [LocalMktDate](#)

Used in components: [LegStreamCalculationPeriodDates](#)

180.2.2579 LegStreamFirstPeriodStartDateAdjusted

The adjusted first calculation period start date, if it is before the effective date.

Type: [LocalMktDate](#)

Used in components: [LegStreamCalculationPeriodDates](#)

180.2.2580 LegStreamFirstPeriodStartDateBusinessCenter

The business center calendar used to adjust the instrument leg's stream's first calculation period start date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: **String**

Used in groups: **LegStreamFirstPeriodStartDateBusinessCenterGrp**

180.2.2581 LegStreamFirstPeriodStartDateBusinessCenterGrp

LegStreamFirstPeriodStartDateBusinessCenterGrp is a repeating subcomponent within the LegStreamCalculationPeriodDates component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the LegDateAdjustment component in InstrumentLeg.

Name	Mult.	Type	Description
NoLegStreamFirstPeriodStartDateBusinessCenters	[1..1]	NumInGroup	
LegStreamFirstPeriodStartDateBusinessCenter	[0..1]	String	Required if NoLegStreamFirstPeriodStartDateBusinessCenters(40941) > 0.

Used in components: **LegStreamCalculationPeriodDates**

180.2.2582 LegStreamFirstPeriodStartDateBusinessDayConvention

The business day convention used to adjust the instrument leg's stream's first calculation period start date. Used only to override the business day convention specified in the LegDateAdjustment component within the InstrumentLeg component.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)

Code	Name	Description
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: [LegStreamCalculationPeriodDates](#)

180.2.2583 LegStreamFirstPeriodStartDateUnadjusted

The unadjusted first calculation period start date if before the effective date.

Type: [LocalMktDate](#)

Used in components: [LegStreamCalculationPeriodDates](#)

180.2.2584 LegStreamFirstRegularPeriodStartDateUnadjusted

The unadjusted first start date of the regular calculation period, if there is an initial stub period.

Type: [LocalMktDate](#)

Used in components: [LegStreamCalculationPeriodDates](#)

180.2.2585 LegStreamGrp

The LegStreamGrp is a repeating subcomponent of the InstrumentLeg component used to detail the swap streams associated with the instrument.

Name	Mult.	Type	Description
NoLegStreams	[1..1]	NumInGroup	
LegStreamType	[0..1]	CodeSet	Required if NoLegStreams(40241) > 0.
LegStreamXID	[0..1]	XID	
LegStreamDesc	[0..1]	String	
LegStreamVersion	[0..1]	String	

Name	Mult.	Type	Description
LegStreamVersionEffectiveDate	[0..1]	LocalMktDate	
LegStreamPaySide	[0..1]	CodeSet	
LegStreamReceiveSide	[0..1]	CodeSet	
LegStreamNotionalXIDRef	[0..1]	XIDREF	
LegStreamNotional	[0..1]	Amt	
LegStreamCurrency	[0..1]	Currency	
LegStreamNotionalDetermination-Method	[0..1]	String	
LegStreamNotionalAdjustments	[0..1]	CodeSet	
LegStreamNotionalFrequencyPeriod	[0..1]	int	Conditionally required when LegStreamNotionalFrequencyUnit(41704) is specified.
LegStreamNotionalFrequencyUnit	[0..1]	CodeSet	Conditionally required when LegStreamNotionalFrequencyPeriod(41703) is specified.
LegStreamNotionalCommodityFrequency	[0..1]	CodeSet	
LegStreamNotionalUnitOfMeasure	[0..1]	CodeSet	
LegStreamTotalNotional	[0..1]	Qty	
LegStreamTotalNotionalUnitOfMeasure	[0..1]	CodeSet	
LegStreamCommodity	[0..1]	Component	
LegStreamEffectiveDate	[0..1]	Component	
LegStreamTerminationDate	[0..1]	Component	
LegStreamCalculationPeriodDates	[0..1]	Component	
LegPaymentStream	[0..1]	Component	
LegPaymentScheduleGrp	[0..*]	Group	
LegPaymentStubGrp	[0..*]	Group	
LegDeliveryStream	[0..1]	Component	
LegDeliveryScheduleGrp	[0..*]	Group	
LegStreamText	[0..1]	String	
EncodedLegStreamTextLen	[0..1]	Length	Must be set if EncodedLegStreamText(40979) field is specified and must immediately precede it.

EncodedLegStreamText	[0..1]	data	Encoded (non-ASCII characters) representation of the LegStreamText(40248) field in the encoded format specified via the MessageEncoding(347) field.
----------------------	--------	------	---

Used in components: [InstrumentLeg](#)

180.2.2586 LegStreamLastRegularPeriodEndDateUnadjusted

The unadjusted last regular period end date if there is a final stub period.

Type: [LocalMktDate](#)

Used in components: [LegStreamCalculationPeriodDates](#)

180.2.2587 LegStreamMaximumPaymentAmount

Specifies the limit on the total payment amount.

Type: [Amt](#)

Used in components: [LegPaymentStream](#)

180.2.2588 LegStreamMaximumPaymentCurrency

Specifies the currency of total payment amount limit. Uses ISO 4217 currency codes.

Type: [Currency](#)

Used in components: [LegPaymentStream](#)

180.2.2589 LegStreamMaximumTransactionAmount

Specifies the limit on the payment amount that goes out in any particular calculation period.

Type: [Amt](#)

Used in components: [LegPaymentStream](#)

180.2.2590 LegStreamMaximumTransactionCurrency

Specifies the currency of the period payment amount limit. Uses ISO 4217 currency codes.

Type: **Currency**

Used in components: **LegPaymentStream**

180.2.2591 LegStreamNotional

Notional, or initial notional value for the payment stream. The LegPaymentSchedule component should be used for specifying the steps.

Type: **Amt**

Used in groups: **LegStreamGrp**

180.2.2592 LegStreamNotionalAdjustments

For equity swaps this specifies the conditions that govern the adjustment to the number of units of the swap.

Type: **int**

Allowed values in StreamNotionalAdjustmentsCodeSet:

Code	Name	Description
0	Execution	Execution. The adjustments to the number of units are governed by an execution clause.
1	PortfolioRebalancing	Portfolio rebalancing. The adjustments to the number of units are governed by a portfolio rebalancing clause.
2	Standard	Standard. The adjustments to the number of units are not governed by any specific clause.

Used in groups: **LegStreamGrp**

180.2.2593 LegStreamNotionalCommodityFrequency

The commodity's notional or quantity delivery frequency.

Type: **int**

Allowed values in StreamNotionalCommodityFrequencyCodeSet:

Code	Name	Description
0	Term	Term
1	PerBusinessDay	Per business day
2	PerCalculationPeriod	Per calculation period
3	PerSettlPeriod	Per settlement period
4	PerCalendarDay	Per calendar day
5	PerHour	Per hour
6	PerMonth	Per month

Used in groups: **LegStreamGrp**

180.2.2594 LegStreamNotionalDeterminationMethod

Specifies the method for determining the floating notional value for equity swaps.

See <http://www.fpml.org/coding-scheme/determination-method> for values.

Type: **String**

Used in groups: **LegStreamGrp**

180.2.2595 LegStreamNotionalFrequencyPeriod

Time unit multiplier for the swap stream's notional frequency.

Type: **int**

Used in groups: **LegStreamGrp**

180.2.2596 LegStreamNotionalFrequencyUnit

Time unit associated with the swap stream's notional frequency.

Type: **String**

Allowed values in TimeUnitCodeSet:

Code	Name	Description
H	Hour	Hour
Min	Minute	Minute
S	Second	Second
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year
Q	Quarter	Quarter
EOM	EndOfMonth	End of Month. End of Month identifies a relative time unit, e.g. until the third Friday of each month.
F	Flexible	Flexible. A flexible time unit indicates that a specific time unit for the contract is currently undetermined.

Used in groups: **LegStreamGrp**

180.2.2597 LegStreamNotionalUnitOfMeasure

Specifies the delivery quantity unit of measure (UOM).

Type: **String**

Allowed values in UnitOfMeasureCodeSet:

Code	Name	Description
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet
Bbl	Barrels	Barrels. Equal to 42 US gallons
CBM	CubicMeters	Cubic Meters
BDFT	BoardFeet	Board feet. Equal to 144 cubic inches
GJ	Gigajoules	gigajoules
Bu	Bushels	Bushels
kHR	HeatRate	Heat rate. The number of BTUs required to produce one kilowatt hour of electricity, typically 3,412.14 BTUs per 1 kWh.
Ccy	Currency	Amount of currency
kWh	KilowattHours	Kilowatt hours
CDD	CoolingDegreeDay	Cooling degree day

Code	Name	Description
MHR	MegaHeatRate	Mega heat rate. The number of million BTUs required to produce one megawatt hour of electricity, typically 3.41214 million BTUs per 1 MWh.
CER	CertifiedEmissionsReduction	Certified emissions reduction
MMBtu	OneMillionBTU	One Million BTU
CPD	CriticalPrecipDay	Critical precipitation day
MWh	MegawattHours	Megawatt hours
CRT	ClimateReserveTonnes	Climate reserve tonnes
thm	Therms	therms. Equal to 100,000 BTU
cwt	Hundredweight	Hundredweight(US). Equal to 100 lbs
tnCO2	TonsOfCarbonDioxide	Tons of carbon dioxide
day	Day	Days
dt	DryMetricTons	Dry metric tons
EnvAllwnc	EnvAllwncCert	Environmental allowance certificates
EnvCrd	EnvironmentalCredit	Environmental credit
EnvOfst	EnvironmentalOffset	Environmental Offset
g	Grams	Grams
Gal	Gallons	Gallons
GT	GrossTons	Gross tons. Also known as long tons or imperial tons, equal to 2240 lbs
HDD	HeatingDegreeDay	Heating degree day
IPNT	IndexPoint	Index point
kg	Kilograms	Kilograms
kL	Kiloliters	kiloliters
kW-a	KilowattYear	Kilowatt year (electrical capacity)
kW-d	KilowattDay	Kilowatt day (electrical capacity)
kW-h	KilowattHour	Kilowatt hour (electrical capacity)
kW-M	KilowattMonth	Kilowatt month (electrical capacity)
kW-min	KilowattMinute	Kilowatt-Minute (electrical capacity)
L	Liters	liters
lbs	Pounds	pounds
MW-a	MegawattYear	Megawatt year (electrical capacity)
MW-d	MegawattDay	Megawatt day (electrical capacity)
MW-h	MegawattHour	Megawatt hour (electrical capacity)
MW-M	MegawattMonth	Megawatt month (electrical capacity)

Code	Name	Description
MW-min	MegawattMinute	Megawatt minute (electrical capacity)
oz_tr	TroyOunces	Troy ounces
PRINC	PrincipalWithRelationToDebtInstrument	Principal with relation to debt instrument
t	MetricTons	Metric tons. Also known as Tonnes, equal to 1000 kg
tn	Tons	Tons (US). Equal to 2000 lbs
a	Are	Are
ac	Acre	Acre
cL	Centiliter	Centiliter
cM	Centimeter	Centimeter
DGE	DieselGallonEquivalent	Diesel gallon equivalent
ft	Foot	Foot
Gal_gb	GBGallon	GB Gallon
GGE	GasolineGallonEquivalent	Gasonline gallon equivalent
ha	Hectare	Hectare
in	Inch	Inch

Sqft	SquareFoot	Square foot
Sqin	SquareInch	Square inch
SqkM	SquareKilometer	Square kilometer
SqM	SquareMeter	Square meter
Sqmi	SquareMile	Square mile
SqmM	SquareMillimeter	Square millimeter

Code	Name	Description
Sqyd	SquareYard	Square yard
yd	Yard	Yard
MMbbl	MillionBarrels	Million Barrels
USD	USDollars	US Dollars

Used in groups: [LegStreamGrp](#)

180.2.2598 LegStreamNotionalXIDRef

Cross reference to another LegStream notional for duplicating its properties.

Type: [XIDREF](#)

Used in groups: [LegStreamGrp](#)

180.2.2599 LegStreamPaySide

The side of the party paying the stream.

Type: [int](#)

Allowed values in PaymentPaySideCodeSet:

Code	Name	Description
1	Buy	Buy
2	Sell	Sell

Used in groups: [LegStreamGrp](#)

180.2.2600 LegStreamReceiveSide

The side of the party receiving the stream.

Type: [int](#)

Allowed values in PaymentPaySideCodeSet:

Code	Name	Description
1	Buy	Buy
2	Sell	Sell

Used in groups: [LegStreamGrp](#)

180.2.2601 LegStreamTerminationDateAdjusted

The adjusted termination date.

Type: [LocalMktDate](#)

Used in components: [LegStreamTerminationDate](#)

180.2.2602 LegStreamTerminationDateBusinessCenter

The business center calendar used to adjust the instrument leg's stream's termination, or relative termination, date, e.g. "GBLO".

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in groups: [LegStreamTerminationDateBusinessCenterGrp](#)

180.2.2603 LegStreamTerminationDateBusinessCenterGrp

LegStreamTerminationDateBusinessCenterGrp is a repeating subcomponent within the LegStreamTerminationDate component. It is used to specify the set of business centers whose calendars drive the date adjustment. Used only to override the business centers defined in the LegDateAdjustment component in InstrumentLeg.

Name	Mult.	Type	Description
NoLegStreamTerminationDateBusinessCenters	[1..1]	NumInGroup	
LegStreamTerminationDateBusinessCenter	[0..1]	String	Required if NoLegStreamTerminationDateBusinessCenters (40943) > 0.

Used in components: [LegStreamTerminationDate](#)

180.2.2604 LegStreamTerminationDateBusinessDayConvention

The business day convention used to adjust the instrument leg's stream's termination, or relative termination, date. Used only to override the business day convention specified in the LegDateAdjustment component within the InstrumentLeg component.

Type: **int**

Allowed values in BusinessDayConventionCodeSet:

Code	Name	Description
0	NotApplicable	Not applicable. Business day convention is not applicable.
1	None	None (current day)
2	FollowingDay	Following day. The following business day.
3	FloatingRateNote	Floating rate note. The FRN business day convention.
4	ModifiedFollowingDay	Modified following day. The modified following business day.
5	PrecedingDay	Preceding day. The preceding business day.
6	ModifiedPrecedingDay	Modified preceding day. The modified preceding business day.
7	NearestDay	Nearest day. The nearest applicable business day.

Used in components: **LegStreamTerminationDate**

180.2.2605 LegStreamTerminationDate

LegStreamTerminationDate is a subcomponent of the LegStreamGrp component used to specify the termination date of the stream.

Name	Mult.	Type	Description
LegStreamTerminationDateUnadjusted	[0..1]	LocalMktDate	
LegStreamTerminationDateBusinessDayConvention	[0..1]	CodeSet	When specified, this overrides the business day convention defined in the LegDateAdjustment component in InstrumentLeg. The specified value would be specific to this instance of the leg stream termination date.

Name	Mult.	Type	Description
LegStreamTerminationDateBusiness-CenterGrp	[0..*]	Group	When specified, this overrides the business centers defined in the LegDateAdjustment component in InstrumentLeg. The specified values would be specific to this instance of the leg stream termination date.
LegStreamTerminationDateRelativeTo	[0..1]	int	
LegStreamTerminationDateOffsetPeriod	[0..1]	int	Conditionally required when LegStreamTerminationDateOffsetUnit(40262) is specified.
LegStreamTerminationDateOffsetUnit	[0..1]	CodeSet	Conditionally required when LegStreamTerminationDateOffsetPeriod(40261) is specified.
LegStreamTerminationDateOffsetDayType	[0..1]	CodeSet	
LegStreamTerminationDateAdjusted	[0..1]	LocalMktDate	

Used in groups: [LegStreamGrp](#)

180.2.2606 [LegStreamTerminationDateOffsetDayType](#)

Specifies the day type of the relative termination date offset.

Type: [int](#)

Allowed values in PaymentStreamPaymentDateOffsetDayTypeCodeSet:

Code	Name	Description
0	Business	Business
1	Calendar	Calendar
2	CommodityBusiness	Commodity business
3	CurrencyBusiness	Currency business
4	ExchangeBusiness	Exchange business
5	ScheduledTradingDay	Scheduled trading day

Used in components: [LegStreamTerminationDate](#)

180.2.2607 LegStreamTerminationDateOffsetPeriod

Time unit multiplier for the relative termination date offset.

Type: **int**

Used in components: **LegStreamTerminationDate**

180.2.2608 LegStreamTerminationDateOffsetUnit

Time unit associated with the relative termination date offset.

Type: **String**

Allowed values in PaymentStreamPaymentDateOffsetUnitCodeSet:

Code	Name	Description
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year

Used in components: **LegStreamTerminationDate**

180.2.2609 LegStreamTerminationDateRelativeTo

Specifies the anchor date when the termination date is relative to an anchor date.

See http://www.fixtradingcommunity.org/codelists#Relative_To_Date for values.

Type: **int**

Used in components: **LegStreamTerminationDate**

180.2.2610 LegStreamTerminationDateUnadjusted

The unadjusted termination date.

Type: **LocalMktDate**

Used in components: **LegStreamTerminationDate**

180.2.2611 LegStreamText

Free form text to specify additional information or enumeration description when a standard value does not apply.

Type: **String**

Used in groups: **LegStreamGrp**

180.2.2612 LegStreamTotalNotional

Specifies the total notional or delivery quantity over the term of the contract.

Type: **Qty**

Used in groups: **LegStreamGrp**

180.2.2613 LegStreamTotalNotionalUnitOfMeasure

Specifies the unit of measure (UOM) for the total notional or delivery quantity over the term of the contract.

Type: **String**

Allowed values in UnitOfMeasureCodeSet:

Code	Name	Description
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet
Bbl	Barrels	Barrels. Equal to 42 US gallons
CBM	CubicMeters	Cubic Meters
BDFT	BoardFeet	Board feet. Equal to 144 cubic inches
GJ	Gigajoules	gigajoules
Bu	Bushels	Bushels
kHR	HeatRate	Heat rate. The number of BTUs required to produce one kilowatt hour of electricity, typically 3,412.14 BTUs per 1 kWh.
Ccy	Currency	Amount of currency
kWh	KilowattHours	Kilowatt hours
CDD	CoolingDegreeDay	Cooling degree day

Code	Name	Description
MHR	MegaHeatRate	Mega heat rate. The number of million BTUs required to produce one megawatt hour of electricity, typically 3.41214 million BTUs per 1 MWh.
CER	CertifiedEmissionsReduction	Certified emissions reduction
MMBtu	OneMillionBTU	One Million BTU
CPD	CriticalPrecipDay	Critical precipitation day
MWh	MegawattHours	Megawatt hours
CRT	ClimateReserveTonnes	Climate reserve tonnes
thm	Therms	therms. Equal to 100,000 BTU
cwt	Hundredweight	Hundredweight(US). Equal to 100 lbs
tnCO2	TonsOfCarbonDioxide	Tons of carbon dioxide
day	Day	Days
dt	DryMetricTons	Dry metric tons
EnvAllwnc	EnvAllwncCert	Environmental allowance certificates
EnvCrd	EnvironmentalCredit	Environmental credit
EnvOfst	EnvironmentalOffset	Environmental Offset
g	Grams	Grams
Gal	Gallons	Gallons
GT	GrossTons	Gross tons. Also known as long tons or imperial tons, equal to 2240 lbs
HDD	HeatingDegreeDay	Heating degree day
IPNT	IndexPoint	Index point
kg	Kilograms	Kilograms
kL	Kiloliters	kiloliters
kW-a	KilowattYear	Kilowatt year (electrical capacity)
kW-d	KilowattDay	Kilowatt day (electrical capacity)
kW-h	KilowattHour	Kilowatt hour (electrical capacity)
kW-M	KilowattMonth	Kilowatt month (electrical capacity)
kW-min	KilowattMinute	Kilowatt-Minute (electrical capacity)
L	Liters	liters
lbs	Pounds	pounds
MW-a	MegawattYear	Megawatt year (electrical capacity)
MW-d	MegawattDay	Megawatt day (electrical capacity)
MW-h	MegawattHour	Megawatt hour (electrical capacity)
MW-M	MegawattMonth	Megawatt month (electrical capacity)

Code	Name	Description
MW-min	MegawattMinute	Megawatt minute (electrical capacity)
oz_tr	TroyOunces	Troy ounces
PRINC	PrincipalWithRelationToDebtInstrument	Principal with relation to debt instrument
t	MetricTons	Metric tons. Also known as Tonnes, equal to 1000 kg
tn	Tons	Tons (US). Equal to 2000 lbs
a	Are	Are
ac	Acre	Acre
cL	Centiliter	Centiliter
cM	Centimeter	Centimeter
DGE	DieselGallonEquivalent	Diesel gallon equivalent
ft	Foot	Foot
Gal_gb	GBGallon	GB Gallon
GGE	GasolineGallonEquivalent	Gasonline gallon equivalent
ha	Hectare	Hectare
in	Inch	Inch
kM	Kilometer	Kilometer
M	Meter	Meter
mi	Mile	Mile
mL	Milliliter	Milliliter
mM	Millimeter	Millimeter
oz	USOunce	US ounce
pc	Piece	Piece
pt	USPint	US Pint
pt_gb	GBPint	GB pint
qt	USQuart	US Quart
qt_gb	GBQuart	GB Quart
SqcM	SquareCentimeter	Square centimeter
Sqft	SquareFoot	Square foot
Sqin	SquareInch	Square inch
SqkM	SquareKilometer	Square kilometer
SqM	SquareMeter	Square meter
Sqmi	SquareMile	Square mile
SqmM	SquareMillimeter	Square millimeter

Code	Name	Description
Sqyd	SquareYard	Square yard
yd	Yard	Yard
MMbbl	MillionBarrels	Million Barrels
USD	USDollars	US Dollars

Used in groups: [LegStreamGrp](#)

180.2.2614 LegStreamType

Type of swap stream.

Type: [int](#)

Allowed values in StreamTypeCodeSet:

Code	Name	Description
0	PaymentCashSettlement	Payment / cash settlement
1	PhysicalDelivery	Physical delivery

Used in groups: [LegStreamGrp](#)

180.2.2615 LegStreamVersion

The stream version identifier when there have been modifications to the contract over time. Helps signal when there are embedded changes.

Type: [String](#)

Used in groups: [LegStreamGrp](#)

180.2.2616 LegStreamVersionEffectiveDate

The effective date of the LegStreamVersion(42583).

Type: [LocalMktDate](#)

Used in groups: [LegStreamGrp](#)

180.2.2617 LegStreamXID

Identifier of this LegStream for cross referencing elsewhere in the message.

Type: **XID**

Used in groups: **LegStreamGrp**

180.2.2618 LegStrikeCurrency

Currency in which the strike price of a instrument leg of a multileg instrument is denominated

Type: **Currency**

Used in components: **InstrumentLeg**

180.2.2619 LegStrikeCurrencyCodeSource

Identifies class or source of the LegStrikeCurrency(942) value.

Type: **String**

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbolology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in components: **InstrumentLeg**

180.2.2620 LegStrikeIndex

Specifies the index used to calculate the strike price.

Type: **String**

Used in components: **InstrumentLeg**

180.2.2621 LegStrikeIndexCurvePoint

The point on the floating rate index curve. Sample values:

M = combination of a number between 1-12 and an "M" for month, e.g. 3M

Y = combination of number between 1-100 and a "Y" for year, e.g. 10Y

10Y-OLD = see above, then add "-OLD" when appropriate

INTERPOLATED = the point is mathematically derived

2/2031 5 3/8 = the point is stated via a combination of maturity month / year and coupon.

Type: **String**

Used in components: **InstrumentLeg**

180.2.2622 LegStrikeIndexQuote

The quote side from which the index price is to be determined.

Type: **int**

Allowed values in StrikeIndexQuoteCodeSet:

Code	Name	Description
0	Bid	Bid.
1	Mid	Mid
2	Offer	Offer

Used in components: **InstrumentLeg**

180.2.2623 LegStrikeIndexSpread

Specifies the strike price offset from the named index.

Type: **PriceOffset**

Used in components: **InstrumentLeg**

180.2.2624 LegStrikeMultiplier

Used for derivatives. Multiplier applied to the strike price for the purpose of calculating the settlement value.

Type: **float**

Used in components: **InstrumentLeg**

180.2.2625 LegStrikePrice

Multileg instrument's individual security's StrikePrice.

See StrikePrice (202) field for description

Type: **Price**

Used in components: **InstrumentLeg**

180.2.2626 LegStrikePriceBoundaryMethod

Specifies the boundary condition to be used for the strike price relative to the underlying price at the point of option exercise.

Type: **int**

Allowed values in StrikePriceBoundaryMethodCodeSet:

Code	Name	Description
1	LessThan	Less than underlying price is in-the-money (ITM)
2	LessThanOrEqual	Less than or equal to the underlying price is in-the-money(ITM)
3	Equal	Equal to the underlying price is in-the-money(ITM)
4	GreaterThanOrEqual	Greater than or equal to underlying price is in-the-money(ITM)
5	GreaterThan	Greater than underlying is in-the-money(ITM)

Used in components: **InstrumentLeg**

180.2.2627 LegStrikePriceBoundaryPrecision

Used in combination with StrikePriceBoundaryMethod(2187) to specify the percentage of the strike price in relation to the underlying price. The percentage is generally 100 or greater for puts and 100 or less for calls.

Type: **Percentage**

Used in components: **InstrumentLeg**

180.2.2628 LegStrikePriceDeterminationMethod

Specifies how the strike price is determined at the point of option exercise. The strike may be fixed throughout the life of the option, set at expiration to the value of the underlying, set to the average value of the underlying , or set to the optimal value of the underlying.

Type: **int**

Allowed values in StrikePriceDeterminationMethodCodeSet:

Code	Name	Description
1	FixedStrike	Fixed strike (default if not specified)
2	StrikeSetAtExpiration	Strike set at expiration to underlying or other value (lookback floating)
3	StrikeSetToAverageAcrossLife	Strike set to average of underlying settlement price across the life of the option
4	StrikeSetToOptimalValue	Strike set to optimal value

Used in components: **InstrumentLeg**

180.2.2629 LegStrikeUnitOfMeasure

Used to express the unit of measure (UOM) of the price if different from the contract.

Type: **String**

Allowed values in UnitOfMeasureCodeSet:

Code	Name	Description
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet
Bbl	Barrels	Barrels. Equal to 42 US gallons
CBM	CubicMeters	Cubic Meters
BDFT	BoardFeet	Board feet. Equal to 144 cubic inches
GJ	Gigajoules	gigajoules

Code	Name	Description
Bu	Bushels	Bushels
kHR	HeatRate	Heat rate. The number of BTUs required to produce one kilowatt hour of electricity, typically 3,412.14 BTUs per 1 kWh.
Ccy	Currency	Amount of currency
kWh	KilowattHours	Kilowatt hours
CDD	CoolingDegreeDay	Cooling degree day
MHR	MegaHeatRate	Mega heat rate. The number of million BTUs required to produce one megawatt hour of electricity, typically 3.41214 million BTUs per 1 MWh.
CER	CertifiedEmissionsReduction	Certified emissions reduction
MMBtu	OneMillionBTU	One Million BTU
CPD	CriticalPrecipDay	Critical precipitation day
MWh	MegawattHours	Megawatt hours
CRT	ClimateReserveTonnes	Climate reserve tonnes
thm	Therms	therms. Equal to 100,000 BTU
cwt	Hundredweight	Hundredweight(US). Equal to 100 lbs
tnCO2	TonsOfCarbonDioxide	Tons of carbon dioxide
day	Day	Days
dt	DryMetricTons	Dry metric tons
EnvAllwnc	EnvAllwncCert	Environmental allowance certificates
EnvCrd	EnvironmentalCredit	Environmental credit
EnvOfst	EnvironmentalOffset	Environmental Offset
g	Grams	Grams
Gal	Gallons	Gallons
GT	GrossTons	Gross tons. Also known as long tons or imperial tons, equal to 2240 lbs
HDD	HeatingDegreeDay	Heating degree day
IPNT	IndexPoint	Index point
kg	Kilograms	Kilograms
kL	Kiloliters	kiloliters
kW-a	KilowattYear	Kilowatt year (electrical capacity)
kW-d	KilowattDay	Kilowatt day (electrical capacity)
kW-h	KilowattHour	Kilowatt hour (electrical capacity)
kW-M	KilowattMonth	Kilowatt month (electrical capacity)
kW-min	KilowattMinute	Kilowatt-Minute (electrical capacity)

Code	Name	Description
L	Liters	liters
lbs	Pounds	pounds
MW-a	MegawattYear	Megawatt year (electrical capacity)
MW-d	MegawattDay	Megawatt day (electrical capacity)
MW-h	MegawattHour	Megawatt hour (electrical capacity)
MW-M	MegawattMonth	Megawatt month (electrical capacity)
MW-min	MegawattMinute	Megawatt minute (electrical capacity)
oz_tr	TroyOunces	Troy ounces
PRINC	PrincipalWithRelationToDebtInstrument	Principal with relation to debt instrument
t	MetricTons	Metric tons. Also known as Tonnes, equal to 1000 kg
tn	Tons	Tons (US). Equal to 2000 lbs
a	Are	Are
ac	Acre	Acre
cL	Centiliter	Centiliter
cM	Centimeter	Centimeter
DGE	DieselGallonEquivalent	Diesel gallon equivalent
ft	Foot	Foot
Gal_gb	GBGallon	GB Gallon
GGE	GasolineGallonEquivalent	Gasonline gallon equivalent
ha	Hectare	Hectare
in	Inch	Inch
kM	Kilometer	Kilometer
M	Meter	Meter
mi	Mile	Mile
mL	Milliliter	Milliliter
mM	Millimeter	Millimeter
oz	USOunce	US ounce
pc	Piece	Piece
pt	USPint	US Pint
pt_gb	GBPint	GB pint
qt	USQuart	US Quart
qt_gb	GBQuart	GB Quart
Sqcm	SquareCentimeter	Square centimeter

Code	Name	Description
Sqft	SquareFoot	Square foot
Sqin	SquareInch	Square inch
SqkM	SquareKilometer	Square kilometer
SqM	SquareMeter	Square meter
Sqmi	SquareMile	Square mile
SqmM	SquareMillimeter	Square millimeter
Sqyd	SquareYard	Square yard
yd	Yard	Yard
MMbbl	MillionBarrels	Million Barrels
USD	USDollars	US Dollars

Used in components: [InstrumentLeg](#)

180.2.2630 LegStrikeValue

The number of shares/units for the financial instrument involved in the option trade. Used for derivatives.

Type: [float](#)

Used in components: [InstrumentLeg](#)

180.2.2631 LegSwapClass

Swap type.

Type: [String](#)

Allowed values in SwapClassCodeSet:

Code	Name	Description
BS	BasisSwap	Basis swap
IX	IndexSwap	Index swap
BB	BroadBasedSecuritySwap	Broad-based security swap
SK	BasketSwap	Basket swap

Used in components: [InstrumentLeg](#)

180.2.2632 LegSwapSubClass

The sub-classification or notional schedule type of the swap.

Type: **String**

Allowed values in SwapSubClassCodeSet:

Code	Name	Description
AMTZ	Amortizing	Amortizing notional schedule
COMP	Compounding	Compounding
CNST	ConstantNotionalSchedule	Constant notional schedule
ACRT	AccretingNotionalSchedule	Accreting notional schedule
CUST	CustomNotionalSchedule	Custom notional schedule

Used in components: **InstrumentLeg**

180.2.2633 LegSwapType

For Fixed Income, used instead of LegOrderQty(685) to requests the respondent to calculate the quantity based on the quantity on the opposite side of the swap.

Type: **int**

Allowed values in LegSwapTypeCodeSet:

Code	Name	Description
1	ParForPar	Par For Par
2	ModifiedDuration	Modified Duration
4	Risk	Risk
5	Proceeds	Proceeds

Used in groups: **InstrmtLegExecGrp**, **InstrmtLegSecListGrp**, **LegOrdGrp**, **LegQuotGrp**, **LegQuotStatGrp**, **QuotReqLegsGrp**, **SecLstUpdRelSymsLegGrp**, **SideCrossLegGrp**, **TrdInstrmtLegGrp**

180.2.2634 LegSymbol

Multileg instrument's individual security's Symbol.

See Symbol (55) field for description

Type: **String**

Used in components: **InstrumentLeg**

180.2.2635 LegSymbolPositionNumber

Reference to the first or second currency or digital asset in LegSymbol(600) for FX-style trading.

Conditionally required when one or both symbols in LegSymbol(600) represent a digital asset.

Type: **int**

Used in groups: **LegSecAltIDGrp**

180.2.2636 LegSymbolSfx

Multileg instrument's individual security's SymbolSfx.

See SymbolSfx (65) field for description

Type: **String**

Allowed values in SymbolSfxCodeSet:

Code	Name	Description
CD	EUCPWithLumpSumInterest	EUCP with lump-sum interest rather than discount price
WI	WhenIssued	"When Issued" for a security to be reissued under an old CUSIP or ISIN

Used in components: **InstrumentLeg**

180.2.2637 LegTerminationType

Type of financing termination.

Type: **int**

Allowed values in TerminationTypeCodeSet:

Code	Name	Description
1	Overnight	Overnight
2	Term	Term
3	Flexible	Flexible
4	Open	Open

Used in components: [LegFinancingDetails](#)

180.2.2638 LegTimeUnit

See TimeUnit(997) for complete definition.

Type: [String](#)

Allowed values in TimeUnitCodeSet:

Code	Name	Description
H	Hour	Hour
Min	Minute	Minute
S	Second	Second
D	Day	Day
Wk	Week	Week
Mo	Month	Month
Yr	Year	Year
Q	Quarter	Quarter
EOM	EndOfMonth	End of Month. End of Month identifies a relative time unit, e.g. until the third Friday of each month.
F	Flexible	Flexible. A flexible time unit indicates that a specific time unit for the contract is currently undetermined.

Used in components: [InstrumentLeg](#)

180.2.2639 LegTotalGrossTradeAmt

Expresses the full total monetary value of the traded contract. The value is the product of LegLastPx(637) and LegTotalTradeQty(2357) or LegTotalTradeMultipliedQty(2360), if priced in units instead of contracts.

Type: **Amt**

Used in groups: **TrdInstrmtLegGrp**

180.2.2640 LegTotalIssuedAmount

Specifies the total amount of the issue. Corresponds to the par value multiplied by the number of issued security.

Type: **Amt**

Used in components: **InstrumentLeg**

180.2.2641 LegTotalTradeMultipliedQty

Expresses the total trade quantity in units where LegContractMultiplier(614) is not 1. The value is the product of LegTotalTradeQty(2357) and LegContractMultiplier(614).

Type: **Qty**

Used in groups: **TrdInstrmtLegGrp**

180.2.2642 LegTotalTradeQty

Expresses the total quantity traded over the life of the contract when LegLastQty(1418) is to be repeated periodically over the term of the contract. The value is the product of LegLastQty(1418) and LegTradingUnitPeriodMultiplier(2353).

Type: **Qty**

Used in groups: **TrdInstrmtLegGrp**

180.2.2643 LegTradeID

The TradeID(1003) value corresponding to a trade leg.

Type: **String**

Used in groups: **TrdInstrmtLegExecGrp**

180.2.2644 LegTradeReportID

The TradeReportID(571) value corresponding to a trade leg.

Type: **String**

Used in groups: **TrdInstrmtLegExecGrp**

180.2.2645 LegTradingUnitPeriodMultiplier

Indicates the number of contract periods associated with the minimum trading unit for a given contract duration resulting in the number of total traded contracts.

Type: **int**

Used in components: **InstrumentLeg**

180.2.2646 LegUnderlyingPriceDeterminationMethod

Specifies how the underlying price is determined at the point of option exercise. The underlying price may be set to the current settlement price, set to a special reference, set to the optimal value of the underlying during the defined period ("Look-back") or set to the average value of the underlying during the defined period ("Asian option").

Type: **int**

Allowed values in UnderlyingPriceDeterminationMethodCodeSet:

Code	Name	Description
1	Regular	Regular
2	SpecialReference	Special reference
3	OptimalValue	Optimal value (Lookback)
4	AverageValue	Average value (Asian option)

Used in components: **InstrumentLeg**

180.2.2647 LegUnitOfMeasure

Multileg instrument unit of measure.

See UnitOfMeasure(996) for complete definition.

Type: **String**

Allowed values in UnitOfMeasureCodeSet:

Code	Name	Description
Alw	Allowances	Allowances
Bcf	BillionCubicFeet	Billion cubic feet
Bbl	Barrels	Barrels. Equal to 42 US gallons
CBM	CubicMeters	Cubic Meters
BDFT	BoardFeet	Board feet. Equal to 144 cubic inches
GJ	Gigajoules	gigajoules
Bu	Bushels	Bushels
kHR	HeatRate	Heat rate. The number of BTUs required to produce one kilowatt hour of electricity, typically 3,412.14 BTUs per 1 kWh.
Ccy	Currency	Amount of currency
kWh	KilowattHours	Kilowatt hours
CDD	CoolingDegreeDay	Cooling degree day
MHR	MegaHeatRate	Mega heat rate. The number of million BTUs required to produce one megawatt hour of electricity, typically 3.41214 million BTUs per 1 MWh.
CER	CertifiedEmissionsReduction	Certified emissions reduction
MMBtu	OneMillionBTU	One Million BTU
CPD	CriticalPrecipDay	Critical precipitation day
MWh	MegawattHours	Megawatt hours
CRT	ClimateReserveTonnes	Climate reserve tonnes
thm	Therms	therms. Equal to 100,000 BTU
cwt	Hundredweight	Hundredweight(US). Equal to 100 lbs
tnCO2	TonsOfCarbonDioxide	Tons of carbon dioxide
day	Day	Days
dt	DryMetricTons	Dry metric tons
EnvAllwnc	EnvAllwncCert	Environmental allowance certificates
EnvCrd	EnvironmentalCredit	Environmental credit
EnvOfst	EnvironmentalOffset	Environmental Offset
g	Grams	Grams
Gal	Gallons	Gallons
GT	GrossTons	Gross tons. Also known as long tons or imperial tons, equal to 2240 lbs

Code	Name	Description
HDD	HeatingDegreeDay	Heating degree day
IPNT	IndexPoint	Index point
kg	Kilograms	Kilograms
kL	Kiloliters	kiloliters
kW-a	KilowattYear	Kilowatt year (electrical capacity)
kW-d	KilowattDay	Kilowatt day (electrical capacity)
kW-h	KilowattHour	Kilowatt hour (electrical capacity)
kW-M	KilowattMonth	Kilowatt month (electrical capacity)
kW-min	KilowattMinute	Kilowatt-Minute (electrical capacity)
L	Liters	liters
lbs	Pounds	pounds
MW-a	MegawattYear	Megawatt year (electrical capacity)
MW-d	MegawattDay	Megawatt day (electrical capacity)
MW-h	MegawattHour	Megawatt hour (electrical capacity)
MW-M	MegawattMonth	Megawatt month (electrical capacity)
MW-min	MegawattMinute	Megawatt minute (electrical capacity)
oz_tr	TroyOunces	Troy ounces
PRINC	PrincipalWithRelationToDebtInstrument	Principal with relation to debt instrument
t	MetricTons	Metric tons. Also known as Tonnes, equal to 1000 kg
tn	Tons	Tons (US). Equal to 2000 lbs
a	Are	Are
ac	Acre	Acre
cL	Centiliter	Centiliter
cM	Centimeter	Centimeter
DGE	DieselGallonEquivalent	Diesel gallon equivalent
ft	Foot	Foot
Gal_gb	GBGallon	GB Gallon
GGE	GasolineGallonEquivalent	Gasonline gallon equivalent
ha	Hectare	Hectare
in	Inch	Inch
kM	Kilometer	Kilometer
M	Meter	Meter
mi	Mile	Mile

Code	Name	Description
mL	Milliliter	Milliliter
mM	Millimeter	Millimeter
oz	USOunce	US ounce
pc	Piece	Piece
pt	USPint	US Pint
pt_gb	GBPint	GB pint
qt	USQuart	US Quart
qt_gb	GBQuart	GB Quart
SqcM	SquareCentimeter	Square centimeter
Sqft	SquareFoot	Square foot
Sqin	SquareInch	Square inch
SqkM	SquareKilometer	Square kilometer
SqM	SquareMeter	Square meter
Sqmi	SquareMile	Square mile
SqmM	SquareMillimeter	Square millimeter
Sqyd	SquareYard	Square yard
yd	Yard	Yard
MMbbl	MillionBarrels	Million Barrels
USD	USDollars	US Dollars

Used in components: [InstrumentLeg](#)

180.2.2648 LegUnitOfMeasureCurrency

Indicates the currency of the unit of measure. Conditionally required when LegUnitOfMeasure(999) = Ccy

Type: [Currency](#)

Used in components: [InstrumentLeg](#)

180.2.2649 LegUnitOfMeasureCurrencyCodeSource

Identifies class or source of the LegUnitOfMeasureCurrency(1720) value.

Type: [String](#)

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbolology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in components: [InstrumentLeg](#)

180.2.2650 LegUnitOfMeasureQty

Refer to definition of UnitOfMeasureQty(1147)

Type: [Qty](#)

Used in components: [InstrumentLeg](#)

180.2.2651 LegUPICode

Uniquely identifies the product of a leg instrument using ISO 4914. See UPICode(2891) for further detail.

Type: [String](#)

Used in components: [InstrumentLeg](#)

180.2.2652 LegValuationMethod

Specifies the type of valuation method applied.

Type: [String](#)

Allowed values in ValuationMethodCodeSet:

Code	Name	Description
EQTY	PremiumStyle	premium style
FUT	FuturesStyleMarkToMarket	futures style mark-to-market
FUTDA	FuturesStyleWithAnAttachedCashAdjustment	futures style with an attached cash adjustment
CDS	CDSStyleCollateralization	CDS style collateralization of market to market and coupon
CDSO	CDSInDeliveryUseRecoveryRateToCalculate	CDS in delivery - use recovery rate to calculate obligation

Used in components: [InstrumentLeg](#)

180.2.2653 LegValuationReferenceModel

Specifies the methodology and/or assumptions used to generate the trade value.

Type: [String](#)

Used in components: [InstrumentLeg](#)

180.2.2654 LegValuationSource

Specifies the source of trade valuation data.

Type: [String](#)

Used in components: [InstrumentLeg](#)

180.2.2655 LegVersusPurchaseDate

The effective acquisition date of the lot that would be used for gain-loss trade lot reporting. The versus purchase date used to identify the lot in situations where a custodial lot identifier is not available.

Type: [LocalMktDate](#)

Used in groups: [LegPreAllocGrp](#)

180.2.2656 LegVersusPurchasePrice

The versus purchase price used to identify the lot in situations where a custodial lot identifier is not available. The value should be calculated based on current cost basis / quantity held.

Type: **Price**

Used in groups: **LegPreAllocGrp**

180.2.2657 LegVolatility

Specifies the volatility of an instrument leg.

Type: **float**

Used in groups: **InstrmtLegExecGrp**, **LegOrdGrp**, **SideCrossLegGrp**, **TrdInstrmtLegGrp**

180.2.2658 LienSeniority

Indicates the seniority level of the lien in a loan.

Type: **int**

Allowed values in LienSeniorityCodeSet:

Code	Name	Description
0	Unknown	Unknown
1	FirstLien	First lien
2	SecondLien	Second lien
3	ThirdLien	Third lien

Used in components: **Instrument**

180.2.2659 LimitAmt

The limit for the counterparty. This represents the total limit amount, independent of any amount already utilized.

Type: **Amt**

Used in groups: **LimitAmts**

180.2.2660 LimitAmtCurrency

Indicates the currency that the limit amount is specified in.

Type: **Currency**

Used in groups: **LimitAmts**

180.2.2661 LimitAmtCurrencyCodeSource

Identifies class or source of the LimitAmtCurrency(1634) value.

Type: **String**

Allowed values in CurrencyCodeSourceCodeSet:

Code	Name	Description
1	CUSIP	CUSIP
2	SEDOL	SEDOL
4	ISINNumber	ISIN
6	ISOCurrencyCode	ISO Currency Code (ISO 4217)
S	FinancialInstrumentGlobalIdentifier	Financial Instrument Global Identifier. An Object Management Group (OMG) standard. Also referred to as FIGI. Formerly known as "Bloomberg Open Symbology BBGID".
Y	DigitalTokenIdentifier	Digital Token Identifier (ISO 24165)

Used in groups: **LimitAmts**

180.2.2662 LimitAmtRemaining

The remaining limit amount available between the counterparties. The type of limit is specified in LimitAmtType(1631).

Bilateral agreements dictate the units and maximum value of this field.

Type: **Amt**

Used in groups: **LimitAmts**

180.2.2663 LimitAmts

Name	Mult.	Type	Description
NoLimitAmts	[1..1]	NumInGroup	Number of limit amount occurrences.
LimitAmtType	[0..1]	CodeSet	Required when NoLimitAmts > 0
LastLimitAmt	[0..1]	Amt	Either LastLimitAmt(1632) or LimitAmtRemaining(1633) or LimitUtilizationAmt(2394) must be specified when NoLimitAmts > 0.
LimitAmtRemaining	[0..1]	Amt	Either LastLimitAmt(1632) or LimitAmtRemaining(1633) or LimitUtilizationAmt(2394) must be specified when NoLimitAmts > 0.
LimitUtilizationAmt	[0..1]	Amt	Either LastLimitAmt(1632) or LimitAmtRemaining(1633) or LimitUtilizationAmt(2394) must be specified when NoLimitAmts > 0.
LimitAmt	[0..1]	Amt	
LimitAmtCurrency	[0..1]	Currency	
LimitAmtCurrencyCodeSource	[0..1]	CodeSet	
LimitRole	[0..1]	CodeSet	

Used in groups: **TrdCapRptAckSideGrp**, **TrdCapRptSideGrp**

Used in messages: **ExecutionReport**

180.2.2664 LimitAmtType

Identifies the type of limit amount expressed in LastLimitAmt(1632) and LimitAmtRemaining(1633).

Type: **int**

Allowed values in LimitAmtTypeCodeSet:

Code	Name	Description
0	CreditLimit	Credit limit
1	GrossPositionLimit	Gross position limit
2	NetPositionLimit	Net position limit
3	RiskExposureLimit	Risk exposure limit

Code	Name	Description
4	LongPositionLimit	Long position limit
5	ShortPositionLimit	Short position limit

Used in groups: **LimitAmts**

180.2.2665 LimitedRightToConfirmIndicator

Indicates whether the Seller may request the Buyer to confirm its intent to exercise if not done on or before the expiration time on the expiration date. If true ("Y") specific rules will apply in relation to the settlement mode.

Type: **Boolean**

Used in components: **OptionExercise**

180.2.2666 LimitRole

Indicates the scope of the limit by role.

Type: **int**

Allowed values in PartyRoleCodeSet:

Code	Name	Description
1	ExecutingFirm	Executing Firm (formerly FIX 4.2 ExecBroker)
2	BrokerOfCredit	Broker of Credit (formerly FIX 4.2 BrokerOfCredit)
3	ClientID	Client ID (formerly FIX 4.2 ClientID)
4	ClearingFirm	Clearing Firm (formerly FIX 4.2 ClearingFirm)
5	InvestorID	Investor ID
6	IntroducingFirm	Introducing Firm
7	EnteringFirm	Entering Firm
8	Locate	Locate / Lending Firm (for short-sales)
9	FundManagerClientID	Fund Manager Client ID (for CIV)
10	SettlementLocation	Settlement Location (formerly FIX 4.2 SettlLocation)
11	OrderOriginationTrader	Order Origination Trader (associated with Order Origination Firm - i.e. trader who initiates/submits the order)

Code	Name	Description
12	ExecutingTrader	Executing Trader (associated with Executing Firm - actually executes)
13	OrderOriginationFirm	Order Origination Firm (e.g. buy-side firm)
14	GiveupClearingFirmDepr	Giveup Clearing Firm (firm to which trade is given up)
15	CorrespondantClearingFirm	Correspondant Clearing Firm
16	ExecutingSystem	Executing System
17	ContraFirm	Contra Firm
18	ContraClearingFirm	Contra Clearing Firm
19	SponsoringFirm	Sponsoring Firm
20	UnderlyingContraFirm	Underlying Contra Firm
21	ClearingOrganization	Clearing Organization
22	Exchange	Exchange. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
24	CustomerAccount	Customer Account
25	CorrespondentClearingOrganization	Correspondent Clearing Organization
26	CorrespondentBroker	Correspondent Broker
27	Buyer	Buyer/Seller (Receiver/Deliverer)
28	Custodian	Custodian
29	Intermediary	Intermediary
30	Agent	Agent
31	SubCustodian	Sub-custodian
32	Beneficiary	Beneficiary
33	InterestedParty	Interested party
34	RegulatoryBody	Regulatory body. In the context of regulatory reporting, this identifies the regulator the trade is being reported to.
35	LiquidityProvider	Liquidity provider
36	EnteringTrader	Entering trader
37	ContraTrader	Contra trader
38	PositionAccount	Position account. The account which positions are maintained. Typically represents the aggregation of one or more customer accounts.
39	ContraInvestorID	Contra Investor ID
40	TransferToFirm	Transfer to Firm
41	ContraPositionAccount	Contra Position Account
42	ContraExchange	Contra Exchange

Code	Name	Description
43	InternalCarryAccount	Internal Carry Account
44	OrderEntryOperatorID	Order Entry Operator ID
45	SecondaryAccountNumber	Secondary Account Number
46	ForeignFirm	Foreign Firm
47	ThirdPartyAllocationFirm	Third Party Allocation Firm
48	ClaimingAccount	Claiming Account
49	AssetManager	Asset Manager
50	PledgorAccount	Pledgor Account
51	PledgeeAccount	Pledgee Account
52	LargeTraderReportableAccount	Large Trader Reportable Account
53	TraderMnemonic	Trader mnemonic
54	SenderLocation	Sender Location
55	SessionID	Session ID
56	AcceptableCounterparty	Acceptable Counterparty
57	UnacceptableCounterparty	Unacceptable Counterparty
58	EnteringUnit	Entering Unit
59	ExecutingUnit	Executing Unit
60	IntroducingBroker	Introducing Broker
61	QuoteOriginator	Quote originator
62	ReportOriginator	Report originator
63	SystematicInternaliser	Systematic internaliser (SI)
64	MultilateralTradingFacility	Multilateral Trading Facility (MTF). Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
65	RegulatedMarket	Regulated Market (RM). Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
66	MarketMaker	Market Maker
67	InvestmentFirm	Investment Firm
68	HostCompetentAuthority	Host Competent Authority (Host CA)
69	HomeCompetentAuthority	Home Competent Authority (Home CA)
70	CompetentAuthorityLiquidity	Competent Authority of the most relevant market in terms of liquidity (CAL)
71	CompetentAuthorityTransactionVenue	Competent Authority of the Transaction (Execution) Venue (CATV)
72	ReportingIntermediary	Reporting intermediary. The medium or vendor used to report to a regulator, non-regulatory agency or data repository.

Code	Name	Description
73	ExecutionVenue	Execution Venue. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
74	MarketDataEntryOriginator	Market data entry originator
75	LocationID	Location ID
76	DeskID	Desk ID
77	MarketDataMarket	Market data market
78	AllocationEntity	Allocation Entity
79	PrimeBroker	Prime Broker providing General Trade Services
80	StepOutFirm	Step-Out Firm (Prime Broker)
81	BrokerClearingID	Broker clearing identifier
82	CentralRegistrationDepository	Central Registration Depository (CRD)
83	ClearingAccount	Clearing Account
84	AcceptableSettlingCounterparty	Acceptable Settling Counterparty
85	UnacceptableSettlingCounterparty	Unacceptable Settling Counterparty
86	CLSMemberBank	CLS Member Bank
87	InConcertGroup	In Concert Group
88	InConcertControllingEntity	In Concert Controlling Entity
89	LargePositionsReportingAccount	Large Positions Reporting Account
90	SettlementFirm	Settlement Firm
91	SettlementAccount	Settlement account. The account to which individual payment obligations are aggregated for netting and funds movement. Typically represents the aggregation of many margin (performance bond) accounts.
92	ReportingMarketCenter	Reporting Market Center
93	RelatedReportingMarketCenter	Related Reporting Market Center
94	AwayMarket	Away Market. Identify using PartyIDSource(tag 447) = G (Market Identifier Code) if the MIC exists.
95	GiveupTradingFirm	Give-up (trading) firm
96	TakeupTradingFirm	Take-up (trading) firm
97	GiveupClearingFirm	Give-up clearing firm
98	TakeupClearingFirm	Take-up clearing firm
99	OriginatingMarket	Originating Market. Identifies the Market using PartyIDSource(tag 447) = G (Market Identifier Code) where an order originated in the event that the order is sent to an alternative market for execution. Serves as an inverse of an away market.

Code	Name	Description
100	MarginAccount	Margin account. Also referred to as "performance bond account". The margin account is the calculated margin requirements. Typically represents the aggregation of one or more position accounts.
101	CollateralAssetAccount	Collateral asset account. The account at which individual collateral assets are maintained. Typically, although not always, one-for-one with the settlement account.
102	DataRepository	Data repository. Multiple instances of this PartyRole may appear for reporting purposes.
103	CalculationAgent	Calculation agent
104	ExerciseNoticeSender	Sender of exercise notice
105	ExerciseNoticeReceiver	Receiver of exercise notice
106	RateReferenceBank	Rate reference bank. The bank providing the reference rate. Multiple instance of this PartyRole may appear.
107	Correspondent	Correspondent
109	BeneficiaryBank	Beneficiary's bank or depository institution. The institution in which the beneficiary, a person or an entity, has their account with. The institution may be a bank or non-bank institution.
110	Borrower	Borrower
111	PrimaryObligator	Primary obligator
112	Guarantor	Guarantor
113	ExcludedReferenceEntity	Excluded reference entity
114	DeterminingParty	Determining party
115	HedgingParty	Hedging party
116	ReportingEntity	Reporting entity. The entity that is reporting the information.
117	SalesPerson	Sales person. The person who is involved in the sales activities for their firm.
118	Operator	Operator. The person who has the capabilities and authorization to take certain actions; for example, setting entitlements, etc.
119	CSD	Central Securities Depository (CSD)
120	ICSD	International Central Securities Depository (ICSD)
121	TradingSubAccount	Trading sub-account. Example of sub-accounts include a clearing account that has multiple trading sub-accounts, a trading account that has multiple trading sub-accounts belonging to different trading firms.

Code	Name	Description
122	InvestmentDecisionMaker	Investment decision maker. In the context of ESMA RTS reporting, this is used to specify party responsible for the investment decision. See RTS 24, Annex, Table 2, Field 4.
123	PublishingIntermediary	Publishing intermediary. The medium or vendor used to publish to the market.
124	CSDParticipant	Central Securities Depository (CSD) Participant. In the context of EU SFTR reporting the identifier of the CSD participant or indirect participant of the reporting counterparty. Where both the CSD participant and indirect participant are involved in the transaction this should identify the indirect participant.
125	Issuer	Issuer. The issuer of the security.
126	ContraCustomerAccount	Contra Customer Account. Same as PartyRole(452) = 24 (Customer Account) but for the counterparty. Can be used whenever the parties component is not nested in a repeating group representing both sides.
127	ContraInvestmentDecisionMaker	Contra Investment Decision Maker. Same as PartyRole(452) = 122 (Investment Decision Maker) but for the counterparty. Can be used whenever the parties component is not nested in a repeating group representing both sides.
128	AuthorizingPerson	Authorizing person. In the context of MiFIR, this value is used to identify the person authorizing algorithms within a trading firm.

Used in groups: **LimitAmts**

180.2.2667 LimitUtilizationAmt

The total amount of the limit that has been drawn down against the counterparty. This includes the amount for prior trades. It may or may not include the amount for the given trade, specified in LastLimitAmt(1632), depending upon whether the given trade is considered pending.

Type: **Amt**

Used in groups: **LimitAmts**

180.2.2668 LinesOfTextGrp

Name	Mult.	Type	Description
NoLinesOfText	[1..1]	NumInGroup	Specifies the number of repeating lines of text specified
Text	[1..1]	String	Repeating field, number of instances defined in LinesOfText
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.

Used in messages: **Email**, **News**

180.2.2669 LinkageHandlingIndicator

Indicate whether linkage handling is in effect for an instrument or not.

Type: **Boolean**

Used in messages: **SecurityStatus**

180.2.2670 LiquidityIndType

Code to identify the type of liquidity indicator.

Type: **int**

Allowed values in LiquidityIndTypeCodeSet:

Code	Name	Description
1	FiveDayMovingAverage	5-day moving average
2	TwentyDayMovingAverage	20-day moving average
3	NormalMarketSize	Normal market size
4	Other	Other

Used in messages: **BidRequest**

180.2.2671 LiquidityNumSecurities

Number of Securites between LiquidityPctLow (402) and LiquidityPctHigh (403) in Currency.

Type: **int**

Used in groups: **BidDescReqGrp**

180.2.2672 LiquidityPctHigh

Upper liquidity indicator if TotalNumSecurities (393) > 1. Represented as a percentage.

Type: **Percentage**

Used in groups: **BidDescReqGrp**

180.2.2673 LiquidityPctLow

Liquidity indicator or lower limit if TotalNumSecurities (393) > 1. Represented as a percentage.

Type: **Percentage**

Used in groups: **BidDescReqGrp**

180.2.2674 LiquidityValue

Value between LiquidityPctLow (402) and LiquidityPctHigh (403) in Currency

Type: **Amt**

Used in groups: **BidDescReqGrp**

180.2.2675 ListExecInst

Free format text message containing list handling and execution instructions.

Type: **String**

Used in messages: **NewOrderList**

180.2.2676 ListExecInstType

Identifies the type of ListExecInst (69).

Type: **char**

Allowed values in ListExecInstTypeCodeSet:

Code	Name	Description
1	Immediate	Immediate
2	WaitForInstruction	Wait for Execut Instruction (i.e. a List Execut message or phone call before proceeding with execution of the list)
3	SellDriven	Exchange/switch CIV order - Sell driven
4	BuyDrivenCashTopUp	Exchange/switch CIV order - Buy driven, cash top-up (i.e. additional cash will be provided to fulfill the order)
5	BuyDrivenCashWithdraw	Exchange/switch CIV order - Buy driven, cash withdraw (i.e. additional cash will not be provided to fulfill the order)

Used in messages: **NewOrderList**

180.2.2677 ListID

Unique identifier for list as assigned by institution, used to associate multiple individual orders. Uniqueness must be guaranteed within a single trading day. Firms which generate multi-day orders should consider embedding a date within the ListID field to assure uniqueness across days.

Type: **String**

Used in components: **TradeReportOrderDetail**

Used in groups: **BidCompReqGrp, BidCompRspGrp, OrdAllocGrp**

Used in messages: **ExecutionReport, ListCancelRequest, ListExecute, ListStatus, ListStatusRequest, ListStrikePrice, NewOrderList, OrderCancelReject, OrderCancelReplaceRequest, OrderCancelRequest**

180.2.2678 ListManualOrderIndicator

Indicates if the list of orders was initially received manually (as opposed to electronically) or if it was entered manually (as opposed to entered by automated trading software).

Type: **Boolean**

Used in messages: **NewOrderList**

180.2.2679 ListMethod

Indicates whether instruments are pre-listed only or can also be defined via user request

Type: **int**

Allowed values in ListMethodCodeSet:

Code	Name	Description
0	PreListedOnly	pre-listed only
1	UserRequested	user requested

Used in components: **Instrument**

180.2.2680 ListName

Descriptive name for list order.

Type: **String**

Used in messages: **BidRequest**

180.2.2681 ListOrderStatus

Code to represent the status of a list order.

Type: **int**

Allowed values in ListOrderStatusCodeSet:

Code	Name	Description
1	InBiddingProcess	In bidding process
2	ReceivedForExecution	Received for execution
3	Executing	Executing
4	Cancelling	Cancelling
5	Alert	Alert
6	AllDone	All Done
7	Reject	Reject

Used in messages: **ListStatus**

180.2.2682 ListOrdGrp

Name	Mult.	Type	Description
NoOrders	[1..1]	NumInGroup	Number of orders in this message (number of repeating groups to follow)
ClOrdID	[1..1]	String	Must be the first field in the repeating group.
SecondaryClOrdID	[0..1]	String	
ListSeqNo	[1..1]	int	Order number within the list
ClOrdLinkID	[0..1]	String	
SettlInstMode	[0..1]	CodeSet	
Parties	[0..*]	Group	Insert here the set of "Parties" (firm identification) fields defined in "Common Components of Application Messages"
TradeOriginationDate	[0..1]	LocalMktDate	
TradeDate	[0..1]	LocalMktDate	
Account	[0..1]	String	
AcctIDSource	[0..1]	CodeSet	
AccountType	[0..1]	CodeSet	
DayBookingInst	[0..1]	CodeSet	
BookingUnit	[0..1]	CodeSet	
AllocID	[0..1]	String	Use to assign an ID to the block of individual preallocations
PreallocMethod	[0..1]	CodeSet	
PreAllocGrp	[0..*]	Group	
SettlType	[0..1]	CodeSet	
SettlDate	[0..1]	LocalMktDate	Takes precedence over SettlType value and conditionally required/omitted for specific SettlType values.
CashMargin	[0..1]	CodeSet	
ClearingFeeIndicator	[0..1]	CodeSet	
HandlInst	[0..1]	CodeSet	
ExecInst	[0..1]	CodeSet	Can contain multiple instructions, space delimited. If OrdType=P, exactly one of the following values (ExecInst = L, R, M, P, O, T, or W) must be specified.
MinQty	[0..1]	Qty	
MatchIncrement	[0..1]	Qty	

Name	Mult.	Type	Description
MaxPriceLevels	[0..1]	int	
DisplayInstruction	[0..1]	Component	Insert here the set of "DisplayInstruction" fields defined in "common components of application messages"
MaxFloor	[0..1]	Qty	
ExDestination	[0..1]	Exchange	
ExDestinationIDSource	[0..1]	CodeSet	
TrdgSesGrp	[0..*]	Group	
ProcessCode	[0..1]	CodeSet	
Instrument	[1..1]	Component	Insert here the set of "Instrument" (symbology) fields defined in "Common Components of Application Messages"
UndInstrmtGrp	[0..*]	Group	
PrevClosePx	[0..1]	Price	Useful for verifying security identification
Side	[1..1]	CodeSet	Note: to indicate the side of SideValue1 or SideValue2, specify Side=Undisclosed and SideValueInd=either the SideValue1 or SideValue2 indicator.
ShortMarkingExemptIndicator	[0..1]	Boolean	
ShortSaleExemptionReason	[0..1]	CodeSet	Available for optional use when Side(54) = 6(Sell short exempt).
SideValueInd	[0..1]	CodeSet	Refers to the SideValue1 or SideValue2. These are used as opposed to Buy or Sell so that the basket can be quoted either way as Buy or Sell.
LocateReqd	[0..1]	CodeSet	Required for short sell orders
TransactTime	[0..1]	UTCTimestamp	
Stipulations	[0..*]	Group	Insert here the set of "Stipulations" (repeating group of Fixed Income stipulations) fields defined in "Common Components of Application Messages"
QtyType	[0..1]	CodeSet	
OrderQtyData	[1..1]	Component	Insert here the set of "OrderQtyData" fields defined in "Common Components of Application Messages"
OrdType	[0..1]	CodeSet	
PriceType	[0..1]	CodeSet	
Price	[0..1]	Price	
PriceProtectionScope	[0..1]	CodeSet	

Name	Mult.	Type	Description
StopPx	[0..1]	Price	
TriggeringInstruction	[0..1]	Component	Insert here the set of "TriggeringInstruction" fields defined in "common components of application messages"
SpreadOrBenchmarkCurveData	[0..1]	Component	Insert here the set of "SpreadOrBenchmarkCurveData" (Fixed Income spread or benchmark curve) fields defined in "Common Components of Application Messages"
YieldData	[0..1]	Component	Insert here the set of "YieldData" (yield-related) fields defined in "Common Components of Application Messages"
Currency	[0..1]	Currency	
CurrencyCodeSource	[0..1]	CodeSet	
ComplianceID	[0..1]	String	
ComplianceText	[0..1]	String	
EncodedComplianceTextLen	[0..1]	Length	Must be set if EncodedComplianceText(2352) field is specified and must immediately precede it.
EncodedComplianceText	[0..1]	data	Encoded (non-ASCII characters) representation of the ComplianceText(2404) field in the encoded format specified via the MessageEncoding(347) field.
SolicitedFlag	[0..1]	CodeSet	
IOIID	[0..1]	String	Required for Previously Indicated Orders (OrdType=E)
QuoteID	[0..1]	String	Required for Previously Quoted Orders (OrdType=D)
RefOrderID	[0..1]	String	Required for counter-order selection / Hit / Take Orders (OrdType = Q)
RefOrderIDSource	[0..1]	CodeSet	Conditionally required if RefOrderID is specified.
TimeInForce	[0..1]	CodeSet	
EffectiveTime	[0..1]	UTCTimestamp	
ExpireDate	[0..1]	LocalMktDate	Conditionally required if TimeInForce = GTD and ExpireTime is not specified.
ExpireTime	[0..1]	UTCTimestamp	Conditionally required if TimeInForce = GTD and ExpireDate is not specified.
GTBookingInst	[0..1]	CodeSet	States whether executions are booked out or accumulated on a partially filled GT order

Name	Mult.	Type	Description
ExposureDuration	[0..1]	int	Conditionally required when TimeInForce(59)=10 (Good for Time)
ExposureDurationUnit	[0..1]	CodeSet	
CommissionData	[0..1]	Component	
CommissionDataGrp	[0..*]	Group	Use as an alternative to CommissionData if multiple commissions or enhanced attributes are needed.
OrderCapacity	[0..1]	CodeSet	
OrderRestrictions	[0..1]	CodeSet	
PreTradeAnonymity	[0..1]	Boolean	
CustOrderCapacity	[0..1]	CodeSet	
OrderAttributeGrp	[0..*]	Group	
ForexReq	[0..1]	CodeSet	
SettlCurrency	[0..1]	Currency	
SettlCurrencyCodeSource	[0..1]	CodeSet	
BookingType	[0..1]	CodeSet	Method for booking out this order. Used when notifying a broker that an order to be settled by that broker is to be booked out as an OTC derivative (e.g. CFD or similar). Absence of this field implies regular booking.
Text	[0..1]	String	
EncodedTextLen	[0..1]	Length	Must be set if EncodedText field is specified and must immediately precede it.
EncodedText	[0..1]	data	Encoded (non-ASCII characters) representation of the Text field in the encoded format specified via the MessageEncoding field.
SettlDate2	[0..1]	LocalMktDate	Can be used with OrdType = "Forex - Swap" to specify the "value date" for the future portion of a F/X swap.
OrderQty2	[0..1]	Qty	Can be used with OrdType = "Forex - Swap" to specify the order quantity for the future portion of a F/X swap.
Price2	[0..1]	Price	Can be used with OrdType = "Forex - Swap" to specify the price for the future portion of a F/X swap which is also a limit order. For F/X orders, should be the "all-in" rate (spot rate adjusted for forward points).
PositionEffect	[0..1]	CodeSet	

Name	Mult.	Type	Description
CoveredOrUncovered	[0..1]	CodeSet	
MaxShow	[0..1]	Qty	
PegInstructions	[0..1]	Component	Insert here the set of "PegInstruction" fields defined in "Common Components of Application Messages"
DiscretionInstructions	[0..1]	Component	Insert here the set of "DiscretionInstruction" fields defined in "Common Components of Application Messages"
TargetStrategy	[0..1]	CodeSet	The target strategy of the order
StrategyParametersGrp	[0..*]	Group	Strategy parameter block
TargetStrategyParameters	[0..1]	String	For further specification of the TargetStrategy
ParticipationRate	[0..1]	Percentage	Mandatory for a TargetStrategy=Participate order and specifies the target participation rate. For other order types optionally specifies a volume limit (i.e. do not be more than this percent of the market volume)
Designation	[0..1]	String	Supplementary registration information for this Order within the List
ManualOrderIndicator	[0..1]	Boolean	

Used in messages: [NewOrderList](#)

180.2.2683 ListRejectReason

Identifies the reason for rejection of a New Order List message. Note that OrdRejReason(103) is used if the rejection is based on properties of an individual order part of the List.

Type: [int](#)

Allowed values in ListRejectReasonCodeSet:

Code	Name	Description
0	BrokerCredit	Broker / Exchange option
2	ExchangeClosed	Exchange closed
4	TooLateToEnter	Too late to enter
5	UnknownOrder	Unknown order
6	DuplicateOrder	Duplicate Order (e.g. dupe ClOrdID)

Code	Name	Description
11	UnsupportedOrderCharacteristic	Unsupported order characteristic
99	Other	Other

Used in messages: [ListStatus](#)

180.2.2684 ListSeqNo

Sequence of individual order within list (i.e. ListSeqNo of TotNoOrders (68), 2 of 25, 3 of 25, . . .)

Type: [int](#)

Used in groups: [ListOrdGrp](#)

180.2.2685 ListStatusText

Free format text string related to List Status.

Type: [String](#)

Used in messages: [ListStatus](#)

180.2.2686 ListStatusType

Code to represent the status type.

Type: [int](#)

Allowed values in ListStatusTypeCodeSet:

Code	Name	Description
1	Ack	Ack
2	Response	Response
3	Timed	Timed
4	ExecStarted	Exec Started
5	AllDone	All Done
6	Alert	Alert

Used in messages: [ListStatus](#)

180.2.2687 ListUpdateAction

If provided, then Instrument occurrence has explicitly changed

Type: **char**

Allowed values in ListUpdateActionCodeSet:

Code	Name	Description
A	Add	Add
D	Delete	Delete
M	Modify	Modify
S	Snapshot	Snapshot

Used in groups: **PartyDetailAckGrp**, **PartyDetailsUpdateGrp**, **PartyEntitlementAckGrp**, **PartyEntitlementUpdateGrp**, **PartyRiskLimitsAckGrp**, **PartyRiskLimitsUpdateGrp**, **RelSymDerivSecUpdGrp**, **SecLstUpdRelSymGrp**

180.2.2688 LoanFacility

Specifies the type of loan when the credit default swap's reference obligation is a loan.

Type: **int**

Allowed values in LoanFacilityCodeSet:

Code	Name	Description
0	BridgeLoan	Bridge loan
1	LetterOfCredit	Letter of credit
2	RevolvingLoan	Revolving loan
3	SwinglineFunding	Swingline funding
4	TermLoan	Term loan
5	TradeClaim	Trade claim

Used in components: **Instrument**

180.2.2689 LocaleOfIssue

Identifies the locale or region of issue.

Type: **String**

Used in components: **Instrument**

180.2.2690 LocateReqd

Indicates whether the broker is to locate the stock in conjunction with a short sell order.

Type: **Boolean**

Allowed values in LocateReqdCodeSet:

Code	Name	Description
N	No	Indicates the broker is not required to locate
Y	Yes	Indicates the broker is responsible for locating the stock

Used in groups: **ListOrdGrp**

Used in messages: **CrossOrderCancelReplaceRequest**, **MultilegOrderCancelReplace**, **NewOrderCross**, **NewOrderMultileg**, **NewOrderSingle**, **OrderCancelReplaceRequest**

180.2.2691 LocationID

Identification of a Market Maker's location

Type: **String**

Used in groups: **CompIDReqGrp**, **CompIDStatGrp**, **MDFullGrp**, **MDIncGrp**

180.2.2692 LockedQty

Locked order quantity.

Type: **Qty**

Used in messages: **ExecutionReport**

180.2.2693 LockType

Indicates whether an order is locked and for what reason.

Type: **int**

Allowed values in LockTypeCodeSet:

Code	Name	Description
0	NotLocked	Not locked
1	AwayMarketNetter	Away market better
2	ThreeTickLocked	Three tick locked
3	LockedByMarketMaker	Locked by market maker
4	DirectedOrderLock	Directed order lock
5	MultilegLock	Multileg lock. Lock in the context of multileg orders where legs are executed independently and the entire order is locked until matching information is available for all legs. A multileg order or quote must be matched in its entirety or not at all. For example, one of the legs may be a stock leg sent to a different execution venue that may or may not be able to fill it.
6	MarketOrderLock	Market order lock
7	PreAssignmentLock	Pre-assignment lock

Used in messages: **ExecutionReport**

180.2.2694 LongQty

Long quantity.

Type: **Qty**

Used in groups: **PositionQty**, **TradePositionQty**

180.2.2695 LotType

Defines the lot type assigned to the order.

Type: **char**

Allowed values in LotTypeCodeSet:

Code	Name	Description
1	OddLot	Odd Lot
2	RoundLot	Round Lot
3	BlockLot	Block Lot
4	RoundLotBasedUpon	Round lot based upon UnitOfMeasure(996)

Used in components: [TradeReportOrderDetail](#)

Used in groups: [LotTypeRules](#), [MDFullGrp](#), [MDIncGrp](#)

Used in messages: [ExecutionReport](#)

180.2.2696 LotTypeRules

Name	Mult.	Type	Description
NoLotTypeRules	[1..1]	NumInGroup	Number of Lot Types
LotType	[0..1]	CodeSet	Defines the lot type assigned to the order. Use as an alternate to RoundLot(561). To be used with MinLotSize(1231). LotType + MinLotSize (max is next level minus 1). Required if NoLotTypeRules(1234) > 0.
MinLotSize	[0..1]	Qty	Minimum lot size allowed based on lot type specified in LotType(1093)

Used in components: [BaseTradingRules](#)

180.2.2697 LowExercisePriceOptionIndicator

Indicates if a given option instrument permits low exercise prices (LEPO).

Type: [Boolean](#)

Used in components: [Instrument](#)

180.2.2698 LowLimitPrice

Allowable low limit price for the trading day. A key parameter in validating order price. Used as the lower band for validating order prices. Orders submitted with prices below the lower limit will be rejected

Type: **Price**

Used in components: **PriceLimits**

180.2.2699 LowPx

Represents an indication of the low end of the price range for a security prior to the open or reopen

Type: **Price**

Used in groups: **MDFullGrp**, **MDIncGrp**

Used in messages: **AllocationInstructionAlert**, **SecurityStatus**

180.2.2700 MailingDtls

Set of Correspondence address details, possibly including phone, fax, etc.

Type: **String**

Used in groups: **RgstDtlsGrp**

180.2.2701 MailingInst

Free format text to specify mailing instruction requirements, e.g. "no third party mailings".

Type: **String**

Used in groups: **RgstDtlsGrp**

180.2.2702 MakeWholeAmount

Amount to be paid by the buyer of the option if the option is exercised prior to the MakeWhole-Date(42591).

Type: **Amt**

Used in components: **OptionExerciseMakeWholeProvision**

180.2.2703 MakeWholeBenchmarkCurveName

Identifies the benchmark floating rate index.

Type: **String**

Used in components: **OptionExerciseMakeWholeProvision**

180.2.2704 MakeWholeBenchmarkCurvePoint

The point on the floating rate index curve.

Sample values:

M = combination of a number between 1-12 and an "M" for month, e.g. 3M

Y = combination of number between 1-100 and a "Y" for year, e.g. 10Y

10Y-OLD = see above, then add "-OLD" when appropriate

INTERPOLATED = the point is mathematically derived

2/2031 5 3/8 = the point is stated via a combination of maturity month / year and coupon.

Type: **String**

Used in components: **OptionExerciseMakeWholeProvision**

180.2.2705 MakeWholeBenchmarkQuote

The quote side of the benchmark to be used for calculating the "make whole" amount.

Type: **int**

Allowed values in StrikeIndexQuoteCodeSet:

Code	Name	Description
0	Bid	Bid.
1	Mid	Mid
2	Offer	Offer

Used in components: **OptionExerciseMakeWholeProvision**

180.2.2706 MakeWholeDate

The date through which option cannot be exercised without penalty.

Type: **LocalMktDate**

Used in components: **OptionExerciseMakeWholeProvision**

180.2.2707 MakeWholeInterpolationMethod

The method used when calculating the "make whole" amount. The most common is linear method.

Type: **int**

Allowed values in PaymentStreamInflationInterpolationMethodCodeSet:

Code	Name	Description
0	None	None
1	LinearZeroYield	Linear zero yield

Used in components: **OptionExerciseMakeWholeProvision**

180.2.2708 MakeWholeRecallSpread

Spread over the floating rate index.

Type: **PriceOffset**

Used in components: **OptionExerciseMakeWholeProvision**

180.2.2709 MandatoryClearingIndicator

An indication that the trade is flagged for mandatory clearing.

Type: **Boolean**

Used in messages: **TradeCaptureReport**

180.2.2710 MandatoryClearingJurisdiction

Identifier of the regulatory jurisdiction requiring the trade to be cleared.

Type: **String**

Used in groups: **MandatoryClearingJurisdictionGrp**

180.2.2711 MandatoryClearingJurisdictionGrp

MandatoryClearingJurisdictionGrp is a repeating component of TradeCaptureReport used to specify the set of jurisdictions to which mandatory clearing applies.

Name	Mult.	Type	Description
NoMandatoryClearingJurisdictions	[1..1]	NumInGroup	
MandatoryClearingJurisdiction	[0..1]	String	Required if NoNoMandatoryClearingJurisdictions(41312) > 0.

Used in messages: [TradeCaptureReport](#)

180.2.2712 ManualNoticeBusinessCenter

Identifies the business center used for adjusting the time for manual exercise notice.

See <http://www.fpml.org/coding-scheme/business-center> for standard 4-character code values.

Type: [String](#)

Used in components: [OptionExercise](#)

180.2.2713 ManualOrderIndicator

Indicates if an order, quote or trade was initially received manually (as opposed to electronically) or if it was entered manually (as opposed to entered by automated trading software).

Type: [Boolean](#)

Used in groups: [ListOrdGrp](#)

Used in messages: [ExecutionReport](#), [MassOrder](#), [MassOrderAck](#), [NewOrderSingle](#), [OrderCancelReplaceRequest](#), [TradeCaptureReport](#)

180.2.2714 MarginAmount

Name	Mult.	Type	Description
NoMarginAmt	[1..1]	NumInGroup	Number of margin amount entries
MarginAmt	[0..1]	Amt	

Name	Mult.	Type	Description
MarginAmtType	[0..1]	CodeSet	Total margin requirement if not provided
MarginAmtCcy	[0..1]	Currency	Can be used to specify the base settlement currency if Currency(15) is not specified.
MarginAmtFXRate	[0..1]	float	
MarginAmtFXRateCalc	[0..1]	CodeSet	
MarginAmountMarketSegmentID	[0..1]	String	
MarginAmountMarketID	[0..1]	String	
MarginDirection	[0..1]	CodeSet	

Used in messages: [AccountSummaryReport](#), [MarginRequirementReport](#)

180.2.2715 MarginAmountMarketID

Market associated with the margin amount

Type: [String](#)

Used in groups: [MarginAmount](#)

180.2.2716 MarginAmountMarketSegmentID

Market segment associated with the margin amount.

Type: [String](#)

Used in groups: [MarginAmount](#)

180.2.2717 MarginAmt

Amount of margin requirement.

Type: [Amt](#)

Used in groups: [MarginAmount](#)

180.2.2718 MarginAmtCcy

Currency of the MarginAmt(1645).

Type: **Currency**

Used in groups: **MarginAmount**

180.2.2719 MarginAmtFXRate

Foreign exchange rate used to compute the MarginAmt(1645) from the MarginAmtCcy(1646) and the Currency(15).

Type: **float**

Used in groups: **MarginAmount**

180.2.2720 MarginAmtFXRateCalc

Specifies whether or not MarginAmtFXRate(2088) should be multiplied or divided.

Type: **char**

Allowed values in UnderlyingFXRateCalcCodeSet:

Code	Name	Description
D	Divide	Divide
M	Multiply	Multiply

Used in groups: **MarginAmount**

180.2.2721 MarginAmtType

Type of margin requirement amount being specified.

Type: **int**

Allowed values in MarginAmtTypeCodeSet:

Code	Name	Description
1	AdditionalMargin	Additional Margin. Component of the total margin calculation which allows the CCP to include amounts generated outside of the Margin Deficit. Additional risk charges collected when a firm is placed on higher than normal surveillance. Additional margin serves to cover the additional liquidation costs that potentially could be incurred. Such possible close-out costs could arise if, based on the current market value of a portfolio, the worst case loss were to occur within a 24-hour period. It is used for options (also options on futures) and non-spread futures positions, bonds and equity trades. For bonds and equity trades, the additional margin is calculated for security positions but not for the corresponding cash positions.
2	AdjustedMargin	Adjusted Margin. Unadjusted Margin can be modified to become an Adjusted Margin by assigning a specific collateral to it or by applying an exchange rate.
3	UnadjustedMargin	Unadjusted Margin. Calculated by adding up the options Premium Margin, the current Liquidating Margin, the Futures Spread Margin and the Additional Margin on account and currency level.
4	BinaryAddOnAmount	Binary Add-On Amount. Requirement generated from positions in Binary Options which are considered fully margined. Margin for an individual contract in this category represents the total amount that would be paid upon delivery of a contract should it expire in-the-money. This amount is included as a component of Additional Margin in the Total Margin calculation.
5	CashBalanceAmount	Cash Balance Amount. Information about cash balance posted to the clearing house to cover the current margin requirement.
6	ConcentrationMargin	Concentration Margin. Reflects a riskier portfolio concentration when a set of closely related products is held.
7	CoreMargin	Core Margin. Specific basic requirement of a position. Core margin is equal to Initial Margin plus a percentage of the Variation Margin.
8	DeliveryMargin	Delivery Margin. Margin amount calculated between the Last Trade Date or Options Exercise Date and the Delivery or Settlement Date. Can also represent a commodities or energy delivery.
9	DiscretionaryMargin	Discretionary Margin. Unspecific margin amount added by the risk manager, also called Increase Coverage Amount.

Code	Name	Description
10	FuturesSpreadMargin	Futures Spread Margin. Long and short positions of futures with different expiration dates can be offset against each other and are called “spreads”. The remaining risk stems from the difference in expiration dates which does not provide a perfect price correlation. The purpose of Futures Spread Margin is to cover this risk until the next trading day. This kind of margin is levied in order to cover those risks associated with a futures spread which could arise between today and tomorrow.
11	InitialMargin	Initial Margin. The initial amount required to cover the position.
12	LiquidatingMargin	Liquidating Margin. Calculated for cash, bond and equity positions and is equal to the profits and losses in such positions at the time of calculation. This margin protects the CCP if it is required to close out the position at the current/EOD price. The liquidating margin (also called Current Liquidating Margin or Net Liquidating Margin) is paid by the buyer or the seller of the bonds. This margin covers losses that would occur if a position were to be liquidated today. The liquidating margin is adjusted daily similar to premium margin.
13	MarginCallAmount	Margin Call Amount. If the collateral that has been deposited is no longer sufficient, meaning a lack of coverage exists, then the market participant will be called upon to provide additional cash as collateral.
14	MarginDeficitAmount	Margin Deficit Amount (Shortfall). Base margin risk charge. This amount represents anticipated losses should the value of a portfolio (all positions in the account) fall below predefined level of Historical Value-at-Risk confidence. Also called Expected Shortfall Amount.
15	MarginExcessAmount	Margin Excess Amount (Surplus). Excess long premium value which is generated when long premium value exceeds the sum of any short premium debit requirement and the account's risk charges. Also called Expected Surplus Amount or Margin Credit Amount.
16	OptionPremiumAmount	Option Premium Amount. Premium registered on the given trading date. The amount of money that the options buyer must pay the options seller.
17	PremiumMargin	Premium Margin. Premium margin must be deposited by the seller of a traditional options position. It remains effective until the exercise or expiration of the option, and covers the potential costs of a close-out (liquidation) of the position of the seller at the settlement price.

Code	Name	Description
18	ReserveMargin	Reserve Margin. Reserve margin provides a way to reflect the inflated risk of a position. Reserve margin is equal to a percentage of the variation margin.
19	SecurityCollateralAmount	Security Collateral Amount. Information about the security collateral posted to the clearing house to cover the current margin requirement.
20	StressTestAddOnAmount	Stress Test Add-On Amount. Amount in addition to Margin Deficit in the Risk component of the margin calculation. This charge is based on tests which incorporate changes to distributional and confidence level assumptions to evaluate exposure to security concentration and changes in dependence structure; a predetermined percentage of the calculated exposure is collateralized as this charge.
21	SuperMargin	Super Margin. Additional risk charge applied to predetermined Cross-Margin accounts. The charge is based on the account's level of Margin Deficit. This amount is included as a component of Additional Margin in the Total Margin calculation.
22	TotalMargin	Total Margin. Sum of all margin amounts at value date.
23	VariationMargin	Variation Margin. Variation margin (also called Contingent Variation Margin or Maintenance Margin) is the daily Profit and Loss (P&L) on Open Positions for the given trading date. The current price is compared to the previous day's price. Variation margin (a daily offsetting of profits and losses) occurs as a result of the mark-to-market procedure used for futures and options on futures.
24	SecondaryVariationMargin	Secondary Variation Margin. Variation margin on Option Positions that is calculated based on the market movement. This will be used by CCPs wanting to report the variation for Options and Futures separately.
25	RolledUpMarginDeficit	Rolled up margin deficit
26	SpreadResponseMargin	Spread response margin. Risk factor component associated with spread moves, curve shape changes and recovery rates.
